To paraphrase a remark once made by Patrick O'Mara concerning chrysanthemums, rose culture is broader than the cut flower market, and any narrow view of this question will benefit but little. There is ample evidence, we think, that a large number of those engaged in commercial rose growing show anything but fidelity to the organization that is seeking to promote their interests. Nothing has been added to convince us that any greater interest in the society and its work will be taken by these parties in the future. It is admitted that more funds are necessary for the proper and complete conducting of the society's affairs, and there is a pretty general feeling that increased membership would help along this line.

It is, then, to the amateur element that, we believe, the society must look for an augmentation to its membership list. And the true test of just how far that element will respond has not yet been made. The society has not permanently carried out its intention, as outlined in its prospectus, of holding a June show of roses—an exhibition in which the amateur rosarian would be more largely interested than in a display of facing roses. There is evident an appreciation of the need of a show of outdoor roses, and we are glad that initiatory steps are being taken to enlist the nurserymen—who more than the florist are interested in hardy roses—in bringing forth such an exhibition.

The necessity of providing literature suitable for the amateur rose grower has also forced itself upon the

OUR READERS' VIEWS

Mixing Carnation Pollen.

Editor Florists' Exchange:

My short note in criticism of Mr. Donlan's article in regard to the parentage of Winsor carnation has brought out more than I expected. I should like to make myself clear on this point, that I did not doubt the word of any one. I mention this because Mr. Weber in a recent issue says that Mr. Murray's word should not be questioned. Now I certainly did not do that; nor have I noticed any of your other correspondents doing it. Winsor is, in my opinion, one of the best carnations of to-day, and Mr. Murray deserves great credit for his seedling.

When I opened up the subject I took exception to Mr. Donlan's remarks in which he spoke of the tri-parentage of the variety. In all my experience, I had never heard the word used before when speaking of one generation, and I wanted to find out whether this was Burbankism or something new in fertilization. I find it has all turned out as I fully expected it would.

I thought that the two pollens had been used. I believe that is common enough with some who do a little crossing for amusement; but no matter if ten different pollens had been used. I claim that the seed which germinated and produced the now famous Winsor was only the result of the union of the contents of one pollen grain with that one ovule; therefore it is wrong to use the term tri-parentage.

On page 151 Mr. Donlan has a sentence which is rather amusing. He says, "I for one am ignorant of any authority that can prove the impossibility of mixing pollen." Certainly pollen grains can be mixed. The mere mixing, however, would have no material effect on them. They are each individual multicellular bodies and may be mixed but could not be blended so that two uniting would form one. Now what would be the object of mixing these pollen grains, unless they could be blended?

W. N. Rudd, on page 185, states that he would not dare say that it is impossible for two different pollen grains to act simultaneously in fertilizing the same ovule. I would go further and say that it is impossible, and will believe that to be the case until some one can prove conclusively that it can be done.

Any good text book of Botany treats on the subject of fertilization, some books being more lucid than others. What follows is culled from that source.

The ovule consists of three parts. First, a stalk called the funicle by which it is attached to the parent. Second, one or two coats the integuments which do not completely close at the anterior end, but leave a short canal known as the micropyle. Third, a central cellular mass called the nucellus; one cell of this nucellus increases greatly in size and constitutes the embryo-sac within which, at the anterior end of the ovule (that is to say, the end at which the micropyle is situated) is the oosphere.

Fertilization takes place as follows: The pollen grain falls on the stigmatic surface of the ovary and germinates, throwing out a long tube known as the pollen tube; this extends to the oosphere through the micropyle, and the oosphere is fertilized in consequence of the contact.

In the pollen grain two or more nuclei are present, and the protoplasm is aggregated around them; the transference of the generative nuclei of the pollen tube must take place by diffusion through the softened membrane, as no rupture of the pollen tube has ever been noticed.

Ultimately the nuclei of the pollen tube reaches the nucleus of the oosphere, and the two fuse together, and fertilization is complete.

The effects of the fertilization are, that the oosphere develops into the embryo, the ovule into the seed, and the pistil into the fruit.

Now, it will be readily seen that as it only requires one of the nuclei of the pollen tube to fuse with one nucleus of the ovum to complete fertilization, even were it possible for two pollen tubes to enter the micropyle simultaneously (which I doubt), each nucleus would have to fuse with separate nuclei of the ovum, and the result would be, instead of a mixture of the two pollens, there would be two embryos formed. W. H. WAITE.

Growing Gladiolus with Carnations.

Editor Florists' Exchange:

I read with interest the article on page 319, March 9 issue of The Florists' Exchange regarding the experience of Messrs. J. Bebbington & Sons with the forcing of gladioli among carnations, and as I am particularly interested in and have made many experiments with this bulb, both in the fields and under glass. I trust I will not too much encroach upon your space in offering a few suggestions.

In the first place most florists who force gladioli are apt to cut the spike too near the soil, unless they use the individual flowers for funeral work, or are satisfied with a shorter spike, and in cutting leave enough foliage to fully develop the bulb. If the spike is cut too close to the soil, the bulb is damaged and will not the next year, either under glass or if grown outside, do as well. I have found that to give the forced bulbs one year in the ground before forcing the second time increases their vitality, and I feel quite sure if this had been done by Messrs. Bebbington & Sons, they would have secured better results with their early planting; although I do not recommend planting in the house much if any before January 1. In solid beds I have produced excellent spikes in 90 days with the earliest varieties, but among carnations it usually takes from 98 to 105 days.

While the roots are forming on the bulbs, the temperature should not be over 50 degrees at night, and 60 degrees during the day, but after they are well established 55 degrees at night and 65 degrees during the day is not too warm for them. The main point is not to have the temperature too high until they are well established. A light dressing of three parts of ashes and one of bone meal applied at the time of planting the bulbs will more than repay for the trouble and expense. ARTHUR COWEE.

Berlin, N. Y.

Box Edging.

Spring is the proper time to make cuttings of box-edging. In nurseries many old shrubs of box are used for cuttings. The longer the naked parts of the stem put in the ground, the more sure of rooting is the shoot. Because of this it is not uncommon to set such shoots—cuttings of a foot or more in length, burying all but the part bearing the foliage and then when rooted well, say after two seasons' growth, taking them up and chopping off the greater part of the stem, leaving only about six inches of length, as this length will be well rooted as far as it was underground. Believing it saves time many chop away all the stem but six inches before the first planting, but it is the experience of planters that such short chopped ones do not root as freely as those with longer stems.

When plants are but small there are no troubles expected in the way of rooting, as it is always possible to so divide the plants that a few roots are attached to every part divided.

As with many other hardy shrubs the box has been taken hold of for Summer propagation in greenhouses, and large numbers are now rooted in this way. Half ripe wood is used for the purpose, and with ordinary care practically all will root; and this young stock is of just the size desired by those who wish to plant an edging of box after it has had two years' growth or three.

Box should be planted as soon as possible after the ground is fit in Spring that the soil may be well settled around the plants before hot weather comes. In the Southern States it is better set earlier than Spring, even in Autumn where hard freezings do not occur. With late plantings and hot suns, box has a hard struggle to root well the first season, and becomes weakened thereby. JOSEPH MEEHAN.

Mrs. Henry A. Dreer.

Mary Leavenworth Dreer, widow of the late Henry A. Dreer, and mother of Wm. F. Dreer, Philadelphia, died Tuesday in Pasadena, Cal., in the eightieth year of her age. The remains will be brought to Philadelphia and buried at Woodland Cemetery.

Mrs. Dreer was born in Reading, Pa., September 27, 1827, where she was married June 22, 1847, and went to Philadelphia to live. She was descended from Puritan and German stock, inheriting their sturdiest qualities. She was deeply religious and patriotic. Notwithstanding the arduous duties connected with a large family, she found time for church affairs and charities. During the Civil War she was a constant visitor to the Satterlee Hospital, West Philadelphia, and opened her house to receive convalescent soldiers. She was a prominent member of the Sanitary Commission, having charge of the horticultural department at the great fair in 1864. The following year she went as delegate to the Chicago Fair. She was active in the building of the Northminster Presbyterian Church and Horticultural Hall, was a manager of the first Young Women's Christian Association, the Presbyterian Home for Aged Women and various other charitable organizations of Philadelphia. In 1888 she visited California, returning there two years later to live in Pasadena. Mrs. Dreer is survived by four daughters and one son.

Rose Society, resulting in the proposition to publish a periodical which shall meet this requirement. We presume the commercial man is already well supplied along this line.

The Rose Society cannot in justice to itself limit or restrict either its scope, operations, or membership. Such a narrow-minded view would, in our opinion, be suicidal. Open the doors wide. So shape your work that every phase of rose culture will be entered to and advanced by your operations, and strive to have the membership of the American Rose Society fully representative of the rose interests of the United States—as it should surely be.

BOOKS RECEIVED.

PEONY MANUAL, Second Edition. By C. S. Harrison, York, Neb. Paper, Price 25c.

In this the second edition of the Peony Manual Mr. Harrison has entirely revamped the contents, besides having drawn liberally from the literature on the peony appearing since the first edition was issued, thus adding considerably to the value of the booklet. In quoting from The Florists' Exchange the author has inadvertently, we presume, given credit to another trade paper for the information he publishes concerning the "Twenty-four Best Sorts." The herbaceous varieties of peonies have been found hardy in South Dakota and as far north as Manitoba; and Mr. Harrison says they are "like the Rocky Mountain burro that bears any amount of misuse or neglect, and yet patiently plods along." A long list of the leading varieties is furnished, with the names of the originators where known, and the date of introduction. Speaking of Lady Alexandra Duff, the author characterizes it as "Kelway's myth;" and he quotes E. J. Shaylor of Massachusetts as saying that he is "led to the conclusion that there is no such peony as Lady Alexandra Duff or Lady A. McDuff, as it was first called. It has been, probably, a re-naming of an old French variety from the very beginning." Mr. Harrison finds the Japanese peonies rather disappointing: "their names are yet a jumble of confusion. They bear no comparison with the chionensis."

That the author is an enthusiast on the subject of the peony is evidenced by his glowing account of the Boston show last year, and his optimism concerning the future of this now popular class of plants. He writes in what may be termed a conversational style, and is not slow to censure, by name, firms guilty of flagrant objectionable practices in their dealings. Notwithstanding the promiscuous presentation of the matter furnished, there is a host of good, solid information contained in Mr. Harrison's little book.

PUBLICATIONS RECEIVED.

THE DAHLIA NEWS. Issued monthly by The New England Dahlia Society, Maurice Fuld, Secretary, 5 Union street, Boston, Mass. 4 pp.

We have received Volume 1 Number 1 of this publication, which is the organ of the recently organized New England Dahlia Society. It contains an announcement by Secretary Fuld as to the aims and objects of the society, list of officers and members, the latter already numbering 113; an interesting and informative article on "Field Roots vs. Pot Roots vs. Green Plants," by Wm. F. Turner, a dahlia specialist of New Bedford, Mass. and a page of dahlia advertisements. The society plans to give all the dahlia news of interest in future numbers of the periodical.

We commend the procedure of the New England Dahlia Society in the issuance of this publication, a feature worthy of adoption by other special organizations catering to a general clientage. The following quotation from Mr. Fuld's opening announcement is worthy of consideration: "Many horticultural societies furthering the interests of but one flower are now in existence in this country; their progress has been extremely slow and their accomplishments consequently few. This has been due largely to a lack of originality in creating a popular interest for their respective favorites," etc.

The Green (?) Carnation.

Editor Florists' Exchange:

I have just noticed in two of the recent numbers of The Florists' Exchange a protest against the degrading practice of dyeing white carnations green. I have often wished when short of white flowers for funeral work and could not procure them, I could turn other colors into white; but never had a thought, nor could I understand how a white carnation by this process could be made to symbolize the emblem of Ireland, the shamrock, or St. Patrick's important mission as representing the Trinity. I wish to add my testimony against it, with J. I. Donlan, also D. M.

J. BEBBINGTON.

Azalea Culture in Belgium.

In the course of his remarks on a recent trip to Europe, William Kleinheinz, gardener to Mrs. P. A. B. Widener, Ogontz, Pa., gave the members of the Pennsylvania Horticultural Society the following account of the method of azalea cultivation in Belgium:

"For grafting, the pink *Azalea indica* is used. The grafts are propagated by cuttings from December 1, grown for a year in small pots to single stems. They will make a growth of from 10 to 18 inches in the season. After grafting in December the plants are plunged in a propagating bed with sufficient bottom heat, and close to the glass, until they begin to grow vigorously, after which they are removed to a suitable house. In Spring, as soon as the weather is safe, the young plants are set out in beds, where they are allowed to remain until Fall. At this time the young plants, as well as the old ones not sold, are lifted and placed on benches in shaded houses. As soon as outside work is over, the azalea grower starts in to remove all the flower buds and to trim the plants into shape. The plants are either potted up or planted out in benches as close as possible, and are kept there all Winter in a temperature a trifle above the freezing point. When the weather again moderates they are planted out in the open ground, in beds about five or six feet wide. Of these plants, the strongest are sold in the Fall, according to the sizes wanted, and the remainder go through the course of indoor treatment as described. To describe the rich, black soil with which the Belgian azalea grower is favored would be to waste your time—every gardener knows what a wonderful, rich soil it is."

Mr. Kleinheinz also spoke enthusiastically of the Sander establishment at Bruges, mentioning among the new things seen there *Cypripedium Curtisii nobiliss.*, the sepals and petals of which much resemble those of *Cypripedium Lawrenceanum*, the labellum being dark red. Also a new seedling croton of the type of *Craigii*, but with larger foliage and of a more vigorous growth.

Hybridizing Azaleas.

Much interest was shown by European cultivators in North American azaleas during the first half of the nineteenth century, and considerable numbers of hybrid seedlings were raised, many of which received semi-scientific names, indicating their colors or special cultural qualities. *Azalea nudiflora*, the common "dwarf honeysuckle," or Pinxter flower of eastern woodlands, has given the greatest number, while *A. calendulacea*, the Flame flower of the Allegheny Mountains, comes next. The fragrant or swamp azalea, *A. viscosa*, has also been quite fruitful in varieties, certain of which, we are informed, are still much used as stocks on which to graft the finer hybrids of other species. While these old varieties of our native azaleas are now little cultivated under their original names, they survive, in a measure, in the strain of hardy hybrids collectively known as *A. gandavensis*, as they originated and have long been commercially grown in the vicinity of Ghent, Belgium. The present Ghent azaleas appear to be

Vanda Sanderiana

As Flowered in Missouri Botanical Garden

dilute hybrids of *nudiflora*, *calendulacea* and to a smaller extent, with the oriental species *A. pontica* and *A. sinensis*. There are single and double flowered varieties, ranging in color from cream white through pink, rose and crimson to blood red; many with yellow and orange markings. *Viscosa floribunda* is pure white, fragrant and, of course, takes its character from our Summer blooming swamp species. There is little trace in the Ghent azaleas that have reached this country of the influence of the California species, *A. occidentalis*, of the tree azalea of the eastern uplands, *A. arborescens*, nor of the more recently discovered pink azalea of the Carolina mountains, *A. Vaseyi*. Strangest of all there is no indication of the influence of the *Rhodora*, *A. canadensis*, though this very distinct eastern species has been known in Europe since 1767, and crosses have been effected between it and one or two of the hardy evergreen rhododendrons.

Present European interest appears to run toward the breeding and propagation of the tender greenhouse kinds, chiefly seedlings of the very variable *A. indica*. They are grown in immense quantity in the rich, moist lands of Belgium and Holland, and form an important article of export to other countries, where they are extensively used for conservatory decoration and for Easter blooming. Some very good hardy forms of the Indian azalea have originated in Japan, where this charming plant is much appreciated, and are being increasingly planted in this country. The variety known as *amœna*, with profuse rose-purple blooms, is now seen everywhere.

Hiodegiri is a more recently imported form of *amœna*, with bright red flowers, apparently as hardy and prolific as the type. Other varieties, apparently cross-bred with various oriental species, have large flowers in many shades of cream, rose and purple. They bloom late and are sometimes unfavorably affected by our hot sun, but fairly hardy as regards cold after becoming well established. These azaleas are described as rhododendrons by modern botanists, but the former name is generally used horticulturally.

Breeding Native Species.

Systematic breeding of our native species, both together and with the Old World forms, has been under way on the Rural Grounds for the past six years. While we may not produce anything superior, in a decorative way, to those already known abroad, it appears possible to select seedlings better adapted for our comparatively dry climate than those developed under the humid conditions of Japan or the Netherlands of Europe. The most showy imported varieties other than *amœna*, which is ever a delight when properly grown, are sold under the name of *Azalea mollis*, a synonym for *A. sinensis*, and bear profuse clusters of large red, yellow and orange blooms in May. Nothing more dazingly effective can be imagined than well-flowered *mollis* varieties for a year or two after planting, but the bushes seldom increase in size in this country, even under the best of care, and rapidly fall off in bloom after the first outburst. Seedlings are quite easily grown and bloom well for a few seasons, but have little permanency, soon beginning to decline. By hybridizing selected *mollis* varieties with our Pinxter flower, *A. viscosa* and *A. arborescens*, we have produced a race of vigorous and extremely floriferous half-breeds with rose, salmon and creamy white flowers, that are so well adapted to our climate that they appear inclined to grow into fairly large shrubs. Being nearly sterile they do not exhaust themselves by seed production, but set their bloom buds so thickly that they are covered in May and early in June with veritable wreaths of bloom. Those having *nudiflora* for the pollen parent are most showy, some having a fair development of foliage before the flowers open. The seedlings of *viscosa* and *arborescens* are less striking, the colors being quite pale, but have the advantage of pleasing fragrance and more foliage at flowering time. Our hybrids of the *mollis* section do not compete in brilliancy of color with the foreign kinds, but have their own distinct beauty and refinement. We have made no attempt to propagate these seedlings, and doubt if it would be commercially practicable under present conditions of nursery labor to do so in this country. It would doubtless be easier to continue their production by repeating the original hybridization. Many other crosses have been made with Ghent varieties, and with the hardy kinds of Japanese origin. These later seedlings have not yet bloomed, but we find them far more thrifty than direct hybrids between native species. Seedlings of *occidentalis* and *Vaseyi* are good growers, and the latter are particularly noticeable for the extremely rich and brilliant Autumn colors of their foliage. All appear hardy if heaving by frosts can be avoided until the young plants are established. We hope to continue this work through successive generations where the hybrids retain their power of seed or pollen production.—Dr. Van Fleet, in Rural New Yorker.

Primula Obconica

Grown for Easter by Wm. Berger, Germantown, Pa.

Vanda Sanderiana.

This magnificent species, native of the Philippines, is undoubtedly the finest of the genus. It was discovered by M. Roebelin, the collector for Messrs. Sander & Sons, St. Albans, England in 1882; having been found growing on trees, its thick fleshy roots hanging down for a considerable distance, enabling it to obtain an abundance of moisture. The flowers are large, varying from 3½ to 5 inches in diameter, and almost flat; the dorsal sepal is of a delicate rose color suffused with white; the lateral two are tawny yellow crossed and re-crossed with prominent sanguineous red veins; petals smaller than the sepals, colored like the dorsal sepal with a tawny blotch spotted with red on the side next to the lateral sepals; lip comparatively small, different from the other species in the absence of a spur; it is usually of a dull tawny yellow streaked with red on the inner side.

The species enjoys a stove temperature, where an abundance of moisture can be obtained. The potting material should consist of sphagnum moss and peat; well drained pots or baskets should be selected. When the plants become old, the stem just beneath the leaves should be bound round with moss, and kept moist to induce it to root, after which it may be severed from the old stem and potted. The old stem will soon start to send out new shoots and form a specimen plant. G. H. P.

this country are doing wonderfully good work, when you consider seriously how they are always hampered and confronted by the specter of practically "no funds."

Secretary Hammond has made the suggestion "that the American Rose Society award its medals to special rose exhibits of various local societies," and goes on to explain how appreciative the Annandale Horticultural Society of Tarrytown, N. Y., was of this great honor. Should the American Rose Society adopt such a course generally, to my mind the stimulus thereby given to rose culture in America would be beyond estimate.

Again, why not allow members of all local societies in good standing to become associate members of the American Rose Society? Again, how would it do to allow such "associate society member" to pay to the American Rose Society an annual due sufficient to cover the cost of such medal or medals?

It would then perhaps be financially fair on both sides—the local society would be honored by the medal award from the official source, and the parent society would be strengthened by whatever influence for good the associate organization might command in its territory.

CLUB AND SOCIETY DOINGS.

NEWPORT HORTICULTURAL SOCIETY.—A regular meeting of this society was held Tuesday evening, President Butterton in the chair. A communication was received from S. G. Harris, Tarrytown, N. Y., offering a premium of \$15 for a collection of roses exhibited by private gardeners of Newport. The offer was accepted with thanks. The schedule of premiums for the June show was approved after some slight alterations. This list includes twenty-five premiums for exhibits by school children, besides three premiums for school gardens. The president was appointed to act as judge of the merits of the school gardens and announce awards. D. M.

THE ELBERON (N. J.) HORTICULTURAL SOCIETY held its regular meeting on March 18, President W. D. Robertson in the chair. A. Greib, superintendent for S. Sachs, gave an address on violets, which was both interesting and instructive.

A. Rickard of New York, and W. F. Ross of Tarrytown were present and made a few remarks.

The American Rose Society's Medals and the Financial Question.

Editor Florists' Exchange:

I have several times re-read, and most seriously and earnestly pondered Mr. Hammond's report as secretary of the American Rose Society. It is what the writer calls a most factful-fool-for-thought reference to the one vital question of the financial needs of every branch of our horticultural work—how can the needed amount of annual funds be raised to properly carry on any given work? Our established horticultural and agricultural societies, as well as the older established florists' clubs of our large cities, do not have the ever present question of "ways and means" before them as a very much alive issue. These well-fixed financially organizations can devote their meetings in any manner that may seem best to their members without the restricting band of the money question. The reverse of this is true of the hundreds of smaller florists' clubs and kindred societies.

I have prefaced the few thoughts I am calling your attention to as above, for this plain truth—I believe that the very smallest horticultural organizations in

I speak of this exchange of financial obligation, as I firmly feel that every society must, to be successful, be absolutely self-sustaining.

Now some will say that this contradicts what I have just so clearly made plain—that the smaller organizations are always cramped for funds, and therefore have none to pay out. But my sincere belief is, that any society or florists' club can well afford to become an associate and corresponding member of such an organization as the American Rose Society. If necessary the expense thereby incurred could be met by a reduction of the local society's prize appropriation. The good that would be accomplished by any local society connecting itself officially with the American Rose Society would be worth any amount of self-denial necessary to accomplish such an honor. The writer earnestly and sincerely trusts that this plan of awarding the medals of the American Rose Society, through the local societies, will be at once put in force. Secretary Hammond's recommendation will appeal to every lover of the rose. M. R. FAXON.

A Correction.

In the paper of Theodore Wirth on Roses for Outdoor Culture, appearing in issue of March 16, page 360, the variety Papa Gontier is given as an H. R., instead of an H. T. rose.

The exhibitors at this meeting were W. D. Robertson, who scored highest with a vase of Cattleya Schroedere; J. Kennedy, a vase of Narcissus Princeps; A. Greib, vase of Violet Princess of Wales; P. Murray, vase of callas; F. Detlinger, vase of Violet La France; A. Bauer, vase of Stock Princess Elizabeth; B. Wyckoff, vase of the grape hyacinth, and H. Wood, a specimen azalea. G. M.

CONNECTICUT HORTICULTURAL SOCIETY.—The regular meeting of this society was held at Hartford, on Friday evening, March 22. Vice-President Hoss in the chair. It was "rose night" and splendid exhibit were tabled. Among the leading exhibitors were: John Coombs, florist, Hartford; Carl Peterson, superintendent of the Whiting greenhouses, West Hartford; N. Nelson, gardener at the Retreat and J. F. Huss, superintendent to J. I. Goodwin. In addition to a large turnout of regular members, there was a good public attendance and much interest was evinced in the fine exhibition.

An animated discussion, ensued on rose culture in general and on the merits of grafted or own root plants in particular. J. F. Huss, Carl Peterson and N. Nelson led the discussion, and as might be expected, the consensus of opinion was in favor of grafted stock. Diplomas were awarded to Messrs. Coombs, Peterson and Nelson, and a certificate of merit to J. F. Huss. A committee was appointed to arrange for a Fall show.

Boston Spring Flower Show.

Never before was such a horticultural exhibition seen in Boston, or in America for that matter, as the Spring show of the Massachusetts Horticultural Society, which was held on March 22, 23 and 24. Of recent years there seems to have been a lack of interest at many of the exhibitions of this old society, but the superiority of the present show over any previous one of its kind demonstrates conclusively that new interest has been awakened and that the flower lovers of to-day can far supersede any of their illustrious progenitors.

The show was simply grand. The halls were all filled. There were hundreds of fine plants and there were many rare species that people had been led to believe the present day gardener did not know how to grow. The magnificent plants of acacias that, with their pleasing color, did so much to make a fine exhibit, brought back to many a gardener olden times when these hardwooded plants used to be in their heyday.

To the commercial grower as well as to the private gardener is due the credit of making this excellent exhibition, for each did much in his line to show wonderfully fine exhibits. I have heard it said several times, and I believe, truly, that Horticultural Hall never before held an exhibition where there were so many fine plants and such a varied assortment of varieties and species.

To the arrangement committee is due much credit for the harmony of color effects throughout; the whole exhibition was very pleasing and showed the splendid taste of those in charge. But to many of the individual

of cyclamen, cinerarias and foliage plants, while on either side were the groups of R. & J. Farquhar & Company and the Harvard Botanical Gardens, already mentioned. A fine group of foliage plants was staged by Edward McMullin; and Hoffman, the Back Bay florist, had a group of Easter plants the arrangement of which was unique. It succeeded in capturing the first prize. Jos. Breck & Sons made a nice exhibit of foliage and Spring flowering plants in oak jardinières; and an excellent group was put up by Wm. Rust, gardener to Dr. C. G. Weld.

T. D. Hatfield, gardener to Mr. Walter Hunnewell, showed some excellent plants of acacias, and Wm. Thatcher, gardener to Mrs. J. L. Gardner, captured Julius Rehrs Company special prize for collection of hardwooded plants. The collection contained among others such fine old-fashioned subjects as *Eriostemon intermedius*, *Chorizema ilicifolia*, *Rouletia gratissima* and many fine acacias in variety.

James Garthley, gardener to Mr. H. H. Rogers, exhibited a fine collection of Spring flowering and bulbous plants. One of the features of the exhibition was the hybrid amaryllis from W. C. Ritchie, gardener to Mrs. J. Montgomery Sears. J. R. Clarke & Company of West Roxbury exhibited a collection of hardy plants in pots; and a fine lot of group of schizanthus was put up by Wm. Thatcher.

M. H. Walsh of Woods Hole, Mass., displayed some excellent plants of his Rambler roses including the varieties *Celestia*, *Jucinda*, *Babette*, *Hiawatha*, *Arcadia*, *Lady Gay* and *Milky Way*. The latter variety received

State; William Sim for new violet, Boston; James Crosbie, gardener to Mrs. J. W. Tufts, for superior cultivation of *Dendrobium nobile*; J. E. Rothwell for *Dendrobium nobile virginale*; and to Thos. Watt for superior cultivation of azaleas.

Silver medals were awarded to R. & J. Farquhar & plants; William Sim for superior cultivation of Winter-Company for superior group of Spring bulbs and flowering sweet peas; and to Geo. M. Anderson, gardener to Mr. J. H. Brooks, for a display of cyclamen. This latter exhibit was exceptionally fine; the group contained many plants all well grown and flowered and of a very even size.

Honorable mention was awarded to Joseph Breck & Son, for display of oak jardinières and collection of bulbs; W. W. Rawson & Company for bed of Spring bulbs and plants; H. A. Jahn, seedling carnations; Mrs. E. S. Grew, vase of Farquhar's annual pink lupin; Wm. Whitman, plant of *Cattleya Schroedera*; R. & J. Farquhar & Company, *Begonia Gloire de Lorraine* superba; Julius Rehrs Company, new azalea *Julius Rehrs*.

Votes of thanks were given to R. & J. Farquhar & Company, for superior group of Spring bulbs and plants; C. S. Sargent, agave in bloom; F. Heeremans, vase of gardenias; Dr. C. G. Weld, rhododendron *Mary Weld*.

In the general schedule for plants the prizes for azaleas went to Mr. Wm. Whitman (Martin Sullivan, gardener), first; The Fahyan Estate (James Stuart, gardener), second; and E. W. Breed, third. For pair of palms Mrs. Frederic Ayer (Geo. Page, gardener), was first and Wm. Whitman, second.

Mrs. Ayer took the prize for ericas. For orchids Wm. Whitman was first; J. E. Rothwell second, and James Stuart third. For specimen plant of acacia Mrs. Ayer was first and James Stuart second. For twelve plants of acacias Thos. Roland was first with a superb lot of plants and Mrs. Frederic Ayer second. M. H. Walsh took all the prizes for Rambler roses including two firsts, one second, and a silver medal. The cyclamen exhibits were equally up to the high standard of those shown in Boston. Dr. C. G. Weld (Wm. Rust, gardener), was first for best 10 plants; and James Stuart first for best group. Cinerarias were exceptionally fine and although the plants were not as large as formerly they had a fine finish, especially those of the *stellata* type. There was a large lot of exhibitors of bulbous plants, the principal prize winners being Wm. Whitman (Martin Sullivan, gardener), who had extra fine lots of plants; Mrs. A. W. Blake (J. L. Smith, gardener), and Mrs. J. L. Gardner (Wm. Thatcher, gardener).

In the cut flower classes the Waban Conservatories captured first for American Beauty, Bride and Bridesmaid roses. W. H. Elliott was first for Richmond and Killarney, exhibiting superb vases of each variety. The Exeter Rose Conservatories were second in each of these last named classes.

In the carnation classes, for vase of 100 blooms Albert Roper was first with Bay State; F. R. Pierson Company second with Winsor. Other prize winners for carnations were Wilford Wheeler, who took two firsts; S. J. Goddard, three firsts and one second; E. A. Wood, one first; H. A. Stevens, one first; C. S. Strout, one second; and Backer & Company, three seconds and one third.

The exhibitors of violets were Lanis Smith, N. F. Comley, E. Bingham and H. F. Woods, each capturing several prizes.

The exhibition was very well patronized, the attendance on Saturday and Sunday being above the average. Music was furnished in excellent style by a young ladies' orchestra, which recently performed at the automobile show, where it also proved an attraction.

J. W. DUNCAN.

Pennsylvania Horticultural Society's Spring Show.

The annual Spring show opened in Horticultural Hall, Broad street Philadelphia, on Tuesday. The date of the show was a bad one for the trade, but was fixed to suit the private gardeners, who are the chief exhibitors.

The display of hyacinths and tulips was far ahead of anything previously seen here. The chief exhibitors in hyacinths were Mrs. R. J. C. Walker (John McClary, gardener); Mr. P. A. B. Widener (Wm. Kleinheinz, gardener); Mr. James W. Paul, Jr. (Joseph Hurley, gardener); and Mr. John W. Pepper (Wm. Robertson, gardener). They secured prizes in about the order given. The exhibits were so good that a selection of the best is difficult. Among the newest and best single hyacinths were William I, dark red; Lady Derby, blush pink; and the following good pinks: Kohinoor, Jacques, Morens and *Rosea maxima*. The best whites were La Grandesse and *I'Innocence*; in blues *Mauve Queen*, *Potgeiter*, *King of the Blues*, and *Eochantress*. The best double hyacinths were *Kastanjabloom*, pink; *La Grandesse*, white; and *General Koehler*, blue.

Group of Spring Flowers at Boston Show

Exhibited by R. & J. Farquhar & Co.

exhibitors is due equal credit for the excellent manner in which the exhibits were staged. As an example of this the splendid color arrangement of the group of Spring flowering plants of R. & J. Farquhar & Company was perhaps never equaled at any of the exhibitions, and at once showed that it had received the careful forethought and critical study of Mr. Farquhar. The group from the Botanical Gardens of Harvard University showed also much taste in arrangement, and at once proclaimed the excellent artistic taste of Mr. Cameron.

On entering the hall the first pleasing sight to the visitor was a bed of tulips and Spring flowering plants put up by W. W. Rawson & Company and tastefully arranged by Mr. Fuld. The same exhibitor had also a hardy Spring border effect in the main hall which was very pleasing and educational. It contained many fine varieties of narcissus, tulips, crocus, violets, primroses, etc.

On entering the loggia a very pleasing group of plants, bordered by a magnificent lot of tulips, was to be noticed, exhibited by R. & J. Farquhar & Company. The varieties included *Sir Thomas Lipton*, *Keizerkroon Kroon*, *D'Or* and *Tulipa Fosteriana*, a beautiful new variety from the Caucasus.

In the center of the main hall were excellent groups

a first-class certificate, the others having been previously given awards.

Julius Rehrs Company, Rutherford, N. J., made quite an exhibit of foliage plants of merit; and Lager & Hurrell, Summit, N. J., exhibited a collection of orchids in many fine varieties. Emil Johannsson, gardener to J. E. Rothwell, staged two hundred bottles of cut orchids in 125 varieties, including some fine spikes of *Phalaenopsis analibis Rimestadiana*, and *Cattleya luminosa* of excellent colorings. This lot captured the Appleton silver gilt medal.

One of the finest plants in the hall was a new hybrid Himalayan rhododendron, *Mary Weld*, a seedling raised some years ago by Kenneth Fiulayson and exhibited by Wm. Rust. It received the award of first-class certificate. Another comparatively new plant was *Primula Kewensis*, exhibited by Thos. Coles, gardener to General S. M. Weld, which also received a first-class certificate.

Other first-class certificates were awarded to George Page, gardener to Mrs. Frederic Ayer for superior cultivation of *Marguerite Queen Alexandra*; Thos. Roland for superior cultivation of genistas, which by the way were quite an attraction; Lager & Hurrell for *Calanthe vestita igneo-oculata gigantea*; Peter Fisher for carnation *Beacon*; Albert Roper for carnation *Bay*

In tulips the most noticeable were Pink Beauty, Joost Von Vondel, white; Hobbema, salmon pink shaded lilac, a very fine variety; Mon. Fresor, yellow and Prince of Austria. Toreador and Salvator rosea were the best of the double tulips.

Glory of Loden is a new narcissus of the trumpet class and a very good one—clear yellow; it was much admired.

The geraniums exhibited by Mr. John W. Pepper were, as usual, very good, many plants being four feet in diameter. Among the most striking varieties were Mary Benton, white; Mme. Chas. Molin, light pink; and Alphonse Ricard, semi-double. Milfield Rival, exhibited by Mr. James W. Paul, Jr., took first for specimen geranium; the plant was five feet in diameter, well covered with flowers of a bright pink with light eye.

The Cineraria stellata plants from Mr. C. B. Newbold were a great feature of the show, several being four to five feet in diameter and of good assortment as to colors.

Nephrolepis Whitmanii, in a 14-inch pan, from Mr. James W. Paul, Jr., was a grand plant; it had a spread of four feet and all the fronds were perfect.

Deutzia Lemoinei was largely exhibited; it is quite an advance over old varieties. Some of the plants were three feet high and as much through.

The lilies were very good this year, plants more even and better flowered. Spiraeas also were very good; Superba and Gladstone were the chief varieties.

The new rhododendron Fink Pearl is a great acquisition to forcing plants—a delicate blush pink and a very large truss. Every florist should grow this next year.

In the commercial classes, John E. Haines, Bethlehem, Pa., staged his new carnations Imperial and Pink Imperial and John E. Haines—all very good flowers. W. A. Manda, South Orange, N. J., showed two carnations; seedling Number 1, a very nice light pink, and seedling Number 2, a good white; he also staged flowers of Passiflora princeps and some flowers of the Cherokee rose.

One of the features of the exhibition were beds of hyacinths and tulips forming the design of the original American flag. The first prize bed from Mr. P. A. B. Widener (Wm. Kleinheinz, gardener), was very well done, and of good quality. The exhibits of hyacinths and tulips were so good and competition so keen, that the judges had much difficulty in making their decisions. The judges said it was the best exhibit of bulbous stock that had ever come before them. DAVID RUST.

A Few Notes on Jamaica, W. I.

BY WILLIAM FALCONER.

The recent earthquake calamity has brought Jamaica before the eyes of the whole civilized world, but so far as I have seen very little has been said about the natural conditions and vegetation of the island, and this being so, as I spent some busy weeks there a few years ago, maybe a note or two horticulturally on this most lovely West Indian land may interest a few of your readers.

Jamaica lies about 90 miles south of Cuba and is somewhat turtle-shaped, and about 144 miles long by nearly 50 miles wide; it has a surface area of

Silver Medal Group of Cyclamen at Boston Show.

Exhibited by George M. Anderson.

over 4,200 square miles, equal to over 2,692,500 acres. It is familiarly termed "The Gem of the Antilles," and well so, for it is one of the most beautiful spots on earth. Near the sea and here and there inland near the rivers there is a good deal of comparatively level land, but most of the interior is exceedingly mountainous. Blue Mountain peak is 7,423 feet above sea level and this is higher than any mountain peak on the North American continent east of the Mississippi River.

The south side of Jamaica—where Kingston is—is somewhat hot and dry; the north side is more salubrious and moist, the rainfall there being 100 to 130 inches a year. Jamaica is thoroughly English, the English language is the only one spoken and the money is £. s. d. The island is densely populated; about 720,000 people live there. Of these 15,000 are said to be true whites, 12,000 or 15,000 East Indian coolies, and 690,000 colored people varying from darkest Africa to white-skinned, blue-eyed hybrids. The color line as we know it is unheeded, miscegenation troubles no one; in churches, at balls and parties colored and white appear on equal footing. Some 67 per cent. of the children born in Jamaica are illegitimate!

The whole island is one of extravagant beauty and the tropical luxuriance of the north slopes is only excelled by Trinidad. At the same time everywhere I was struck by the absence of big forest trees. The ceiba was the greatest and it hugged the lowlands and as individuals mostly. Along the roadsides the bread fruit abounded and it is the most tropical looking tree in the West Indies; but it is not native there, it comes from the South Sea Islands. Next is the Akee apple from West Africa and the mango from India. The mangoes are naturalized everywhere. Common also are star apple trees, calabash, poinciana, mahoes, rain tree, Kola trumpet tree (spathodia), immortelle tree (Erythrina umbrosa), cedar (Cedrela odorata), etc. I saw enormous bamboos in many places, notably at

Dog Walk, but little use is made of them, the wood is so perishable.

The Principal Gardens.

Private gardens are not pretentious, nor is there much attempt at tasteful effect. Spottiness prevails, and too often the plants are allowed a choking go-as-you-please disposition. This is disappointing in a land of infinite variety.

THE PARADE GARDEN, or public park, at Kingston is fairly well shaded with trees, but it lacks the refinement of our American city parks.

THE KING'S HOUSE GARIBENS around the governor's residence a few miles out from Kingston are well kept and contain many fine trees and a large assortment of shrubs. Here I saw Pothos argyrea, a variegated-leaved vine, with foliage as big as large rhubarb leaves and running up tree stems 50 feet high. An avenue of rubber trees (Ficus benjamina) was very striking. The trees were small-leaved, evergreen, and had broad, spreading heads of arching branches glorying in the blazing sun. The genus Ficus revels in sunshine. Some may recall the tiny creeping Ficus repens that luxuriates with the ferns in the shady parts of our greenhouses, but on a stone fence at Director Fawcett's home in Jamaica this little creeper, unshaded in any way, in happiest mood was clothing the stones in evergreen.

HOPE GARDENS, five miles from Kingston, is the chief botanical garden and institution of the West Indies. It is conducted both as a botanical and experiment garden, and ornamental and economic plants are propagated for sale and distribution. It contains a great variety of plants, and a day spent there is an indelible education to a botanist or horticulturist. Here I find most every economical tropical plant imaginable in fruit or maturity, from the ginger to the pineapple and nutmeg, and the gigantic teak-wood tree. The Liberian coffee, a magnificent evergreen tree, was laden with large, showy scarlet berries; it was one of the prettiest fruited plants I ever saw.

THE BOTANICAL GARDENS AT CASTLETON, 19 miles East of Kingston contain the finest collection of mature palms in the West Indies, also many economic plants. They comprise ten acres. Situated by the Wag Water river and on an uneven foothill between high hills, its climate is sultry and oppressive and it is said to be a perfect hotbed of fever. When I was there the superintendent was absent on a six months' sick leave, and looking out from his dining room window I was shown a mound on a hillock a little way off; it was the grave of his predecessor. Here I saw the Amherstia nobilis in bloom. It is a bush tree from the East Indies and one of the loveliest gems in the Universe. Had there been a duplicate in Jamaica, east what it might, it would have moved to the Phipps conservatories at Pittsburg; but there wasn't so far as I could hear. At Bath, the east end of the island, is an old botanical garden containing a collection of palms and tropical trees.

THE HILL OR CINCHONA GARDENS, at an elevation of 4,900 feet, are on the slope of the Blue Mountains and a little over 20 miles back from Kingston. Here years ago Peruvian bark was cultivated, also tea and many other economic plants. Now, if I mistake not, the garden and its buildings are occupied by the New York Botanical Garden people. Here I found lots of our northern plants at home, tea roses blooming beautifully, the tree tomato laden with fruit, and Dahlia imperialis run wild and are a shower of blossoms. Shell flower and yellow and white hedychiuns were as happy as in a swamp in Florida, and young Chinese pines, silk oak, gum trees, etc., gave promise of arboreal vigor. But for 10 or 12 miles the only way of getting up here is on pony or mule back and over narrow mountain trails.

(To be continued.)

Boston Spring Show—View in Main Hall

FOR THE RETAILER

Seen in the New York Stores.

There never was greater variety or better quality displayed by the retail florist than is shown this Easter. Plants were never before in better shape, and the manner in which they are presented should please the most fastidious customer. The almost tropical weather of last Saturday was the cause of some uneasiness with both the grower and retailer, but everything was delivered in good order.

The hawthorn, double pink and white, has proved itself a splendid Easter novelty, and the plants were especially good this season. They were large and well furnished with flowers. The manner of displaying them varied at the different stores. Some were shown in baskets made of willow twigs in which the catkins were allowed to remain on the branches; they presented a rustic appearance that was particularly pleasing.

There was also a very fine new hybrid rhododendron shown at one or two stores, the flowers being unusually large and of a beautiful shade of delicate pink, growing in immense clusters. The plants, although small, were unusually well flowered for a rhododendron and it should prove a splendid addition. One store handled over two hundred of this plant, with splendid results.

Ericas were not as plentiful as in former years; they are expensive plants and have been dropped by many growers on that account. I saw a very pretty basket in a Fifth avenue store; it was a long window box affair, made of gilded bamboo, was filled with plants of Erica Wilmoreana and small plants of Adiantum Farleyense, tied with a flowered pink ribbon. The yellow variety, Erica Cavendishii, is one of the finest of the type, but is always scarce and very few plants of it were seen.

A distinct novelty was a basket, consisting of the "bird of paradise" flower, *Strelitzia regina*; its wonderfully formed blue and orange flowers were the center of attraction. It was used in combination with *Maranta rosea picta*.

Mahernia (*Hermannia*), although grown extensively in some localities, is seldom seen in this city. The few plants shown this Easter, however, sold very readily. Its common or garden name "honeybell" describes it perfectly; and its pretty, pale yellow flowers, with their delicious fragrance, make it a ready seller. Plants

of mahernia in basket form are most attractive, owing to its pendant habit. It is to be hoped we shall see it more extensively grown next season.

Small handle baskets constructed of willow, large enough for one pot of violets, were an innovation, and certainly the most attractive small commodity shown anywhere.

The new hardy, climbing Rambler roses have fully established themselves as Easter plants, and the old favorite Crimson Rambler was as much in evidence as ever, and sold quite as readily. The pink varieties Dorothy Perkins and Lady Gay, were quite scarce, owing doubtless to the dull weather earlier in the season, many of them coming blind on that account.

Flowering Plants in Dry Goods Stores.

It is nothing new for the dry goods stores to handle growing plants, but it has usually been in competition with the florist. What I now refer to are the very excellent displays seen in the windows of the leading houses of this city. The plants were not for sale, but used in conjunction with millinery and artificial flowers. A store recently opened on Thirty-fourth street had a magnificent display—large plants of *Cibotium Schiedeii* were in the background; groups of *Azalea Vervaeana* and the new dwarf pink hydrangea built up in pyramids filled in with *Neprolepis Whitmanii* were most effective. A rich green velvet covered the floor, and formed the background, bringing out the colors. The idea seems a good one to me and should do much to advertise the business, besides being another outlet for the growers' surplus. The plants displayed were all first-class.

Several of the Fifth avenue millinery establishments have taken advantage of an early Easter to have their Spring openings this week, and most of their displays are in keeping with the season. One firm that has always used American Beauty roses displayed a large jardiniere and pedestal filled with Easter lilies in pots, the pedestal being wound with strings of asparagus. Another store used white lilac and lilies, with broad green ribbon in bows and loops. A great amount of money is expended annually for this purpose and it should certainly receive every encouragement from the retail florist.

D. RAYBUN.

A Basketful of Winsor Carnations.

There is much pleasure to be had in looking at or even writing about a beautiful flower, and such is Carnation Winsor. We have previously written at length regarding the culture and productiveness of this grand new variety; but we prefer to consider it from the artistic viewpoint and in doing so, memory wanders back to the days of the early eighties, when that charming old variety Grace Wilder reigned supreme at every fashionable function at those old Delmonico decorations by Klunder, where ten thousand carnations were used at each event. Why don't we see such these ultra-wealthy days?

Winsor brings vividly to our mind the magnificent pink decorations of bygone days. Its beautiful color seems to be the reincarnation of all that was best and most beautiful in them. True it is that the varieties Grace Wilder and William Scott were small in size compared with those which have appeared since, but they had the colors which will never fade in memory, and which in those days brought wealth to growers and dealers. Scott's unprecedented Wilder and Winsor comes to fill the gaps made by the disappearance of them both and, besides, represents the advancement of the times.

The illustration shows a simple old-fashioned, green willow basket filled with the lovely colored blooms of Winsor carnation. The basket was brought on from New York to Toronto and made up at the recent carnation show there. We had a two-fold object in view in all our decorative work at Toronto—first, to demonstrate the uses of carnations with their own foliage exclusively with the object of encouraging and popularizing

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 23th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Avenue. My facilities for delivering flowers for any and all occasions are unequalled. I can give prompt service to steamer and theatre trade. Telegraphic orders solicited.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonal varieties of flowers always on hand. Wire me your orders.

Washington, D. C.

GUDE BEOS, 1214 F Street, N. W. We excel in high-class flowers and design work of every description; quick service, reasonable charges and liberal treatment have placed us on top. Try us.

Milwaukee, Wis.

THE C. C. POLLWORTH CO. Wholesale Florists, will take care of all your Retail orders for the delivery of flowers anywhere in Wisconsin.

Denver, Colo.

THE PARK FLOREAL CO., 1706 Broadway. J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Cincinnati, O.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dallas, Texas.

LANG, THE FLOREST, the largest flower store in the South, Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Texas, Louisiana. Mail and telegraphic orders solicited.

such; and, secondly, to illustrate the adaptability to all purposes and the magnetic color of Winsor. There is not a wire or any kind of artificial support used on stem or flower in the make-up of this basket, except a few wires employed in tying the stems to the handle of the basket. The most of the blooms are in water. The basket stood three and a half feet high and had nearly a 3-foot spread when made up with two hundred and fifty Winsors.

Though it is often necessary to use up a ribbon mill and miscellaneous factories to manufacture some designs or demonstrate cumbersome ideas, we ourselves prefer to encourage the cultivation and love of the natural flower, undespoiled by superfluities. Our experience when making up this basket at the Toronto carnation show, where we were surrounded by a hundred interested and interesting people, who asked numerous questions, convinces us that competitions or demonstrations by floral artists at shows would be most interesting to the public and do much good to all concerned. By competition we mean that a certain amount of the same material be given to each competitor, and the design be made up before the public. Then again, many good artists may be found in any city who would volunteer to give lessons to the public on the uses and arranging of flowers and foliage.

J. IVERA DONLAN.

TWO NEW AZALEAS.—Charles Pynaert describes in *Revue de L'Horticulture Belge et Etrangere* two new varieties of *Azalea indica* which have been secured by Dr. G. D'Hooghe, of Ghent, Belgium. One named *D'Hoogheana* is a sport of the variety *Luna*, and is said to differ in advance of *Vervaeana*, to which it will prove a formidable rival. The flower is large, double, having a fiery rose center with a large white border. The other variety is a greatly improved *Deutsche Perle*, having a much larger flower, and has been named *Perle de Loochristy*.

Basket of Carnation Winsor.

Exhibited by F. R. Pierson Company at Toronto Show of American Carnation Society.

ASPARAGUS

Robustus, best for pots, pans and vases. Sprongerl, extra like stock. Plumosos, supply limited. \$6.00 per 100, well worth eight or ten. Send ten cents for sample.

ALBERT M. HERR, Lancaster, Pa.

Table with columns for GERANIUMS and CANNAS, listing various varieties and prices per 100.

JOS. H. CUNNINGHAM, Delaware, O.

Cyclamen Splendens Giganteum Hybrids

This strain has no equal or better, in five true colors, including fringed varieties, twice transplanted from flats \$3.00 per 100. \$25.00 per 1000. From 2 1/2 in. pots \$5.00 per 100, \$45.00 per 1000.

Asparagus Plumosus Nanus

From 2 1/2 in. pots \$2.50, from 3 in. pots \$4.00, from 3 1/2 in. pots \$8.00 per 100.

Cannas

Started from Sandhed in variety as McKinley, Queen Charlotte, Florence Vaughan, Chicago, Papa, Egandale, J. D. Cabos, Alphonse Bouvier good plants \$3.00 per 100 \$25.00 per 1000. Satisfaction Guaranteed.

Trade Notes. The beginning of the week before Easter has brought us the sort of weather conditions that suit the florists' trade to perfection. Nice, warm days, too warm for a starter of Spring, with the thermometer up to the eighties, give the plantsmen an opportunity to display their stock, and there is a good lot of it everywhere. Shipping trade has been very brisk and the small sale of plants was satisfactory. The usual varieties, such as azaleas, roses, hydrangeas and bulbous stock, are sold at prices the same as usual for Easter. Lily plants are scarce; cut blooms will be more abundant than was expected at prices from 12c. up, but good ones will run close to 20c. Roses and carnations promise well and will be the principal flowers handled outside of bulbous stock, which is very plentiful.

Trade the past week might have been better; flowers were too plentiful and at times stock sold cheap—roses at from 35c. to 50c. per dozen, and violets were sold very low, even in the stores. Almost all the churches, regardless of denomination observed Palm Sunday, using many plants, more than usual, but very few cut flowers. The prospects for a good Easter trade are bright; all that is wanted is good, warm weather.

J. Jones has opened a store on Wood street for the sale of plants and cut flowers over Easter, and is making a good show. Wood street in that locality should be a good place for a regular florist's stand, one of the best in the city without a doubt, although the rents are rather high.

John Bader has made his appearance in the Pittsburg market with a good lot of stock and is doing a brisk retail and wholesale business.

L. I. Neff, Sixth street, will make his regular Easter display this week and has fine stock of his own growing.

The usual display in the park conservatories of both cities promises to be better than ever this Easter.

E. C. REINEMAN.

Cincinnati, O.

News Notes.

The Spring number of The Florists' Exchange is the best that you have issued for a long time.

The past week has been very much on the quiet side; lots of stock and little demand.

The writer was in Grand Rapids, Mich., last Thursday, and called upon some of the trade there. They will have a fine lot of stock for Easter, especially Henry Smith. Crabb & Hunter might be in better shape, but Mr. Crabb is just recovering from pneumonia and was not able to look after things at the critical moment.

Eli Cross was busy building another 300-foot American Beauty house. He has discarded most of his carnations, and cucumbers and tomatoes have taken their place. When a crop fails to make good with Eli, out it goes and something else takes its place at once.

At Kalamazoo I called on Samuel Batson, and found his specialties in good shape for Easter. Mrs. Batson was quite sick with La Grippe. I did not have time to call on the larger growers at this place.

Once more the Ohio River is getting back to its banks, and we hope it will

FERNS A SPECIALTY

Please notice the big reductions. Cibotium Schiedel, the king of Ferns, well-known for its unequalled beauty and great keeping qualities, very easily grown:

3 in. pots \$20.00 per 100; 4 in. pots \$40.00 per 100;

5 " " " 60.00 " 7 " " 1.70 each.

10 " " " Large specimen, \$5.00 each.

Adiantum Rhodophyllum, 4 in., \$20.00.

Assorted ferns for jardinières, in all the leading varieties, \$3.00 per 100, \$25.00 per 1000; 500 at 1000 rate. Fresh Fern Spores, Choice collection in 55 varieties, true to name, including all the best market sorts, 30c. per trade package; \$3.00 per doz.; \$12.00 for the whole collection. Write for list of varieties.

J. F. ANDERSON,

Successor to Anderson & Christensen, SHORT HILLS, N. J.

stay there, as it caused a great amount of inconvenience and monetary loss. The market gardeners are the greatest losers; they have lost all. E. G. GILLET.

Indianapolis Ind.

News Items.

Henry Reiman narrowly averted an accident to his heating plant by arriving at the opportune moment.

Berteriann Brothers Company, A. Wiegand & Sons, Wm. Billingsley and John Reiman have most effective window displays. An eight-foot cross of boxwood and miniature lights, with clusters of lilies, fronted by a window of grass is the attraction in the first mentioned firm's window. Masses of genistas and lilacs, heavily banked on either side, complete the arrangement. Wiegand's window is beautifully filled with novel Easter arrangements. John Reiman shows an attractive window of specimen plants.

Several of the large department stores are this year displaying plant decorations; those of wistaria and other artificial flowers are quite effective and perhaps better adapted for this purpose because imperishable. I. B.

St. Louis, Mo.

News Notes.

We have every reason to believe that the demand for blooming plants this Easter will be greater than last year. All of our local growers have an immense stock of everything in season. J. W. Dunford and A. Jablonsky have about the largest stock of any, and they report that nearly everything is already sold to the local store men. Those nearer to the city—George B. Windler, C. C. Sanders, Chas. Beyer and the Bentzen Floral Company, who also supply the store men with stock—are in good shape to supply any and all demands for extra fine plants. The weather has been almost too warm last week to hold them back, and everything is coming on with a rush.

Mrs. M. S. Vesey, Fort Wayne, Ind., and R. A. McPherson, Litchfield, Ill., were visitors the past week. Mrs. Vesey to look after her Easter business and Mr. McPherson buying a stock of supplies. C. L. Braunsing of C. L. Braunsing & Company, Paducah, Ky., also spent a day here last week, visiting retailers and growers. He reports trade very good all through Lent.

F. H. Weber, Maryland and Boyle avenues, has an extra fine display of Easter blooming stock in cut flowers and plants. His show house is a great attraction in that neighborhood.

Florists who took part in the American Bowling Congress tournament the past week were J. H. Stevens, Chicago; J. J. Beneke, C. A. Kuehn and A. Y. Ellison, St. Louis.

C. Young & Sons Company had one of the most attractive window displays seen on Olive street for some time, in Easter blooming plants; it was a grand sight and attracted a great deal of attention.

Fred. Foster of the Foster Floral Company reports that they will open their new store in time for Easter business, running both places.

Miss Annie Beruhardt, formerly with the Foster Floral Company, is now with Alex. Siegel at Sixth and Washington avenues.

Among the West End florists who had pretty Easter windows the past week were Fred. C. Weber, Ellison Floral Company, Kalish & Sons, Theodore Miller and Miss M. S. Newman.

R. J. Windler and Conrad Bergesterman, on South Grand avenue, report a good trade in blooming plants. These two are among the newest on the South side.

Some of the florist howlers are practicing hard for their match with the Desoto team after Easter. On last Monday night at the Desoto alleys Carl Beyer and Eddie Garland were defeated by George Schriefer and Henry Lorenz in a special two men match. The final scores for the three games were 1,048 and 1,011.

Pot Culture.

Read before the Morris County Gardeners and Florists' Society, Madison, N. J., March 13, 1907, by Wm. Duckham.

I am requested to speak on the method of pot culture only. My remarks will be brief, as I shall only give you my practice for the past eleven years. I do not wish it to be understood that because I have followed pot culture for the above stated time that it is the best, or that it is better than outside or field culture; suffice it to say, I have had fair results, which undoubtedly have led me to continue the practice.

Our cuttings are taken at the usual time, which is as soon as they can be procured after the middle of January, rooted in the usual way, and as soon as rooted are potted into 2 1/2-inch pots, grown along, but not forced, until such time as the pots are filled with roots. They are then repotted into 4 to 4 1/2-inch pots.

Our plants are just being shifted into the above sizes, in which they will remain until time to plant into the bench. I endeavor to have all the plants pinched once before potting into the larger pots, and to have the plants again active and starting a number of growths. Careful watering and attention to the usual requirements are all that is now necessary until final quarters are reached. About the first week in June our plants have been usually planted, at which time the pots have become full of roots, and it becomes a necessity to repot or plant.

Inasmuch as the usual greenhouse bench will not hold a larger pot than 4 1/2 inch planting is in order, and I would prefer to plant earlier than the date given rather than allow the plants to suffer.

After planting, great care must be used for a week or two regarding watering. This is most essential, for with so much soil, if watered too freely, the whole is likely to get soured. After the plants get hold of the new soil, plenty of water must necessarily be given, together with frequent syringing, which will encourage growth and also help keep down red spider, which must be looked out for at all times.

Now what are the advantages or gain of pot culture over field or outside culture? In the first place, I might cite that last year, out of 700 plants, all that were lost were two plants from stem rot; on the other hand, plants from the field would invariably show a greater loss than this, especially in wet seasons. In fact, I have seen big losses and undoubtedly you all have seen the same, but never so with plants grown inside. I might claim, too, that indoor grown plants produce larger flowers with longer stems at an earlier date in the Fall, and taking the average through. I believe this applies to the whole Winter.

As stated before, I do not wish to infer that my method herein stated is the better way; that would be folly and absurd on my part, for we have only to look around at the exhibits here tonight. Perhaps I would be safe in saying, that not one of the flowers here but what was produced by the field or outside culture, with the possible exception of the few I have brought. Given a good house, good soil and a little common sense, and excellent carnations can be produced from either inside or outside culture.

MABELLE--New Pink Carnation for 1907

Color--A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Lawson. Unlike most pinks, the brightest an does not injure the color. Size--Three to four inches in diameter when established. Odor--Pleasing, but not strong. Stems--Invariably strong, but always graceful, ranging from 12 to 30 inches during the season. Habit, etc.--A very quick active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Gets away rapidly, blooms early and gives long stems right from the start. Productiveness--Prodigious is the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. Stock limited. No discounts. First class certificates Madison and Indianapolis. Delivery Jan. 5th to 10th and later. Price, \$12.00 per 100, \$100.00 per 1000.

Easter Prospects.

Easter is just upon us, and, as usual, great preparations have been made to meet the big flower and plant business that will materialize. There is no doubt whatever that more trade will be done this Easter than has ever been before; the increase in the population makes that an assured fact, but whether the business will be as profitable to the florist as it has been in other years remains to be seen. The recent depression in Wall street affairs will, it is believed by some, curtail to quite an extent the flower purchases of certain classes of people. This may be so, and we have no means of proving that it will not, at the same time it can safely be said that it is but a small percentage of the general public that are directly affected by the rise and fall of Wall street quotations, and the flower business, so far as the Easter trade goes, will not be influenced to any extent through the manipulation of the man behind the ticker.

Although the retailers have not set up their window displays in full at this writing, there is plenty of evidence that flowering plants are well up to the standard of other years, and it is not likely that there will be any shortage, unless it is possibly of pot lilies, for with many growers it is believed that 12c. per flower cut is better than 15c. per flower, delivered, with the plants in the pots.

Rhododendrons do not promise to be plentiful, but there is a good supply in sight of hydrangeas, azaleas, daisies, spiraea Rambler roses, hyacinths and tulips in pans, ericas, violets and lilac. The plant peddlers are beginning to

get busy again. Their familiar cries along the side streets are the only signs of Spring heard by many of the city dwellers, and thousands of homes get a breath of Spring only through these itinerant merchants.

News of the Week.

Peter Crowe of Utica, N. Y., has been spending a few days here since attending the rose show in Washington. On his way from Washington he stopped over at Riverton, N. J., and while going from one greenhouse to another he stepped in a marshy place and immediately sunk three or four feet in the ground. As he had been piloted over that particular path, he thought for the moment that this was an attempt to plant the original of Adiantum Croweaum, but as three or four men were instantly called, and through their efforts he was extricated from the uncomfortable position and it being also explained to him that that particular place had become somewhat of the nature of a quicksand owing to the bursting of a water main in the immediate neighborhood, he changed his mind and believed that it had been only an ordinary accident.

Joseph Bradley, gardener for Mr. Henry Seidenberg, Hastings-on-Hudson, N. Y., had an exciting time last Saturday night with two burglars who had entered the house of his employer. It seems that all through the house burglar alarms are attached which communicate with Mr. Bradley's sleeping room, so that he was notified at the moment the burglars entered. He tried to get the police by telephone, but there was much delay in doing so. In the meantime a second alarm had gone off, which indicated to Bradley that the burglars had made their escape through

one of the windows facing the river. He finally secured the assistance of two policemen, and the house and grounds were searched, the burglars finally being discovered leaving the neighborhood of the house and going toward the railroad tracks. Many pistol shots were exchanged between the policemen and the burglars, but with no effect, the latter finally reaching the railroad tracks and getting clear away.

Chas. Wiese has bought and is now running the florist and seed store at 327 Park street, Richmond Hill, L. I., which he purchased from Chas. K. Fraser.

Herbert Greensmith, lately with the Black Hall Nurseries, Conn., has accepted a position with the Andorra Nurseries, Chestnut Hill, Pa., taking charge of the firm's herbaceous department.

Kalamazoo, Mich.

Trade Notes.

Easter with the Kalamazoo growers will from all appearances be one of the best on record. There will be lots of cut stock of all kinds and an abundance of plants in pots. The recent spell of warm weather has helped in most cases to advance the cut of roses and carnations. Many early orders have already been booked, and the wholesale branch will surely be kept busy. The weather will cut a considerable figure in the retail line, so we are all hoping for it to keep fine. Retail prices are at present uncertain, but will probably not reach where they should be, especially in cut flowers, as these are still being offered at cut rate prices now at nearly every place in town, and it seems likely this condition will prevail some time yet. In

R. ENGELMAN & SON, Pittsfield, Mass.

the meantime the buyers are having their inning.

Last week the weather made the high record for the month of March, \$6 in the shade being recorded on the 22d.

St. Patrick's Day did not seem to produce any great demand for green carnations, but it certainly increased the general volume of business in other lines and may now be regarded as one of the good days for the florist.

We received a visit from E. G. Gillett of Cincinnati last week and, as usual, found him well posted on trade topics and very willing to give us surveys all the benefits of his experience. We regret he does not visit us oftener.

The men in the nursery departments are now beginning to ship trees, etc., and all are declaring the season's business to be good and the prospects bright also for the Fall shipments. They also report it easy to make collections, which is a good sign for future business.

REVIEW OF THE MARKET

NEW YORK.—The cut flower business the early part of the week was not very brisk. The tendency has been to lower prices, and supplies of almost every line are in excess of the demand. Roses of all kinds and grades are extremely plentiful, and so far as fixed prices go it cannot be said that there are any; it is more a question of getting rid of the stock at the best possible figures. To give an idea, we may say that on Tuesday the prices of tea roses ranged from 1c. to 6c. each, including all grades; and American Beauty could be bought at from \$15 per 100 down. Of course, these prices are no indication of what will be maintained for Easter.

The supply of carnations is also more than ample for the demands, and so far there has been no advance in prices over those quoted last week. Lilies are of various grades and sell at various prices, 10c. and 12c. each being about the rule. Callas seem fairly plentiful; and while there is a generous supply of orchids it is not thought that there are any more than can be cleaned up to good advantage.

Violets are coming in extremely heavy, and one wholesaler remarked that he expected to have for Easter trade at least one million flowers. All other reasonable stock is also in heavy supply, and the indications are that there will be enough to fill every call that comes in, and that prices all around will be such that retailers will not be debarred from plunging to a reasonable extent. It is a foregone conclusion that if we have fair weather Saturday and Sunday, we shall have the biggest flower business the city has ever known.

On Wednesday, owing to that being a fast day, there was a little extra call for white flowers, consequently Bride roses and white carnations made a better average than did the other colors in these two staples.

CHICAGO.—As usual, under similar circumstances, the conditions of the market have been more or less uncertain and much guess work as to coming events has been indulged in. The unprecedented warm weather since last Thursday has undoubtedly cast a shade of uncertainty over the market, as the quantity to be shipped in during the present week will surely be much larger than has been anticipated, and it is also feared that the quality of the goods may be affected. The week opened with a quiet day and plenty of stock on Monday, and though advance orders have been heavily placed there seemed to be a strong tendency among buyers to hold off and await the result of the warm weather on the supply and prices before placing further orders. With the fearful slump in the market of a year ago so fresh in memory, the inclination to postpone purchases as well as prophecies was very evident, and it will probably not be until toward the latter part of the week that a very positive line on matters can be taken. No attempt was made on Monday to hold purchasers to Easter prices as had been expected where increase in price had been previously announced. The lily handlers still appear positive that prices will hold, and as near as may be judged the stock is fairly well ordered up, while other lines of cut flowers remain uncertain. Easter plants in general appear to be finding a good market.

Wednesday night finds the market heavily overstocked in all lines; stock selling below prices quoted and averaging as low as for the past month.

W. K. W.

BOSTON.—The grand rush of Easter business has hardly commenced yet in the cut flower line, but prices have stiffened considerably for some kinds of flowers. Violets are not nearly so plentiful, which goes to show that growers are holding back as much as they can of this favorite Easter flower till the end of the week. Sweet peas are not so abundant either. There is an abundance of bulbous stock and very fine tulips and narcissus are seen. Lilies bring \$12.50 and \$15; callas, \$12.50. There are quite a number of candidum lilies now grown; they are bringing \$6. Snapdragons bring \$8 and \$10. Carnations have advanced and

few can be had at less than \$4. Roses have not yet advanced in price, but they are not so very plentiful; they bring from \$1 up to \$20, while the finer grades of Richmond and Killarney realize more. American Beauty are still scarce and good prices are realized for any first-class stock.

J. W. D.

INDIANAPOLIS.—An unexpected siege of warm weather has caused the growers an endless number of perplexities. Many of the flowers which had been coaxed along for weeks to be in readiness for Easter are now in full bloom. Cellars and other cool places are sought for the profusion now on hand. There remains no misapprehension for belated lilies, etc. The retailers' views, on the other hand, are most optimistic, as many orders are being hooked and inquiries are abundant.

Not much profit has been attached to the past week's business as the deluge of flowers caused orders to be filled regardless of price, there being no alternative between well-filled orders and the waste-box.

Bulbous stock is in bloom out of doors at this early date, so the effect upon forced stock can readily be pictured, \$2 to \$3.50 a hundred is obtained in wholesale lots. Violets are shipped in in heavy quantities. Late arrivals from Chicago report thousands of bunches offered at a nickel per bunch by the vendors.

Carnations are not to be outdone and introduce themselves daily by the thousands; unwelcome visitors many of them are at \$2 to \$3 per hundred. Roses have been in fair demand; select Bridesmaid, Bride and Mme. Abel Chatenay are wholesaling at \$8 to \$12 the hundred. American Beauty are prone to remain upon the store man's hands at \$2 to \$9 a dozen.

The display of blooming plants seen in the various shops has seldom been equalled; a number of plants are sold, but it is too early to move such numbers profitably.

Tomlinson Hall Market is one mass of color these days. Heavy wholesale orders have been booked; but retail trade is certainly disappointing.

I. B.

MINNEAPOLIS.—On account of the bright weather we have had the past week, business has been very good. Carnations especially have been handled in large numbers. Bulbous stock has also moved rapidly. The week preceding Easter is, as a rule, dull, but this year all of the trade have been kept busy. In every store Easter plants are carried quite largely, no doubt to induce early Easter orders, but from reports there have been but very few of them placed. A small number of churches have placed their orders, but the big trade in church orders is expected the fore part of this week.

A visit to the different greenhouses finds the Easter stock in general far ahead of last year. The lilies in some places have been forced very hard and show the effects, but as they will be wanted for only a matter of a few days it probably will not make any material difference especially with the churches, which for use in the residence they will be a disappointment as far as the keeping qualities are concerned. Azaleas appear to be much better than for a number of years past; the shape of the plants is all that can be expected and the blooms are fully up to expectations. Spiraeas, rhododendrons, hybrid roses, Baby Rambler and hydrangeas are grown, in large numbers, and in every instance the plants are of the best quality. One grower has a stock of Primula obconica which is exceptionally fine and is being eagerly sought after by the retailers.

The prospects for a large supply of cut flowers are good. About everybody has plenty of roses and carnations and immense quantities of bulbous stock, therefore there will not be much advance in prices. Some of the trade have already issued Easter price lists, offering roses at \$1.50 and \$2 per dozen, carnations from 75c to \$1.50 a dozen, and bulbous stock such as tulips, daffodils, and jonquils, at 75c a dozen; Murillo tulips at \$1 per dozen, lily of the valley, \$1, per dozen. There does not appear to be an advance of over from 10 to 25 per cent, and from the preparations and additional expense for a large Easter business, it seems that prices should be much higher.

PAUL.

THE METAIRIE RIDGE NURSERY COMPANY LTD.

NEW ORLEANS, LA.
GROWERS OF CHOICE CUT FLOWERS
Roses, Carnations, Orchids, Etc.

We are fully prepared to fill orders for shipping by Steamers and Express all through the Southern States.

ST. LOUIS.—Trade the past week was not very encouraging; the weather was too warm. Thursday was the warmest day on record for the month of March, it being 90 degrees in the shade. This, of course, brought out everything held back for Easter, and there was an enormous over-supply of cut flowers in this market. The retailers throughout the city report light trade. The plantsmen had an unusual number of Spring opening plant decorations. In the downtown district, stock is selling very cheap, and it is a question of how cheap stock is going to be the latter part of this week. The commission houses are all loaded down with quantities of extra fine stock, flowers selling very low in 1000 lots. Easter prices are, as yet, quite doubtful. A scarcity is hardly looked for now, and picking will not be necessary among the growers.

In looking over the stock at the wholesale houses this Monday morning we find in roses plenty of Bride, Bridesmaid, Richmond, Killarney and American Beauty in all grades, with prices ranging from \$1 to \$5 per 100. Carnations are selling cheap—\$10 per 1000 and \$1.50 to \$2 in 100 lots. Extra fancy brought \$3 per 100. Nelson Fisher and Enchantress are extra fine, as are Lady Bountiful. Lilies are in plenty now, also callas, which go at \$10 per 100. Harrisii and longiflorum lilies sell at \$12.50 per 100; daffodils, tulips, Roman hyacinths, lily of the valley, Paper White narcissus are too plentiful and many are going to waste. Easter prices will probably run as follows: Roses, select, \$6 to \$8; medium, \$4 to \$5 and shorts, \$2 to \$3 per 100. American Beauty, extra select, \$6 per dozen; medium, \$3; shorts, \$5 to \$8 per 100. Carnations, fancy, \$4 to \$5 per 100; firsts, \$2 to \$3; common, \$1 to \$1.50 per 100. Lily of the valley, \$2 to \$3; tulips, \$3 to \$4; Dutch hyacinths, \$4 to \$5; daffodils, \$2 to \$3; Roman hyacinths and Paper White narcissus, \$2 to \$3 per 100; sweet peas, 50c, to \$1 per 100; longiflorum and Harrisii lilies, \$12.50 to \$15; callas, \$12.50 per 100; violets, 50c. to 75c. per 100; smilax, \$15 to \$18 per 100 strings. Other greens will remain as usual.

COLUMBUS.—We have had good business right along through Lent, and now with Easter trade opening most favorably all the craft are feeling correspondingly happy. There will be a great business for Easter, as the weather the past two weeks has simply jumped an enormous amount of stock into salable condition. Spring seemed to open here with Summer weather, last week; the temperature went to over 81 degrees and practically stayed there for three or four days. The effect upon stock of all kinds can be imagined. Again, the simply enormous amount of bulbous flowers that are ready to cut, and must be marketed, insures reasonable rates for Easter, as even if roses and carnations are marked up, the great over-the-counter trade at popular prices can be taken care of with tulips, hyacinths, and narcissus. The only scarce item is lilies, but scarce or plenty, 25c. each is the price limit here, and cannot be exceeded except in very special cases. It certainly looks like a great Easter business, and at about the following rates:—American Beauty, \$2 to \$10; other roses, \$1 to \$3; carnations, 75c. to \$1.25; lily of the valley, 75c. to \$1; all bulbous stock, 50c. to \$1; lilies 25c. each; violets, \$1 to \$2 a hundred in bunches to suit the customer. With the exception of the last two items, the above quotations are for dozens.

The Richmond rose, is having a great run here; in fact, it is hurting the sales of American Beauty to quite an extent. As regards plants of all kinds they will be plentiful and most reasonable in price. This must be so, as every grower has an unusually large stock and of

most excellent quality. Everyone has made the most extensive preparations in years; and as every line of business here is very prosperous, with the result that money is waiting to be spent, it will certainly turn out to be when the story is told next week—a great Easter.

F. W.

WASHINGTON, D. C.—So far as present indications go, a satisfactory Easter is expected for both grower and retailer.

The entire Lenten season has been one of little demand and over-supply. On March 22 and 23 the thermometer suddenly jumped from normal to 95 degrees, thus adding to the glutted market. Bulbous stock and azaleas are superabundant everywhere. At Easter large shipments are expected from Pennsylvania, and it is hoped this season will relieve the market of much excess in both home grown and shipped flowers. There has been less demand than usual during the past week for decorative work, as Holy Week is more rigidly observed than the preceding weeks in Lent.

J. L. C.

FIRMS WHO ARE BUILDING

ADAMS, MASS.—T. D. Brown is planning for another big addition to his already extensive plant. Work will be begun at once.

FAIRHAVEN, MASS.—Peter Murray will build new greenhouses at the corner of Washington street and Temple place this Summer.

CHANGES IN BUSINESS.

TERRE HAUTE, IND.—Mrs. Lawrence Heim contemplates selling out the business of her deceased husband.

NEWBURYPORT, MASS.—E. W. Pearson has leased a store on the lower side of State street above Essex in which he will conduct a florist's business.

BAY CITY, MICH.—The Wm. Roethke Floral Company has leased the Parra building which the company will occupy as a flower store. The firm's greenhouses are located at Saginaw, Mich.

ABILENE, KAN.—The Abilene Nursery Company has been incorporated; capital stock \$10,000. Purpose, growing and selling plants, seeds, trees, etc. Incorporators: W. D. Batjer, W. A. Minter, Jr., J. V. Cockrell.

CONCORD, N. H.—C. H. Barratt has purchased the interest of F. A. Main in the business lately conducted under the name of F. A. Main & Company at 23 Pleasant street, and will continue to carry on the establishment at the old stand.

GRAND RAPIDS, MICH.—Charles W. Dolan, who has been a letter carrier at the local office for many years, has embarked in the florist business. He will not give up carrying mail, but has recently completed a new greenhouse on Quimby street and will take up flower culture as a side issue.

COLUMBIA CITY, IND.—Wagner Floral Company, composed of A. J. Wagner and O. H. Diefenderfer, has taken over the greenhouses known as "Wagner's Columbia City Greenhouse," and will add one house, 42 x 150 feet, for carnations, one 14 x 100 feet, for general stock, while the present room will be devoted to roses. Steam heat will be used. A. J. Wagner has been known to the trade for many years, while O. H. Diefenderfer has had but little experience; he is a practical business man and will add much to the strength of the company.

BUSINESS DIFFICULTIES.

DAVENPORT, IA.—A receiver has been appointed for the Allison-Pope Company, florists.

News Notes.
A visit to Horticultural Hall at Audubon Park showed everything in fine order. The collection of geraniums here composes all the up-to-date varieties and are so well grown that Head Gardener Weller may well be proud of them. He also has a fine collection of fancy-leaved caladiums including many of his own seedlings. An interesting item is some pans of seedling sugar cane, which Mr. Weller is raising for Professor Blouin at the experiment station.
The Abele Brothers are busy planting the new addition to their garden. They are also building a new cottage for Otto Abele, Paul's residence being already on the grounds.
Emile Valdejo, who retired from the florist business last year, has purchased four lots near the river front, where he will build a new residence.
At the last meeting of the Horticultural Society the principal business transacted was completing the arrangements for the Fall shows.
CRESCENT CITY.

What to Call a Spade.
The New Man—Oh, I see. You want a man on this paper who will call a spade a spade.
The Editor—Certainly not. We want a man who can call a spade an indispensable implement of primitive agriculture.—Exchange.

Boston.

News Notes.

A delegation of about fifty members of the Gardeners and Florists' Club held a very successful outing on Saturday afternoon at the Waverly establishment of W. W. Edgar & Company. The chief features of the establishment were the large numbers of Easter lilies and azaleas. A superb lot of large azaleas was seen. The party was served with refreshments by Mrs. Edgar and family, and several speech makers expressed their appreciation of the event, while the singing of a favorite song by W. J. Stewart was much appreciated.

Anderson & Williams are at present cutting some extra fine Bride and Bridesmaid roses which find a ready sale at the hands of Wm. Aylward in the Park street flower market.

E. L. Beard, formerly of the Shady Hill Nursery Company, has opened an office at 155 Milk street for the sale of nursery stock under the name of the Nursery Exchange of New England.

B. K. Howard will be the speaker at the meeting of the Gardeners and Florists' Club on April 16; his subject will be "Landscape Gardening." It is expected that Duncan Finlayson will be the speaker at the May meeting, taking for his subject "How to Plant an Italian Garden."

The wind storm of last Thursday played havoc with one of the greenhouses of Peirce Brothers at Waltham, causing considerable repairs to be made.

Thos. Roland of Nahant has a superb lot of Easter plants, including many fine acacias of the varieties armata, longifolia and heterophylla.

J. W. DUNCAN.

ROCK ISLAND, ILL.—The fall that Otto Klingbiel, florist, sustained last Summer which confined him to the hospital for several months, has resulted in a derangement of his mental faculties that makes necessary his confinement at Mt. Pleasant hospital for the insane for treatment.

Your Money is well spent when you advertise in THE FLORISTS' EXCHANGE

inary loss to Mr. Hauswirth not to be able to be installed in his new quarters for the transaction of his Easter business. It is promised that the new store will be a gem as regards its furnishing and finishing, and the conservatory, thirty by seventy feet, in the rear, will be a beautiful and important augmentation to the equipment of the concern.

Two leaders of the wholesale branch of Chicago commercial floriculture were enjoying the balmy Spring weather last week by an auto trip through the beautiful drives in the northern part of the town when two plain clothes representatives of the majesty of the law saw fit to temporarily interfere with their pleasure by escorting them to the Sheffield avenue station where by stop watches conclusive evidence of violation of the speed ordinance was produced and \$25 of the profits on long-stemmed American Beauty turned into the city's exchequer.

Harry Manheim of the J. A. Budlong crew was one of the many on the sick leave list last week but is able to be about with the opening of this busy week.

Among the visitors in the city last week getting a line on Easter prospects was W. G. Matthews of Dayton, O.

Ten thousand bench plants of American Beauty roses was one order completely filling one freight car placed to the credit of Peter Reinberg last week. Five houses in the block east of Roby street have already been filled with Mrs. Marshall Field rose, the variety which Mr. Reinberg expects to put on the market next year.

A plan is under consideration to make the next Florists' Club meeting, on April 11, a week from next Thursday, a retailers' smoker, when the results of the Easter business can be talked over from the standpoint of the man who is in closest touch with the consumer or final purchaser, who in reality is the one who foots the bills.

Miss Davidson, bookkeeper for the E. F. Winterston Company, though not fully recovered, is back on duty after last week's illness.

J. F. Miller, McHenry, Ill., and H. W. Buckhee, Rockford, Ill., were noted among Monday's visitors.

Last Sunday at noon the Winterston Seed Store took possession of a goodly portion of its new quarters above the old, familiar stand and cleaning house and installing Easter plants were immediately in order. On Monday business in the new department was in running order and opened up very satisfactorily to the managers.

Sharp, Partridge & Company of this city are among the largest glass dealers of the country, handling a generous proportion of the required product for florists' use.

Spring, which was astronomically scheduled to arrive here at 1:33 o'clock on Thursday afternoon of last week, was on time, and in an appreciative mood the mercury mounted to 76 degrees within two hours, constituting a record for the season for thirty-one years. On Friday the hot spells continued and Saturday, with the thermometer registering a fraction of a degree over 80, demolished all precedents for high temperature in March during the existence of the weather records. Sunday saw a return to normal March conditions, but on Monday Spring returned, and as a result of this remarkable weather the most carefully prepared prophecies were overturned. Wm. K. Wood.

MORRISTOWN, N. J.—The green-house of John Green between Morristown and Bernardsville, was struck by lightning during the thunder shower of last week. Rafters were broken, glass knocked out and the boiler and heating apparatus damaged.

Minneapolis.

Newa Notes.
Wm. Desmond, formerly with Holm & Olson, St. Paul, is now with the Donaldson Glass Block. Wm. Owens, the past manager of their retail department, has accepted a position in Boston.

Ralph Latham has greatly enlarged his place, it being the only conservatory store in the city and now, as it covers a good space, he is able to make a grand Easter display.

Amundson & Kerschner have turned over immense quantities of bulbous stock the past week; they report country business as being very good. Design work they also say has kept up nicely.

Some difficulty is being experienced by most of the retailers, in being able to get a sufficient number of Easter lilies. The growers consider themselves fortunate in getting all of them in bloom, and whether they overestimate or not their own retail demand, they appear reluctant to sell any more than what they are really obliged to do. It begins to look as though a great many lilies will be shipped in. **PAUL.**

Manchester, Mass.

The regular meeting of the North Shore Horticultural Society was held on Friday evening and was one of the best attended of the season, about forty members being present. After the regular business the members listened interestedly to a paper on "Trees and Shrubs" by John W. Duncan of the Boston Park Department. A lengthy discussion followed Mr. Duncan's talk.

It was announced that J. K. M. L. Farquhar would lecture before the society some time during April.

President McGregor, who has been on the sick list, was able to again attend to his official duties. **J. W. D.**

Tomlinson Hall market florists are enjoying a heavy business; most of their best stock has been engaged early by the retailers.

MANCHESTER, N. H.—During a recent wind storm two brick walls of Hood's greenhouses were blown down, but on account of some of the supports the glass roof did not fall.

Baltimore, Md.

News Items.

The weather has been clear and Spring-like; outdoor work has commenced with a rush. Trade in cut flowers is slightly slower than it was a week ago and there seems to be an abundance of everything. The prospects for a good Easter week are bright, as many azaleas, Rambler roses, lilies and bulbous stock are already on the move. Prices are but fair at the present time. A great scarcity of greens has been noticeable for some time.

The members of the Gardeners' Club, with the bowlers, returned from Washington very much pleased with the kind hospitality extended to them. Washington is a little over 100 pins ahead of Philadelphia and Baltimore. The next match will be played in Philadelphia in April. Washington is the holder of the Baltimore cup for the present, but look out for the Philadelphia boys in April! C. L. S.

The florist business is particularly well represented in this city. There are probably over one hundred establishments where plants and cut flowers are grown for commercial purposes. In addition to this there are a good many large private estates where a head gardener is kept as well as a well-trained corps of assistants, where greenhouses well filled with all the popular flowering plants as well as all the choicer exotics attest to their ability to keep well in the ranks with the foremost of commercial growers.

Among the latter Samuel Feast & Sons occupy a position well in the foreground. They have two fine stores as well as a large range of glass at Catonsville where most of the stock is grown. Orchids and American Beauty are handled in large quantities as well as all other stock in season.

Edwin A. Seidewitz, who has quite a growing establishment here as well as at Annapolis, has a handsome store on Charles street. Most of his stock is grown at Annapolis and he is now busy enlarging his range of glass in this county to keep up with his increasing business.

Halliday Brothers, 329 North Charles street, have a grand array of Easter stock. Many handsome rhododendrons in various shades of the leading hybrid varieties were seen in their display.

Wm. J. Halliday has a well equipped store also on North Charles street with a large stock on hand of all that goes to make a well equipped flower shop and was apparently enjoying a very good business.

John Cook, 318 North Charles street, has a very attractive store just across the street from Halliday Brothers. While a number of stores are in this immediate vicinity it does not appear to a casual visitor that any of their business interests suffer thereby.

The "Fernery," near the Union Depot is also an attractive flower store; they had a large display of bulbous stock. The "Fernery" is owned by Mr. Blackstone, and across the street is the second establishment of Samuel Feast & Sons.

It was market day on Saturday and the florists from all the suburbs were on hand with their pre-Easter displays. The stalls that are usually sufficient in the market place were entirely inadequate for the day. For two blocks on either side of the street in the close vicinity of the Lexington market the florists held forth with fine effect. Although it was a little past the middle of March the entire street looked as bright as a garden in June. There were spiræas in large quantities and hyacinths, tulips and narcissus by the wagon load. Talk about a shortage of lilies for Easter, the display here showed nothing of the sort. The florists that contributed most to this display were H. Ebelhart & Son, Beaumont avenue; H. Walthers, Park Heights avenue and Pimlico road; Mrs. E. H. Hahn, Roland Park; Inwald Brothers, Hillen road; Edward Kress, 2506 East North avenue; Henry Fisher, Sinclair avenue; Harry Ekas, Frederick road; F. C. Bauer, Julius Tischinger, and M. Thau of Govanstown. J. M.

EDWARD MacMULKIN,
194 BOYLSTON ST., BOSTON, MASS.

Scranton, Pa.

The Scranton Florists' Club held its initial exhibition on March 16, and it was a most successful one. The exhibits were judged by points, and it is the intention of the club to award a silver cup to the party securing the largest number of points on its exhibits during the year.

Local exhibitors included Marvin & Muir, G. R. Clark, Schultheis & Company, T. B. McClintock, Thomas Arner, Ralph Harwood, J. Rodham & Son, Scranton Florists' Supply Company. The out of town exhibitors were: William MacDonald, Moosic; Davis Bros., Bloomsburg; J. E. Haines, Bethlehem; J. J. Wade, Carbondale; Leo Niessen Company, Philadelphia; Paul Niehoff, Lehigh; J. L. Dillon, Bloomsburg; C. H. Gerbig, Archbald; G. H. Schlingmann, Wilkes-Barre; A. D. Turnbull, Carbondale; Chicago Carnation Company, Joliet, Ill.; C. W. Ward, Queens, L. I.; F. Dörner & Sons Company, Lafayette, Ind.; W. J. and M. S. Vesey, Fort Wayne, Ind.; E. R. Pierson Company, Tarrytown, N. Y.; Yates Floral Company, Canajoharie, N. Y.; E. J. Hill, Olyphant; and S. S. Pennock-Meehan Company, Philadelphia.

The awards of the judges were as follows:

Marvin & Muir—One large basket of narcissus, 90 points; one basket lilies, 90 points; one pan tulips, 90 points.

Paul Niehoff, Lehigh—Certificate of merit for new rose Aurora.

Thomas Arner, Scranton—Boston fern, 90 points; primulas, 85 points.

Schultheis & Co.—For arrangement of plants for artistic effect, 95 points; pot of iris, 85 points; one plant, rhododendron, 90 points.

G. R. Clark—Table decorations, 85 points; floral basket, 92 points; table centerpiece, 85 points.

T. B. McClintock, Scranton—Bride's bouquet, 90 points; mantel decorations, 90 points.

E. J. Hill, Olyphant—Group of plants, 90 points; lily plant, 85 points.

T. B. McClintock, Scranton—Honorable mention for old and new style baskets.

C. W. Ward, Queens, L. I.—Certificates of merit for Alma Ward and Beacon carnations.

Leo Niessen Company, Philadelphia.—Honorable mention for display of roses.

J. L. Dillon, Bloomsburg.—Honorable mention for roses and carnations.

W. C. Clark—Special mention for floral display.

Scranton Florists' Supply Co.—Special mention for artistic arrangement of floral supplies.

J. Rodham & Son—Special mention for display of carnations.

T. B. McClintock, Scranton—Special mention for floral display.

Davis Bros., Bloomsburg—Honorable mention on carnations.

Charles Schlingmann Wilkes-Barre—Honorable mention for Primula obconica.

C. H. Gerbig, Archbald—Honorable mention for display of carnations.

That's Our Business

and that's why we know the greenhouse business. We are neither lumber speculators nor running a planing mill. We devote every minute of our time to greenhouses and their equipment. We sell materials only, or erect them complete. We construct not only a durable house of a lightness of construction that stops on the safe side, but we plan its arrangement for greatest economy and you are sure of pleasant dealing. You'll be busy to-morrow, better write to-day.

San Francisco.

Jottings.

Now that advertisers in florists' papers are mentioning "Decoration Day" and "Memorial Day" a veteran in the trade admonishes me. He is a two-fold veteran; not only has he been in the San Francisco trade as a plant and flower grower for more than two decades, but he is a Civil War veteran with a lame right leg, the result of a fall he had during the battle of Stone River. He was doing service in a tree-top as a sharpshooter until the enemy took notice of him, and sent a few shells his way, one of which clipped away his supporting branch, causing him to fall twelve feet below, where he was caught with a maimed leg in a friendly nest of other branches, and the lameness in his walk to this day is quite perceptible. He admonishes me in this way: "For several months last year before Memorial Day," he said, "I noticed in The Florists' Exchange and other trade papers that fully 50 per cent. of the growers who were advertising stock for the 30th of May, used in their advertisements the expression 'Decoration Day' instead of 'Memorial Day.' I want you in your writings to entirely discard the term 'Decoration Day.' As a time for strewing flowers over graves May 30 was selected by the Grand Army of the Republic many years ago, and some time thereafter, about twenty-five years ago, the Grand Army considered the day and christened it 'Memorial Day,' and ever since comrades speak of it only as 'Memorial Day,' which is now very generally taken cognizance of as a national holiday for remembering the dead and covering their graves with flowers. Do what you can to get the people to avoid the old habit of speaking of this annual event as 'Decoration Day.'"

A few months before the earthquake-fire The Florists' Exchange had an exclusive notice to the effect that the John H. Sievers Nursery Company had a representative appear before the city authorities with a warning that if they raised the street grade at Polk and Chestnut streets to the great height they were discussing it would greatly destroy the value of John H. Sievers' nursery plant and heavy damages would be exacted. Recently Mr. Sievers brought suit against the city for \$2,000 damage already done by water because of the raised grade made by the city.

In an interview this week with Park Superintendent McLaren he said: "Men are at work now plowing and reseeded places in Golden Gate Park from which the earthquake-fire refugees moved recently, but it is a big job to repair the damage that has been done. Not only has the grass been killed, but trees have been damaged by the refugees, and it will require two years to restore the park to its former good condition. It will require at least \$175,000 to repair the damage done to the parks by the refugees, in addition to the injury done by the earthquake." ALVIN.

QUAKER CITY MACHINE CO.
RICHMOND, IND.

THE AMOUNT AND QUALITY OF STOCK PRODUCED

is of vital importance to every florist. The more you grow the more you can sell and the better the quality the higher price you will get. Why not build houses that you know are the latest in construction and use material that guarantees you a long lived plant factory? We have furnished the right kind of material for over forty years and can give you construction that is up-to-date all the way through. We are not a planing mill nor a sash and door factory—we make nothing but greenhouse material and all of our mammoth factory is used for that business alone. We carry only one grade of cypress and no cheaper grades for making interior finish which we afterwards slip in on the greenhouse material when we run short of open air dried stock—this means quality and uniform quality too.

Put Your Hand on Your Chimney

Keep putting it on every day or so when you're firing—it's a great tell-tale on boilers. That's what started us thinking and making the "Burnham" Sectional Boiler so the burning gases pass up the sides and then back and forth from front to back, three times before reaching the chimney.

We have kept our hand on the chimney for years and that's why we now keep so much heat in our boilers. Get to know the "Burnham". For Sale: Every part or any part for good greenhouses.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XXIII. No. 14 NEW YORK AND CHICAGO, APRIL 6, 1907 One Dollar Per Year

CARNATION WINSOR

The most talked about carnation at the Toronto Convention.
Won first prize for best 100 pink

Winsor is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders, and have a fine lot of stock in the cutting bench, so that we can promise prompt delivery on orders received from now on.

If you have not already purchased a stock of this, you should lose no time doing so. We have sold more Winsor

than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market where our flowers are sold.

There is nothing on the market that approaches Winsor today in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities, in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high quality flowers. It practically does not split at all, notwithstanding the fact that we have had the darkest, duldest winter we have ever had, when the Enchantress and Lawson types are splitting badly all over the country with everyone, we have not had one-half of one per cent. of split calyxes on the Winsor. In fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement, extravagant as it may appear.

Anyone who fails to plant Winsor this year will regret it. Rose pink Enchantress is good, and a good many other varieties are good, but IF YOU WANT THE WINNER, PLANT WINSOR.

Strong Rooted Cuttings. \$12.00 per 100, \$100.00 per 1000.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION

Henry W. Wood, Richmond, Va., president; C. S. Burge, Toledo, O., first vice-president; G. B. McVay, Birmingham, Ala., second vice-president; C. E. Kendal, Cleveland, O., secretary and treasurer; J. H. Ford, Ravenna, O., assistant secretary.

SAN JOSE, CAL.—The Braslan Seed Growers Company, telegraphing Wednesday, say: "Regret to report our onion crop has been destroyed, fully fifty per cent., by water; our onion crop Coyote a total failure."

LEXINGTON, KY.—Professor C. W. Matthews of the Department of Horticulture, State College, through the aid of the Civic League, will distribute 30,000 penny packages of flower seeds among the children of the cities of central and eastern Kentucky.

TOLEDO, O.—Clover seed reached its highest price in years at noon on Tuesday, the 26th ultimo, March selling for \$9.50 and April for \$8.90. October, which means the new crop, was up to \$7.10 and good buying was stimulated by had crop reports. Some scattered realizing caused a little setback towards the close, the market taking a small drop.

DENVER, COL.—A local paper announces that "if you want the largest and most brilliant blooms in endless profusion and the tallest, healthiest plant you must use sweet pea seeds that have been inoculated with nitrogen culture fertilizer. Then you will have sweet pea perfection such as you have never known before and there will neither be stunted growth nor unsatisfactory flowers; on the contrary your sweet pea bed will be riotous with color and beauty." It is further stated that "Barteldes & Co., the seed firm at 1521 Fifteenth street, prepare the seed in this way and as they must be fresh to secure the best results this firm does practically all the business in inoculated seed in Denver."

Gladioli—NOTHING BETTER ANYWHERE. Cannas—VERY BEST SORTS. THE MONEY MAKERS. Carnations—1200 sorts, finest sorts in liberal supply. Paeonias—1200 sorts, finest sorts in liberal supply.

Send for a list of our offers.

CATALOGUES RECEIVED.

H. DEN OUDEN & SON, Beskoop, Holland, Wholesale Trade List of Nursery Stock 1907-8. Particularly interesting are the lists of new Hybrid Rhododendrons and new Conifers, as well as that of new Roses. Illustrated.

EAST BRIDGEWATER DAHLIA GARDENS, J. K. Alexander, proprietor, East Bridgewater, Mass.—This catalogue, for 1907, contains thirteen pages of named dahlias under their respective classification including standard and the latest varieties, also a general list and 1907 list of gladioli. Valuable points on the growing of dahlias and other interesting information are embraced within the covers of this catalogue. Mr. Alexander was awarded the silver medal, one of the highest honors, at the World's Fair, St. Louis, 1904, for growing exhibit.

THE TRADE ONLY—When Writing Please Mention THE FLORISTS' EXCHANGE.

European Notes.

The balmy Spring-like weather which has succeeded the unsettled spell referred to last week is eminently favorable to the development of the crops of florists' flower seeds, and the appearance of the houses of primulas, cinerarias and cyclamen is all we could desire. As regards the latter the only new feature of note this year is connected with the effort to develop the perfume which some affirm has been driven out of this plant in the rage for color and size. How far this is true or otherwise the writer is not at the moment prepared to say, but he well remembers how in the early sixties a fair proportion, especially of the pure whites, emitted a most delightful fragrance, which is certainly lacking now.

In connection with cinerarias the first public exhibit this year was a large batch of the so-called cactus strain from Sutton & Sons. It must be admitted that they are fantastic and early, but they are certainly as beautiful as a cartwheel consisting only of hub and spokes. Nearly all the colors commonly found in cinerarias were represented.

Primulas have already been referred to, but attention may justly be called to a magnificent new hybrid between *P. sinensis* and *P. stellata* exhibited by Cannell on March 19. The flowers were pure white, as large as many of those of the best varieties of *P. sinensis* and as perfectly formed and substantial; but the habit of the plant was that of the best *stellata* section. It has been named "Reward," and should bring a rich reward to the raiser.

The origin of *P. stellata* has been wrapped in a good deal of mystery, but there is no doubt that instead of being a distinct species it is simply a variation of the *P. sinensis*. It is a significant fact that no mention is made of it by E. H. Wilson in the account of his recent wanderings in China and Thibet, including Sinea, the home of *P. sinensis*.

The following description of the plant copied from an old, but undated book entitled "Maund's Botanic Garden" may be of interest, as it confirms the statement made above:

"Its mode of inflorescence is particularly beautiful; for out of a single umbel or head of flowers rises a distinct scape or stalk supporting a second umbel, and from this is produced a third, by which peculiarity the plant remains in bloom during the great part of the Summer."

It will easily be seen that this description better fits the *P. stellata* than *P. sinensis* as now grown, for florists have so effectually dwarfed the inflorescence that in some varieties it is quite difficult to get it to rise above the leaves; this, of course, is ugly.

There is nothing particularly new to record respecting other branches of the seed trade at the present time.

EUROPEAN SEEDS.

FLORISTS' SPRING WANTS
Cannas, Phlox, etc.

Burbank, Mlle. Barat, Robusta, large 2-eye pieces, \$1.75 per 100; \$15.00 per 1000.

THE TRADE ONLY—When Writing Please Mention THE FLORISTS' EXCHANGE.

Prices Advertised in these Columns are for

(72) **Asparagus plumosus.** — I want to grow a few hundred strings of *Asparagus plumosus* to be ready to cut early next Fall. Can I obtain these by using strong rooted seedlings at this time or will I have to use stronger plants? How far apart shall I plant them and how many crops can I cut in a year? The house is from 10 to 12 feet high. H. H. Conn.

—If strings of asparagus are required it would be best to plant two-year-old plants, spacing them 12 inches apart in the rows and 15 inches between the rows. Unlike the smilax, asparagus does not come in crops; two or three strings can be run up from the same root, and thus several strings can be cut in a season, depending altogether on the length the strings are allowed to grow.

(73) **A Seedling Carnation.** — I send you to-day, by mail, a carnation seedling; color, blue and pink. Kindly tell me if it is worth while to propagate the same. F. E. Mass.

—The carnation is not very desirable in its coloring, and we do not think it would be worth while to grow it for commercial purposes.

(74) **The Grape Fruit.** — Will you kindly advise me as to what class of plants the grape fruit belongs, native country, how it grows and when it was introduced into this country. P. B. New York.

—The grape fruit belongs to the citrus family, its proper name being *Citrus Decumana*. It is also known as Shaddock and pomelo. It comes from Malacca, but just when it was introduced into the United States we are unable to say.

(75) **Portable Cement Benches.** — I should like very much to see an article on portable cement benches with full directions for making same. Having a small plant only, it would not be wise to have a construction company do the work for me. Briefly this is my plan, and I would like some suggestions for or against it:

Make a mold of wood L shape 8 inches long, 3 inches wide, 1 1/2 inches thick except at the corner which would be a little more. These for side of benches. For the bottom, slabs 1 foot wide 1 1/2 thick with 2-inch mesh chicken wire for re-enforcement. Will the spacing of the slabs give sufficient drainage? The weight of the soil in the benches will keep the sides in place? Some benches will be 3 feet wide others 5 feet; the 5-foot bench would need a support running lengthwise of the center. How near must the supports for sides be? I propose to make columns of cement. M. E. A. Conn.

—Perhaps some reader who has constructed cement benches could give some idea as to what method would be best to adopt. There is a firm advertising cement block machinery, however—the Ideal Concrete Machinery Company, South Bend, Ind. We think an inquiry addressed to that firm would result in some useful information.

JAMES VICK'S SONS ROCHESTER, N. Y.

The Leading Specialists and Largest Growers of High Grade Asters in the World.

Five New Varieties For 1907

VICK'S SUNSET. Companion to Daybreak and Purity, in color a delicate pink shading to a deep rich pink in center. Profuse bloomer. Price per packet, 25c.; 2 pkts. 40c.

VICK'S UPRIGHT. Long graceful stems branch out at the ground and grow directly upward. Flowers are symmetrical, double and full to the center. Splendid for cutting. Especially valuable for shipping. Price per packet, 25c.; 2 pkts. 40c.

VICK'S ROYAL PURPLE. An offshoot from the Branching. Unlike its parent it sends out stems close to the ground. A medium early variety but lasting until late in fall. Nearly every stem produces specimen flowers. Price per packet, 20c.; 2 pkts. 35c.

VICK'S BRANCHING ROSY CARMINE. A new color in the Branching Class. Leading florists pronounce it a shade which will be popular with the trade. Price per packet, 25c.; 2 pkts. 40c.

VICK'S CARDINAL. The best bedding Aster ever introduced. A good one for cutting. With its profusion of flowers and brilliant coloring it makes a handsome showing. Price per packet, 25c.; 2 pkts. 40c.

For illustrations and prices per ounce see our **ASTER BOOK FOR FLORISTS.**

As we would like to know where you saw this adv. please mention The Florists' Exchange when you write.

PEACOCK'S HYBRIDS IN 12 COLORS

Finest Single Dahlias on earth. Larger than the Century Dahlias (which we originated and introduced) and in a complete range of colors including pure yellow. Set of 12 strong roots \$7.00

ONLY THE BEST DAHLIAS PAY

We have a limited surplus of the best varieties that we plant for cut flowers. They will pay you as they pay us.

Peacock Dahlia Farms: I wired you today to make heavy shipments. I want to say to you that the Dahlias (cut blooms) have been coming in, in fine form, better than ever before. W. F. KASTING.

Mr. Kasting wires Oct. 5th.—Your Dahlias selling well, double shipments. And writes again Oct. 8—Your Dahlias are better than any others coming in, good bright color, good stems and in fine condition. Just what we want. Cactos and one that I can't sell well. Double shipments.

The above are from a disinterested dealer and shows plainly that only the best Dahlias pay.

Strong field grown roots, guaranteed absolutely true to name. BEST VARIETIES FOR CUT FLOWERS.

AMERICAN ASSOCIATION OF NURSERYMEN.
Orlando Harrison, Berlin, Md., president; J. W. Hill,
Dea Moines, Ia., vice-president; George C. Seager,
Rochester, N. Y., secretary; C. L. Yates, Rochester,
N. Y., treasurer.

SIoux FALLS, S. D.—Many of the nurserymen of the State are bitterly complaining of the provisions of a new law enacted by the recent legislature which relates to the carrying on of a nursery business in the State. Among other things the new law provides that every company, individual or firm carrying on a nursery business in South Dakota must file a bond of \$5,000, and that the head or proprietor of each nursery concern must pay a license of \$10, with a small fee for each agent. The chief objection to the bill is to that clause which provides that when a contract is taken it must be specified in black and white just where each tree, shrub, plant or vine ordered is grown. The nurserymen declare that it is utterly impossible to fill this requirement. It is charged by some of the nurserymen that the bill was passed in the interest of nurseries located in other States which do business in South Dakota by means of catalogues, and which, because they do not sell "by agent," are not affected by the new law.

Seasonable Notes.

When pines, firs and similar evergreens are required of a bushy nature rather than to be tall the leader should be cut out. The side branches make faster growth then, as a new leader does not form at once.

In a private letter a correspondent asks if the common sweet chestnut needs fertilizing by the flowers of another tree, as a tree standing by itself on his lawn never bears chestnuts, though flowering freely. It must be a case of the male flowers opening before the female, or vice versa, as there are numerous instances where this tree growing alone bears good crops of chestnuts.

Rhus aromatica does not make a great showing with its flowers, but they come very early in Spring; and then it soon displays its red berries, rendering it altogether a valuable shrub. It is good for planting on banks, its underground shoots binding the soil.

It is well understood that the Tom Thumb Arbor vitae, *Retinispora squarrosa*, and other like evergreens are but juvenile or seedling forms of something else. Tom Thumb Arbor vitae belongs to *Thuja occidentalis* and *Retinispora squarrosa* to *R. pisifera*. It is quite common for *squarrosa* to send out branches of true *pisifera* at times, but Tom Thumb Arbor vitae is not so apt to change its form.

By encouraging the perennial grasses to make a strong growth by applying guano or other stimulants it helps to keep down the Fall grass, an annual very troublesome on many lawns.

The beautiful Oregon maple, *Acer macrophyllum*, is quite hardy in the vicinity of Philadelphia. In its first few years of seedling life it is sometimes slightly hurt in Winter, but never after it has shoots that have passed through three or four years. There are large trees of it here and not a twig of them is ever injured.

A creeping plant well known to gardeners is the North China saxifrage, *Saxifraga sarmentosa*. It is not generally known that it is hardy, and that for rock-work and similar uses it is available. If a few falling leaves cover the plants in the Fall it is an advantage—as it is to every plant in Winter.

For grouping as well as for single specimens the two *rhus*—*R. typhina* and *R. glabra*—are desirable. Their large heads of scarlet seeds ornament them in Winter, long after their crimson hued foliage has fallen. In Virginia years ago, the leaves of these two plants were of commercial value for tanning purposes, as they may be yet.

A writer from the South says the Carolina jasmine, *Gelsemium*, does not flower while young, which may be true of wild plants, but small two-year-old plants in pots will bloom profusely in a greenhouse in Winter. The confinement of the roots causes them to flower, as it will any other plant. The double flowered Carolina jasmine is good and the flowers are more lasting than those of the single one.

Catalpa Bignonioides.

Of late years writers on trees have referred nearly altogether to *Catalpa speciosa* in their notes on this genus. This is because of the great demand that has sprung up for timber trees, and because of the great value of *C. speciosa* for this purpose. But we desire to bring before our readers the fact of the great beauty of the *C. bignonioides* as a lawn tree, without a thought particularly of its value for timber.

The *Catalpa bignonioides* is known as the Eastern catalpa in opposition to the other one, which inhabits

the West. It is really a Southern tree, but for years it has been creeping North, getting advanced further and further in this direction yearly. It is abundant along many rivers and creeks in Eastern Pennsylvania. Its increase is usually along low ground near water, a situation it evidently prefers. Along the Pennypack Creek, near Philadelphia, there are so many of these catalpas and they so embower the water in places that many persons make a point of visiting them when in flower to enjoy their beauty.

It does not follow that the tree will not flourish elsewhere than in low ground. The beautiful specimen of our illustration tells a different tale, for it is growing at Belmont, the highest point of the older part of the city of Philadelphia. This tree was caught in its height of flowering, and forms a lovely picture. It is impossible to say at this day whether it represents one tree chopped off at the ground level at some early date, or whether three seedlings sprang up close together. The catalpa is known to make grotesque shapes, and it may be but one tree.

In our opinion this species of catalpa is a much more desirable flowering tree than *C. speciosa*. It makes naturally a spreading tree such as the one illustrated shows, and such a tree displays its flowers to much better advantage than the erect growing *C. speciosa*, the flowers of which are high over head. Let those

Yellow Pine.

Nurserymen frequently have orders for yellow pine, and they are often at a loss to know just which pine is wanted. Under this name three species are known. In the South it is *Pinus palustris*, in the cooler parts of the South, *P. mitis* (*echinata*), and in the North, *P. rigida*. *Pinus mitis* extends north to some degree. It can be found in New Jersey in several locations, and our Northern one, *P. rigida*, goes South a short way in the same manner. *P. palustris*, when got from its Northern limits in a wild state, North Carolina, has endured some hard Winters in Philadelphia, apparently unharmed, but all of them died ultimately, turning yellow, evidently not liking the heavy soil. Were trees to be had and planted in sandy soil it is more than probable the result would be satisfactory.

The *P. palustris* is such a beautiful pine because of its long needles that its branches are sold at Christmas to great advantage. Would not our florists find a good sale for small pot-grown plants of it for the same occasion? Plants of from two to three feet high would surely sell well.

Magnolias in Nursery Rows.

Nurserymen know that Spring is the season to plant magnolias; they know also that these trees require great care in digging and planting. Unless of quite small

Catalpa Bignonioides

who want timber trees plant *C. speciosa*, but for lovely display of flowers set out *C. bignonioides*.

There are not as many *Catalpa bignonioides* planted on lawns as there should be. Nurseries have more of the *C. speciosa* because sales called for them for forest planting. Those having the sale of trees would do well to remind customers of the beauty of the *C. bignonioides* as a lawn tree, showing them our illustration to prove their words.

Chinese Cork Tree.

A valuable cork-barked tree is becoming slowly disseminated, the *Phelodendron amurense*. There are two trees in cultivation under this name; one, however, is known as variety *Regeliana*, and this is the corky-barked one. The other has no semblance whatever to corkiness of the bark. The cork-barked one is a tree of great beauty. Its corkiness is more pronounced than that of any other corky-barked tree in general cultivation. Besides this, its foliage changes to a handsome yellow color in the early days of Fall, usually before that of any other tree. It is a great acquisition, and it is to be hoped our nurserymen will soon have a good stock of it to offer. No doubt Japanese nurserymen could supply small trees of it, and perhaps seed; but it must not be forgotten to mention that the corky one is the one desired. The tree seems perfectly hardy in Pennsylvania as it will doubtless prove to be much farther north than this.

size many of the trees are lost in transplanting when set out without much pruning. Tulip trees are closely allied to magnolias and may be considered in just the same way.

It is claimed by some planters that when a magnolia is pruned at planting it rarely breaks afresh in a satisfactory way. One pruned back branch may push afresh, another may not, the result being an ill-formed tree. This is true, to some extent. A better way, it is thought, is to prune by thinning out the branches, say, by cutting out entirely every other one, not touching the remainder at all. This, of course, is the equivalent of cutting back half way all the branches. When planting in nursery rows and not on a customer's lawn the very best way of all is to cut the magnolias right down to the ground. This is drastic treatment, but it is the right kind to give them. If but small plants, and such as have been recently transplanted, there may be no need of such treatment, but in all other cases—and even in these, many think—it would be better to cut them down to within four inches of the ground. In this way everyone will live. A six-foot tree so treated may make but six inches to a foot of growth the first season. This is better than a dead tree, and the following year it will make additional growth of perhaps three feet, and, really, in the end but little will be lost in height, even had it grown well without having been cut back at all.

JOSEPH MEEHAN.

THE FLORISTS' EXCHANGE

Dreer's Roses for Out-Door Planting

The best stock procurable to sell to your retail customers

WE make a specialty of this class of stock. All the plants are field grown plants which during the winter months have been potted up into 5 and 6 inch pots; they were stored in cold houses and are now breaking into growth freely and are in prime condition to sell to your retail customers for out-door planting. This stock must not be confounded with cheap Holland grown plants, all being either home grown or imported from England, Ireland or Germany.

Omaha, Neb.

Newa Notes.

The past few days have turned most unusually warm, not in fact, the thermometer has gone up to 85 and over—the warmest in thirty years. This weather was entirely unlooked for, and much more Easter stock will be in than was expected; some will also suffer as a consequence.

The early Easter, coupled with diseased bulbs, will make lilies scarce. Not only are lilies scarce, but also carnations; hardly a grower in this vicinity has cut what would be a fair average.

Bulbous stock will be in great supply. Owing to the heat wave, violets will fall off greatly, and perhaps cut off the supply entirely.

Alfred Donaghue will discontinue his Sixteenth street store after April 1, moving his interests to the Farnam street shop, where Mrs. K. Donaghue is in charge.

L. Henderson has made great preparations for a large trade. He will erect two rose houses, 25x150 feet each as soon as the season will permit. Mr. Henderson is making things ready for a great "blowout." The Florists' Club to be the willing victims.

A recent visit to Paul Floth's plant, revealed everything in fine shape, from Spring bedding stock to the finest lilies in the city. These latter were the Lilium giganteum, and Mr. Floth thinks they pay much better than Harrisii or longiflorum. He will build this Spring, but has not decided as to size.

Herman Brothers of Council Bluffs, a new firm, are sending in some fine Mrs. Lawson carnations in several colors.

The new location of J. H. Bath has proven very satisfactory.

WATERVILLE, ME.—Mitchell & Company, the well known florists, held an anniversary of the opening of their store at 144 Main street on March 27, from 1 to 5 p. m. They kept open house during the hours named, and to each lady calling they presented souvenirs in the form of a small palm or croton, and a small tasty folder containing two pictures of their greenhouses; and general information regarding the extent of their florist's business. The store was crowded with ladies all the afternoon, and hundreds of the souvenirs were given away. The firm has 27,000 square feet of glass, one of the carnation houses being 40 by 200 feet.

SYRACUSE, N. Y.—H. Youell has resigned his position with C. W. Crouch, Knoxville, Tenn., and is back in this city.

NORFOLK, VA.—B. D. Blick, father of Lloyd Blick, florist, died on March 25, aged 73 years.

Hardy Roses for Decoration Day

HARDY H. P. ROSES
We offer exceptionally strong two-year-old dormant, low-budded stock (on Manetti), to the following varieties:
Alfred Colomb, carmine.
Anna de Diesbach, bright carmine.
Ball of Snow, pure white.
Baron de Bonstetten, dark crimson sbudcd.
Baroness Rothschild, satiny pink; extra.
Captain Christy, delicate flesh color.
Duke of Edinburgh, bright vermillion; very fine.
Fisher Holmes, dark rich scarlet.
Frau Karl Druschki, the finest white in existence, \$12.00 per 100.
General Jacqueminot, rich velvety crimson.
General Washington, beautiful red, shaded carmine.
John Hopper, beautiful rose pink.
La France, the finest light pink.
Margaret Dickson, white, pale flesh center.
Margia Charta, clear rose pink.
Mme. Gabriel Luizet, light, satiny pink.
Mme. Plantier, white.
Mrs. John Laing, soft pink; most desirable variety.
Paul Naylor, beautiful dark pink.
Princess Camille de Rohan, velvety crimson.
Ulrich Brunner, cherry red.
Prionsa on H. P. Roses \$1.25 per 10; \$11.00 per 100; \$100.00 per 1000.

HYBRID TEA AND OTHER ROSES OF RECENT INTRODUCTION
(Strong 2-Year-Old Plants.)
Bessie Brown. Creamy white, \$1.50 per 10; \$12.00 per 100.
The great new red rose, and distinct from Liberty in color. No Rose in commerce can compare with Grues on Teplitz as a leader, \$1.50 per 10; \$12.00 per 100.
Konigia Knorla (Improved Teestout). Magnificent, \$1.50 per 10; \$12.00 per 100.
Mrs. Sharman Crawford. Deep rosy pink, the outer petals shaded with pale flesh-color, white at base of petals, and distinct from all other Hybrid Perpetual Roses, \$1.50 per 10; \$12.00 per 100.
Perle de Rouges. A polyantha variety of unusual merit. Color velvety crimson, with reflex of petals bright cerise, \$1.50 per 10; \$12.00 per 100.
ENGLISH MOSS ROSES
Assorted White, Pink, Red, large dormant plants, from open ground, \$1.50 per 10; \$12.00 per 100.
THE TREE BABY RAMBLER (Mad. Norbert Levavasseur)
CROWN AS A STANDARD
The popularity of the Baby Rambler has suggested the growing of it as a tree or standard. The variety is too well known for description; enough to say, it retains all its characteristics of free-blooming qualities, etc., 60c. each; \$5.00 per doz.
THE BABY RAMBLER
Mme. Norbert Levavasseur. Strong field-grown plants, \$1.75 per 10; \$15.00 per 100.
CRIMSON RAMBLER
Large heavy plants, two years old, 3 to 6 feet, \$1.75 per 10; \$15.00 per 100. 4 to 5 feet, \$2.00 per 10; \$18.00 per 100.
DOROTHY PERKINS
Resembles the Crimson Rambler, except in color, which is a lovely shell-pink, holding a long time without fading. \$1.75 per 10; \$16.00 per 100.
The Sensational New Rambler Rose LADY GAY
"A seedling from the popular Crimson Rambler, which it resembles in habit and general effect. The flowers are of a delicate cherry-pink color, which fades to soft white." Strong plants, field-grown, \$3.50 per 10; \$30.00 per 100.
OTHER CLIMBING ROSES OF MERIT
Paul's Carmine Pillar. One of the most attractive Climbing Roses. Two-year-old, field-grown, \$1.75 per 10; \$15.00 per 100.
Marchal Niel. Color bright rich golden yellow, field-grown, \$1.75 per 10; \$15.00 per 100.
Gloire de Dijon. Color buff, orange center, very sweet-scented, field-grown, \$1.75 per 10; \$15.00 per 100.

HYBRID TEA ROSES
Maman Cochet, pink. Maman Cochet, white. Unequaled as hedgers for Summer blooming, producing buds of large size and of ideal form. The buds are of the color and form of Bridesmaid and Bride, but larger, and outside will yield more blooms than the latter, will under glass. The two finest outdoor Roses yet introduced. Strong 2-year-old plants, 10 for \$1.50; \$12.00 per 100.
American Beauty, Clothilde Soupert, Kaiserin Augusta Victoria, Caroline Testout, Hermosa. Strong, 2-year-old, \$1.50 per 10; \$12.00 per 100.

THE KILLARNEY ROSE
Irish Crown From the Raiser.
Good strong two-year-old plants, \$3.00 per 10; \$27.50 per 100.

HARDY ROSE SOLEIL D'OR (Golden Sun.)
Like Persian Yellow, this variety is perfectly hardy, with large, full, globular flowers, varying in color from gold and orange to reddish gold, shaded with nasturtium-red. Two-year-old, budded plants, per 10, \$2.00; per 100, \$15.00.

The Grand New Rose ETOILE DE FRANCE
Superb crimson red velvet, the center of the bloom vivid cerise red. The flowers are very fragrant and last long. This new variety is the result of a cross between Madame Abel Chatenay and Fisher Holmes. Field-grown, strong two-year-old plants, \$2.75 per 10; \$25.00 per 100.

AMPELOPSIS and other Climbers

AMPELOPSIS
Ampelopsis Veitchii (Boston Ivy), extra strong imported vines, three-year-old, \$2.00 per doz.; \$15.00 per 100.
Ampelopsis murilis, more rapid grower than the foregoing, larger foliage, \$3.00 per doz.; \$20.00 per 100.
Quinquefolia (American Ivy or Virginia Creeper). Good for covering walls, verandas or trunks of trees; affords shade quickly, 25c. each; \$2.50 per doz.; \$18.00 per 100.
CLEMATIS
Henryi, pure white; extra large.
Jackmanii, purple.
Alba, white.
Sieboldii, lavender.
Ville de Lyon. The finest of all reds; flowers brilliant carmine red. It is equally as good as Mme. Edouard Andre, but contrary to this one, is a very free-growing variety.
All the above Clematis in extra strong plants, \$3.00 per doz.; \$20.00 per 100.
Clematis paniculata, strong 2-year-old plants, \$1.25 per doz.; \$12.00 per 100.

ARISTOLOCHIA SIPHO
Dutchman's Pipe, strong field-grown, \$2.50 per doz.
WISTERIA SINENSIS
Extra strong field-grown plants.
Blue, \$3.50 per doz.; \$25.00 per 100.
White, \$5.00 per doz.; \$40.00 per 100.
HONEYSUCKLE
Extra strong field-grown plants, 5 feet long, many branches.
Coccineum, Scarlet.
Hulliana, Yellow.
Perlyzium White.
Serotinum Belgica (Monthly Dutch). Red.
\$2.00 per doz.; \$22.50 per 100.
HYDRANGEA PANICULATA GRANDIFLORA
Two-year-old, 3 to 4 branches, bushy, \$1.60 per doz.; \$10.00 per 100.

ARTHUR T. BODDINGTON, 342 WEST 14th ST. NEW YORK CITY

FIRES.
THOMPSONVILLE, CONN.—A small blaze in the greenhouse of D. William Brainard on March 25 was extinguished before much harm was done.
DETROIT, MICH.—On the night of Friday, March 22, fire did considerable damage in the flower store of Simon Lachman, 16 Wilcox street. The origin of the fire is unknown.
LAWRENCE, K. A. N.—Considerable damage was done by fire to the Heshon greenhouse and its contents on Saturday,

March 23, caused by the burning of tobacco stems.
IRVINGTON, N. J.—A fire started in the boiler room of the greenhouses owned by Herman Hoffman at 9:30 o'clock Saturday night, March 30, and did about \$100 damage before the owner could extinguish it.
SOUTH ORANGE, N. J.—The village fire department was called out Saturday last and again on the day following to extinguish blazes in the Manda Nurseries, caused, it is thought, by sparks from a passing locomotive on the Lackawanna Railroad.
KALAMAZOO, MICH.—The death and burial, on March 29, of Richard Van Bochove is reported in the local papers. The deceased is the father of the well-known florists of this city. He was a successful and most highly respected business man of Kalamazoo, having recently retired from the lumber business which he had conducted for thirty years. He died at the advanced age of 89 years. S. B.

PETER REINBERG, NO. 51 WABASH AVENUE, CHICAGO

Few members of the great fern family are as easy of culture as these nephrolepis. Their propagation by division and especially by runners is rapid and always successful. A well-lighted bench should be chosen for Summer propagation, and the plants should go into the soil now as soon as such a bench can be had. Early planting and early lifting in the Fall mean a goodly lot of fine, well-established specimens when sales begin. The best bench soil for the purpose is a mixture of sandy loam, rotted manure and leaf mold in about equal parts. No shading is needed for these ferns while making their growth.

Sweet Peas.

There is no such a thing as being too early with the starting of sweet peas out of doors in the beginning of Spring. It is a great advantage to have the ground in readiness for sowing the seeds without being compelled to wait for its becoming in proper condition for spading or plowing, which in early Spring is to be looked for, rather as an unusual state of things than as a rule. The grower, therefore, who plans in time for a coming season's large sweet pea field, preparing the land in the Fall and having now nothing to do but to sow the seeds as soon as the mellow upper crust is workable, will have the best chances of receiving good pay for his expenditure in time and labor.

Sweet peas do well in almost any kind of ground, provided it is deeply dug, liberally enriched and freely exposed to air and sunshine. Of course, there is a great difference as to behavior in the varieties offered by the seedsmen. Some are absolutely worthless for extensive culture by the professional florist, while others may be grown with success and profit in some localities, but not in all. Growers who go into sweet peas heavily every Summer must continue to test some of the newer or untried sorts in a small way every year to discover those of merit for their particular place. Outsiders' advice here is most unreliable. A variety that as a trial crop proves a profuse producer of high grade, fast selling flowers, has, with me at least, usually continued in succeeding years to be a good thing to grow quite heavily. While some of the old standbys have become enfeebled and uncertain and some of the newer ones are giving out too quickly, there still remains a long list of good varieties to recruit from.

Reminders.

Left over azaleas, if not already started into new growth, are improved in shape by judicious pruning before making a renewed start. They should not be placed out of doors until the new growth is well under way or almost completed, when they will be excellent stock for next season.

Stock plants of poinsettias should now be repotted into new soil after being cut back. If sparingly watered at first and afforded a good place on a sunny bench, a good crop of cuttings will be available in May.

From salable plants of Vinca major many cuttings may now be taken without lessening the value of the old plants. No opportunity to increase the stock in this line should be missed. A Summer's field culture will make fine plants of cuttings rooted now.

Amaryllis vittata, now about out of bloom, must not be allowed to become dry at the roots for six or eight weeks yet or until the foliage is well ripened. On this depends future success.

The dividing and replanting of Shasta daisies, if deemed at all advisable, should be undertaken now or as soon as the ground is in fit condition.

The field set apart for asters should not be dug up or plowed while still in a soggy condition, and the plants should not be set out before the soil has become somewhat warm and is in the best state for planting.

A lime dressing on any land over-fertilized, sour or worm-infested, is a good thing at this time of the year. A liberal dose before plowing and another after the land is leveled off, evenly raked under, will prove of benefit to most outdoor crops, especially roses, asters and carnations.

One of the richest, safest and quickest acting fertilizers is coal soot. Thinly spread over the surface of the soil in which plants are growing it is carried down in watering and produces immediate results.

THE WEEK'S WORK.

Timme's Timely Teachings.

Cyclamens.

We now enter upon a season when young stock of all kinds requires constant attention and when any sort of long continued neglect most often amounts to wilful sacrifice. Cyclamens, started last Fall or in Midwinter, are among the readiest to resent any slight in cultural care at just this time of year. Those sown in September or October are now ready for 3-inch pots and should now undergo this shift without delay. The later sown lots will need a transplanting into new soil and will fare best by being once more dibbled off into trays or boxes, allowing them more room and a slightly higher stand above the soil. The little corns should never be entirely below the surface of the ground; their tops should be visible when the planting or potting is finished. Only those seedlings started early last Fall will be in bloom in time for next Christmas, and their corns should now be of the size of peas.

A good potting soil for well advanced cyclamens is a rather stiff mixture of turfy loam and thoroughly decomposed horse manure, lightened by the addition of some sharp sand and a small portion of good leaf mold, all well broken up, but not sifted. Rightly placed drainage in the larger sized pots is essential.

Cyclamens may be carried through the Summer in outdoor frames, but all indoor culture from start to finish has resulted in the making of fine specimens and is to be preferred when the right kind of bench space is available. A shading, not too dense, at the sunniest hours of bright days, is necessary, but at all other times the plants must not be deprived of the fullest light.

Nephrolepis.

Boston ferns enjoy a degree of unflagging popularity that so far has been a potent safeguard against the danger from overproduction. Although the newer forms strive hard, and not in vain, for public recognition, the original type has gained such a firm hold in the esteem of the people as the most-effective, most easily managed and most durable of decorative house plants, that it seems doubtful whether the most distinct improvement will ever rise above the common appellation Boston fern. In the opinion of most buyers all the newer kinds of nephrolepis, some of them truly magnificent, are merely Boston ferns, better grown on some places than on others. But in the mind of the farsighted grower there exists no doubt as to the great superiority of nearly all of the later forms over the old type of Boston fern, almost as great and decided as the improvement in this over the old time Nephrolepis exaltata; and the time is not far off when Boston ferns will be grown and sold, which are not the Boston ferns of old.

MINNEAPOLIS FLORAL CO., MINNEAPOLIS, Minn.

diate effect. Soot may also be employed in liquid form by suspending a small bag of it into a harrel of water for a day or two, and using this in the feeding of plants. To throw clean soot in with the cinders and on the ash heap is a sinful waste.

The best stock for planting in benches for Winter or early Spring flowering of such things as swainsonas and snapdragons is obtained by rooting cuttings now, taken from plants just coming into bloom.

It is now time to begin the propagation of chrysanthemums in good earnest. It is none too early for almost all of the leading commercial kinds.

Very useful during early Summer are a bed or two or a few rows of candytuft, mignonette, Gypsophila elegans and the like. Sow the seeds as soon as possible.

Uncover all hardy stock, remove the rubbish, and give things a tidy look and the plants a chance to grow.

If any grass seed is to be sown, the early part of April is the best time for it.

Dormant hardy stock, until sold, fares best if properly heeled in on some cool and shady spot of the garden, but for immediate trade a wrapping or mossing of the roots and a place in some cool shed will do well enough. Customers should be made to understand that entire success mainly depends on early planting.

A slight delay in the ordering of the material for the new houses to be put up usually amounts to a great lengthening out of the building season.

FRED. W. TIMME.

Change in Canadian Tariff.

In the revision of the Canadian tariff, a change has been made that will have considerable effect on the florist trade, says the Canadian Florist. Seedling carnation stock for propagating purposes has been placed on the free list. This means that Canadian growers will be able to purchase from the introducers in the United States, seedling carnation stock of new varieties, that they may wish to try in Canada, without having to pay a duty on such stock. Growers will not, however, be able to import standard varieties without paying the usual duty of 20 per cent.

A resolution has been sent by the Canadian Horticultural Association to the Minister of Customs asking that plants and cuttings of new varieties of roses, chrysanthemums and geraniums be also included in the free list.

Naming of Florists' Varieties.

Even in the naming of florists' varieties, some fancy used to be exercised in the seventeenth century, particularly in the case of carnations, says the London Times. There were red Hulos and Crystallines, and Striped Savages and Canbersines and Lusty Gallants and Pale Pageants and Infantas and Feathered Tawnies. And there is no reason why florists now should not show a little more spirit and invention in giving names to their novelties. Florists' varieties do not have botanical names; therefore, the florist has a free choice, and no excuse if his names are meaningless or ugly. Yet they are usually both. What is to be said for the name Blairii No. 2, given to an excellent old rose, or Gruss an Teplitz, given to an excellent new one? The habit of calling flowers after people is a very dull one and ought to be discouraged. All that can be said for it is that the names of people do not need to be translated, but this would apply also to classical names, which are far less used, scarcely at all; but even if a pretty florist's name had to be translated it would not matter much, provided it was short and descriptive. Daffodils in this respect are better treated than roses; for instance, Lucifer is a good name for the glowing flower to which it is given, and Sunset is another. But there are some pretty names even among roses, as, for instance, Irish Glory and Irish Modesty for the beautiful single teas, which have lately come from Ireland. Even humorous names are better than dull ones, and the gardener is to be commended who christened a new cucumber "Tender and True," when he might have called it Lord Kitchener or Sir Henry Campbell Bannerman.

Charles A. Reed.

Charles A. Reed, florist, and a popular member of Massasoit lodge, I. O. O. F., passed away at his home, 1062 North Main street, Brockton, Mass., on March 25, 1907, at the age of 40 years and 23 days, after a lingering illness. He is survived by a widow and two children.

Mr. Reed had been a resident of the north end for ever 30 years, living in the house where he died. He was a man esteemed and honored by all who knew him, his genial disposition winning many friends. He had been a sufferer with the disease to which he succumbed for several years. He went south to Asheville, N. C., some years ago, and was also treated at the Rutland sanitarium, with but slight result.

By occupation up to within five years Mr. Reed was a shoe operative. He succeeded H. E. Barrows in the florist business which he conducted in Brockton for the past five years.

Nathan Smith.

Nathan Smith, senior member of the firm of Nathan Smith & Son, Adrian, Mich., died at his home in that city on Thursday, March 28, 1907. Had he lived until

The Late Nathan Smith

Saturday, March 30, he and his estimable wife could have celebrated their sixty-fifth wedding anniversary.

Mr. Smith was one of the oldest and most highly respected citizens of Adrian. Without doubt, up to his death, he was the oldest continuous resident of the State, going to Michigan with his parents when he was but three years of age.

Nathan Smith was born September 22, 1817, at Manlius, Onondaga county, New York. Three years later he went with his parents to Michigan, the family settling near Birmingham, which is now nearly a suburb of Detroit. The father set to work making a home in the woods, where he reared a large family. Nathan Smith is the last one of this large family to go. As a young lad Nathan's playmates were the Indian children of the woods, and he learned their language quite fluently. He seldom saw a white child outside of his own family, and his education was picked up as best he could. Mr. Smith was a great reader, and kept up-to-date on all questions to a remarkable degree. At the age of 17 he began learning the carpenter trade, and was in the work quite extensively in Detroit. For many years he was in charge of the department of construction on the Michigan Central railroad, his first work being on the first Michigan Central round house at Detroit. Most of the first buildings along the Michigan Central road were erected under his supervision. He was in charge of a gang of one hundred men at the memorable time when, near Michigan City, a railroad crossing war resulted in an accident which killed many men, and which ultimately led up to starting the present laws regulating railway crossings in Michigan.

Mr. Smith was married March 30, 1842, in Southfield township, Oakland county, to Miss Helen A.

Green, and she has proved a faithful and helpful companion through all the sixty-five years that have passed. In the Summer of 1843 they moved to Detroit, where they kept their home until 1857, when they went to Adrian. That city has been their home ever since, Mr. Smith worked at the carpenter trade there for some years, built the present Smith residence himself, on West Maumee street, and in 1876 erected the first greenhouse of the plant which has grown into one of the largest floral establishments in the Northwest. Elmer D. Smith, the junior member of the firm, has accomplished much of this and is now recognized as one of the most expert chrysanthemum growers and originators in the United States. Two children were born to Mr. and Mrs. Nathan Smith, Alfred N., who was first sergeant of Company C., Eighteenth regiment, and died at Nashville, Tenn., and Elmer D. Smith, who has been spoken of.

Nathan Smith took much interest in the affairs of Adrian. In the building of the college in that city, he gave liberally of his money and in material. He was one of the first Republican voters, and a Fremont man. Of a robust constitution he had but little sickness during his long life, until last Summer he was taken ill. Still he kept up all Winter, and took to his bed only the Tuesday preceding his death, suffering from a complication of diseases.

In the death of Nathan Smith there is the passing of a good man; having nothing in his heart but the best wishes for his fellow beings and with kindly disposition and intelligent conception, of things has blessed the world for having lived in it.

The funeral was conducted from the house Sunday at 2 p. m., burial being private.

Thomas H. Douglas.

Thomas H. Douglas of the firm of R. Douglas' Sons, nurserymen, of Waukegan, Ill., died at Los Angeles, Cal., Tuesday, March 26, 1907, of heart failure. Mr. Douglas' father, the late Robert Douglas, was a nurseryman of international reputation and founded the business which bears his name.

OUR READERS' VIEWS

Sweet Peas.

Editor Florists' Exchange:

Noticing an article on "Sweet Peas" in your issue of March 16, quoted from The Horticultural Advertiser of England, perhaps the following reply which I have sent to that periodical will be of interest to your readers, namely:

"Observing an article in The Horticultural Advertiser of February 20, wherein my name is mentioned, as well as my Winter-flowering sweet peas, I would state in answer to Mr. Engelmann, that in all my experience with this flower—over twenty-five years, sixteen of which nearly all of my time has been devoted to its cultivation I have failed to see one sweet pea sport. Every variety I have, originated with me, is a seedling, and I have now over seventy colors in sweet peas. Christmas Pink is a cross between Blanche Ferry and one of my first early flowering seedlings; Florence Denzer is a cross between Christmas Pink and Emily Henderson; Christmas Captain is a seedling from Christmas Pink and Captain of the Blues; Mrs. Alex. Wallace, Christmas Comtesse, Mrs. Charles H. Totty (lavender), Mrs. William Sim, Mrs. F. J. Dolansky, Mrs. W. W. Smalley (soft pink or orange), and over sixty other varieties are all seedlings obtained by myself from crosses made by my own and my son's hands, and all duly recorded.

"I think Mr. Engelmann must be in error about his sports, for I am almost sure that he has obtained several stray seeds from me, as he has purchased sweet peas of me for several years.

"It is not necessary nowadays to wait for a sport in sweet peas. There is so much skill among specialists now that we can produce nearly every color to order to be delivered within two years. As an example of how quickly a new sweet pea can be obtained in the United States, I would state that I got from a friend some seeds of that fine variety, Gladys Unwin, which was disseminated by Messrs. Watkins & Simpson, if I am not mistaken in November, 1904. I sowed the seed at once, and in the following May Gladys Unwin was in full bloom. I made some crosses with it and several of my Christmas-flowering varieties, and in the following November I was in a position to show to the New York Florists' Club several new seedlings obtained from these crosses. These flowers have been referred to several times in our trade papers, and Messrs. Watkins & Simpson have asked me how it was possible that I could disseminate seeds from this cross the last year. This is very simple matter to me, and just as simple in the case of any of my seventy varieties.

Mr. Englemann must know the difference between his own sports and my seedlings, for he has over forty varieties originated by me and has been a customer of mine for several years.

"In answer to S. B. Dicks, I would state that I would be pleased to send him some of my Winter-flowering varieties for trial. Probably Mr. Dicks would be able to secure some of the Telemly strain and grow them side by side with mine. I have never heard of the Telemly sweet peas until this year in the Sweet Pea Annual. I ship many of my seeds to France, Germany, Austria and Russia as well as to England, but I never heard of Telemly.

In answer to the editor's note, I am very sure that my first sweet pea seedlings were obtained from crosses made with the vetch. ANT. C. ZVOLANER.
Bound Brook, N. J.

"New Creations."

Editor Florists' Exchange.

In your issue of February 28, your correspondent John Birnie, in an article entitled "That Burbank Letter," puts himself on record as claiming the word "create" as found in the Bible to mean, to make out of nothing something that did not exist before. And I must admit that this is the popular meaning given to the word as taught in our Sunday schools, and by those thinkers who have a tendency to take a superficial view of things or have not given the subject the attention it deserves. To illustrate—in the first Chapter of Genesis, verses 1 to 3, we read. (1) In the Beginning God created the heavens and the earth. (2) And the earth was without form and void; and darkness was upon the face of the deep. (3) And the Spirit of God moved upon the face of the waters and God said let there be light, and there was light.

Here we find no mention made of God making anything out of nothing. It simply says that the earth was without form and void. To make my meaning clear: Suppose there is an uncultivated field, or forest of tangles; enters a man who clears the ground, builds himself a house, lays out a beautiful lawn and garden. Before the man came to this place did the house and cultivated garden exist? No. Did he make it out of nothing? No again. If the man had not come there, could this house and cultivated field have sprung up "de novo"? Most certainly not.

Did Mr. Birnie in all his experience ever see Nature make something out of nothing, and what are we if not a part of the visible order of things, and do we ever try to make something out of nothing? And may not what is true of a part be true of the whole also? Out of nothing, nothing can come. If Mr. Birnie would go a little deeper into biology and psychology I am sure he would come to this conclusion.

In regard to Mr. Burbank's claim to the title of a "creator" of new varieties of plants, etc., I will not discuss the matter, but merely quote the following extract from a very able essay by Dr. W. C. Saleeby entitled "Chemistry and the World" which will be found in the February issue of Harnsworth's Self Educator Magazine: "Nature is commanded by being obeyed. In a great epigram which we have quoted more than once, Bacon has summed up all the facts of the case and more, Nature is to be commanded only by obeying her." Now words like creative and creator may legitimately be applied to man in many of his acts. A great musical composition, such as, let us say, the third or fifth or seventh symphonies of Beethoven, or even a simple folk song, may properly be called a human creation; so also is a chair, a house or a football, so also, is "Paradise Lost." Man may be looked upon as the creating animal.

Now what does the word mean? We who are students of science clearly recognize what the word does not mean. First the chemist or the poet does not make something out of nothing. And in the second place, whatever he makes, does or creates, he remains the servant of Nature, to use Bacon's phrase, as well as her commander. The greatest genius cannot modify by a hair's breadth the smallest of Nature's laws, not in this sense can man create; and not in this sense can Nature be commanded; but if man chooses to observe Nature's laws, to obey Nature, then he can command her in this limited sense.

Thus the synthetic chemist will fail if he tries to make compounds in defiance of Nature's laws. If it be a fact in Nature that carbon and oxygen have an affinity for each other, there will never be any making of a compound which depends for its existence upon antagonism between these two elements. If, on the other hand, the chemist will accept Nature's laws, then his intelligence is capable of directing them to his own purpose and so producing new compounds which Nature herself would not have made, but which yet are made in obedience to her. This saying of Bacon's is one of the profoundest that ever emerged from a mighty mind.

And now to conclude, if I have been able to throw any light on the subject for Mr. Birnie and others, I shall feel well repaid for the trouble of writing this letter, but if Mr. Birnie persists in thinking to the contrary, notwithstanding, then all I can say is that Mr. Birnie is "nothing," for, as the Greeks say, "Out of nothing, nothing can come."

Woodstock, N. B.

WINSLOW C. WATT.

Mixing Pollen.

Editor Florists' Exchange:

The case quoted by one of your correspondents giving the results of past environment, in future progeny, is valuable evidence if the records show that the first husband was absolutely and officially dead, grave closed, and tombstone erected.

The same law that governs the offspring of mankind governs the offspring of the carnation.

JOHN G. ESLER.

CLUB AND SOCIETY DOINGS.

THE COLUMBUS FLORISTS' CLUB held its last meeting for March on Tuesday of Easter week, and considering the busy time the meeting was very largely attended. President Sherman F. Stephens was in the chair, and we were all much pleased to have Secretary James McKellar with us again after his attack of the grip. The floral committee appointed for the evening, consisting of Messrs. Bauman, Hills, Metzmaier, Wedemeyer, Monk, and Battelle, made the following awards: L. D. Siebert for a very fine specimen of Empress of India azalea, 20 points; an especially cleanly grown Hydrangea otakasa, in a 4-inch pot, brought R. A. Currie 15 points.

At this meeting the committee chosen sometime ago, consisting of Messrs. M. B. Faxon, Albert Knopf, Guy H. Woodrow, James McKellar and Sherman F. Stephens, reported in regard to the chrysanthemum show to be held in November next. The committee recommended a list of prizes to be awarded by the club, which were unanimously approved. In addition to the regular prizes, there will no doubt be several special prizes offered by members and interested friends of the club, in the same manner as last year. Last season the chrysanthemum show was for the members only, but the club feels that the time has come for a public show; and on the motion of Vice-President Currie it was unanimously voted, that the exhibition this Autumn be held in some suitable place where the public can come, and that an admission fee be charged.

The progress made by the committee on the distribution of seeds to the school children, was reported by M. B. Faxon. Very little in active work has been done since the last meeting as while the club's seed committee attended the last meeting of the Columbus Board of Education, and tried to obtain the necessary permission to distribute the packets of flower and vegetable seeds to the children and collect a penny a packet for the same as in previous years, certain members of the Board of Education, who are opposed to the work, blocked the request of our club until the hour of adjournment arrived and so the matter goes over for another two weeks. It seems a shame after all the hard work our club has done in this matter, to be blocked now at the eleventh hour just as this movement is shaping itself to do so much good in this city. We hope at the next meeting of the Board of Education to obtain the desired permission to distribute the seeds to the children.

This meeting was an especially long one, on account of the time consumed in discussing the important matters I have just referred to; nevertheless, we made time to compare notes regarding the Easter outlook. On the whole it would seem that the week of Summer weather (temperature around 80 degrees), that we have been having and which still lingers with us, will do much damage to plants and all kinds of cut stock, as it is simply impossible to hold anything back in this intense heat. But there is no help for it. It has certainly been a strange time the past six months; either no sun or all sun. At a late hour we adjourned to meet again Tuesday evening, April 9. F. W.

TARRYTOWN (N. Y.) HORTICULTURAL SOCIETY.—The regular monthly meeting of this society was held March 26. President Howard Nichols in the chair. There were two elected to active membership and three nominations. Wadsworth Lewis offers a silver pitcher to be competed for at the Fall show, and Mrs. George Lewis offers a silver cup. Julius Roehrs Company offers \$25 for the best table of orchids; H. A. Dreer, \$10 for the best collection of stove plants, and the F. R. Pierson Company, a \$25 silver cup for carnations. President Howard Nichols puts up \$10 for the best six pot plants of chrysanthemum, pots not to exceed seven inches. The executive committee reported on the schedule for the Fall show, and suggested a few minor alterations from last year.

The monthly prize for the best display of flowering plants and cut blooms was awarded to D. McFarlane, as was also a certificate of merit for the same exhibit. A certificate of merit was awarded James Ballantyne for his exhibit. The exhibits consisted mostly of *Cineraria stellata* and bulbous stock, most of which were shown in pots and pans. A paper on "Hardy Outdoor Roses" was read by D. McFarlane and freely discussed. D. M.

Our London Letter.

BY A. HEMSLEY.

OUR MARKET SUPPLIES.—The chrysanthemums, of which we had such a glut up to Christmas, finished up at better prices; those who were fortunate enough to have good blooms after Christmas did well with them. One grower told me that he made as much for one box of blooms the first week in January as he did for ten boxes of the same quality in the middle of December. Those who had good blooms early did well, and the late ones, especially good whites, made even better prices. The best late sorts were Mrs. J. Thompson, Madame T. Panckouke, and Niveus. I find that a good many growers are not likely to do so many another season; and those who have done best are the growers who grew them in moderate quantities, began to cut early, and had a regular succession all through up to the finish. And it is much the same with all other classes of flowers or plants—good quality and a regular succession will pay in any class of plants.

Some growers of carnations come in with a big lot just when the flowers are most plentiful and are surprised that they cannot make the prices recorded a week earlier. A week often makes a great difference. Taking varieties it seems that Enchantress will be overdone so many growers are doing it well. It is not quite deep enough in color for some work, but if we could get the same habit with the color of Mrs. H. Burnett we should have an ideal carnation. White Perfection I find is to take the lead in market as the best. Every grower is buying Britannia, but St. Louis and Robert Craig are also claiming attention, and Victory is another favorite.

Among roses we have been getting some very bright blooms of Richmond; the only fault is that they are not quite large enough. Liberty has also been good; both of these keep their color better than the old English favorite, General Jacqueminot, yet this variety is still valued on account of its beautiful fragrance. Mme. Caroline Testont was not in quite so early this season, but I saw some lovely blooms the third week in January. Mme. Abel Chatenay remains one of the most popular roses we have, and during the past year I believe that they have been procurable every morning that the market has been open. Hiawatha and the Climbing Frau Karl Druschki are the two roses that will be most in demand among trade growers next season.

FERNS.—*Nephrolepis Whitmanii* has shown in splendid condition by Messrs. H. Low & Company at a recent meeting of the Royal Horticultural Society, yet it failed to gain distinction from the committee. It is certainly a beautiful fern, but we are getting rather too many of this type, and as Piersoni elegantissima and Messrs. T. Rockford's *N. todoroides* had so recently received certificates, the last came failed. *Davallia canariensis elegans* is another valuable fern added to the list this year; it comes from Messrs. J. Hill & Son.

THE WINTER-FLOWERING CARNATION SOCIETY seems to be now well established on good lines. It has fixed on the Royal Botanic Gardens as its headquarters and held another show there on March 13. It will give a great impetus to English growers to work at hybridizing; and also to import all the new varieties from America and other sources. I find there are some difficulties ahead. The great point is to determine which is the best variety of any particular color. There will be a slight difference in the shade and one may like one and another a different shade. To properly prove a carnation it should be shown every month during the year and points given; we should then find out which were the best for all-the-year-round trade. We know that Mrs. T. W. Lawson, Enchantress, and a few others are good twelve months in the year, and others should be proved; then the best for any particular month might be selected. I do not believe in just the way it is done in the Sweet Pea Society, that is, giving first place to some variety because it is shown in most classes, especially as several classes are restricted to special sorts. I also find fault with the Sweet Pea Society for confining large classes to special sorts. I think there is one for about 18 or 19 sorts, which must be the same in each exhibit. Now take the scarlets; if A has a fine scarlet seedling which might be better than Scarlet Gem, which is shown by B he ought to be allowed to substitute it for that variety under a new name, and the same should apply to all other varieties. But I do not advocate the increase of new names; we are already getting too many. I find that the number of varieties has risen to 152 shown last year, where it was only 90 in 1903. The society gives an audit of the number of exhibits of each variety, but being compelled to include certain sorts in several classes, this does not prove much. But we get a little nearer the mark in the first-prize list, where it is for any variety of a particular color. This, however, does not take in some of the newer sorts. Coming to these I am surprised to find that Paradise, a beautiful variety of the Gladys Unwin type, has received no distinction.

About Asters.

I have grown asters for exhibition and commercial purposes for almost thirty years. I like them, and always have. As I look back over the years, and bring to mind all the innumerable novelties in this popular flower that have come and gone, I am almost forced to believe that anything of merit in asters, in the way of a real sterling novelty, is almost impossible to find. In the old days we grew almost entirely for exhibition and sale purposes the Victoria, and Truffaut's Pæony-Flowered Perfection classes; and to-day there are no better kinds in the whole aster family. The Victoria class, for all purposes, is certainly grand; the magnificent blooms in shade and color embrace every tint known in this flower. The blooms themselves are round and fully double, with the beautifully imbricated petals recurving to the edge of the flower.

Many amateur and professional gardeners as well have always contended and still contend, that the Improved Victoria is by far the finest aster in cultivation; be that as it may, it is certainly an elegant variety. Besides its great value for florists' purposes and as a garden plant, it is also the very best of all asters for pot culture. The plants can be grown and flowered wholly in pots if desired. In height this variety grows about two feet, in some soils possibly a little less. As regards colors best suited to commercial work, I would advise the following shades: dark blue, peach blossom pink, and snow white. There are some twenty other very pretty and delicate shades, but the ones mentioned can always be used with good effect, especially in funeral work, and it is in funeral work that a very large proportion of all asters-grown are used.

Truffaut's Pæony-Flowered.

Truffaut's Pæony-Flowered Perfection asters have always been favorites of mine, for many reasons; they are sturdy and easy growers, less liable to disease than any, and their flowers are intense and superbly brilliant in color and shade. The individual blooms are large, perfectly double, with each petal distinctly incurving to the center of the flower. This sort attains a height of two feet, and when in full bloom makes an extremely brilliant effect. As with the Improved Victoria class, there are many colors and shades, but the dark purple and snow white for commercial work are the most desirable varieties.

Imbricated Pompon.

Another class of asters that are not very much grown, in fact, never have been when compared with the large-flowering varieties just described, are the

Imbricated Pompon asters. These beautiful, small-flowered sorts are much liked by growers, especially for exhibition purposes. Each plant forms a most perfect mass of bloom; in fact, every plant might well be called a perfect bouquet in itself. This aster grows about twenty inches in height, and there are many very beautiful colors and shades in this class. For exhibition purposes it is superbly elegant. The whole plant is usually cut and placed in a vase, and the effect of a stand of these must be seen to be appreciated. The individual flowers are very small, but borne in the greatest profusion.

The three splendid classes of asters that I have just described have stood the test of time. They were popular thirty years ago and are to-day. There are no better sorts in cultivation.

American Branching.

Within a comparatively few years a class of asters known as American Branching have become very popular, and have been largely grown by both amateur and commercial growers. This class has many good points: in the first place they are very free-flowering, without which characteristic no aster can ever be a success commercially. The blooms are very double, average extremely large in size and the stems of the flowers being very long, make this class one of the very best for cutting. The make-up of the flowers is grace itself, the wavy and twisted petals giving the resemblance of a Japanese chrysanthemum. This class grows to a height of practically three feet, and needs quite good growing space for satisfactory results. For very early maturing asters, the Queen of the Market is valuable, as the plants come into bloom some four weeks before other varieties, and are very satisfactory for cutting.

The various strains of Improved Comet asters, as well as the Ostrich Plume varieties, are most charming for their exquisitely curled and twisted petals.

A Desirable Novelty.

To describe all the other more or less standard classes would be only right, but as I wish to take a little of your valuable space to describe an aster of recent introduction that I cannot but feel has before it a wonderful future, I want to tell you my experience of last season with Vick's Violet King aster. Perhaps in no more convincing way can I recommend this variety to you, than to at once tell you, that last September when other standard asters were a drug on the market, Vick's Violet King sold for fifty to seventy-five cents, and a few special blooms even brought \$1 a dozen. I have not for years been so much impressed with a novelty as I have been with

Vick's Lavender Gem Aster—Reduced to One-half Natural Size
Courtesy James Vick's Sons

this aster. In habit of growth it resembles the Branching types, is a most sturdy and bushy grower, and has rich green foliage, and strong stems. In form this variety is certainly distinct. The petals are large, broad, and quilled somewhat. The individual blooms are often five or more inches in diameter, and perfectly double; the curled and fantastically twisted petals completely covering the crown of the flower. In its superb color, is its great elegance. The originators call it a soft violet-lilac; but the description in my trial ground report book says:—a most brilliantly elegant "Royal Purple," and my notes further state that the last good cutting of these asters was made on October 9, 1906, when they brought seventy-five cents a dozen at retail. It is a splendid flower for funeral work, and in my judgment those who do not plant it liberally this year will regret it. One point in regard to it has not been emphasized very strongly, and that is, that Vick's Violet King is its best as a late aster—it is its very best when outdoor flowers are beginning to be scarce and of poor quality.

The Hercules Class.

Another aster which did very well with me last season was the new Hercules class. They are branching in habit, and grow about two feet in height. The individual flowers are extremely large, and borne on strong stems; the long-petaled flowers resemble very much Japanese chrysanthemums. This season there is being offered a pure white sort, which comes well recommended as a fine exhibition variety.

Lavender Gem.

Another new aster that has been well received is Lavender Gem. In color it is an exquisite shade of delicate lavender, deepening with age. The feathery effect of the ostrich feathered type, to which it belongs, is enhanced by the fact that it bears a large proportion of long, partly tubular florets, that are irregularly cut and slashed. The plant is erect and of medium height, branching close to the ground. The flowers are borne in profusion on long, slender, wiry stems. In season it comes between Queen of the Earlies and Daybreak. To the florist the value of this variety, the originator says, will be very great.

In watching the introduction of new asters, as the writer has for years, seeing them come into prominence through skillful advertising, flourish a short time, and then disappear forever, he has become very skeptical regarding new varieties. But it does really seem that, during the past few seasons some very promising new asters have been produced. They are so promising, and come to us from firms of such absolute reliability, that it would appear to be at least most conservative to give these new comers a fair trial.

M. B. FAXON.

Freesia Purity.

The accompanying illustration shows a spike of Freesia Purity, as grown by the originator, Rudolph Fischer, Great Neck, L. I.

The increasing demand for this freesia compels Mr. Fischer to give up his business in the East and move to the Pacific Coast, where the bulbs can be raised in quantity in the open ground, and where he hopes to maintain the high standard of his specialty. He grows only Purity and a batch of seedlings of his own raising. After May 1 Mr. Fischer's address will be Santa Anita, Los Angeles County, Cal.

Hardy Outdoor Roses.

Read by David McFarlane before the Tarrytown (N. Y.) Horticultural Society at the March, 1907, Meeting.

The so-called hardy outdoor roses with but few exceptions possess extremely poor qualities for the gen-

Vick's Imperial Sunset Aster

Courtesy James Vick's Sons.

eral embellishment of the landscape from an artistic point of view, consequently we cultivate the majority because of their excellence for house decoration as a cut flower and their unique colors, fragrance, purity and individuality. So many are the varieties of roses now in commerce that to make a selection is no easy task, and as the most of them have been hybridized in France, Germany and Great Britain, many that carry the highest honors in the lands of their birth are a sad disappointment when grown under our more extreme temperature. But if a collection of, say, three hundred well selected varieties were once established on a place, the chances are that not one of them would ever be discarded; for we might say, especially of hybrid perpetual roses, that the color and form of one variety is so near, and yet so far, in resemblance to another, that we decide to keep both because of their characteristic individuality.

The Hybrid Perpetual Class.

The grandest of all rose blooms are found in the class generally designated as hybrid perpetuals, but the word perpetual applied to the blooming of these roses, I regret to say, is very much of a misnomer, at least in our climate. While a bloom or so may be found later in the season, we have to console ourselves with the fact that the flowering period for these roses is during three weeks in June. If this fact alone were judiciously taken into consideration it would eliminate many a rose garden from such a prominent position in the landscape, while at the same time detract nothing from the general interest displayed in the rose.

Place for a Rose Garden.

The best place for a rose garden is one that cannot be seen from any distant point, but one where a host, or hostess, can guide his or her guests and lead them by surprise among the rose beds or under the arbors in the season of bloom. And while the plants are at work preparing for next June they will not be critically commented upon for their rustic looks. The rose is a strong feeder and is best suited in a heavy, moist, but well drained soil, and if they can be planted with a shade from the east, but by no means an overhead one, so that the dews will hang on until 9 or 10 a. m., so much the better, as I consider this the best location for roses.

Time to Plant.

The best time to plant hardy roses is in the Fall, about the first or second week in November. In planting be sure that the graft is well buried. In the case of strong growing varieties I recommend a depth of

seven or eight inches, and the weakest growers should not be planted any less than four inches below the normal surface of the soil. Roses planted at this time should be laid down at once and covered over with three or four inches of soil. In that way they will keep over the Winter and turn out plump and fresh in Spring.

If it is compulsory to plant roses in Spring, have the work done just as early as the ground will permit, for there is no plant that I know of that suffers from late planting as much as the rose. Should the plants show the least sign of shriveling when received in Spring, dig a trench and cover them entirely with about eight inches of soil for three or four days, and unless they have been all the more dried out you will generally find the wood and buds quite plump when you lift them from the trench. If any wrinkles remain on the bark, the chances are that these plants will die; and should they survive, the growth will be extremely poor for the first season.

Pruning.

The last week in March or first week in April is generally the best time to prune hybrid perpetual roses, as at this time all danger from damaging frosts are past, so that we can spread what covering has been used for Winter protection. After the pruning is done give a good loosening up of the soil with a spading fork and the plants are ready to start work.

Few gardeners prune their rose bushes close enough. With but a very few exceptions I prune down from one to four inches of the soil and those exceptions are only such roses as Margaret Dickson, General Jacqueminot and Prince Camille de Rohan, which are apt to run blind on the extra strong shoots from the bottom. Even with these varieties care should be taken to cut out all two-year-old wood close to the soil.

Fertilizers.

If the manure used for protection during Winter is dug in in Spring no additional fertilizer need be applied until the 20th day of May, when a liberal application of some stimulant—pure bone meal, a good grade of commercial fertilizer, or liquid manure from the baryard which ever is convenient—is of great benefit; and should the weather be dry from this time until the flowering period is well over the ground should be well saturated with water. Where the soil is very light a mulch of from four to six inches of litter, or cut grass, is good to retain moisture and also to keep the roots cool, although, it adds nothing to the beauty of the beds. I would prefer litter to grass as a mulch, as I have seen the grass during a dull spell create a bad dose of mildew. If a mulch has been used up to and through the flowering period it should be removed early in July, and the beds kept well cultivated from then until October.

Freesia Purity

Grower Rudolph Fischer.

Growing H. P.'s for Cut Bloom.

The best way to grow hybrid perpetual roses for cut blooms is in rows in the garden, and I would advise every one to give them plenty of room between the rows—three feet or more. They may be set fifteen to eighteen inches in the rows. This enables

Comet Asters

Photo by J. F. Johnston.

you to draw up the soil to the heel of the plants for Winter protection before placing the manure around them. Another advantage it lends in Spring when you remove the manure, the cavity in the center will hold quite a lot of it, where it can be deeply forked in. This will cause fresh root action over a wide space, as the root is the driving power for the top and our aim is to produce a good bloom on a long stem with good foliage. I have never seen this method fail even on light sandy soil.

Most men who have written on the rose advocate the soil to be left good and firm and only forked up to a depth of a few inches in the Spring. This is contrary to my experience for good results, as I never hesitate to put the fork as far in as the foot will send it, seven or eight inches away from the neck of the plant. No doubt by this operation a great many roots are broken, but it is at a time when the plant is dormant and we have just cut all of its top away, and I think that the young roots will work through the loose soil with such vigor that will soon more than compensate for the rough pruning they have received.

Hybrid perpetual roses should not remain undisturbed more than seven or eight years when they should either be replaced with young two-year-old stock or carefully lifted, placed over a chopping block, and all the thick fiberless roots removed with a sharp hatchet. Roses treated in this way are in many cases as good as younger stock. Care should be taken not to treat all in one season, as hybrids give very poor results the first season after being planted.

Roses grown for cutting or exhibition purposes should be disbudded, leaving only the strongest bud on each shoot, which is generally the center one. And where roses are grown especially for exhibition the small weakly shoots may be removed at an early stage; although the latter is seldom necessary where the operation of pruning has been perfectly performed in early Spring, for in that operation no wood should be left that is likely to throw up a weak growth.

List of Varieties.

The following are varieties that I have found worthy of a place in any collection. I will not try to describe their colors in shades as I will probably get confused. I might here make a suggestion for that energetic body of men, The American Rose Society, of which one of our esteemed members is ex-vice-president, to take up, and see if a standard color chart could not be produced. I think it would aid compilers of catalogues in describing varieties in a more satisfactory form to

their patrons, for with this color question left to the masses we get various descriptions of the same roses. This is not to be much wondered at, as we very often get three and more shades of color harmoniously blended in one bloom.

White—Frau Karl Druschki, Margaret Dickson, Merveille de Lyon, Mabel Morrison, Jules Finger, White Baroness, Merveille de Blanchés, Helen Paul and Clio may also be classed among the whites.

Pink—Mrs. John Laing, Mrs. R. B. Sharman-Crawford, Mrs. Frank Cant, Mme. Gabriel Luizet, Pride of Waltham, Robert Duncan, Paul Neyron, Paul's Early Blush, Marguerite De St. Amande, Marchioness Dufferin, Laurence Allen, Jennie Dickson, Ellen Drew, Magna Charta, Abel Grande, Alphonse Souper, Baronne Prevost, Baroness Rothschild, Duchess of Edinburgh, Francois Michelon, Jules Margottin, Mme. Eugene Verdier, Duchess of Fife, Duchess de Vallombrosa, Dupuy Jamain, Duchess of York, Mme. George Paul, Marquis de Castellane, Mrs. Cockey and Mrs. Harkness.

Red and other shades—Ulrich Brunner, Jubilee, John Hopper, Jean Liabaud, Jean Souper, John Bright, Lady Helen Stuart, Longfellow, Lord Macaulay, Lord Frederick Cavendish, Mme. Ferdinand Jamin, Eugene Verdier, Louis van Houtte, Horace Vernet, Grand Mogul, Gloire de Margottin, Gloire de l'Exposition de Bruxelles, Earl of Dufferin, Earl of Pembroke, Eclair, Exposition de Brie, General Jacqueminot, Fisher Holmes, Prince Camille de Rohan, Paul Verdier, Paul Jamain, Pierre Notting, Mrs. Jowitz, Mrs. Harry Turner, Star of Waltham, Victor Hugo, Victor Verdier, Tom Wood, Waltham Standard, Mlle. Annie Wood, Marie Baumann, Marie Rady, Maurice Bernardin, Mlle. Suzanne, Marie Rodocanachi, Mme. Charles Wood, Mme. Lelievre Delaplace, Duke of Connaught, Duke of Edinburgh, Duke of Fife, Countess of Oxford, Charles Lefebvre, Charles Lamb, Captain Haywood, Boh. Davison, Bruce Findlay, Ben Cant, Baroo de Bonstetten, Prince de Portio, Abel Carriere, Alfred Colomb, Anne de Diesbach, Charles Margottin, Eugene Furst, Francois Levat, and Marshall P. Wilder.

No collection of roses is complete without a few of the mosses. They require the same treatment as the hybrids. The following I have found the best: Common Moss, Crested Moss, Gracilis, Little Gem, Muscosa Japonica, Crimson Globe and Blanche Moreau.

For rose heds in prominent places I would recommend the following varieties: Pink and white Maman Cochet, Grace Darling, Viscountess Folkestone, Safrano, Hermosa, Gruss an Teplitz and the polyantha Baby Rambler.

A whole bed of one variety is always more effective than any attempt to mix them, and a suitable edging of sweet alyssum, verbenas, or any low growing continuous flowering plants will help show the roses off.

All decaying blooms should be frequently picked off and the plants should always be gone over after a heavy rain.

These roses, with the exception of Baby Rambler, are either tea or hybrid tea, consequently are not so hardy as the hybrid perpetual, and should be extra well protected during Winter. They should not be pruned nearly so far back in Spring.

No class of rose has gained in popularity in the last fifteen years as the climbing rose. This I may say is due to the Crimson Rambler, which is now no stranger neither to the humble cottager nor the wealthy millionaire. But the Crimson Rambler may justly be credited with the stimulus created among hybridizers the results of whose work are now demonstrated by a vast variety of sterling merit, and the Yankee hybridizer deserves a goodly share of the credit.

For covering arbors, trellises, fences, pillars, or planting alongside of buildings and high walls in conjunction with other climbers, nothing is more effective than these Rambler roses. The best and hardest varieties are found in the Rambler, or polyantha class, although some of the Wichuraiana hybrids are extremely useful for this purpose. But some of the latter cannot be classed as hardy roses, many of them having too much tea blood in them to be able to stand our Winters. I have seen large plants of Gardenia, Jersey Beauty and Evergreen Gem completely killed in a moderate cold Winter. They are better adapted generally for covering banks and low projecting rocks. And when mixed with honeysuckle are extremely valuable for landscape work. The following are good varieties of Climbing roses: Dorothy Perkins, Lady Gay, Dawson, Leuchstern, Psyche, Crimson Rambler, Sweetheart, Debutante, Lynch's Hybrid, and White Wichuraiana.

Pillars and various shaped trellises may be covered with roses in the front and rear yards of the small cottages, and many of the strongest growing hybrid perpetual varieties as well as the so-called pillar rose may be used for this purpose. Some of the best are Baltimore Belle, Queen of the Prairie, Gem of the Prairies, General Jacqueminot, Mme. Plantier, Magna Charta, Marshall P. Wilder and Carmine Pillar.

Climbing and pillar roses must not be cut far back in Spring, but the oldest wood should be cut out occasionally and this is best done just after the flowering period, taking care that you have a good young growth from the bottom for every old one you cut out. All that will be necessary in Spring will be to cut back to suit the space desired to be covered.

Some varieties of roses may be used for hedges, but I think there are other plants that adapt themselves better to this work than the rose. The best rose for this work is the hybrid China, Mme. Plantier, although some of the Austrian, of which Persian Yellow is the best, may also be used.

Rosa rugosa can vie with the best of flowering shrubs for ornamental mass planting; Alba and Rosea are the best. These should also be cut well back in Spring and induced to throw up strong shoots from the heel.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Avenue. My facilities for delivering flowers for any and all occasions are unequalled. I can give prompt service to steamer and theatre trade. Telegraphic orders solicited.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Washington, D. C.

GUDE BROS., 1214 F Street, N. W. We excel in high-class flowers and design work of every description; quick service, reasonable charges and liberal treatment have placed us on top. Try us.

Milwaukee, Wis.

THE C. C. POLLWORTH CO. Wholesale Florists, will take care of all your Retail orders for the delivery of flowers anywhere in Wisconsin.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLORAL CO., 1706 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Cincinnati, O.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dallas, Texas.

LANG, THE FLORIST, the largest flower store in the South. Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Texas, Louisiana. Mail and telegraphic orders solicited.

Insect Pests.

The rose like all other good things in floriculture has its bug enemies. White scale or rose scale, is often troublesome on climbing, pillar, or standard roses; where the wood is over a year old it is generally worst. A thorough spraying with Pratt's Scalecide, one portion scalecide to twenty of water, applied with a fine nozzle in late Fall or early Spring, will kill this pest. Caterpillars must be carefully guarded against. I generally find one application of powdered hellebore sufficient to keep these pests in check. This should be applied about the 20th of May. The best way is to use it in liquid form, one tablespoonful of hellebore to fourteen quarts of water, sprayed on in the afternoon of a bright dry day. One should not wait until reminded by the half-eaten leaves before using hellebore, as the caterpillars are sure to visit the plants about the time I have stated.

Another great enemy of the rose is a little white thrips, but this insect seldom attacks roses in the open garden. However, look out for your climbers on buildings, or pillar roses, if any way shaded by trees. I find strong applications of tobacco water the best for keeping this thrips in check, but generally the application has to be repeated at intervals throughout the season, commencing about the 10th of May.

Aphis is sometimes troublesome; tobacco dust, applied late in the evening, is the surest remedy for aphis.

But, gentlemen, the worst of all bugs that we have seen in late years is the genuine rose bug that devours the finished product and has vexed all admirers of the rose along this section of the Hudson River for the last two years. I have seen arbors of roses with the blooms literally covered with these bugs, and scarcely one perfect bloom free from its ravages. Killing by hand seems to be the only way to destroy this pest, but even this plan gives small satisfaction, for we are unable to save our blooms. If I could prescribe a remedy to eradicate this pest, this paper would have been at least worth the ink that has been spilled upon it.

Hedge of Madame Plantier Roses

Photo by John F. Johnston.

New York.

News of the Week.

The next meeting of the New York Florists' Club takes place on Monday evening, April 8, and is to be a ladies' night. This means, of course, that the house committee are making the usual elaborate preparations, and we can assure all ladies who attend this gathering that they will have a most pleasant evening. In addition to the entertainment provided for the ladies, it is expected that some of the members who attended the recent meeting and exhibition of the American Rose Society, held in Washington, D. C., will have something to say regarding their experiences and impressions gathered while there.

The weather has been decidedly cooler ever since Sunday evening, and all cut flowers are being much benefited thereby.

It is in the general order of things to expect a lively season of trade from now on to the beginning of May. There are many weddings and other social events to come off, and retailers will no doubt experience quite a busy time for the next few weeks. Stock in general has been so scarce and high-priced during the winter months that it is within all reason to expect that from now on there will be an unusually heavy supply of all seasonable flowers, and as that will mean a corresponding decrease in wholesale values, it should give the retailers an opportunity to recoup somewhat from the uphill business they had to contend with during the few months of scarcity and high prices.

Peter Beurlein has resigned from the position he has held as assessor in the tax department of Long Island City. Mr. Beurlein has for 16 years held that office. Before the township of Newtown was merged in Greater New York, he was elected assessor for Newtown and held the office for seven years, and for the nine years since Newtown became a part of Greater New York, he has held the office by appointment, with headquarters in Long Island City. Mr. Beurlein has been building more glass recently, and from now on he will devote all his time to his carnation business.

U. G. Scollay, who answers the heating problems in our question box department, is making rapid progress toward recovery, and his doctor thinks that in the course of two or three weeks or so Mr. Scollay will be able to resume his business duties again. He has been suffering from an internal tumor and not from appendicitis as has been previously stated.

The coast steamer Bermudian, which arrived from Bermuda on Easter Saturday, had only 250 boxes of cut lilies aboard. This is the smallest number of lilies that have arrived by steamer from Bermuda for Easter in a great many years. The fact of the festival being so early this year accounts for the shortage, as the lilies were not in full blossom early enough in the fields to make them available for the Easter trade.

Joseph Myrtle, described as a florist living at 30 Wilbur avenue, Dutch Kills, L. I., was shot recently while crossing a vacant lot at Sherman and Wilmer streets. He was wounded slightly in the right arm. Myrtle stated that while crossing the lot he saw three men, evidently Italians, talking together, and one of them called on him to stop, but instead of doing so, he broke into a run; then a shot was fired and the bullet hit him. He was taken to St. John's Hospital, and two of the three men were arrested by detectives and held in \$500 bail for a hearing later.

Rudolph Fischer, the well-known florist of Great Neck, L. I., will on May 1 move to Santa Anita, Cal., where he will make his permanent home and cultivate extensively his freesia Purity.

The monthly meeting of the Horticultural Society of New York will be held in the American Institute rooms, West Forty-fourth street, on Wednesday, April 10, at 4.20 p. m., and a discussion on "Plants for Shaded Gardens" will be introduced by Parker Thayer Barnes of the Garden Magazine. The annual exhibition of this society will be held in the Museum Building of the New York Botanical Garden on May 8 and 9. On May 8 the annual meeting of the society will also be held in the Museum Building, and G. T. Pow-

ell will speak on the subject of "Renovating an Old Orchard."

L. W. Wheeler, of Vaughan's Seed Store, has returned from a trip to Bermuda, where he has been inspecting the lily crop.

Fire broke out in the building in which is located the store of Traendly & Schenck, 44 West Twenty-eight street, a little after 12 o'clock on Tuesday night. The firemen after their arrival soon had the flames under control, and finally extinguished, when it was found that the tenants in the upper floor had suffered a loss of about \$3,000. Traendly & Schenck suffered little damage except that occasioned by water and some broken glass. The fire had evidently started on the second or third floor of the building, but its origin has not been determined.

Wm. C. Russell, for fourteen years superintendent of the Daheim estate, Millbrook, N. Y., and well known as an expert plantsman, has started in the florist business at the H. J. Smith greenhouses, Millbrook.

On Wednesday, April 3, Miss Katherine Olive, daughter of Chas. B. Weathered, greenhouse builder and engineer, was married to Norman J. Couder, at St. Michael's Church, Cranford, N. J. Miss Anita Weathered was her sister's maid of honor.

Chicago.

News of the Week.

John A. Evans, Richmond, Ind., was in town last week.

Clara Kirscht, seventy-two years of age and mother of ten children including the florists by that name in Niles Center where the deceased lived, died last week and was buried from her late residence on Saturday morning.

Although early in the season bulbous stock, probably owing to the scarcity of carnations and roses, brought for a considerable length of time higher prices than usual, the year as a whole has not proved profitable to some growers, who, as a result of the Easter slump, are confirmed in a previously formed intention of withdrawing from that field in the future.

Lilac from out of doors from Southern shipping points appeared in large quantities on Friday of last week. By referring to his books Percy Jones ascertained that the first outdoor lilac he received from the same sections last year was on April 21, which taken as a criterion would make the season fully three weeks ahead of last year.

Thirty-seven hundred and fifty pounds, well up to two tons, was the weight of the first shipment of roses and carnations, bulbous stock, etc., (lilies included) from the Poehlmann Brothers' greenhouses to the city salesroom last Friday morning.

H. B. Beatty accompanied J. C. Vaughan to this city from Pittsburg, arriving last week Friday and remaining until Easter Sunday.

A meeting of the executive committee of the Horticultural Society of Chicago was called for Wednesday afternoon of last week at the store of P. J. Hauswirth but, lacking a quorum, was postponed.

Louisiana strawberries arrived in the Chicago market in quantities a month earlier than usual; Mississippi narcissi were shipped to our wholesale florists three weeks in advance of the last year's record, which in itself was some weeks ahead of any predecessor. A telegram reached here last week from New Orleans stating that ripe peaches were being gathered in Plaquemine parish months ahead of time owing to the warmest March weather ever recorded anchored in this neighborhood about March 23, all of which form pretty positive evidence of the precocity of the season.

Peonies in this vicinity were seen last Sunday several inches high, and commission men report that inquiries regarding the crop are already coming in.

This Easter was assuredly a retailer's festival, as the purchasing price was favorable to them and the further reports that are coming in make more emphatic the favorable accounts which were circulated earlier. Later reports such as, "largest ever," "fifty per cent. increase," "twice," and even, "three times as much as last year," were common on the street early this week.

The Winterson Seed Company reports a satisfactory, in fact, encouraging plant business for its opening week and commenced on Monday to open up a carload of box plants and trees.

Carl Cropp reports a very heavy de-

mand for gladiolus Princeps, so heavy indeed that the stock is exhausted.

Vaughan's West Market Seed Store has been compelled to make a change by the improvement of West Randolph street in the Haymarket district, and has removed from 206-S to 202 West Randolph street, where they have a first floor store and four large lofts, occupying the whole of the notable Masonic building at the Southwest corner of West Randolph and Halstead streets.

The Kennicott Brothers' Company commenced moving on Thursday from their recent location, the building having been obtained by Marshall Field interests, to 48 and 50 Wabash avenue.

William La Hayn of Chesterton, Ind., was a recent visitor.

The greenhouse of Mike Smith, a former policeman, but now a vegetable grower at Ridge and Farwell avenues, Rogers Park, was partly destroyed by fire between one and two o'clock Sunday morning, entailing a loss in the neighborhood of \$1,000. Mr. Smith is the grower made famous by Chief of Police Collins' stories regarding the former's extraordinary success as a mushroom culturist.

Frank Pisternick of the Wienhoeber Company staff was compelled to withdraw from active duty at a critical time in the middle of last week, owing to the appearance of blood poisoning in his left arm. At this writing he is making favorable progress.

Mr. Washburn, who is among the best at statistics, estimates that there was nearly fifty per cent. more stock handled by Chicago houses than at any previous Easter, but owing to low prices the returns would not foot up to over a ten per cent. increase. One hundred thousand lilies is his estimate of the number passing through the wholesalers' hands.

The express companies caused not a little hard feeling and inconvenience by starting in at one of the busiest days in the year to enforce the rule to make no collections after six o'clock.

Paul A. Stover of the Lincoln Park Greenhouse staff has the sympathy of many friends in the loss of his daughter Lillie, who died quite suddenly on Saturday last.

George Reinberg, after rebuilding some of his old houses, will erect a new range north of his last year's addition, which will be devoted entirely to miscellaneous stock, including Asparagus Sprengeri and plumosus, smilax and orchids in half a dozen of the favorite commercial varieties. A new departure for this section on a large scale. As previously stated carnations will be abandoned and his entire place, except as above stated, will be devoted to roses.

Florists' Club meeting and smoker next Thursday evening at 8 o'clock.

WILLIAM K. WOOD.

Philadelphia.

News Items.

Pennock Brothers have started this week opening their store at 8 a. m., instead of 7 a. m.; the last year they closed at 7 p. m., instead of 8 p. m. and as business increased, they have decided to still to with another hour less, believing that they can do just as much business in the shorter hours.

Fred Ehret, 1405 Fairmount avenue, had a horse stolen on Saturday. He sent a man out with horse and wagon to deliver plants; the man sold the plants, pocketed the money, left the wagon and harness in the street and sold the horse. The horse was recovered, but the man has gone.

Florists' Club Meeting.

There was a very good attendance at the club meeting on Tuesday evening. The paper read by Paul F. Reichner, of Henry F. Michell Company on "Bulbs," dealt chiefly with lilies, giving some of the methods used by growers who each year raise these flowers for Easter. The essayist suggested that florists generally select too small a bulb; more 7 to 9 would be better than the 5 to 7 size. He also suggested that economy in space and time could be gained by using cold storage bulbs which can be brought in in 12 weeks. He also dwelt on florists making selections as to varieties of hyacinths and tulips for forcing. For instance, many still adhere each year to varieties that shoot their spikes; as soon as the flower spike appears ready to get out of the leaves it is found broken off. Also in tulips many continue to order the Pottbakker varie-

ties, the red one of which is a very poor forer.

Westcott's Laurel Hill Nurseries had on exhibition the new Spiraea Queen Alexandra, the flower spikes being carried high above the foliage; the color of the flower is a delicate pink. This variety is being sent out by Van Wayeren and Kruijff of Holland. B. D. Kepleyn of that firm being present, gave a very interesting talk, stating that this new spiraea was a cross between a Lemoine variety and S. chinensis and remarked that to get the color good the plants should be shaded when showing color. He also gave some information as to the reason for the scarcity of some varieties of bulbs. Tulips like Vermilion Scarlet produce but few bulbets each year and these take four years to grow before they can be offered for forcing. Murillo, on the other hand, produces small bulbets freely, and they make perfect bulbs in one year. He also stated that most florists afforded too much water after the spikes appear; keep the plants moist, but do not deluge them with water.

The Florists' Gnu Club has tendered the use of its grounds at Wissinoming, to the sports committee of our club for use during the convention next August.

After the club meeting the members enjoyed refreshments, generously tendered by George Burton, in celebration of his winning the Lord & Burnham silver cup for American Beauty at the American Rose Society's show in Washington, the cup now being his property. DAVID RUST.

Washington.

Club Meeting.

The Washington Florists' Club held its regular monthly meeting April 2. It was expected that this meeting would finally dispose of all matters pertaining to the convention, but it was found necessary to let the matter lie over until another session, in order to render full and accurate account. Secretary McCauley read a letter from Edward A. Beaven, Evergreen, Ala., in which that gentleman returned the check sent him in payment for the wild smilax to decorate the hall, saying the pleasure was "all his." Wm. Weber, Oakland, Md., also returned with thanks the check which the club had sent him in payment for services as one of the judges of the show. In each case a unanimous vote of thanks was given, and the secretary requested to acknowledge same. Z. D. Blackstone, vice-president of the club, likewise returned the check for the \$25 prize, which he had taken for his mantel decoration. David Bisset also declined to accept his prize of \$6 for violets. In each of these cases a vote of thanks from the club was given. George C. Shaffer, chairman of the decorative committee which did the work of the banquet hall, was congratulated by the club and President Bisset upon the very able and efficient manner in which his duties had been performed. President Bisset stated that the hall was acknowledged by many to be one of the most beautiful ever seen. Professor Webber, formerly of the local branch of the Department of Agriculture, but now located in Boston, was made an honorary member. Fred D. Owen, who has for some time been connected with Public Buildings and Grounds here, and who originally laid out the landscape work of the flats, has written the Florists' Club inviting their co-operation with him and the civic government in making Washington more the "city beautiful."

G. H. Cook had the \$50 silver cup, which he had offered for 50 blooms of best Richmond roses, and which was won by Wm. H. Elliott, Brighton, Mass. Mr. Cooke was endeavoring to decide on the best inscription, and as soon as the work is done the cup will be forwarded to the winner.

The next meeting will be held on May 7. We are always glad to have any of our out-of-town brother tradesmen present at these meetings, and to receive from them a few leaves from their experience book.

JAS. L. CARRERY.

TOLEDO, O.—Miss C. B. Flick, of Fort Wayne, Ind., has sold her store here to Miss Helen F. Patten. It is now known as the Patten Flower Store.

SHARON, PA.—John Murchie has opened a flower store here.

ASPARAGUS

Robustus, best for pots, pans and vases. Sprenger, extra fine stock. Plumosa, supply limited. \$6.00 per 100, well worth eight or ten. Send ten cents for sample.

CARNATIONS

The Queen, \$12.50 per 1000. Nelson Fisher, \$15.00 per 1000. Last of April delivery subject to their rooting. The Queen, \$10.00 per 1000. Nelson Fisher, \$12.50 per 1000. Bountiful, \$15.00 per 1000. Enchantress, \$15.00 per 1000. J. E. Haines, \$25.00 per 1000. 100 at thousand rates.

GERANIUMS

Rooted cuttings only, ready about April 15th. at the uniform price of \$1.50 per 100, or \$10.00 per 1000. S. A. Nutt, Perkins, Vlaud, Buchner Poitvine, L. Francis, Castollano, Ricard.

ALBERT M. HERR, Lancaster, Pa.

Miscellaneous Stock---Surplus

ASPARAGUS SPRENGERI, 2 1/2 in., \$2.50 per 100. ANTHERICUM VIVATUM VARIEGATUM, \$3.00 per 100. BEGONIA VULCAN and VERNON, 2 in. ready for shift, \$2.50 per 100. HARDY PINKS, 2 in. in variety, \$2.50 per 100. GLOXINIA BULBS, Separate colors, \$4.00 per 100. CANNAS---Chas. Henderson, David Harum, Mills. Berat, Shenandoah, Italla, Duke of Marlborough, Pres. Carnot, 2 and 3 eye pieces, \$2.00 per 100, \$17.00 per 1000. (See catalog No. 5 for complete list.) ROSES---Strong young plants of Clotilde Soupert, Champion Climbing Soupert, Empress China, Golden Gate, Grusa An Tepnitz, Meteor-Mosella, Papa Gontier, Safrano, \$3.00 per 100, \$25.00 per 1000. CARNATIONS---Fair Maid, Mrs. Lawson, The Queen, Queen Louise, Boston Market, from flats of soil, \$2.50 per 100.

The STORRS & HARRISON CO., PAINESVILLE, OHIO.

GERANIUMS

ROOTED CUTTINGS S. A. Nutt, Buchner, and Doyle, \$10.00 per 1000. Ricard, Poitvine, Vlaud, and Castellano, \$1.50 per 100. Cash with order.

PETER BROWN, Lancaster, Pa.

For Immediate Delivery

PLUMOSUS, 2 1/2 in., \$3.00 per 100 4 in., 10.00 Bridesmaid, Golden Gate, Ivory, Kalsorin, Bride, 2 in., \$3.00 per 100; \$25.00 per 1000. MUMS, General Nonin, 2 1/2 in. pots, \$3.00 per 100 " " R. C. 2.00 " " Mrs. G. A. Lotze, fine com. white, 5.00 per doz.; \$25.00 per 100. Mrs. Geo. Truffett 2.00 " " Beatrice May \$10.00 per 100. Morton F. Plant 1.00 " " Mrs. John E. Dunne .75 " " General Hutton .75 " " Mrs. D. V. West .75 " " Ivory, Kalb, Willow Brook, Jerome Jones Queen, Nellie Pickett, Robinson, Ben Wells, Glory of the Pacific, John K. Shaw, Chalmersin, Dr. Enguehard, Wm. Duckham, Ralfour, Helen Frick, Quita, Cobbold, Bonsson, Halliday, Appleton, H. A. Psarr, G. T. Baer, Brutus, Edgar Sanders, rooted cuttings, \$1.50 per 100; 2 in. pots, \$2.00 per 100.

THE FLORISTS' EXCHANGE, St. Paul & Franklin Sts., BALTIMORE, Md.

PETUNIA "THE QUEEN"

This is something new in the PETUNIA order, a new double, extra fine, that requires no staking, 2 1/2 in. pots, \$1.60 per doz.; \$10.00 per 100. PLANT CULTURE PRICE \$1.00 A. T. DE LA MARE PTG. & PUB. CO., 2 Duane Street, New York

Davenport, Ia.

The Tri-City Florists held a meeting on March 21 at Fejervary Park and elected their officers for the ensuing year as follows: President, William Knees; vice-president for Davenport, Henry Pauli; vice-president for Rock Island, Henry Myer; vice-president for Moline, Julius Staack; treasurer, Adolph Arp; secretary, John Staack; financial secretary, Theodore L. Ewoldt; trustees, P. Becker, Frank Wolz and Henry Gaethje. The topic for discussion was "Beautifying City Lots and School Grounds." The discussion brought out many interesting features and facts, among which was that Davenport is a considerable distance behind Rock Island and Moline in the decoration of its lots and school grounds.

Plans were also discussed for the forming of a horticultural society. The object of the society would be to give displays regularly which would include every branch of the florist's work. Such an organization is badly needed in Davenport and it is thought more definite plans will be made in the near future. After the business meeting a social time was enjoyed and refreshments were served in the Inn. The next meeting will be held at Fejervary Park April 11.

Govanstown, Md.

The establishment of Isaac Moss at this place is one of the most complete of the many plant and cut flower growing establishments in the vicinity of Baltimore. The ride to Govanstown by electric car is not over twenty-five minutes from the business or central portion of Baltimore. Further out still Mr. Moss has quite a nursery where evergreens as well as a full line of nursery stock are grown. Here he also has a range of glass devoted principally to carnations where most of the newer varieties are seen. It is of the place at Govanstown your correspondent desires particularly to speak. Here is one of the finest commercial greenhouses possibly to be found in the State. It is of the Lord & Burnham construction, on the ridge and furrow plan, and gives a clear space on the inside of 180x76 feet. The entire floor space is laid out in solid beds with about two-foot walks between. Each bed is planted in a different variety of roses, principally Golden Gate, Bridesmaid, Ivory, Killarney and Richmond. Another bed was devoted to carnations, one to callas and longiflorum lilies and one to miscellaneous stock. The house is light and airy and is attractive on the outside as well as the inside, and is a credit to the enterprise of Mr. Moss who, by the necessary push and business acumen was able to erect such a handsome addition to his already large plant. W. C. Price is foreman for Mr. Moss and takes pride in his well-filled houses of valuable stock, all in the best condition. J. M.

Fishkill Landing, N. Y.

By prompt action on the part of workmen what would otherwise have been a serious fire in Hammond's Paint Works was averted on Thursday afternoon of last week. A pot of wax, used for lining barrels and kegs, was being melted in the Slug Shot grinding room, which has a cement floor, and in which there is no inflammable material. This vessel with several pounds of wax suddenly flashed fire, throwing a flame up to the ceiling. The blaze was quickly extinguished before any harm had been done.

Mr. Hammond has offered a cash prize of \$50 to the street commissioner of either village, Fishkill Landing or Matteawan, who puts the streets and crosswalks of the village under his care into the most tidy condition and so keeps them during the year. A committee of citizens will be appointed who shall pass judgment upon the results and the commissioner showing the best work to have the prize, and with the prize shall go a suitable certificate of honorable mention, which the street overseers may have as a testimonial of winning the said prize.

SCRANTON, PA.—The next regular monthly meeting and contest of the Seranton Florists' Club will be held on the evening of April 19, in Guernsey Hall. Besides the monthly contest and the regular business to be transacted, it is likely that the question of holding a chrysanthemum show in this city some time in the Fall of the present year will be brought up.

FRANK N. ESKESEN, Madison, N. J.

Baltimore, Md.

The Florists' Exchange has a handsome three-story building on the corner of Franklin and St. Paul streets, which is quite a monument to the enterprise of the florists of this city. It is a handsome structure of brick with elaborate stone trimmings, and columns that give the building quite an imposing appearance. As well the building affords the florists and gardeners of this city and vicinity a club room in keeping with many of the others of more elaborate pretensions.

The second floor and basement are occupied as a commission sales room and storage for all the surplus stock grown in the vicinity of this city. J. J. Perry is manager of this end of the business, and had well-filled tables of stock of all kinds for which there was a ready demand, it being Easter week. Bulbous stock seemed to be largely in preponderance, but there was also a large assortment of all other stock.

The entire floor upstairs is used as a club or meeting room and has a well-polished floor where the florists and their wives, and sweethearts may occasionally "shake their foot" as the occasion may demand. The hall is artistically finished and appurtenance with all the conveniences that a meeting place of this character requires.

J. M.

DAYTON, O.—Daytonians are gratified over the acquisition of the Montgomery County Fair Grounds for municipal park purposes, as proposed and practically arranged for. The Chamber of Commerce will probably indorse the purchase. J. B. Heiss, florist, suggests the conversion of the plot inside the race track into a public playground.

Appleton, Cheltonia; Percy Plumridge, H. W. Buckbee, Cash and Monogram, \$4.00 per 100; all other varieties, \$2.00 per 100. H. W. Buckbee, Rockford, Ill. NEW BEDFORD, MASS.—Everyone reports a very satisfactory Easter trade. Prices were good, and stock quite plentiful. Potted plants were in most demand, lilies were rather scarce; 25c. a flower was the price asked, although one department store was advertising them at 18c. a flower. Tulips, daffodils, hyacinths in pots and azaleas sold well; there seemed to be a good supply of these. They ranged from 25c. to \$1.50 for pots of tulips and daffodils and \$1 to \$2 for azaleas. Violets were not quite so plentiful as expected; the two days before Easter being so warm caused a big loss in these flowers, many of them drying up. The prices varied a great deal, from 75c. up to \$2 per 100 was the price asked. Carnations ranged from 75c. to \$1.50 per dozen. Roses were not advanced much in prices. H. V. Sowle had a store downtown, and Saturday night the place was packed with buyers. R. H. Woodhouse had some fine double tulips in all colors, which sold well. H. J. John had a fine lot of his white seedling carnation blooms; \$2 per dozen was the price asked. Good weather prevailed for the delivery of orders. HORTICO.

FOR SALE

The Book of Water Gardening

Giving in Full Detail

All the practical information necessary to the selection, grouping and successful cultivation of aquatic and other plants required in the making of a Water Garden and its surroundings, and covering all conditions from that of the Amature with a single plant to the large estate or park.

Profusely illustrated with over one hundred photographs from life, diagrams and plans.

The author is PETER BISSET, of Washington, D. C., a well-known expert in this art.

Price, postpaid, \$2.50—Orders taken now.

A. T. De La Mare Ptg. & Pub. Co., Ltd. 2 Duane Street New York

Boston.

News Notes. On Saturday the last of the series of lectures of the Massachusetts Horticultural Society was given at Horticultural Hall by John K. M. L. Farquhar. His subject was "The Gardens of Italy" and a large number of people turned out to hear what Mr. Farquhar had to say on this interesting matter. Mr. Farquhar illustrated his lecture with many excellent views of fine gardens of which he had taken photographs when in Europe last Summer.

The enterprising firm of W. W. Rawson & Company will now deliver free within fifty miles of Boston all orders for seeds and bulbs, amounting to two dollars or over.

The executive committee of the New England Dahlia Society met at the office of the secretary on Wednesday when some important business was transacted relative to the dahlia exhibitions the coming season.

R. and J. Farquhar & Company exhibited at Horticultural Hall on Saturday an exceptionally well-grown specimen plant of the fine old-fashioned pelargonium Mme. Thibaut.

J. J. Grulleman, Jr., of J. J. Grulleman & Son, Lisse, Holland, was among the visitors this week; also J. Horace McFarland, Harrisburg, Pa.

Hermann Thiemann, one of the well-known gardeners of this section, leaves for Chicago at an early date where he is to take charge of an extensive estate and commercial range for Mr. Fahyan.

Robert Cameron of the Harvard Botanical Gardens lectured before the Houghton Horticultural Society of Lynn on "The West Indies" on Monday. J. W. DUNCAN.

St. Louis, Mo.

News Notes. Our visitors the past week included Miss Bell Miller of Springfield, Ill., looking over the market for her Easter supply; and J. J. Karins, the well-known salesman of Henry A. Dreer, Philadelphia. Mr. Karins reports that the plant and bulb trade was never better. He spent Easter Saturday and Sunday with us and found everybody busy, so he will stay a few days longer. The Foster Floral Company has decided not to open its new store at 612 Olive street, having obtained a year longer lease on the old location at Broadway and Olive streets.

Oscar Hurtlemann, the North St. Louis florist, had a wagon-load of fine blooming plants destroyed by fire the past week while driving along Grand avenue. It was caused by some one placing a burning cigar in the rear end of the wagon. Loss, \$50.

Adolph Brix reports that he has bought the Klockenkemper place in the North End, he having a lease on it

heretofore. H. Braun, his foreman, says that they will build two new houses this Spring.

H. J. Pilcher, the Kirkwood florist, helped out Mrs. Ayers at Easter, and says he never saw such a quantity of stock as sold this year. Mr. Pilcher is building up his new place and is daily receiving a large number of carnation cuttings for his new houses.

Mrs. Frank M. Ellis, wife of our former wholesaler, will leave this week to join her husband in Panama; she reports Frank doing well.

Among our local growers who will build new houses this Summer are J. F. Ammann at Edwardsville, one large house, 150x40 feet; Hugo Gross at Kirkwood, six new houses; Oakland Floral Company, East Kirkwood, Mo., two large houses; W. J. Pilcher, Kirkwood, three houses; Adolph Brix, two houses. There are also a few others whose names we are not able to learn at present.

The local parks and the Missouri Botanical Garden are ablaze with fine tulip beds of all colors. George Ostertag, the superintendent of parks, with a big force of men, is hard at work in all the local parks. Park Commissioner Aul reports that the parks are in better condition now than ever before, and the Mayor will not go amiss to re-appoint these two men when the new officers will be named this month.

All the local seed houses have all they can attend to at present. Mr. Nichols of the St. Louis Seed Company, and Mr. Schisler of the Schisler-Corneli Seed Company say they were never so busy as this year, and the double force at these houses is kept going until late at night putting up shipping orders and attending to the over the counter trade.

President Irish and the trustees of the St. Louis Florists' Club expect a large attendance at the April meeting on next Thursday afternoon. This is generally a busy month for the growers, but the annual rose show should attract their attention. The retailers, who will be over their rush, should come out and swell the attendance. The meeting will take place in the Burlington building at 2 o'clock.

Washington, D. C.

Easter Notes:

The florists of this city and vicinity were a busy lot of people for the past week. Ideal weather in a great measure served in the double capacity of giving ample facilities to display to the best advantage their well grown stocks, as well as to bring out in large numbers an army of enthusiastic plant and cut flower purchasers. This, too, for an early Easter where the weather conditions have in some instances greatly interfered with the handling of the increased trade at this season to the best advantage. One met everywhere evidences of the festival. In the hotel lobbies, restaurants, and everywhere that men and women congregate were to be seen Easter plants in large numbers.

Gude Brothers' Company store on F. street, N. W., was a sight that attracted the attention of all passers by. On either side of the store and stretched along in front of those of their neighbors were banked lilies, rhododendrons, azaleas, spiraeas, deutzias, hawthorns, lilacs, and some fine bougainvilleas. One fine plant of bougainvillea that stood fully eight feet high and was well in bloom occupied the position of honor in front of the store in a handsome mound, and was offered at the modest price of \$50.

The Washington Florists Company on the corner of Thirteenth and F. streets had a handsome display of azaleas, hydrangeas, and rhododendrons, not to mention the hundreds of lilies and smaller blooming plants.

The display of J. R. Freeman at 612 Thirteenth street was in keeping with that of the other growers. Several large azaleas, well flowered, four to five feet high, made a notable appearance. Hybrid roses in both bush and standard form were also seen, all well flowered and thrifty. Hydrangeas, rhododendrons, spiraeas and lilies were here also in large numbers.

N. Davis had an entire street corner and large basement to himself on F. street, N. W. He seemed to have disposed of a large amount of stock. He kept a well-trained brigade of bicycle boys continually on the move.

F. Kramer had at 915 F. street, as well as in the Central market, a fine display of all to be found at this season in a florist's stock. Prominent among his cut flowers were a few fine vases of his new rose Queen Beatrice, that were much admired.

The store of J. H. Small & Sons on Fourteenth and G. street was an emporium of all the requisites of the florist's art that might be required for either personal adornment or public display.

Henry Pfister and George H. Cook both hold forth on Connecticut avenue. Each had attractive displays where rhododendrons and bougainvilleas appeared to be most prominent.

It is in the Central market, however, that one sees the greatest display of all the smaller blooming plants. In a few of the larger displays pyramids of lilies reached almost to the ceiling of the market house. Here was also found bulbous stock in large quantities—hyacinths, tulips and narcissus in great preponderance—in addition to all the other stock. Among the florists having the largest showings in the market the names of Comley Brothers, J. R. Morgan, John Boyle, Frank Shultz, N. Studer, F. H. Kramer, Alex. B. Garden, Robert Bowdler, and the American Rose Company were most noticeable.

On the outside of the market were scores of smaller displays where daffodils, pansies, laurel branches, saxifras, and pussy willows could be had at prices to suit the very smallest purchaser.

Possibly one of the largest collection of orchids in this country where the plants are grown for cut blooms, is that of George Fields on Brightwood avenue. The sorts grown are such as from long experience prove the most profitable for the cut flower trade. About ten large houses are devoted to this collection, where the plants are so classified that to a great extent, but a few kinds are found in each house. The first house was devoted exclusively to cypripediums, still indispensable to the commercial grower. Here large, well-filled twelve to fourteen-inch pans could be counted by the hundreds. Each season a certain number of pans are taken and divided that a single season's growth gives again a well established plant. In this way the stock is on the increase annually, in very rapid proportions. The dendrobium house comes next, and presents a very handsome effect as many of the plants were in bloom. While many pretty varieties were to be found the old and always pretty D. nobile predominated to a considerable extent. Formosum and Fendleyanum were also in good cutting stage, as well as some nice plants of Wardianum. Of this variety Mr. Fields has a white that he is very proud of—Wardianum album; several plants developed from among an importation of the other varieties.

Two or more houses are devoted to cattleyas—many hundreds of well-established plants, most of them in large twelve-inch pans. Several benches run the entire length of the house and on each bench are found such well known kinds as Mossiae, gigas, labiata, Triane, and Mendell.

Another interesting house contained some three hundred plants of Vanda cœrulea in from six to twelve-inch pans. Oncidium splendens was also to be found in this collection, but not in as large proportion as the other orchids named. Taken as a whole there must be between eighteen to twenty thousand well-established plants in this collection.

Besides orchids Mr. Fields has eight houses of roses as a side line, but his orchids claim the greatest part of his attention and care. J. M.

Lenox, Mass.

The regular meeting of the Horticultural Society was held Saturday, March 16. President Heeremans in the chair. F. Heeremans was awarded a cultural certificate for a very fine vase of Richmond roses. A. McConnachie won the society's checker tournament, also the medal presented by H. A. Bunyard, New York.

At the next meeting on April 6, John K. M. L. Farquhar, Boston, will give a lecture, illustrated with stereopticon views on "The Gardens of Italy."

Robert Mackie, for four years foreman at Allen Windon Gardens, has been appointed superintendent to Charles L. Laurence, Esq., Bay Shore, Long Island. G. H. I.

Table with columns for variety names and prices per 100 and per 1000. Includes The Belle, White Lawson, Enchantress, Nelson Fisher, Harry Fern, Mrs. T. W. Lawson, Boston Market.

Color.—A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Lawson. Unlike most pinks, the brightest sun does not injure the color. Size.—Three to four inches in diameter when established. Odor.—Pleasing, but not strong. Stems.—Favorably strong, but always graceful, ranging from 12 to 30 inches during the season. Habit, etc.—A very quick active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Gets away rapidly, blooms early and gives long stems right from the start. Productiveness.—Prodigious in the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. Stock limited. No discounts. First class certificates Madison and Indianapolis. Delivery Jan. 6th to 10th and later. Price, \$12.00 per 100, \$100.00 per 1000.

CARNATIONS

A Word About Varieties. Paper read by Robt. M. Schultz before Morris County Gardeners and Florists' Society, March 13, 1907.

Having had little experience with carnations and trying to ascertain the best varieties to grow for New York, I canvassed the market and noted the opinions of several wholesalers. We are now growing Mrs. Lawson, Enchantress, Queen and Victory, which, to my mind, is a good commercial combination and as I thought the poor man's varieties; but one morning my wholesaler said to me: "What makes Enchantress go to sleep so quickly, and why doesn't it hold its color?" "Why don't you grow a carnation like this?" holding up a bunch of Fair Maid. Looking them carefully over, I remarked the smallness of the flower and the color, being very good, and compared them with Enchantress. I thought Enchantress would bring twice the amount the salesman was getting for Fair Maid, but changed my mind when he pointed out the difference in keeping and shipping qualities, also its color. I saw both varieties that had been shipped two days previously by the one grower, and witnessed them sold to a retailer, who preferred Fair Maid for the reasons mentioned above. I must admit here, that Enchantress did show up in poor shape, while Fair Maid was fresh as if newly picked.

I just mention this incident to show that size of flower does not count if it hasn't the keeping and shipping qualities and color. Three different people spoke to me of this variety, and I believe it is worth a trial. They also mentioned Mrs. Frances Joost, Goethe, Abundance, Queen, and several other varieties of the smaller type and told me that these were the money-makers for Long Island and up-Hudson growers.

Now the question arises, Is there more profit in growing these small varieties than in novelties and fancy grades? Novelties and fancies embrace those varieties which are adapted for private gardeners and show purposes, but I do not think them profitable for a commercial grower. On the other hand, would the novelty and fancy grades, were they grown more extensively for market, show a balance on the right side of the ledger? This is a question open for discussion and I would like to see it thrashed out and opinions given by growers more able than I to handle the subject.

The ideal commercial carnation is the one that has size, color, stem, keeping and shipping qualities. Produce one with these attributes and you will win favor with the commercial grower as well as the private gardener. These are the ones the commercial grower should handle—the varieties that produce the greatest number of first-class flowers to the square foot.

Of the varieties in vogue there are some first-class ones to stick to, and of the new sorts of 1907 introduction, we have several presented to us which I believe will make good. We have pinks, reds and variegated kinds to choose from, but as yet the commercial man has not found his ideal white. However, from what I have seen and heard of late, I venture to say that the day is not far distant when we shall see several good whites disseminated.

The commercial value of the carnation is being felt more every year, and many growers have discarded and will discard roses, violets, etc., to take up and grow the "divine flower." Those growers who can handle novelties and fancy grades, and produce the goods, will no doubt be successful; but to the ordinary grower I say leave novelties and fancies alone. Stick to those from which you are sure of the best results.

A great mistake we growers make, is to purchase very small lots of the new introductions that strike our fancy, grow them in an off-handed way in some remote corner, and when we see we have a good thing, we say words to ourselves for not purchasing more and giving it a better chance. Where a money-maker is presented to you, take the time to look it up; go and see it growing, satisfy yourself as to its commercial value, and if it appeals to you as being the right thing stock a house with it. If it proves a bread-winner, under your culture, you will have plenty of stock to propagate from the following season. This purchasing of small lots is a great mistake. Regarding the temperatures that different varieties require, I do not feel competent to give the practical knowledge requested. I believe, though, such a table would be appreciated, were it compiled and printed in our trade papers.

THE EASTER TRADE OF 1907

The reports which follow, received from the larger cities, indicate that the Easter business of 1907 has been in general most satisfactory. The weather with the exception of that experienced in the Northwest, where frost occurred, was propitious, necessitating but little wrapping of stock, with consequent saving of time and labor.

It was again a plant Easter, although cut flowers were also in active demand. Azaleas seem to have been the almost universal favorites, but there was also a large call for lily plants, shortages of which are reported from some centers. Spiraeas, hydrangeas, rhododendrons, lilacs, Crimson Rambler and h. p. roses, bulbous flowers, geraniums, etc., all had their admirers, and it is noticeable that acacias and genistas were more largely called for than in some former years at this season.

The very warm weather immediately preceding Easter brought in a plethora of cut stock, in many cases militating against its quality. In this respect bulbous flowers suffered considerably, much of this class of goods being unsalable. Complaints are also registered regarding the unsatisfactory condition of violets in some cities, and carnations were also reported to have been, in several instances, soft and sleepy. There were, in general, plenty of cut lilies and good prices were realized for these. The picking practice does not appear to have been so general this year.

Prices obtained for plants generally were about as usual; and no attempt was made to inflate cut flower values. The volume of business done exceeded that of last year by a considerable margin. No novelties are reported.

Easter, 1908, comes at a much later date than this year, namely, April 19.

NEW YORK.—In glancing briefly over the business conditions that prevailed in this city during Easter time, one is forcibly impressed with the low prices that were obtained for all kinds of cut flowers and also for a great many plants. This, of course, was not unexpected and cannot be wondered at, as never before was there such an enormous quantity of plants and flowers available for an Easter holiday, and any attempt to obtain prices above the normal would have been suicidal. While values were in the main below the ordinary, it was, taking it all round, a splendid Easter trade. The weather was all that could be desired and had been so all the week previous, making it possible for plants to be delivered without any wrapping, thereby obviating a great deal of work on the part of the growers. It did commence to rain on Easter Sunday evening; and this was followed by a snow-storm on Monday morning; happily, this was too late to affect business in any way and one shudders at the thought of what might have happened if this storm had arrived twenty-four hours earlier. We can say for once that florists were especially favored by weather conditions. It was reported that early in the week some enthusiasts in the district that supplies New York with flowers and plants, requesting that all get down on their knees and pray for fine weather; if this was so, and the recipients did as requested, the thanks of the florist community are certainly deserved by that gentleman.

While here and there were those in the trade who affirm that Easter business was unsatisfactory it goes without saying that taking the city as a whole and taking into consideration the large amount of stock available, the trade in general was most satisfactory. It is true that if it were possible to get a record of the gross amount of money spent on flowers in this city, we feel positive that the figures would show an enormous advance over those of any previous year.

Retailers throughout the city cleared up quite satisfactorily. The plants they had prepared for the occasion, and with the reasonable prices prevailing in cut flowers, they had a good business along that line also. In the wholesale market, when stores were closed on Sunday noon, it was apparent that quite a little stock remained in the ice-boxes of the dealers. At the same time, it must be remembered that with the seemingly never-ending supply of flowers that pours into the wholesale district at such a time as this, it would be an utter impossibility to sell out clean of every thing.

On Saturday morning the Cut Flower Exchange the scene there was one of the liveliest we ever remember seeing. There was an absolute plenty of every seasonable flower, including lilies. It seemed a sure fact that fine weather would prevail, and buyers were there by the hundreds picking out their stock and getting away with it as rapidly as possible. No attempt to inflate values was made; lilies were offered at 12c.; carnations at \$3 and \$4 per 100; narcissus and single tulips were sold at the rate of eight bunches for \$1; sweet peas at \$1.50 per dozen bunches and every seed to be enough stock for everybody.

On the floor below where are located the salesmen of some of the larger rose and carnation growers, it early became evident that supplies were extremely heavy. The Summit express had two large wagons loaded to their utmost, and we feel perfectly safe in saying that never before was such a number of American Beauty and Killarney roses seen at one time on this floor as was the

case last Saturday morning. While it had been rumored that American Beauty might reach the 40c. mark, no attempt was made to obtain that figure; 30c. each was the highest price asked and that was an outside one; many going at a price below that. The best Bride and Bridesmaid went at 8c. and 10c., with an occasional 12c. each for something of extraordinary quality. Contrary to the rule of last year, it was the short stock that was left after the business of the day was over, Number one and Number two roses not being in such good demand as were the extras and specials. Lilac did not clear out here, neither did lily of the valley.

The best carnations obtainable were sold at 8c. each; this means for novelties only. Of the ordinary varieties, even of fancy grades, \$5 per 100 was the outside price, and from this down to \$2 per 100 was the general run of carnation values all through the day.

Among the wholesale stores in Twenty-eighth and Twenty-ninth streets conditions about the same as were mentioned, there being an abundant supply of everything and no attempt made to advance prices over what had ruled the day before. While 30c. was the outside price on American Beauty, it must be remembered that lots of the same were sold at 25c. also, and in large numbers even at 20c. In addition to that there were many so-called special American Beauty that could not be classed with the best grades and had to be moved at a price below 20c. even. The stock was so plentiful that buyers were extremely picky, and anything below first-class quality had to be sacrificed if it was desired to move it at all. Bride and Bridesmaid roses went at 8c. and 10c. each for specials, down to 2c. for Number twos; in fact, some of the latter grade went as low as 1c. each in quantity, and there was an occasional sale at 12c. made for some of exceptional quality.

Carnations sold at from 6c. down, an occasional hundred touching the 8c. mark. We may also mention here, with respect to carnations, that there were a number of choice fancy varieties that went to sleep in the hands of the dealers, and on that account were entirely unsalable. It seems strange that such a thing as this could happen; at the same time it is a fact and one that is much to be deplored.

Of lilies there seemed to be enough for all demands, and while 15c., was the top ruling price, there were many sold at \$1.50 per dozen.

Sweet peas were extremely plentiful and no attempt whatever was made to advance prices. A great many being cleared out. Lily of the valley was a complete drug, and those who attempted to get over \$1 or \$2 per 100 had the stock on their hands, as it was absolutely impossible to obtain a price on this staple. Lilac was another hard proposition and unless offered at reasonable prices say around 75c. per bunch, it generally remained unsold.

The violet question was one that everybody was well prepared for. It was expected that the greatest crop on record would be in, and it was also on record what had happened at the violets on the Easter Sunday of 1906. At that time we are reasonably sure that when the business was over there were no fewer than 250,000 violets left in the hands of the dealers. With this incident in mind, dealers this year made no attempt to get fancy prices. For good, ordinary flowers no higher than 50c. per 100 was asked and for this grade of stock it may be said that prices ruled at from 30c. to 50c. per 100, depending solely on the number wanted by the buyer. If he wanted a few hundreds,

he would pay 50c.; if he wanted a few thousands, he could have them at 30c. The special grade of violets was consequently very scarce. There were very few boxes of these violets in, consequently those that had them were enabled to clear them out at a fairly reasonable figure—that is, 75c. per 100, with an occasional sale going slightly above that. Roughly estimating the number of violets that came in, we believe there were about two millions, and there would have been more if the growers in Rhinebeck had been able to get the flowers picked. It was very evident, also, from the stock as it came in, that the warm weather which had prevailed some seven or eight days preceding Easter, had had a very bad effect on the violet stock, for, as a general rule, the flowers available for this Easter were of a very poor quality, indeed, and much unsatisfactory comment is heard among dealers who handle them in quantities. Still it must be stated that on Sunday the violet was the scarcest flower in the market.

Orchids sold out very well; they were not so plentiful as was expected, at the same time those obtainable brought good prices. The same can be said of gardenias of good quality, though there were many of the latter that did not sell out satisfactorily on account of being short-stemmed and otherwise inferior.

Bulbous stock, particularly narcissus in variety and single tulips, there was a great plenty. Prices were kept down at about \$1 per 100, and while a great many were cleared out, some were left over on Sunday. The bulbous stock that came up from the South was absolutely worthless when it arrived; evidently the heat had been too much for the successful shipping of these particular consignments.

The plant trade of the city was eminently satisfactory to growers, and we believe to retailers also. As is well known the city authorities allowed the plant peddlers the use of the side-walk around the park on Union square on Easter Saturday, and almost by daylight on that morning the little park was completely encircled by the offerings of these merchants. These peddlers had previously been to the triangular market at Canal and Washington streets, where the Jersey growers unload their products, and the growers had gone home early, having had little trouble in disposing of their plants. The Canal street market had to be run in the open as the inclosure had not been prepared to receive the tent under which the New Jersey growers have done business for the last few years. The tent is to be erected this week, however, and business there will be as usual under the canvas roof until the end of the season. We have been informed that this will be the last season that that spot of ground will be available for market purposes, as the city authorities have for it some other purpose in view. To get back to Union square where the peddlers had decorated the side-walk with their gorgeous azaleas, roses, hydrangeas, geraniums, spiraeas, etc., the place took on a very lively aspect early in the morning, and all classes and kinds of people were observed among the throngs. The "flushing" business being done throughout the day until the last plant had been disposed of.

As we said last week, the retailers were making elaborate preparations for Easter, and while there was little to be arranged, there was absolutely new in the plant line, there were many attractive arrangements, both as window displays and in combination boxes of plants. Among the prettiest trimming of plants noticed, we might mention some combinations seen at the store of J. W. Hauser, Fifty-sixth street and Madison avenue. The artist here had some very pretty blendings of ribbon and pot cover effects with Porto Rican mats, that were among the finest seen in the city. Myer, the florist at Fifty-eighth street and Madison avenue had a very tastefully arranged window in which were introduced boxes and nests of wicker-work made with the live pussy willow. George M. Stumpff of Fifty-eighth street and Fifth avenue went in chiefly for massive effects, showing large plants of azaleas, genistas, acacias and Rambler roses. J. Warrendorf, near Sixtieth street and Madison avenue, had for a window attraction a Rambler rose trained in the form of an automobile. The machine was of good-sized dimensions, there being room enough for a lay chauffeur and lady passenger, and considering the amount of twisting and tying that had been necessary to get the rose canes to conform to the shape of the vehicle, there was quite a goodly profusion of flowers. Another feature at this place was a miniature greenhouse filled with various flowering plants, the whole structure being about fifteen inches high, thirty inches long by eighteen inches wide, resting in a miniature garden with gravel walks, turf, etc., complete. We also observed an arrangement similar to that of the Fleischman store at Twenty-fifth street and Broadway. J. H.

Small & Sons, at their Broadway store, had one of the prettiest displays they ever had, and a collection of plants included all the choicest that the market afforded.

Taking it all in all through every department of the flower trade in this city, and at the same time realizing that here and there in spots business will not average up as good as last year, we have no hesitation in saying that the Easter trade of 1907 far exceeded in gross value that of any other previous Easter.

With the passing of Easter the market has been plentifully supplied with flowers, and prices are now about where they were one week ago. The cool wave that came in early in the week was most welcome indeed to flower handlers, and stock of all kinds is appearing to much better advantage than it did on Saturday and Sunday last. The consignments of bulbous flowers from the South are much better than those which arrived for the Easter trade. Violets have shortened up considerably, and slightly better prices are resulting. Mignonette was a glut all through and so remains. Lily of the valley is yet an unsatisfactory proposition and hard to dispose of.

American Beauty roses with long stems go anywhere from 10c. to 25c. each according to quality. Bride and Bridesmaid bring from 6c. down to 1c., including all grades. Carnations are selling at from 1c. to 3c., and there are more than enough at all times. Of lilies there is a regular supply on hand, and callas are plentiful. Narcissus are selling at from 20c. per 100 for Southern stock to \$1 per 100 for home-grown, and the market is glutted with them.

Smilax is not selling nearly so well as it did a week ago. Maidenhair fern and asparagus are moving fairly well.

Everything almost seems to be in full crop, and it would appear that for this season at least the high prices are over; at the same time we never know what a day will bring forth in this market.

NEWPORT, R. I.—As far as the demand for plants and flowers was concerned, Easter this year beat all former similar occasions, and had not lilies been very scarce it would have been the most profitable Easter on record for every florist in town. The shortage as well as the quality of the bulk of the lilies on sale cut a big hole in the net profits of the greater number of the dealers in Newport. Lilies were as usual, first choice, and sold at 25c. per bloom, the same as last year. White hyacinths in pans came next and went readily at \$1 in 6-inch pans; there were not enough to meet the demand. Blue hyacinths were in much larger supply which ought not to have been the case, but they had to go, and on Saturday evening they too brought \$1 each. Azaleas in 7-inch pots went rapidly at \$1.50; spiraeas and genistas in 6-inch pots at \$1 each. Deutzias were more in demand than usual and sold at the same price as spiraeas. A novelty for Newport was shown by Gibson Brothers in the shape of cacia pubescens in fine shape in 8-inch pots. They brought \$5 each. Hydrangeas, Baby Rambler and Crimson Rambler roses were features of the display at Zeigler's, who also had some good hybrid perpetual roses in pots; they all sold well. Genistas were rather neglected until a late hour, but they moved finally.

Cut flowers of every kind sold at high figures Saturday evening. Roses were scarce especially Bride. Carnations were also scarce toward the finish especially Enchantress, which was the favorite. Violets cost 2c. each; callas 25c. per flower. Small and medium azalea plants sold more readily than the larger-sized plants. Tips were rather slow in moving until nothing else remained.

D. M. CINCINNATI.—Once more Easter has passed into history, but this time it had its peculiarities. The beginning of the week was so warm that growers could do nothing with their stock, and for four days (Monday, Tuesday, Wednesday and Thursday) the ash barrel was the commission man's best customer. The boxes would fairly steam when opened, and it certainly made one sorry to see such a loss—something never before known to the oldest florist. But on Friday the wheels commenced moving, the stock that arrived was fresher, and when Sunday noon was reached the sales had passed those of 1906. Tulips and narcissus filled the barrel to the greatest extent. Roses, the kind treated to the salt solution, also went there. The grower; this Easter is a heavy loser; still in the end he will pull out fairly well.

The growers in the Jabez Elliott flower market report a fine business. There was nothing new in the plant line. In cut flowers sweet peas sold well—that is, good ones. E. G. G.

ST. LOUIS.—Easter trade was about the best the local florists have ever had. It was full of surprises on all sides. This Easter every retailer went heavy on plants and sales in these were better than ever before. Cut flowers, too, averaged considerably better than last year, with prices not so high. The uptown florists, who are in the fashionable district, made great window displays of fine blooming plants, which attracted the shoppers. Everything in the plant line sold well. Lilies sold out early as they were not any too many fine plants in the market. Other plants, such as azaleas, tulips, Dutch hyacinths, Crimson Rambler roses, Begonia Gloire de Lorraine and other high-class blooming plants, also sold well.
In cut flowers the trade was all that was expected. Everything sold out clean early Sunday at fairly good prices. The downtown stores, who rely mostly on cut flower sales, had fine window displays of all kinds of seasonal stock, and all report a heavy trade. So it can be safely said that we all had the best Easter in years. As for the cut flower market, the less said the better. The wholesalers were in all but good humor the early part of the week, and they say that never before did they have such a glut of everything as the early part of the past week brought. Stock, good and bad in all varieties and grades, went for a song only to slacken up Saturday when it was most needed. Then shipments became scarce and buyers very plentiful, and prices went up. Monday, Tuesday and Wednesday of the past week carnations sold at \$1.50 per 100. Roses, all kinds and grades, went at \$2 to \$3 per 100. Bulbous stock was mostly all dumped. Violets and sweet peas also went begging; so the wholesalers have little to say for this year's Easter trade. ST. PATRICK.

BOSTON.—There was an extensive Easter trade in this city. Plants were by far the best selling stock of anything the dealers had. Lilies led the way by long odds and there was a great scarcity of them. By noon Saturday it was seen that lilies were short and many plants were pressed into service that otherwise would not have been fit to market for another week. Next to lilies came the ever popular azalea; these sold well, especially the larger sizes. Rambler roses followed closely; the pink sorts, like Dorothy Perkins, were popular. Crimson Ramblers were not up to the standard of former years—the flower trusses being much smaller than generally seen. Acacias and genistas all sold well and many fine plants were available.

Cut flowers kept up well in price all the week, but on Saturday morning there was a big slump, for all kinds of flowers poured into the market in quantities. The extremely warm day made matters worse and only small prices could be realized for very good grades of flowers. Cut lilies, like the pot plants, sold all out at good prices, although the average was \$15. Violets, ever popular at Easter, were selling very low; in fact 25c. was the price for very good flowers, although later on in the day they fetched from 35c. up to 75c. Carnations could be bought for \$3 and \$4, but some of the best grades brought \$5 and \$6 and even \$7 for fancy ones. Roses brought from \$1 up to \$12. There were some good American Beauty in the market; the best grades brought \$6 per dozen, a few extra fine, long-stemmed bringing even more. Sweet peas sold well at from 35c. to \$1. Eulubus stock was the most plentiful of all flowers, and it was hard to move at any price; much of this stock sold in quantities at \$8 and \$10 per 1000.

houses and was consequently thrown on the market in unexpected and unprecedented quantities

The first important break in the weather occurred about ten days before Easter, followed by an almost unbroken succession of bright, warm, hot days interspersed with the Summer accompaniments of three severe thunderstorms on Saturday, Tuesday and Wednesday evenings, a hall storm on Wednesday afternoon, a deluge on Thursday evening, and the mercury one day registering over eighty degrees—the highest March record in the history of the weather bureau in Chicago. Except in the length of the day the productive conditions were fully three if not four weeks in advance of the calendar which fact being general immeasurably added to the complication of matters by forcing on to the market stock from out of doors, grown in the Southern section of the State in the form of hundreds of thousands of narcissi and wagon loads of lilacs, consignments which generally reach this center the latter part of April.

So thoroughly swamped were some of the commission houses that it became next to impossible to accommodate the continual influx of stock, notwithstanding that the express companies were constantly pressed in the work of properly sorting and dispatching the wagon loads of boxes prepared by the steady exertions of upward of seventy-five expert flower packers and shipped to all sections within the radius of the Chicago shipping district.

Notwithstanding the deluge of stock which nearly overflowed every house there was throughout a steady demand, especially toward the end of the week, for fresh, sound goods, which would stand shipment to distant points and to satisfy the requirements of the better class of the local trade.

The anticipated shortage of lilacs had occasioned unusual forcing in many cases, so that stock was so soft that it could not withstand the torrid wave and was rushed in during the middle of the week and in some instances sold seemingly for what was offered, producing a slightly depressing effect on the better goods on Wednesday and Thursday, after which they recovered and the finish prices were maintained to the finish for netted and prime cut goods.

Flowering plants, as a rule, sold well and when added to the above is the item of smilax which at times was hard to find and brought 25c. a string and Asparagus plumosus, which sold well at advanced prices and possibly scarlet carnations which were in short supply, the really stable feature of the last few days of the week have been mentioned.

The reports on roses were more or less conflicting and varying at different times, though the large dealers in this specialty, with practically unlimited stock to select from, probably succeeded in turning over the soft and more advanced flowers which remained in their hands at a figure which brought the totals up to a satisfactory average.

Carnations at no time reached the prices expected, and the bulk of the stock which was all right sold at from \$15 to \$30 a thousand and though quantities of these goods went much lower on Saturday afternoon and Sunday morning.

But bulbous stock was one of the worst stumbling blocks of the week and was severely cut and sacrificed throughout, it being impossible to estimate the quantity which failed to find a purchaser at any price and was at last consigned to the barrel.

It was, however, among the large consignees of violets that the greatest degree of mortification and disappointment was to be found, as thousands of bunches reaching this market in a dilapidated condition, entirely too far gone to stand shipment and were taken up by speculators or peddlers at from \$1 to \$2 a thousand.

The retailers, however, have very generally had what may be termed a gala week, and in the case of some of the higher classed stores it has been a record one for large sales; and though much of their stock was engaged in advance at regular prices, the profits have been large and satisfactory. The cheaper stores handled untold quantities of stock which must have netted good returns, and the peddlers resented a generous supply from condemnation.

Among the retailers there was nothing seen in the line of novelty, the regular lines being very generally offered as heretofore. Pretty but moderate priced baskets, hampers, and decorated pots were leading features in the principal stores, lilacs, azaleas, rhododendrons, Rambler roses, spiraea and bulbs being everywhere much in evidence and attractively presented.

A tour of the wholesale district on Monday of this week revealed but slight evidence of the strife and turmoil which had reigned there for several days previous. In the Atlas building where an even dozen of the large houses are installed, small reports were reported and comparatively light shipping orders came in. Opposite in the flower market upstairs and at the Chicago Rose Com-

pany's headquarters downstairs there was not much stock, in sight, while at the Bassett & Washburn's and the Hunt store at 78 Wabash avenue it was stated little could be done for the day between an Easter Sunday and a city election Tuesday. On Randolph street the A. L. Randall Company, the Kennicott Brothers Company and E. C. Ambling made similar reports, so that all around it was a day of comparative quiet, the city trade requiring but little attention, dealers generally having nearly stock enough on hand to supply their slight needs and orders for out of town being very light.

Prices, though hardly re-established on a firm basis were, for good stock, generally on a scale a trifle lower than before Easter week. W. K. W.

PITTSBURG.—A good Easter trade is the general report of all. As to whether it was better than last year is doubtful. Regardless of the good times we have had right along, the people are not so willing to spend as much money as they did some years ago. The plant trade hints the cut flower business considerably, as many people who formerly spent from \$10 to \$15 for cut flowers will hardly spend the half of that amount now for plants, which if properly delivered will give more satisfaction. There were more plants on the market this year than ever before, particularly bulbous stock; and quite a few growers thought they were stuck, but they cleaned out very well at fair prices. The stores all had a good selection of pot plants that sold at good prices, some azaleas as high as \$25 each. Of the larger sizes of azaleas Blind Brothers had the best stock; the plants were fine and brought fancy figures. John Bader had the largest stock in the western part of the State of commercial sizes which brought from 75c. up. Pot hyacinths sold remarkably well at all prices; in fact, all good bulbous stock went well as the cut stock was very scarce. Genistas, hydrangeas and Crimson Rambler roses were not as abundant as usual.

In the cut flower line everything was of good quality excepting bulbous stock and some lilies. The warm weather a few days before Easter brought on tulips, daffodils, etc. in great numbers and the heat spoiled them; they are not fit to be sold. Very few good ones could be had and they went readily. Harrisii lilies were plentiful and many remained unsold. The quality was none of the best. There were quite a few good ones but many more were poor. The prices was from 12c. up, retailing at \$3 per dozen. Callas were not so abundant but there was little demand for them. Roses were generally good for the season. Prices of American Beauty, long stemmed, brought \$5 to \$6 wholesale and \$10 and better at retail, per dozen; Bride, Bridesmaid, Richmond and a few other sorts were sold at from \$3 to \$5 per dozen, retail. Carnations reached all around although a little more colored stock could have been sold late in the evening. Prices ranged from 7c. per dozen up. Tulips and daffodils went at \$1 per dozen. Violets were in good demand; many thousands were sold at from \$2 per 100 up to \$5 and even better in some cases the quality was good. Sweet peas went well at 75c. per bunch.

The commission houses did a nice business and considerable stock was sold up to midnight on Saturday, as quite a few of the dealers cleaned out of carnations and roses early in the evening. All carried a good and sufficient stock, excepting in bulbous flowers for which they were forced to refuse orders. E. C. REINEMAN.

PHILADELPHIA.—The market is quiet this week after the great rush of Easter; there are entirely too many flowers for the demand. Easter business was the largest ever seen in this city; the number of plants sold surprised everyone. Everything that had a few open flowers went. There was plenty of stock for all orders except that some growers could have sold more azaleas. The extreme warm weather of last week told on lilies; some growers lost a few on that account. It was almost entirely a plant Easter; in comparison very few cut flowers were sold. Even the most prominent stores sold very few roses; one large store had only four dozen American Beauty on hand on Saturday, and not all of these were sold. Most of the cut flowers were very soft, and much stock could not be used for shipping orders, so that many cut flowers were left over.

In the retail stores the chief demand was for made-up baskets and hampers of plants; large numbers of plants of all descriptions were used in this work. The most expensive baskets contained ericas and Adiantum Farleyense. DAVID RUST.

INDIANAPOLIS, IND.—The many trials undergone by the grower and retailer during a fortnight of the most unseasonable March weather on record were more than counter-balanced by the generous amount of support afforded them at Easter. The florists were forced to stand by many days and see thousands of bulbous flowers, as well as their choicest specimen plants, wilt under a temperature of 80 degrees before the buying time arrived. Many of the flowers intended for April use were on hand last week, and even the immense Easter trade did not clear the market. The displays in the various flower quarters were most beautiful this year as they have undoubtedly never been surpassed in this city. The great mass of lilacs, rhododendrons, spiraeas, hydrangeas, roses and other plants, created most gorgeous showings.

Prices in most instances were lower than at former Easters; with few exceptions they deviated but little from the customary figures. Lilies and violets were the only flowers not in sufficient quantities. The last named were ridiculously small at \$1 to \$1.50 the hundred; when priced to customers at \$2 to \$3 the hundred they were declined for sweet peas at the same price.

But few novel flowers were on hand when the public waited expectantly. A few "Goldengem" and genistas, although not entirely new, sold upon sight. It is time for something new, as the introductions of late years no longer satisfy the regular custom.

Carnations were of exceptional quality this year and filled a wide gap at \$4 to \$6 a hundred; \$1 to \$1.50 a dozen were the popular retail prices.

Roses were plentiful throughout and advanced but little in price; Bridesmaid went at \$2 to \$4; American Beauty at \$3 to \$12 a dozen received the most patronage.

Fancy baskets and hampers sold away ahead of former years. The vast amount of stock enabled the dealers to offer them at low prices. Those from \$4 to \$12 sold most readily.

Specimen plants adorned with an attractive pot cover commanded the usual attention.

Tomlinson Hall market received its usual share of Easter trade, but keenly felt the loss of a great portion of the bulbous stock. I. B.

KALAMAZOO, MICH.—Easter trade was good and far in advance of that of last year's. The weather also was in marked contrast to that of last year as then the week preceding Easter was very cold and stormy, hence business suffered accordingly. This year the reverse happened and fine, bright weather prevailed during the latter part of the week which brought on the buyers who spent their money freely on both plants and flowers and caused a new record for Easter. The plant displays made were very effective in all the stores, and while I noticed no novelties, the quality of what was offered was very good indeed. Cut flowers were abundant, quality good, and prices reasonable. In roses American Beauty sold for from \$2 to \$6 per dozen; teas, 75c. to \$1.50; carnations, 35c. to 76c., 50c. being what the bulk brought. Tulips and daffodils realized 50c. per dozen; lilies, 20c. per bloom. Most of these prices show a 50 per cent. decrease from last year's figures. An abundance of bulbous stock in pots was on hand and really fair stock of hyacinths and tulips was offered as low as 5c. per pot. Large quantities of this class of goods were sold and good business in higher-priced stock, such as lilies, azaleas, etc., is reported.

Van Bochove & Brother rented a large additional store where they made an elegant display and did a big business. Fisher & Rockley and the Central Nursery Company also made attractive displays and profited accordingly. A Grofvert and the Dunkley Company had good displays and lots of flowers at their greenhouses and were also pleased with the volume of business done. The weather and the crops were for once in accord, and the florists in this city have reason for satisfaction. S. B.

Carnation growers who have a surplus of young plants should advertise them in THE FLORISTS' EXCHANGE.

RUFFALO, N. Y.—Friday and Saturday preceding Easter were ideal spring days, bringing out throngs of people. This, of course, helped trade considerably, which was the best we have had in years. Flowers and plants of all descriptions sold well. Violets went exceptionally well, but many complaints are coming in an account of this flower falling so rapidly. Violets seem to have a tendency to fall at this time of the year. It appears that the growers hold them on the plants too long before cutting, and by the time they reach the customers' hands they have that stale violet smell, which is very offensive. In roses, good Bridesmaid, Bride and Liberty sold at from \$3 to \$5 per dozen, the supply being limited. Bon Silene, and Mme. Abel Catronay had a fair sale, ranging from \$1 to \$2. In carnations, Enchantress, Roosevelt, and Mrs. M. A. Patten were extra fine stock, and sold at \$1 per dozen. Mrs. Patten's plants were of white varieties bringing from \$1 to \$1.50 per dozen. Lily of the valley was in great demand at \$1.50 per bunch of 25. Sweet peas had a good sale, at \$2 per hundred.

The sale of plants was phenomenal. The Harrisil lily crop ran out early, selling at 25c. per flower or bud. Azaleas held their own, retelling at from \$1 to \$25 per plant, according to size and quality. Spiraea, hyacinths, tulips and lily of the valley in pans had a good sale, bringing from \$1 to \$1.50 for pans of four to six flowers. Baby Rambler plants in 4-inch pots sold well at \$1.50 per plant, while the Ulrich Brunner and Mrs. John Laing ran a good race as sellers.

Anderson had some especially fine window displays, which speak well for Jos. Sangster's ability. He also had his store leaded with plants of all descriptions, which sold well. He had many specimen plants of azaleas and lilies. Arthur Beyer at W. J. Palmer's show store at 522 Main street had a great display of fancy baskets; they have quite a demand for this line of trade. The Ever Ready Flower Pot Cover Co. had a phenomenal sale of their covers; many florists are just beginning to realize the necessity of this neat little plant trimmer. W. H. G.

ROCHESTER, N. Y.—The volume of Easter business handled here is surprising, considering the many places catering to the flower loving public. Reporting on business done at the established stores—H. E. Wilson, Salter Brothers and J. B. Keller Sons—all agree that receipts were far in advance of last year by about 20 per cent. The last named firm this year found the occasion demanded an annex, this being the first time in its history such a requirement was necessary. With this firm Easter was a plant and decorative basket occasion, they having disposed of over 350 baskets varying in price from \$25 to \$2.50, necessitating the use of a considerable quantity of small flowering plants. With other firms cut flowers were a secondary matter, leading plants being, of course, azaleas and lilies. Owing to the scarcity of the latter a greater demand was expected for other plants. Prices kept up accordingly. Considerable material was shipped here, all of which was disposed of by Geo. Hart. A very fine consignment of dwarf hydrangeas and well grown lilies were shipped in from Lake View Greenhouses, which were speedily sold at a good price.

Lilium, Angliferum and Harrisil brought 20c. per bud and flower for top grade, but a great many diseased flowers—cripples—were shipped in, selling at anywhere from 10c. to 18c. Azaleas, hydrangeas, primula, spiraea, potted flowering shrubs and ferns, etc., were also found a ready sale at prices satisfactory to all, size of plant and quality of same determining its market value.

In cut flowers violets took the lead, the wholesale price being 75c. per 100, for good grade, but the recent warm spell had its effect on these, as was plainly evident in the poor quality of nearly all consignments. Of American Beauty, Bride and Bridesmaid, enough were to be had at prices ranging from \$8 to \$12 per 100, the best grade of Bride being early sold out. Carnations of the whole proved an unsatisfactory investment, owing to the sleepy appearance of the majority of the stock received. Buyers were tardy, and bought no more than really necessary, owing no doubt to the growers evidently mixing old and fresh flowers in the bunches, as could plainly be seen by their appearance soon after their arrival. Top grades reached \$5 per 100, lowest grade \$1.50 most of which went to the Greeks.

A scarcity of orchids at the last day was very apparent, the demand for this class of flowers having increased considerably of late years. Growers will have to consider the forcing of larger numbers for future holiday occasions. Bulbous stock moved slowly and was bought only when other material was scarce; hyacinths especially, being a back number, presumably on account of being too tall and brittle for general use. Churches on the whole were very liberal in their orders for decorations. Does any person know of a way whereby flo-

rists can get their orders for such decorations a few days ahead of time, instead of at the last day? No end of inconvenience is felt, and one is lucky to get out of the reach of some of the sextons who complain of having dirt on the floor at the eleventh hour.

Rochester was particularly fortunate in the matter of warm weather, a fact which was deeply appreciated by florists, as considerable labor was saved, the thermometer showing between 40 and 50 degrees, necessitating only the light wrapping of plants and cut flowers.

Owing to the early arrival of the warm spell, vegetation has commenced to grow in real earnest, and nurserymen have secured a two weeks earlier start on their shipping orders, than is usually to be had, their hope being that no very severe cold snap will arrive to check growth, as trees, etc., are so far advanced that a severe freezing would do great injury.

SYRACUSE, N. Y.—Easter of 1907 will long be remembered by all the florists as the greatest record-breaker ever known. Glorious Spring-like weather prevailed for the entire week, which induced many persons to make early purchases. L. E. Marquise says he never sold so many plants before as he has this year. The market was well supplied with everything required with the exception of lilies; there was a general complaint of these being late and dwarfier than usual. As a rule high prices were not asked for cut flowers or pot plants; consequently very large quantities were disposed of and few left over.

There were no novelties to speak of. Quinlan's two stores were very attractive, with a fine display of pot roses and fancy baskets which found a ready sale. Burt's and Morris's stores were stocked with the usual Easter plants. McInnelly & Son made a very pretty display. George Bartholome, as usual, had a very nice showing at his greenhouses, and cleaned out. Bard & Davis were especially strong in violets and lily of the valley. L. E. Marquise was well supplied with carnations which were exceedingly fine, and those which he had in large sales. His Marchioness is simply grand, and two dollars a dozen was easily obtained for them.

Prices for cut flowers were as follows: American Beauty, \$5 to \$15; Bridesmaid, \$1.50 to \$3.50; carnations, \$1 to \$2 per dozen; violets, \$2 to \$3 per 100; lily of the valley, \$1 a dozen; daffodils, narcissus, tulips, 75c. to \$1 per dozen; callas and lilies, \$3. Carnations had the call, and violets were in good demand.

WASHINGTON.—In spite of the weather, which would have been more seasonable in August than March, and attendant injury thereby to Easter crops, the Washington stores presented a most attractive appearance with cut flowers and plants of good quality. Among the many attractive stores were George H. Locke's, with banks of specimen plants of azaleas, hydrangeas, rhododendrons, etc. Guide Brothers Company devoted their large store to a display of many of the season's most attractive plants, and in front of the entrance had a most magnificent specimen of Bougainvillea glabra, some seven feet high, around which were banked azaleas and other seasonable plants. George C. Shaffer not only filled his store, but considerable of the sidewalk with miscellaneous plants which attracted much attention. Easter lilies were very scarce as a result of disease, and the quality of those offered was much below the average of former years the larger majority being very short, and all lacking the usual number of flowers. Some of the local growers claim to have lost over 50 per cent. of their stock by reason of the disease, and further state that many of the lilies received from abroad are not true to name. Business in all branches of the trade was about all one could desire and prices strictly in line with those of former years.

A review of the Washington stores after Easter shows a wonderful change; the immense stock has dwindled down and in no case is the store too small to carry its remaining plants inside. Both grower and retailer had all they could handle. Everything sold, from the specimen plant to the Baby Rambler rose. There was an especially good market for the poorer grades of bulbous plants, and at the Center market as in most others, by ten o'clock Saturday

night nothing was left on the benches. At the stores azaleas sold best of all the plants offered, the demand being principally for the smaller sizes, as the majority of customers for large specimen plants are abroad. All classes of cut flowers were eagerly sought, and toward the end of the day but little regard was manifested as to what it was so it was a flower. As anticipated, the glut has been relieved, and indications point to a fair market the remainder of the season.

THE 40 FOOT PROPOSITION

There's a point in bigness that becomes unwieldy—there's a point in smallness that ceases to be commercially economical. The 40-foot house is just a nice width. It's big enough for all advantages of heat economy and ventilation perfection. It benches up splendidly, giving a sidewalk and a chance to get at every point and part of your plants. It costs a good deal less than two 20-foot houses and you save land. It's the H & Co. width of economy, and you'll be sure of pleasant dealing. Write today; tomorrow you'll be busy.

BALTIMORE.—Easter business was exceptionally good and the supply was about equal to the demand. Very good prices were obtained. Potted plants of every description went faster than expected. Azaleas, lilies and other bulbous plants were sold at better prices than heretofore at Easter. The window displays by our local up-town florists were both artistic and enticing.

ST. PAUL.—At this writing Easter trade is practically over aside from the complaints from late delivery, frozen stock, etc. The fore part of the week we had very mild weather, which brought the stock in in due time. The temperature dropped Friday very near to freezing point and continued to get colder, so by Saturday it was freezing hard and everything had to be wrapped carefully. Notwithstanding the inclement weather business with all of the dealers was very good, the general report being that it was the best Easter trade for a great many years. Lilies were only fair and a great many showed the results of forcing, being very soft. It appears that there were only about a dozen to supply the demands, while some of the trade claim they could have sold a great many more lilies if they had been available. It is remarkable how well the high-priced azaleas sold; those left on hand are only inferior plants. Spiraeas, hydrangeas and dentals also all bulbous stock were easily disposed of. Prices were maintained nicely and only in one instance were lilies retailed below 25c. a bloom; this one concern, however, quoted them at 15c. a flower, but as the demand was very heavy, it did not affect sales in any way. Cut flowers sold in very small quantities, Saturday, of course, being the big day. Carnations and roses were plentiful, but violets were indeed scarce, practically all of the stores being over-sold; in consequence some substituting was done.

COLUMBUS.—We have most certainly had a more than satisfactory Easter business. The warm weather, of course, pushed forward an enormous quantity of stock, both plants and cut flowers, all at once; but our great trade took it all in good shape. As compared with a year ago, the prices obtained were somewhat smaller, especially for bulbous flowers. This had been expected, and in order to get rid of all the stock low prices were made—as low as 35c. a dozen for narcissus. Tulips did a little better, but plenty of this sort of stock customers could easily find for 50c. a dozen. Such prices encouraged a perfectly enormous over-the-counter trade, with the resultant great total of sales. It was an Easter when stock being good, plenty of it, and prices for it reasonable, the rank and file of the entire city bought lavishly. As regards prices, roses brought \$1.50 to \$3.50 a dozen with American Beauty at \$3 to \$12; carnations from 75c. to \$1, with a few very fine Enchantress at \$1.50. Lilies were

only in fair supply; the price was 25c. each. Violets had a great run at \$1 to \$2 a hundred in bunches to suit customers; some firms sold entirely out of violets early.
The stock of plants in the city was larger than ever before. I think one reason for this was the fact that a year ago the supply was so short and poor

FROST-PROOF ECONOMY

Ideal Hollow Concrete

Block construction will protect your greenhouse from frost and secure greatest economy in fuel.

The illustration of hollow block explains its resistance to frost. With the Ideal Concrete Machine you can yourself make these blocks from sand, gravel and cement at little cost—far below the cost of brick, stone or lumber. Ideal Blocks not only give frost protection, but are absolutely fire-proof, and effect a perpetual saving in insurance.

IDEAL Concrete Machines

May be operated by any man without previous experience. The process of making blocks is simple as making mortar. Blocks for every building purpose, with plain, tooled, ornamental face or natural stone effect made with the same machine. Simple, durable and adaptable to any size block within capacity.

Our catalogue will show you how to secure frost protection and fuel economy, as well as initial saving over cost of other materials. Write for it and it is freely yours.

that every grower made special efforts to have a large supply. They did, but the sales were enormous and everything went. Here again prices averaged reasonable. Crimson Rambler roses had a great sale at from \$1 to \$3 each. Azaleas never before had such a run and ranged from \$1.50 to \$3, with a few at \$5 and \$6. Hydrangeas went at \$1 to \$3, and

bulbous plants in pots and pans were the leaders. The greatest seller in potted bulbs were the Dutch hyacinths; everybody wanted them and I believe twice as many could have been sold at the going rate of 15c. per bloom. All the trade I have been able to see have expressed themselves as more than pleased with the business done.
P. W.

U-BAR greenhouses are different—so different that they are the only greenhouses successfully using curved eaves or the 24" spacing of glass. Think what that means to plant growth, with no gutter to shade them—a house that is just as near being outdoors, and still be indoors, as is possible. Send for that catalog. A BIT OF INFORMATION

It's good to have in a convenient form, bits of information that will help you in making up your mind—and your order—for a greenhouse.
Cypress is fitting in even foot lengths only. For instance: a 20 foot wide house having roof built with the usual pitch, requires a roof bar 12 feet long. Figure it this way: for every additional 2 ft. of roof bar the width of house is increased 3 ft. 4 in. Thus a 14 foot bar would make a house 23 ft. 4 in. wide. This rule applies to all bars up to 20 ft. long.
Now, when you come to buy your materials, it's a satisfaction—and a saving—to know that you have an estimate that covers everything, guaranteeing you against series of vexatious delays—those extra expenses that creep up and pull your first year's profits down.

You can depend on depending on our estimate and list to cover the entire proposition. It's just so much insurance.

Vol. XXIII. No. 15

NEW YORK AND CHICAGO, APRIL 13, 1907

One Dollar Per Year

CARNATION WINSOR

The most talked about carnation at the Toronto Convention.
Won first prize for best 100 pink

Winsor is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders, and have a fine lot of stock in the cutting bench, so that we can promise prompt delivery on orders received from now on.

If you have not already purchased a stock of this, you should lose no time doing so. We have sold more Winsor

than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market where our flowers are sold.

There is nothing on the market that approaches Winsor today in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities, in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high quality flowers. It practically does not split at all, notwithstanding the fact that we have had the darkest, duldest winter we have ever had, when the Enchantress and Lawson types are splitting badly all over the country with everyone, we have not had one-half of one per cent. of split calyxes on the Winsor. In fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement, extravagant as it may appear.

Anyone who fails to plant Winsor this year will regret it. Rose pink Enchantress is good, and a good many other varieties are good, but IF YOU WANT THE WINNER, PLANT WINSOR.

Strong Rooted Cuttings. \$12.00 per 100, \$100.00 per 1000.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION

Henry W. Wood, Richmond, Va., president; C. S. Burge, Toledo, O., first vice-president; G. B. McVay, Birmingham, Ala., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; J. H. Ford, Ravenna, O., assistant secretary.

BOSTON, MASS.—W. W. Rawson & Company report a most favorable season up to now. Whether it is due to the change of locality or improved methods of doing business they feel highly encouraged with the increase of trade experienced, particularly in specialties. This relates to beets, Crosby Egyptian, Arlington strain, also hothouse lettuce, horticultural wax beans, dandelion and the best strain of radish seed. The firm says there is no doubt but what there will be an extreme scarcity in the future of hothouse grown lettuce seeds as the crops of late have been continuous failures, and those who have grown for the wholesale trade in Boston have decided to abandon growing lettuce seeds in hothouses. Mr. Metcalf, one of the growers of lettuce seeds under glass, refuses to accept any orders for them as he will not grow any more; his losses having gone into hundreds of dollars for the last two seasons.

In regard to flowers there has been an unusual demand for Queen of the Market aster which now is a very short article; an increase of 400 per cent. over former years is reported by the concern.

The firm's new introductions of this year have taken hold so well that they are sold out of the available stock. The new gladiolus Harvard has been distributed widely, orders having been received from Italy, France, Germany and England.

CANNAS, 4 inch pots, \$6.00 per 100.
ELIZABETH NURSERY CO., Elizabeth, N. J.

LANSING, MICH.—The Senate has passed a bill regulating the sale of agricultural seeds. Its provisions are sweeping and provide a penalty for the sale of seeds of some kinds which are adulterated more than a thousandth part. The bill is designed to prevent the continuance of the growing up of Michigan farms to weeds. Senator Bates of Moline, who championed the measure, declared that Michigan is a dumping ground for adulterated seed and that much of it is sent across the river from Canada. Action on the bill was unanimous.

CROP CONDITIONS ON LONO ISLAND.

—The anxiety that is always manifested at this season regarding the conditions of the stocks put away for seed purposes has been intense for the past two weeks—more than usual, because of the extreme and steady cold weather that followed the warm spell of December and January. The first reports were unfavorable for the cabbage stocks, as many had rotted badly in the trenches; at the present writing the growers have nearly finished setting, and a majority of the fields present a satisfactory appearance, and an average crop is now in sight. The only shortage will be in some special strains where the dealer furnished the stock seed, and only sufficient for the amount desired; in case of failure or partial failure of these crops the loss cannot be made up. But of the main crops, there is always a sufficiency planted to secure the desired quantities for all orders.

The two types of Wakefield are making a good showing, which is satisfactory, as there is a constantly increasing demand for these sorts. Allhead is also looking well as are the Flat Dutch types. The Volga is a sure seeder, and has kept well. The Mammoth Rock Red looks badly, as do the Savoys. Rutabagas have kept well, and the kale appears all right, but it will take a few days of hot sunshine to test its vitality. Brussels sprouts are looking badly; total or practical failure of crop is certain. A more complete report will be made early in May.

The demand for Long Island grown stocks of cabbage seed is on the increase, and fill up orders are constantly coming in.

BEANS.—The Department of Agriculture will soon issue Farmers' Bulletin 289 on Beans, prepared by L. C. Corbett, Horticulturist, Bureau of Plant Industry. In this bulletin types of beans are discussed under Broad beans, Kidney beans, Lima beans, Dolichos beans, Soja beans, Scarlet Runner beans, and Velvet beans. These are divided into two classes, namely, field and garden beans. Field beans are discussed under the following subjects: Preparation of the soil; planting, which includes the quantity of seed per acre, as well as depth of planting; culture; harvesting, which includes a description of the commercial methods of harvesting the crop by machinery; thrashing, with a brief description of the types of machines used for this purpose, together with a brief description of the subject of cleaning and grading the product for market. Garden beans are discussed under the type of soils to which they are adapted, fertilizers used in connection with the production of this crop, cultivation, harvesting, yield, enemies, and diseases. The whole matter is a brief summary of the commercial industries as they now exist in the United States of growing dry beans and garden or string beans. Maps accompany the text, showing the distribution of the two crops, and there are illustrations showing typical fields of beans grown for dried beans as well as those grown for string beans, together with character of implements used in handling these crops.

Copies of the bulletin may be obtained upon application to Senators, Representatives, and Delegates in Congress, or to the Secretary of Agriculture.

IMPORTS OF SEEDS, ETC.— March 27.—H. Frank Darrow, one case live plants; J. M. Thorburn & Company, two sacks seed; C. B. Richard & Company, 29 packages plants; M. F. Berry, 10 cases plants; H. F. Vandegrift & Company, 74 packages trees, plants, etc. April 3.—H. Nungesser & Company, 130 barrels grass seed.

EXPORTS OF SEEDS, ETC.—March 30.—Shipped from New York to Dresden, two packages seed, valued at \$130; to Stettin, 658 bags grass seed, valued at \$2,709.

European Notes.

The weather certainly has been on the side of the seedsman during the latter half of March, and the Easter vacation finds us all fairly well satisfied with the business of the past ten days. A light frost every night and brilliant sunshine all day provide conditions for Spring cultivation and sowing that are simply ideal, and so far as plants of biennials and perennials are concerned, the check they receive from the night frosts is less destructive than a mild frost in May.

Beets and carrots have made very little growth at present, so we hope that what is put out will be all right.

The before-mentioned causes have reduced the supply of green food for cattle, consequently the demand for kale, dwarf Essex rape and other quick growing plants is very large. Rape has reached the top notch in the matter of price during the present week, being sold freely at an advance of 35 per cent. on November prices. With some extra good samples, a lot of very inferior seed is being offered in Holland, the figure now paid being higher than the best price paid by the oil crushers. A lot of French seed has been thrown on the market for the same reason, but it is being let severely alone owing to disastrous results which have followed its use in at least two important countries.

The English crop is so small that it is all needed for home consumption, and as the acreage that will be left for seed is much below the average both in Holland and England, it will no doubt pay to carry any surplus over to next year. Owing to the almost entire failure of the purple sprouting broccoli the London markets are now being supplied with the young shoots of the thousand-headed kale. It makes an excellent green vegetable, but its use in this way means less food for the sheep and a smaller crop of seed, so that next season's price for this article will maintain the present season's advance.

CALLA BULBS

Let me book your order now. Write me for special advance prices.

Stokes Seed Store
219 MARKET ST., PHILADELPHIA.

During 1906 we furnished to the trade over One Hundred Thousand of the below described leaflets.

CULTURAL DIRECTIONS

Specially written for the use of your amateur customers. Send Twenty-five cents for complete sample set, which amount will be deducted from order for first thousand.

The universal favor in which these Directions are held, as shown by the many orders received therefor, encourages us in the belief that these Leaflets are just the neat little factor to help promote business and establish better relations between the dealer and his customer.

TRY SOME!

BIG BUSINESS ASSISTANT

TO SAVE TIME, QUICKEN SALES, AND AID YOU PLEASE YOUR CUSTOMER, WE HAVE PREPARED

Cultural Directions

COVERING A NUMBER OF THOSE PLANTS AND BULBS MOST LARGELY IN DEMAND

THE "CULTURALS" have been written by experts; they are fuller, and contain more detailed directions than it is possible to embrace in a catalogue. Equipped with these, just hand one out with each sale, and save yourself considerable present and future trouble, as the customer will then be able to consult the directions, grow his plants, seeds or bulbs intelligently, and so receive satisfactory results, without having to continually resort to you for advice.

The following "Culturals" are now ready:

- AMARYLLIS(Hippeastrum)
- ANNUALS FROM SEED
- ASPARAGUS
- ASTERS
- BEGONIA, TUBEROUS
- BULBS
- CABBAGE and CAULIFLOWER
- CANNA
- CARNATIONS, MONTHLY
- CELERY
- CHINESE SACRED LILY
- CHRYSANTHEMUM

PRICE LIST

500 Cultural Directions for \$1.50
1,000 2.50

Printed on white paper, clear type, size 8 x 10 1/2 inches, in an assortment, your selection of not less than 100 of each, delivered carriage paid.

Sufficient space will be left at the bottom of each leaflet for your name, address, etc. If you desire this imprint (3 lines) we will put same on for you at 50 cents for 500, 75 cents for 1000. Special quotations will be made on quantities of 2500 "CULTURALS" or over.

A. T. De La Mare Ptg. and Pub. Co. Ltd.
Pubs. The Florists' Exchange. P. O. Box, 1697, NEW YORK

PLANT CULTURE

THE BEST BOOK FOR THE PLANT CROWER
A. T. DE LA MARE PTG. & PUB. CO. LTD., 2-8 DUANE STREET, NEW YORK
THE TRADE ONLY—When Writing Please Mention THE FLORISTS' EXCHANGE.

(76) **Pansies coming with Small Flowers.**—Do you know of any lack of any special fertilizer in the ground as the cause of small flowering pansies? New York. E. R.

—Lack of nourishment in the soil would be evidenced by a poor growth of the plants. If in the present case the plants show a thrifty growth and are healthy otherwise, except in their flowering, we would be under the impression that it was quality in the strains of the seed used that was lacking, rather than any fertilizer in the soil.

(77) **Ferns.**—Kindly tell me which is the best way to grow ferns—in a bench or in pots—and how large a 2 1/2-inch fern should be by October 1 if started now, of the leading varieties.

Conn. J. E. C.
—We presume that the ferns referred to are of the Boston type, and if so, it will be a good idea to plant them in a bench containing three or four inches of soil, and if they are well taken care of they should be ready for 5 or 6-inch pots by the first of October.

(78) **Japanese Air Plant.**—Can you advise me where the Japanese air plant can be obtained? I have looked through plant catalogues but do not find it advertised.

New Hampshire. A. R. S.
—We do not know just what is meant by the Japanese air plant, but for novelties in Japanese plants we would refer the inquirer to H. H. Berger & Company, 47 Barclay street, New York City.

(79) **Sod for Carnations.**—Please let us know where we can get good sod for our carnations; we are unable to grow good carnations in the soil we have here. What would be the price of a quantity needed to fill three houses, 25 x 100 feet, each house having three benches, to get the sod shipped in from outside? We are located about 70 miles from Pittsburgh, East.

Penna. W. S.
—The best way for the grower to procure good turf for his greenhouse is to make thorough search through the territory in his immediate vicinity, and when he finds what is suitable make a deal with the farmer on whose land he finds the turf to purchase the quantity required. Farmers are generally willing to sell a few loads of soil from their old meadows when they can get a good price for it.

HARDY PHLOX
MISS LINGARD, best white summer cut flower, R. C., \$30.00 per 1000.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.
Orlando Harrison, Berlin, Md., president; J. W. Hill, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

Seasonable Notes.

The submergence of the roots of trees, often created by the banking up of water courses near them, causes no apparent harm to them in Winter, but is death to them if it occurs after the growing season starts in Spring. At least this seems correct from observations made here.

The discussion on a seedless apple which has been prominent of late leads to the thought that there are many cases of seedless fruits. The orange, persimmon, fig, and osage orange come to mind, and very often the mountain ash will have seedless berries. Some entirely lack seeds, others have them, but all imperfect. They are said to leave untouched mountain ash berries which there are no seeds.

Variiegated *Euonymus radicans variegata*, makes an excellent white-leaved edging plant. Its first growth is close to the ground, but afterward it makes a little height. Although of a creeping nature, if a plant of it is tied to a stake it will become an upright shrub in time.

To have the pleasure the bright green leaves of the *Bambusa Metake* afford in Winter the plants should be set in a well-favored sheltered spot, as free from high winds as possible. Where standing in an open place the leaves become greatly scorched in Winter.

Dahlias from cuttings make satisfactory plants. Old roots are started indoors and when the shoots are two to three inches long they are taken off and rooted in the hothouse. They root in a couple of weeks, giving nice plants for flowering the same season; and this way of increasing them is helpful in the case of rare sorts.

Cornus Florida.

One of the most charming trees of our woods in early Spring is the great white dogwood, as the *Cornus florida* is called. It comes into flower early, before its leaves expand, and before other trees and shrubs about it are far in leaf; and it is this that makes it so conspicuous and so universally admired. Those who greatly love trees are grieved to see the *Cornus florida* disappearing so rapidly as it does, as wood after wood is chopped down to make room for dwellings. Occasionally one who knows how to estimate a beautiful tree leaves a specimen or two of this dogwood as the forests are cleared, and to such a one we owe the preservation of the fine specimen it was our privilege to photograph. There are three or four such trees left standing in a field near the public road shown in the illustration, in Montgomery County, Pa., and rarely are better specimens to be met with anywhere. It is many years ago that the wood in which they grew was cleared, and so they have had a good chance to develop; and that they made excellent use of their opportunity all will admit.

Cornus florida, as it grows under cultivation in Europe, does not become anything nearly approaching what it does here. Many of the ministers and other officials of the governments of Europe who visit Washington become enamored of this dogwood as they see it in the woods near the Capital, and they order seeds or seedlings of it for their own grounds abroad. There are but five European countries that will admit trees from here, fearing the introduction of injurious insects, so that it is mostly seeds of the dogwood that find their way there.

As is well understood, the large white "flowers" of the dogwood are not flowers at all, but are bracts, the true flowers being what appear in the center of these. This, of course, is immaterial except as a botanical feature. It is the display of its mantle of white that is desired, no matter the name of what gives it.

The introduction of the pink dogwood has stimulated the demand for our white one as well. Both flowering at the same time, they are often planted together, in groups, the pink and the white mingling well together.

Both the pink and the white dogwood are easily raised from seeds, but the pink one cannot be relied upon to come true in this way, reliance having to be placed on propagating it by budding or grafting it on the white one.

Transplanting Azaleas.

Azaleas make such a mass of small roots binding the soil they meet with so firmly that no one need lose any of them when transplanting them. When often transplanted, as these plants usually are, they have such nice balls of soil with them that even when just about to flower they can be moved without any injury to their blossoms. Nearly all the azaleas planted are imported, and they cross from Europe with such good, solid balls that they simply need heeling in in some

convenient place for selling, as those unsold can be planted out properly when sales are over. The Holland shippers and all others who understand their business now wrap the balls in bugging, to keep the balls in solid condition, and this is something it pays well to do. Azaleas should be planted in light soil, but it should contain food. Their fine roots will not enter heavy soil. Loamy sod suits them well, and if mixed with decayed leaves or peat, so much the better. When planted the material should be packed closely to the roots.

The wild azalea of our Northern woods is found where decayed leaves have formed a light soil. Having grown from seedlings where they stand, they have not a ball of roots hence when transplanted they should be cut back well, when they will all grow.

Box Bushes for City Yards.

All who dwell in cities know how few evergreens there are that will thrive in yards. Of all the many

soils of Southern New Jersey. Many people are surprised to notice the thrift of such trees, knowing that sometimes several feet of sand is at the surface. An investigation would show that not a fiber was in the top layer, but that all the roots had struck through it to the solid soil beneath. When planting in such soil it is an advantage to place a spadeful or two of manure in the bottom of the hole, that the roots may have some food until they have penetrated to a lower depth where nutrition is to be had.

There are situations quite dry, often, even where the soil is not sandy, but of ordinary good substance. The same rule holds good here as well. A deep rooting tree will push down to where moisture is, and so will thrive in such a place, while a shallow rooting one would die.

Wax Myrtle for Seashore Planting.

Seashore residences are now desired by a great many, so much so that the finding of suitable trees and shrubs is the aim of all who have the planting of the grounds

in such situations. One of the useful large evergreen shrubs is the wax myrtle, *Myrica cerifera*, for, first of all it is a native of the coast close to the sea. Although it is found inland as well as along the seashore, it is never abundant in woods; still, the fact that it thrives there as well as at the shore is in its favor, as showing its adaptability to various situations.

Along the coast it is found so close to the shore that salt spray almost reaches it; and wherever a few bushes of it exist it catches the drifting sand, and the sand accumulating will creep up until often but the tops of the shrubs will appear above it, although these shrubs may be six to eight feet high.

The foliage of the wax myrtle is quite thick, the leaves being close together and leathery, but in green appearance they are not the equal of those of the ink-berry, *Prinos glaber*, another seashore evergreen, though not found as close to the sea as the wax myrtle is.

Those who have tried the raising of the wax myrtle from seed report varying success. Some seasons a fair lot of seedlings will appear, in others none. Still, this is the only way practicable of increasing the stock.

The name wax myrtle comes from the waxy particles adhering to the seeds, giving them a gray white appearance. It used to be customary to make the candles for Christmas trees from the wax of the berries of this myrtle, and this may be the custom still. The berries, or seeds, were exported to Europe in large quantities for the purpose. The sweet fern, a little bush common in our Northern woods, and known as *Comptonia asplenifolia* was formerly called *myrica* being closely allied to it.

Sowing Elm Seeds.

In common with other trees that ripen their seeds in Spring, the elms that do this are best sown as soon as ripe, when nice seedlings follow the same season. Not all elms ripen seeds in Spring; *crassifolia*, *texana* and the Japanese one, *parvifolia*, ripen late. Some of the Spring ripening ones are *americana*, *fulva*, *campestre* and *montana*; the two last named are European species. The seeds should be spread out on a floor of a shed for a week or two to thoroughly ripen them, and then be sown at once. The elm leaf beetle is not as destructive to the foliage of elms as it was. Doubtless the care given to the spraying of these trees has done much to lessen the number of beetles; besides this it is a fact that insect evils have their day. There may be several years in which the pests appear in great numbers, and this will be followed by a term of years when their numbers will be few. When the foe is numerous the European elm, *campestre*, suffers worst of all, next the *americana* and least of all the *fulva* and the *montana*. *Fulva* is the slippery elm.

JOSEPH MEEHAN.

Cornus Florida—Great White Dogwood

kinds that have been tried, quite a number fail, a few struggle on, and a very few thrive. In the latter class is the common boxwood, and a better evergreen bush than it for the purpose is hard to name. Give it good soil and an abundance of water, and its growth will be quite satisfactory. A surface manuring every Fall is one of its needs, as is then shown by the nice green foliage it displays the following season. One enemy it has in cities and that is red spider. This insect preys on the foliage of the plant to its injury, but, fortunately, it is easily destroyed. Attach a line of hose to the hydrant and play the water on the bush with all the force possible. This dislodges the red spider, and if the water is played on the plants every week it ends the depredations of the pest.

There are several varieties of box. The common tree box is as good as any to use. One called *rotundifolia* is also a good one, so is *myrtifolia*; but the common box edging form is too slow in growth to be satisfactory.

Planting in Dry Places.

It frequently happens that the planter is called on to set out trees in places where the soil is a dry one, and then it is that judgment is required to plant only such sorts as will thrive there. It is an error to think the place cannot be satisfactorily planted because of trees not doing well. It is useless to set out such shallow rooting ones as the elm, the maple, the linden and the like. Plant oaks, tulip poplar, ash, walnut, hickories, common poplars and similar sorts, and all will be well.

These trees are naturally of a deep rooting nature, and when they are in poor top soil, they ignore it quickly and the roots strike downward to the lower layer, and there they find the food they want. This accounts for the well being of many trees in the sandy

THE LEEDLE FLORAL COMPANY, SPRINGFIELD, OHIO

Hardy Roses for Decoration Day

HARDY H. P. ROSES

We offer exceptionally strong two-year-old dormant, low-budded stock (on Massey), in the following varieties: Alfred Colomb, carnation; Anna de Dinbach, bright carmine. Ball of Snow, pure white. Baron de Bonstetten, dark crimson shaded. Baroness Rothschild, satiny pink; extra. Captain Christy, delicate flesh color. Duke of Edinburgh, bright vermillion; very fine. Fisher Holmes, dark rich scarlet. Fran Karl Druschki, the finest white in existence, \$12.00 per 100. General Jacqueminot, rich velvety crimson. General Washington, beautiful red, shaded carmine.

John Hopper, beautiful rose pink. La France, the finest light pink. Margaret Dickson, white, pale flesh center. Magna Charta, clear rose pink. Mma. Gabriel Luizat, light, satiny pink. Mma. Plantier, white. Mrs. John Laing, soft pink; most desirable variety. Paul Neyron, beautiful dark pink. Prince Camille de Rohan, velvety crimson. Ulrich Brunner, cherry red. Prices on H. P. Roses \$1.25 per 10; \$11.00 per 100; \$100.00 per 1000.

HYBRID TEA ROSES

Maman Cochet, pink. Maman Cochet, white. Unequaled as bedders for Summer blooming, producing buds of large size and of ideal form. The buds are of the color and form of Eridesmaid and Bride, but larger, and outside will yield more blooms than the latter will under glass. The two finest outdoor Roses yet introduced. Strong 2-year-old plants, 10 for \$1.50; \$12.00 per 100.

American Beauty, Clothilde Souper, Kaiserin Augusta Victoria, Caroline Testout, Hermosa. Strong, 2-year-old, \$1.50 per 10; \$12.00 per 100.

THE KILLARNEY ROSE

Irish Grown From the Raiser. Good strong two-year-old plants, \$3.00 per 10; \$27.50 per 100.

HARDY ROSE SOLEIL D'OR

(Golden Sun.)

Like Persian Yellow, this variety is perfectly hardy, with large, full, globular flowers, varying in color from gold and orange to reddish gold, shaded with assturtium-red. Two-year-old budded plants, per 10, \$2.00; per 100, \$16.00.

The Grand New Rose

ETOILE DE FRANCE

Superb crimson red velvet, the center of the bloom vivid cerise red. The flowers are very fragrant and last long. This new variety is the result of a cross between Madame Abel Chatenay and Fisher Holmes. Field-grown, strong two-year-old plants, \$2.75 per 10; \$25.00 per 100.

AMPELOPSIS and other Climbers

AMPELOPSIS

Ampelopsis Veitchii (Boston Ivy), extra strong imported vines, three-year-old, \$2.00 per doz.; \$15.00 per 100. Ampelopsis mutabilis, more rapid grower than the foregoing, larger foliage, \$3.00 per doz.; \$20.00 per 100. Quinquefolia (American Ivy or Virginia Creeper). Good for covering walls, verandas, or trunks of trees; attains shade quickly, 25c. each; \$2.50 per doz.; \$13.00 per 100.

CLEMATIS

Henryi, pure white; extra large. Jackmanni, purple. Alba, white. Sieboldii, lavender. Ville de Lyon. The finest of all reds; flowers brilliant carmine red. It is equally as good as Mma. Edouard Andre, but contrary to this one, is a very free-growing variety. All the above Clematis in extra strong plants, \$3.00 per doz.; \$20.00 per 100. Clematis paniculata, strong 2-year-old plants, \$1.25 per doz.; \$12.00 per 100.

HYBRID TEA AND OTHER ROSES OF RECENT INTRODUCTION

(Strong 2-Year-Old Plants.) Bessie Brown Creamy white, \$1.50 per 10; \$12.00 per 100. Gruss an Teplitz. The great new red Rose, closely resembling Liberty in color. No Rose in commerce can compare with Gruss an Teplitz as a bedder, \$1.50 per 10; \$12.00 per 100. Konigin Karola (Improved Testout). Magnificent, \$1.50 per 10; \$12.00 per 100. Mrs. Sharman Crawford. Deep rose pink, the outer petals shaded with pale flesh-color, white at base of petals, and distinct from all other Hybrid Perpetual Roses, \$1.50 per 10; \$12.00 per 100. Perle de Rooze. A polyantha variety of unusual merit. Color velvety crimson, with reflex of petals bright cerise, \$1.50 per 10; \$12.00 per 100.

ENGLISH MOSS ROSES

Assorted White, Pink, Red, large dormant plants, from open ground, \$1.50 per 10; \$12.00 per 100.

THE TREE BABY RAMBLER (Mad. Norbert Levassauer) GROWN AS A STANDARD

The popularity of the Baby Rambler has suggested the growing of it as a tree or standard. The variety is too well known for description; enough to say, it retains all its characteristics of free-blooming qualities, etc., 60c. each; \$5.00 per doz.

THE BABY RAMBLER

Mme. Norbert Levassauer. Strong field-grown plants, \$1.75 per 10; \$15.00 per 100.

CRIMSON RAMBLER

Large heavy plants, two years old, 3 to 6 feet, \$1.75 per 10; \$15.00 per 100. 4 to 6 ft. \$2.00 per 10; \$18.00 per 100.

DOROTHY PERKINS

Resembles the Crimson Rambler, except in color, which is a lovely shell-pink, holding a long time without fading. \$1.75 per 10; \$15.00 per 100.

The Sensational New Rambler Rose LADY GAY

"A seedling from the popular Crimson Rambler, which it resembles in habit and general effect. The flowers are of a delicate cherry-pink color, which fades to soft white." Strong plants, field-grown, \$3.50 per 10; \$30.00 per 100.

OTHER CLIMBING ROSES OF MERIT

Paul's Curmine Pillar. One of the most attractive Climbing Roses. Two-year-old, field-grown, \$1.75 per 10; \$15.00 per 100. Marechal Niel. Color bright rich gold-an yellow, field-grown, \$1.75 per 10; \$15.00 per 100. Cloire de Dijon. Color buff, orange center, very sweet-scented, field-grown, \$1.75 per 10; \$15.00 per 100.

ARISTOLOCHIA SIPHO

Dutchman's Pipe, strong field-grown, \$3.50 per doz.

WISTERIA SINENSIS

Extra strong field-grown plants. Blue, \$3.50 per doz.; \$28.00 per 100. White, \$5.00 per doz.; \$40.00 per 100.

HONEYSUCKLE

Extra strong field-grown plants, 6 feet long, many branches. Coccineum, Scarlet. Halliana, Yellow. Periclymenum, White. Serotinum Belgica (Monthly Dutch). Red. \$3.00 per doz.; \$22.50 per 100.

HYDRANGEA PANICULATA

GRANDIFLORA

Two-year-old, 3 to 4 branches, bushy, \$1.50 per doz.; \$10.00 per 100.

Lancaster, Pa.

Among the florists here Henry D. Kohrer has probably the largest amount of glass, which is situated on the Philadelphia Pike. His greenhouses on Cottage avenue he expects to move in connection with his newer plant on the Philadelphia Pike, the property on Cottage avenue being more desirable now for residential sites. Mr. Kohrer grows cut flowers principally for the wholesale trade, making a specialty of carnations. His roses, carnations, smilax and in fact his entire general stock are all grown in solid beds. While some claim more blooms per plant can be produced from carnations on raised benches than in solid beds, Mr. Kohrer is very well content with the results he obtains from the latter. The expense of the benches and the keeping of them in good condition would be considerably more than the difference, if any, in the bloom producing qualities of plants grown on benches. The growers in this section, therefore, prefer the solid beds, even though they may get a few hundred fewer blooms in a season's cut. Albert M. Herr, the affable secretary of the American Carnation Society, has a thrifty looking establishment on Ryder avenue. Mr. Herr grows carnations and geraniums for the wholesale trade. Thousands of cuttings in all stages of development were to be seen

From a hurried observation it could be seen that the solid bed system, with the exception of one carnation house, prevailed all over his place. In this way the roses appear to be carried over for several years. Carnations, violets and all other stock were grown in solid beds with apparently good results. Unfortunately for your correspondent Mr. Barr was too busy to give any information relative to the methods employed in the practical administration of his establishment. One of Lancaster's most progressive florists is George B. Willson. He has the distinction that possibly no other florist in this country enjoys. Mr. Willson is the owner of "Wheatland," the old homestead of President Buchanan. In 1856, James Buchanan left Wheatland to make the White House at Washington his home. Mr. Willson purchased the place from Harriet Lane Johnson, some time previous to her death in Baltimore. Visitors to Lancaster take much interest in viewing this handsome old mansion and all its notable surroundings. Many fine trees are found all through the grounds that had been planted in President Buchanan's early days by people prominent in this country's affairs at that date. An old boxwood hedge, about 4 feet tall and the same in diameter and 500 feet long still stands in a state of fine preservation; it was planted by President Buchanan

everywhere. Mr. Herr, too, speaks very favorably of the solid bed system for carnation growing. In a fine new house, 256 x 20 feet, he grew last year Lady Bountiful, John E. Haines, Nelson Fisher and others in solid beds with the best results. This present season, now about over, he used raised benches, and the results obtained are not as good as those of the preceding year in solid beds. It is needless therefore to say that in the future, like most other growers in this section, he will stick to the solid bed system. Mr. Herr is somewhat of an authority on the propagation of geraniums. While he does not claim to be the equal of John Birnie he is entirely satisfied with the results he obtains. What a man may do with 50 or 100 stock plants depends entirely on what the stock plants are like. A stock plant may be a very small production, and again it might be of fine proportions capable of yielding a large number of cuttings during the propagating season. All of Mr. Herr's stock plants are grown in solid benches running the entire length of his houses. Whole benches, in some instances, are devoted to one or more particular varieties. These stock plants are used for three years. New beds are planted each season and some plants that had outlived their usefulness discarded. When stock plants are used for over three years Mr. Herr says they get too woody for propagating purposes. George W. Schroyer has a well stocked, up-to-date establishment on Harrisburg avenue. In addition to this he has a seed and flower store at 151 North Queen street. Mr. Schroyer handles a general stock of seeds, bulbs and plants. He says his Easter trade was the best he ever had. B. F. Barr's Keystone Nurseries and greenhouses are situated on Columbia avenue. Mr. Barr has also a city store,

when, it is said, he was quite a young man. It is in this historic old homestead that Mr. Willson resides. Few florists, if any, have this distinction, and Mr. Willson wears the honors of his achievements in this line most gracefully. He is genial and courtly, and despite the fact that he has much more to show as the results of a successful business career he has unlike some others of his calling, both the time and the inclination to treat a wanderer kindly. Mr. Willson has several well filled greenhouses of general stock that appear to be in good hands and he enjoys a splendid trade. D. K. Herr and Peter Brown are also among Lancaster's foremost geranium and carnation growers. The greenhouses of Mr. Herr are on Ryder avenue and adjoin those of A. M. Herr. Just at present he is making a specialty of coleus and has many handsome varieties. Geraniums, too, are in goodly numbers—long, solid beds of stock plants of all the popular bedding varieties were in abundance. The stock plants here also are carried over from two to three years with good results. J. M. DAYTON, O.—At the last regular meeting of the Dayton Florists' Club, Thursday, April 4, G. W. Bartholomew, the newly elected president, presided. A unanimous vote of thanks was tendered the retiring president, J. B. Heisa, for his untiring services rendered the club. It was decided that the club subscribe \$150 to the guarantee fund of the National Flower Show. Easter trade was reported good. It was the general opinion of all that there was a marked increase in the demand for blooming plants. There was an ample supply of almost all cut flowers, for which there was a healthy demand.

THE WEEK'S WORK.

Timme's Timely Teachings.

After Easter.

Not having had time so far to gather in the opinions of neighboring florists as to the volume and character of the trade during Easter, I can only judge and speak of what happened to fall to my share, and this justifies me in believing that after a more thorough-going summing up of the business transacted it will be found that this year's Easter was the best of any ever experienced by local florists and retailers. Cut flowers, made-up work, foliage and flowering plants, all went equally well and with astonishing rapidity, the bulk of the trade all being transacted on Saturday afternoon and Sunday morning. This again proved convincingly to be thoroughly prepared and to have all in line and readiness for the oncoming rush is of greatest importance and is a point worth remembering.

There was no trouble in disposing of anything in the lily line, either cut or pot-grown. As far as I am now enabled to judge, there were none too many lilies many plants only now beginning to show color. Very slow in coming into bloom and therefore behind for Easter were longiflorums of the Japan type, also most of the few Liliun candidum raised hereabouts. The loss in lily bulbs of all kinds, I think, was greater among those forced for this year's Easter than in most previous years, while those brought out in good time under moderate heat were, as a rule, of better quality and finer appearance than usually offered in former years.

High-priced flowering plants, not over-trimmed and ribbon bedecked, found buyers in plenty, and anything in this line, well grown and not of every-day character, could be sold at a fair price more readily this Easter than at any holiday in previous years. This is a point worthy of note, since cultural failures with plants of this kind, mostly foreign prepared and annually imported, are rare and the profits considerable.

Of other plants that sold exceptionally well this year, roses in pots deserve special mention, and of these the bright foliage and nicely bloomed hybrids, teas and remontants, found greater favor than the Rambler roses, which latter, though generally in good form, only went after the others were sold out clean. Baby Ramblers, field grown and potted up last Fall, did not all come into bloom in time for Easter. Those that did sold well. All pot culture for a season, after having been raised into size in the field, is the better course to pursue with these, as well as with most other roses.

Palms, ferns and other foliage and decorative plants were much called for and preferred by many people to flowers or flowering plants as Easter gifts. Common things from the ordinary run of greenhouse stock could have been disposed of in greater numbers had they been in a less backward condition than was the case. Much of this material had been made use of in filling boxes and baskets, which, as usual, are what a large class of buyers prefer to anything else offered. Most of the Holland bulb stock is disposed of in this form and is looked upon with as much favor as ever.

If there is any complaint to make as to the Easter business as carried on this year, it is the raw, chilly weather prevailing at a time when much of the delivering had to be done, which necessitated a deal of extra care in wrapping and packing. But altogether it certainly was a grand Easter and I hope satisfactory in its summing up to everybody, in the trade.

Left Over Plants.

Should any of the stock raised expressly for the Easter trade remain unsold on the benches of any retail grower, he will find most of it probably of little further use after this date. The cheaper kinds of bulbs, when out of bloom now,

GRAFTED ROSES

Brides and Bridesmaids.

EDW. J. TAYLOR Southport, Conn.

Dreer's Roses for Out-Door Planting

The best stock procurable to sell to your retail customers

WE make a specialty of this class of stock. All the plants are field grown plants which during the winter months have been potted up into 5 and 6 inch pots; they were stored in cold houses and are now breaking into growth freely and are in prime condition to sell to your retail customers for out-door planting. This stock must not be confounded with cheap Holland grown plants, all being either home grown or imported from England, Ireland or Germany.

Hybrid Perpetual, Moss and Other Hardy Roses

Strong two-year-old plants, nearly all in 6-inch pots

Table listing various rose varieties like Alfred Colomb, Anna de Diesbach, Alfred K. Williams, etc., with prices per dozen and per 100.

Table listing more rose varieties like Prince Camille de Rohan, Pride of Waltham, Queen of Queens, etc., with prices per dozen and per 100.

Hybrid Tea and other Everblooming Roses

Table listing varieties like Antoine Rivoire, Balduin, Baby Rambler, etc., with prices per dozen and per 100.

Frau Karl Druschki

Small table listing varieties like Safrano, Sonvenir de la Malmaison, etc., with prices per dozen and per 100.

Rambler, Climbing and Trailing Roses

All strong 2-year-old field grown plants potted up into 5 and mostly 6-inch pots

Table listing rambler rose varieties like Baltimore Belle, Climbing Clothilde Soupert, etc., with prices per dozen and per 100.

For a complete list of seasonable stock see our current Quarterly Wholesale List—Specialties, Hardy Perennial Plants, Water Lilies, Nulumbiums and other Aquatics, Decorative Plants, Palms, Ferns, etc., Dahlias and other summer flowering Bulbs.

April 13, 1907.

are not worth the room they take up, either indoors or outdoors, though some, such as tulips, will bloom again next Spring if dried and ripened off and planted in August in an open border. But the time required in going to this trouble can more profitably be employed in work more garden-like.

Decorative plants of all kinds remain valuable stock in the hands of a good grower right along, and though the thinning out by sales at Easter may not have been as far-reaching as was expected, a real loss in stock, if in receipts, is not experienced. Any room gained through sales during Easter should be utilized in behalf of the remaining plants by systematic rearrangement.

Heaths, acacias, roses, lilies, primulas and anything on the grower's hands that proved too slow to be just right for Easter will be in good condition for a trade always to be figured upon right along throughout the early Spring months. Nicely grown flowering plants of all the holiday kinds and made-up arrangements in baskets, pans and boxes find buyers at all times nowadays, and I never had occasion to throw any away because of their being left over from the trade at any holiday.

Hydrangeas, roses, spiraeas, azaleas, acacias, genistas, and plants of like character, if now beyond their prime, can with a small amount of judicious care-taking be worked up into first class stock for next season's forcing. A trimming back into shapely crowns in some cases is necessary, but should not be attempted after a set of new growth has already started. All such plants may be held in good condition in out-of-door quarters during the Summer, but should not be exposed to open air conditions until well forward in their new growth and sufficiently weaned to a sojourn out of doors after having undergone severe forcing during Winter. While some could well be planted out into the open field, most of them will be better plants for another Winter's forcing by being kept in pots, some few probably needing a repotting before being plunged outdoors.

Hardy azaleas, rhododendrons, prunus, lilacs and hybrid perpetual roses, or any of the hardy shrubs that were subjected to a high degree of forcing, will seldom give satisfactory results if forced again the following season. If of shapely form and unimpaired health after they have brought flowers for cutting or remained unsold as pot plants, they are worth keeping as outdoor plants, but will not do for forcing for several seasons, for which purpose younger stock, expressly grown to that end, is to be preferred in every instance to these leftovers. It is therefore advisable to look about for the right kind of stock for next year's forcing in the line of hardy shrubs, if home-grown material is, to the exclusion of imported stock, thought to be the more profitable kind to handle, an opinion which is gaining ground on many places, where the extensive forcing of hardy shrubs has been successfully practiced for years. Small, vigorous, shapely plants of the suitable kinds, to be had at any nursery, potted up now or grown on in the open field until of proper size and promising condition, i. e., well set with buds and of fine form, are the kind to procure for the purpose, and now is the time to plant them if a fairly good piece of ground is available. Some will require several years of field culture, combined with frequent top and root pruning, to become suitable material for profitable forcing, while others arrive at the proper point and right stage of flowering condition in a single season. In planting merely room enough between plants for convenient cultivation is needed. Plants should be allowed full time for the ripening of their flowering wood in the Fall before being potted up. Those potted up in early Spring and carried through the Summer in pots, will invariably prove the best for Winter forcing.

Memorial Day.

In clearing up after Easter we are reminded that Memorial Day is not so far off as to render all thoughts of it or any preparations for it premature. The day has gained in importance from year to year, until now it is looked upon by a great number of retail florists, especially those located near our cemeteries, as the holiday above all others capable of making away with the greatest amount of florists' stock. It is the day when anything in flowers and plants, if in any way presentable, finds ready acceptance, a day for which little in the way of any special effort in preparing is needful. At

FUCHSIA, 6 kinds, \$1.25. AGERATUM, white, GURNEY PAULINE, 60c. VINCA VARIEGATA, 90c. SALVIA BONFIRE, SILVERPOT, SPLENDENS, 90c. ALTERNANTHERA, 3 kinds, 60c. HELIOTROPE, 3 kinds, \$1.00. FLOWERING BEGONIAS, 8 kinds, \$1.25. PARLOIR IVY, 76c.; DOUBLE PETUNIAS, 10 kinds, \$1.00. 'MUMS: TRANTOR, ALLIANCE, PACIFIC, CHELTONI, GOLDEN AGE, WEEKS, ENGLAND and EATON, \$1.25. STEVIA SERRATA, and VARIETAS, 75c. COLEUS, 10 kinds, 60c. GUPHEA, 2 kinds 60c. SWANSONIA ALBA, \$1.00. PARIS DAISSY, white and yellow, \$1.00. ALEXANDRIA, \$1.25. Seedlings, Dwarf and Tall, double stock, Antirrhinum, Grand White, pink and yellow, \$3.00 per 1000.
Cash or C. O. D.

BYER BROS. Chambersburg, Pa.

ENGLISH IVY

R. C., 75c.; 2 in., \$2.00.

BEK BEGONIA, 2 in., \$3.00; 4 in., \$8.00. ASPERAGUS SPRENGERI, 2 in., \$2.00 per 100. AERUCARIS, 60c. and 75c. each. CANNAS Austria, \$1.50; America, \$1.50; D. Harum, \$2.00; Pennsylvania, \$1.50; G. Gray, \$3.50 Marlborough, \$2.00; Italia, \$1.50; A. Bouvier, \$2.00; C. Henderson, \$2.00; Egandale, \$3.00 per 100.

Will exchange for Enchantress, Boaton Market or Guardian Angel Carnations.

J. H. DANN & SON, WESTFIELD, N. Y.

200,000 PANSIES

SUPERB STRAIN. READY NOW.

Fine, large Fall Transplanted Pansies, in bud and bloom. A trial order will convince you that these are the best you have ever handled.

\$1.25 per 100; \$10.00 per 1000. Cash with order.

LEONARD COUSINS, Jr. CONCORD JUNCTION, MASS.

SEED PANSY PLANTS

THE JENNINGS STRAIN

25,000 plants now ready. From finest selected stock, large flowering, fancy colors, in great variety. Stock is all transplanted and first-class in every respect. First size, large plants, \$1.00 per 100; by express only. Second size, strong plants, 100 by mail, 60c; 1000 by express, \$4.00; 2000 \$7.00. Seeds, \$1.00 per pkt. of 5000; 1 oz., \$4.00. Cash with order.

E. B. JENNINGS, Lock Box 254 Southport, Conn. Grower of the Finest Pansies

GERANIUMS

ROOTED CUTTINGS

S. A. Nutt, Grant, Buchner, and Perkins, \$10.00 per 1000.

Ricard, Poltevine and Castellens, \$12.00 per 1000.

3 in. pot plants, fine stock. S. A. Nutt, Buchner, Grant and Doyle, \$4.00 per 100; \$40.00 per 1000.

Cash with order.

PETER BROWN, Lancaster, Pa.

GERANIUMS Rooted In sand, then pot grown a month. Sent partly free of Soil.

Dbl. Grant, Buchner, Poltevine, Ricard, Perkins, Nutt, Doyle, and three fine new. Bargain prices.

COLEUS Verschell, G. Bedder, and only very brightest. Fancy, 20 kinds, mixed, well rooted, 100, 60c., 1000, \$6.00

6 in. pot, many kinds, finest of all Coleus, 80c. per 100.

GLADIOLI (Graft) Hybrids, blooming size, 50c. per 100. SAGE, Bull of Fire, R. C. 50c. per 100. Choice Pansies, Alternothern. Soil plants, Rug, and Imp. P. M., 100, 80c. Yellow, 100, 60c.—Nothing by mail.

DANIEL K. HERR, Lancaster, Pa.

Electrotypes of the illustrations used in this paper can usually be supplied by the publishers. Price on application.

YEARLY SUBSCRIPTIONS.

United States, Canada, and Mexico, \$1.00. Foreign countries in postal union, \$2.50. Payable in advance. Remit by Express Money Order Draft on New York, Post Office Money Order or Registered Letter.

The address label indicates the date when subscription expires and is our only receipt therefor.

REGISTERED CABLE ADDRESS:

Flores, New York.

ADVERTISING RATES.

One-half inch, 75c.; ¾-inch, \$1.00; 1-inch, \$1.25, special positions extra. Send for Rate Card showing discount of 10c., 15c., 25c., or 35c., per inch on continuous advertising. For rates on Wants, etc., see column for Classified Advertisements.

Copy must reach this office by 12 noon Wednesday to secure insertion in issue of following Saturday.

Orders from unknown parties must be accompanied with cash or satisfactory references.

To Our Advertisers.

Commencing with the issue of March 23 last, our patrons will have noticed that we had inaugurated a new departure in our advertising columns.

From its first issue in January, 1889 (in the fifth week of its publication), and thus for nearly eighteen years we have carried under each and every advertisement the wording, "Mention The Florists' Exchange when writing," the idea for the use of this legend being that readers answering would state they had seen the advertisement in The Florists' Exchange, and thus reinforce our claims as to being the best advertising medium for the trade.

The publishers of The Florists' Exchange have always, with no period of relaxation of vigilance, made a determined stand in the endeavor to restrict the circulation of this medium to those only engaged in the trade or in occupations auxiliary thereto; but, with increasing business, with the construction put on the second class mailing privileges by the Post Office Department, which forbids discrimination, with the failure of many unknown subscribers to answer our question as to whether they are in the trade or not, and perhaps more largely than from any other cause, the fact that many florists leave their trade paper where it can be readily seen by outsiders, here and there people who have no right to be considered as "in the trade" take advantage of having seen a quoted figure, and write expecting to get their stock at trade prices.

Under our new departure in the display line we are now printing at the foot of every advertising page, reading "Prices advertised in these columns are for the Trade only—When writing please mention The Florists' Exchange," we feel satisfied that we are protecting the interests of our advertisers better than ever before. As one advertiser well puts it: "We are gratified to see you take this action, and we feel certain the majority of the trade will appreciate it. It not only gives us a sound basis upon which we can turn down orders at wholesale prices received from retail customers, but will also head off many such orders and save useless correspondence at a busy season of the year."

There is no reason why growers should be compelled to retail at wholesale prices, and our announcement will assist their position materially when they are so requested to do. The greatest benefit to the trade will come from a strict adherence by all our advertisers to the letter of the announcement now appearing on our pages.

The Daily Press as Purveyors of Horticultural Information.

John F. Sullivan of Detroit has been giving some attention to the stories appearing in the public press and elsewhere concerning horticulture and floriculture, often "fearfully and wonderfully made," and at its last meeting he induced the Detroit Florists' Club to appoint a committee to endeavor to regulate the information concerning flowers and plants promulgated by the local newspapers and monthly magazines. Mr. Sullivan's aim seems to be, through this committee, to prevent as far as possible erroneous statements getting into the public prints regarding the craft and its operations, and immediately to correct all such statements when they do find their way before the people through the media mentioned. He believes a similar committee appointed by every florists' club in the land would render an admirable service, and save those engaged in the business much annoyance and oftentimes loss. And when editors and publishers of daily papers, and monthly or weekly magazines came to see that the florists themselves were anxious and willing to give correct information on such subjects, Mr. Sullivan thinks application would be made direct to the tradesmen for the desired data, instead of intrusting the work of writing these articles to those wholly ignorant of their themes.

The proposed plan is one worthy of being put in operation, even should it fail to accomplish all that is desired. Too much buncombe relative to plants and flowers, too many exaggerated statements regarding prices and profits of the florists are allowed to go unchallenged in the columns of magazines and newspapers. The trouble would be to get all the publishers of these to make the necessary corrections. Just imagine what an amount of ridicule heaped upon American horticulture would have been obviated had the foolish Burbank articles been nipped in the bud through this means in every instance whenever and wherever they appeared!

An unfortunate phase of this question, however, is that many of the craft are themselves the worst offenders along this line. They stuff reporters and magazine writers with all sorts of trash; the fountain can rise no higher than its source and, as a consequence, we have these Munchausenian horticultural tales which shock the sensibilities and work great harm to the industry. This is a condition that should be frowned down and reformed; then can the craft go with clean hands to the guilty ones and request redress.

The freedom with which the daily newspapers will accept and publish correct and valuable information on horticultural and floricultural topics is well exemplified by the success of the National Council of Horticulture in this direction. There is nothing sensational about the articles disseminated by that useful organization, yet they are welcomed and find a place in thousands of newspapers throughout the country.

By all means institute a campaign of censorship and correction in all matters dealing with horticulture and floriculture placed before the general public. It is greatly needed; and the time seems opportune for its inauguration.

American Rose Society.

Ex-Secretary Wm. J. Stewart of the American Rose Society told the New York Florists' Club on Monday evening last, that the former association must, in his opinion, live by the support afforded it by the commercial rose growers of America—men who are willing and ready to put their hands in their pockets when needed. The society people cannot be counted upon as rose enthusiasts, those of them appealed to by Mr. Stewart for a renewal of membership in the association having promptly sent in their resignations. One good friend of the rose in the commercial class is, according to Mr. Stewart, worth 40,000 ephemeral friends found in the upper strata of society.

This opinion is based upon the old method of doing things in the organization named. Neither the four hundred nor the forty hundred can be expected to take much interest in any body whose workings have no particular interest for them. When all the good suggestions propounded at Washington are brought to a culmination by the Rose Society, when an exhibition of hardy roses, in which the nurseryman, the florist, the amateur and private gardener will all take an active part; when helpful literature (not banquet reports or mere lists of awards) is provided, furnishing practical cultural instruction and in other ways for the general lover and grower of the rose in publications where such literature can be read by those interested; in short, when the American Rose Society lives up to its professed aims and objects in the fullest degree, then will the condition set forth by Mr. Stewart pass into its place among those that now reflect antiquated ideas and endeavors—relics of régimes that retarded progress.

Obituary

F. L. Tempie.

Felker L. Tempie, a well-known nurseryman and landscape gardener died Saturday afternoon, April 6, 1907, at his home in Hampden, Mass., his native town. For 20 years he was connected with the Shad Hill Nurseries in Somerville, Mass., and later had nurseries in Westminster, Vt. and Bucksport Me. He is survived by his widow.

Mrs. Anna B. Jones.

Mrs. Anna B. Jones, wife of Mr. William M. Jones florist, East Cambridge, Md., died on Easter Sunday morning, aged 32. For five weeks she had been suffering from blood poisoning. Her death was due to heart failure. She was the daughter of Mr. and Mrs. John L. Freeman, of Baltimore. In addition to her husband she is survived by five children, Anna, Viola, Myrtle Edith and William.

Thomas J. Kirchner.

Dying as he had lived—a true, good fellow—Thomas J. Kirchner, a veteran florist of Cleveland, O., raised a glass of milk to his lips with the words, "Here's good health," and sank back dead. The end came unexpectedly, Tuesday morning, March 27, though he had been ailing for two years. Mr. Kirchner was a veteran of the Civil War, an enthusiastic fox hunter and a collector of rare birds and flowers. His home in South Euclid resembled a small menagerie.

Mr. Kirchner was born 72 years ago in Bavaria. At the age of 22 he got a start as a florist at the corner of Quincy avenue and East Sixty-seventh street, Cleveland. He was one of the first in the field and prospered. Mr. Kirchner enlisted shortly after the outbreak of the war. He spent much money in raising the fine breeds of dogs, and his final breakdown was due to over exertion while fox hunting.

Deceased is survived by three sons: George J., William J. and Thomas J., the two last named being a head of the florist business, and two daughters.

Amasa Kennicott.

After an illness of about six weeks' duration Amasa Kennicott, horticulturist and florist, oldest surviving son of Dr. John A. Kennicott, one of the earliest horticulturists and physicians of Cook County, Illinois, died on Monday morning last at his residence, "The Grove," near Glen View. The deceased was 69 years old and leaves a widow, Mrs. Mary Seeley Kennicott; three sons, Ransom, Walter and Harrison; two brothers Bruno and Flint, and one sister, Mrs. Alice M. Reilly wife of Dr. F. W. Reilly.

Mr. Kennicott was born at "The Grove" in 1838 and served during the Civil War as captain of Company F., Thirty-ninth Illinois, the regiment known as the "Yates phalanx." At the close of the war he returned to the Grove, where he built up an extensive and lucrative wholesale flower business and attained a national reputation. The funeral services were held on Wednesday afternoon, and the interment was in Arlington Heights Cemetery.

Our statement that the fight on express rates making by the S. A. F. O. H. against the United States Express Company is one "for a few of its members in a restricted locality" is characterized by our esteemed Boston contemporary as "shallow," and in opposition to that view it is asserted, in all good faith, that this said fight "is on behalf of the entire horticultural industry of the country." This latter opinion will be apt to afflict the Jerseymen, for whom the struggle is making, with the exaggerated ego. It is, however, a view not in consonance with either the facts or the complaint of the S. A. F. O. H. itself. No positive assertion can be made regarding what other express companies will or will not do. Anything of the latter character is gratuitous and mere conjecture, and we were dealing with actualities, not assumptions or apprehensions as yet groundless or at best ill-supported. Evidently, too, the majority of those most vitally concerned take but little interest in the fight judging by their outward indifference thereto, and the fact that they have already solved the difficulty to their apparent satisfaction, by the institution of another and cheaper mode of conveyance for their traffic.

CLUB AND SOCIETY DOINGS.

NEW YORK FLORISTS' CLUB.—It was Ladies' Night on Monday evening, April 8, and the business session of the club was a brief one to allow full justice being done the entertainment of the fair sex. President Totty occupied the chair; and there was a gratifying attendance. Mr. Sheridan reported, for the dinner committee, a surplus of \$2.05 over expenditures, and the committee was discharged with much thanks. The outing committee reported progress of a satisfactory character; advertisements for the "book of sports," and donations of prizes are being given liberally. Most of the games will be for the women and children, with, probably, baseball and bowling for the grown-up males. George Baldwin and F. A. Bolles were elected members. Mr. Sheridan withdrew his motion to establish a membership committee. A suggestion by Alex. J. Gutman, regarding a life membership in the club, was referred to the board of trustees for consideration and report.

The essay committee announced that at the May meeting, S. S. Skidelsky, Philadelphia, would read a paper on "The National Flower Show," to be held at Chicago next year under the auspices of the S. A. F. O. H.

Mr. O'Mara gave an interesting talk on the work done by the American Rose Society at its recent Washington convention. Among other things Mr. O'Mara said he was glad to observe that many of the members of the Rose Society including the president, men engaged in forcing roses under glass were in favor of a broad policy being pursued by the organization. He believed the society had had its course shaped in the right direction; and could not see why the two ideals—the development of the rose as a winter-forcing or artificial product, and as a natural product—should not go on safely and harmoniously together. The work of the Rose Society is a little more complicated than that which falls to the lot of the Carnation Society inasmuch as the carnation is only to a limited extent capable of development in the open ground and is essentially adapted for artificial growing or forcing under glass. Mr. O'Mara thought that much depended at the present time upon how the executive committee of the Rose Society handled the subject. They were capable men, all of them, and if the necessary time could be given by them to a consideration of the question, he felt sure the American people were ready for some movement that will develop the rose, which flower year in year out, taking one season with another, holds the public favor in a way that no other floral product does.

Wm. J. Stewart, being called upon by President Totty, said he did not agree with Mr. O'Mara's views. His experience as secretary of the Rose Society for two years had shown him conclusively that the men engaged in commercial rose growing were the association's best friends, without whose munificent aid the Rose Society in recent years would have been in a bad plight. The Rose Society, Mr. Stewart thought, must live by the support of the commercial men—men who love the rose sufficiently to put their hands in their pockets when financial assistance is needed. Society people have no more interest in the rose than they have in chiffon or other articles of personal adornment, and a friend of the flower in the commercial ranks to-day is worth 40,000 of these ephemeral friends found in the upper strata of society. It required more than mere sentiment to carry on the work of any organization.

The balance of the evening was devoted to entertainment furnished by John B. Nugent, Jr., including songs by that gentleman himself rendered in his own inimitable style, piano solos by Master William Burnett, son of George Burnett, seedsman; negro and other melodies by the Rickard Brothers, and others, winding up near the midnight hour with a medley of music, vocal and instrumental, by the members generally given in a style rarely reached and certainly never eclipsed.

NEW JERSEY FLORICULTURAL SOCIETY.—The prevailing popularity of the orchid was again made manifest at the monthly floral display of this society. Langer & Hurrell, Summit, N. J., exhibited Cattleya Schroederæ alba and Laelio-Cattleya × G. S. Ball, both of striking appearance, and vases of the various season's blooms. Julius Roehrs Company, Rutherford, N. J., besides, beautiful examples of Cattleya Schroederæ var. Barouess, Cattleyas Rutherfordense and

Mossie and Odontoglossum pesentorei, contributed a new azalea which they have named Julius Roehrs. In color it is a bright crimson, with heavy leafage. Joseph A. Manda, West Orange, displayed four Cattleya citrina, Cypridium Sallisis pictum var. with a yellow margin to dorsal sepal instead of the usual white.

Carnations Eucharistess, Robert Craig, and a crimson seedling were shown by S. & A. Colgate (William Reid, gardener), and Charles Hathaway (Max Schneider, gardener), who also had Cineraria stollata, tulips Keizerkroon and Anaryllis, Empress of India. J. Crosby Brown (Peter Duff, gardener), contributed a vase of white and purple schizanthus, a most striking and ornamental bouquet for the table, and a specimen Adiantum dolabriforme. Judges were A. T. Caparn, Malcolm MacRorie and Edward Roehrs.

The paper of the evening was by John E. Lager upon "Travels in the Tropics." It was received with marked attention and was both entertaining and instructive. It was decided to hold a special rose night upon June 7 and a dahlia night. The schedule for the Fall show received its first reading. This exhibition is now an assured fact from the guarantee fund of two hundred dollars already subscribed among the society's patrons, and the fund still is growing.

Malcolm MacRorie announced a contribution of ten dollars cash through him from Mrs. Charles Rice. Designs for the society's medal were displayed, but action delayed until next month. Resolutions of condolence were read upon the death of Mr. Orson D. Munn and ordered spread upon the minutes. J. B. D.

OUR READERS' VIEWS

"New Creations."

Editor Florists' Exchange:

It has never been either my intention or desire to enter into any controversy or discussion on the word "create," further than to make a humble effort to prevent opprobrium and ridicule being brought upon our profession. The word "create" implies the word Creator which is one of the titles of the Deity; therefore to make use of the word for commercial purposes, or to attract notice or cause notoriety à la Burbank, is a direct breach of the third commandment. I call attention to the fact that this commandment has a special penalty attached to it.

I fail to see why Mr. Watt's letter was published unless it is to exemplify the detrimental effect that reading penny-a-line articles in a ten cent magazine has upon poorly balanced or immature minds. The letter is mostly a conglomeration of crudely called quotations, taken at second hand from some cheap magazine, and in most cases the quotation marks are left out. Nothing of any consequence has "emerged" from his mighty mind. A "great musical composition" is a composition, not a creation, and the composer is only a created being exercising a God-given talent. Any one who claims to create any thing, be it plants, hens, chairs, houses or footballs, can safely be put in the same class as Teddy put Harriman. Mr. Watt has thrown no "light on the subject;" neither has he cast any shadow, having said "nothing." Out of nothing, nothing can come; Greeks and penny-a-line "students of science" notwithstanding.

JOHN BIRNIE.

Perhaps This Silence is Golden.

Editor Florists' Exchange:

I do not understand the circumstance under which Job and John Birnie remain silent and for all we at this distance know motionless while this most amusingly instructive controversy in connection with the parentage of carnation Winsor has been running its merry course. Although Job's thrusts were occasionally the means of causing a more or less smarting sensation they were nevertheless useful on account of their forcible demands for attention to things past, and therefore useful also in their suggestions for the proper conduct of affairs and individuals in the future. The onslaughts of Mr. Birnie, although differing in manner of delivery as well as in effectiveness from those of Job, were also of some avail if for nothing else than to show to what danger a man will lay himself bare without the doubtful precaution of hiding his identity. I say doubtful because I am still in doubt regarding the identity of Job, despite the sensational allusion to that gentleman's supposed forefathers by Mr. McGorum. I have no doubt that the effect of the work of Job would be less keenly felt by Mr. McGorum as well as many others were they convinced that their antagonist's identity was rightly made known by the allusion referred to. However, many of us hope, after the reflection afforded by the silence of Job and the other combatant, that we will in the near future be again enlivened by their strenuous if sometimes discordant exertions. F. D.

Reflections on Current Topics.

Mr. Editor:—That communication of "F. D.," in a recent number, is about the stiffest conundrum I have run up against in a long time. Had the initials been "D. F.," some excuse for the riddle would have been afforded. However, I submitted the subject to Jemima, and with her usual intuition she says she thinks my characterization of F. D., as an anonymous writer, in the now classic words of the Boston scribe, has aroused the ire of F. D., to the extent of creating a "brain storm," rendering him unfit for the intelligent and intelligible expression of his feelings. There are times, and probably this is one of them, when one's affection for a particular saying—owing to its originality, aptness or other attribute—puts him in the same ridiculous position as the Scotchman in London, of whom Goldsmith tells the story, "who refused to be cured of the itch because it made him unco thoughtful of his wife and Bonny Iverary." But "F. D." need not feel bad about being termed "a bemasked, skulking scribbler." I have had the same lash applied to myself; but, then, I'm hidebound, and that means much when one is subjected to castigation by the oracle of American intellectual horticultural knowledge and wisdom. These little occurrences only help to cheer us on life's pathway, enabling us, as they do, to "see ourselves as others see us."

I read in a Boston contemporary, that only appeals to "intelligent and progressive people," showing by the few I hear of reading it that many of us horticulturists, etc., are not in that class, that the Ginger Jar man has been at Washington shaking President Roosevelt's hand; and, furthermore, that in the East Room of the White House, George was in his element, for everything there was gingery, excepting the jars. It is stated by my friend Watson that he was "behind Job" (that is his natural place, invariably); and he goes on to criticize Job's bow and handshakes. Now I cannot wholly account for George's illusion regarding my presence in that ginger-colored chamber and under such august auspices. When I look at that group picture of "those present," and observe Watson's Dick Deadeye pose, which you may remember was a triangular one, I am inclined to the belief that George must have been indulging in a daydream; or that the fact that they permitted him within the precincts of the White House had so distorted his vision that he could only see through a glass darkly, and had mistaken his man—something not unusual in his case. However, it is a delightful description that the Ginger Jar man furnishes of what must have been an interesting event. I am sure, notwithstanding the awkwardness and other departmental defects of those participating in it. You see, the rose men—or the majority of them at least—are only used to receptions by presidents of the S. A. F. O. H., where they make no bow and where ceremony is as much out of place as the function itself is a foolish one.

Finally, I observe that Watson says he was "flustered." That is surely something unusual, isn't it? It would be interesting to know whether that condition ensued because he was actually in the President's presence, or, in fancy, in such close proximity to Job.

P. S.—Since writing the foregoing I observe that my friend R. McGorum has awakened from his hibernation, and is edifying the "intelligent and progressive" by the statement that he sees Job in the rose men's picture. Robert's magnified vision reminds me of that of the wayfarer who sought the aid of a policeman to get a cab to carry him home. "Go straight ahead," said the bobby, "till you reach the top of this street; you'll see two cabs, but there's only one there." I wonder what brand is McGorum's favorite?

McGorum likewise muses on the meager display of cut flowers at the recent Boston show. I did not happen to read this critic's name among the list of exhibitors there, nor at Washington. What a remarkable interest fellows like McGorum take in such matters—on paper—and then wonder "why we have not the spirited contests we had some years ago!" You remember the Biblical injunction, "Take the mote out of your own eye," etc. The musing man's optics seem to contain the proverbial beam, a condition always accompanied with a lively imagination, hence that weird tale about some one of my forefathers being "a pedantic ruler of Scotland," and carrying a long sword. Like John Birnie, I am too plebeian to have blue blood in my veins, and I would certainly draw the line at the Scotch brand. I refer my imaginative and deluded friend to my autobiography, previously published in these columns, where in he will find it stated that I am a native of Uz. The weapon of my forefathers was a shepherd's staff, the objects of their attention sheep, an inheritance that abides with myself, hence my solicitude for the welfare of McGorum and his ilk. J.

A Traveler's Observations.

On January 30, bright and early I boarded the train for New York City, arriving there the same evening at 10 o'clock. The next morning a trolley car brought me within a few blocks of the very fine greenhouse plant of the Dailledouze Brothers, at Flatbush, N. Y. This place consists of some 18 or 20 greenhouses, of which quite a number are iron frame of the most modern style. All of these houses are isolated. This place is almost exclusively devoted to the cultivation of carnations, and after a careful scrutiny one becomes easily convinced that these gentlemen most thoroughly understand the cultivation of the divine flower; in fact, that they are experts at the business. A variety originated on this place, called Crimson Glow, impressed me most favorably. As the name implies, it is a pleasing crimson, of vigorous growth, large, well formed flowers, strong wiry stems of good length, and a very free bloomer. Taking this variety all in all, as it shows up on the benches here, it is, in my estimation, one of the best crimson carnations in cultivation to-day. Those who attended the Carnation Society's convention in Toronto will remember the variety shown by Messrs. Dailledouze as Number 348, as one of the brightest carnation gems on the exhibition table there. However, I have found in many instances in the past that it is one thing to see a variety slick and trim on the exhibition table and quite another thing to see it growing on the greenhouse benches. Many of the varieties that have loomed up big and bright, that filled one with admiration in the exhibition hall, lose much of their glamor when you come to examine them with a critical eye at their home in the greenhouse. Not so with Number 348. The more carefully I examined it from every viewpoint the more I became convinced that here with-

carnations are grown, of which a good percentage were originated on the place. Of the latter Alma Ward looms up big and lofty, both as a plant and as a flower; but I am sorry to say that the good opinion one forms of it at a little distance requires material modification on closer and more careful inspection. It is sincerely to be hoped that by careful and continued selection for a few more years what now must be considered faults may be entirely eradicated. The two great faults of Alma Ward, in my humble opinion, are: First, the coarse loose habit of the bloom, and, second, the all too free tendency to show color, which latter in a white variety is altogether intolerable.

There are a number of pink and cerise varieties of Cottage Gardens origin grown here that I think are worthy of being widely disseminated. The carnation bloom produced at this place is of the highest quality and brings top notch prices in the New York market. Those who have any doubt about the future usefulness of Beacon can have the same quickly and permanently dispelled by visiting this place, where the variety named is certainly producing some grand results. It is, of course, admitted by all competent to judge in the matter that the color of Beacon is not as ideal as in Robert Craig; notwithstanding the slight drawback in color Beacon has so many good qualities as a flower and so many strong points as a plant that it will be easy for this, like so many others of Peter Fisher's introductions, to create a field for itself in the near future as broad as that now occupied by the famous Enchantress. Queens is also the home of Lieutenant Peary, which is extensively grown here. In this variety all the desirable points we look for in a commercial white are strongly developed. Octoroon is another of Mr. Ward's introductions; it is a pleasing crimson, finely fringed, of good

The Gardens of Italy.

Abstract of a Lecture delivered before the Massachusetts Horticultural Society, Saturday, March 30, 1907, by J. K. M. L. Forquhar.

The oldest form of Italian garden is undoubtedly the court-yard garden. This garden consisted of a geometrical arrangement of the court into formal beds and borders with convenient paths laid in mosaic or paved, and embellished with statuary, sculpture, sundials, fountains and stationary wash-basins of marble. Occasionally the statuary and fountains were of bronze. Pompeii had numerous gardens of this class, several of which have been restored by the Italian Government, and it is interesting to see the attendants turn the water on the fountain through the system of pyramidal lead pipes which did service 2000 years ago.

The court-yard garden is of oriental idea—enclosed for protection, surrounded by an arcade on three or four sides of its rectangular area, and furnished with benches and other accessories to comfort. It was a garden for the family to live in, serving the same purpose as the small garden in the rear of the city houses of Japan, or the high-walled gardens of China, and like these existed for the family rather than for the passer-by.

Hillside Gardens.

The second step in garden evolution is seen in the hillside gardens. These occur chiefly throughout central Italy and mark a more advanced state of civilization, when personal security had become established, and when a wall ten or twelve feet in height afforded ample protection to the inmates of the villa. The hillside villa was usually rectangular, the house occupying the highest ground in the rear. The ground was arranged in a series of terraces which were usually separated by parapets frequently surmounted by balustrades. One terrace would be arranged with arched recesses in the retaining walls, in some of which were erected statues for ornament and in others benches where one might enjoy a sun bath quite protected from any chilling breeze. Another terrace would be an extensive pergola, affording a pleasant, shady promenade which the Summer sun could not penetrate, and where the inmate might listen to the dripping water from the fountain on a terrace yet below.

It was in these hillside gardens that the great possibilities of landscape effect dawned upon the designer. The immediate environment often uninviting had to be obscured. If the protecting wall ten or twelve feet high was insufficient screen, it could be supplemented by a screen of cypress, the delicate cypress, the fine foliage scales of which distinguished it from the pines and firs, and the graceful tapering form of which carries the gaze of the observer to the distant surroundings. In these hillside gardens there were usually two flights of steps protected at least on one side with parapet walls or balustrades. The purpose of the arrangement was, if possible, to render the hillside more habitable and make it as it were an outer living room.

It must be noted that through these stages of development the Italian garden remained strictly formal, and its lines were made to harmonize with those of the architecture to which it was linked. It had three chief elements—marble, water and the foliage—flowers were incidental.

Gardens of the Renaissance.

An enlargement of the hillside villa marked the third stage of evolution, and brings us to the elaborate garden of the Renaissance. The terrace was broadened into an elaborate geometrically arranged area, in which were disposed sculpture, statuary, sundials and benches of marble. Flower beds were arranged in elaborate geometrical design, and numerous architectural features were introduced, such as wall-beds, pergolas, fountains, cascades and other ornaments.

It is this enlarged garden, in its great variety of character and feature, yet always rigidly formal, that has aroused so much interest and the desire on the part of many garden lovers in this country to reproduce it here.

About Naples we find the slopes of the hills covered with compact walled villas arranged with convenient paths, a few cypresses standing like sentinels about the house, here and there an olive, orange or lemon tree, and an abundant growth of fig and grapevines.

Noted Examples.

In Rome, the villas average larger; they are more elaborate and contain a greater variety of trees, shrubs and plants. The celebrated Villa Borghese is a beautiful public park with fine drives, interesting groves of umbrella pine, hedges or ilex and boxwood, the latter frequently forming a background for statuary. It is well kept and contains numerous elaborate flower beds. Flower beds are frequently arranged with a statue for a centerpiece. Such a bed in the Borghese has for its centerpiece an unknown statue found in the Forum;

New Carnation House of L. Cousins, Jr., Concord Junction, Mass.

out a doubt is the most promising of all the new pink varieties in sight at the present time. The bloom is very large, of fine form and substance, is well built up in the center, color a very attractive pink, lighter than Mrs. Lawson (approaching rose pink), long stiff stems, a prolific bloomer, calyx apparently split-proof, plant vigorous and healthy.

From Flatbush I proceeded to the Cottage Gardens Company establishment, at Queens, N. Y. Unfortunately Mr. Ward was away from home. However, I had the good fortune to fall into the hands of R. T. Brown, who looks after the financial end of this very large and thriving concern. Mr. Brown is quite familiar with all the details of the establishment; in fact, he seems to have all the valuable information that one is always eager to pick up at these places at his fingers' ends. To hear Mr. Brown talk about the good, the bad, the strong or the weak points of the numerous varieties grown here, one is inclined to think that he spent all of his time watching them grow and taking notes on their general behavior and habits. Besides the many large greenhouses of the most modern types and substantial character there is a very large acreage devoted to the growing of ornamental nursery stock. Here the mistake so often made by many nurserymen of growing five or six trees or plants in the space where one only ought to grow is studiously avoided, and the results obtained are very gratifying indeed. Every plant and tree grown here is a beautiful specimen, equaling the finest stock raised by the best nurserymen. It was really a pleasure to see these handsome specimens, especially in the evergreen plot, with all the parts perfectly developed—well balanced compact trees fit for the finest lawns or the spacious grounds of the multi-millionaire.

In the greenhouses a large number of varieties of

form, splendid stem and in every way one of the most desirable varieties in this color.

That the proprietor of this fine place is enterprising and progressive can easily be judged from the style and general character of the greenhouses and other buildings. Last season a neat office building was erected, which for its elegant interior finish, for the high quality of its furnishings and for the admirable appointments throughout would be difficult to equal in the largest florists' establishments of the big cities. The fine water colors on the walls of the office bear ample testimony to the artistic tastes of Mr. Ward.

Berlin, Ont.

II. L. JANZEN.

L. Cousins, Jr.'s, New Greenhouse.

The accompanying illustration shows the new carnation house added to the plant of Leonard Cousins, Jr., Concord Junction, Mass. It contains some 10,000 plants. Mrs. Lawson and its white and variegated sports, are grown here to perfection; some of the finest Mrs. Thos. W. Lawson carnations seen in the Boston market the past season, were sent from here. Fair Maid, Queen, J. H. Manley and Harlowarden are also grown in quantity.

Pansies form another specialty of Mr. Cousins who reports that they have wintered finely this season. The covering has been removed and the plants show up in excellent condition. By a careful selection of plants and growing his own seed for years Mr. Cousins now produces an excellent strain of pansies. He has already started shipping to an increasing trade of florists all over the country.

for its edging coral rock, inside of which were planted rows of white-leaved gnaphalium, pink ivy-leaved geraniums and white Paris daisy, in the order named; behind these followed blue aceratum, balsamin, scarlet salvia, African marigolds, cunmas, dahlias, New Zealand flax and Abyssinian banana. The only thing Italian in character in such a flower bed is the statue in the center; the floral treatment is borrowed from western Europe and is quite out of place. In Rome there are many beautiful water gardens and one is often surprised at the great effects produced with a comparatively small flow.

In southern Italy a large portion of the villa is generally devoted to fruit culture, especially figs and grapes. The latter are supported on live elms or poplars whose trunks and short pruned limbs serve as trellises.

Florence undoubtedly holds first place for beautiful environment and fine villas. The famous Boboli garden of the Medici family is one of the largest and best preserved. It is entered through an avenue arched with ilex trees, leading to a vast amphitheatre at the rear of the Pitti Palace. It contains many fine avenues which are perfectly straight, and to me much less interesting than the beautiful Rampa farther up the hill. The Rampa is a public driveway leading along the face of the mountain, lined on both sides with charming villas and commanding a fine view of the city and its surrounding mountains. Its culminating point is the Piazza Michael Angelo, a magnificent terrace affording a commanding view of the vast amphitheatre-like landscape in the city of art, forms the arena.

In Florence and northwards, garden arrangement has suffered encroachments of the ideas of western Europe, and it is only in the more neglected gardens that the architectural features of sixteenth century remain. Many of the older villas have been occupied by foreigners, and foreign ideas chiefly French and English, have been introduced. The architectural garden too, affords little opportunity for elaborate floral display, and it has been ruthlessly modified to overcome this limitation.

Whenever we find elaborate garden decoration, it follows French ideals, the only difference being that the colors harmonize better and the designs are more graceful in form than the French.

The grounds of the Milan Exposition last year were profusely planted with formal flower beds and borders all of refined and tasteful arrangement, but there was not a single example of the old Italian style of planting. The Italian garden of the sixteenth century is virtually a thing of the past. It is not built in Italy now and in but rare instances are the old ones kept up. Expense of construction and maintenance seems to stand in the way. There is also a taste for more lavish floral display to which the arrangement of the old garden is not adapted.

We also find in the north of Italy occasional fine examples of natural gardening. In these the most notable feature is the skill with which the gardener uses water in his composition. In American gardens we have hardly any water—we use it in our park, why not in our gardens?

Italian Gardens in America.

The best examples of Italian gardens in this country are much more floral than perhaps any in Italy. There the flowers are a secondary consideration, here the garden exists for them. A natural garden is a much better home for flowering plants than an architectural one on the Italian plan; yet there are many features of the Italian garden which may be profitably introduced here. It will be prudent to say, however, that it should never be attempted upon a small scale or where there is any thought of economy. It is expensive to build, expensive to plant and the most expensive of all gardens to maintain. Yet there are instances where a modified Italian garden may be advantageously introduced. It may be made a suitable setting for an imposing residence, and its features may add much to an architectural design. The present method of using cement, where cut stone was formerly used, will reduce the cost of construction. Almost any kind of stone may be closely imitated by mixing the stone, crushed, with the outer layer of cement. Even the pergola—pillars and roof—may now be reinforced cement construction, which if well done, should last as well or better than stone.

The beautiful cypress is not hardy in our climate, but we have a satisfactory substitute in the pyramidal Arbor vite, *Thuja occidentalis* pyramidalis.

Water may be profitably introduced as an element of garden construction. Water pipes and basins must, however, be arranged so as to be thoroughly drained off during Winter to avoid injury by frost.

To maintain a continuous floral display, the plants must be frequently renewed. In many of the older gardens of Italy we find the floral collection confined almost exclusively to pots and vases. In an old garden in Naples last Summer I found growing in pots and vases amaryllis, agave, carnations, chives, chamærops, chrysanthemums, lantana, Pheasant-eye pink, pelargonium and phornium, while I found only fourteen kinds of flowering plants growing in the grounds, of

which only two, petunia and amaranth, were in bloom.

The Italian garden as a whole is not to be recommended for general adaptation here. There are of course exceptional places like two of our beautiful estates in Brookline, a new estate at Sharon, Conn., and the vast estate of Biltmore, where it may be appropriately used.

American conditions differ from those of any other country and no imported style exactly fits them. Each garden location calls for a particular style of treatment, which will fit its conditions and environment, and I am forced to the conclusion that in the majority of cases, the more natural the arrangement, the more satisfactory will be the result. Where a formal treatment is inevitable, the English terrace garden with a single parapet will usually be found more satisfactory than the elaborate and expensive sixteenth century garden, which the Italians themselves no longer build.

Wind and Greenhouse Roofs.

There is an idea, more or less general, among builders, that a floor, when first laid, should be arched up in the center to allow for a settling there that may afterwards occur. There is no scientific authority for this. A floor should be level when laid, and its foundations, including often a beam in the cellar, supported sometimes on posts under the center of the floor, should have their proportionate amount of bearing surface on the soil to the weight carried by them as compared to the weight carried on the walls, so that the settlement of all may be alike. To crown a floor up in the center is an acknowledgment that the foundations, carrying the center of the floor, are not sufficient to keep it from sinking with the accompanying cracking of partitions with door frames going out of square and other evils that result.

Wind and Greenhouse Roofs. Reproduced from Canadian Florist.

But what has this to do with a greenhouse roof? Nothing, if it were not that some builders have got the floor crowning idea so firmly rooted in their craniums that they want to apply the same principles to the sash bars of a greenhouse roof. To this we would take no objection were it not that it sometimes gets the owners of the houses, as well as ourselves, into trouble. When any one puts you to unnecessary trouble then it is time to speak with a view to securing an improvement of conditions.

To illustrate why the sash bars of a greenhouse should not be crowned I submit sketch Fig. 1 and Fig. 2, in illustration. In the roof here illustrated the rafters act partly as floor joists to support the sheathing of the roof, but they act also as columns or posts partly supporting the weight of the roof represented by W in the figures referred to.

The opposing sides of the roofs by leaning against each other at the ridge, help to support one another. For instance, the lower end of roof, side A B rests on the wall at B, the upper end rests on the rafters of the other side of the roof, said rafters, therefore, acting as pillars or posts to convey one-half of the weight on the roof and carrying this strain direct from the ridge A to the opposite wall at C.

Further, let D represent the pressure of a wind storm blowing on the side of the roof A B, and consider the effect on the roof. A greenhouse roof weighs about 2½ pounds a square foot, and it may be thought that when we allow an additional 7½ pounds for a snow load that our whole duty is performed, but in a windy locality, where the full sweep of the wind unbroken can get to the side or ends of your houses, it is not so.

The following data are taken from good authority on wind pressure:

Pleasant breeze, 4 lbs. a square foot.

Very high wind, 8 lbs. a square foot.

Wind storm, 10 lbs. a square foot.

Big storm, 20 lbs. a square foot.

Hurricane, 40 lbs. a square foot.

Thus, a hurricane will put four times more pressure on your roof bars than the average calculation for a snow load in Canada. There is a difference, however, in the nature of this pressure. A snow load is all downwards, a wind load is not, but rather at places has an upward suction tending to raise the roof. This was explained in my article on roof trussing, published in the Canadian Florist last Spring. How, then, is the wind pressure met in the illustration under consideration?

Half of it is met by the bottom end of rafter secured to wall B, which is considered a fixture. The other half is carried at the ridge and conveyed to the wall C by the rafters A C acting as posts. Thus the post strain on the rafters A C is half the pressure due to the weight of the roof itself plus half the pressure due to the wind.

Everyone should know that the whole virtue in the ability of a slim post, such as a rafter is, to carry weight is in keeping it absolutely straight. Let it deviate from a true line one-half its diameter, and it will support but one-fourth the load it would otherwise carry, but let it deviate its entire diameter and it will support nothing. Test this experimentally if you will by placing an ordinary folding carpenter's rule in the position illustrated at A C, Fig. 1. While the rule is straight it will carry all the rule is capable of carrying, acting as a post, but while continuing the pressure at A give it the least pressure upwards in the direction of the arrow E and see what happens. It supports nothing while its center piles up in the air, and the structure is a wreck.

Straight Rafters.

Therefore, to provide against a wind pressure, such as described, it is necessary, in the case under consideration, to be sure that the rafters on the suction side are straight. Since provisions made for carrying the roof prevent them from being forced downwards, if there is to be any "crowning" done let it be "concave" on the upper side of the roof, and let any wind ties put in, tie it in this position. Then, when there is a downward sag or bend in the rafters the post pressure, due to the weight of the opposite side and any extra pressure due to the wind, tends to further spring the sash bars down, and so resist the upward suction represented at E, tending to lift them upwards and create that flopping of the sash that in a wind storm sometimes threatens the safety of the roof or may wreck it.

These remarks apply mainly to roofs supported on walls and purlins, but not to roofs having posts under the ridge, for the reason that in the latter the post pressure is taken off the rafters and conveyed direct to the ground through the ridge supports. This note serves to further illustrate the correctness of the position taken, since with posts from the ridge to the ground direct there is no post pressure on the rafters. But, if the ridge posts are taken away then the rafters have to do the work of the posts.—R. W. King, in Canadian Florist.

American Carnation Society.

Variety Registered.

By James D. Cockroft, Northport, N. Y.

SENSATION.—Color, a beautiful shade of bright cerise; well built flower of large size; calyx perfect, does not burst; stem from 24 to 30 inches and over from September to July; keeping qualities of the best; early, free and continuous; habit, strong clean growth, every shoot producing a flower.

ALBERT M. HERR, Secretary.

Lancaster, Pa.

Notice to Florists' Clubs.

At your next meeting get a list of your members who would like a carnation measure. Mail the list to Kroeschell Brothers Company, 33 Erie street, Chicago, Ill., and they will mail a measure to each member free of charge.

GLADIOLUS PEACE.—An illustration of this gladiolus appears as a supplement to The Gardeners' Chronicle, London, England, of March 30, 1907. The variety was raised by H. H. Groff, Simcoe, Ont., and is being cultivated by Arthur Cowee, Berlin, N. Y. It is considered to possess exceptional merit, and has received certificates from the S. A. F. O. II., and the Canadian Horticultural Association, it is said.

A variety of the same name, described as of flesh-pink color with violet spot and white tips, is catalogued by Kelway & Sons, Langport, England. It is unfortunate that two new varieties should bear the same name.

FOR THE RETAILER

Weddings.

This is a month of weddings, and the week just past has been a busy one. Many wedding decorations are particularly acceptable to the trade the week following Easter, which is generally admitted to be a dull time, and prove a good outlet for stock left on hand, especially lilies, which are beginning to be a glut already and not worth a third of what they were bringing last week for even inferior flowers. A wedding decoration of the type that uses up surplus Easter stock, executed by a leading florist, created much favorable comment, and showed what may be accomplished with a miscellaneous supply of material to work with.

The chancel was banked high on either side with palms, the lofty effect being obtained with made-up stumps, in the tops of which were inserted giant palmetto leaves eight to ten feet long. Smaller palms graduating down from these, were brought out to the front, natural palms being used to finish off. Over the altar a Gothic arch frame had been erected. This was made of heavy wire, with a series of pot holders, the frame being hidden with wild smilax. Lilies in pots were used in the arch, the effect being very loose and airy. On the altar proper, turned over on its side, was an immense plant of Cibotium

Cattleya Schroderæ being intermingled with the ferns. Large French bows of pale orchid ribbon completed the arrangement.

The canopy under which the ceremony took place was in the form of a semi-circular pergola. Wild smilax was thrown carelessly over it, falling in graceful festoons. Wide open Mme. Abel Chatenay roses were fastened on the smilax, giving the effect of a beautiful climbing rose bush. Formal looking Italian pots filled with lilies and connected by ribbons, formed the aisle up which the bridal party walked. The stairway, which was a very wide one, was lined on either side with Crimson Rambler roses in pots, the pots being covered with smilax. The effect was that of a complete hedge of roses in full flower. One side of the hall was banked with the beautiful new rhododendron, Pink Pearl, its large masses of pink flowers proving quite an attraction. The bride carried a formal bouquet of white camellias, while the maid of honor held a basket of the same flowers in pink, tied with very pale green ribbon.

Polygonatum Multiflorum.

A firm of growers offered for sale this week "A new variety of lily of the valley, two feet high." Orders were given and the arrival of this new marvel anxiously awaited, when, lo and behold! on unpacking we discovered our old friend, Polygonatum multiflorum, or Solomon's seal. The plants were admittedly well grown, and distinctly a novelty in the florists' shop; but why they were sold under the name of "lily of the valley" was a mystery. This might possibly go through in some instances, but they were immediately recognized in most stores, even by customers. Possibly the joke was on the retailer, as orders were eagerly given for "lily of the valley, two feet high."

Church Decoration by A. N. Crouch, Knoxville, Tenn.

Schiedei, with a ten-foot spread, forming the background for a large sunburst cluster of lilies. On either side of the choir stalls rhododendrons and azaleas were banked, dark crimson starting at the altar rails, then azaleas of the Van der Cruyssen coloring, next Professor Wolters and Vervaneana, finishing up with the pure white varieties. Masses of spiræa and Dentzia gracilis, gracefully arranged, relieved the backs of palms facing the guests. Azalea mollis in its varying shades was used on the pews up the center aisle, each cluster being tied with pale yellow ribbon. A large mass of genista was arranged over the entrance at the rear of the church, and the supporting columns were entwined with garlands formed of wild smilax and Easter lilies.

It will be seen that three or four colors were used in this decoration, yet they were so carefully blended and artistically arranged that the most critical observer could scarcely find fault; and I have seldom seen a decoration that was so generally admired.

A Mirror Decoration.

At a home wedding this week a distinct feature of the reception room was a large mirror measuring ten feet in height by four feet wide. Some long strings of Asparagus plumosus were draped on one side and tied in with ribbon about half way down. At the highest point of the mirror was attached a large specimen plant of Dendrobium Wardianum; other plants of this orchid were placed at varying distances down the right hand side of the mirror, the spikes of flower being allowed to hang naturally from the plant. On a low shelf, about eighteen inches from the floor, were placed plants of Adiantum Farleyense, starting low to the left and rising gradually to a height of about two feet,

Beautiful Wreath.

The handsomest wreath I have seen this season was part of a large order taken this week. The wreath itself was made solid with white violets, with a cluster of purple lilac and lily of the valley; this was hung over a cross of purple violets standing on a square base, the base being filled in with lilies and white lilac. No ribbon was used.

D. RAYBUN.

A Southern Church Decoration.

The accompanying illustration shows the decorations of the Presbyterian Church at Knoxville, Tenn., for a wedding, recently executed by A. N. Crouch, florist. An innovation was the use of large candelabra, many of which are heirlooms, hundreds of years old. Large numbers of electric lights were intermingled among the palms and ferns, providing a beautiful effect.

H. Y.

Forcing Gladiolus in Winter.

Editor Florists' Exchange:

I recently read in The Florists' Exchange some communications regarding the growing of gladiolus in the greenhouse in winter. In France they plant the gladiolus like hyacinths, tulips or lilies, and have flowers all winter. Why is this not done here? I am sure that, with the number of varieties of gladiolus now on the market, some sorts could be found suitable for forcing in winter.

Wood Haven, N. Y.

BEAULIEU.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words: each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Avenue. My facilities for delivering flowers for any and all occasions are unequalled. I can give prompt service to steamer and theatre trade. Telegraphic orders solicited.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of reasonable varieties of flowers always on hand. Wire me your orders.

Washington, D. C.

GUDE BROS., 1214 F Street, N. W. We excel in high-class flowers and design work of every description; quick service, reasonable charges and liberal treatment have placed us on top. Try us.

Milwaukee, Wis.

THE C. C. POLLWORTH CO., Wholesale Florists, will take care of all your Retail orders for the delivery of flowers anywhere in Wisconsin.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLORAL CO., 1706 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Cincinnati, O.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dallas, Texas.

LANG, THE FLORIST, the largest flower store in the South. Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Texas, Louisiana. Mail and telegraphic orders solicited.

WREATHS.—When calling on Messrs. Wills & Segar a few days ago I was rather interested in what to me is a new departure, called "forest wreaths," made up with large fir cones, teasels, thistles, echinops, etc., with a ground-work of beech, yew, etc., some being in natural colors and others dyed. They were beautifully made up and Mr. Segar told me that his firm did quite a large trade in them at Christmas, most customers preferring them to the holly wreaths, which have become very popular for putting on graves at Christmas time. I also find wreaths are made up of various sorts of fresh foliage, with a bunch of flowers on one part only. Colored flowers are generally introduced; mauve and purple are favorite colors. I recently noted some pretty designs with a groundwork of heather and a few white flowers standing up. Color in almost all funeral designs is becoming more and more in use, especially in foliage; and when natural bronzy foliage is not procurable dyed foliage is substituted. A. H.

DYEING FLOWERS.—Writing in condemnatory terms of this practice, as observed in London, England, a correspondent of the Chicago Inter-Ocean says:

"Plant or flower 'faking' is an old art. One of the most familiar examples of it is the 'carrot fern.' This merely consists of the crown of a carrot cut off, fixed firmly by means of wooden pegs in a pot of soil, then allowed to produce a tuft of green foliage, and in this state palmed off on unsuspecting town or suburban folk as a rare or choice fern at sixpence or so each. Beet, parsnip, and even mangold roots are treated in the same way, and disposed of as the latest floral wonder during the Spring months."

More inspiration for the fellows who "fake."

New York.

News of the Week.

From a musical standpoint it can safely be said that the Ladies' Night at the club meeting on Monday evening last was an immense success. John H. Nugent, Jr., was never in better voice and he was most liberal with his numbers, never once refusing to respond to a recall. The Rickards Brothers were also in splendid form and fully maintained their reputation as entertainers. Some of their selections were culled from the latest hits at Broadway theaters and they never failed to please. The outside talent provided by Mr. Nugent was all good and deserves the thanks of the club members for so liberally contributing to our enjoyment. It came near being an evening without Scotch music (the artists above referred to dealing strictly with the classical), for it was just at the close when John Birnie and a few of his compatriots gathered around the piano and commencing with Annie Laurie the airs of Bonnie Scotland were gone through in unison one by one until Auld Lang Syne was reached and duly enjoyed by the performers, giving a fitting finale to our Ladies' Night.

The weather is anything but suitable to the best interests of either the florist or the seed business. Tuesday we were treated to a snow-storm, which lasted all day, and traffic of all descriptions was very much impeded. With the ground about covered with snow in April, the check to the seed trade can better be imagined than described.

Wm. Elliott & Sons' auction room is a busy mart on Tuesday and Friday of each week, and immense quantities of imported hardy stock is being disposed of under the hammer. Visitors who are in the trade should make it a point to attend these auction sales, if possible, while in the city. There is always something going that would be of much interest to an outsider, as well as local tradesmen.

Evidence is not lacking that the average florist is equal to any emergency in the chase after the nimble dollar. One of the best things seen in a long while is the sign of a Greek flower store established in the heart of a settlement where the residents are chiefly from Erin's Isle. The sign is large and conspicuous and reads "The Shamrock."

Josephine Jeslin, who for some time ran a retail store at 2603 Broadway, has filed a petition in bankruptcy. The liabilities are \$2,512 and the assets are \$517. This seems but a simple announcement, but in connection with a failure like this there are, no doubt, some benevolent wholesale florists who suffer in silence.

Word comes from Milan Center, N. Y., a hamlet located somewhere in the neighborhood of Poughkeepsie, that there will be several greenhouses erected there during the coming Summer for the cultivation of violets. We are apt to think at times that there are about as many violets being grown now as can be disposed of at a profit, but, of course, the growers know better than we do just how cheap the violets can be sold at and still yield a profit.

F. B. Vandegrift & Company, custom house brokers, at 66 Beaver street, will move on May 1 to the Kemble building, 15-25 Whitehall street.

Bertha Cohn, a florist, 17 East Fifty-ninth street, has filed a petition in bankruptcy with liabilities of \$4,180 and assets of \$20.

St. Louis, Mo.

The Week's News.

W. C. Smith, Carl Beyer and Frank Weber, trustees of The St. Louis Florists' Club, held a meeting at Mr. Beyer's place on Thursday night, and report that they completed all the arrangements for the rose show to be held this week, Thursday afternoon, in conjunction with the club's monthly meeting. The kind of entertainment they will give for the club's twentieth anniversary, June 28, was talked over. A banquet or a smoker was suggested, also to have all the ex-presidents present.

The rose show will have ten classes, 15 to a vase, the prizes being \$3 for first and \$2 for second, making \$50 in all. The varieties mentioned are the Bride, Bridesmaid, Kaiserin Augusta Victoria, Mme. Abel Chateauy, Killarney, Richmond, Liberty, Perle des Jardins, Golden Gate and a mixed vase. The prizes can only be competed for by club members and local growers.

J. H. Denker, father of Edwin Denker, florist, St. Charles, was elected mayor at the last Tuesday election.

Professor Trelease, director of the Mission Botanical Garden, returned home a week ago from the West India Islands, bringing many new and valuable plants. Professor Irish reports that he will lecture before the ladies' club at Webster Groves next week.

The Bentzen Floral Company report a large Easter business in plants and plenty of orders ahead for planting out just as soon as the weather permits.

George Wallbart has refurbished his place on Grand avenue. As it looked like moving day during the Easter rush, everything sold clean in plants and cut stock.

Mrs. May M. Pape, wife of Fred W. Pape, florist and former superintendent of public parks, died on Sunday, April 7, after a short illness. Mr. Pape is well known among the local trade who extend their deepest sympathy.

Mrs. M. M. Ayers had a busy week with funeral work and a large wedding. Their Easter trade was even greater than they expected. The show house looks well with its new stock of palms. Carew Sanders is still under the doctor's care, but considerably better than a few weeks ago. A complete recovery is looked for this Summer.

C. Young & Sons Company are doing a rushing business in the plant and seed trade. An extra force is kept busy all day long. The cut flower department, under James Arata, has plenty to do in all lines. ST. PATRICK.

Washington, D. C.

News Items.

General regret has been expressed at the Department of Agriculture over the loss of Dr. H. J. Webber, chief of Division of Plant Breeding Investigations, who recently left for Cornell where he has accepted a position as head of a new department in that university. While connected with the Department here Dr. Webber made for himself a world-wide reputation. The work he has assumed at Cornell will be parallel with his former work, only far more searching, as he aims to discover the laws of plant heredity. Much has been learned along the line of the effects of heredity, but little is known of its causes. His aim will be to classify the laws of heredity and apply them practically. Besides having done much along the line of orange culture, he has made many improvements in both the tobacco and cotton crops. It is claimed that in the matter of cotton alone he has developed a method in the selection of seeds for the planter that should add \$40,000,000 annually to the value of the American crop.

In our last issue we mentioned the endeavor of Fred. D. Owen, who is connected with the Public Buildings and Grounds, to have the florists of this city unite with him and his colleagues and aid the civic government in further beautifying the Capital City. Mr. Owen's first meeting was held on April 6, but by reason of that date falling on Saturday, and the existing inclemency of the weather, few of the trade were able to attend. George Brown, Superintendent of Public Buildings and Grounds, was present to represent the government, while Z. D. Blackstone spoke in behalf of the florists. It appears that Washington is far behind many other cities in this class of work, notwithstanding the fact that many thousands of plants are annually placed in the public and private gardens here. Many private individuals do much to adorn their respective abodes with shrubbery and flowers, but there seems to be an underlying deficiency in the sources from which necessary knowledge of a reliable character can be readily obtained. The dissemination of such knowledge can only be effected through the experienced and competent gardener; hence Mr. Owen's request. It is believed that as soon as the worthy effort becomes known, there will be a ready response not only from florists but from those anxious to assist the cause and to beautify their surroundings. The idea should appeal to every progressive man connected with our profession, not only from the standpoint of beautifying the National Capitol in which he resides, but from the fact that his support means a stimulus to the plant industry. The date of next meeting was not decided upon, but due notice will be given. Let us each strive to lend a helping hand to this worthy cause. J. L. C.

Newport, R. I.

Trade Notes.

Indications point to a strong demand for *Rhododendron maximum* this Spring; several Newport men are already in possession of good-sized orders for early delivery.

Large native cedars stood the Winter remarkably well. I refer, of course, to the cedars moved from their native wilds within the last two or three years on to estates in town. There is no question of the immense value of these large cedars in producing immediate decorative effect, and if it turns out that a fair proportion of the number transplanted will survive, a great many more will be used.

Spring operations are now underway in spite of the best efforts of the weather man to still further hinder the progress of necessary and seasonable outdoor work. The past Winter has been one of the severest on record, but not until the snow had all melted was there any idea of the damage to things outdoors. Hybrid perpetual roses suffered to an extraordinary extent in some places; whole rows of certain varieties were killed down to the ground, making them of no practical utility this season and for that reason necessitating their removal and the purchase and planting of others to take their places. There are no roses in Newport to supply the want indicated, so that the supply will have to come from out of town. It is out of the question to order from any European source now for this Spring's planting.

There have been a great many hybrid tea roses planted during the past year or two, and luckily for the larger growers of these they lifted the most tender of the varieties out of the open ground and either heeled them in cold frames or housed them in some other way. The hardier of the hybrid teas or those known to keep pretty well outdoors were left out, but well covered. These survived in fairly satisfactory numbers, although some growers find that a great many are gone.

It is too early yet to say anything about the probable fate of the large number of specimen hydrangeas outdoors, but it is feared that many of these are put out of commission for this year's flowering, which is very regrettable when it is considered what a prominent feature of Newport hydrangeas are in Summer.

Although there are not very many carnation growers in Newport (Stewart Ritchie being now the largest), much interest was manifested in the proceedings of the convention recently held in Toronto, not only because of the importance of the convention as a whole, but because of the new carnations lately introduced and a curiosity concerning how they showed up and were recognized there. Everyone who saw Winsor has been delighted with it, and a great many are delighted at the promise it gives of being profitable to Mr. Pierson, who is recognized here as one of the most enterprising men in the business. The success of this carnation is also gratifying to many here because of their friendship for Peter Murray, the originator. It would be a generous thing for some of those-growers of carnations to ship a few blooms of their latest introduction, grown as no doubt all their product is, to perfection, to some of our meetings, where I am confident they would not only be greatly appreciated and instructive, but would also receive at our hands all the recognition within our power, commensurate, of course, with their comparative superiority, as we could to the best of our knowledge discern. The essays read at the convention were read here with much interest. The impression seems to be prevalent that John Birnie has modified his views regarding the growing of carnations of the highest development within the past year, his views now being just like what he and other able men would like in the carnation of the future—assured moderation in everything.

V. A. Vanicek is preparing to ship nursery stock.

There is already a demand for good kentias and when the season opens the call will be brisk indeed.

The supply of large plants of the Boston fern and its varieties is not at all extensive in Newport; a great many

are used by florists during the Summer. *Pandanus Veitchii* is also somewhat scarcer than usual.

Adiantum Parleyense is called for already both in its small size and as specimens in 6 and 8-inch pots at an increased price.

Dahlias promise to be in pretty good demand again this year; several large growers are giving up collections and are going in more for standard sorts of merit and utility.

Mr. and Mrs. Carl Jargens arrived home from Europe just before Easter; they are both much improved as a result of their trip abroad.

Gibson Brothers Tuesday of last week opened a new store on Washington Square, one of the best if not the best all the year round locations in the city. They did a very large Easter business; their stock was all first class including the bulk of their lilies (their own growing). John Gibson will have charge of the new store, Joseph will superintend the greenhouse work and Thomas the landscape department.

The bids for the care of the city parks will be opened this week. It is likely that a new man will have the work this year. Whoever gets it will have to purchase large quantities of material for bedding for Summer as well as bulbs for Fall planting.

Fred. M. Smythe made one of his periodical visits to Newport last week. He was accompanied on his return trip to New York by Mr. and Mrs. Charles Hurn. Mr. Smythe engaged the services of a competent Newport man to select and move large numbers of *Rhododendron maximum* from the Island to places where Mr. Smythe is carrying on landscape operations.

Stewart Ritchie had a good crop of carnations for Easter but nothing like sufficient for the demands. Mr. Ritchie thinks Winsor will make a go of it and will follow up his opinion by planting this variety in considerable numbers.

Oscar Schultz busied himself last week hunting up kentias for a customer. By the way, kentias in large sizes are scarce; that fact is worth noting.

Gardeners are again this year planting large evergreens; Andrew Meikle is the first to start.

The Italian garden at Mr. E. C. Knight's place will this year be planted by Charles Cowles with small *renisporas* exclusively. Ten thousand plants will be used in the work. V. A. Vanicek of the Rhode Island Nurseries has secured the contract. D. M.

Pittsburg.

Club News.

The April meeting of the Florists' Club was fairly well attended. The subject for discussion was "Roses and Bulbous Plants." There was a good exhibition. Three new members were elected and several proposed. The delinquent list was gone over with the result that some members were stricken off the list and a few held over for a month. Fred. Burki of the Bakerstown Rose and Carnation Company made a fine exhibit of roses Mme. Abel Chateauy, Wellesley, Bride, Kate Moulton, Bridesmaid, Richmond, Killarney and Mme. Cusin, all good sorts which are extensively grown in our vicinity. Richmond was exceptionally fine and pronounced by all the best rose of its color. The Phipps conservatory at Schenley Park showed some fine pot hyacinths; William Hamilton, superintendent of the conservatory in Allegheny Parks, fine plants of *Cineraria stellata*, glonias, hydrangeas, gesneras, cinerarias, and good amaryllis, favorites of his for many years. Dr. Shafer, the orchid enthusiast, sent in a hybrid *Laelio Cattleya* of a very odd color of dark red not often seen in orchids.

John H. Bochmann of the Holland Bulb Company, who was present at the meeting, spoke about bulbs and how they were grown for the trade. He also stated that the several severe dry spells the past season were responsible for the poor results in tulip forcing, as the foliage was destroyed, which checked the ripening of the bulbs.

At the next meeting the "Credit System" will be thoroughly discussed by Messrs. Langhans, Bader, Elliott, Randolph, Ludwig and several others.

E. C. REINEMAN.

STRATFORD, CONN.—Frank E. Conine has recently purchased a large farm here to be used by The F. E. Conine Nursery Company to increase its business.

FIRMS WHO ARE BUILDING

DEVIL'S LAKE, N. D.—P. J. Kerster will rebuild his greenhouse and enlarge his residence.

MEDICINE HAT, CAN.—Large greenhouses are to be built here by two concerns in the near future.

SOUTHPORT, CONN.—E. J. Taylor is erecting another large greenhouse, making thirty-four on this place.

LAFAYETTE, IND.—Dorner & Sons & Company are clearing the ground for an enlargement of their greenhouse plant.

STERLING, ILL.—The Sterling Floral Company will build an office and palm house, the former 24x26 feet; the latter, 40x26 feet.

LEBANON, TENN.—The Lebanon Floral Company has purchased a large tract of land and is building thereon an extensive greenhouse.

GRAND RAPIDS.—For two weeks previous to Easter Summer weather prevailed, bringing out the carnation crop with a rush, hurrying the slow blooming rose plants of all Winter forward into crops that hit Easter with gratifying precision.

The volume of business done was far larger than last year—about 20 per cent better on an average all round. Saturday was a balmy, windy, ideal Spring day, the thermometer standing at about 60 degrees.

The volume of business done was far larger than last year—about 20 per cent better on an average all round. Saturday was a balmy, windy, ideal Spring day, the thermometer standing at about 60 degrees.

BALTIMORE, Md.—The Glyndon Gardens nursery of Guthrie, Baltimore and Glyndon, Md., has been incorporated; capital stock, \$40,000.

MANCHESTER, MASS.—The North Shore Horticultural Society held its regular meeting on the 5th inst. President McGregor in the chair.

It was announced that the next attraction of the society would be an illustrated talk on the Gardens of Italy by J. K. M. L. Farquhar on April 26.

JOLIET, ILL.

Decorative Plants.

BOUGAINVILLEA GLABRA is easily propagated in Spring from cuttings of half-ripened wood, cut into six-inch lengths and placed in the sand in a propagating bench. Insert the part of the cutting that by nature is lowest about two inches in the sand. If there is any shade on the glass it should be removed when the cuttings of bougainvilleas are put in, because for the successful culture of the plants light must be admitted freely from start to finish. But for a few days after the cuttings are put in a temporary removable shade may be necessary during the hours of very bright sunshine. The sand should be kept continually moist and the cuttings syringed lightly every day.

When the cuttings are rooted they should be potted into small pots, in soil composed of fibrous loam, leaf mold and sand, then placed in a light, sunny location in the greenhouse, shading in the manner already indicated for cuttings. As soon as roots are well through the soil in the pots the plants should be shifted into larger pots; for this shift leaf mold should be left out of the compost, using mostly good fibrous loam with a reasonable portion of sand. The plants from this stage should be given liberal quantities of water at the roots and frequent syringing overhead, and be shifted into larger pots whenever the condition of their roots warrants it.

The plants as they develop in stature should be grown in full sunlight without crowding in order that every shoot will ripen sufficiently to flower freely, which condition they will attain by the end of October if properly treated; then the plants intended for early flowering may be kept slightly on the dry soil.

B. glabra is suitable for training on a trellis in a greenhouse as well as for a pot plant. **B. Sanderiana** is of a dwarf compact habit and is, in consequence, a splendid thing as a pot plant, especially as it can be had in bloom at Easter without trouble. This variety, although not on the whole as beautiful as **glabra**, is nevertheless well worthy of first choice for pot plants for decorative purposes, while for cutting **B. glabra** is preferable.

STEPHANOTIS FLORIBUNDA may be called old-fashioned, but like many other things similarly termed not many years ago it is coming into favor again, and no wonder when we consider how varied its capabilities are. On private places, where greenhouses are located on a scale in any way pretentious, **stephanotis** is almost indispensable as a plant to train upon portions of the roofs of one or more of these houses. For this purpose it is admirable, because it is easily controlled and in no way a hindrance to the growth of other plants except in so far as its unfortunate liability to attack by mealy bug is concerned; but even this, in the light of the knowledge we of to-day possess in the matter of insect pests, can be surmounted. **Stephanotis** makes a very good pot plant; all that it requires for that condition is a wire frame or trellis for its support. The plant is propagated from seed, and by layers and cuttings. The cutting method is probably the best, except when a large plant is required in a very short

time; then it will be better to layer it, as many shoots as plants are required in this way. A 4-inch or a 5-inch pot is procured and filled with sand and leaf mold in equal proportions, providing proper drainage, of course. Place the pot directly under the part of the shoot where roots are desired to come from, then cut the shoot half through at a joint, peg it down to the soil in the pot with a wire peg, cover slightly, and water; keep moderately moist until rooted and when well rooted cut off from the parent.

For cuttings take short shoots of the previous season's growth and make in each a clean cut with a sharp knife just below a pair of leaves. Do not remove these leaves. Put each cutting in a small pot filled with leaf mold and sand and a little peat if at hand, then plunge all the pots containing cuttings in sand over a good bottom heat, keeping them well shaded until they are rooted. The soil in the pots needs but very little water and none at all for two or three days after the cuttings are put in; but a humid atmosphere is necessary in order to keep the foliage from flagging to a serious degree.

As soon as the small pots are reasonably filled with roots the little plants should be shifted into larger pots, using this time a compost of fibrous loam two parts, sand and charcoal a part of each, always preparing for the soil with good drainage, without which success with **stephanotis** in pots is impossible. When the plants start well into growth and have made two pairs of leaves, the tops should be nipped off, in order to cause fresh breaks. Repotting and pinching should be continued as often as necessary until August. The second year the plants should be repotted twice, in February and in July; but no stopping of the shoots will be necessary unless with some special object in view. When the plants are in as large a size of pots as required they will stand without repotting for years, all that will be required being an annual top-dressing of home meal and fibrous loam. In Winter the plants require very little water, but when in active growth they need a good deal carefully applied.

CYTISUS should now be in their second size pots and be kept growing without interruption and repotted as they require it until they are in 5 or 6-inch pots, the sizes most in demand by customers. They succeed well in a compost of fibrous loam and leaf mold; or loam and peat with a little sand added. **Cytisus** are gross feeders and should never be allowed to suffer from want of water; in addition to water in its pure state an occasional watering with liquid manure will be very beneficial.

Old plants after flowering should be cut back and repotted as they show signs of growth, after which they should be kept close and syringed frequently until they are thoroughly established in their pots, when light and air in plenty should be given them. When growth is completed the plants may be put outdoors, in July, August and September, to be taken in again before the appearance of frost. The plants required for early flowering should be put in a moderately warm temperature when they are taken in or shortly thereafter; while

PETER REINBERG, NO. 51 WABASH AVENUE, CHICAGO

MABELLE-- New Pink Carnation for 1907

Color.—A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Lawson. Unlike most pinks, the brightest sun does not injure the color. Size.—Three to four inches in diameter when established. Odor.—Pleasing, but not strong. Stems.—Invariably strong, but always graceful, ranging from 12 to 16 inches during the season. Habit, etc.—A very quick active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Gets away rapidly, blooms early and gives long stems right from the start. Productiveness.—Prodigious is the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. Stock limited. No discounts. First class certificates Madison and Indianapolis. Delivery Jan. 6th to 10th and later. Price, \$12.50 per 100, \$100.00 per 1000.

REVIEW OF THE MARKET

NEW YORK.—The market is a little too crowded with stock at present, and prices are weaker, if anything, than they were a week ago. It does not matter how heavy the demand may be at this particular time of the year, there is always a surplus of stock left over when the business of the day is finished, and when a day such as was Tuesday is experienced (it snowed all day long), the accumulations in the stores of the wholesalers are excessively heavy, and the effect on the following day's business is felt by a further depression of market values all around.

The rose and carnation problem must be a very satisfactory one to the retailer just now, prices are easy on all kinds and varieties. There is a general falling off in the supply of locally grown bulbous flowers, but any loss in quantity from this quarter is more than compensated by the steady consignments reaching us from the South. Lily of the valley is perhaps the one thing that is selling best this week than it does last. Lilies are quite plentiful and the prices they bring are most discouraging, especially to those growers who are cutting flowers that should have been in for Easter. Sweet peas and freesias are more plentiful and sell poorly.

Violets are not meeting with very flattering favor, and prices are ruling somewhat lower than a week ago. Callas are plentiful and not much in demand. Mignonette and smilax are both difficult to sell at satisfactory prices. Business, in general, is slow, with a wealth of material on hand every day.

PHILADELPHIA.—While there was a good business done in cut flowers on Monday, owing no doubt to the fact that all stocks were cleaned out well on Saturday, yet Tuesday was very dull. The retail stores showed little activity and the wholesale houses had lots of flowers of all kinds on hand. American Beauty are selling at from \$3 to \$5 for the very best stock, while no reasonable offer is refused for a large quantity. There are some very fine Richmond coming in from Stephen Mortensen and E. Towill, the choicest flowers selling at \$25, the general line of all teas running from \$6 to \$15 per 100.

Carnations are very plentiful just at present; white varieties are selling poorest. Beacon is bringing \$5 per 100 for the choicest flowers, fancy Mrs. Lawson and Enchantress, \$4, while \$2 and \$3 is obtained for general stock. A large number of carnations are coming in with split calyx, owing to the recent warm weather.

Antirrhinum majus is selling very well, \$1.50 and \$2 per dozen being obtained for the choicest flowers. John Savage at Gywnned, Pa., is growing this stock very fine; he is sending in a light pink, lavender, and pure white which are very good, about 3 1/2-foot stalks, with flower spikes of about 8 to 10 inches.

Lily of the valley is scarcer than for two weeks past; prices are \$4 to \$5 per 100. Sweet peas are very plentiful; most of this stock is selling at 75c. to \$1 per 100, a few choice flowers bringing \$1.50 per 100. Lilies are still bringing \$12 to \$15 per 100; daisies, \$1.50 and \$2.50 per 100. Daffodils are nearly over, and very little good stock being on hand; \$2 per 100 is the best price. Orchids are very scarce; cattleyas are quoted at 75c. each, oncidiums, \$2 per 100 flowers.

Smilax is rather scarce; there is some very good stock in this week at \$20 and \$25 per 100. Asparagus is in sufficient supply for all demands at 50c. and 75c. per bunch. DAVID RUST.

BOSTON.—The market is overstocked and prices are lower than they have been at any time this season. With few exceptions there is a surplus and many kinds of flowers are hard to move. Roses are very plentiful and sell at prices ranging from \$1 to \$8, while a few extra fancy blooms bring a little more. Richmond and Liberty realize from \$1 to \$12, according to grade. American Beauty are now quite plentiful, bringing \$1 to \$4 per dozen for the best grades. Carnations bring for ordinary blooms from \$1 to \$2, while the best grades sell for \$3 and \$4. Lilies are scarce, but there is not a great demand. Lily of the valley is plentiful and of excellent quality at \$1 to \$4. Sweet peas are very abundant and of good quality. Violets are becoming scarce this season for they are being nearly over. Bulbous stock of all kinds is very plentiful and sells at \$5 and \$7.50 a thousand up to \$1 and \$2 per 100 for the finest grades.

J. W. D.

PITTSBURG.—Business after Easter has been fair, but too much stock is coming in, which has resulted in a fall in prices. Those on roses particularly took quite a tumble; carnation values are also down, being at \$2 up per 100. Lilies are plentiful. A severe cold spell the past week, with the thermometer down to 16 degrees, checked the plant trade considerably. The seed trade is very active. W. C. Beckert the Allegheny seedsman is working his force day and night to catch up with orders. Several of our large department stores are selling more plants than ever before; roses are disposed of by the thousands in bundles of ten for \$1.

John Eader cleaned out his azaleas, of which he had an immense stock; his Easter trade was as good as he ever had.

Outdoor daffodils (Southern grown) have been in the market for some time and sell well. A few pæonies are also seen occasionally, and good ones at that. E. C. R.

INDIANAPOLIS.—Relief from the great inundation of flowers, with cooler weather, came this week. The height of the bulbous season was reached Easter week and there remain but a few varieties to supply the market. Much field-grown stock is brought in at \$2.50 per 1000. All lines of trade are bearing up splendidly. Quantities of funeral work greatly facilitate the reduction of stocks. Counter trade, too, is remarkably heavy. Reports from the smaller towns still arrive and indicate that the retailers throughout the State did a thriving Easter business.

Thousands of carnations are still on hand, selling at \$2 to \$3 a thousand. This fact often brings forth the prediction that there will be a shortage a few weeks hence. Sweet peas and lily of the valley are much used for evening wear as there are no good violets. The first mentioned are cleaned up daily at \$1 a hundred.

The rose market is suffering at present; many are shipped to distant markets, but the returns are meager. Select Bridesmaid and Bride may be had at \$6 a hundred; firsts at \$4 to \$5. Madame and Chandy, with four-foot stems, are common at \$10 a hundred. Richmond and Liberty roses still maintain their standard at \$8 to \$10 a hundred. Only the best American Beauty bring the market prices.

Harrisii and callas are not so readily disposed of at \$6 to \$12 a hundred. Antirrhinum and other Spring flowers are on hand in quantities.

A depleted and sun-cooked stock of potted plants is not sufficient to meet the demands of exacting customers. The display consists mostly of rhododendrons, roses, lilies and hydrangeas.

I. E.

ST. PAUL.—The past week the sale of cut flowers has been very slow. Prices dropped to the lowest point of the season. Wholesale prices are quieting and roses at \$3 per 100 and found difficulty in disposing of them even at that figure. Carnations are plentiful, but prices on them were maintained, no doubt, on account of their keeping qualities. Violets are beginning to get scarce and the small number on the market are off color. Bulbous stock is also becoming scarce; tulips are practically through and it appears hard to secure enough to fill small orders. Some Easter stock is yet in evidence; no one dealer sold out entirely. With some a number of lilies remained on hand and with others several very large specimen azaleas were carried over. The sales on other plants, such as spiræas, Rambler roses, and hydrangeas, appear to have been heavy as practically all of the varieties were entirely cleaned out.

The opening of the new City Auditorium made a little ripple in the cut flower market; a great many violets especially were used for the occasion. L. L. May & Company had the decorations.

August Swanson reports a fine Easter business, being successful in handling an enormous stock of fine plants. His Minnehaha rose found a ready market in Chicago; Mr. Swanson says he shipped it out in thousands.

Charles F. Vogt reports Easter week a strenuous one. He sold out of everything at the highest figure. Mr. Vogt & Olson sold everything with the exception of about 100 lilies. Their stock of these was especially fine this year.

Colberg & Lemke disposed of everything with the exception of some white lilac plants, which were held at a fancy price. PAUL.

ST. LOUIS.—The retail cut flower business since Easter has dropped off considerably, and stock shows a tendency to crowd the wholesalers. With good flowers of all kinds, prices have fallen and the retailer has had it all his own way for the past month in the matter of prices. This week we are hoping for the better, as a number of good-sized weddings and dinner parties are looked for by the uptown retailers. The downtown florists are not so well pleased with their trade since Easter, as everything is selling too cheap and profits are small. The greenhouse men are all busy getting ready for the Spring planting.

The weather since Easter has been damp and cold, and it is hardly safe to plant out before the latter part of this month. The wholesale market has been very discouraging regarding stock and prices. Roses are down to Summer figures, and some extra fine, long, fancy American Beauty are sold at 15c. each, the highest price being 25c. and in 100 lots even cheaper. There was no fixed value on high grade Bride and Bridesmaid; anywhere from \$1 to \$5 per 100 was obtained for them. Ivory, Richmond, Killarney, Perle des Jardins and short American Beauty run along the same lines as to price.

Carnations, unless extra fancy, had to suffer also; good stock sold as low as \$10 per 100, with extra fancy at \$20 per 1000. Common and splits brought \$5 to \$7.50 per 1000; prices in 100 lots were \$1.50, \$2 and \$3 according to grade.

Bulbous stock is about over. No Roman hyacinths, Paper White narcissus or freesias are coming in. Callas and Harrisii lilies bring \$10 to \$12.50 per 100; lily of the valley, \$3 to \$4; tulips, \$3 and \$4; Dutch hyacinths, \$3 per 100. Sweet peas are somewhat scarce and in demand at from 50c. to \$1 per 100. Violets are over for this season.

In greens smilax is up to 18c. and 20c. per string; all other greens are in plenty. Common ferns are at \$3 per 1000 and poor at that; this price will hold until the new stock comes in. Trade in the plant line has been brisk, and any kind of plant in bloom sells well. ST. PATRICK.

ROCHESTER, N. Y.—Business here has settled to its normal condition. Good snappy freezing spells and strong north winds help to keep the supply of cut flowers from becoming too large, and with many orders for funeral work, the retail men have no difficulty in keeping their ice boxes from becoming overstocked.

Prices for cut flowers have dropped since last writing. In roses—Bride and Bridesmaid bring from \$4 to \$5 per 100. American Beauty are not much in demand, and quality determines price. Carnations are in fair call, selling for \$1.50 to \$2.50 per 100.

Violets bring 50c.; lily of the valley, \$3 to \$5 per 100. Cut bulbous stock is to be had in plenty, whole shipments sometimes having to be disposed of at sacrifice prices, in order to clear up.

Salter Bros. have had good success with carnations, and feel satisfied that their decision to stock their entire Fairport range of glass with this flower, displacing roses, has been a decided advantage to them. This firm has on sale in their stores, some plants of the new Ficus pandurata, but finds it will have to last less before heavy sales of it are made. The question of experienced help in the different branches of the trade here is a serious problem, and one which the florists' clubs and societies would do well to seriously consider.

Regarding the cut flower trade of the past Easter season, considerable dissatisfaction was manifested among the retailers on account of pickled stock. It is the general opinion among the wholesalers and retailers here that until the public can be brought to realize that they are receiving fresh cut violets or other cut flowers, just so long will it take to re-establish confidence in this line of business.

Would it be advisable for the different societies and florists' clubs to take up this matter, and discuss its relative (dis) advantages? Or can we leave it to the business integrity of those interested to give us what we pay for? COCKNEY.

NASHUA, N. H.—There was a heavy Easter trade in this northern New England State. Prices were practically the same as in various cities and towns. August Gaedke & Company issued a schedule, and kept their prices firm. They report a 15 per cent increase.

In Manchester as well as Nashua lilies were scarce; in fact all cut flowers were sold close. The weather was perfect and no one had cause for complaint. C.

COLUMBUS, O.—Easter is over, and all agree that we had a much larger business, both in cut stock and plants than in any past season. The plant part of the trade was very satisfactory. With the cut stock it was a very different story; if the out of town shippers could be here and once fully realize the injury done our trade by being obliged to use stock which must have been unfit for sale even to street men when it was shipped, they would be brought to a full understanding of what it means to a retailer to receive "pickled" and "sleepy" carnations and equally good violets, etc., at such a time as a few hours before Easter, or for that matter any holiday.

The past week has, of course, seen an after holiday business, but notwithstanding the sudden change to very raw and cold weather, as compared with so short a time ago (we have had furries of snow and temperature down to 25 degrees the past week), trade with all has been very good, with funeral orders especially large. As Easter prices for cut stock were advanced less than ever before, so on the whole rates have settled very little. American Beauty roses range from \$2 to \$4, and other sorts \$1 to \$2 a dozen. Most carnations go for 50c. to 75c., lily of the valley, 75c.; Dutch hyacinths, \$1, and other bulbous stock in a regular way, 50c. a dozen. Violets are very plentiful and of better quality than they have been all Winter, but about \$1 a hundred in bunches to suit customers is the going price. In regard to violets they have until now been of poor quality almost all the season; this may in a measure account for the distinct falling off in their sales taking the season as a whole. Certain it is that one sees them less worn as corsage bouquets than formerly.

Both nurserymen and seedsmen are working to the limit, trying to keep up with their orders; but the past warm weather jumped things along, so that the next warm spell we are sure to get any day now will do much to shorten the season. F. W.

NEW ORLEANS.—The weather on Easter Sunday in this city was very unfavorable to the flower business, being wet and bleak which, of course, kept the casual buyers at home, but did not affect the general run of customers who do not leave their buying until the last moment. There was a good stock of both flowers and well-grown plants. Lilies were in abundance, the local crop being augmented by outside shipments.

The florists' windows were well worth looking at, most of them being a little flower show in themselves, and many novelties in made-up pieces were to be seen. The majority of the retailers report an increase of business over previous years; some the same as last year, but thin the inclement weather was the cause of this.

Outside florists mail their special Easter price lists too late to be of any benefit, many of them arriving about two days before Easter, when they should be received at least a full week to give time to order and have stock shipped on time. Several local florists state that they received many favorable offers of stock, but entirely too late to be of any service. Shippers take note. C. C.

TORONTO, ONT.—Business since Easter has been brisk, with good stock still plentiful. Yellow narcissus are no longer a glut, but there are still enough to go around. Carnations are very plentiful, and roses are coming in freely and generally of fine quality. American Beauty have been a little in oversupply.

The past week has been rather dull and cold, so the plant trade has been lethargic. The call for roses and other hardy flowering shrubs is good, and the indications are that there will not be many of them left over this Spring. There has been very little planting done here up to the present time, as in many places the frost is not yet out of the ground. There is somewhat of a shortage in Spring bedding stock in many places, but it is being worked up rapidly now.

The holding of a Fall show again this year is now assured and the committee expects shortly to pay the balance of last year's prizes. The Provincial Government has made a liberal grant toward the expense and there is every indication of a successful exhibition. T. M.

ALBANY, N. Y.—In an action brought by G. W. Pool against L. Menand, Florist, Cemetery avenue, to be tried before Judge Lathrop April 6, 1907, the matter was settled out of court by the defendant paying the bill together with the interest and costs. A. B. C.

Philadelphia.
News Notes.
The principal activity just now is among the seed stores; all are very busy this week. The transient trade is now on and requires much attention. Some stores report that many large orders have been cut down very much this season owing to the financial worry of the past few weeks.
Several stores report much satisfaction resulting from the placing of lilies in cold storage. The forcing varieties did so well, that auratum, rubrum, etc., have been put in storage with good results, the bulbs coming out in splendid condition and being very satisfactory to customers, as often at this time of year they have been sold with growth started.

The Philadelphia Cut Flower Company expects to move to the new store 1517 Sanson street about July 1. The new store is 15 1-2 x 72 feet and will give the firm much needed increased facilities.

Several of our American Beauty growers are much concerned over the fact that flower buyers have evidently got away from these blooms, as they could not get them for three months; now they still don't ask for Beauty and these flowers are too plentiful.

Alfred Burton, who has acted as secretary of the Philadelphia Wholesale Flower Market, entertained the directors at dinner at his home at Wyndmoor on Tuesday evening. The market as a corporation is now in liquidation and its affairs will be wound up about July 1.

There is a great scarcity of young gardeners around this city; several of our prominent private places have been looking for good greenhouse men, but as wages are better in other trades, good help cannot be obtained.

Columbus, O. News Notes.

For some time past many of the craft here have most favorably commented upon the increasing popularity and consequently large sales of the Richmond rose; I think it is conservative to say that many customers have been buying this fine variety, neglecting somewhat the more expensive American Beauty. Apropos of these changeable flower fashions, there seems to be a feeling that violets are not the popular flowers they were; certain it is that ladies wear fewer of them in public than has for many years been the custom.

The Clover Hill Nurseries have had an especially good season with bulbous stock.

The seed committee of the Columbus Florists' Club, consisting of Messrs. M. B. Faxon, Sherman F. Stephens, and R. A. Currie, attended the monthly meeting of the Board of Education last Monday evening in an effort to obtain permission to make the yearly distribution of penny packets of seeds to the school children. This permission was refused.

S. N. Kiner & Son are very busy planting trees, the warm weather rushing their orders altogether.

State orchard inspector C. W. Mally, who was recently appointed by the state board of agriculture to succeed A. F. Burgess, has assumed his new position, beginning work April 1, 1907.

J. R. Hellenthal reports a very large Easter business; as a special attraction he advertised carnations all the preceding week at twenty-five cents a dozen.

Secretary T. L. Calvert of the State Board of Agriculture has decided to plant small plots of both alfalfa clover and soy beans, within the state fair grounds for exhibition purposes at the coming Ohio State Fair. Several plantings will be made in order to show both plants in all stages of growth.

The Livingston Seed Company held their annual sweet pea sale March 26. Extensive advertising and extremely warm weather combined to make the affair a success. F. W.

ALLIANCE, O.—On April 1 fire in the greenhouse plant of Albert Davis caused a loss of several hundred dollars.

Easter Echoes.
Now that the Easter season is over perhaps a few remarks concerning some phases of it may not come amiss. Referring to the plants disposed of, nothing really new was seen, the only novelties the trade had to offer being in basket work and trimming. The new wire basket handle, conceived by Geo. Hart, was in evidence at all the stores, it being a device whereby a pot plant is instantly changed into basket effect, by being fastened—very simply—on the projecting edge of standard pots. After the pot was trimmed, and a bow of suitable colored ribbon tied on wire handle, the plant was offered for sale at a more reasonable price than if the same plant had been put in an expensive basket. At the same time the handle is practically indestructible and can be used over and over, and on any size pot.

Noticeable, too, was the greater number of flowering shrubs, among which were some imported pot-grown Chinese wistaria. These were a perfect sight, and certainly an innovation to the plant-loving public. They are easily brought into bloom, in about five to six weeks, the only thing necessary being to be sure to have all buds break about the same time. This can be done by wrapping or packing the whole top of a plant in wet moss, thus insuring the softening up of the wood, and causing even breaking of the blossom buds.
Among the many Spring flowering shrubs also seen were deutzias, Lemoiné, gracilis and rosea, the last named being quite desirable on account of its pleasing shade of pink. Being new, it was more easily disposed of. Among the white deutzias, gracilis is here considered the most desirable on account of its long panicles of bloom, being useful for cutting and making up into design work. These are brought into flower in gentle heat about six weeks, frequent syringing of the wood being necessary in order to soften up the buds. The different varieties of weigela were used with tasteful effect in baskets. These require about eight or ten weeks to get them into flower, because of two or three leaves appearing on twigs before the flowers show.

York, Pa.
The florists' business is fairly well represented here. There are probably about a half dozen establishments in the city. Two florists, who are growers, have stores on Market street in addition to the store of J. E. Schaeffer who is not a grower.

Chas. E. Smith is on East Market street and his greenhouses on the corner of Jefferson and Juniper sts. He is the largest grower, having about 25 houses all in general stock. He supplies most of the City Parks with bedding plants of which he had a fine stock on hand.
Chas. A. Schaeffer has also a store on Market street with a very complete growing plant at West street and Penn. avenue. He has a new bright red seedling of Enchantress carnation as well as a few others of merit.

Mrs. Mary Lichtenberger, who has been conducting a business on George street near Prospect Hill Cemetery, has decided to go out of business and her greenhouses are for sale or rent. Mrs. Lichtenberger has three nice greenhouses well filled with a general miscellaneous stock.

J. C. Luitweiler has a smaller plant on Duke street and reports business good in his line.

Anthony Bruggeman and Casper Henkle, who have formerly been identified with the florist business of York, your correspondent was informed have gone out of business. J. M.

POUGHKEEPSIE, N. Y.—The Dutchess County Horticultural Society held its annual dinner on Wednesday evening, April 3. As usual, it was a most enjoyable affair.

COHOES, N. Y.—On March 26 fire in the store of A. D. Carpenter did damage to the extent of \$100.

Entirely distinct were some plants of Genistas Andreaea and alba praecox, grown by J. B. Keller Sons. These are deciduous, but not entirely hardy, as freezing kills back the flowering wood. G. alba praecox is the first to bloom, it having white pea-shaped blossoms along the entire stem, without leaves showing after flowering; very erect habit, and a plant that for general effect is useful in many ways. G. Andreaea requires two weeks more of forcing to bring it into flower, as the blossoms show only after foliage has appeared, as is the case with weigela. The coloring of the flowers of this variety is very pleasing, the center being maroon, and back or wing canary yellow. These with a background of its pale green foliage, are a pleasing sight.
Pyrus floribunda is easily forced into bloom, but should be put into a cold greenhouse before being fully open, as if not treated so, the apple blossoms fall off very easily, which is something to be remembered by those contemplating the handling of this plant.
Of the new hydrangeas, Souvenir de Clare, and japonica rosea, were tried for forcing, but on account of the early Easter, cloudy weather, etc., were not ready for sale. Some doubts were manifested about the japonica rosea variety, as to whether it should blossom on new growth or last season's wood. Perhaps some reader can write concerning this variety. It is a comparatively easy grower.
Spiraea Van Houttei and floribunda were both good plants, and desirable for a great many uses. To be easily handled these shrubs must be forced into flower in the smallest pots possible. Several Holland firms have made a specialty of growing these into two-year-old plants, and shipping them here ready for 4-inch pots. In this size they are found to be the most convenient. What plants remain unsold, the general florist has always a chance to use in the planting of hardy borders, so that the risk is small to those desiring to try a box of these ornamental as well as useful additions to our Easter supply, not forgetting, of course, the splendid show the hardy azalea makes. COCKNEY.

THE BEST WAY to collect an account is to place it with the

National Florists' Board of Trade

56 Pine St., New York
WHY? Because many debtors will pay the Board fearing otherwise a bad rating in our Credit List. Full information as to methods and rates given on application.

CANADIAN NEWS

OTTAWA, ONT.—The Easter trade can be summed up as a record breaker. The stock was ahead of that of previous years in quality and quantity. The weather, although changeable, was, on the whole, as favorable as one could expect in March. In plants almost all lines sold out clean. With Scrim, American Beauty roses took the lead, with azaleas and tulips next. Graham Brothers had a very heavy stock of lilies which all went before Saturday night. They also had a good stock of Azalea mollis; a few of these were left. Spiraea were scarce with some of us; they arrived in poor condition and were no good. Azaleas were very fine and sold out. Bulbous stock, in pans and pots, and lily of the valley sold well and were cleaned up. There was but little green stock shown or sold. As Ottawa is about sold out of Boston ferns and good palms, the public did not seem to want them.

The cut flower trade kept up with the plants. There was a large stock of carnations, bulbous stock, lily of the valley and violets, which were sold out at good prices. The churches decorated a little more elaborately than in previous years, and the demand generally was in advance of any previous Easter. All are quite satisfied and prepared to enter into the Spring preparations with good spirits.

TORONTO, ONT.—The Easter trade this year again broke all records. The whole of the week was good for business, and Saturday was a splendid day, immense quantities of stock being sold, but there was plenty to go around. Lilies were very plentiful, but were not always well placed, as, while some of the stores could have sold a good many more, others had more than enough. During Saturday prices ranged from 7c. to 30c. per bloom, and the general price at retail was about 20c. per bloom; wholesale prices were from 6c. to 12c. per bloom. There were not so many lilies used in store decorations this year, but they were decidedly the favorites with the public. Roses sold exceptionally well, except American Beauty; these appeared to stick. There were but few of them of local growth, but some fine stock was imported. The public, however, did not appear to want them, and quite a number were left on hand.

Carnations were both good and plentiful and found a ready sale. Violets were also very abundant and most of our retailers made good money on them. Plenty of violets were bought for \$7.50 per 1000 and sold at \$3 per 100. Yellow narcissus were also very plentiful and thousands were disposed of; they were also remunerative to the retailer. Lily of the valley was both good and plentiful; tulips were also in good supply.

In plants, after the lily, azaleas were the favorite; nearly all seen around were in fine order, the early season being just right for them. Hydrangeas also went well and a few roses in pots sold very well. Cinerarias found a ready market. Some good Primula obconica were offered. Dunlop had a fine window of

Cypripedium spectabile which attracted much attention, and Tidy had some fine baskets of ericas.

Ferns and palms were not plentiful and were not much called for, most people wanting something in bloom. Simmers has just enlarged his store and had it finely decorated for the week. Harry Dillemath had a very husy week. He had some big decorations in our large stores and a fine family trade; he is much pleased with his stand on Spadina avenue.

Several new retail stores have been opened in different parts of our city, and all report trade good.

Some of the grocers and butchers had immense stocks of plants and flowers, and in most cases sold stock below the regular trade.

The last meeting of the Gardeners and Florists' Association was a social gathering and a very successful one. A good many members and their friends turned out. President E. Dale was in the chair. The program was in the hands of E. Graham of Reservoir Park, and although two of the principal singers did not turn up, a very pleasant evening was spent. The refreshments were in the hands of our treasurer, George H. Mills, and were, as usual, all right. The tables were decorated with fine bunches of Rose-Pink Enchantress carnations from the Dale estate and from Mr. Jennings of Brampton, also some fine violets from the latter gentleman.

Before the meeting opened, the Floral Committee of the late Fall Show took up the matter of the protest of F. R. Pierson as to whether the Dale Estate's carnation Excelsior was a variety not in commerce at the time of the show, and after very careful consideration, the committee recommended that the protest of Mr. Pierson be sustained.

THOS. MANTON.

FREDERICTON, N. B.—The Easter trade here was the best on record. Five hundred lilies were just in time and a large supply of bulbous stock in the pink of perfection. We transformed our potting shed and work room into a conservatory of beauty, with evergreens, flowering plants and cut flowers. Roses, carnations, lily of the valley and violets were all cleaned up by Sunday noon. The weather being favorable had much to do with a successful Easter in 1907.

The Week's News.

At a meeting of the Board of Trustees of the Massachusetts Horticultural Society on Saturday it was decided to open the library on Sunday afternoons from 2 until 6 o'clock. This will prove of great benefit to many of the members and especially gardeners and florists who find it inconvenient during business hours to take advantage of the many fine volumes on horticultural subjects.

The committee on special prizes for the Fall show reported progress and stated that the schedule would be ready at an early date. A memorial on the late George M. Fabian was presented by W. N. Craig.

Henry McGrady was accidentally killed on Saturday afternoon at his home in Newton Center by being buried in a trench in which he was connecting a water pipe to one of his houses. The sides of the trench caved in completely enveloping him and when dug out although he was still breathing he soon expired, all medical aid being in vain. Mr. McGrady was 37 years old and with his father conducted a florist business in Newton Center where he was well known.

John Kelly, formerly in the employ of N. F. McCarthy and later with Welch Brothers, died on Monday of pneumonia.

N. F. McCarthy & Company, started their Spring auction sales on Friday with an importation of Dutch-grown roses, trees and shrubs. There was a good attendance and satisfactory prices were realized.

E. Sutermeister is able to be in town again after a four weeks' sickness.

Welch Brothers are handling a fine grade of gardenias at the present time.

D. MacRorie, representing W. A. Manda, South Orange, N. J., is in town this week.

A POINT OF VIEW WORTH CONSIDERING

IT'S all right for you to buy your materials from us, and we are always glad to furnish them—but sometimes a man doesn't get the results he would if we had also erected the house for him; and that's why every year the florist is doing less and less of his own erecting.

Here's what one of our customers recently said in answer to an inquiry as to why he had stopped doing his own building: "My business is growing flowers, not building greenhouses. I can't afford to take the time from the business that I do know about, to experiment with something that I know nothing about."

Let us take this side of the question up with you at once. Write today, you'll be just as busy tomorrow.

HITCHINGS and COMPANY

GREENHOUSE DESIGNERS AND BUILDERS. Manufacturers of Heating and Ventilating Apparatus
1170 Broadway, New York

Detroit, Mich.

Club Meeting.

April 3, 1907, the Detroit Florists' Club had one of its outline meetings. There was a good attendance and two rousing papers were read, one by Robert E. Unger, the other by J. F. Sullivan.

After the reading of the papers, the Easter trade was discussed very completely. Mr. Sullivan introduced a proposition which should be of interest to all the clubs of this broad land. He proposed to have a committee appointed for the purpose of verifying all news items pertaining to horticulture and floriculture inserted in the daily papers. By this means he expects to keep all absurdities out of the papers, and thus do away with a great source of annoyance. If such a measure was taken in hand by the florists, says Mr. Sullivan, all papers, even periodicals of monthly publication, would look to the trade for correct data. Many monthly periodicals have their so-called space writers, in many cases ladies, who write on subjects of which they are entirely ignorant. Such an agitation would certainly be a great safeguard to the general public.
HARRY.

Cincinnati, O.

News Notes.

We have very little to say regarding trade since Easter; the past week has been very much on the quiet side with lots of stock of all kinds.

Ben George of George & Allan, bulb forcers, tells me that their loss on Paper White and Von Sion narcissus will be not less than \$1,200, to say nothing of tulips. But to make matters worse, four of their help have left and if any one is looking for a situation, call on George & Allan.

J. Charles McCullough says he has been very busy since the last flood and is still doing business at the old stand, Second and Walnut streets. For several weeks Mr. McCullough was very much indisposed and was confined to his bed, directing his business over the telephone which he had within easy reach.

Otto Haefner, formerly of Hamilton, O., but recently of San Bernardino, Cal., died at the latter place Easter Sunday. He was a good florist and was foreman for some firm at the time of his death. He was unmarried.

A few weeks ago it was my pleasure to have a call from our esteemed friend Walter Mott; it seemed like old times to see his familiar face.

Jumping from one subject to another, I would state that two hard freezes have killed much of the fruit in this section, but I am in hopes that Henry Smith of Grand Rapids, Mich., escaped, for, in connection with a very extensive florist business, he has a large fruit farm and annually ships many carloads to the larger markets. At present he is in New Mexico inspecting some orchards in connection with some Chicago capitalists.

Charles Knopf of the B. K. & B. Floral Company, it is reported, has bought out his partners and will conduct the plant.

E. G. GILLET.

FRANKLIN, MASS.—On March 24 plants to the value of nearly \$100 were destroyed by a fire that started in a corner of the greenhouse owned by Joseph Cataldo on his premises on Worsted street. An oil stove had been kept burning in the greenhouse, but it appears that the fire did not originate from this source, but started in a corner some distance from the stove and the cause is somewhat of a mystery. Besides the destruction of several plants the frame work of the house was considerably damaged.

 A. T. De La Mare Ptg. & Co. Ltd., New York

ABOUT SIZES AGAIN

WE have talked with you about the 40 foot wide house and some of the economies in maintaining these large houses—but the erection costs are just as strong in their arguments. Growers seem inclined to ignore the fact that a house 11 feet wide requires the same sides and ridge, same work to frame; same glass and paint and same heat as the 30 foot house.

One wide house is not only cheaper to maintain than two small houses of equal area, but a great deal cheaper to erect.

Cutting expense down is one thing; cutting it off at both ends (building and maintaining end) is another. The large house cuts both ends. For Sale: Every part or any part for good greenhouses.

NEW YORK AND CHICAGO, APRIL 20, 1907

One Dollar Per Year

CARNATION WINSOR

The most talked about carnation at the Toronto Convention.
Won first prize for best 100 pink

Winsor is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders, and have a fine lot of stock in the cutting bench, so that we can promise prompt delivery on orders received from now on.

If you have not already purchased a stock of this, you should lose no time doing so. We have sold more Winsor

than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market where our flowers are sold.

There is nothing on the market that approaches Winsor today in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities, in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high quality flowers. It practically does not split at all, notwithstanding the fact that we have had the darkest, dullest winter we have ever had, when the Enchantress and Lawson types are splitting badly all over the country with everyone, we have not had one-half of one per cent. of split calyxes on the Winsor. In fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement, extravagant as it may appear.

Anyone who fails to plant Winsor this year will regret it. Rose pink Enchantress is good, and a good many other varieties are good, but IF YOU WANT THE WINNER, PLANT WINSOR.

Strong Rooted Cuttings. \$12.00 per 100, \$100.00 per 1000.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION

Henry W. Wood, Richmond, Va., president; C. S. Burge, Toledo, O., first vice-president; G. B. McVay, Birmingham, Ala., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; J. H. Ford, Ravenna, O., assistant secretary.

Just 389,985 one cent packages of flower seeds have been distributed among the school children of Cleveland, O., this year and at the end of the season prizes will be awarded to those making the best use of them.

ERNST BENARY, Erfurt, Germany, sends us a colored plate showing his latest introductions in *Petunia hybrida grandiflora fimbriata*. The markings are exceedingly pretty.

LOS ANGELES, CAL.—The recent item in regard to the onion sets that was productive of inquiry of the Editor should have read 100 instead of 1000 tons. This is the second year in business of the firm named in seed and onion set growing at Westminster, Cal.
P. D. H.

NEW YORK.—Sealed bids or estimates will be received by the Park Board at its office, Arsenal Building, Fifth avenue and Sixty-fourth street, until 3 p. m., Thursday, April 25, for furnishing and delivering grass seed, flower seed, and plants (No. 1, 1907), for the parks of the Borough of the Bronx.

ZVOLANEK'S SWEET PEAS.—Edwd. Alex. Wallace, Victoria, B. C., writes to the Horticultural Advertiser of England to the effect that he has grown the Zvolanek sweet peas this Winter and notices "that the tendrils have lost their power of clinging. Very few attach themselves to the strings, and these in a very loose and perfunctory manner. We have to train these peas about twice every week. This seems to me pretty strong evidence in favor of the vetch."

SANTA ROSA, CAL.—It is understood that Governor Gillett desired Luther Burbank to accept an appointment as Commissioner of Horticulture, as the successor to Ellwood Cooper, whose term will soon expire. Cooper is growing old and does not desire reappointment. Gillett felt that the State would receive wide value for the money expended if Burbank could be persuaded to accept. Burbank is working on plant problems under the direction of the Carnegie Institute at a yearly salary of \$10,000, and could not accept another position.

CANNAS, 4 inch pots, \$6.00 per 100.

ELIZABETH NURSERY CO., Elizabeth, N. J.

WATERLOO, NEB.—The J. C. Robinson Seed Company says the season's rush is nearly over; vine seeds and sweet corn orders were closed up some time ago, and another week will close up all field corn orders. Business in the latter has been brisk and all stocks of Flint and early Dent varieties are exhausted. Vine seed stocks are the lowest they have been in two years. Farmers are rather slow in taking contracts for vine seed, even at somewhat increased prices; and owing to trouble in getting Flint corn husked, they are fighting shy of them as well as small early sweet corn.

LOUISVILLE, KY.—Messrs. Wood, Stubbs & Company state that owing to the very favorable and opening weather during the early part of the season, the seed business has been very good. Local business started at least two weeks sooner than formerly, and has kept up without intermission steadily for two weeks, so the sales on garden seeds are far in excess of last year's business. Stocks of field seeds are pretty well cleaned up generally in this market. Grass seeds and clovers, though considerably higher than in other years, have been in very great demand, and prices have no effect on the demand. Onion sets are all used up; in fact, it would be hard to get five bushels in the entire city. Onion seed is about all exhausted in this market; sowings in this locality are about completed, and the acreage is about the same as usual. Cow peas, sweet corn, soy beans and other similar crops are getting scarcer, and the first three items are considerably higher than usual.

AMERICAN SEED TRADE ASSOCIATION.—Arrangements for the program of the forthcoming annual convention, to be held at the Hotel Astor, Times Square, New York City, June 25, are progressing very well. Among some of the most interesting matters already arranged for are the following: "Reminiscences of the Seed Trade," by F. W. Bruggerhof of J. M. Thorburn & Company. Mr. Bruggerhof has had an active experience of more than fifty years in the trade, and those who are fortunate enough to have a personal acquaintance with him feel sure that his paper will be a most interesting and valuable one. Dr. B. T. Galloway, Chief of the Bureau of Plant Industry of the U. S. Department of Agriculture, has agreed to give a talk on "What the Department of Agriculture is Doing for the Seed Trade." J. Horace McFarland will prepare a paper on "The Twentieth Century Seed Catalogue." From Mr. McFarland's knowledge and experience in this particular line, his treatment of the subject should be both interesting and profitable to the seedsmen. S. F. Willard will deliver a paper on "The History of the American Seed Trade Association," giving a review of the principal and most notable events of the association's past history.

The convention to be held in New York is the twenty-fifth anniversary of the formation of the American Seed Trade Association, and efforts are being put forth to make it a most notable occasion in celebration of that event. The selection of the Hotel Astor by the local Committee on Entertainment is a very happy and fortunate one. This hotel is one of the most modern in New York City, centrally located, and its selection should add very much indeed to the success of the convention.

EXPORTS OF SEEDS, etc.—April 5. —Shipped from New York to Aarhus, 55 bags grass seed, valued at \$405; to Cape Town, 24 packages seed, valued at \$106; 10 bags clover seed, valued at \$400; to Savanilla, 50 bags seed, valued at \$374; to Havana, 28 packages seed, valued at \$239; to Shanghai, two packages seed, valued at \$190.

During 1906 we furnished to the trade over One Hundred Thousand of the below described leaflets.

CULTURAL DIRECTIONS

Specially written for the use of your amateur customers. Send Twenty-five cents for complete sample set, which amount will be deducted from order for first thousand.

The universal favor in which these Directions are held, as shown by the many orders received therefor, encourages us in the belief that these Leaflets are just the neat little factor to help promote business and establish better relations between the dealer and his customer.

TRY SOME!

BIG BUSINESS ASSISTANT

TO SAVE TIME, QUICKEN SALES, AND AID YOU PLEASE YOUR CUSTOMER, WE HAVE PREPARED

Cultural Directions

COVERING A NUMBER OF THOSE PLANTS AND BULBS MOST LARGELY IN DEMAND

THE "CULTURALS" have been written by experts; they are fuller, and contain more detailed directions than it is possible to embrace in a catalogue. Equipped with these, just hand one out with each sale, and save yourself considerable present and future trouble, as the customer will then be able to consult the directions, grow his plants, seeds or bulbs intelligently, and so receive satisfactory results, without having to continually resort to you for advice.

The following "Culturals" are now ready:

AMARYLLIS (Hippeastrum)	CROCUS, Snowdrop and Scilla Sibirica	MUSHROOM CULTURE
ANNUALS FROM SEED	DAHLIA	ONIONS
ASPARAGUS	FERNS	PALMS, House Culture of
BEGONIA, TUBEROUS	FRESIA	PANSY

Pierson Company, 29 cases trees.

European Notes.

Never in the history of the oldest inhabitant or since the preparing of meteorological records has Europe been favored with such a magnificent spell of glorious sunshine as we have this year experienced. We have enjoyed the twelve hours per day all the more complacently because the light, cool air by day and the surface frosts by night have kept vegetation in check and thus preserved it from injury. Although we have only had one light shower in nearly four weeks the land beneath the surface is sufficiently moist for all purposes and our Spring sowings of all kinds are now visible above the ground. Present indications point to rain in the near future and this, with the cessation of frost, will help our plants of cress, radish and spinach to make up for lost time.

As regards our biennial crops very little needs to be said. What is left standing is looking very promising and in the case of cabbage, Brussels sprouts and broccoli have grown much more quickly than could have been expected.

The satisfactory way in which the green crops of mangel and kohlrabi withstood the heat and drought of last Summer has caused an unusually heavy demand for these articles for Spring sowing. The crops of these seeds in England last year were both very good; they are consequently abundant and cheap.

The trade in the giant half sugar mangels has assumed very large proportions in France with a corresponding decrease in the demand for mangels of the coarser kinds. Some of the more enterprising firms in England are trying to popularize them in that country, but with such an absurdly conservative class as the British farmers it will mean a very hard struggle.

The culture of sugar beet for sugar is also a dead issue for the present, as, owing to the ridiculously low price of sugar, it is much more profitable to grow wheat.

EUROPEAN SEEDS.

NOTES FROM HOLLAND.—After three weeks of almost continuous hard storms and cold weather the last week of March has suddenly marked such an improvement in the temperature that the general aspect of the bulb fields has changed as if by magic. Whereas we expected that Easter would find us still in Winter weather and no flowers, some of the earliest of the narcissi, like Yellow King and Ard Righ, have suddenly burst into bloom, and many of the hyacinth varieties are already showing their colors, and will be in full bloom by the end of next week. If the present fine weather should continue, we may expect that hyacinths will be at their best in about two weeks from now, and tulips 10 days later.

Judging from the present state of the crops, outside of the fact that the acreage planted out this season is considerably less than last year, everything is promising a good crop, but as the critical time of growing has to come yet, after the flowering season, nothing decisive can yet be said.

Spring shipments have not been as good as last year up to the present, but as we have nearly a full month still before us, there is plenty of time to make up for it. Seedsmen, however, have no reason to complain, as the demand has been unusually good from all sides, and prices realized have been very satisfactory.—Horticultural Trade Journal.

INSUFFICIENT POSTAGE.—We notice in your issue of March 23 a protest about the insufficient stamps put on letters to Germany. We would like to join in the protest for this country. Scarcely a mail passes in the season that we do not have to pay an excess of 6c. The mail rate from U. S. A. is 5c. and when there is only a 2c. stamp put on it leaves a deficiency of 3c. which, according to our Post Office rule, we have to pay double on. We put this down often to the carelessness of the office boy, but it is quite a tax on us all the same.

Dreer's Hardy Perennial Phlox

We are the largest growers of Perennial Phlox in the world. Our collection is unequalled, and we are prepared to furnish the new and rare kinds as well as all the popular and standard varieties in large quantities.

The plants we offer are nearly all strong one-year-old field-grown plants or equally strong divisions, and will make a fine display of flowers this season. This stock is much superior to and must not be confounded with young Winter propagated stock such as is generally sent out in the Spring of the year.

New and Rare Hardy Phlox and Varieties of Special Merit

Table listing various Phlox varieties with prices per dozen and per 100. Includes varieties like Albion, Chateaubriand, Coquelicot, Etna, etc.

Choice Standard Phloxes

Table listing standard Phlox varieties with prices per dozen and per 100. Includes varieties like Aquillon, Andrea Hofer, Bouquet Fleuri, etc.

Phlox Subulata

Moss Pinks or Mountain Pinks.

- List of Phlox Subulata varieties: Alba, Atropurpurea, Lilacina, Nelsoni, Rosea, The Bridesmaid.

All the above in strong clumps, 75c. per doz.; \$5.00 per 100; \$40.00 per 1000.

Phlox—Various Types

Table listing various Phlox types with prices per dozen and per 100. Includes Amoena, Divaricata Canadensis.

For complete list of hardy Perennial Plants, see our current Quarterly Wholesale List just issued.

HENRY A. DREER, 714 Chestnut St., PHILADELPHIA

The above prices are only for Florists, or those engaged in the trade.

(80) Wants a Cactus Catalogue.—If you know of a commercial place where they make a specialty of cactus, will you kindly publish their address? I would like to obtain a catalogue of cactus. P. B.

New York.—For the address of a grower of cacti and succulent plants, we would refer you to Frank Weinberg, Woodside, L. I.

(81) Lettering on Lawns.—What materials are used for lettering on lawns? Is there anything hardy employed that will not have to be replanted each year, something like a grass seed, but that will produce a color contrasting with the green lawn? I think a description of how this is done; how far apart to set different plants for that work and something as to the price charged for such work would interest many readers. New York. J. E. A.

—We know of no plant that is suitable for the purpose mentioned. The only way in which lettering can be done on lawns to be permanent is to do it with pebbles or medium-sized stones, and keep them white by frequent applications of whitewash or some other material.

(82) Leaf Blight of Gladiolus.—A purchase last Spring of 500 gladiolus bulbs (from one who made, by the bye,

large claims for his stock), introduced the first leaf blight of this flower I ever had on my grounds. In the Fall I had the whole lot dug up and given away. Is the disease likely to reappear with new corms from another source? Kindly tell me about this blight, as I am wholly ignorant of its cause and character. Canada. C.

—In our opinion the disease is not likely to reappear with new bulbs planted if they are of a variety that has not been affected with the blight in the past. We have been troubled with this blight more or less for a good many years, and have tried all kinds of experiments, planting the corms early and late and lifting early and late. We have tried planting with and without different kinds of fertilizers, but without any real results that amounted to anything. We have found that it is beneficial to plant on new ground as much as possible, yet this is not a complete remedy. There have been times when we thought that our stock was affected, perhaps on account of using the same ground year after year, more than other people's, but on looking into the matter we have learned that certain varieties that have been diseased with us have also done poorly with other growers, both in this country and abroad. For instance, the old variety Grand Rouge, which at one time was one of the leading sorts, was affected with this disease, and the entire stock has been lost. In tracing up this variety in foreign countries we found that the growers there report a crop failure also. This applies to White Lady and several other sorts, so we have come to the conclusion that the fault lies in the variety more than in the soil. On the

HERBACEOUS PERENNIALS We offer a fine stock of perennials as follows

OAK HILL NURSERIES, Roslindale, Mass.

other hand, take the varieties Ceres, Breachleyensis, Shakespeare, etc., and plant these on ground that has been used for the varieties that were diseased, and the former show no effect of the blight whatever. Some years ago the New York State Experiment Station took up this matter with us very extensively, and they were forced to abandon it, having obtained no practical result. JOHN LEWIS CHILDS. Rochester, N. Y., secretary; C. L. Yates, Rochester,
N. Y., treasurer.

A NEW APPLE.—Hubert & Company Limited, seedsmen and florists, Jersey, Channel Islands, have a new apple which they intend introducing to the United States. The variety has been named "Jersey Pioneer." It is of a bright red color, of fair size, and is an excellent keeper. The introducers intend to place a few trees in different parts of the country in order to ascertain its growing and bearing qualities here.

TWIG FOR NAME.—Will you kindly give me the right name of sample spruce sent under separate cover. It is apparently a spruce of a robust growth, with a kind of bluish tint and stands the sea winds remarkably well. M. F.
Long Island.

—It is difficult to name sprigs of coniferous trees correctly. Whether a pine, fir or spruce can be told, but not so well the species. The spruce sent I believe to be what is called white spruce, *Picea alba*. J. M.

AMERICAN ASSOCIATION OF NURSERYMEN.
—The committee on exhibits is ready to receive applications for space at the forthcoming convention of the American Association of Nurserymen to be held at Detroit, Mich., June 12, 13 and 14 next. Application blanks can be secured from the chairman of the committee also any information required. The committee has decided that no application for space will be considered after June 1, and all exhibits must be in place at the exhibition hall not later than Tuesday evening, June 11. Application for space must be made on blanks to be furnished by the committee. Exhibits of every character, that will be of interest to nurserymen, are solicited; trees, shrubs, fruits, implements, and machinery and such devices as are or can be used by nurserymen, are especially desired. The committee is anxious to make this the most complete exhibition ever presented at the annual convention and earnestly requests intending exhibitors to take up the matter with the chairman of the committee as soon as possible so that all arrangements can be made in good time. Members of the association will confer a favor on the committee by advising them at once of the names of any manufacturer of tools or implements used by nurserymen so that an exhibit can be solicited from them.

THOMAS B. MEEHAN, Chairman.

A Fastigate Form of Larix Americana.

Editor Florists' Exchange:

I mail you a photograph of a small tree which I picked up in a near-by swamp. It has the Irish juniper habit of growth, foliage like that of larch or tamarix and cedar bark, stands about 2 ft. 6 in. high, and 6 in. wide. Please give the name of it, if known, and state if the plant is rare or grown extensively.

Syracuse, N. Y.

W. MENEILLY.

—The photograph represents a bushy, fastigate form of the tamarack, *Larix americana*, which, if propagated, would make an interesting addition to the list of ornamental trees. It could be increased by inarching or grafting it on the common larch.

JOSEPH MEEHAN.

Seasonable Notes.

The difference in appearance often noticed in the *Abies concolor* may be from one representing the Colorado form, the other, the Californian. The latter is sometimes known as *A. lasiocarpa*, and it is not of equal hardness to the one from Colorado.

Purple-leaved barberry is still in great demand, as it fully deserves to be. Its purple foliage is displayed early in Spring; its branches of yellow flowers also come early, and then the red berries follow. It is, too, among our hardest shrubs, hence its value in the coldest States. It comes fairly true from seeds; and seeds should be sown in Autumn, or in Spring if kept in moist soil all Winter.

No grander tree exists than a full grown blood-leaved beech which has thriven at will. But for certain situations pyramidal forms of it are most desirable; and they are lovely to look on when the foliage is fully expanded in Spring. Trees desired of this shape should be pruned in late Winter or early Spring, giving them the desired pyramidal shape.

English primroses live outdoors all Winter in the Middle States if given the shelter of a covering of leaves. But they require to be in a moist, shady place all the time, to have success with them. They should be set out in Spring, that they may have good root-hold by the close of the Summer.

Both Halesias, tetraptera and diptera, are known as snowdrop tree on account of their blossoms looking so much like the flowers of the snowdrop. *H. tetraptera* is the better known, but both should be grown where hardy, as they are here, as *H. diptera* flowers later than the other, and it has large foliage. The flowers appear in advance of the leaves.

A Maryland writer asks if the cork oak will live out in his State. It is not likely to, though it may not have been tried. It will stand a few degrees of frost, such as it meets with in California, but the zeros of Maryland are not to its liking.

Red birch, *Betula rubra*, is in much request for planting along the banks of rivers, situations it delights in, and it tends to hold the soil together as well. The seeds of this birch ripen in early Summer—June—and re-

very first flowers to proclaim by its appearance that Spring is near. Its bright yellow blossoms come in February or March.

It is customary to treat hollyhocks as biennials, sowing the seeds in Spring. This is a satisfactory way of treating them. If seeds are sown in January in the greenhouse and grown ahead from the start the plants will often bloom the first season. Plants treated as perennials are often satisfactory.

Killing Trees.

The killing of a tree by ringing it is understood by many gardeners, but the proper time to do this is not so well known. It has to be just as the foliage of the tree has fully expanded in Spring. The reason why this is the proper time is because during the Summer season trees are storing up sap, which has been perfected by the leaves. This is the office of the foliage. When the leaves fall there is this sap in all parts of the tree including the roots. As soon as Spring opens the sap is supplied to the leaves, bringing them to perfection, and when they are at this stage, fully unfolded, all the perfected sap is virtually exhausted. By ringing the tree then it stops communication between the severed parts, no more true sap can descend to the roots and, though the leaves may remain green even to the close of the season, there will be no fresh ones made the Spring following. If the ringing has been done at the exact time there will be no sprouting below the ringed part as well as none above, as no true sap will have been furnished by the new leaves, and all the tree had stored up before will have been used up.

The ringing may be done at any point desired. If the whole tree is to be killed, do it near the ground. A strip of bark of a width of from four to six inches will suffice.

The killing of poison vines and all objectionable plants can be accomplished by chopping them down at the same time in Spring, when the leaves first fully expand. If all sap has been drawn out by the tops before they were chopped off there will be no more shoots made. Otherwise there will be a few, which must be chopped off as soon as seen, for no plant can long exist that has no leaves.

Hedges of Purple Beech.

Hedges of beech are met with occasionally here, but they are not as common as they are in Europe. Yet in the way of a screen as well as for beauty nothing answers in the way that the beech does. The common European beech holds its leaves all Winter even though they die in the Fall, and because of this such a hedge is one of the best to act as a windbreak; and in Spring, when its leaves are well unfolded, it forms one of the most pleasing hedges on a place. The blood-leaved beech makes a beautiful picture when its new foliage is well matured in Spring. As is well known, the color intensifies for many weeks until it reaches its darkest stage, after which it lessens through the rest of the season; but even at the last, when Autumn comes, it is still a purple-leaved beech. A hedge of purple beech is a sight calling many to see it when in its perfection of new growth in late Spring. Seedlings of the purple beech are better to use than the Rivers' variety. The seedlings are bushy growers, while the Rivers' is not. The latter is known to be apt to make but few branches comparatively. It is first-rate as a tree, but as a hedge it lacks the bushiness required. Seedlings from the blood-leaved beech do not all possess the dark color of the parent, but vary from a light to a dark purple. As seedlings are set in nursery rows for a few years until they are of a suitable size for hedging, it gives an opportunity to select a uniform dark color, that the whole hedge may look alike.

Beeches are best set in Spring and at all times should be had into good roots and be severely pruned to insure success with them.

Value of the English Linden.

As between our native linden, *Tilia americana*, and the European one *Tilia europæa* the latter gives the most satisfaction in planting. The americana makes a very large tree, often too large, and its foliage is just what tent worms like, judging from the way they attack it every season. Then the leaves, though large, have not a pleasing green color. These defects would not be noticed so much could we do no better, but in European linden we have a superior tree. It is a medium sized tree; its foliage is of a pleasing green, and is not troubled with tent worm or any other insects. Its leaves are small compared with those of the American, and they are retained late in the season. The American is sometimes seen set as a street tree, a position it is no more fitted for than the plane, growing altogether too large. The European is much the better for this purpose, but it, as well as all lindens, delights in good, deep soil.

There are more than one variety of European linden; and foreign nurserymen say that to get the best, the order should call for *Tilia europæa platyphylla*.

JOSEPH MEEHAN.

A Fastigate Form of Larix Americana.

quire sowing at once, as they rarely vegetate well when sown in Autumn.

Quercus Prinus monticola is the rock chestnut oak, growing always on high ground or at least preferring that situation. The chestnut oak that grows in low ground is the *Q. Michauxii*. The foliage, while unquestionably a "chestnut oak," is larger than and of different outline to the other. Both are splendid lawn trees.

Pecan nut, *Carya olivæformis*, thrives in Southern Pennsylvania, but the trees do not bear the good crops of nuts they do farther south. In Delaware cultivated trees have given satisfaction.

The Winter aconite, *Eranthis hyemalis*, is esteemed by all who are familiar with it. It is really one of the

Hardy Roses for Decoration Day

HARDY H. P. ROSES

We offer exceptionally strong two-year-old dormant, low-budded stock (no Manetti), in the following varieties:
Alfred Colomb, carmine.
Anna de Diesbach, bright carmine.
Ball of Snow, pure white.
Baron de Bonstetten, dark crimson shaded.
Baroness Rothschild, satiny pink; extra.
Duke of Edinburgh, bright vermilion; very fine.
Fisher Holmes, dark rich scarlet.
Fran Karl Druecki, the finest white in existence, \$12.00 per 100.
General Jacqueminot, rich velvety crimson.
General Washington, beautiful red, shaded carmine.
John Kopper, beautiful rose pink.
Margaret Jackson, white, pale fleab center.
Magna Charta, clear rosy pink.
Mme. Gabriel Luizet, light, satiny pink.
Mme. Plantier, white.
Mrs. John Laing, soft pink; most desirable variety.
Paul Neyron, beautiful dark pink.
Prince Camille de Rohan, velvety crimson.
Ulrich Brunner, cherry red.
Prices on H. P. Roses \$1.25 per 10; \$11.00 per 100; \$100.00 per 1000.
HYBRID TEA ROSES
Maman Cochet, pink. Strong 2-year-old plants, 10 for \$1.50; \$12.00 per 100.
American Beauty, Kaiserin Augusta Victoria.
Herm. ossa, Strong, 2-year-old, \$1.50 per 10; \$12.00 per 100.
THE KILLARNEY ROSE
Irish Grown From the Raiser.
Good strong two-year-old plants, \$3.00 per 10; \$27.50 per 100.
DOROTHY PERKINS
Resembles the Crimson Rambler, except in color, which is a lovely shell-pink, bolding a long time without fading. \$1.75 per 10; \$15.00 per 100.

HYBRID TEA AND OTHER ROSES OF RECENT INTRODUCTION

(Strong 2-Year-Old Plants.)
Bessie Brown, Creamy white, \$1.50 per 10; \$12.00 per 100.
Grass an Teplitz. The great new red Rose, closely resembling Liberty in color. No Rose in commerce can compare with Grass an Teplitz as a badder, \$1.50 per 10; \$12.00 per 100.
THE TREE BABY RAMBLER (Mad. Norbert Levavasseur)
CROWN AS A STANDARD
The popularity of the Baby Rambler has suggested the growing of it as a tree or standard. The variety is too well known for description; enough to say, it retains all its characteristics of free-blooming qualities, etc., 50c. each; \$5.00 per doz.
THE BABY RAMBLER
Mme. Norbert Levavasseur. Strong field-grown plants, \$1.75 per 10; \$15.00 per 100.
CRIMSON RAMBLER
Large heavy plants, two years old, 3 to 5 feet, \$1.75 per 10; \$15.00 per 100. 4 to 6 ft. \$2.00 per 10; \$18.00 per 100.
OTHER CLIMBING ROSES OF MERIT
Paul's Carmine Filler. One of the most attractive Climbing Roses. Two-year-old, field-grown, \$1.75 per 10; \$15.00 per 100.
Marechal Niel. Color bright rich golden yellow, field-grown, \$1.75 per 10; \$15.00 per 100.
Gloire de Dijon. Color buff, orange center, very sweet-scented, field-grown, \$1.50 per 10; \$15.00 per 100.
ENGLISH MOSS ROSES
Assorted White, Pink, Red, large dormant plants, from open ground, \$1.50 per 10; \$12.00 per 100.

AMPELOPSIS and other Climbers

- AMPELOPSIS
Ampelopsis Vetchii (Boston Ivy), extra strong imported vines, three-year-old, \$2.00 per doz.; \$15.00 per 100.
Ampelopsis muralis, more rapid grower than the foregoing, larger foliage, \$3.00 per doz.; \$20.00 per 100.
Quinquifolia (American Ivy or Virginia Creeper). Good for covering walls, verandas, or trunks of trees; affords shade quickly, 25c. each; \$2.50 per doz.; \$18.00 per 100.
CLEMATIS
Henryi, pure white; extra large.
Jackman, purple.
Alba, white.
Sieboldii, lavender.
Ville de Lyon. The finest of all reds; flowers brilliant carmine red. It is equally as good as Mme. Edouard Andre, but contrary to this one, is a very free-growing variety.
All the above Clematis in extra strong plants, \$3.00 per doz.; \$20.00 per 100.
Clematis paniculata, strong 2-year-old plants, \$1.25 per doz.; \$12.00 per 100.
ARISTOLOCHIA SIPHO
Dutchman's Pipe, strong field-grown, \$3.50 per doz.
WISTERIA SINENSIS
Extra strong field-grown plants. Blue, \$3.50 per doz.; \$25.00 per 100. White, \$5.00 per doz.; \$40.00 per 100.
HONEYSUCKLE
Extra strong field-grown plants, 5 feet long, many branches.
Goodenium, Scarlet.
Haliana, Yellow.
Periclymenum, White.
Serotinum Belgica (Monthly Dutch). Red. \$3.00 per doz.; \$22.50 per 100.
HYDRANGEA PANICULATA GRANDIFLORA
Two-year-old, 3 to 4 branches, bushy. \$1.50 per doz.; \$10.00 per 100.

THE WEEK'S WORK.

Timme's Timely Teachings.

Dahlias.

The trade in potted and well started plants of the better kinds of dahlias has shown a steady growth in the last half dozen years and is now of sufficient importance to justify particular attention when preparing for the coming Spring business in plants. As a cut flower for the general market the dahlia has been somewhat slower in coming to the front than was confidently predicted some years ago, all owing probably to our peculiar climatic conditions which render worthless, or at least unprofitable, many of the kinds so highly recommended as eminently suitable for cutting by European growers. In carefully conducted trials of some of the much lauded old and newer varieties it has been found that but few possess the requisite qualities which make them desirable stock for cut flower production. A variety worthy of being extensively raised for that purpose must be highly prolific, must bring faultless flowers from early until late in the season, and the blooms, after being cut, should last in good condition for four or five days at least. Any variety of whatever class lacking these attributes cannot profitably be grown for its flowers in a cut state by the commercial florist, though it may be an excellent kind for the home garden of his customer.

I have given much attention to dahlias of all the various types since their reinstatement to public favor, but owing to scarcity of garden space could only try a limited number of the newer kinds every year. Of the varieties thus grown in a small way, those of the decorative section proved most valuable; next to these the single sorts and least satisfactory were those of the cactus type. Most of the latter, although faultless in

form, lacked depth or purity in color, and those not having this defect were usually shy in production. However, a few proved remarkably good with me and in my soil, which is a black, heavy loam. Their flowers, though not over abundantly produced, take well and last a considerable length of time. They are: Britannia, salmon; Ringdove, pink; Mary Service, variegated rose and orange; Flamingo, best scarlet; Countess of Lonsdale, shaded pink, the most floriferous; Island Queen, lavender; Jealousy, yellow; Gabriel, the colors varying greatly in fine bleedings on white ground; and Mr. Moore, deep crimson. I failed to find among this section, the cactus dahlias, a perfect pure white.

The following varieties were fine decorative dahlias as grown on my place: Henry Patrick, clear white and a good keeper; Mrs. Basham, rose variegation on yellow ground, fine but a little shy; Mrs. Roosevelt, rose, very large bloom; Lucy Fawcett, variegated on yellow ground; Perle, a fine white, not very large; Black Beauty, dark maroon; Penelope, white, blotched and edged with light pink; John Walker, fine white, but not a good keeping sort; and Clifford Bruton, clear yellow.

Of all the dahlias the single flowered sorts are the most productive and any variety of good color and long keeping quality is a good market kind and a profitable thing to grow. But good keepers among singles are extremely scarce. Here are a few of the named single varieties well worth growing for their flowers: Scarlet Century, red; Gracie, variegated in light, delicate shades, better than Twentieth Century; Lustre, pink; Wildfire, scarlet; Alha Superba, pure white, long lasting; St. George, yellow, and Snow Queen, a fine white but a trifle shy. In addition to these I have three good singles, selected from a large number of seedlings, all of them good keepers, which, indeed, must be the first desideratum in choosing dahlias for cutting.

Careful selection of varieties from any of the various types and proper cultivation are necessary in an attempt to make dahlia flowers one of the foremost items handled in our markets during Midsummer and early Autumn. When this is accomplished it will be found that dahlias are the best paying of Summer outdoor crops. An increase in the demand and sales is noticeable from year to year. Last season all flowers of pleasing color, good form and known to be lasting for a reasonable length of time met with ready sales over the commission man's counter, bringing a prices satisfactory to grower and buyer.

The Culture of Dahlias.

The starting of dahlia roots, their care and after treatment in the field are most simple in their every detail. Many growers still cling to the oldtime meth-

ROSES. We have in stock upward of 1000 different varieties, consisting of the very latest European varieties, as well as all the leading varieties of American origin. Forcing varieties, including Killarney, a specialty. Stock from 2 1/2, 3, and 4 and 5 in. pots, all on own roots. Ask for catalogue.

CANNAS. 40 leading varieties. Write for list and prices. Louisiana Cannas, 8c. Mont Blanc, 8c.

MISCELLANEOUS PLANTS of all kinds, including Violets, Ferns, Geraniums, Asparagus Sprengeri and Plumosas, Dahlias, Cissus Discolor, Pot Hydrangeas, etc. in large supply. Send us your list for prices. Ask for catalogue. It's free.

ad of planting the divided portions of the root clump at once in the field at a time when all danger of seeing the rapidly pushing shoots nipped by belated frosts is past. This is the least expensive way of making a start, much practiced by amateur gardeners and often resulting in a superb lot of dahlias. In following this course it is best either to plant pieces showing but one starting shoot or to remove all but one of the strongest after they have pushed their way above ground. One single shoot will make a better plant than several—a rule that holds good with whatever kind of dahlia one may grow. The distance between plants in the field depends somewhat on the variety grown, but three feet in the row and the rows at least four feet apart is not wasting any space when it comes to picking of flowers. Ground, manured heavily and grown to some other crop the year previous, is good for dahlias but should be freely exposed to air and sunshine. Subsequent cultivation merely amounts to staking and tying up in the case of some varieties, in shallow hoeing to keep the weeds down and in thorough and frequent watering in dry seasons. Flowers are cut as soon as fully open, placed in fresh water for a night and sent to market the following morning.

Starting Dahlias Indoors.

For the sake of economy, if stock is limited, it is best to divide dahlia roots in the Spring after the eyes have started, so as to make as many divisions as there are plump, promising eyes or well advanced shoots. These appear at the crown or wood-like stump of the old stem and are not always proportioned in number to the number of adhering tubers as is often supposed. Merely tearing the tubers apart, as I have seen done, is not the proper way of dividing dahlia roots, unless the grower has more of a kind than he knows what to do with. A strong knife, even a hatchet at times, and great care are necessary in effecting the right kind of divisions through the hard crown of the old clump. Every piece should show at least one strong, fairly well advanced shoot, connected with one or several tubers by a neck or thin elongation of the tuber, differing in length and strength as to variety and last season's mode of culture.

Dahlia roots, still dormant, may first be started into growth in some good soil in boxes or in a bench before being divided, or the divisions could thus be started in moderate heat and be potted up as the shoots appear, if potted plants are wanted for the Spring trade. It is now time to start dahlias for that purpose.

Dahlias from Cuttings.

Where large numbers and many varieties of the best dahlias are grown and handled in shipment during the busy season of plant traffic, propagation by rooting cuttings is the most satisfactory course to pursue. The plants so obtained, if not better as some claim, are fully as good as sprouted divisions, take less room, are less cumbersome and not so easily damaged in handling, and in the increase of high priced or rare varieties this is the process which results in the greatest number of good plants. For the retail plant trade, demanding nowadays a well-assorted supply of pot grown and finely started dahlias, the plant raised from a cutting with a firm ball of roots is the proper thing to offer and presents quite a different appearance from the started and usually overgrown tuber, squeezed into a pot never having the required depth.

To obtain good cuttings for successive propagation during the greater part of early Spring it is necessary to plant the tubers and start them into growth in a good, well-enriched kind of soil, choosing for the purpose a well-lighted bench in the warmest of carnation houses. Ordinary sorts of the common run of oldtime dahlias should not be bothered with in this manner; they should be discarded for newer sorts without loss of time. In taking cuttings of these newer dahlias, however, some good judgment must be exercised in order to avoid loss and disappointment. While cuttings of some sorts may be taken off and successfully rooted when but an inch high, others must be allowed to attain a proper degree of firmness and a height of from three to four inches to be in fit condition for the sand bed. The lower leaves are trimmed in and the cutting prepared as is done with other cuttings of like nature, and dahlia cuttings, no

more than these, should ever be suffered to wilt either before or after being put in the sand.

A temperature of from 50 to 55 degrees in the house, with a few degrees higher in the sand, is high enough for any variety of dahlia cuttings. While, of course, the sand should never become really dry, a moderate degree of congenial moisture is more likely to promote rapid root formation and to ward off destructive decay than a continual water-soaked condition. But frequent sprinkling on very bright days is necessary, and if this is attended to rightly shading will hardly be needful. And, again, dahlia cuttings, like those of most other kinds of stock, should be potted up as soon as the first rudimental fibers assure future progress in growth, or at least before the roots have grown to any considerable length. Rooted dahlia cuttings allowed to remain in the sand too long will never amount to anything surprisingly fine.

Most varieties of dahlias, when once established in pots, are wonderfully rapid in their growth and if started too early will need a repotting before the planting or the selling season begins, which, in most cases, amounts to a considerable loss in their value for outdoor planting and, of course, also means quite a lessening in profits considering the extra labor and room required in their repotting at the busiest time of the season. An abundance of light and fresh air, more than excessive moisture at the roots, prevents any lankiness of growth, keeps the plants stocky and in marketable shape for a considerable length of time and should be relied upon as the only means of keeping young dahlia stock in proper condition for future shipment, for which purpose a solid ball of roots is desirable.

Seedling Dahlias.

It is now time to sow dahlia seeds, of which strains of nearly all the leading types can be obtained. Seeds of dahlias sprout quickly and rapidly grow into sturdy plants, requiring well-timed attention as to potting and shifting. All the single flowering kinds, of which there are several fine strains to be had, if sown now will soon grow into flowering size and yield an abundant crop of blooms throughout Summer and Fall, while the double flowering varieties are slower in maturing flowering growth and usually amount to little before Autumn.

But in raising dahlias from seeds it must not be expected that they come as near true as to color, variety or even type as do most other things so raised. The seedlings vary greatly in all respects, but a small percentage of the named and double varieties showing up as such when coming into bloom. But while this may prove a disappointing outcome to the ever-expectant or inexperienced grower, it greatly heightens the interest and pleasure to be extracted from exploits of this kind. Few plants among any batch of dahlia seedlings are utterly worthless, most of them excellent stock for carrying along from season to season for a diversified demand in plants at home, and occasionally a truly magnificent one is discovered in a field of seedling dahlias.

All seedlings started now will attain full size by next Fall, and in digging tubers will be turned into view. The better plants should have been marked while in bloom and before the first frosts blot out all distinguishing features, so that none but those having shown real merit need be saved. But nearly every seedling dahlia will furnish good flowers for home use the first season.

FRED W. TIMME.

CYCLAMEN GIGANTEUM

Twice transplanted, in fine growing condition; four leading colors, ready for 3 in., \$4.00 per 100; \$35.00 per 1000. Ready for 2½ in., \$3.00 per 100; \$25.00 per 1000.

Asparagus Plumosus Nanus, strong, transplanted, \$2.00 per 100.

G. A. THIELE, Frankford, Philadelphia, Pa.

ASPARAGUS

Robustus, similar to Plumosus but better for pots, pans, and vases; extra fine stock ready for 4-inch pots at \$6.00 per 100, Sample for ten cents.

Success with House Plants

BY LIZZIE PAGE HILLHOUSE.

A complete text-book and guide to the care, cultivation and propagation of all plants in the garden and the home.

The volume is written by a woman for women, in plain, concise language, easily understood, and the book has the special merit of giving directions which can be readily followed, the methods prescribed being of the simplest, and the material suggested to be used easily within reach of all.

12mo., 232 pp.; profusely illustrated, with complete and ready reference index to all plants enumerated. Price, Cloth, \$1.00; Paper, 50 cents.

To Retail Florists. The old thought, that it was dangerous for a customer to know much about the care of plants, has passed away, being superseded by the newer and more intelligent one, viz.: that the more successful a customer is with plants, the greater quantity will he or she buy.

We offer Special Inducements to all who wish to handle this book. It is a good seller.

PAMPHLETS RECEIVED.

BULLETIN OF THE AMERICAN ASSOCIATION OF PARK SUPERINTENDENTS. Issued by the Association.

As usual, this bulletin is replete with information of the most practical and serviceable nature. The subjects treated upon include "The Water Garden," in which the construction of ponds, treatment of surroundings, plants to use, etc., are dealt with. Professor Cowell says: "Several low forms of plants—algæ and fungi—may be kept in check by copper solutions. We have used these for years and with uniform success. Some foliage is easily burned and lime may be added to the copper when spraying. Arsenite of lead is a good insecticide to use for the chewing pests that occasionally infest the plants. Aphids are quite troublesome at times and may be combated with tobacco dust and soap and kerosene emulsions. In our Victoria tanks we throw in sulphate of copper soon after planting, and have no trouble with algæ. I do not think we use more than an ounce of the crystals to 1000 gallons of water. If the algæ are allowed to start, however, it takes a stronger dose."

"The Herbaceous Garden" is also discussed, as well as "Bulbs." Some helpful information is given regarding the carrying over of bulbs, their use after having been forced and such like. Theodore Wirth suggests that tulips and other bedding bulbs, two or three or even more years old, not considered fit for bedding purposes, may be planted about eight inches deep along the edge of shrubberies, where they make an extremely pretty effect in the early Spring, especially where they are planted along dwarf shrubbery, so that the flowers when they are out will show through branchlets and possibly through very early foliage. It does not take long to plant these bulbs in the Fall, and they do not need to be disturbed thereafter. When spading that shrubbery a little bit of care can be taken not to spade deep.

"Playground Management," and "Cement Concrete Construction" form the remaining subjects treated upon in the bulletin.

It is a pleasure to observe the ready manner in which these park men, through the means of their bulletin, give freely of their practical experience for mutual benefit—a condition which makes that publication of the greatest service and utility to those concerned.

Notice to Our Canadian Readers.

An agreement between the United States Post Office Department and that of the Dominion of Canada, concluded April 1, 1907, amends Section "C" of Article 1 of the Postal Convention of January, 1888, now in force between the United States and Canada.

Under this new agreement, and commencing on the 8th day of May, 1907, the publishers of The Florists' Exchange will be compelled to pay postage on papers mailed to our Canadian subscribers at the rate of one cent for each four ounces, or fraction thereof, and to prepay same by means of postage stamps affixed.

Very unwillingly, and solely because of this new regulation, which will compel us to pay an average of two cents a copy, we have to announce that on and after May 8, 1907, our annual subscription rate to patrons within the Dominion of Canada will be increased from \$1.00 to \$2.00, until further notice, payable in advance.

The Florists' Exchange has been mailed to its Canadian subscribers all these years at the same postage rate and under the same privileges as it has been mailed to United States subscribers; namely, in bulk, at one cent a pound, under the provisions governing second-class matter; it will thus be seen that the amount of postage on each number issued was nominal.

The interest taken in The Florists' Exchange in the Dominion has always been very satisfactory to the publishers, and we regret much this backward step, for retrogression it must surely be called, when governments rescind long-standing privileges associated with mediums of an educational and trade nature, which lead to the development of a better understanding between peoples and the commercial advantages that go with it.

An Experiment Station in the Nursery Business.

A "Press Bulletin," issued by the Vermont Experiment Station at Burlington, announces that "the last legislature passed an important act establishing at the Vermont Agricultural Experiment Station a State Nursery for growing forest tree seedlings. The law specifies that these are to be furnished at cost for planting in the State."

The bulletin then goes on to describe the profits in tree culture; and announces the price at which the station will sell seedling trees for planting this Spring. It is also stated that the N. Y. State Forester, C. H. Pettis, is to act as consulting forester for the Vermont Station, and that the New York Forest Commission has given the Vermont State Nursery a "considerable number of 2-year-old white pine seedlings and offered to furnish an additional supply upon order through the Vermont Nursery at cost of growing and packing. As a result it will be possible for the State Nursery to take orders as long as this quantity permits, for delivery between May 1 and May 15 at \$2.50 per thousand plants for small orders and somewhat less for large ones. Since this is less than half the nurseryman's usual price, it behooves those who wish them to order promptly. May is the best month for planting and all orders should be in by May 1. It is not probable that as low prices can be quoted again until 1909 since it requires two years from seeding to grow the crop."

It would be difficult to conceive of a greater injustice to the nursery trade than the inauguration of this State nursery by the Vermont legislature, and the open announcement of the selling of stock by it to buyers at "less than half the nurseryman's usual price," particularly as the ultimate aim in planting these trees is the "bringing of a larger return for the investment than any other crop."

We do not believe that the farseeing and progressive men who planned the institution of State Experiment Stations ever desired or intended that they should become commercial ventures of any nature whatsoever. Such a step at once renders them a menace to legitimate business rather than an aid which latter assuredly is their proper mission.

The reforestation of depleted woodland tracts is, all will agree, a most commendable and necessary work, but it affords no good or sufficient reason for depriving the nurserymen of the share of trade which should be theirs in the accomplishment of that operation, especially when it is remembered that the denuded condition of our forest lands has been largely, if not wholly, brought about for gain; to say nothing of the injustice of taxing nurseries to maintain institutions that will act as competing factors in their business.

There is no telling where unjust competition of the character referred to will end, and nurserymen generally should register a vigorous protest against it, as being in direct opposition to the aims and purposes of a State Experiment Station, the province of which is to "make experiments," and not to act as competitors of any industry promoting the interests of those whom these institutions are designed to serve and assist in their own legitimate and proper way.

OUR READERS' VIEWS

Azalea Julius Roehrs.

Editor Florists' Exchange:

I read in your valued paper, page 517, a report referring to our Azalea var. Julius Roehrs. Kindly note that this variety was raised by Sander of Bruges, Belgium, and dedicated to our Mr. Roehrs, Sr. It is one of the finest, if not the finest, red pink azaleas introduced in the past years and no doubt will prove to be of great commercial value. In color it beats "Madame Vander Cruyssen all hollow," as the Eastern gardeners stated to me, "strong vigorous double flower and grower, and is a splendid forcer and even grower."

It will be put on the market in the Fall of 1907.

JULIUS ROEHR'S COMPANY,
Thomas Knight.

Steam Boiler Legislation and Other Heating Matters.

Editor Florists' Exchange:

Referring to the recent discussion on steam boiler legislation at the meetings of the Gardeners and Florists' Club of Boston and to the report of Mr. Palmer as chairman of the committee which attended the hearing at the State House, I wish to say that I also attended that meeting and as far as I could learn it was simply a dispute between the engineers and boiler makers as to who should have the right of inspecting the boilers in the State. After an experience of fourteen years throughout the United States erecting greenhouse boilers, I would say that the skilled mechanic should have the preference over all others.

I have set up hundreds of boilers in greenhouses, among them tubular boilers that the Hartford Insurance Company had cut the pressure on. These boilers have been running under a pressure of from 15 to 30 pounds for ten years or more and I find the plate in the boiler just as good to-day as when it left the shops.

In regard to licensed firemen, I would rather have a good upright and honest greenhouse man who has had experience with fires than a number of the licensed firemen of to-day, for I know of a case that came under my notice where a licensed fireman was the cause of almost freezing an entire greenhouse.

Hot Water Boilers for Greenhouse Heating.

During my experience in greenhouse heating I have set up a great many different styles of boilers, among them horizontal tubular, upright tubular, locknut-nipple, push nipple, and portable upright cast iron boilers. The tubular makes a very good boiler for heating purposes when properly taken care of. All the water should be run off and the boiler thoroughly cleaned once a year, when boiler and system should be refilled and left so until it is required for use again. All boilers should be properly valved on supply and return.

The cast iron boiler should be blown off by steam so as to clean out the boiler thoroughly. A great many boilers are found fault with as not giving satisfactory results, but if you look into the manner these boilers are run you will find the fault is not with the boiler, in a great many cases, but with the one who has charge of it.

In regard to push nipple boilers, I would say they are just as good for heating purposes as any cast iron boiler, but they are not quite so safe as the locknut-nipple boiler. If any part of a push nipple boiler needs repairing you have to take the whole boiler apart, whereas with the locknut-nipple boiler, if a part or section gives out you can take a three wheel pipe cutter and cut the connection to the damaged section, plug up same and your boiler is ready for work again.

All hot water boilers should be thoroughly cleaned every other year. A very good way to do this would be to close the main supply and return valves to the boiler, put on water gauge so placed that gauge cock will show water in boiler when it reaches to within three inches of top, start a wood fire in the boiler and when you have from ten to thirty pounds of steam draw the fire and blow off the boiler. This will carry off all sediment in the boiler. I would say, too, that there should be a safety valve on the boiler when blown off by steam.

Steam boilers should be blown off at least twice a year.

In heating greenhouses by hot water, it is necessary to use circulating pumps in order to get a rapid circulation. A cheaper, better and simpler method is the heat generator, which will give an increase of five to ten pounds pressure without any danger attached and makes a rapid circulation when the pipes are properly laid in the greenhouse. The generator is connected to the pipe of the expansion tank of the open kind and is a very simple device, operating by mercury. I find that the more simple the system, the better the results obtained.

Boston, Mass.

DANIEL ILIFFE.

"New Creations."

Editor Florists' Exchange:

Under the above heading much has been written within the past year, much more can be written without solving the problem or query. "What is a New Creation?" or through what agency new forms are developed. Lather Burbank has been charged with all manner of assumptions regarding the new types of vegetables, fruits and flowers which he claims to be the results of the labors of his own hands guided by his intelligence regarding plant life, its nature, variety and phenomena. That he has assumed the powers of a creator through whom development is the result of the power, "to will or to do," is making a charge which his own assertions would scarcely warrant anyone in stating.

What has been said regarding Mr. Burbank's wonderful work is, undoubtedly, in strange contrast with what he has actually accomplished which might well be and then have much to his credit. He is a close observer, an indefatigable worker, a man of keen perceptions and an ardent lover of nature. Such men are ever on the alert for the beautiful and the useful, that the casual observer would pass by unnoticed. His individuality, the most prominent feature of his organization, united with keen and active perceptive faculties, has given him a power of selection, which, in a climate where the development of all vegetable forms is extreme, has enabled him to do what he could not have done without the natural advantages due to environment. He is credited with work he has never performed, and with scientific knowledge he would never assert; more than that, he is credited with the production of vegetable wonders that some of our most careful observers have failed to discover in his gardens. That may or may not be charged to a disposition to over-estimate on his part the work of his own hands directed by a knowledge not possessed by others. Should that be the case, there is to his credit the vast amount of good he has done by interesting and encouraging others to work along the same lines of usefulness.

This brings us to the vital essence of the subject under consideration, viz: How are new varieties produced? Upon this subject there is a wide difference of opinion. As a rule, the hybridist gets credit for all, or nearly all, of the "new varieties" of fruits, vegetables and flowers no less than for the development of types. Than this there can be no greater mistake, neither one more generally believed. Much credit is due this class of workers—not for what they have accomplished, but for their persistent efforts to do something.

The active principle of creation is reproduction, it is also the vital principle. Strictly speaking a hybrid form is non-productive, that is seedless. Such a form would be of no use to the seedsman, yet their catalogues abound with various hybrids when none exist. At this point it is both safe and just to say that no hybridist ever made a cross between so-called species, or well defined varieties, in order to get a certain result, that ever accomplished his purpose. It is true that through cross-fertilization the good qualities of two varieties may be united in the one. That is a vigorous plant of great productiveness, but of a poor quality, may through crossing with a feeble growing variety of the same species, produce a plant possessing the good qualities of both. But that is not a hybrid, unless there is a new definition of the term hybrid, and what is generally called a hybrid is simply a cross between varieties with marked characteristics due to environment.

Some very useful forms have been produced through the agency of cross-fertilization; no one can dispute that fact, no one is inclined to. Every one interested in plant life greets with gladness any improvement in fruit, vegetable or flower, without the slightest regard to the methods employed to produce the results. There is however a principle underlying this fact but little known or appreciated; it is fundamental, the cornerstone upon which plant growth builds its many beautiful superstructures.

When a cross has been secured between two well-marked varieties (usually termed species) the work of the plant breeder is but fairly commenced. If the cross has been satisfactory, selection is the first step to be taken, and upon its development depends success or failure. All depends upon the keen, active perception of the horticulturist, and his industry in its application and environment. Both are essential, both necessary for success. What Mr. Burbank has done along the line of improvement in vegetable forms, neither he nor any other man could do without the assistance of nature's full and willing hand with which she has scattered her gifts more freely on the Pacific coast than in any other part of the globe. In that clime all the plant asks for is an opportunity, and it will develop the full limit of its usefulness. Man does not cannot have creative powers; his gifts and abilities come from his powers of observation and the intensity with which they are applied. Be-

cause of these gifts kindly assisted by environment Mr. Burbank has, by indomitable industry and perseverance, done that which entitles him to great credit. Having employed his eyes to the limit of their power, with results following, he has observation upon his crest and shield.

Other men have achieved greatness along the same lines. We will note a single instance. The late Mr. Livingston, the well-known tomato specialist, was a man gifted with the same powers of observation which he employed to the fullest extent in the development of his favorite industry. In answer to my interrogation, as to how much he was indebted to cross-fertilization for his success in the development of types or varieties of the tomato, his answer was prompt, plain and practical: "Nothing at all. From the setting of the plant to the perfection of its fruit the field is my study. Not a day passes, (weather permitting) that I am not in the field, noting the variations that are constantly presenting themselves. By these means I have been able to select all the valuable types I have sent out."

It is to such men we are indebted for all or nearly all our new varieties of fruits, vegetables, and flowering plants.

There is, however, an agency in plant development that must not be overlooked, a vital principle but little understood or appreciated; viz, changes through environment. A notable instance is the dwarf lima bean. How and whence did these valuable types come? Certainly not through man's agency, but through their own volition. I am in the most perfect and happy accord with Ernest Hecke's theory regarding the "soul cell" in plants that there are in each, and were when the plant was but an invisible cell, the possibilities of its highest development, also a consciousness of its duty to develop in harmony with other creations.

In South America its native habitat, the lima bean is a herbaceous perennial, a most rampant grower, midway between a climber and a twiner, and, having fully nine months to perfect its fruit, it can ramble at leisure, producing its seeds sparingly for several months previous to its season of rest. When the Spring time of plant life comes, as it does everywhere, from the crown of its immense fleshy tubers, some of which weigh nearly fifty pounds there shoot forth numerous tender stems, not unlike those of the perennial ipomoeas, which make a rapid growth twining over other vegetable forms, until it becomes an impenetrable mass.

Note the change. The plant's consciousness of its place in the economy of nature, that its mission is to adapt itself to the necessities of other forms of life, and, as reproduction is the active vital principle of life, when removed from its native habitat and grown under changed conditions of climate, it immediately adapts itself to its environments. If the season of growth of its adopted home is shortened its growth is more rapid, its vines are proportionately shortened, at the same time more vigorous. The further removed from its Southern home the more rapid its growth, and the more dwarf its habit until it reaches the limit of time it has for reproduction. The result is that in its Northern home it produces as much seed on a plant not more than 18 inches high, and, in a period of four months, as it does in its native habitat, in twice that time.

These changes are constantly going on with all plants and under every condition of growth. These changes in plant forms are simply the results of the soul of matter in operation along the line of adaptation to the necessities of other creations. Each form is a part of the great principle we call life; it is but a part, as no one form is an independent creation, but an item in the world of life.

Man's place in nature is to develop to the greatest extent the possibilities of every creation, which he can do through observation and applied industry. Floral Park, N. Y. C. L. ALLEN.

Birnie's Interpretations.

Editor Florists' Exchange:

Job, with characteristic stupidity, has utterly failed to interpret "F. D.'s" letter correctly, and Jemima's "usual intuition" is on a par with the old gentleman's stupidity—a stupidity which seems to run in the "blood" of whatever "brand" it may be. "F. D." has evidently had a little education, which may account for the difficulty both Job and Jemima find in understanding the letter. The letter, however, is quite plain and easily understood, and is not a criticism, as Job seems to think. It is an expression of "gratitude" and gives Job "credit" and praise for his apt use of "unadulterated billingsgate" and "borrowed epithets," and advises him to persevere and improve himself along these lines for the special benefit of those who like it and those who don't, as well as to further "the interests of Job himself." The last part of "F. D.'s" letter is just as plain as the first. When he reached the other name mentioned, he was so overcome with the ecstasy of delight, appreciation and admiration, that words failed him, and the "thought" died aborning! Such a calamity is to be deplored; the conception of a stillborn "thought"

must be discouraging in the extreme. I am inclined to believe that jealousy induced Job to suggest the transposing of "F. D.'s" initials. That either of the gentlemen will ever "create" a brainston is highly improbable, material being evidently in scant supply; the usual periodical attack of circular insanity is the only thing that is likely to trouble them.

I see it asserted in one of your contemporaries that Job's picture is in that Washington rose convention group, but upon close scrutiny I fail to find it. As I remember Job's picture, as published by you some years ago, he is neither handsome of feature nor graceful of figure. No one would be likely to be struck speechless by his beauty; his physiognomy (to put it mildly) would be conspicuous by its plainness in a picture like the one referred to, when all the faces (including Guttman's) are passably good-looking and intelligent. In fact, I am of opinion that Job's "looks" would militate against his admission into the White House. That George Watson should make such a mistake is remarkable, but mistakes will happen in the best regulated families. Watson's picture is all right, looks just like him; looks to me as if he was just about to step out, and in his own genial way pass the same remark to me as the Governor of North Carolina passed to the Governor of South Carolina, and I don't suppose there would be much argument about the matter. That Jersey coterie near the northeast corner, where the jovial features of Schultz and Boehler are prominent, gives tone and foreshadow to the picture.

It seems to me, Mr. Editor, that Job, like some others, is forgetting to use quotation marks when he quotes. That little paragraph "see through a glass darkly" sounds familiar to me. I have heard it asserted by those who ought to know, that if one looks through certain kinds of glasses often enough he is likely to see anything, and from Job's aptitude at relating such stories as that about the "wayfarer," the "hobby" and the "cab," the idea suggests itself that Job may be speaking from experience.

I gather from your Lancaster news notes that the Pennsylvania geranium growers are still experimenting with geraniums in the same crude, old-fashioned manner.

JOHN BIRNIE.

Sweet Pea Sports.

Editor Florists' Exchange:

Noticing in your issue of April 6 an article written by Ant. C. Zvolanek of Bound Brook, N. J., being a reply to Mr. Englemann of England, in which Mr. Zvolanek states that sweet peas do not sport, I wish to make it plain that my experience has been that sweet peas do sport, and any person wishing to be convinced that my statement is correct is welcome to visit me at any time and see at least four distinct sports in bloom at the present time. In connection with this I have written Mr. Zvolanek inviting him to visit me and see these peas growing.

Regarding the sports in question, during the Winter of 1903-04 in the month of December I noticed in a bed of peas, variety Earliest of All, three vines producing flowers of distinct color. Number 1, a white, resembling Mont Blanc only being larger in size, the seed at maturity being black.

Number 2, flesh-colored pink, resembling very closely Katherine Tracy in color; was lost Autumn of 1906.

Number 3, a scarlet identical with Mars in color.

Number 4, an early sport of Lady Grisel Hamilton, found growing in a bed planted to that variety Winter of 1905-06, being identical in color with the parent.

Number 5, a sport of Countess of Radnor, being noticed this present Winter and now growing and blooming in a bed of the regular late flowering strain. Seed was purchased of Henry A. Dreer, Inc.

I had the pleasure of visiting Mr. Zvolanek's place in December, 1905, and again in March, 1906, and was treated with much courtesy. I was impressed with the number of colors he has produced of the Winter-flowering strains of sweet peas. My motive is not to underrate what he has accomplished, but simply to establish beyond question the fact that sweet peas do sport, therefore, I make the foregoing comment.

While at his place I failed to notice either a lavender, pink, or scarlet that will compare in color with the sports herein mentioned. Another and indisputable fact is that no seed grown by Mr. Zvolanek was planted on this place prior to July 15, 1906, which, therefore, precludes the slightest possibility of the vines in question being produced from stray seed of his strain.

All of which summed up proves most conclusively that sweet peas do sport, from the fact that we have sports growing, and have made no effort to produce them.

Ronsk, Pa.

CHARLES M. WEAVER.

Bulbs.

Read by Paul Richter of Henry F. Michell Company before the Philadelphia Florists' Club at its April, 1907, meeting.

Several months ago one of your enthusiastic members asked me if I would not give a talk on something that would interest the florists at this meeting. I gave the matter some little thought, and decided that a talk pertaining to bulbs would be about the proper thing, especially at this season of the year, when all of you will remember the different successes and failures that you have had with your bulbous stock.

I am speaking now largely from the experience of the seedman, which, as you probably know, is more or less theory. However, we come in contact with so many different florists, who all grow different things and have different ideas, that by careful observation, correspondence and in other ways, we gradually learn the many different ways in which bulbs are handled so as to get the best results from them.

Lilies.

Probably the most important of our Easter flowering plants is the lily. Some florists force the old type *Harrisii*; again you will find some using the multiflorum, which is a Japanese product, as likewise is the giganteum. The two latter sorts have come into great prominence during the last few years because of the apparent few failures that have occurred with them. Many attribute this to the fact that the bulb of the Japanese lily is not diseased, while that of the *Harrisii* is more or less diseased.

I think you will all agree with me, that the most important thing for the florists to watch is not to buy small-size bulbs. It has been proven that wherever disease exists, it is in the smaller bulbs, as for some reason or other they gradually seem to outgrow any sickly conditions if the bulbs are more mature or aged. The most profitable sizes of the above mentioned lilies to force are the 7 to 9 size in *Harrisii* and the 9 to 10 size in multiflorum and giganteum.

You all know quite well the characteristics of the *Harrisii* lily, while you do not all, probably, know the characteristics of the multiflorum and the giganteum lilies. The former produces a greater abundance of bloom; in fact, is a very free forcer. It is a green-stemmed plant, while the *Lilium giganteum*, which does not force so readily, is a red-stemmed plant, and likewise produces fewer flowers, although these are of a gigantic size.

Many failures, particularly with lilies, have been traced to the fact that the bulbs have not been thoroughly rooted. Many of you probably try to get the very first shipments that arrive in the country, pot them up and get them in for Christmas. This is hardly necessary nowadays, as very good cold storage lilies may be had for this purpose, which I will remark on later.

Treatment of Lilies.

Lily bulbs are handled by almost every florist in a different manner, but we have had occasion to observe that those handled in the following manner have bloomed most successfully, and have shown the least tendency to loss through disease.

In potting the bulb you will find a small layer of good, well-rotted cow manure in the bottom of the pot very advantageous; the bulb may then be placed on this and the pot filled up with soil. After they have been watered thoroughly they should be placed outdoors, say until the first part of October, when the bulbs have been potted in August. A covering of sand, leaves, or some suitable litter on top of the pots, to protect them from the ravages of the sun will be found of great benefit. When they are brought in, say in October, they can be placed under the greenhouse bench in a temperature of about 60 degrees and left there until there is room in the top, or until they are to be brought into warmer houses to force. This method of treatment will invariably produce strong, thrifty plants, which will give you plenty of bloom.

Speaking of Japanese lilies again, I would like to call your attention to some remarks made by one of our florist customers in Akron, Ohio, who purchased from us, 4,000 *Lilium giganteum*, 9 to 11 size. His remarks are as follows:

"Upon arrival of bulbs we pot them at once in 4-inch pots, using coarse, soft-coal ashes for drainage in the bottom of the pots, and giving them a soil composed of sandy loam and well enriched with about one-third well-rotted horse or cow manure. The pots are placed under a dry bench in either a violet or carnation house, soaked down with water very heavily and after two or three days we cover the pots with two or three inches of ashes.

"When Easter is early, as it was this year, we place the lilies on a bench after January 1, giving them a temperature of 60 degrees at night and 70 degrees days for about ten days, then 70 degrees nights and 80 degrees days until buds can all be counted.

"During this period we manure-water them regularly once a week with the following liquid: One bushel of fresh cow manure and one 4-inch potful of nitrate of soda to each fifty gallons of water. Spray the foliage once a day or twice a day in clear weather. We try to keep the house moist, otherwise, by spraying the walls and walks. It is also important to never allow the soil to get very dry, and we never feed unless the soil is moist.

"When the buds can all be counted easily, we move them into houses where we can get the temperature down gradually, and finally mulch them with either a little sheep manure or bone flour, which will be sufficient food until they are ready for market.

"Our experience with lilies, especially Japan, has proven to us that the only way you can get them good is to force them quickly and not check them in growth while the temperature is kept high. As the root action becomes such that they can easily be knocked out of the pots without disturbing the ball of earth we shift them either into 5-inch or 6-inch pots, according to strength of the stock. Drainage in the pot is also of great importance when repotting is done.

"The 4,000 lilies obtained from you this season are a fine lot indeed. It may be well also to mention that we use Nicotifide for fumigating."

Benefits of Cold Storage.

The cold storage lilies, which are now coming into great favor, are confined principally to the varieties of

A Double Richardia

Originated with Chas. Stellmacher, Warren Point, N. J.

longiflorum, multiflorum, and giganteum. The latter variety, however, is much more desirable, as it seems to stand forcing better than the other two sorts. Longiflorum is the next best, while multiflorum is probably the poorest of the lot, as it is somewhat soft, probably due to the fact that in the green state it is the most free forcer of the Japan lilies.

To obtain the best results, cold storage bulbs should be potted immediately upon being received by the florist; and we would suggest very much the same method of potting as that applied to the bulbs as they were handled by our florist friend of Akron, Ohio, whom I mentioned before. They should be placed in a dark, cool place; probably under the bench of the potting house would be the best. They should then be left there in a cool temperature as long as possible, until the pots are well filled with root growth. This can be determined sooner or later by examining them.

They should then be removed to a greenhouse and started off at a temperature of about 50 degrees to 55 degrees and kept at this temperature until the bud parts, or flowers, set. Then the warmth may be increased to 60 degrees or 65 degrees to 70 degrees. This will draw the plant to its proper height and rapidly develop the buds and flowers at the same time.

Cold storage lilies should commend themselves to every florist who grows lilies, if it were only for the one reason that they can be brought into flower in twelve weeks from the time they are potted. As can readily be understood, it requires the space of the greenhouse but a very short time, compared with what is ordinarily required to bring the fresh or green stock of lilies into bloom. The saving is anywhere from two to three months. Then, at the same time, the amount of labor required is of much shorter duration, as is also heat, etc.

A large grower of lilies has said that he would not grow any more fresh stock, because he figured out that

unless every square foot of his greenhouse brought him in \$1 per year it ceased to be profitable, and he says he can make this very easily in lilies when growing cold storage stock.

Other Staple Bulbs.

I want now to take up your time just a few minutes further, by calling your attention to one or two other good bulbs which are very largely forced. Take, for instance, the *Narcissus Paper White* and the *Roman hyacinth*. There is not much comment necessary, because almost every florist seems to have reasonably good success and we have invariably traced failures in *Paper Whites* to be principally due to lack of root development.

Upon questioning some florists who have reported failures and upon referring to their orders, we find that they have not allowed sufficient time for the bulbs to really produce a bud; for the fact is that the strength which should have gone into the roots was divided and part went into the flower and part into the roots, and the result was that there was neither root nor flower. It is almost impossible to force these bulbs in six weeks, as some florists suppose.

This applies equally well to *Roman hyacinths*. And I can only repeat, with emphasis, that it is absolutely necessary to root all bulbous stock in a most thorough manner.

Cause of Failure.

I will now take up the items of tulips, hyacinths, and daffodils. Every little while one hears the report that such a variety of tulips, hyacinths, etc., did not do well. Frequently we find that the florist has not chosen his varieties well; probably has not selected the right ones. Take, for instance, the *Pottelbakker tulip*. While these may be forced successfully at times, still there are years when there will be no bloom at all when they are grown indoors. The *Hollanders* claim that this is not a forcing tulip, and therefore should not be used for that purpose.

There are a number of other sorts which can not be counted upon to bring the best success, such as *Chrysolora*, *Duchesse de Parma*, and similar varieties. In their catalogs most seedsmen have the forcing tulips marked with an asterisk, or by some other method, and as the seedsmen takes his experience largely from the *Hollander*, it is well sometimes, if not always, for the florist to be guided largely by this in using these sorts.

Now take the item of hyacinths. It seems that the florist will persist in buying *Baroness Von Thuyll*, which is a handsome white sort. This variety, however, is not at all adapted to forcing, unless in a very slow way, and it certainly should not be used to bring into flower for Easter. It has a tendency to "cut its throat," as the seedsmen claim. In other words, after the bud and stem have developed nicely, down below the foliage, it seems to come to a stand-still, while the stem a little further down simply rots off. The cause of this, I do not believe has ever been determined.

Now we will take the item of narcissi. Some florists plant *alba plena*, *odorata*, *poeticus*, and similar kinds, which are wholly undesirable for forcing. Therefore, you can always be assured when there are failures in bulbs, it is sometimes the fault of not choosing the right kinds, as well as for other reasons.

Other Sorts Worthy of Attention.

There are a few bulbs which I want to call attention to, which are not used as much as they should be used by the florists, that is, for forcing. Take for instance, the *delytra*, or *bleeding heart*. You have no idea what demand there would be for this by the *Roman churches* for Easter decorations. It costs very little, requires very little attention to get it into flower and pays as well as any Easter plant one could force.

Again, there is the *Spanish iris*. It reminds one very much of dainty little orchids. Irises may be planted among carnations and will do very well. They bring a handsome price when cut, while the cost of the bulbs is in the neighborhood of \$3 or \$4 per thousand, and they require no attention from the time they are planted until they are cut.

The hardy Japanese lilies, such as *auratum*, *album*, *rubrum*, etc., while they can not be brought in very well for Easter, make excellent lilies for selling in pots or for cut flower purposes during the Summer. They can be potted up when they arrive from Japan, say in October, and can be brought into flower without a bit of trouble by April or later, as required.

I do not know that these are extensively forced now by florist, but I think *Robert Craig*, of West Philadelphia, has had some little experience with them and I believe he still forces them with excellent results. They cost considerably less than *Harrisii* and other Easter lilies, while they probably bring greater results. Do not, however, confuse them with Easter lilies, as they must not be planted with the idea of supplying the demand for the latter.

In the short talk on the above I have endeavored to bring out the most important points on the subject, as I did not have much time, even to prepare the data, owing to the great rush which exists in the seedsmen's business at this time of the year.

A Double Richardia.

We have often seen double flowers of the calla, that is, blooms that have had two spathe, one surrounding the other, but we do not remember to have seen a calla with two spathe, carried after the manner of the one from which the illustration herewith shown was made.

We are indebted to Charles Stellmacher, Warren Point, N. J., for the flower which is here pictured, and that gentleman informs us that this is the first bloom that has been produced from a batch of plants which he raised from seed, seven years ago. He accounts for the plants not flowering earlier by the fact that he was laid up with a paralytic stroke for a year or two, and they received no attention except that which was only necessary to keep them alive during their growing season.

Mr. Stellmacher is waiting with much interest the coming of other flowers from the hatch of plants he is growing, and is half inclined to believe that they will all show the same characteristics as the one from which the photograph reproduced was taken.

Flower Show at Pasadena, Cal.

The second annual flower show of the Pasadena Gardeners' Association was held April 4, 5 and 6, in a mammoth tent, which afforded plenty of room for nice grouping of ornamental stock and the proper display of cut flowers. Edward H. Rust, proprietor of the Palm Nursery, South Pasadena, and The Park Nursery Company had fine exhibits of pines, palms, philodendrons, ferns, and other exotics so extensively used in landscape work on this coast. Among the plants in the Rust exhibit was a *Ficus pandurata* that attracted attention because of its large foliage which stands erect, the petiole being so short that the leaf grows close to the stem. In the collection of the Park Nursery Company were several new introductions from the Agricultural Department at Washington. The most attractive of these was an actinidia, as yet without a specific name. It has heart-shaped leaves of a peculiar shade of green; the petioles and stems are covered with short hairs of dark pink color. Evidently this plant is an evergreen; should it prove hardy in this climate it will be a valuable addition to our list of vines. Another plant shown for the first time here was *Vitis coignetiae*; its deeply lobed, downy dark green foliage is very pretty.

Howard & Smith had a fine display of cut roses, field grown, and of large flowering clematis which attracted a great deal of attention. The most prominent of these was Marcel Moser, a white variety with ruby colored stripes in the middle and lengthwise of the petals. This firm's amaryllis were very fine, of large size, eight inches across the flower, in color from almost white to very dark orange. These with some cut flower stems of *Sparaxis pulcherrima* are some of the new additions to plant life of Southern California as the result of Fred Howard's trip to Europe last season. One unique feature of this firm's exhibit was the bamboo vases in which they had their cut flowers. When the merits of this valuable plant become known in the United States it will be extensively planted for economic purposes, as well as for ornament.

A. K. Macomber, who bought the Dr. Schiffman collection of orchids last year, had it on exhibition to the delight of visitors. One of the most attractive of this collection was a hybrid of *Laelia cinnabarina* and *Cattleya Mossiae*. The petals were of a dark orange color, long and narrow, the labellum being also small with a royal purple throat.

The collection of wild flowers was very fine, but unfortunately was not named. Indeed, few of the exhibits were named. It is not only disappointing but positively exasperating to visit a flower show and become interested in the exhibits to find them without names and no one present who knows the appellations. At this show Edward H. Rust was the only exhibitor who had every specimen on exhibition labeled and that too in letters large enough that the names could be read without the use of a magnifying glass.

When nurserymen and florists on this coast become as wise as they should be, as well as amateur growers who care to advance the cause of horticulture, they will one and all bring with what they have to show cards with the names of the subjects nicely printed or written thereon, and visitors who pay their admission fee to see and learn will go away satisfied that the time and money were well spent. And if the committees who have the management of these shows will insist on exhibitors complying with such rules they will be public benefactors.

Gladiolus of large size and beautiful colors, sparaxis, narcissus of the trumpet varieties, ranunculus of great beauty in form and color, as also anemones, snapdragons with stems a yard long, were all shown in great profusion. Of flowering shrubs, branches—not the bushes—there was a fine exhibit—*genistas*, *weigelas*, *Cantua buxifolia*, *spiræas*, *Clianthus Dampieri*, *Diosma fragrans*, *Choisya ternata*, which is one of our most beautiful shrubs, abutilons in variety, *Habrothamnus elegans*, all from the gardens about town, and all without a name attached to them.

P. D. B.

Plant Bedding and Bedding Stock.

Read before the Detroit Florists' Club, April 3, 1907, by Robert E. Unger, Horticulturist, Belle Isle, Detroit, Mich.

Spring is here, with all its vexations and tribulations as well as plenty of hard work, success and failures for the florist and landscape gardener. The planting of beds and growing of stock have to be considered, plans have to be completed; and in this latter instance, it is advisable for the gardener to prepare his plans during the Winter months, in order to know beforehand what he wants and regulate his propagation of stock accordingly. By doing this it will facilitate his Spring work very materially. Of course, this pertains only to such planting as the gardener knows of beforehand. For the commercial gardener it is rather difficult, for he is seldom in a position to know exactly what and how much stock he will need. He has to use his own judgment.

Sometimes he has a customer who wants a certain bed for some successive years; the gardener prepares for the same work, and all at once when planting time comes the customer changes his mind; he either wants something entirely different or wishes to discontinue entirely. Or again, the gardener will prepare for his regular trade as usual, when suddenly orders come in

Use of Plants in the Various Plantings.

First take carpet bedding or mosaic work. Proper sketches, according to size of beds, should be made in advance, with the respective colors marked in the various fields so as to know exactly what is wanted. For such designs the following plants are most popular: principally the *Alteroantheras*, *amona* (red), *paronychioides* (brown), *aurea* (golden yellow), etc., are the best. Then most of the *echeverias*, large and small varieties, *kleinia*, *sempervivum*, *sedum*, in fact, almost all the different sorts of the *crassula* family are very useful. The various *oxalis*; among these the best is *O. trapaeoloides* on account of its beautiful dark red foliage and its creeping habit; *centaurea*, especially, *candidissima* with its fine silvery foliage; *Goaphalium lanatum*, also white, or rather gray foliage.

Then we have various dwarf growing geraniums, like *McMahan* (bronze foliage); *Mount of Snow* (white and green); *Happy Thought* (variegated), etc., which help greatly to add color to the bed. Also for larger beds the various sorts of *coleus* can be used freely. With such a variety of color, by placing the plants so as to obtain the desired contrast, one cannot fail to create a very striking effect.

In order to offset the more prominent points to better advantage, single plants should be used, such as palms, *dracenas*, *yuccas*, *agaves* of proper height for center of beds and *echeveria*, *crotons*, *aloes* for center of smaller panels.

New Greenhouse (King Construction) Rose Hill Greenhouses, Columbia, S. C.

of which he never dreamed. Of course, in this latter case he can buy stock sufficient to fill the order; but, as said, it is rather difficult to have a fixed plan as to planting and propagating.

Planting Beds.

There are various methods of bedding, and almost every gardener has his own taste. First, there are mass beds, that is, beds composed of various kinds of foliage and flowering plants of different sizes, or all of the same kind; tropical beds, that is, tropical plants or those that will produce a tropical effect; beds of all flowering plants, and also the so-called carpet, or mosaic beds. The latter are not so much in vogue at the present time; beds of a tropical and sub-tropical character are freely used.

Good judgment should be used in planting the different kinds of beds. For instance, it would be very improper to plant a bed of a floral design right out into the natural surroundings of a park or a private place; that is, from the standpoint of a landscape gardener. The landscape gardener has to adapt his planting to the surroundings in order to create the desired effect, on which depends a great deal the success of his bedding.

Carpet bedding, or all formal bedding, should be concentrated especially around conservatories, residences or other buildings, as the beds are more in harmony with architecture, or, in formal gardens, which are largely termed Italian, but are the old Rococco style, which are composed of mostly straight lines and formal trees and shrubs. This method of planting had its origin in Italy and France, and during the reign of Marie Antoinette, Queen of France, was in its prime. In those days some of the oddest designs were executed in flowers and foliage plants, and were considered a great art. Nearly all ornamental bedding can be adopted at almost any place, by selecting the proper varieties of plants.

If a tropical effect is required, especially in large beds, we have the different varieties of *solanum*, *ricinus*, *cannas*, *caladiums*, *stevia*, and other plants of tropical and sub-tropical appearance, many of which have been great favorites in European gardens for many years, but unfortunately are almost total strangers in this country. For instance, one of the finest sights that I can remember to have seen in some European gardens, were monster beds planted with *ricinus* of immense size, *Wigandia caracasana*, which, under proper care and in rich soil, will grow from 8 to 10 feet high in one season. This is a very imposing plant, with its light green leaves about three feet long and from eighteen inches to two feet wide; the variegated *Zea Mays* will grow up to 10 feet in one season. *Ferdinanda emimens*, now called *Podachonium paniculatum*, with immense dark green foliage, grows to about six feet high during Summer. *Solanum robustum* and *marginatum*, etc., which grow from three to six feet high, with large and handsome foliage; *S. marginatum* has beautiful silvery gray leaves and is much more of a bushy habit; *Cyperus papyrus*, about 5 to 6 feet; and *C. alternifolius*, 2 to 3 feet; *Caladium esculentum* bordered with *Centaurea gymnocarpa*. I can assure you that a group of such plants, properly treated, is very imposing, and once seen is not easily forgotten.

(To be continued.)

A South Carolina Plant.

Our illustration shows the interior of the new short span greenhouse, 65 x 100 feet, built by the King Construction Company, North Tonawanda, N. Y., for the Rose Hill Greenhouses, Columbia, S. C. The firm has 5,000 carnation plants in this house also a few sweet peas, both of which have done well. The photograph from which our engraving was reproduced was taken a few days before Christmas. The concern says it is more than pleased with the construction of this house.

FOR THE RETAILER

Seasonable Table Decorations.

As the season advances, Spring flowers become more plentiful and are offered in greater variety, opportunity being thus given the artist to display his taste in making pretty combinations for luncheon and dinner parties. The wideawake florist naturally takes advantage of any novelty that presents itself, and will give his customer the advantage of early arrivals. I once heard a prominent Boston florist remark, that he would give a great deal if he could get, once in a while, some of the choice tid-bits that appear regularly in the New York stores.

Moss roses are dearly beloved by most of our lady customers, and they will pay almost any price to get these flowers. They combine splendidly with many of the smaller blossoms and are especially pretty for luncheons for ladies. Moss roses made up into a centerpiece with white sweet peas form a most attractive arrangement. They may also be used with lily of the valley, white daisies and lilac. If some of the roses are partly open it will add greatly to the charm.

The Spanish iris, which has been in this market for the past two weeks, is a most welcome change from our every day flowers, and its small, orchid-like flowers are the object of much comment. They are, however, scarce as yet and considered quite choice. They are seen in shades of purple, lavender, yellow, and white. To be at their best they should be used for daylight functions, as they lose much of their brilliancy under artificial light.

And odd combination was used to decorate the table at a prominent club function. The flowers were Narcissus Golden Spur and violets, representing the club colors. The result was really better than would be expected. The narcissus and violets were arranged in irregular groups as a center-piece and filled in with Adiantum cuneatum. Violets were strewn promiscuously over the table, and the gentlemen wore button-holes of yellow daisies and violets.

At a large dinner for forty, genista and yellow snapdragon were employed with good effect. Silver pieces were used, varying from a cup thirty inches high down to low center-pieces. The genista, which was cut from loose, straggly plants, was particularly adapted for this purpose, some of the sprays being two feet in length, falling gracefully to the cloth. The yellow snapdragon was used in the lower pieces, which were edged with large fronds of Adiantum Farleyense. Each of the taller cups was surrounded by a low wreath composed of Adiantum Farleyense. A single flower of the Cattleya citrina floated in the finger bowls. Button-holes of Oncidium carodes completed the yellow effect.

At another function blue hydrangeas were used with a gold service; the result was strikingly rich. The arrangement was kept very low. Large bows of soft yellow ribbon filled in the vacant places on the table.

Flowering plants for decorations of this kind are often preferable to cut flowers, but are quite frequently overlooked because they are not cut and in the icebox. Azalea mollis and even the indica varieties are splendid for table effects and often prove a valuable asset when the customer insists on something different, and the florist often realizes more out of a plant by cutting it for this purpose than by selling it in pot form.

Acer Negundo Variegata, Variegated Maple.

A firm of growers who are of an experimental turn of mind are to be credited with forcing this extremely pretty shrub, which will surely prove a good novelty. The variegation comes expressly distinct through forcing, and the white and green effect is most attractive. I saw this subject used this week in combination with palms and ferns in a window decoration, the only other ornament being a vase of about fifty long stemmed Mme. Abel Chateney rose. D. RAYBUN.

CLUB AND SOCIETY DOINGS.

THE ST. LOUIS FLORISTS' CLUB held its regular monthly meeting and annual rose show last Thursday afternoon in the meeting rooms in the Burlington building. The meeting was largely attended, considering the fact that the greenhouse men are very busy at this time of the year. The exhibition was not as large as we have had, but the flowers exhibited were of extra fine quality and attracted a great deal of attention. J. F. Ammann, of Edwardsville, Ill., and Walter Weber, of H. G. Weber & Sons Nursery, were the main exhibitors for the prizes, and the Minneapolis Floral Company for exhibition only, the latter showing a fine vase of the new rose, Miss Kate Moulton. Mr. Ammann staged Richmond, Mme. Abel Chatenay, Ivory, Bride and Killarney. Mr. Weber showed Richmond, Mme. Abel Chatenay and a mixed vase. All these showed to good advantage.

President Irish had too much business to attend to at the Garden, so the duties of chairman fell upon the vice-president, John Cannon, who performed them in an able manner. The chair called upon the trustees for a report on the celebration of the club's twentieth anniversary; they reported that nothing had as yet been done, but that they would make a full report at the next meeting. They stated that the picnic and the celebration would not be held at the same time.

Theo. G. Brown made application for membership, to be acted upon at the May meeting.

The treasurer's report showed that the club's financial condition was healthy and growing with each meeting.

The judges of the exhibits appointed were F. J. Fillmore, Harry Young and George Augermuller, who reported as follows: Best fifteen Bride, J. F. Ammann, second. Fifteen Mme. Abel Chatenay, J. F. Ammann, first; Walter Weber, second. Fifteen Killarney, J. F. Ammann, first. Fifteen Richmond, J. F. Ammann, first; Walter Weber, second; Fifteen Golden Gate or its sports, J. F. Ammann, first with Ivory. Best vase of mixed roses, Walter Weber, second. The report on Miss Kate Moulton was that the variety had very luxuriant foliage, good flowers, stem slightly weak and deservingly honorable mention.

The question box brought out a very spirited discussion, in which every member took part. There was also a review of the Easter trade, in which retailers, growers and wholesalers took part. The growers considered this Easter a bad one, owing to the fact that the early warm days the first part of March brought out the blooming plants with a rush long before Easter, especially lilies, of which there was a decided scarcity and on which they claim a 75 per cent. loss and 90 per cent. on Dutch hyacinths. The retailers made a satisfactory report in all lines, business being ahead of last year's. The wholesalers did well on Saturday and Sunday, but before that a glut in almost everything in season, with heavy losses to the consigners.

The next meeting will take place Thursday afternoon, May 9.

ST. PATRICK.

NEWPORT (R. I.) HORTICULTURAL SOCIETY.—A regular meeting of this society was held in Mercury Hall, Tuesday evening, President Buttrick in the chair. The secretary had proofs of the schedule for the June rose show; the classes were considered very satisfactory and the lists were ordered distributed. The committee on the Adams memorial reported progress. The executive committee labored for two hours on the schedule for the Fall exhibition and were not finished with the work when they gave it up for the evening. There is a general inclination this year to give a greater number of premiums to plants that come to maturity in a shorter time than is the case with large specimen plants that can be kept from year to year, although admittedly these require skill and care in order to keep them in condition fit for exhibition. Dahlias will again this year be a prominent feature of the Fall exhibition, and the display of these now extremely popular flowers will be more elaborate than ever before. The state appropriation of \$1,000 to the society is assured; this amount will have to be given in premiums to citizens of the state. Prizes awarded to outside exhibitors will come from the funds of the society. D. M.

MORRIS COUNTY (N. J.) GARDENERS AND FLORISTS' SOCIETY.—We had a very interesting time at the April meeting; about 40 members and several visitors from New York and Newark were present. It was rose night. We had three vases of Queen Beatrix from F. H. Kramer, Washington, D. C.; they traveled well and received high encomiums from many close inspectors. This variety received a certificate of merit at a previous meeting. L. A. Noe had American Beauty, Bride, Bridesmaid and Richmond; J. R. Mitchell, Bride and Bridesmaid; Wm. G. Badgley, Bridesmaid; R. M. Schultz, Richmond; Alexander Brown, gardener to Mr. G. MacCulloch Miller, Killarney, and A. R. Kennedy, cinerarias. All the exhibits were of a very high order and nearly every one secured a cultural certificate.

The edifying part to a great many were the essays on the rose read by Messrs. Kennedy and Falconer. They

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 23rd St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYEE, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Washington, D. C.

GUDE BROS., 1214 F Street, N. W. We excel in high-class flowers and design work of every description; quick service, reasonable charges and liberal treatment have placed us on top. Try us.

Milwaukee, Wis.

THE C. C. FOLLWORTH CO., Wholesale Florists, will take care of all your Retail orders for the delivery of flowers anywhere in Wisconsin.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLOREAL CO., 1706 Broadway. J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Cincinnati, O.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dallas, Texas.

LANG, THE FLOREALIST, the largest flower store in the South, floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Texas, Louisiana. Mail and telegraphic orders solicited.

knew their subject, and an interesting time was spent asking questions and discussing details. The essayists were cross-examined well and they stood the test. "Lawns and Their Care and Management" will be on for next meeting; Arthur Herrington is to be the lecturer. The date is May 8. E. R.

MASSACHUSETTS HORTICULTURAL SOCIETY.—The trustees of the Massachusetts Horticultural Society have voted to open the library of the society to its members and others interested in horticultural matters on Sunday afternoons from 2 to 6 o'clock, beginning Sunday, April 21.

It is believed that there are a considerable number of persons, whose business will not permit them the privilege of using the library during the hours in which it is now open, who would welcome the opportunity to use it were it open during some portion of their leisure. This applies especially to garden employees, who have little time and are not overburdened with means; yet, it is largely upon such men that the present and future success of practical horticulture depends.

The Massachusetts Horticultural Society, by offering young gardeners the use of its library, will be fulfilling an important part of its mission—the advancement of horticulture.

While the free use of the whole library is offered, it is believed that the opportunity to consult the world's best horticultural periodicals will be greatly appreciated by many who could not under the former arrangements make use of them.

It is known as a fact that some men who make the most noise in certain localities, in an agitation to keep up the price of plants in the Spring, are the first to cut prices and try all possible means of getting rid of their stock in any old way. D. M.

Elias Fursman.

Elias Fursman, an old settler of Woodford County and an acknowledged authority on corn, died at his residence, 247 Hamlin avenue, Chicago, on Saturday last. He designed the big corn picture which formed a feature of the Illinois exhibit at the World's Fair, and at the time of his death was arranging a corn display in connection with the big corn convention to be held in Chicago next Fall.

Florists' Clubs, Their Value and Importance.

Read by J. F. Sullivan before the Detroit Florists' Club, April 3, 1907.

In view of all that has been said and written on the subject of florists' clubs, it would appear that the trade at this date would be familiar with the value of such organizations. However, we still find much indifference shown by some of the older florists, and a still greater number of the more recent accessions to our ranks, toward these societies, whose beneficial work is now quite universal and of a most substantial character. To all such in our profession I particularly address myself, and if my words and efforts in this direction will be even remotely the cause of new additions to club memberships in any part of the country, then I shall feel justified and well repaid for the preparation of this address.

In the pursuit of any vocation life is too short for mere superficial engagement in it, and in this as in other occupations all should strive to reach the summit of success, neglecting no stepping stone to attain it. Undeniably, to the florist membership in the florists' club is the most valuable as well as the most accessible means to this end. And all honor is due the chief factors of the clubs, namely, the broad-minded, progressive spirited growers or floral artists, who, excelling in their chosen line, come to our open meetings and, with their carefully and thoroughly prepared essays, divulge unstintingly to their interested hearers the cherished and highly valuable knowledge gained through years of experience, involving in some cases many sacrifices.

The Results of Organization.

Who shall question the value of florists' clubs when he remembers those illustrious examples of the persistent good work and zeal of these bodies that now, I am glad to note, adorn this country? Organization, then, is the watchword of the day. We see evidences of its operation on all sides, and florists everywhere, particularly the growers, are feeling the effects of the workings of organizations and combinations which materially advance the cost of all component parts, articles, and materials entering into the construction of greenhouses and the operation of them. Even labor organizations contribute largely though indirectly to the same result.

Florists' clubs are by their very nature the legitimate and properly designed combinations for accomplishing for their members that which if left to individual effort, would be unattainable. The club's value to its members lies in the facility it affords for bringing out the very best methods locally known for growing and marketing the crops of the members.

Purpose of Clubs.

The florists' club's purpose is primarily to develop and advance the floricultural industry as locally presented. This is accomplished by the extraordinary facility the club offers for the exchange of experiences of its members by the presentation of essays and informal chats that the club meetings invariably bring about between members, so that they individually, after a period of association with each other, are far better exponents of the vocation they represent. For it is a noteworthy fact that florists are in these times better informed, and generally more qualified in their profession, than they were prior to the organization and practical operation of florists' clubs throughout the country.

I will go still further, and assert with full confidence, that even the leaders of twenty years ago are to-day, in their respective lines, still better qualified and more successful and representative than they formerly were, because, as a rule, the class referred to are always found foremost in the ranks of trade organizations. Florists' clubs give a tone and dignity to the calling that truly belongs to it, adding to it prestige, without which progress and development are necessarily retarded, as witness the condition of the trade in all its branches prior to the inauguration of florists' clubs over twenty years ago.

The prominence given to the industry through the instrumentality of the great flower shows, the development of interest in our productions, and the elevating influence of these, are the direct results of florists' clubs' work, the value of which must be plain to the most casual observer of the progressive stages of the business during the period following the organization of such clubs.

It is a well established fact that only the producers of first-class flowers are to-day assured of a ready market and remunerative prices for their products, at all seasons of the year, and it is a self-evident fact that the wise grower cannot afford to ignore any contributing factor to the end that he may be able to invariably grow first-class stock, and enjoy a compensation commensurate with the skill and labor employed in its production.

Retailers Need Club Assistance.

Retailers, too, stand in much the same position as that of the growers as to the incumbency upon them to seek all the means within their reach to create a ready market for the final disposition of the stock after it leaves the grower's hands. Upon the retailers devolves the duty; yes, the necessity of developing in the future a still finer taste for flowers, and by suggestions and illustrative displays to create more occasions for the use of flowers and plants, and thereby increase the sale of them. All the representatives of this important branch of the business should highly prize club membership, because it offers them the same advantages that it presents to the growers; and the full extent of these benefits corresponds precisely with the amount of interest taken in the club proceedings, and the facilities afforded by the latter to inaugurate competitive floral displays to the certain interest of all concerned.

Florists' clubs, composed as they are of the most intelligent, enterprising and progressive men in the community where clubs exist, are the natural results of the highest conception of the broad liberal mindedness of their members who have been proven to be such by their attachment to these organizations, and it is an assured fact that every florist engaged in the industry, whether a member of a florist body or not, is sharing to-day, in a relative degree, the benefit of the great work of these societies. Every retail dealer in flowers and every employee should appreciate the great work these societies are doing; their value is progressive and cumulative as they increase in age, being ever watchful as they should be of their opportunities. Every one engaged in floriculture commercially should be a member of a florists' club, and the larger the membership the greater will be the value of the work accomplished by the organization. Every man possessing even a hotbed devoted to the production of flowers, owes it to himself and the noble calling he has adopted to equip himself properly with the great fund of valuable knowledge that only membership in a florists' club can impart to him.

The Need of Employees.

And while a reference to employees is not strictly a part of this subject, I cannot refrain from here saying that I have always thought, and strongly contended, that employees who are eligible to membership in florists' clubs should be admitted on the payment of dues much lower than those paid by dealers and employers; and the latter class should gladly welcome employees to their ranks so that the knowledge thus acquired by these employees may be used to the advantage of floriculture generally.

It is indeed deplorable to witness some florists' clerks attempting, without success, to give to the customers even the proper names of the plants they are selling, and most unfortunate are the results of their efforts to give the public the necessary mere rudimentary cultural instructions for growing the most ordinary house plants, or the more easily grown bedding varieties. And when their effusions are given to the press, as they too frequently are, every intelligent, well-informed florist is horrified and totally disgusted with the perusal of it. The true value of florists' clubs would be materially augmented by a recognition of this suggestion, and the practical operation of it.

Prior to the formation of these clubs it was no uncommon occurrence to find the door of many greenhouse establishments securely locked against visiting florists, the owner himself being secreted upon the premises and refusing to be seen. The spirit of jealousy, suspicion and deceit was not confined to any one locality either, and such examples of unfriendliness could be found in almost all of the large cities, where now are to be seen flourishing clubs, with many of their members trying to outdo the others in generous public-spirited acts. Even in our club we have some members, most enthusiastic and devoted to the promotion of good feeling, who prior to joining the club would have walked two or three blocks out of their way to avoid passing close to the stores of their competitors. At the same time it was easy for any of us to have a grievance against our neighbor florists; we would give a willing ear to any accusation made against them, and would greatly magnify their alleged faults, freely circulate rumors detrimental to them, and if an opportunity arose to quote competitive prices, one dealer would be sure to undercut the other.

Now, thanks to the happy results of our club meetings that bring us together twice a month, all inimical words and words are by-gones, buried deep, never to be resurrected. Then why should we not prize the florists' club?

The history of florists' clubs, is co-existent with that of the parent and greatest of all floricultural organizations, the Society of American Florists, and contributory support is given by the former to the latter bodies through its pursuing a similar line of work, thereby adding another element of value to the clubs, and increasing the sum total of their intrinsic worth.

Prospective Club Work.

A story giving a review of the value of the florists' clubs would not be even fairly complete did it not include a reference to some of their "prospective work," which is peculiarly their own, and in due time will, I hope, be added to their annual programs everywhere. Among these many phases of contemplated club work are: the dissemination of authentic or floricultural information to the public; an active participation in civic improvement work; substantial aid to school classes in botany and practical garden work. They will, too, always anticipate the demands and inclinations of the public, and never neglect an opportunity, when it arises, to promote among the people a still greater love for and admiration of our productions, and develop an increasing patronage for our members.

Bureau of Information Desirable.

Chief among these, I regard that of dissemination of floricultural knowledge among the public most important. Indeed, it is not unreasonable to hope that in the near future every florists' club in the land will increase its scope and usefulness by maintaining a bureau for the specific purpose of preparing seasonable articles giving plain, practical cultural instructions as to growing plants and flowers that will insure to those interested pleasurable and successful results; and securing the publication of these articles in the press of their respective localities. For if such articles are carefully prepared, devoid of the appearance of commercial interests, and of a truly altruistic nature, the press will cheerfully publish them, and the ultimate results will inure to the certain benefit of the florists.

Aiding Civic Improvement.

Another opportunity of vast importance now presenting itself to the florists' clubs is that of co-operation with the local civic improvement efforts. In such matters the present is a most opportune time for the clubs not only to identify themselves with such work, but actually to lead in it, and when it is considered that the florists alone are the direct pecuniary beneficiaries of this work so fast becoming popular, it is all the more surprising that their organizations have not as yet shown much aggressiveness in it. Our own club has already taken some initiatory action along these lines; but really effective work can only follow continuous and systematic effort. Our clubs need apologize to no one for their intervention in this good work, so productive of almost immediate results and constituting an element of rare value.

This work might with much propriety extend to efforts upon our part to secure horticulturists and practical plantmen for our parks and public gardens, and thus remove from such places the examples of so much abortive work placed there by politicians wrongly occupying these positions, caring little about the work beyond its remuneration, men too frequently devoid of the knowledge necessary to equip them for even the most rudimentary work of this nature.

It is true that the total eradication or even amelioration of all the ills that the pursuit of the florist business is subject to, is not contemplated by the most enthusiastic champions of florists' clubs, for if that were possible then uninterrupted success and perfect tranquillity in our chosen work might be purchasable by the mere payment of our annual dues in these societies.

An Example of Wholesome Fraternity.

If the power and influences of organizations were devoid of proof, or at all lacking confirmation, I might with perfect propriety point to even one of many examples of it that could be found in the history of our own club. On the occasion I refer to, it was not necessary to lose any time to work up sentiment to attain the end desired; we were already organized and the necessary spirit of kindness toward each other was there, on top of it, as it were, and the occasion only was needed to give a practical demonstration of it.

It was less than two years ago that one of our members was about to erect a fine store and office building. We considered that the accomplishment of that enterprising project would stand as a monument to the floral industry, that, locally, it would be an illustrative testimonial of the great possibilities open to others thus engaged, and that the dignity of the calling would be forcibly impressed upon the public by witnessing such an achievement.

The club accordingly took full charge of the ceremonies attending the laying of the corner-stone of that building on July 29, 1905. On that occasion, it affords me great pleasure to say, nearly every member of the club was present and shared with our fellow member the great enjoyment of the unusual but important event. This demonstration of unselfish community of interests, I should not hesitate to declare, never had a parallel in the history of trade organizations, and the emulation by other clubs of the same cordial spirit shown by the members on that occasion would add immensely to the value of the club fortunate to show it.

(To be Continued.)

Reading, Pa.

The firm of Hoskins & Giles was some time ago dissolved owing to the death of Mr. Hoskins. John H. Giles is now in business for himself with a very handsome store and greenhouse attached at 123 South Fifth street. Besides his greenhouse in connection with the city store he has a fine growing plant a short distance out on the Mineral Spring road. Mr. Giles says that Easter trade was very good.

The Hoskins boys have formed the G. H. Hoskins Company, and do business at 37 North Tenth street. They have also a greenhouse, in connection with their city store, but the principal part of the plant growing establishment is at Wyomissing. The Hoskins Company has received the contract to plant the grounds connected with the Water Department of the city and were busy getting their stock in shape. J. M.

Harrisburg, Pa.

The Capitol city of the Keystone state is considerably behind in matters of interest to the craft compared with many of the smaller places in this great commonwealth. J. D. Brenneman is probably the largest grower. He has about seventeen greenhouses well filled with stock, ready for immediate sale, consisting chiefly of geraniums, roses and heliotropes. In young chrysanthemum plants he has them by the hundreds of thousands and judging from the appearance of his houses of stock plants will be able to continue to produce them in large quantities until far into the Summer.

The Paxton Greenhouses, owned by M. G. Hanson and Louis Salingre, are on Cameron street where a general assortment of miscellaneous plants is grown for the local trade.

Chas. L. Schmidt, who recently got burned out on North Third street, has now another location on a popular thoroughfare close by. He has a small greenhouse in connection, where a limited number of desirable plants may at all times be found.

Samuel Parker of the Melrose Floral Company states that business was good in his line and that the Easter trade was all that could be desired. J. M.

Bloomsburg, Pa.

The greenhouses on the estate of the late J. L. Dillon are very extensive consisting as they do of about 200,000 square feet of glass. The business is carried on without interruption of any kind. Mrs. Dillon and Mrs. Furman are the managing as well as executive heads of the establishment ably assisted by W. E. Bryfogle as grower and superintendent. Roses, carnations, and verbenas are the specialties of this place, most of which, so far as cut flowers are concerned, find their way to the wholesale markets in the larger cities near by. Their plant trade, however, goes all over the entire country; shipments were being made to Canada as well as many remote points in the Northwest.

More verbenas are grown here than any other class of plants. The propagation of these begins usually in September of each season; when rooted they are potted up in 2-inch pots. These plants then act in the double capacity of making good stock plants for the season's supply of cuttings as well as making good strong plants for early delivery where such stock is desired. Mr. Bryfogle states that they usually pot up about 60,000 in this way annually. In addition to this there are nearly as many again planted around the edges of the benches in both rose and carnation houses. It takes usually about 500,000 plants or rooted cuttings each season to meet the demand. About 100 different varieties are grown.

Mr. Bryfogle is an enthusiast on the subject of grafted roses. These are all grown in solid beds and allowed to remain from two to three seasons. Much more vigorous growth, and consequently better stems are to be had from the grafted stock than from own root plants, is the opinion of the growers here. For raised benches, however, where the plants do not remain so long, it was stated that plants on their own roots were preferable. American Beauty and Perle des Jardins are always grown on their own roots. The grafted stock of these varieties, it is claimed, is not as good as when the plants are

propagated in the ordinary way on their own roots.

The Davis Brothers Company have recently added some new houses and grow carnations chiefly. They have a new white, Mary Albert, that will be shortly offered to the trade. It is a cross between Flora Hill and G. H. Crane. They have also a second seedling, a cross between Queen Louise and a seedling of Scott and Argyle. J. M.

West Chester, Pa.

Joseph Kift, the well known florist, has here a very thrifty looking establishment right in the central portion of the city. What stock is not consumed by the local trade is shipped to Philadelphia to his brother Robert, who has a store at 1725 Chestnut street. The Easter trade here was entirely satisfactory; all available stock was sold at remunerative prices.

A hurried trip through the nurseries and packing sheds of the Hoopes Brothers & Thomas Nurseries showed a large and varied assortment of nursery stock in the course of preparation for shipment. Fruit trees and deciduous ornamental stock could be seen in cold storage by the hundreds of thousands. These are placed in the Fall in long tiers the length of the large storage room. The trees are placed top to top, the root ends forming a wall on either side of the tier in some places twenty feet high. In this way the roots are in position to receive attention such as an occasional moistening or covering as the weather conditions may require. James Farley, the foreman in the rose growing department, is something of a hybridist and has a few houses filled with young stock of his own production. He has many crosses chiefly of the Wichuraiana and climbing varieties that will be heard from soon. In a considerable sized corner of the grounds he has a collection of well-established, large specimens of his own production that show in their dormant condition a wonderful diversity of style and growth formation. It is said by experts that there are many valuable varieties in this collection that would be acquisitions to many of the classes to which they belong. J. M.

West Grove, Pa.

West Grove is everywhere renowned for its roses. The Dingee & Conard Company has by long years of successful propagation brought about this enviable reputation. At the time of your correspondent's visit there were on hand fully 700,000 marketable rose plants consisting of some 1,400 different varieties, and filling 71 large greenhouses. This stock consisted chiefly of the ordinary mailing sizes as well as the larger two-year-old plants usually grown in 4-inch pots. This, too, at a season when a couple of months of the shipping season had passed. The purchasers at that time along the Gulf Coast had been supplied, and the buyers in the Middle and Eastern States were just beginning to claim attention.

The business of this company is now well presided over by the affable P. J. Lynch, who is its executive head and business manager. In these duties he is assisted by his brother Henry, who is well qualified for the onerous duties in the official department of this company. Edwin Parker is the grower-foreman, the high priest of the incubating department, where the young tenderlings are turned out by the hundreds of thousands and nurtured until of sufficient strength to stand either a Kansas drought or an Alaskan blizzard.

Not far removed from the Dingee & Conard place are the greenhouses and nursery grounds of the Conard & Jones Company. This is a newer establishment and one of the largest plant producing corporations in the country. As its name implies it is a vigorous shoot of the parent plant that has already taken a position of confidence among the plant purchasers of the whole country. The entire growing and propagation end of the business is in the hands of Antoine Wintzer. A better selection could not be made anywhere. As a hybridist he is a past master of the art, and as a disciplinarian, grower and propagator he is at the head of his profession. Mr. Wintzer takes pleasure in showing visitors the results of his work among the great many new things he has under way.

All the popular roses are grown, some

Cyclamen

Splendens Giganteum Hybrids

This strain has no equal or better, in five true colors, including fringed varieties, twice transplanted from flats \$3.00 per 100, \$25.00 per 1000, from 2 1/2 in. pots \$5.00 per 100 \$45.00 per 1000.

PANSIES

THE JENNINGS STRAIN.

A few more left; strong plants at \$1 per 100, transplanted, ready to bloom. Cash with order.

E. B. JENNINGS, Lock Box 254, Southport, Conn.

Grower of the Finest Pansies

varieties not to be had elsewhere. Killarney, Maman Cochet, and Crimson Rambler were said to be in most demand. Pink and white Cochet, are great sellers. The yellow Cochet is no companion for the other two, being a poor grower and should never have been classed with the Cochets, as it is always disappointing compared to the vigor of the others of this color.

Several houses are devoted to the newer crosses and seedlings of Mr. Wintzer's own raising. His work is not of the haphazard sort. Every new variety is well understood. A correct pedigree of the parentage on both sides is preserved for generations back. This not only applies to roses but to cannas as well. In cannas Mr. Wintzer has a good many fine things in store for the future. The production of the smaller hardy outdoor stock is carried on with apparent little trouble or mishap. Several houses are filled with the hard wood cuttings of viburnums, hydrangeas, berberis, weigelas, and, in fact, all through the entire list of stock of this description. These are put in by the hundreds of thousands and transplanted from the cutting beds in the greenhouses to the open fields where they are set in rows sufficiently far apart to allow the cultivation with a wheel hoe the first season. The second season every alternate row is removed and they are then ready for cultivator by horse power. Acres of such valuable stock as this, too numerous in variety to mention, can be found here.

Mr. Wintzer called the writer's attention to a large block of the much talked about Iceberg blackcherry killed almost to the ground by the Winter. It is little better than the old Crystal White of twenty-five years ago, and on account of liability to get killed by an ordinary Winter in this climate will not again be popular except in a warmer climate. J. M.

GERANIUMS—GERANIUMS

Nephrolepis Scottii all the year round

JOHN SCOTT, Roland Road & E. 5th St., BROOKLYN, N. Y. Telephone 2890 Bedford.

Newport, R. I.

Messrs. Wadley & Smythe have purchased of Captain J. P. Cotton the Newport Nursery. This nursery was started about fifteen years ago by the late L. D. Davis and others. A few years after its incorporation trouble overtook the company, with the result that Captain J. P. Cotton, one of the largest stockholders, assumed responsibility and took over the nursery, operating it on his own account until the sale to Messrs. Wadley & Smythe. The Newport Nursery is fairly well stocked; there is an especially fine lot of large evergreens, all of which Mr. Smythe will utilize in the near future on places he is grading.

Gibson Brothers are doing a large business in their new store on Washington square. Their greenhouses on Malbone avenue are fuller than ever before with choice bedding stock.

There is a large demand for Red Erfordii begonias; ten thousand will be planted on one estate.

Andrew Christensen is now established on Russel avenue as a landscape gardener; he will erect greenhouses as soon as he gets straightened out a bit.

If there has been one department of the City of Newport that escaped public criticism as to the manner in which

H. WESTON, Hempstead, N. Y.

it had been conducted, that was the department of public parks under the superintendence of Eugene Hughes, who recently severed his connection with that department. Last week bids were opened by the park commissioners for the care of these parks and in addition thereto the care of a new system for public comfort situated on Washington square. William H. Maher was the lowest bidder and secured the contract.

Good single men capable of greenhouse work are still in demand here, and indications point to the employment of every available man for outdoor work when planting gets fully under way. Donald Shepherd, who is superintending the improvements and alterations on the estate of W. R. Roelker at East Greenwich, is having a good deal of trouble in securing help in sufficiency to bring things to a satisfactory conclusion this Summer. Mr. Shepherd intends planting extensively in shrubs and hardy perennials and roses.

The qualified intimation in a recent issue of The Florists' Exchange of the withdrawal from business of the Faddons (Mrs. Hura) has been fully verified by recent happenings and finally by the closing of the store on Bellevue avenue. This retirement from business of one firm and the removal to another location of Gibson Brothers sweeps the avenue clean of strictly so-called local florists, leaving that fashionable thoroughfare also for more than seven months of the year without an open florists' store. The firms from New York coming here every Summer are Hodgson, Wadley & Smythe, Leikens and Siebrecht. There are vague rumors of the further invasion of Newport by a well-known florist now doing business in one of the large cities, the question of location being so far somewhat of an obstacle.

The troubles and perplexities of the members of the Florists' Club of Columbus, Ohio, as related from time to time in the columns of The Florists' Exchange and other horticultural journals, in connection with the attempt made by that body to receive permission from those in authority to deliver semi-grants or for a penny a-piece packages of seeds to school children, are interesting. We living in Newport try once in a while to do a little in the way of encouraging a fondness for plants and flowers on the part of school children whose home surroundings are usually bare of such adornment, and happily we receive from those in authority permission to do what has been proposed; but we also receive from them all the aid and encouragement possible. Here, however, the plan of supplying seeds at the rate of a penny a packet has not been adopted; instead of that a great number of substantial cash prizes are offered for exhibits of flowers and vegetables by children, leaving the matter of the purchase of seeds to the discretion of the children and their parents. In addition it is hoped to have at a number of schools gardens cultivated systematically by children, for which liberal premiums are offered by the society.

James Murray, for nearly twenty years gardener for Henry Clews, is very ill in the Newport Hospital. Mr. Murray during his long residence in Newport has endeared himself to all classes of the community and now that his condition has been announced critical much sympathy is expressed for him and his family. D. M.

PETER REINBERG, NO. 51 WABASH AVENUE, CHICAGO

Washington, D. C.

It is probable that the flower beds in the yards surrounding the Treasury Building will occupy their customary places this Summer, but on a more extensive scale. A short while before Secretary Shaw retired he gave orders that the flower beds be abandoned. Since Mr. Cortelyou has assumed the secretaryship, however, it is understood that preparations are being made to enlarge the beds, plant more flowers, and make the display more elaborate than ever before. The proposition to do away with the beds is said to have been due to the belief that they were not in keeping with the immense building of the United States Treasury. The beds were not unusually large nor particularly beautiful, and Mr. Shaw decided that the lawns would look better without them. According to the present plans the beds are to be much larger than of old and greater preparation will be made in arranging the display.

Notwithstanding the very unseasonable weather the past week, during which time growers have again had to resort to their fires, trade has been good and prices equally so. The sudden drop in temperature from the nineties to below freezing seemed, in a general way, to reduce the supply, especially of carnations.

The plants of many of the local growers are between crops, and the cut is correspondingly small. Stock, however, is banded to better advantage by reason of the cold wave. There has been quite an amount of funeral work owing to the deaths of several prominent persons; a good many society dinners have also claimed the attention of the decorative artists. There have been a few marriages also.

Plums, pears, and some varieties of cherries are in most profuse blossom, and baffling with the cold. Grave apprehensions are felt relative to loss of the fruit by frost, but with the exception of a few instances, the constant wind, though cold, has kept the blossoms dry, and to this time the loss has been small. The early gardens are being greatly retarded; many persons during the torrid wave in March planted all kinds of seed. Peas are up, but at a standstill; and the other seeds either lie dormant or have decayed in the earth.

JAS. L. CARRERY.

TERRYVILLE, CONN. — Edward Fenn, florist, remains in a critical condition at his home on High street. He has been ill all Winter, but was worse than usual last week.

Plant Notes.

ORCHIDS.—There is no apparent reason why orchids should not be found profitable to grow by florists who own their greenhouses. A good plan for beginners in the cultivation of orchids would be to purchase at first a reasonable number of established plants and along with these get a case or more of imported stock. The latter under ordinary conditions, and with a fair share of attention, would in a few years give a good account of themselves. There is a tendency on the part of a certain class of flower buyers as well as of buyers of plants to look for something more out of the common than usually satisfied them. It is often the case that many houses are found empty in Summer when the space within them could be made profitable if the owners could hit upon something or another that would give quick results and in that way be no hindrance to the success of what was eventually intended to occupy the same space. A greenhouse in that respect is in much the same condition as a piece of ground, only there is more at stake with a greenhouse. In both, however, more money can be got out of them when continuously occupied. D. M.

WOOD BROS. Fishkill, N. Y.

MABELLE--New Pink Carnation for 1907

Color.—A peculiar shade of lovely pink, with a faint yellow cast; several shades lighter than the Lawson. Unlike most pinks, the brightest sun does not injure the color. Size.—Three to four inches in diameter when established. Order.—Pleasing, but not strong. Stems.—Invariably strong, but always graceful, ranging from 12 to 30 inches during the season. Habit, etc.—A very quick active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Gets away rapidly, blooms early and gives long stems right from the start. Productiveness.—Prodigious is the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. Stock limited. No discounts. First class certificates Madison and Indianapolis. Delivery Jan. 6th to 10th and later. Price, \$12.00 per 100, \$100.00 per 1000.

HENRY EICHHOLZ, Waynesboro, Pa.

REVIEW OF THE MARKET

NEW YORK.—There has been very little change in the market value of cut flowers this week, but it is the general opinion of dealers that stock is clearing out a little better, due principally to the moderating of certain kinds of flowers, and to a little spurt that came along on Saturday last. Violets are nearing the end of their season, and compared with but a few days ago the number of boxes received daily is very insignificant.

Bulbous stock from the South continues to arrive, but the home grown product is shortening up rapidly. Freesias and sweet peas are fairly plentiful, and as prices are not held too stiff, clearances are the rule. Snapdragon continues a regular factor in the daily supply, and while values vary a great deal at times, the general average is fairly satisfactory.

For American Beauty roses there is an occasional sale of special grade blooms at 25c. each; these are of a quality somewhat better than the average, however, as there is at all times a generous supply of blooms that can be purchased in quantity at a figure much below that named.

The supply of tea roses is not quite as heavy as has been the rule for a few weeks, and fairly good clearances are being made. Carnations, too, are clearing out fairly well, and there has been no material change in values.

CHICAGO.—A decided curtailing of the supply last week, owing to the relatively wintry weather, with a good, firm shipping and city demand, brought about a most unexpected turn in the market conditions, and added one more to the surprises which the sudden and unlooked for tangents of the weather have given this market within the recent past. With more than an abundance of stock on hand in all lines, a week before last, and no immediate prospect of any cessation of the incoming surplus, last week opened dreary and stayed so, growing colder and ending with a snowstorm and blizzard. Out of door supplies which were coming in in large quantities from the southern sections were entirely cut off or came only in greatly reduced areas, while the greenhouse products were immediately reduced greatly in amount.

This week opened with a strong demand and an inclination toward higher prices, and yet it is a question. After recent experiences it is well to say as Josh Billings directed, "Never prophesy unless you know."

BOSTON.—The past week has seen little change. Prices have been somewhat firmer, and there has been a good supply of all kinds of flowers. Violets continue to come in, although at present there are more doubles than singles, and double violets are never popular in this market. Roses are plentiful enough; there are now some good American Beauty and Richmond, and Killarney, Wellesley and Mme. Abel Chatenay are all in good shape. Bride and Bridesmaid are very plentiful. Carnations keep up well in price; some excellent blooms are seen. Sweet peas are good. Bulbous stock continues plentiful, and there are more lilies than last week. Other stock remains about the same. Hardy cut ferns are of poor quality; in fact, good grades can scarcely be got this season.

PHILADELPHIA.—The supply of flowers has fallen off the past week, but as there is not any large amount of business doing there is sufficient stock for all demands. American Beauty are here at \$2 per dozen for the very best, but if a customer wants one hundred he can drive a good bargain at lower rates. In tea roses, there are a few choice Richmond and Liberty coming in which sell at \$2 to \$2.50 per dozen. Some good flowers of Killarney are selling at \$8 per 100. The general stock of teas ranges from \$2 to \$6 per 100. Carnations are falling off in supply; a few fancy Enchantress have sold at \$4 per 100; general stock is going at \$2 to \$3 per 100. Gardenias are selling this week at from \$1 to \$2 per dozen. Cattleyas are very scarce this week; they are sold readily at 75c. per flower. The supply of violets is gradually diminishing; most of the growers are sending in only twice a week. Prices range from 50c. to \$1 per 100 for the best doubles. Lilies, both Harrisii and longiflorum, are very plentiful, the supply being far in excess of demands. No reasonable offer

is refused. A few stalks of Liliun candidum were seen on Monday, bearing five to eight flowers per stalk; they sold at \$1 per dozen stalks.

Asparagus is much too plentiful; 50c. per bunch is the top price. Smilax is in fair supply; the best is bringing \$25 per 100 strings.

Sweet peas are in large supply; prices range from 75c. to \$1.50 per 100; such fancy flowers of scarce colors, some as light lavender, fetch \$2.50 per 100. Anthrinum majus is selling very well at from \$1.50 to \$2 per dozen stalks.

DAVID RUST.

ST. LOUIS.—There was quite a lot of business going on among the florists the past week, but not enough to keep us what we term busy. There were weddings, parties, dinner receptions and plant decorations, also quite some funeral work. The sale of blooming plants keeps up, and quite a good demand is reported for fancy stock of these. The wholesale market was not so overcrowded the past week; still, a great deal of stock came in, especially Harrisii lilies and callas. These sold very cheap; as low as \$5 per 100 in large lots; other bulbous stock is becoming scarce. Lily of the valley is fine at \$2 to \$4 per 100. Tulips bring \$2 to \$4 per 100; these are not any too plentiful in the market for the demand.

In roses, the market is well supplied with all varieties. American Beauty, long, fancy, the very best, bring only \$3 per dozen; from this down to shorts at \$4 to \$5 per 100. Other roses, such as Bride, Bridesmaid, Kaiserin Augusta Victoria, Mme. Abel Chatenay, Killarney, Richmond, Perle des Jardins, Golden Gate and Ivory realize \$5 to \$6 per 100 for the extra choice. Other grades in these run from \$1 to \$3 per 100, and cheaper in 1,000 lots.

Carnations are up a cent or two, and not nearly so many are coming in; the wholesalers are cleaning up daily at prices running from \$2 to \$4 per 100; some extra fancy bring \$5. Quality of stock is very good in all varieties, especially Lady Bountiful, Enchantress, Mrs. Thos. W. Lawson, Prosperity and Cardinal. These, with a few odds and ends, make up the daily market supply in St. Louis.

ST. PATRICK.

CINCINNATI, O.—We are passing through a spell of dark, cold and gloomy weather—rain, snow and sleet. Business is still quiet, but all choice stock of carnations and sweet peas sells readily, and as this weather is liable to continue a few days, it will have a tendency to shorten supplies and advance prices. Wholesale florists are now in our stock; this is about the only flower that is dragging. Sweet peas are now more in demand than any other flower, and sell at 50c. to 75c. per 100. Bride and Bridesmaid roses bring 2c. to 6c.; carnations, 1.50, \$2 and \$3; stocks, 3c.; lily of the valley, 4c.; tulips, 2c. and 3c.; Baby primrose, 25c. to 50c. per 100; snapdragon, 4c.; callas, 8c. to 10c.; longiflorum and multiflorum lilies, \$1 per dozen. Fancy ferns still hold at \$2.50 per 1,000 for good stock. Smilax is very scarce. Asparagus plumosus sells at 25c. to 50c.

Our visitors this week were Henry and William Lodder, Hamilton, O., and Mr. and Mrs. C. H. Maynard, Detroit, Mich. Mrs. Maynard is busy working for the Ladies' Auxiliary of the S. A. F. O. H.; they now have over fifty members and are still hustling.

Quite a number of our florists are sadly in need of men; plenty of hobs are around, but they won't work.

It looks as though peonies were well destroyed in this section, as on Sunday night we had ice one-half inch thick.

E. G. G.

INDIANAPOLIS.—The weather still plays the leading role in the flower trade. It snows almost daily, and bleak winds keep the public from buying unless pressed to do so. Naturally, counter trade has fallen to a low level, and it devolves on funeral work to keep matters moving. A noticeable fact all Winter and Spring has been that flowers are more generally used for social functions, but never in such profuse quantities as heretofore. Really high-grade stock is difficult to obtain and prices for the same have advanced. Batches of the late bulbous stock sell readily at \$3.50 to \$4 per 100. The carnation cut, as anticipated, is very light; white ones are often unobtainable. Prices are in-

variably firmer—\$2.50 to \$4 per 100; \$1 per dozen is the usual retail figure. Many callas and Harrisii lilies are used daily at \$8 to \$12 a hundred.

Cooler weather has thrown many roses off crop, and few are shipped away. Bride and Bridesmaid are the mainstays at \$6 to \$8 per 100. Fine Madame Abel Chatenay are in demand at \$8 to \$10 per 100. Swainsona, pansies, Ten-week stocks, candytuft, mignonette and forget-me-not lend variety to the market.

Plant trade has fallen off perceptibly, but it is well as there are no choice plants to offer except a few rhododendrons and hydrangas.

Tomlinson Hall Market displays quantities of summer stock, but there is little inclination on the customers' part to even think of the bedding season, so business there is not as brisk as it might be.

I. B.

ST. PAUL.—Business the past week has been remarkably good. While the weather has opened up fine, stock is plentiful; at times, during the middle of the week, wholesalers were offering roses at a small figure, the market appearing to be pretty well glutted. But this condition lasted only for a day or so, and prices afterward advanced to the normal point.

Carnations are in great abundance, and are being offered at prices ranging from 25c. to 75c. a dozen, retail. The confectioneries and the department stores have handled a great many carnations, but the inclement weather has kept the street men from doing but very little business.

Spring plants appear to be the next on the calendar. Already a number of wholesale lists have been sent out to the country trade, and from reports, some very nice orders have already been booked. But very few shipments have been forwarded, and it will be a matter of a few weeks before this can be done safely by freight. A glance at the different greenhouses finds an enormous supply of bedding stock for the market. Geraniums, of course, lead in number, but it is notable that more stock for bedding purposes has been grown than heretofore.

PAUL.

NEW BEDFORD, MASS.—There is no let up as yet to the demand for cut flowers, and the supply is none too plentiful. There have been so many cloudy days of late, that blooms are very slow in opening. Prices remain about the same. Roses sell at from \$1.50 to \$2 per dozen, retail; carnations, 50c. to 60c. per dozen, although one grower is retailing them at 25c. per dozen, and a few others at 40c. There are quite a lot of daffodils yet, but tulips are quite scarce. Sweet peas bring \$1 per 100. Violets are about a thing of the past; a few are to be seen once in a while from cold frames; the stems are short and the flowers small. Garden work is in full swing; the hardest part of this branch just now is to get good men to stay with the job. Funeral work is quite plentiful; this uses up lots of stock. Roses are almost as cheap as carnations at wholesale. There is a good, steady demand for white carnations. Geraniums are coming along in good shape, as are other bedding plants.

HORTICO.

CHANGES IN BUSINESS.

GLENVILLE, O.—J. W. Wilson has purchased 15 lots near the Eddy road. He will move his greenhouse now located on the Clark property, to these lots.

NEWBURYPORT, MASS.—J. J. Conley, the Buck street florist, is to open a flower stand at the hallway on State street recently vacated by E. W. Pearson.

CRIPPLE CREEK, COL.—The Kennedy Floral Company has moved across the street from its old location. A new front will be put in and other improvements made.

ABILENE, TEX.—A charter has been filed by the Abilene Nursery Company, capital stock \$10,000; W. F. D. Batzjar, W. A. Minter, Jr., and J. V. Cockrell, all of Abilene, incorporators.

NEW BEDFORD, MASS.—James Cleary, who is manager of Wm. P. Peirce's Union street store, will, it is said, open a flower store some time in September in combination with the undertaking business.

FRANKFORT, KY.—The Morgan Floral Company of Henderson county has been incorporated with \$3,500 capital stock. The incorporators are C. A. Morgan, E. A. Eckert and W. D. Lambert, of Henderson.

CUT FLOWER BOXES

Waterproof corner lock style. The best and neatest cut flower box on the market to-day.

No.	Per 100	1000	No.	Per 100	1000
0 3x4x20	\$2.00	\$18.00	6 4x8x25	3.75	36.00

The above boxes are a few of our leading sizes. A complete list of all the sizes we manufacture mailed free on application. Add 50c. for printing on an order for 100 boxes, and 75c. for 200 boxes. No charge for printing on an order of 500 boxes, or over. Sample card board free on application.

Terms cash with order.

The LIVINGSTON SEED CO., Columbus, Ohio.

New York.

News of the Week.

The experiment of transplanting a tree between seventy-five and eighty years old and sixty-four feet high was made recently at Port Chester. It was a fine specimen of the Japanese ginko, having a spread of about sixty-four feet and a trunk nine feet in diameter. It weighed thirty-five tons, and a twelve-ton steam road roller was required for its transfer. This is said to be the largest tree ever transplanted.

Sentiment was the motive for moving it. It was planted by Mr. and the late Mrs. George W. Quintard more than fifty years ago, when they were a young couple and had just settled in their new home in Port Chester. This house is now known as the Quintard homestead. The tree then was about twenty-five years old. It flourished and became one of the landmarks of the neighborhood. Mr. Quintard, who is now in his eighty-fifth year, lives with his daughter, Mrs. Nicholas F. Palmer, in King street. Mrs. Palmer wished to have the tree where her father could look out upon this companion of a lifetime from his window, and therefore made arrangements to have it moved to her place.

The tree was moved by Siebrecht & Son, florists and nurserymen, with a machine which has been devised for moving large trees, and which was used to transplant many hundreds of smaller trees on the estate of John D. Rockefeller, at Pocantico Hills, near Tarrytown.

Gunther Brothers, wholesale florists, will remove about May 1 from their present location, 30 West Twenty-ninth street, to 114 West Twenty-eighth street. Wm. H. Gunther has occupied the store to be vacated for the past fifteen years. The property is to be improved and office buildings erected; a lease on it has been secured for 84 years.

One of A. T. Boddington's traveling men, August Noeber, is ill with rheumatic fever in the Emergency Hospital, Boston, Mass.

The Rhinebeck Gazette estimates that the shipments of violets from that district during Easter week brought to the growers \$12,500.

Gustav Pullman, residing at 918 Ninth avenue, has filed a petition in bankruptcy, with liabilities of \$8,706, of which \$6,900 is on an unexpired lease, and assets of nominal value. He was formerly in the restaurant business and a florist. The New York Cut Flower Company is a creditor for \$1,404.

On Tuesday, April 16, A. Weisenberger, head gardener at Gedney Farms, White Plains, N. Y., was married to Miss Elsie Widener of Naples, N. Y. The newly married pair will reside at Gedney Farm.

F. L. Ziegler and Wm. Hastings, both of Newport, R. I., were in town this week.

FIRMS WHO ARE BUILDING.

WATERBURY, CONN.—Work will soon be started on a large greenhouse on Dublin street for Frank Floto of the firm of Saxe & Floto. It will be 50x200 feet, of iron, cement and glass, and will cost about \$10,000.

Los Angeles, Cal.

Trade Notes.
 S. Groot of the firm of Sluis & Groot, wholesale seed growers, Enkhui-
 zen, Holland, is on this coast on busi-
 ness, and was a visitor to the Pasadena
 flower show. He, as are all visitors to
 this country, was surprised at the great
 diversity of plant life in cultivation.
 Poinsettias were a total failure here
 this season. There is no attempt made
 at growing them under cover, and the
 cold wet Winter was more than they
 could endure and develop their beautiful
 bracts.

A violent storm tore the muslin cover
 from part of the Whitesey carnation
 houses, but did no damage to the stock.
 The cut from this establishment was
 11,000 blooms for the week ending March
 30, and the price obtained in our local
 market was from \$1.50 to \$4 per 100.
 Sunny weather, which now prevails,
 will bring on outdoor stock to perfection
 and in great quantities, for the acreage
 is large, therefore lower prices will pre-
 vail.
 P. D. B.

Dallas, Tex.

The ladies of Dallas are arranging
 to hold a chrysanthemum show this Fall.
 They want to make a grand success of
 it, and are to give first-class prizes that
 will induce the best growers to exhibit
 here. This is the first year they have
 ever tried to hold a show in this city.
 Is there anyone that you could sug-
 gest that might be a good man to come
 here and work up interest in this line of
 work?
 TEXAS SEED & FLORAL COMPANY.

NEW ORLEANS.—Frank Reith has
 the contract for supplying the plants to
 the new hotel, "The New Denechand."
 This is quite a job and requires num-
 bers of plants. He is thinking of im-
 porting his bay trees, etc., direct from
 Belgium.

Philadelphia.

News Items.

While there has not been any great activity this week, several of the retail stores have been doing a nice business with wedding orders; shower bouquets and baskets of flowers have been in good demand.

S. S. Skidelsky has returned from a three months' trip, which, he says, was very successful. He has done very well with the new Rose-pink Enchantress carnation, and has received orders for this variety from Europe and also from British Columbia.

James Walsh, decorator for the Wm. Graham Company, fell from a ladder on Saturday and sustained a very bad fracture of the hip; this will keep him in the hospital for at least six weeks.

Among the Rose Growers.

It is rather difficult to write much about a rose growing place at this time of year, hence concerning our trip to Wyndmoor last week we can only be brief. At George Burton's place all the houses but one are devoted to American Beauty, all the plants appearing to have yielded heavily. One house of Golden Gate was very prolific both in wood and flower and will be carried on through the Summer. Three new houses are in course of erection.

At Myers & Samtman's establishment all the American Beauty houses looked well with lots of flowers in sight. They have a new rose, American Beauty X Safrano, which they will grow largely for cut blooms next season. In the growth it looks more like Beauty, with bud shape of Safrano, color bright pink. The firm has begun to build one large new house.

John Burton's American Beauty have done well; Liberty is also showing very good. Bride and Bridesmaid in solid beds have done very well. Mme. Abel Chatenay does very satisfactorily on this place.

At Alfred Burton's everything was looking like a new pin; even at this season all the American Beauty plants are tied up neatly, and producing well. Liberty looked very prosperous. Kate Moulton has been tried this year and more of it will be grown next season.

accompanied by his son, has left for a trip to New Mexico in hopes of benefiting the latter's health.
Last Tuesday evening, at Mussey's, Dearborn and Madison streets, marked the beginning of the howling tournament to select the team to represent the Chicago Florists' Club at Philadelphia next Summer.

A. Malchow, at his North Clark street store, reports a constantly increasing business and expresses satisfaction with his recent Easter trade, the first in his present location.

B. Amerpohl, of Janesville, Wis., was in the city last week.

The Chicago Florist Company, Nic. Korsun, proprietor, has opened a new store at 112 East Monroe street.

The E. F. Winterston Company has completed the removal of its stock of supplies to the quarters of the Winterston Seed Store on the floor above, where, on a newly erected balcony, are installed the desks of Messrs. J. P. Deegan and L. H. Winterston.

On May 1 Frank Williams will be out of his Masonic Temple store, which it is reported will be occupied as a shoe shop. There are, however, still openings in which the management of the block would like to interest a florist.

Although arrangements have not been fully settled in the Kennicott Brothers Company's new quarters, they have progressed far enough to demonstrate that when completed they will be not only commodious but convenient.

The monthly meeting of the Florists' Club was held at Handel Hall on Thursday evening of last week with about the usual attendance, and, like all the recent meetings, proved an interesting and instructive evening to the participants. The gathering had been designated as a retailers' night and a general informal talk was indulged in concerning the results of the recent Easter business, the consensus of opinion of those present being that notwithstanding the unusually low price of cut flowers there was still a strong tendency among purchasers toward plants. General reports were very favorable as to the volume of trade. P. J. Hauswirth gave a very entertaining talk on what he saw at the Washington Rose Society convention, calling especial attention to the new rose Rhea Reid exhibited by the E. G. Hill Company and to the Rambler roses originated and exhibited by M. H. Walsh which he thought, if properly done here, would find a substantial support in the retail trade.

J. C. Vaughan, P. J. Hauswirth and George Asmus were appointed a committee to consult with Mayor Busse regarding the possibilities of doing something more than heretofore for horticultural interests in the public parks, the Mayor in his ante-election speeches having expressed sentiments tending in this direction.

Vaughan's Seed Store showed a handsome specimen of the new pink spirea, Peach Blossom, and well grown plants of Azalea mollis and A. Yodogawa.

J. Elder of the Iowa Seed Company was a recent visitor.

Louis Wittbold, whose inventive genius is always on the alert in the direction of improving present methods, is at work developing a form or mold for a cement bench which will soon be ready for the market. With this form of construction the whole bench will be molded at one time and with a durability that will last a life time.

W. N. Rudd's carefully cherished crimson carnation chosen by critics as the superior of all his productions, will be put on the market next year. It is as yet without a name. The stock will be disseminated by the originator and Jensen & Dekema of Chicago.

Sinner Brothers, who were among the majority of growers who suffered from the drought of last Summer and the sunless Midwinter have brought their stock through in good health and for the past few months their cut has not only been among the largest proportionately but of excellent quality, both in roses and carnations.

The Chicago Rose Company had an exhibition for several days a fine display of Queen Beatrice roses forwarded from Washington by F. H. Kramer. They arrived in good condition and attracted the attention of all the local growers.

Highland Park was aroused early on Monday morning by the arrival of a fifteen pound young lady in Fritz Bahr's family. WILLIAM K. WOOD.

Chicago.
News of the Week.
It is generally admitted among the numerous wire-workers that business has been remarkably brisk and constantly on the increase for some time; however, owing to the recent advance in the price of stock and the unionization of the workers an advance in the cost of finished goods is probable at any early date.
The eccentricities of the weather vie with the memory of the oldest inhabitant in producing meteorological wonders, and the week of cold freezing weather after Easter preceded by a week of Summer weather and succeeded by a week of drizzle and snow, have already shown effects on vegetation further South. But how serious they will be here remains to be seen. Much damage to fruit crops is reported from many sections.
The florists here think it an unjust discrimination against trade that their produce is barred from admission to the Council Chambers on inauguration night. The arrangements for the inauguration are entirely in the hands of the present Mayor and the city clerk who might be induced to change this rule.
Among the growers of bedding plants through this section reports of a general shortage of geraniums still continue to come in.
Grand opera last week, as usual, added its perceptible quota to the demand for the choice tid-bits.

News Notes.

W. T. Dwyer of Connersville, Ind., was a visitor the past week, demonstrating the value of the Heim carnation support to our local growers. Mr. Dwyer reports quite a batch of orders. He also attended the Florists' Club meeting on Thursday afternoon of last week.

Professor H. C. Irish, superintendent of the Missouri Botanical Garden, gave a very interesting lecture last Friday night before the Ladies' Club at Cabanee and King's Highway on Art and Home Grounds. These lectures will be repeated from time to time at different places. The professor is president of the St. Louis Florists' Club, and as the preparation of these lectures takes up a great deal of his time he had to miss the club's last meeting.

The jewelry store of Grim & Gorley, florists, at 1510 Cass avenue, was robbed of nearly \$1,000 worth of stock.

Julius Koenig has left the employ of Henry Berning. He had contemplated a trip to the Jamestown exposition, but gave that up and will now find something about town. He is a first-class man in the florist business.

Secretary Walter B. Stevens, of the Louisiana Purchase Exposition, is making preparations to turn over the grounds to the park department by August 1. They are now at work restoring the grounds by planting trees and shrubs. In his report he says that eight thousand trees and thirty thousand shrubs have been planted, and that before the time expires an additional six thousand trees and twenty thousand shrubs will be set out. A large force of men is now at work finishing up the undertaking.

The St. Louis Horticultural Society's executive committee has changed its day meeting to night meeting, owing to the busy season. They are making preparations for their Fall flower show, and are hard at work on the preliminary list, which they expect to have out by the end of the month.

Trade Notes.

Hoba & Olson have installed a very fine fountain, which adds greatly to the attractiveness of their store.

It is understood that the property belonging to Robert C. Seegar has been sold; all that remain are the ice-box and some florists' supplies, which will be disposed of by the receiver the coming week.

L. L. May & Company are now busy with their Spring delivery of nursery stock. Their packing has been unusually heavy and has been done in their new warehouse to good advantage. Mr. May has just purchased a Packard automobile, which takes him to his country home (Mayfield), a distance of 14 miles, in 45 minutes. PAUL.

Indianapolis, Ind.

Spring Show.

The exhibit of flowers at the Spring show of the State Florists' Association was not as heavy as in former years, but the quality was uniformly good. The growers from the surrounding cities contributed liberally. The evening session in the horticultural rooms of the State House was devoted to the routine business and discussions relative to the trade. The auction at the close netted a neat sum for the association. Following is the list of premiums awarded: Two pans tulips, M. Nelson, second; no first. Two spiraeas, M. Nelson first. Display 24 square feet, J. Grande, first. Twelve white roses, The E. G. Hill Company, first, with Frau Karl Druschki; Smith & Young Company, second. Twelve pink roses, Smith & Young Company, first; P. O. Tauer, Lebanon, Ind., second. Twelve red roses, B. K. & B. Floral Company, Richmond, first; Smith & Young Company, second. Twenty-five white carnations, B. K. & B. Floral Company, first; Baur & Smith, second. Twenty-five

PROBABLY ALL GREENHOUSES ARE SOME GOOD

but is "some good" good enough for you, that's the point? If you are an experimentalist, a man who tries this thing today, and another thing tomorrow, then any old construction will do, but if you are in earnest, and have your eyes open for the thing that saves you time, money and no end of annoyance—then you will be satisfied with nothing but one of our Iron Frame Houses. You'll have a house that's as good as a fifty years' insurance against repairs, and that will grow more plants and better quality. That's why we say write—and write today.

Kalamazoo, Mich.

Trade Notes.

The first half of April marks a new record here for cold and cloudy weather, only two days of clear sunshine being recorded to date, and at present there seems no prospect of any immediate change. On April 14 the thermometer went down to 18 degrees accompanied with a brisk north wind which for the middle of April is considered pretty chilly. Of course, this sort of weather is not bringing out the buds very fast, so although there is no rush of business little if any stock goes to waste. A tie up of the street car service for a week or so also damaged the local trade somewhat since Easter, but things are now adjusting themselves to the usual conditions. Shipping trade continues good, and the bedding plant business begins to assume importance and promises to be good again this season. Notwithstanding the increased cost of production the same prices of ten years ago will prevail; while in cut flowers 25c. per dozen for carnations and 50c. for roses have got to be about the standard prices. Design work is cut in the same proportion, so where the profits come in seems a mystery.

This state of affairs seem to be rather prevalent if one may judge by the wages offered in the columns of the trade press by those seeking help, a florist of several years' experience seemingly being worth rather less than a common laborer. According to my personal observation and judgment the florist trade offers less inducement to bright young men now than it did twenty years ago, and explains the scarcity of good help that your Philadelphia correspondent speaks of. This recalls a remark of the late President McKinley on the labor question: "Cheap prices make cheap men, and you all know what cheap men are." If the florists have not already arrived at that stage they are perilously near it.

L. B. Bragg, a well known nurseryman of this city where he conducted one of the largest as well as oldest established places, died last week at an advanced age. The remains were taken to a crematory and incinerated in accordance with his last wishes.

I am sorry to report the death of Mrs. R. Wells, wife of the greenhouse foreman at the Central Nursery Company establishment. She died somewhat suddenly at the hospital on the 13th, where an operation on her had been performed. Mr. Wells told me on the previous day she was progressing favorably and hoped to see her out before long, but a turn for the worse developed and she died next morning about 10 a.m. The deceased lady who was only 23 years of age, leaves besides a husband, two small children aged 5 and 3 years. The remains were taken to Dawagiac for burial. Mr. Wells has the sympathy of the trade in his sad bereavement.
S. B.

FAIRHAVEN, MASS.—Peter Murray, the originator of carnation Winsor, recently underwent a serious operation for an abscess in his head. The operation was successful, and Mr. Murray is getting along as well as can be expected.

BROOKLYN, N. Y.

FROST-PROOF
ECONOMY

Ideal Hollow Concrete Block construction will protect your greenhouse from frost and secure greatest economy in fuel.

The illustration of hollow block explains its resistance to frost. With the Ideal Concrete Machine you can yourself make these blocks from sand, gravel and cement at little cost—far below the cost of brick, stone or lumber. Ideal Blocks not only give frost protection, but are absolutely fire-proof, and effect a perpetual saving in insurance.

IDEAL Concrete Machines

May be operated by any man without previous experience. The process of making blocks is simple as making mortar. Blocks for every building purpose, with plain, tumbled, ornamental face or natural stone effect made with the same machine. Simple, durable and adaptable to any size block within capacity.

Our catalogue will show you how to secure frost protection and fuel economy, as well as initial saving over cost of other materials. Write for it and it is freely yours.

IDEAL CONCRETE MACHINERY CO., Dept. Z, South Bend, Ind.

MUSSENS, Limited, Montreal, Canada, Sole Agents for Canada.

THAT BOOKLET OF OURS

is worth every cent of what we ask for it and you should have one of them handy if you ever intend to put up a greenhouse. This book tells just how every piece of material is put together, gives valuable information about painting, glazing, and bench construction. Send to-day, enclosing ten cents in stamps to cover cost of mailing, postage, printing, etc. This book only repeats our statement that we handle everything in a common-sense way—get one now, as there are only a few left.

We'll also put your name down for a new catalogue if you want us to.

OUR GREENHOUSES--and MORE FOOT PIECE TALK

After you have set the wooden posts for your greenhouse, and lined them up carefully, some are bound to be a bit higher or lower than the others. That's a bad proposition to overcome, and if you don't overcome it, there's a wind—where there's a wind there's bound to be an uneven pressure and a continual breaking of the glass, not to

mention the impossibility of heat tight joints. The Cast Iron Foot Piece has an adjustment that takes up all these variations and brings your side supports exact and even. If it's a case of supporting a ridge and furrow gutter, we have a round socket top on the foot piece to take the pipe support, giving this same adjustment strong point.

You see our greenhouses are really nicely adjusted, balanced propositions, with ultimate economy always assured. For Sale: Every part or any part for good greenhouses.

Look Here Mr. Florist and Gardener

WE have just passed through an unusually severe winter and you are apt to forget the many sleepless nights you spent worrying about the temperature of that No. so and so house.

Or the many zero nights that you spent in the boiler pit; maybe you did not have to do the stoking and firing, but you certainly had to do the worrying and pay the coal bills.

Now keep the vows you made on those trying occasions, And send for me. I have solved the problem for others, I can do it for you; and remember, I will come recommended by some of the most prominent commercial florists and gardeners in the East, "Personal friends of yours."

Wm. H. Lutton, Heating Engineer, WEST SIDE AVE. STATION, JERSEY CITY, N. J.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XXIII. No. 17

NEW YORK AND CHICAGO, APRIL 27, 1907

One Dollar Per Year

CARNATION WINSOR

The most talked about carnation at the Toronto Convention.
Won first prize for best 100 pink

Winsor is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders, and have a fine lot of stock in the cutting bench, so that we can promise prompt delivery on orders received from now on.

If you have not already purchased a stock of this, you should lose no time doing so. We have sold more Winsor

than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market where our flowers are sold.

There is nothing on the market that approaches Winsor today in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities, in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high quality flowers. It practically does not split at all, notwithstanding the fact that we have had the darkest, duller winter we have ever had, when the Enchantress and Lawson types are splitting badly all over the country with everyone, we have not had one-half of one per cent. of split calyxes on the Winsor. In fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement, extravagant as it may appear.

Anyone who fails to plant Winsor this year will regret it. Rose pink Enchantress is good, and a good many other varieties are good, but IF YOU WANT THE WINNER, PLANT WINSOR
Strong Rooted Cuttings. \$12.00 per 100, \$100.00 per 1000.

TACOMA, WASH.—Fawcett Brothers, seeds and machinery, have been incorporated; capital, \$10,000; incorporators, H. I. Fawcett and V. A. Wilson of Tacoma.

NEW YORK.—Henry Nungesser of H. Nungesser & Company and Robert Pommer of D. J. Bushnell & Company, St. Louis, Mo., sailed for Europe this week on the Kronprinz Wilhelm.

COLUMBUS, O.—Johnson & Pyle have handled a very large quantity of onion sets this season and with most satisfactory returns, as from the very start we have had a continually advancing market with a gain of some \$1.50 per bushel over initial transactions. F. G. Johnson of this firm was, until very recently the treasurer of the Livingston Seed Company. F. W.

CHICAGO.—The recent cold weather called a sudden halt to the seed trade which had developed such a precocious opening. It is probable however, much damage was suffered by the market gardeners as a result of which considerable replanting will be necessary.

Knud Gundestrup reports a very active Spring business at his Milwaukee avenue seed store. About the first of June he has planned to start on a two or three month's tour through Europe, including a visit to the principal seed centers.

IMPORTS OF SEEDS.—April 13 and 14.—Andreas Olsen, 200 bags clover seed; C. C. Abel & Company, 10 plants; H. Frank Darrow 25 boxes seed; C. A. Haynes & Company, 16 boxes plants; F. B. Vandegriff & Company, 39 packages plants; Rooney & Spence, two cases plants; four cases trees, nine cases nursery stock; Hensel, Bruckmann & Lorbacher, one package seeds; Maltus & Ware, one case live plants. April 15.—Bronx Park Botanical Gardens, three packages plants; April 16.—Lager & Hurrell, two cases plants; C. G. Richard & Company, 27 packages plants; August Rökler & Sons, 25 cases plants; Jan Ter Kuile, two cases plants; 12 tubs laurel trees; F. B. Vandegriff & Company, 100 tubs laurel trees; E. R. Durkee & Company, 250 sacks seed; Ammerman & Patterson, 14 packages trees; C. A. EXPORTS OF SEED, ETC.—April 19.—Shipped from New York to London, 250 packages seed, valued at \$1,675.

PHILOSOPHY OF THE CATALOGUE.—Your catalogue is the lever which you employ to overcome the inertia of your prospective customers. It is your brains spread out thinly on paper. Its reason for existence is that you cannot be in more than one place at a time, and because it costs less to mail than your car fare would cost you in making a call. Nevertheless, it always represents you and your business, and your trade will estimate your personality and the quality of your product largely by the appearance and convenience of your catalogue. It should not be either too expensive or elaborate for the grade of goods you have to offer, any more than you should put on a white vest and a high silk hat when you intend to call on a customer. It's then the "right clothes in the wrong place," and your customer might be afraid to handle it much for fear of spoiling it.

On the other hand, if a catalogue looks as though the man who sent it was suffering from chronic constriction of the purse-strings, the recipient is likely to fear that the quality of the goods is likely to be equally skimpy. Do not let your catalogue be freakish, either in design, composition or material. It will make the same impression on the man who requested it that you would if you called upon him clad in a swallow-tailed coat and a suit of pajamas.

Don't imagine with our friend Elbert Hubbard, that merely because you use "butcher manila" for a cover, people will think there is real "meat" inside of it. Appearance will not make or unmake a man or a catalogue; but it does create first impressions, which, if favorable, will make a handicap which even low prices and quick deliveries will not readily overcome.

From the above remarks, it would seem that a catalogue has many of the characteristics of a human being—a specialized business man, minus only the desire to eat and get drunk, and capable of producing great results in a business way, either for good or for harm. This last is exactly the case. Your catalogue (or other advertising) can just as easily be a source of direct loss as of profit, just as any business can easily be destroyed by lack of knowledge regarding its essential features.—PURE WHITE.

European Notes.

Before last week's mail had finally left the Irish shore we were all fairly buried in one of the heaviest snowfalls of the Winter; the weather of the present week has been dull, wet and cheerless. While this has made an invalid of every third man one meets, it has helped vegetation forward at a surprising pace. Peas and other seeds that have lain almost dormant for a month past are pushing through very nicely, and if we can coax Old Sol into renewed activity all may yet be well, and the season not quite so late as we expected. In the meantime the demand for peas, especially those of the tall wrinkled type, is very moderate. Such sterling varieties as Ne Plus Ultra can be bought at less than their cost to grow. On the other hand, the demand for Gradus is so good that holders of worthless lots that should have been sown for pig food are publicly advertising them to be used for seed purposes. Some of your readers know full well what that means at podding time.

One pleasant surprise, which may affect the American market next year, is the greatly increased demand for onion seed. The market price of the bulbs is nearly double what it was in January and growers are planting heavily in the hope that similar conditions will prevail next year. The German Giant Zittauer is an exception to the foregoing, for a large quantity of seed of poor germination is waiting for a purchaser. As already reported in this column the supply of bulbs in France and England is totally inadequate, and as stocks of seed that were intended for carrying over have now been sold, the American growers need not fear any competition from this side.

As regards turnips, the phenomenally high prices now obtained for the yellow

Aberdeen section, purple top especially, is the most noteworthy feature. In another ten days we shall be able to prepare some forecast of the probable crops of this article in 1907.

The following report from the South of France very fairly describes the situation of cultures in that district.

"The situation of the growing crops in France can be stated as follows: After a very long, cold and for our quasi-subtropical climate, unaccustomed Winter, our sky has at last cleared up in the sense that the Spring has made its entrance, sending us good warm sunrises, exercising its beneficial influence over the earth and vegetation. People are beginning to transplant their roots and yearly seedlings.

"A good many plants have suffered terribly from either want of water or Winter cold. You may have an idea of the harm done to the seedlings and plants when it is said that at Priory, the drought and the total absence of water in the irrigation canal (the riverbed of the Durance River was quite dry) have prevented the seeds from growing, bringing about a pronounced shortage of roots for transplanting purposes. Further, the very long, dry and cold Winter has rotted and lost a great deal of kohlrabi, carrots, radishes, cabbages, mangels, double wallflower, Winter stock, and pansies."

EUROPEAN SEEDS.

Coatesville, Pa.

This city can at least boast of one good carnation grower in the person of James Brown, Jr. He has five large greenhouses, 40x165 feet. Each house has four benches running the entire length of the house where all the best commercial varieties are grown. One noticeable feature here is an element of usefulness that Mr. Brown has added to the other desirable points of his plant. He has now three rows of tomatoes on each bench, one in the middle and one on either side. They are set about four feet apart and at the time of writing were about eighteen to twenty-four inches high.

After Decoration Day, when the carnations are thrown out, the entire houses are then turned over to the tomatoes. Each bench also is edged with a well established border of parsley. These little adjuncts add considerably to the productive qualities of the greenhouses without the least apparent injury to the carnations or principal crop.

Send for our Florists' Wholesale Catalogue

Henry F. Mitchell Co.

1018 Market St., Philadelphia

Dorranceton, Pa.

To all florists the name of Dorranceton is inevitably associated with roses, and rose growing. It is here that Benjamin Dorrance has erected a princely home as well as one of the finest ranges of greenhouses in the State for commercial rose culture.

The Dorrance family has from earliest times been connected intimately with all the progress and development of the township that bears their name. The property upon which the residence and greenhouses are built has been in the possession of the Dorrances for many generations back.

The rose growing plant here consists in all of nearly 40 greenhouses, 150x30 feet. Both raised benches and solid beds are used. No grafted rose of any description is ever planted.

Mr. Dorrance was, at the time of our visit, in Florida where he had spent the greater part of the Winter. Miss Dorrance and Miss Frances Marcum are the managers in chief, and ladies in waiting on over 60,000 blooming roses. More roses bloom under the direction of these two ladies than probably any other two in the entire country.

It was to Miss Marcum your correspondent was indebted for the pleasant tour through the many greenhouses at Dorranceton. There is no detail of rose growing, practical or technical, from soil preparation to the gathering of the crop that Miss Marcum cannot talk intelligently and entertainingly about.

Fourteen large houses are devoted to Killarney; eight to Liberty and Richmond; four to Mme. Caroline Testout and one each to the following varieties: Mme. Cusin, Franz Deegen, Mrs. Pierpont Morgan, Golden Gate, Sunrise, and Sarah Nesbit. The latter is a home production, a sport from Mme. Cusin of similar habit and of equal productiveness as its progenitor. It is a beautiful shell pink shading to white at center. A house of this variety in full bloom was a pretty sight and it was no debut party either, for Sarah Nesbit had presented the same appearance the whole Winter through. The entire stock of this rose is in the hands of the Dorrance family and has never been offered to the trade.

Besides roses two large houses are devoted to gardenias—three benches in each house and in all about 3,000 plants. These were looking just as good as you find them along the Mississippi bayous or the deltas and everglades of the Gulf Coast.

Shipments of cut roses are made each day, Saturdays excepted, the entire year round to the New York market. Material for boxes for shipping is received in carload lots, and a carpenter is one of the daily requisites on the payroll of the firm.

J. M.

Forty Fort, Pa.

About twenty minutes' ride from Wilkesbarre brings one to this historic little borough. Here are two new florist establishments—Wm. J. Stroh and Ed. T. Moyer. Mr. Stroh is superintendent of the old Forty Fort cemetery, clerk of the Borough of Luzerne, and has a nice cut flower store and greenhouse establishment just across from the cemetery.

Ed T. Moyer has an entirely new place a little farther out. He has 20,000 feet of glass and grows roses and carnations for the Wilkesbarre and Scranton trade. Mr. Moyer has found business good during his first season, so much so that he is to increase his glass area the coming Summer by a large house for Lawson carnations. He will grow both the pink and the white sorts.

J. M.

PORTLAND, ORE.—To hold a rose show in the city in June is a proposal taken by the Chamber of Commerce. The city authorities have consented to permit the use of the Forestry building for the purpose, and several local organizations will probably be asked to participate in the event. The Portland Railway, Light & Power Company will furnish free lights in the building and probably about the grounds.

MEADVILLE, PA.—George W. Haas & Son report sales this year far ahead of those of last season. Their March business was 50 per cent. ahead of former years at the same time. Easter trade was very good.

Dreer's Hardy Perennial Phlox

We are the largest growers of Perennial Phlox in the world. Our collection is unequalled, and we are prepared to furnish the new and rare kinds as well as all the popular and standard varieties in large quantities.

The plants we offer are nearly all strong one-year-old field-grown plants or equally strong divisions, and will make a fine display of flowers this season. This stock is much superior to and must not be confounded with young Winter propagated stock such as is generally sent out in the Spring of the year.

New and Rare Hardy Phlox and Varieties of Special Merit

	Per doz.	100	1000
Albion (Tall). A variety which originated with us several years since and which is now offered for the first time. Strong grower, pure white with faint aniline red eye.....	\$1.50	\$10.00	\$90.00

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.
 Orlando Harrison, Berlin, Md., president; J. W. Hill, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

ASSOCIATION OF AMERICAN CEMETERY SUPERINTENDENTS.—The twenty-first annual convention of this organization will be held at Providence, R. I., August 20, 21 and 22, with headquarters at the Hotel Narragansett. A carefully prepared program has been arranged of absorbing interest to all engaged in cemetery work.

THE AMERICAN ASSOCIATION OF NURSERYMEN holds its thirty-second annual convention and exhibition at Detroit, Mich., June 12, 13 and 14, 1907. The Hotel Cadillac will be headquarters. So far as at present arranged the program will include the following subjects, all of which will be handled by competent men: "Preparing Nursery Land," "Cultivating Nursery Stock," "Growing and Grading Apple Seedlings and Apple Trees," "Growing Ornamentals," "Growing Cherry," "Growing Small Fruits," "Spraying," "Storage," "Marketing Nursery Stock." Other pertinent and interesting topics to be discussed are: "Shall We Change Date of Annual Meeting?" "Shall Our Association Attempt to Establish Standard Sizes and Grades for Fruit Trees?" etc. Professor Hedcock of the United States Department of Agriculture has consented to tell how nurserymen can prevent Apple Crowngall and Hairy-root. Professor Craig of Cornell University will deliver an illustrated lecture on "Nurseries of the United States" the first evening of the meeting. A list of questions is also being prepared, which should form a strong feature.

In compliance with President Harrison's request the committee in charge is trying to make this a strictly business meeting; no flights of oratory, but rather an experience meeting which none can afford to miss.

It might be added that many nurserymen are inquiring if the time has not arrived to make a general advance in prices. It looks now as if the increased cost of labor, higher prices for all kinds of nurserymen's supplies, make such a step necessary if nurserymen are to show a balance on the right side of the ledger. This will be one of the questions to come out of the box, and every one will be given a chance to have his say on the subject.

An endeavor is making to secure a large and representative exhibition and everything points to the successful accomplishment of this. The annual fee of the association is now \$5. The increase was made because the treasury needed the money, and because the Dallas convention last year relied upon the loyalty of nurserymen. The usual reduced railroad rates will be granted.

President Harrison has issued a circular letter, setting forth the scope and usefulness of the organization and calling for a record-breaking convention. The address of the secretary is George C. Seager, Rochester, N. Y.

Seasonable Notes.

The common cypress spurge, *Euphorbia Cyprissias*, is often called wart plant, because its milky juice will destroy warts. A drop of the juice from a broken leaf applied to the top of the wart three or four times a day is sufficient. It commences to destroy the excrescence at once. Probably the juice of other euphorbias would act in a similar way.

A writer in a European journal states that old seeds or dried out cuttings may be made "good as new" by soaking them in camphor water for a short time before planting them. This could be tested by dividing a parcel, and soaking one-half of it.

Pinus insignis, the pine that has the beautiful green foliage and that grows so rapidly, is greatly valued abroad. In its native place, California, it is thought to be the least valuable of pines for timber purposes. It is not hardy in our Northern States. Anstraliens think a good deal of it as suited to their climate; so do the English.

Melia azederach, the tree known as Pride of China, is called white cedar in Australia. What a number of trees go under this name. This tree will stand moderate Winters in Eastern Pennsylvania, losing but the tops of its young shoots.

The original Seckel pear tree grows on property belonging to the Stephen Girard estate, Hope Ferry road near the neck of land dividing the Delaware and the Schuylkill rivers. A family named Seckel lived on the farm when the pear came into notice. When last the tree was seen, a few years ago, a family named Bastian lived there.

As showing how the character of fruits changes according to where growing, the Susquehanna peach is a September one in Pennsylvania and a July one in Georgia; and Silway and a few others of the late ones in Pennsylvania are too late to ripen a little farther North.

Lonicera periclymenum is justly esteemed as the most fragrant of all the species. It does not thrive well with us; neither does the belgian, a good variety of it. But as pot plants to give pleasure to those who know them of old, they are in demand.

It is the custom of some propagators when layering to make the slit in the shoot in the under side. This increases the risk of the shoot snapping when bent into the ground. It is far better to make the cut on the upper side, as nearly all propagators do.

Kerria (*Corchorus Japonica*) in its double form is one of the oldest inhabitants of our shrub borders, and well it deserves a place in all collections. But its single-flowered form the one with variegated foliage, is really better. The contrast afforded by the green and white leaves and the yellow flowers is pleasing; and the flowering is far more profuse than in the old sort.

Sugar has been made from the sap of the butter-nut, *Juglans cinera*, but it is so purging that it is of no commercial value except in a medicinal way.

found in gardens. There are some in the vicinity of Philadelphia easily 100 years old, and still in fair condition of growth.

On some pleasure grounds laid out where this variety of cherries is found, the landscape gardener finds it agrees with his plans to let live one of them, and there are examples here of some on lawns, and most interesting trees they are. Let us hope that the one pictured will be allowed to grow on when the ground it stands on will be required for residential purposes, which from appearances will not be very long.

The seeds from the Mazzard cherry are in great demand by nurserymen for the raising of stocks. Excepting the Mahaleb, an entirely different species, it is the only stock our nurserymen use. Hundreds of bushels of pits are called for for sowing throughout the country, and besides the stocks these stones produce, hundreds of thousands of the stock are imported from Europe.

June-Budded Peach Trees.

A customer of a nurseryman inquires of him wherein the advantage lies in the June-budded peach trees over those of the ordinary kind he has been accustomed to buy. So far as the purchaser goes, there is no advantage; it is altogether on the side of him who propagates them. The nurseryman has in a June-budded tree one

Cerasus Avium, Mazzard Cherry

Cerasus Avium.

Under the name of Mazzard cherry are known the wild sweet cherries that spring up along fence rows near all large cities and towns and near where any sweet cherries are growing in gardens. They are the product of cherries stolen by birds from cultivated sweet cherries in the first place, and afterward seedlings come from stones from these wild fruits, which are spread still more by birds. The fruit of these wild trees is rarely as good in flavor and size as is that of the cultivated trees from which they sprang. It is more in size than flavor that the deficiency is noticed. Occasionally one is found of excellent character. The writer knew of such a tree; it was such a superior fruit that he grafted it on a named kind in his garden, deeming it superior to the one on which he grafted it.

What fine subjects these adventitious trees make is shown by the illustration of one growing along what was a fence row, in a field, in Germantown, Pa. It is, really, a noble tree. The photograph was taken just as the tree was in its height of flowering, in May, at which time it was a sight worth going miles to see, on account of its perfect shape and its profusion of flowers.

Because, no doubt, of the freedom of growth the fence rows give, these Mazzard cherries are often found of great size. The caliber of the one illustrated is two feet, and those of four feet are not uncommon.

These cherries live to an age that far exceeds those

that is ready to sell in six months from the date of the sprouting of the seed, while the ordinary tree sold has required eighteen months. June-budded trees are budded as soon as the stocks are large enough. June is the month, so-called, but the budding is sometimes done later. But the earlier the better, as it affords more time for the bud to grow. Now that large trees are not looked for as they once were, because of the knowledge that small trees well pruned in are better, the June-budded ones are preferred by those who understand the value of small trees.

It requires care to get a June bud to start off right. It does not do to cut off the top of the tree directly above the bud at once, unless there is a good growth of foliage below it, for such robbing of the tree of its foliage would kill it. The best way is to let the seedling have a good growth of leaves below the bud, then the cutting away of the top when the buds take may be done. There is sure to be some weakening of the trees in the end by the loss of the top which is cut away. This cannot be avoided, and where there is a good showing of foliage below the bud the checking of growth will not be great. As the bud makes a good growth the shoots below it may be checked, that the strength may go to the growing bud.

JOSEPH MEEHAN.

Hardy Roses for Decoration Day

HARDY H. P. ROSES

We offer exceptionally strong two-year-old dormant, low-headed stock (on Mazzetti), in the following varieties:

Alfred Colomb, carmine.
 Anna de Diesbach, bright carmine.
 Ball of Snow, pure white.
 Baron de Rothschild, dark crimson shaded.
 Baroness Rothschild, satiny pink; extra.
 Duke of Edinburgh, bright vermillion; very fine.
 Fisher Holmes, dark rich scarlet.
 Frau Karl Druschki, the finest white in existence, \$12.00 per 100.
 General Jacqueminot, rich velvety crimson.
 General Washington, beautiful red, shaded carmine.
 John Kopper, beautiful rose pink.
 Margaret Dickson, white, pale flesh center.
 Magna Charta, clear rosy pink.
 Mme. Gabrielle, light, satiny pink.
 Mme. Plantier, white.
 Mrs. John Laing, soft pink; most desirable variety.
 Paul Neyron, beautiful dark pink.
 Prince Camille de Rohan, velvety crimson.
 Ulrich Brunner, cherry red, three-year-old.
 Prices on H. P. Roses \$1.25 per 10; \$11.00 per 100; \$100.00 per 1000.

HYBRID TEA ROSES

Maman Cochet, pink. Strong 2-year-old plants, 10 for \$1.50; \$12.00 per 100.
 American Beauty, Kaiserin Augusta Victoria. Horn-osa. Strong, 2-year-old, \$1.50 per 10; \$12.00 per 100.

THE KILLARNEY ROSE

Irish Crown From the Kaiser.
 Good strong two-year-old plants, \$3.00 per 10; \$27.50 per 100.

DOROTHY PERKINS

Resembles the Crimson Rambler, except in color, which is a lovely shell-pink, holding a long time without fading. \$1.75 per 10; \$15.00 per 100.

AMPELOPSIS and other Climbers

AMPELOPSIS

Ampelopsis Veltchii (Boston Ivy), extra strong limbed, three-year-old, \$2.00 per doz.; \$15.00 per 100.
 Ampelopsis muralis, more rapid grower than the foregoing, larger foliage, \$3.00 per doz.; \$20.00 per 100.
 Quinquifolia (American Ivy or Virginia Creeper). Good for covering walls, verandas, or trunks of trees; affords shade quickly, 26c. each; \$2.50 per doz.; \$18.00 per 100.

CLEMATIS

Henry, pure white; extra large.
 Jackman, purple.
 Alba, white.
 Sieboldii, lavender.
 Ville de Lyon. The finest of all reds; flowers brilliant carmine red. It is equally as good as Mrs. Edouard Andre, but contrary to this one, is a very free-growing variety.
 All the above Clematis in extra strong plants. \$2.00 per doz.; \$20.00 per 100.
 Clematis paniculata, strong 2-year-old plants, \$1.25 per doz.; \$12.00 per 100.

ARTHUR T. BODDINGTON, 342 WEST 14th ST. NEW YORK CITY

HYBRID TEA AND OTHER ROSES OF RECENT INTRODUCTION

(Strong 2-Year-Old Plants.)
 Beaulieu Brown. Creamy white, \$1.50 per 10; \$12.00 per 100.
 Grusa an Teplitz. The great new red Rose, closely resembling Liberty in color. No Rose in commerce can compare with Grusa an Teplitz as a bedder, \$1.50 per 10; \$12.00 per 100.

THE TREE BABY RAMBLER (Mad. Norbert Levavasseur) GROWN AS A STANDARD

The popularity of the Baby Rambler has suggested the growing of it as a tree or standard. The variety is too well known for description; enough to say it retains all its characteristics of free-blooming qualities, etc., 60c. each; \$5.00 per doz.

THE BABY RAMBLER

Mme. Norbert Levavasseur. Strong field-grown plants, \$1.75 per 10; \$15.00 per 100.

CRIMSON RAMBLER

Large heavy plants, two years old, 3 to 5 feet, \$1.75 per 10; \$15.00 per 100. 4 to 6 ft. \$2.00 per 10; \$18.00 per 100.

OTHER CLIMBING ROSES OF MERIT

Paul's Carmine Pillar. One of the most attractive Climbing Roses. Two-year-old, field-grown, \$1.75 per 10; \$15.00 per 100.
 Marechal Niel. Color bright rich golden yellow, field-grown, \$1.75 per 10; \$15.00 per 100.
 Gloire de Dijon. Color buff, orange center, very sweet-scented, field-grown, \$1.75 per 10; \$15.00 per 100.

ENGLISH MOSS ROSES

Assorted White, Pink, Red, large dormant plants, from open ground, \$1.50 per 10; \$12.00 per 100.

ARISTOLOCHIA SIPHO

Dutchman's Pipe, strong field-grown, \$3.50 per doz.

WISTERIA SINENSIS

Extra strong field-grown plants. Blue, \$3.50 per doz.; \$26.00 per 100. White, \$5.00 per doz.; \$40.00 per 100.

HONEYSUCKLE

Extra strong field-grown plants, finest long, many branches.
 Coelebsium. Scarlet.
 Halliana Yellow.
 Periclymeum. White.
 Serotinum Belgica (Monthly Dutch). Red.
 \$3.00 per doz.; \$22.50 per 100.

HYDRANGEA PANICULATA GRANDIFLORA

Two-year-old, 3 to 4 branches, bushy, \$1.50 per doz.; \$10.00 per 100.

ROSES

Rose Growing.

Read by David Falconer before the Morris County Gardeners and Florists' Society, April 19, 1907.

The Propagating House.

We will assume we have a rose house, January 15, in nice healthy order and have the propagating bench all prepared for the cuttings. I think a propagating house is a decided advantage over a part of a bench in the rose house; that is, of course, if one has it so fixed as to have control of the heat, top and bottom. We keep the top heat as near to 54 degrees as we can; bottom heat at 60 degrees.

Cuttings are generally fit to pot in four weeks. In the selection of wood we always take blind wood of a uniform hardness and do not put in wood that has the eyes started. The cuttings are from two to three inches in length, with two or three eyes according to the length between the joints. I do not believe flowering wood has any advantage over blind wood as regards producing more flowers to a plant, etc.

Treatment of Cuttings.

When our cuttings are rooted we pot them into 2-inch pots, then shift into 3-inch and finally into 4-inch pots, using exactly the same compost as we put into the benches. Young plants in pots cannot be watched too closely, and must not have any pests, such as red spider, green fly, etc.; nor should they be allowed to get pot-bound. A plant once checked in its growth will always show the drawback when we get a dark spell of weather.

Soil.

In regard to soil for potting, screen it through a 3/4-inch mesh and rub all the finer you can through the screen. Better have it on the rough side than too fine. We dig up the sods in the Spring; it seems to be sweeter and have more vitality to it than when composted in the Fall. Most soils that will grow good hay will grow good roses. Add about one-fifth good cow manure, some bone meal and sheep manure. After planting young plants in the beds in June the sooner they are staked and tied up the better; all they want until about the end of September is plenty of air and cultivation and great care in watering. Syringing every bright day is very beneficial.

Old Plants Preferred.

Our experience is decidedly in favor of old plants; that is, running them over a second or third year. About the middle of July is a good time to begin drying off to ripen the wood to make it in condition for pruning. We give very little water for a few weeks until the plants nearly stop growing, then we trim out all blind wood, and cut back flowering wood to two or three eyes, then take off about one-third of the soil and fill up the beds with the same compost as we use for the young plants. We then tie down the plants flat, about a foot or so above the bed. For a few weeks they have to be syringed frequently to help them break.

Care has to be taken not to get the soil too wet. We have tried the plan of not drying off the plants, just pruning out a little blind wood and mulching them. By this method one gets a few more flowers during the Summer, but at the end of the year the other way is much ahead.

Temperature and Ventilation.

I think it a hard problem to give definite figures to go by, so much depends on the kind of weather, the condition of the plants, whether they are wet or dry; but the general Winter temperature is 58 degrees nights, 74 in sun heat. When there is no driving wind begin to ventilate about 66 degrees; in Summer keep the ventilators up all the time while the temperature is at 60 degrees. In the Spring months, when the sun is hot early, the ventilators have to be opened a little just as soon as the thermometer registers above 60 degrees. Do not allow the houses to get hot with the ventilators nearly closed. I believe a close, stuffy atmosphere in a rose house, especially in the morning, will create mildew more than any other cause.

Watering and Syringing.
This work needs a good deal of practice before a man can do it intelligently. When watering do it thoroughly so that the soil is wet right through to the bottom. Syringe every bright day and just imagine there is a red spider on every leaf when you are doing it. During the Winter we use tempered water at about 58 degrees, both for watering and syringing. I think it must be more beneficial to the plants than using water at 35 or 40 degrees.

As to Benches.

A great deal can be said about benches—raised wooden benches, also cement benches and solid benches. I think there is nothing to equal the raised bench. With them you have got the roots under control, as well as the tops, and can produce more flowers in the Winter season. Besides with raised beds you can get the heating pipes under them which help to dry them out when we have the short days.

Houses.

In regard to structures the tendency of the present day is to build big, wide houses. I believe there is a happy medium in both the width and length of a house. A house from 20 to 28 feet wide and about 200 feet long is the most practical. When a house is so wide that it requires ventilation on both sides of the ridge it is not so easy to judge when to open both sides. Particularly at the change of seasons have they to be watched much closer than a house with ventilation on one side.

Heating.

A good deal depends on the location. For example, with a house that has a rise of say 6 feet in 150 feet it would be difficult to install a nice working steam system. Possibly an ideal heating for a rose house would be two-thirds hot water and one-third steam; it would also be a safe combination in case of a breakdown in either of the systems.

Successful and profitable rose growing is a problem of eternal vigilance, and the person who can pay the coal bill, the many other bills, and get a good living out of the business is pretty much like the farmer who, when asked how it was that everything was so prosperous on his farm replied, "Sir, I understand my business and attend to it."

Wilkesbarre, Pa.

Ira G. Marvin has now over 200,000 feet of glass divided into three sections in different portions of the city. This is not enough, as Mr. Marvin is to build more this Summer. He has now in the course of construction a handsome show room on another street with a good sized greenhouse for display purposes attached; this he intends to run in connection with his present store. The new store promises to be very attractive.

Mooney & Weir is the style of one of the late additions to the Wilkesbarre florist aggregation. Miss Mooney is the moving spirit of the enterprise for which many years of experience in the Marvin establishment have eminently qualified her. They have just fitted up on North Franklin street a handsome store, complete in every detail for a first class business. Miss Mooney is popular with the flower buyers of her city. Your correspondent bespeaks for this new firm a splendid success.

Gottlieb Bauman is also another addition to the florists of this city. Mr. Bauman was for many years in the employment of A. W. Moore & Company. During the last couple of years he has erected some greenhouses and now does business for himself. He has several houses well filled with bedding plants ready for immediate sales, and evidently has abundance of room to still further extend his business.

Eldridge & Company have a cut flower store on South Franklin street with greenhouses attached. A. W. Moore & Company are on Park avenue where several greenhouses filled with carnations and bedding stock are in readiness for the market as soon as the season opens up. J. M.

MISCELLANEOUS PLANTS of all kinds, including Violets, Ferns, Geraniums, Asparagus Sprengeri and Plumosus, Dahlias, Cissus Discolor, Pot Hydrangeas, etc., in large supply. Send us your list for prices. Ask for catalogue. It's free.

THE DINGEE AND CONARD CO., WEST GROVE, PA.

THE WEEK'S WORK.

Timme's Timely Teachings.

Pompon Chrysanthemums.

Few varieties of large flowering chrysanthemums, and these by no means the best, are desirable subjects for outdoor culture or garden display, a fact greatly deplored by many of our customers every Spring. There would, however, be less cause for regret on this score were growers to direct their attention and that of their patrons more ardently and with a warmer interest to a class of chrysanthemums that furnishes varieties eminently suitable for open air culture and in many respects superior to any of the large flowering indoor sorts. In truth, the pompon section of chrysanthemum, as now represented by a large number of highly improved varieties, is among flowering plants one of the most beautiful as well as most useful classes, worthy of being grown extensively by every florist.

The varieties of pompon chrysanthemums are usually considered hardy, but in our Northern States a covering of dry, loosely spread leaves during Winter is a no needless precaution and assures a trifler start in the Spring. While any of the many varieties may thus be used with surprising effect and entire success in permanent outdoor plantings, there are many, especially those of the taller and larger flowering sorts, that will do better if grown or at least flowered under a glass-covered roof. Wherever they are grown in quantity for their cut sprays this mode of culture should be adopted, either lifting and housing the plants early in September or growing them in a cool and amply ventilated house from start to finish. When so treated their culture does not involve that amount of care required in the raising of large flowered indoor kinds, since pompons need neither feeding, staking nor disbudding.

Unsurpassed by anything grown for the Autumn pot plant trade are pompon chrysanthemums of the more dwarf growing sorts. To have these in best, most attractive form, it is of value to raise the plants out in the field in well prepared, pretty rich soil, to impart business and compact shape by frequent shortening in of the shoots and, when this is accomplished and buds are setting freely, to pot them up and remove them to a cool greenhouse.

Hardy Ferns.

In the planning for effective beds and borders about private grounds or as an attractive feature in connection with greenhouse establishments, the value of hardy ferns for such purposes should not be lost sight of. To the florist with a good home trade these ferns prove good and profitable stock, costing little in the first start and requiring less care and attention than almost anything else grown for pleasure or profit. While most varieties are shade-loving plants, and while all will show up to better advantage in positions somewhat shady and sheltered, there are quite a number of excellent kinds that will thrive, increase in size and beauty and furnish an abundant supply of long-lasting, spotless fronds in less favorable situations and in a kind of soil usually considered unfit for ferns. Though this is true, it is well worth while bearing in mind that hardy ferns, as well as all other things easily grown and modest in their cultural requirements, readily respond to some measure of extra care in their treatment. In making plantations of hardy ferns, therefore, a favorable spot should be selected, if possible to be found, and the soil should be worked into a condition congenial to this culture if not naturally so. Small plants rather than large old clumps are the right kind of stock to start with.

Roses.

Well-grown potted roses of the hybrid perpetual and hybrid tea classes, showing plump buds and a few open blooms, sold remarkably well at Easter, were also much called for before that holiday and will no doubt continue to be good property throughout Spring as long as stock holds out. These, as also those of the Rambler group, if given the proper attention and care that all roses

Cyclamen and Asparagus

all sold out
G. A. THIELE, Frankford, Philadelphia, Pa.

under pot culture require, are not likely ever to become a drug on the plant market. Neither lilies nor azaleas and least of all the common bulbous stock will ever materially hurt the sales of finely finished potted roses in early Spring.

It is time to begin another season's rose growing, to lay in stock and to prepare for a good stroke of business in a line by no means overdone as yet. The fact that a great lot of poorly done roses in pots is offered and refused every year should furnish no cause for worry or doubt in the minds of good growers. The rose as such enjoys little advantage over other plants not bearing that name, unless it gives evidence of good culture. To avoid anything in the selection of stock for the purpose or in the preparations to be made now that might result in the production of poor or mediocre plants by next Fall must necessarily be the principal aim when starting afresh.

I still believe that the ideal rose for the better class of plant trade is obtained by an all season's pot culture previous to its being forced, though I had fair success with those grown all Summer in the open field and only potted up last Fall; and though I saw some superb specimens grown by others in like manner these appeared to be exceptions rather, while good results with pot raised stock may safely be regarded as a rule.

Outdoor Culture of Roses.

The planting of dormant roses in garden or field for whatever purposes intended should be well under way by this time. But while much of the ultimate success depends on early planting it is not advisable to undertake the work as long as the soil remains in a soggy condition and actually unfit for any sort of thorough cultivation. Stock as yet, dormant, showing no signs of breaking into growth, can easily be held in that condition until a spell of fine weather has dried off the land sufficiently for planting to be done in a manner insuring the future well-doing of the roses. This period of the season affords many such opportunities and these must be taken advantage of in operations of this kind.

There is little use in planting roses of any kind in poor, wornout ground. For permanent plantations of hardy roses to form a part of well-kept, attractive home grounds, or to yield a good grade of marketable flowers during Summer seasons, the very best portion of the available ground should be chosen. If the soil is not naturally good it must be made so if possible. It should be well drained, deeply worked up with spade or plow before being planted, with a liberal dressing of barnyard manure added during the operation. The heaviness of loamy soils, when not caused by an intermixture with dead clay, forms no objection to rose culture, and when highly enriched and properly cultivated, such soil can be made to be most productive, and the roses grown on such ground thereby gain in hardiness and vigor and usually bring the finest of blooms for cutting. But at no time should ground of that description be worked until reasonably dry and in a mellow condition.

All dormant, nursery grown roses need pruning before being planted. In the pruning of such as are to be potted up in the Fall a trifle more care should be exercised than with stock for permanent borders. It should be done in a way to ensure as far as possible shapely form and well-balanced growth in future development, which very seldom can be brought about alone by the last pruning just before forcing. Hardy roses destined to stay outdoors for years should be quite heavily cut down this first time before being planted, but subjected to ordinary pruning in the following seasons, which means a shortening in of the well-ripened strong wood to within eight or ten eyes on most varieties, some requiring a less severe pruning while a few can only be made to throw fine blooms by using the knife less sparingly, all of which is learned by experience, much depending not only on variety but also on location and condition of stock, which is not the same season after season. As a rule, strong shoots and strong growing varieties are not as sharply cut down as the weaker growth and the less vigorous varieties, and all strag-

gling, thin or dead wood is cut away clean and is about the only pruning necessary on pillar, climbing or Rambler roses, when established out of doors. Rambler roses to be potted up in the Fall, unless of unusual size, will make finer specimens with two or three very strong, well-ripened canes, properly tied into pleasing form before being subjected to forcing, than when allowed to make a great number of weak canes during the Summer.

Roses in the field require the best of cultivation, which includes frequent hoeing and loosening of the top soil, staking and tying up in some cases, the removal of dying leaves and fading blossoms, watering and sprinkling in dry seasons and protection against Winter-killing.

Epacris.

Nearly all the varieties of epacris suitable for general greenhouse culture and the better class of plant trade are now past their prime, some having been at the end of their flowering season for weeks. Left over plants, now in that condition, should not be looked upon as anything needing no attention at present and satisfied with any out-of-the-way place. They are valuable stock, and now is the time to take the first steps toward working them into fine specimens for another season's trade, if they failed to be that this year. To this end it is of immediate importance to subject the plants to a severe pruning. Most of the varieties with a uniformly even growth can safely be cut back to within four or five inches from the pot. The side shoots of plants that show one or more very strong, upright canes are trimmed in to mere stumps of one or two inches in length, leaving about a foot of the stronger center. If there are too many of these upright shoots, forming too dense a center, some of the weakest must be cut away entirely and those remaining be kept apart by wiring or tying. It is only by carefully attending to this sort of pruning now that plants of faultless form, rare beauty and exceptional value can be obtained from material ready at hand and very often deemed scarcely worth while seeing to.

Epacris, after being pruned, are started into new growth in any one of the coolest houses, affording them the fullest light. During this period they need water but sparingly, will fare better by being a little too dry rather than copiously watered. After the young growth is well out and before it gains too great a length, the plants are repotted, should they need it, which is not always the case with specimens of fairly good size. In transplanting or renewal of soil a sandy, turfy or peat-like mixture, quite coarse, should be used, with plenty of clean drainage material at the bottom of the pot; and new pots are to be preferred to any already used. A slight shading on clear, sunny days, frequent sprinkling and moderation in watering and ventilating are necessary for a week or two after the transplanting. During the hot Summer months heaths and epacris are plunged in outdoor frames that can easily be covered with some light shading material during the hottest hours of bright days, or with sashes as a protection against long-lasting heavy rains. Plants of this kind, however, should not be removed to outdoor quarters too soon in the Spring—a mistake often made and one resulting in damage done to the stock that defies all attempts at redemption. Sudden changes from congenial quarters and good growing conditions to less favorable places, exposure to cold or drafts of raw air, anything causing a check in growth turns their color from a healthy green to a sickly yellow and with the best of care ever afterward it is often impossible to overcome the lasting setback.

Tuberous.

As a crop for Summer cutting tuberous are still one of those minor items that may be grown with comparatively little care and considerable profit. Outdoor patches, however, give scant assurance of good results and if first-class spikes are considered only worth while shipping to market, then indoor culture from start to finish will prove the most reliable course to follow. Select sound and solid bulbs, pot up now in rich soil, start them in a warm place and

Keep them in rapid growth on the sunniest bench available.

The Aster Field

Fall plowing, good for any kind of land and nearly all sorts of crops, is especially good for any piece of ground on which asters are to be grown for an abundant yield of fine flowers. This hint, although of value for another season, will be of little help to those who, with thousands of nice plants yet in pots or flats, are behind in the preparation of the land for them. In such cases too great a hurry is of no avail. Land, especially heavy soils, should not be touched with spade, plow or rake until in fit condition, brought about by a day or two of bright sunshine and drying breezes. The ground when ready for planting asters should have lost the last remnant of the Winter's cold and clamminess, and the plants should be of good size, several inches high, robust and thrifty, before being planted. On Spring-plowed land it is of benefit to either roll the ground, when sufficiently dry, before planting, or if this cannot be done, to use the feet in firming the asters after planting, care being taken to avoid too deep a stand of the plants. To counteract stem rot to some extent it is well to rake in a dressing of lime or land plaster, thinly spread over the entire surface. This should be repeated when the plants are showing their center buds, which, by the way, should be pinched out to increase the number of high grade flowers on a given number of plants. Asters do not send their roots deep down, but like good, moderately enriched and frequently stirred top soil. Deep plowing is not essential to success with asters, especially if done in the Spring. There is no cause for undue haste in the planting of asters; they will yield good crops even if planted as late as the end of May or the beginning of June.

FRED W. TIMME.

PETUNIA "THE QUEEN"

This is something new in the PETUNIA order, a new double, extra fine, that requires no staking, 2 1/2 in. pots, \$1.50 per doz.; \$10.00 per 100.

Secret Commissions.

At the Greenwich County Court on March 28, the plaintiff sued a firm of horticultural builders to recover £5 10s., said to be the amount of secret commission paid by them to his gardener in connection with the building, by defendants, of a greenhouse for the plaintiff, for which he paid them £67. A letter was produced in which the gardener wrote to the firm to the effect that his master was very well pleased with the plans and the price. The letter went on to say that his master would try to get a little discount, but he (the gardener) advised them to stick to their estimate, and to tell his employer that it was the lowest possible. Judgment was given for plaintiffs.—Gardeners' Chronicle.

The Horticultural Trades Association of Great Britain and Ireland has considered it desirable to warn gardeners against having anything to do with a number of foreign firms who are now flooding that country with advertisements of seeds, bulbs, plants, etc., accompanied with offers to gardeners of commission varying from five to twenty per cent. upon the amount of their employers' orders. The offer of commission of this kind, if secret, is a direct incitement to a criminal offence, and anyone accepting or making such an offer or even soliciting same, would immediately become liable to very heavy penalties involving both fines and imprisonment. It is clear, therefore, that those accepting such commission would at once find themselves at the mercy of their tempters, who, being foreigners beyond the reach of British law, might on their part run very little risk.

The members of the Horticultural Trades Association, comprising all the leading Nursery and Seed firms in Great Britain and Ireland, do not pay secret commissions of any kind, and therefore feel justified, in the interests of both employers and employed, in taking steps to expose this new and subtle form of foreign competition.

"Should the popular enthusiasm ever be awakened on behalf of a national rose organization it will undoubtedly be by the employment of very different methods from those that have proved effectual in the upbuilding of our professional bodies.—Horticulture.

—There is a wealth of wisdom in these remarks. Strange, though, there are many who believe that the past methods employed in the "upbuilding" of some of our professional bodies have been anything but "effectual." Nothing attempted, nothing done. That tired feeling and pessimism are poor promoters of progress. The Rose Society will doubtless pursue the proper course, despite the wail of the weary ones, who halt at all imaginary obstacles. There is no cause for discouragement. Optimism and energy accomplish much. But get to work.

By Way of Reply.

In last week's issue of our Boston contemporary a correspondent makes the following comments regarding the remarks appearing in these columns relative to our endeavor to maintain the position of The Florists' Exchange as being "Exclusively a Trade Paper": "That paper has always classed itself as a purely trade paper, but in a certain catalogue of books, I find it listed to any one who has the money to buy it, and at a cut price. Probably the editor is ignorant of this fact."

He certainly is, and the correspondent in question would confer on the publishers of this journal a great favor, if he will be good enough to mention "the catalogue of books" to which he refers. A bald statement, unsupported by proof, like that of our contemporary's contributor, is not worth the paper it is printed upon.

The fact is that The Florists' Exchange is listed in no "catalogue of books" or other subscription agency list, with our consent or concurrence; on the other hand, we refuse entirely subscriptions from any such source, unless those given by parties in the trade, and have so advised every subscription agency known to us. The following is the form of a letter sent for years back to agencies that have requested authority to list The Florists' Exchange, and to club it with other periodicals:

"Will you kindly make a note of the fact that owing to The Florists' Exchange being published exclusively for the trade, we do not solicit subscriptions through agencies; therefore it is useless for you to insert the name of our paper in your list, which we sincerely trust you will not do, as we shall refuse all subscriptions for The Florists' Exchange from your agency, or from any other subscription agency."

This Escaped the Press Censor.

An excellent example of how the daily newspaper correspondent runs riot in a desire to promulgate horticultural information and instruction to the public is provided by a contribution on "What Becomes of the Flowers" in the columns of The Evening Post, New York, of Saturday, April 20, 1907. The author is Cora A. Moore, and among other wonderful things she has to say about the flower business of the Metropolis is that one large concern can "hoast of an orchid house of 155 acres." She also informs her readers that "three times a week the market and the largest florist establishments receive palms, ferns, and various other tropical plants from Trinidad. Then there are the experimental nurseries at Hoboken and Madison where grafting and all sorts of interesting experiments are made."

Entering the realm of fashions in flowers, it is stated that "just now there is a wild clamor for La Belle carnation, which is new and very beautiful, a cross between a snowdrop and an old-fashioned garden pink."

With regard to left over stock, the "stem and foliage of which are no longer pulsing with fresh life," we are told that nimble, clever hands "skilfully prop them up, wiring their stems and spraying their fading faces with ammonia water and perfume to bring back a semblance of youth." All this happens after the flowers have had a journey to a downtown shop. Thus cheered, "Miss Rose finds herself on the street again with her charms being shouted loudly and earnestly to the big, surging crowd; she is content with her lot and revels in the dancing lights and the gayety and noise of the great white way.

"But next morning, in spite of wiring, she droops once more, and then she is unbound and there is another journey still farther downtown. Here she is again revived, but differently, so that into her dying face may come one last look of hope. The thread-like wires are reinforced by slender toothpicks." Now the flowers, with their wooden supports, have reached the City Hall Park, and provided they succeed in attracting a purchaser, "the very sister, perhaps, to the flower that blushed on the corsage of Melba or Calve, or some other queen of song, amid the applause and lights, may take its last glimpse of life from the hollow chest of a Bowersy girl, with a squeaking of cracked fiddles, and the shatter of coarse voices sounding a requiem." Poor thing!

All these things and more happen to the flowers—in Cora's lively imagination. John F. Sullivan's censor bureau should get after the Evening Post with a club. What the New York Sun calls "the scrap book" evidently needs "posting."

National Council of Horticulture.

The ninth installment of the press service of the National Council of Horticulture has just been distributed by Mr. Burdett. The subjects treated upon include Campanulas, Rhubarb, Deutzias, Deutzia Lemoinei, Cosmos, and Blackberries.

OUR READERS' VIEWS

A Warning.

Editor Florists' Exchange:

Some party (as yet unknown to me) is moving about several counties adjoining Blair County, representing himself as "John H. Myers, the florist of Altoona, Pa." He has visited several florists and borrowed money, promising to forward same upon his arrival at home. I first learned of his doings in Lewiston, Pa., and lately in Johnstown, Pa. As he is likely to make things unpleasant for others as well as myself, I concluded, in this manner to warn those who may be on his list of intended calls.

Altoona, Pa.

J. H. MYERS.

Some Facts in Breeding.

Editor Florists' Exchange:

If your correspondent, John G. Esler, would like to try an experiment, let him buy a thoroughbred female dog of any breed that would suit his fancy. First allow her to run; then next breed her to the finest thoroughbred dog of her kind that he can find and he may learn something. The progeny of the second union will still be hybrids (mongrels), and they will be mongrels up to the seventh breeding point, and sometimes beyond that. In other words, one contamination of mongrel blood will make the female useless to breed thoroughbreds from, as the elimination of blood would take too long.

Another instance: In this town a white woman had one issue of negro parentage; she then married a white man. From that union three children sprang of undoubted white parentage, but still hybrids, as the contamination of the negro blood was evident in all three. [A similar case is mentioned by Professor Austin Flint, Ed.]

Now, if the law quoted by Mr. Esler should hold good, then the mixed pollen used in fertilizing carnation Winsor should modify the blood of the female, and the effect should be shown in the progeny, perhaps more so by inbreeding carnation Winsor, provided, and a big if, the mongrel blood inherited by all carnations and produced by continuous crossing is not dominant.

Also, if that law should be correct, the art of hybridism as applied to carnations is, from the viewpoint of an animal breeder, nothing else than a continuous breeding of mongrels, which, as far as my limited experience goes, may be correct, as the seed from an inbred carnation will not produce offspring like the parents without wide variations.

Long Island.

C. B. D.

Mixing Pollen.

Editor Florists' Exchange:

I have been considerably amused over the discussion in your columns respecting the mixing of pollen. As far as I can see, the whole gamut of plant or animal life indicates that mixing fails to bring about any new departure. A stock-breeder may turn several rams among his ewes, but where is the proof that the offspring resulting are influenced by more than one ram?

I observe John Charlton invites E. G. Hill to produce a rose bearing multi-colored blooms by pollen mixing. Is he not a bit off the line in doing so? For even were E. G. Hill, or anyone else, to produce such a rose, could it be proved that it resulted through mixing the pollen? I have seen mention of a variety named Jewell, which produces multi-colored roses; in fact, I saw last year a small plant which bore a copper-colored and a pink flower at one time. How was Jewell produced? Personally, I look upon it as an unfixed sport.

There are also nasturtiums which bear differently colored flowers at one time.

It is safe to say that in making crosses, one cannot be certain what will result. Sweet pea raisers on this side have long proved that real good things come as much by chance and careful selection as by making special crosses. Who would expect to see a pure lavender result from a white×pink? Yet the most promising lavender up to date came from such a cross.

Kent, Eng.

T. A. WESTON.

Editor Florists' Exchange:

Enclosed herewith I hand you letter received from Professor W. J. Spillman, Agriculturist, of the Bureau of Plant Industry at Washington, D. C. It may be interesting to your readers to publish that part of Professor Spillman's letter which refers to the "mixed pollen" question. I have written Professor Spillman stating that I have forwarded the letter to you, as I believe his views ought to be set before your readers, and especially that part of them which combats the views set forth in my former communication upon that subject.

C. W. WARD.

Extract from Professor Spillman's Letter.

My Dear Mr. Ward:

Yours of April 18 just at hand. I have read with interest the clippings you enclosed, especially the one written by yourself.

Concerning the possibility of influence of the character you suggest, I will say that while there is a very general belief among stockmen that a previous impregnation may influence subsequent progeny, there is absolutely no reliable evidence of the truth of this theory. The old English case of the quagga influencing subsequent colts has been fully disproved, and there is no modern evidence on the subject. It is generally considered by the best students of the subject that there is no influence of this kind.

I think that there is no question that in all ordinary cases a single pollen grain would fertilize a single ovule so that the seed would be a cross between two varieties only. It is possible, however, by growing a plant from this seed which combines two varieties and fertilizing it with a third variety to get some of the characteristics of the three varieties into a single plant.

It is barely possible that an ovule might be fertilized by two grains of pollen and that plants might be raised from such fertilization. This is highly improbable, however. When such double fertilization occurs, ordinarily part of the chromosomes of the ovule join with one pollen grain and the remainder with the other pollen grain, thus producing two imperfect individuals which seldom, or almost never, develop to maturity.

Very sincerely yours,
W. J. SPILLMAN, Agriculturist.

Assisting Exhibitions.

Editor Florists' Exchange:

Now that the time is again near when those entrusted with the carrying out of arrangements for horticultural exhibitions in many parts of the country are eagerly looking in all directions for rays of hope in their endeavors to bring their labors to a satisfactory conclusion, a word to those who are perhaps not directly but are assuredly indirectly concerned, may be in season. In many sections of the country, where exhibitions are held once or oftener every year, there are doubtless materials in plenty to make the shows attractive without contributions from outside sources; but it usually happens that in these sections thus favored, outsiders are most eager to patronize and assist. There are, however, many other places where exhibits and other means of assistance would accomplish what is most desired, and that is the stimulating of an interest in everything horticultural. If large firms doing a business national in its scope would exhibit at local shows where local growers are for various reasons unable to bring the character of these exhibitions up to a high standard, their doing so would not only result in a stimulus being given to horticulture in that locality, but it would also ultimately be of material advantage to the firms so doing. And what would amount to a great deal more than either, it would help to advance horticultural knowledge; and who can say but that would be of incalculable aid to horticulture universally?

D. B.

"New Creations."

Editor Florists' Exchange:

Mr. Allen speaks truly when he says, "much more can be written without solving the problem, What is a New Creation?" Presumably he is in full accord with him who wrote; "His ways are past finding out;" and unless the science of evolution becomes absolute and our logic perfect, we will remain as ignorant of the moving forces in nature as we have been heretofore.

Mr. Allen's letter seems to be intended as an apology for Burbank and a condemnation of Burbankism, although how the two can be separated is more than I can see. If Burbankism is wrong, Burbank can't be altogether right. "That he has assumed the powers of a creator" is beyond dispute, as the following quotation from that strictly private letter on page 4 of The Florists' Exchange proves: "Nature cares no more for a man than she does for a hen or a plant, so she never creates them for his special use. She leaves that for man to do for himself. I am doing that." Another quotation from the same letter: "I can readily prove that my experiments in new creations are fully as successful as those of nature herself." Is it possible for any one to advance an apology ample enough to cover the egotism and conceit displayed in the foregoing quotation?

Burbank does not seem to be trying to "guide" nature; he is evidently in competition with nature, and according to his own idea he has beaten nature to a standstill.

Regarding the "great credit" Mr. Burbank is said to be "entitled" to, so much has been said about what he can do, also about what he is going to do, but so little seen of what he actually has done, that even those who don't come from Missouri "want to be shown."

There is no comparison between Mr. Livingston and Mr. Burbank. The former modestly claimed to be a selector and introducer of "valuable types;" the latter claims to be a creator of hens and plants.

Mr. Allen's assertion that, "The active principle of creation is reproduction," cannot be disputed. The first command that God gave was: "Multiply and replenish the earth;" and ever since the command was given, the dogs and the cats, the mice and the rats, and even the mosquitoes and greenfly, as well as the plants, have been doing their very best to comply. It seems to be the only commandment that is universally complied with.

Heckel's theory may be all right and answer the purpose, for the time being, or until it is superseded by another more plausible, just as Darwin's theory is being superseded at the present time by Mendel's theory. This is likely to go on for all time; and when all is said, done and written, the truth of the quotation used at the beginning of this letter will be acknowledged: "His ways are past finding out."

JOHN BIRNIE.

Winter-Flowering Sweet Peas.

The following communication appeared in a recent issue of the Horticultural Advertiser, England:

"In the issue of March 20, Mr. Zvolanek makes some erroneous statements in saying that he knows positively that I obtained the blue Winter-flowering sweet pea from some stray seeds I got among his Christmas Pink. I must repeat that this blue variety is a sport of Captain of the Blues, and sported with me before I ever had or saw one of Mr. Zvolanek's kinds. Further, I maintain that I also obtained sports of Dorothy Eckford, Lady Grisel Hamilton and Miss Willmott, which in my previous letter I termed 'habit' sports, as their habit is identical with Mr. Zvolanek's Winter-flowering sweet peas, while the flowers are identical with those of the parents. Several of the largest sweet pea growers in this country happened to see the original plants in my nurseries, among the rows of the ordinary kinds, and would, no doubt, verify my statement if its truth were doubted.

"As regards Mr. Zvolanek's 'vetch theory,' I think this is altogether ridiculous, and I fail to understand how any intelligent hybridizer can as much as give it a serious thought. This vetch business appears to be new even with Mr. Zvolanek, for on page 205, year 1902, of Moller's Deutsche Gärtner-Zeitung, he says that he first discovered the Florence Denzer among a large batch of Emily Henderson, with which it is identical in all but habit. He further writes in a small booklet (which I enclose) that the seeds of the Winter-flowering sweet pea want to be continually re-selected, as otherwise they will go back to the ordinary habit; none, evidently, go back to the vetch habit. Again, if these sweet peas are not sports, where does Mont Blanc come from? It takes a good eye to detect a difference between this and Florence Denzer; or where does Early Blanche Ferry originate, which is uncommonly like Christmas Pink; or what are the Algerian sweet peas, if not sports of the original type? In short, it is my firm conviction that the first Winter-flowering sweet pea was a sport of the ordinary type, caused through the altered conditions of climate or culture; in Mr. Zvolanek's and my cases the latter was the cause, as they were grown under glass; with the Algerian sweet peas it was the former. Once the beginning was there, it was comparatively easy to obtain new colors by crossing. As regards the habit, Mr. Zvolanek's, the Algerian, and my own are all the same, as regards the quality of flowers. Well, there the winner will be found eventually. Mr. Zvolanek sent me, as well as other firms, some of his sweet peas for trial last Summer, about which I find I reported in due course. In conclusion, I may mention that I should not have sold any of the seed of my strain until I had been able to separate and select the best forms and colors, had not another firm, which also received Mr. Zvolanek's varieties for trial, offered the strain in mixed packets, and, of course, one does not like to be behind nowadays.

C. ENGELMANN."

Edward W. Fenn.

Edward W. Fenn, aged 62 years, died Sunday morning, April 14, 1907, of a disease of the liver, at his home on High street, Terryville, Conn. Mr. Fenn had been ill all Winter. About 30 years ago he built a greenhouse upon the farm where he had always lived and devoted all his time to the cultivation of flowers, in which he was successful. Mr. Fenn was twice married. His second wife survives him, also his son, Clarence, and his father, Stephen Fenn, who is 84 years of age.

American Rose Society.

Some Notes by the Secretary.

The exhibition of the American Rose Society held in Washington, D. C., last month, and the publicity given to the same by the press, has made it apparent that a widely extended interest in the affair by both rose growers and local societies in various places exists, also by people of cultivated taste, who address the secretary for information, showing an enthusiasm that is widespread, which leads me to give some facts pertaining to the working of the society and the preparation for its shows.

Looking over the florists' trade papers, there are dozens of advertisers offering roses for sale, each one of whom could assist the society as a working popular force by joining as a member.

The American Rose Society is gaining in a life membership fund, but the sustaining membership is absolutely required, and this may be secured through the assistance of every rose grower in America without being a burdensome expense to themselves.

A photograph of the exhibition, made by Harris & Ewing of Washington, D. C., now before me, gives a fine reproduction of the beautiful effect as one entered the hall at evening, with the electric lights pouring down over the great square hall with its wealth of color and form that at once took the eye. This photograph provides a permanent retention of the show. But 48 hours before, the secretary as he faced the same space, all-ready to fill up, which the Florists' Club of Washington had worked so hard to make ready, was puzzled when at 5 o'clock the night before the show was to open, a gentleman from New York City said "This looks well, but what have you got to fill it up with?" At that instant the entries of all degrees counted thirty-seven vases—a drop in the bucket only.

A few Washington men gathered and the word was passed, "We will have a show if we have to empty our own houses." Here was a perplexity to those on whose shoulders rested the responsibility of getting up an exhibition; at the last minute they were in ignorance of what was coming, and the work of preparation was done on faith. It was ten o'clock Tuesday night when a despatch came from M. H. Walsh, Woods Hole, Mass., saying "I am leaving Boston with a carload of Rambblers." This despatch was like General Sherman's signal "Hold the Fort, for I am coming." Then came a message from Pierson saying "We have missed a train, but will be there with some fine blooms."

Wednesday morning (the show was to open at noon), came load after load from one and another who had started the afternoon or night before, but had sent no word; hence we were in the dark. Three or four who had entered were disappointed at last, but by noon time there had vanished all doubt of not having a rose show. The roses were on hand.

The judges, Messrs. Craig, Kasting and Hauswirth, could not begin work until late; and this point I wish to give out to all exhibitors: Try and let whoever is in charge know ahead that you will come. There is a whole lot of detail work in arranging these shows, and such exhibitions as the American Rose Society puts up are worthy of visitation by thousands of people; the sight is one of beauty.

The prizes taken numbered 55. The Dorrance trophy was carried off by Robert Simpson of Clifton, N. J. This is the first time anyone has captured that prize. Lord & Burnham's prize has been won twice by George Burton of Wyndmoor, Pa., and according to the terms of presentation he now owns it. Wm. H. Elliott of Brighton, Mass., carried off the first prize, which was given by Messrs. Moore, Hentz & Nash, New York, of \$15, to go to the man who did the real growing; this was John Pritchard, Madbury, Mass.; the second prize, \$10, went to Wm. Ahlers of Clifton, N. J., grower for President Robert Simpson. The number of special prizes offered in divisions F and G was 32, and of these eight were not won. The W. A. Manda prize of \$25 in gold is to be won next year. John Breitmeyer's Sons, Detroit, Mich., place their \$25 in the treasury for next year. Alexander Montgomery's cup remains for next year also. The Hammond prize of \$10 for best foliage rose for dooryards, likewise remains. This is as far as heard of from the layovers.

The Rose Society, by invitation of the Chicago Florists' Club, goes to that city in March, 1908. We want 1,000 rose growers in the big centers and in the villages from the East and the West, from the Northland and the Southland, to join us as associate members; and we want to send to each some frequent reminder so as to keep in touch one with the other; and when we hold shows hereafter we want the people to come to see them. The best card we had in Washington was to invite the school children with their teachers; the little folk came in flocks. Two of President Roosevelt's boys were there, well behaved and good mannered lads, too.

BENJAMIN HAMMOND, Secretary.
Fishkill-on-Hudson, N. Y.

Plant Bedding and Bedding Stock.

(Concluded from Page 551.)

Then we have tropical beds of smaller kinds of plants with which to create a most beautiful effect. Take a small or medium size bed; plant, we will say, a medium-sized *Phoenix rupicola* or *P. canariensis* for the center, surround it with the various sorts of crotons, intermixed with *Pandanus Veitchii*, *Acalypha mosaica*, and border it with *centaurea*; this bed in a sunny place, and you will have a most exquisite combination.

We have also a great many flowering and foliage plants which can be used very effectively. There are the various kinds of cannas, which are most effective in large masses bordered with some other plants, like *coleus*, *Stevia serrata* var., etc.; groups of *salvia*, *lantana*, not to forget our very popular geraniums. A group of *heliotrope* in a sheltered place in sandy soil is very attractive. *Begonia Vernon* is also to be recommended on account of its free blooming habit, it requiring little care after planting.

As to the annuals, we have a great variety: I will just mention a few which are to be recommended. They are cheap, easy to grow, and with proper care afford no end of pleasure during the entire season. By selecting the proper place for the various kinds, one cannot help but admire their never-ending shades of color. Plant a bed of the old *Phlox Drummondii* in a bright sunny place, afford the necessary watering, and you will have a splendid show. By picking off the seed pods frequently during the season the plants will be one continuous mass of flower until quite late in the Fall. It is the same with *verbena* in its various colors. *Zinnias*, with their many colored large flowers, borne on long stiff stems, make a very pretty bed.

Then we have the *antirrhinum* (snapdragon), *aster*, *delphinium* (larkspur), the various *dianthus* (pinks), *pentstemon*, *nicotiana*, etc., all of which will thrive most beautifully under the same conditions as *phlox* and can be used in groups or for bordering shrubs or ribbon beds along walks or fences.

Now in all this planting, follow the general rule of Mother Nature and the greater our success will be. Arrange your beds and plantings as much as possible according to the surroundings; the shape and size of a bed depends largely upon the shape and size of the place. Care should be taken in selecting the proper plant for the contemplated bed. It is rather discouraging for a customer to have a bed of plants which will not do well on account of wrong conditions. Therefore, the study of the grounds before planting becomes a necessity, for it would be a mistake to plant a bed of great moisture-loving plants in a high and dry place, and the same reversed. This is one main point where so many failures come in and great harm is done. I therefore repeat: study of the conditions of the soil, surroundings, shape, size of bed and place, proper selection of plants, are the most essential factors for successful bedding, and if such general rules are observed success cannot fail to crown our efforts.

This much about plant bedding. I will now give a few points on propagating and culture of some of the most popular stock.

Seeding.

Phlox, *verbena*, *zinnia*, *antirrhinum*, *delphinium*, *pentstemon*, *nicotiana*, etc., should be sown about the last week in March, in a cold frame, with just enough manure to keep frost out. Sow in a good rich soil, with a top mixture of sand, as this will keep the soil sweet and prevent the seedlings from damping off during moist and cloudy weather. In this way, the seedlings, with a cool bottom, sown rather thinly, can stay until time for planting arrives without extra transplanting; that is, if the seed is sown too thick, it is well, or rather necessary, to transplant the seedlings into another bed in order to keep them dwarf and healthy.

Ricinus can be sown singly in small pots and transplanted as desired. *Oxalis* should be sown in flats, about the end of March or beginning of April, and transplanted as needed. *Centaurea gymnocarpa*, *candidissima*, *Cineraria maritima* should be sown as early as December, on account of their slow growth. As soon as they are up, transplant and keep in a cool house if possible, on a shelf near the glass. About February plant into small pots, and as soon as possible transfer to the hotbed.

Begonia Vernon is also best grown from seed. Sow in flats about February, transplant as soon as possible and keep in a warm house. It is rather tedious to first transplant *begonias* on account of their smallness, but the sooner this is done the better it is for the seedlings. When large enough, plant into small pots.

Cuttings.

With *alternanthera* it is best to overwinter old plants; about March pull them apart and plant on a

warm bottom in a hotbed, and as soon as the young growth starts cuttings can be had in abundance. These can be stuck in a sandy hotbed where they will grow freely and also can be easily used for bedding right out of the frame.

Geraniums are best propagated in Fall or during Winter, so as to get plants of proper size. *Coleus* should be kept in a rather warm house during Winter. About the beginning of April cuttings can be made; with a little bottom heat they will root freely and will make about the right sized plants for bedding.

Cuttings of *sedum* and *mesembryanthemum* can be made at any time during Winter. *Echeveria* should be taken up in Fall and whatever young plants there are should be taken off and planted in flats. Keep them in dry, cool place during Winter and increase watering as the season advances. *Stevia*, *lantana*, *gnaphalium*, *cuphea*, *ageratum*, *salvia*, *heliotrope*, etc., can be propagated at any time after February. *Canna* bulbs should be kept in a dry, cool place. About March the bulbs can be divided and laid in sand; when rooted plant in pots ready for planting. *Dahlias* are treated about like cannas, only need not be started as early. *Caladium esculentum* bulbs are kept best in sand in a warm house and started about April.

There are certainly many more plants to be mentioned, but this much for the present.

Petrea Volubilis
Flowering in Missouri Botanical Garden

Florists' Clubs, Their Value and Importance.

(Concluded from Page 553.)

Obstacles Overcome.

About two years ago a florists' club was organized in a nearby city. At that time there was jealousy, distrust and much vindictiveness among the florists there, and at first it was thought useless to attempt organization, so deep seated and openly pronounced was the general discord. However, a few of the more progressive and broad-minded undertook the formidable and apparently hopeless task, and were much encouraged by a timely visit of the Detroit club in a body to the scene of their efforts. Soon thereafter an organization was effected which has already accomplished much good work. One of their meetings and exhibitions, held a month ago, was so successful that it required two columns of the trade papers to describe the many valuable and entertaining features of it, and it is needless to say that none of the members any longer questions the value of florists' clubs.

Club Members Always Progressive.

A National Flower Show was recently projected by the S. A. F. and a guarantee fund was required. Immediately upon the announcement of the enterprise guarantors came forward with subscriptions amounting to over \$8,000; the total amount required, \$10,000, is almost in sight, and the names of almost all the guarantors can be found in the florists' clubs' membership lists throughout the country. Again, the result of organiza-

In the State of Illinois at the present time the florists' organizations are endeavoring to secure an appropriation of \$15,000 for experimental purposes in their direct interests, while individual efforts could not secure one dollar for the same purpose. Many similar cases might be related covering examples of the clubs' successful work throughout the whole country, all confirmatory of their great value.

Importance of Attending Meetings.

Good attendance at the meetings is not only necessary to bring out a club's greatest usefulness, but is really vital to its very existence. The frequency of attendance at the meetings will serve each time to extend further the acquaintance and cement the mutual friendship, inspiring an interchange of almost implicit confidence in the total membership, and when a time arises calling for the prompt action of a united body of men, no time need be lost by a campaign of education along the lines of duty.

True, it may sometimes call for some individual sacrifice to maintain this high code of worthy practice in our club, as on occasions when the evening program does not appear attractive. The essay to be read treats, perhaps, of a subject in which the florist is not vitally interested, and he is accordingly prompted to remain away. *Don't do it.* Come to the meeting, and by your presence, if not by your participation or even passing interest in the discussion, give encouragement to the essayist who has himself given hours to the preparation of his article for the benefit of all who may hear it read.

I contend that it is really impossible for the florists to meet continuously as they do in their club rooms without acquiring a far better understanding of each other, which often ripens into deepest friendship. It is a great mistake to think that your monetary support of the club will secure for either yourself or the society the full measure of benefit that it is possible to receive by your prompt and regular attendance at the meetings. I would rather witness the presence of a full membership at the meetings than the payment by each absent member of a fee equal to the total amount of his yearly dues. For of what benefit would the money thus secured be, if we did not have interested members to appropriate properly the club funds for the most advantageous furtherance of its purposes? The power and influence of a united and enthusiastic membership is lost when a weakness is unwittingly constituted by the apathy of members who fail to attend the meetings regularly or even frequently.

It is always noticeable that those who are prone to stay away from the meetings are usually the ones who stand most in need of the benefits that the club can impart to them. The full measure of a club's value cannot be brought about without a complete representation of the membership at the meetings. I care not how unattractive the program of the evening is, if the members present are fully representative of the club's strength, the mere assembling of them for participation in the proceedings cannot fail to strengthen further the existing good fellowship.

I hope the time is not far distant when the real significance of our florists' organizations will be so universally recognized that any one engaged in the business, even as an employee, will be very reluctant to acknowledge that he is not a member of both the local club and the Society of American Florists. All florists truly devoted to the advancement of the business should hope and work for a greater number of florists' clubs in this country, and materially aid them to increase their value to the trade; as unquestionably all work of this character contributes essentially to the dignity of our profession and the commercial importance of it.

In conclusion, I wish to congratulate the Detroit Florists' Club upon its many achievements during its brief history of nine years. Chief of these I consider the engendering of the feeling of extraordinary good fellowship that exists always among us, and permits us always to carry to a successful issue anything we undertake.

Petrea Volubilis.

This genus, which is dedicated to Lord Petre, comprises about a dozen species of beautiful twining or arborescent stove shrubs, which are all natives of tropical America. *P. volubilis* is undoubtedly the finest. In its native habitat it is found growing up trees, ascending to a height of twenty to thirty feet. The flowers are disposed in a single pendulous elongated raceme, about ten to twelve inches long; the calyx is of a light blue color, and the corolla a beautiful purple, giving a splendid contrast. The leaves are ovate or oblong acuminate, about six inches long.

A stove temperature suits the plant admirably. Our warm Summers here in St. Louis enable us to put it outside, where it grows profusely; then, it is taken inside about the end of September, where it receives more or less of a resting period. It generally flowers March to April.

Missouri Botanical Garden.

G. H. P.

A Few Notes on Jamaica, W. I.

BY WILLIAM FALCONER.

(Continued from Page 457).

Some of the Trees and Plants.

When I was in Jamaica—about this time of year—among the big trees in good bloom were flamboyant, mahoes, sesbania, bombax, lonchocarpus and spathodia. Principal among the shrubs in flower in gardens were poinsettias red and white, plumbago, red, blue and white; the fragrant murraya, yellow tecoma, orange and buff ixoras, variegated bauhinias, purple tinnea, purple and white meyenias, red achania, peach, pink and scarlet hibiscus, red and white oleanders, fragrant white jasmines, white, pink-tinged and yellowish frangipani, the Cape snowball (*Dombeya natalensis*), day and night blooming cestrum, also the reddish ones, the delicious white tabernamontana, flesh-colored justicias and a good many others. At the same time the paucity of variety of tropical flowering shrubs in gardens in general surprised me.

A good deal is made of variegated plants, notably crotons; they are permanent garden shrubbery, but often their disposition and condition were painful. Many kinds of the fern and lacy-leaved aralias are used and the bronze and dark red leaved dracaenas occasionally appear. *Execaria*, a pretty plant whose leaves are green above and red beneath, is not uncommon and its foliage glistens in the sun. The rosy-leaved *phyllanthus* finds a place with crotons, but I have seen it far finer in Florida than anywhere here. And hedges are made of the caricature plant. The people call it "no-two-alike," referring to its leaves. The variegated *sanchezia* was not infrequent. Among other hedge plants I might mention crotons, aralias, hibiscus, *phyllanthus*, cactus and pinguin. The cactus used is Swartz's *cereus*, an "organ" cactus not unlike the *C. emarginatus*, so much used for fencing in Mexico. Tops are topped off and stuck into the ground straight up and close together, and there they root, making an impenetrable barrier. But the ugliest of all hedge plants is the pinguin, or as the natives call it "plungwing." It is a big long-leaved, hook-spined bromeliad—a waste of ground and a nest for weeds.

Speaking of cactus reminds me that the Turk's Cap cactus is found in Jamaica, but it is rare. A slender *riphsalis* grows on the trees. Another succulent common there but not common in cultivation is *Agave Morrisii*, which is quite like our ordinary century plant. Oh what magnificent cactus gardens could be made on the south sides of this island!

Some Orchids Seen.

Epiphytal air plants abound on some of the trees, but these are mostly *tillandsias* and other bromeliads. No showy orchids are wild on the island. *Epidendrum fragrans* is very plentiful on calabash trees, and other vigorous showy whitish flowered sorts make large clumps in the woods. *Oncidium luridum* on trees, on rocky ground and on stone walls along the roadsides in some places were very abundant, especially at 1,000 to 2,000 feet elevation. On a comparatively level stretch of open land on the Blue Mountains, say about 3,000 or 4,000 feet elevation, *Phajus grandifolius* had become naturalized, no doubt escaped from cultivation and increased from seed. At the Hope gardens there is a collection of exotic orchids.

A Paradise for Ferns.

Jamaica is a paradise for ferns, and there they occur in hundreds of species from forests of tall tree ferns to the tiniest pellucid jewels of filmy ferns. Maidenhair ferns—*Adiantum tenerum* prevailing—are very plentiful, so too are the powdery *gymnogrammas*; *gleichenias* from dense viney thickets and even the common bracken, *Pteris aquilina*, here becomes a running vine 10 to 12 feet long. Associated with the vine ferns I noticed a slender-stemmed, spiny, running vine bamboo, but I was informed that it has almost defied artificial cultivation.

Vines are Jamaica's Floral Glory.

The vines are the floral glory of Jamaica, always in bloom—showy, gorgeous. Among wildlings, big flowered lilac and purple perennial morning glories predominated. In thickets along the Rio Cobre I found the pelican flower (*aristolochia*) with blooms as big as a drab sombrero and tails a yard long. Big, bright yellow morning glories covered many a porch. *Petræa velubilis*, with its racemes of blue, formed woody thickets of vine. *Bougainvilleas* were a sea of magenta and the Mexican mountain rose (*antigonon*) an airy shower of rose pink. The *stephanotis* on high trellises grew bloomed and fruited with a freedom unknown in greenhouses.

But the most extravagantly profuse of all airy-bloomed vines was *Porana paniculata*, an East Indian plant of vigorous growth and a snow bank of small white flowers. Balfour's *clerodendron* had a profusion of red and white blossoms. The bluish potato vine, *Seaforth's solanum*, wild and cultivated, was much in evidence and looked well in bloom and scarlet fruit. On trellises and fences I noted the vivid yellow and orange *Bignonia venusta* in floral extravagance, and occasionally the magnificent bluish *B. magnifica* and its white form *alba* were

strikingly lovely in gardens. *Thunbergias* of several kinds were often met with, especially the showy *Harrisii*. In one garden I came upon a great mass of *Baumonia grandiflora* with its fleshy stems and leaves and big white trumpet fragrant flowers. But there were many other vines in tropical luxuriance, notably passion flowers in flower and fruit, and at one place a red *tacsonia* from New Granada.

A sunflower cheated me. Riding along the road in the dusk of the evening one day, I observed a great mass of big yellow flowers against the piazza of a residence, 40 or 50 yards back from the street. I was much puzzled, got off my horse, opened the gate and walked up to the house. No, it was no vine, nor tree nor shrub unknown to me, but the sunflower, *tithonia*, a vigorous, exceedingly floriferous and showy tender composite 5 to 8 or 9 feet high, fine for a background, but too rough for the front in planting.

Wild Flowers.

Among wild flowers *Begonia nitida* was quite common in the woods; some of the foot hills seemed to be carpeted with *Achimenes coccinea* in bloom, and my heart jumped for joy when I came upon patches of *Coccydium repens*, a creeping blue-flowered, blue-berried gem that I hadn't seen before for 25 years.

Roses.

Noisette, tea and other tender roses are cultivated all over the island, sometimes with difficulty in the low-level lands, but they behave splendidly in the mountains, and I saw the Cherokee rose run wild, escaped from cultivation in the high hills. But nowhere in Jamaica could rose growth compare with that in California.

tain homes to the coast town markets. Pepper and seasoning herbs are also plentiful.

Pittsburg, Pa. WILLIAM FALCONER.

other fruits and runs regular fruit carrying steamers between Jamaica and Baltimore, Philadelphia and Boston. But it is not dependent on its own plantations, it invites fruit from every grower in every section. Great quantities of coconuts are grown near the sea coast; the finest orange trees I ever saw were at Mandeville in the interior; pine-apples are now an important crop, and there is any number of miscellaneous fruits, as limes, avacado pear, star apple, tamarinds, mangoes, mamme apple, pawpaw, cherimoya, sour sap, etc. Hundreds of acres of cacao or chocolate tree are now being planted; it is a profitable crop.

Vegetables.

In the line of vegetables Jamaica is backward. There is any amount of yams and tania. Plantains (cooking bananas) are common. The big bread fruit is cooked as a vegetable. A patch of cassava is in almost every country garden. Many kinds of beans are grown, but there is room for improvement in selection and manner of cultivation. Pigeon peas, too, are grown; these are shrubby and bear all the year round. Tomatoes are had at all times, but there is something lacking. A little corn is grown but ours is better. Choco is a cucumber-like fruit which when nicely cooked is quite good. Cucumbers, squashes and a few other things are not infrequent. And from the mountain country turnips, onions, leaf cabbage, lettuce and some other of our familiar vegetables are brought into the town markets. Women carry them in baskets fruit raising for outside markets, and the Boston

Easter Display of Fifth Avenue Floral Company, Columbus, O.

Aquatics.

The *Victoria* and other tropical aquatics are grown there in one or two places, but from evidence seen and what I heard, when viewing and commenting on photographs of these as grown with us, these plants are far better grown in the United States than in the West Indies. They had nothing to compare with the *Victoria* as grown in the Phipps conservatories; nor with this class of plants as may be seen every Summer in the out door ponds of Dreer at Riverton, Twin Oaks, Washington, or Tower Grove Park, St. Louis. My dear old friend, James Gurney, superintendent of Tower Grove Park, writing to me last week incidentally mentions: "I would have been proud to have had you walk through my water garden last (1906) Summer. I tell you it was a complete surprise to myself, hundreds of people standing on the leaves of the *Victorias*, it did not matter how heavy or how light the folks were. The leaves were from 20 to 22 feet in circumference."

Economic Plants.

Sugar, at one time the main crop and wealth of the island, is now at an exceedingly low ebb; no money in it, and many, many once famous plantations are running to waste, the fields abandoned to guava, logwood, pimento and scrubbery and the buildings crumbling in ruins. But near Montego Bay I saw some very fine plantations.

Coffee is largely grown, particularly between 1,000 feet and 4,500 feet elevation. At the lower levels the plants grow thriftier and bear heavier than at the higher altitudes, but the finest coffee is from the higher lands. In private families one will get a good cup of coffee, but in the road houses we have better at home.

The agricultural depression owing to profitless sugar has turned the attention of the people to on their heads 20 or more miles from their moun-

tain homes to the coast town markets. Pepper and seasoning herbs are also plentiful.

Hardy Chrysanthemums.

Chrysanthemums of the "pompon" type, of which each plant produces from forty to one hundred blooms, an inch or two across, are many of them sufficiently hardy to be left out all Winter in central and southern latitudes. The blooms often remain in good condition until long after Thanksgiving, says the National Council of Horticulture.

These plants are the most capable of resisting frost of any garden herbs. Their peculiar merit is in blooming long after successive frosts have deeded the landscape. Their vivid colors are so unlike anything else at that season that they are indispensable in the carefully made garden.

The flowers are not ruined until their petals have been wet and frozen stiff. The plants are necessarily used for mass effects as great size is not to be expected. Masses of red and masses of brown side by side make a striking combination. Crimson and pink varieties should be kept by themselves because their colors are variable and they make a violent contrast with the yellow.

The culture of hardy chrysanthemums is simple. They need little care and can be planted in any situation, so that the soil is rich. They are best propagated from cuttings which should be made at any time from October to May. The cuttings may be obtained from any florist. They should be inserted singly in pots or sandy soil and as soon as they are rooted they should be put in separate pots or set outdoors in their permanent location.

FOR THE RETAILER

New York Wedding Decorations.

Many weddings are still taking place in this Metropolis, the decorations at some of which have been particularly elaborate. A very costly decoration by a leading Fifth avenue florist was most worthy, and more than ordinary taste was displayed in its execution. The keen competition in New York calls for something more than the usual, "thrown together" affair, and a decoration must be a creation, something different to what has been formerly accomplished, and every effort of hand and mind must be put forward to its successful bringing about. It must be a winner, and something to be remembered, or one's orders for high-class decorations will "grow beautifully less."

The decoration referred to was done entirely with lily of the valley, which naturally spells high price. The side aisles of the church were closed off from the main body by long avenues of palms extending the whole length of the church from front to rear, enclosing the two middle aisles. At every pew was hung a handle basket filled with lily of the valley, tied with white satin ribbon, and showered with narrow ribbon and lily of the valley on one side. The chancel, which was banked on either side with palms and Cibotium Schiedei, was finished off with a complete cascade of lily of the valley and Adiantum Farleyense extending from the altar rails right around on either side to the front of the chancel. The pillars on either side of the chancel were encircled with a broad sash garland of lily of the valley and Asparagus plumosus. Two swinging gates, made of the same flower, were placed about midway up the middle aisle; these were attended by pages, who opened them for the invited guests.

The house decorations were also of a high order, four large rooms and the hall being beautifully done. The canopy, or bower, under which the bridal party received, was perhaps the main feature. One side of the reception room was covered entirely with Southern smilax; this was relieved with branches of variegated maple. In the center a "shell canopy" was erected and covered with smilax. This was relieved with large clusters and sprays of Alma Ward carnations, interspersed with bows of white satin ribbon. The under side of the canopy was entirely covered with white sweet peas. Four marble columns in this room were entwined with garlands of Golden Gate roses, the mirrors being done with Asparagus plumosus, and cherry blossoms forced for the occasion. Palms and blue hydrangeas were used in the next room, two mantels being banked with them.

A wall fountain at one end of the room was filled with Spanish iris lavender and purple in color. In the third room, occupied at one end by the musicians, who were screened by a tall hedge of Dorothy Perkins rose, were placed in appropriate situations, tall vases filled with American Beauty roses. The mirror, which extended from the ceiling to the floor, was completely arched with Dorothy Perkins roses and asparagus. The last room, in which the buffet lunch was served, was done with forsythia, the center-piece for the table being made of Franz Deegen roses and maidenhair fern.

Several large palms formed the decoration for the hall. The winding stairway was covered with white lilac and Southern smilax.

A Sheaf of American Beauty Roses.

A very good arrangement for a funeral design was seen in course of construction at a prominent store this week. A frame about three feet high had been provided; this was made in the form of a sheaf and painted foliage green. Long stemmed American Beauty were wired to this and allowed to cross about the middle of the stem, individual wires extending upward from this center almost to the top of each rose, where they were again attached. The effect when finished was that of a beautiful sheaf of roses. This can be greatly improved upon by tying a large cluster of lily of the valley or white orchids where the stems meet at the center. American Beauty, green or white ribbon, to suit the taste, should be tied at the center and allowed to hang down over the stems.

A large standing cross of white pansies was also very good. This piece was made round and filled all over. A wreath of purple pansies, made separately, was passed over the top and allowed to fall naturally over the front of the cross. The base, which was square, was filled with ivy leaves; one long spray of ivy was allowed to climb naturally up to the arms of the cross, relieving the solid white of the pansies.

D. RAYBUN.

W. G. Salford's New Conservatory.

Editor Florists' Exchange:

We send you a photograph (herewith reproduced) of a new conservatory and show room we have just added to our flower shop. This conservatory is on the second floor of our building, with a four-foot stairway leading out of the store proper. It is forty feet long and twenty feet wide, with concrete floor, end walls, and sides up as far as the glass. The benches are also of concrete; frame of iron, with bent glass construction. Double thick ground glass is used. For lighting we use five fifty candle-power high efficiency lamps. The conservatory was constructed just in time for the past Easter display and proved a great help to us, being also the best advertisement we have ever had. It was erected by Charles Mitchell, of Poughkeepsie, N. Y.

W. G. SALTFOED.

PAMPHLETS RECEIVED.

"MESSENGERS OF SENTIMENT."—This is the title of an interesting brochure distributed by Fiedler's, florists, 902 South Charles street, Baltimore, Md. The language of flowers is given, with suggestions for combinations; also quotations from the poets, and a list of plant puzzles, reproduced from the New York Tribune, which includes such conundrums as the following:

"Plant the days of the year, and what will come up? Dates."

"The unmarried man's bane? Bachelor's buttons."

"An Israelite with the habit of traveling? Wandering Jew."

The booklet, which is neatly printed, and bears no advertising other than the firm's imprint, will be welcomed by the sentimentally inclined who desire to "tell the wish of thy heart in flowers."

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & EUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Washington, D. C.

GUDE BROS., 1214 F Street, N. W. We excel in high-class flowers and design work of every description; quick service, reasonable charges and liberal treatment have placed us on top. Try us.

Dallas, Texas.

LANG, THE FLORIST, the largest flower store in the South. Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Texas, Louisiana. Mail and telegraphic orders solicited.

Dwarf Juneberry for Fruit.

An Iowa writer in a Western farm paper mentions the value of the dwarf Juneberry as a fruiting bush, classing it as of more value than the huckleberry. This, the dwarf Juneberry, exists in several varieties. The common Juneberry of our Pennsylvania woods is the Amelanchier botryapium. There are dwarf forms in the West; one is A. nana; and then in New Jersey there is one, A. rotundifolia, which is but a small bush.

The fruit of these is very good and to our Western friend may be better than the huckleberry, but it is not so to the taste of the writer. However, it is a very good berry and in every way worthy of garden room. Being an early ripening fruit it is a great treat to birds, and the risk that they may gather it has to be run.

It is not alone the fruit that gives the dwarf Juneberry value. In the earliest days of Spring it bears abundant white flowers, in small clusters, appearing before the leaves or with them as they push. It is certainly a bush to be recommended both for its flowers and its fruit.

In our woods one of the delights of early Spring is the display made by the Juneberries as they flower, usually on the edges of woods. J. M.

HARDLY A WEEK passes that The Florists' Exchange has not an inquiry from the addresses of some out-of-town florists to whom the New York retailers desire to send telegraph orders. Every progressive provincial florist should be represented in this column in order to secure his share of the business a-going.

New Conservatory and Showroom of W. G. Salford, Poughkeepsie, N. Y.

CLUB AND SOCIETY DOINGS.

THE COLUMBUS FLORISTS' CLUB Tuesday evening last, held its first meeting for April. President Stephens was in the chair, and there was a large gathering of members. The attractive display of plants and flowers, taken as a whole, was the best, perhaps, our members have made since we started the point system of awards last September. The award committee consisted of Messrs. M. B. Faxon, William F. Metzmaier, A. Wedemeyer, Jacob Reichert and Albert Hills; and their report was as follows:

For a very fine specimen of *Araucaria excelsa*, to John Williams 20 points. R. A. Currie received 15 points for a perfectly bloomed pan of Tournesol red double tulips. Hyacinths were well shown by Sherman F. Stephens, who for a vase of splendid spikes of King of the Blues was awarded 13 points; everyone present admired the superb color of this fine single hyacinth which still holds its place as the best of its class. Some especially good callas won for I. D. Siebert, 13 points; and the committee highly commended John Williams for geraniums.

The important matter before the club at this meeting was the arrangements for the distribution of the penny packets of flower and vegetable seeds that have been prepared for the school children. Since our last meeting the seed committee of the club requested the permission of the Board of Education to distribute the seeds to the children and collect for the same a penny a packet as in past seasons. The request was flatly refused. But the Board of Education instructed their clerk to communicate with the congressman of this district as to procuring free seeds for the children from the congressional distribution. One of your contemporaries stated last week that the same request was made by the Columbus Florists' Club last year and refused at that time by the Board of Education—such a statement is not the fact. In both 1905 and 1906, flower and vegetable seeds in packets were distributed through the teachers of the public schools here to the children and a penny each collected for the packets. For three years our club has worked hard and most enthusiastically to put on a firm basis this children's garden plan, believing it to be one of the best ideas for civic improvement ever invented. From the very start opposers sprang up, but public sentiment in Columbus is in favor of it, and the children themselves have become much interested, so the seeds will be distributed again this year. The sale of these penny packets should not antagonize any seedsman, because it does not compete with his five-and-ten cent packets. On the contrary, many seeds-men agree that this plan makes business for them. The writer can truly say for the Columbus Florists' Club, that the organization has been and is trying to do a good work, and has never, as individuals, in any way looked for or thought of any increased business from these school and home gardening plans. I neglected to mention that the reason our club is so prominent in this seed distribution affair this year, is because as in the past, there have been four or five different organizations doing the same work in as many ways, but this season the entire matter was placed in the hands of our club, and we having accepted the charge could not do otherwise than continue the work to the best of our ability. The end is not yet.

At this meeting the matter of our annual field day and picnic was brought up. A committee consisting of Messrs. James McKellar, R. A. Currie, Jacob Reichert, George Bauman, and W. F. Metzmaier was chosen to conduct the affair; the place and date will shortly be announced.

The delinquent member question was again discussed, but no one seems able to propose a plan that will bring them to the meeting. The hard part of it is, that the large proportion of these stay-aways pay all their dues very promptly, but seem entirely to lose sight of the fact that for the good of the club they should attend the meetings. This is very unfair to those who religiously are present at every session, and are working so hard for the organization.

It was arranged to have a rose and strawberry show in June, with proper prizes for each; and the members voted to make the occasion a Ladies' Night. We have many women members in our club and we hope to make this exhibition particularly interesting to them.

The committee having in charge the arrangements for the chrysanthemum show reported that matters were shaping themselves favorably for a fine display this Fall; and especially pleased were the members to learn that several special prizes would be offered by interested friends.

M. B. Faxon called the club's attention to the proposed plan of the American Rose Society in allowing

florists' clubs to become associate members of that organization. Our members were much interested in the idea. If it could be so arranged, and the American Rose Society award a yearly medal through the local club, it was the unanimous opinion that great good would result, especially in the culture of outdoor hardy roses.

The howling enthusiasts are in favor of having contests from now on, the same as we had last Summer with so much pleasure and success. This matter will be decided at the next meeting. At an unusually late hour the meeting adjourned till Tuesday evening, April 23. E. W.

LENOX, MASS. HORTICULTURAL SOCIETY.—The regular meeting of this society was held Saturday, April 20, President Herremans in the chair. A. Luche was unanimously elected a member. The assistant secretary's resignation was accepted with regret, and E. Pawcett was elected to fill the vacancy. After adjournment refreshments were served, and several of the members entertained by speech-making and singing. Eustace Jaques presented the society with a magnificent silver cup for competition at the Fall exhibition, and was heartily thanked by President Herremans. The following exhibitions will be held by the society in the Lenox Town Hall: Rose and strawberry, June 26; annuals and perennials, August 15; and the Fall exhibition, October 23 and 24. The schedules for these are out and copies can be had upon application to the secretary. G. H. I.

Staphylea Colchica as a Pot Plant
Grower, Mrs. A. Woltemate, Germantown, Pa.

Staphylea Colchica as a Forcing Plant.

In Europe the *Staphylea colchica* has been used for forcing for many years, but it has not been as common here as it will be when its merits are better appreciated than they are now. It is a good thing and has been long valued as a hardy shrub, many collections having it, but only of late years has it been seen in collections of forced shrubs in the United States. Its beauty speaks for itself, as the photograph represents it. The flowers are white, somewhat sweet scented, and last two weeks from the time of opening.

When grown in pots the flowering is more profuse, than when in the open ground, the growth being less rank. There must be a supply of young shoots from which growth may push to give the flowers; the blooms do not appear as soon as growth starts but later, after a little growth has been made. This is why it is not among the earliest of outside shrubs to flower.

Some other shrubs are out of flower before the *staphylea*, opens, the lilac for example. Mentioning the lilac reminds me to say that when in flower the *staphylea* is not unlike it at first glance. There is a native *staphylea*, the trifolia, growing wild in the woods near us; and there are European and Japanese species as well, while the one of our notes, *S. colchica*, comes from the Caucasus. This insures its hardiness over a large extent of our country.

The illustration is of a plant in the greenhouses of Mrs. Albert Woltemate, Germantown, Pa.

JOSEPH MEEHAN.

Stray Notes from Across the Atlantic.

PRICES OF STOCK.—The prices that stock realizes in the United States make our mouth water. I note the Pittsburgers cannot realize more than a dollar apiece for spiraeas; we think ourselves lucky to get a third of that. Grand stock near Easter only fetched twelve shillings a dozen wholesale. The best roses average about twenty-four shillings a hundred. Somewhat different to the New York dollars this! Good Enchantress carnations were bringing more than New York prices.

Easter trade was pretty brisk at holiday resorts, for the fine weather scattered people everywhere.

As for the boy who gets twenty-five cents for carrying a genista in a nine-inch pot, assuredly he is a lucky laddie. The average shop boy here thinks he is doing fairly well to earn that sum in a whole day. I myself would not object to carrying a nine-inch pot plant at a shilling a time, plus the car fare.

I am thinking the prices of things here would break some of the United States growers' hearts. Princess of Wales violets were only fetching two shillings a dozen bunches. America is fortunate in not having neighbors who flood the markets with cheap blooms.

SOCIABILITY IN FLORISTS' CLUBS.—The remarks of Wm. Falconer, regarding a social gathering gives me a sort of happy feeling. Down here (Folkestone) the Gardeners' Society has an annual smoking concert, which always goes with a bang. No bagpipes, though; we fellows, together with the piano, can make enough noise.

THE ROSE SOCIETY AND ITS WORK.—I certainly think the American Rose Society ought to take outdoor roses under its wing, and also embrace amateur growers as members. It is generally admitted that the July show of the National Rose Society in London is the finest of its kind; where we have one rose forcer there are a hundred outdoor growers. Why does it appear so difficult to get outdoor roses right through the season? We are cutting blooms from mid June until November. All or nearly all the teas and hybrid teas are constantly in flower, while such hybrid perpetuals as Fran Karl Druschki send up flowers with every growth. Is it that American growers are afraid to prune? Personally, I slay all varieties very hard, and thin growths as fast as they appear. Maybe there are conditions to prevent similar culture in the U. S. A., but I, at present, fail to see them.

I was interested in Mr. Hill's reference to a disease which causes roses to drop their foliage. Is this disease the same as we term black spot? I find clear Bordeaux mixture the best check for this fungous pest.

SWEET PEAS.—I am interested to note that sweet peas are being marketed in quantity. Up to time of writing, these flowers are not in any great supply here, Englemann being one of the few growers who handle the early sorts. The pink Earliest of All, presumably the same as Christmas Pink, is not a very popular color here. There will be considerable stir this season with these popular flowers, and American raisers will indeed have to work if they hope to catch up with our growers. I am testing forty novelties this season besides numerous seedlings.

United States growers will understand how things are moving when I say there are nearly three dozen varieties of the giant orchid-flowered type in being. Tuttle's Coral Gem will indeed have to be good if it is to hold a place against the giant Spencer seedlings that will be set up against it this year. Perhaps the most interesting fight will be between the new whites. Nora Unwin is praised highly by some, but it will go down before the varieties coming up against it; for purity and substance it has a match in Dorothy Eckford.

However, I am pleased to note that America is not to be right out of the running. I see by Burpee's list that they have some Spencer seedlings. Maybe W. A. B. will have them in London in July. T. A. WESTON.

Kent, Eng.

CUT FLOWERS FROM THE SCILLY ISLES.

During March, 1907, 100,000 boxes of cut flowers, weighing 522 tons, were sent from the Scilly Isles to England. The growth of this industry has been very considerable; although, 30 years ago, it commenced in a small way, in 1887 the total export was only 100 tons, whereas last year it exceeded 800 tons. It is not improbable that this year it will amount to a total of 1,000 tons, representing about 100,000,000 blooms.

St. Louis, Mo. News Notes.

Charles Ford of Philadelphia, traveler for A. Hermann, New York, is calling on the trade this week, selling almost everything in the florist line.
A. S. Halsted, Henry Edmunds and E. W. Guy of Belleville, Ill., were in town last week calling on the trade; all report good cut flower business.

Henry Brown, who has been foreman for A. Brix for the past season, has left the place. Mr. Brown reports that he will take a much needed rest and will, if the opportunity presents itself, engage in business for himself.

Philip C. Scanlan, a young society man of great ability, was appointed Park Commissioner by Mayor Wells the past week to serve four years. Mr. Scanlan will succeed Robert Aul, who has held the position for the past four years and made a splendid record. George Oster-tag, who is superintendent under him, gave great help, and it remains to be seen if the new commissioner will re-appoint the latter.

Edwin Denker, whose father is Mayor of St. Charles, Mo., is buying quite heavily in this market of late. He reports business good in his town.

Mrs. M. Oster-tag is making a fine show of blooming plants at her new store at Olive street and Vandeventer avenue. Business in cut stock is good, and she claims her new place is a paying one.

Carl Beyer comes down to bowl every Monday night in order to get in the light weight class for the busy planting season.

Foster Floral Company, John Burke, Alex. Siegel and Riessen Floral Company, who have the extreme downtown district to themselves, report a good business with over the counter trade; funeral work, too, was quite heavy the past week.

Charles Juengel on South Fourteenth street reports a heavy plant trade. He says he has very little time now to visit friends or attend club meetings.

The rose houses of H. J. Weber & Sons at Nursery, Mo., are in fine shape. Walter Weber, who has charge of them, has had great success this year with Mme. Abel Chatenay, Richmond and Perle des Jardins. They will build a new rose house this Summer and extend several of the old ones. The firm's nursery business has been the largest in years this season; of this branch Frank A. is at the head.

The St. Louis Horticultural Society's aim is to open the new Coliseum, which will be built this Summer at Jefferson and Washington avenues, with their Fall flower show which would give them a great drawing card. The executive committee is now at work on the preliminary list which will be out by the first of the month.
St. PATRICK.

New York.

The Week's News.

An exhibition illustrating the beauty of trees, their growth, their cultivation and preservation, their usefulness to man, their part in literature and art, is holding in the Free Public Library of Newark, N. J., April 12 to May 5, 1907, and is being largely attended. Among those in the trade who have contributed to the exhibition are Andorra Nurseries, Chestnut Hill, Pa., descriptive pamphlets; The Florists' Exchange, series of Gallery of Pine Specimens; Samuel C. Moon, Morrisville, Pa., exhibit of fifty mounted specimens of foliage of evergreen conifers; Olmsted Brothers, Brookline, Mass., photographs of trees in city streets and of famous trees; also the Department of Agriculture and officials of several experiment stations.

Experts from the State Agricultural Experiment Station, together with Congressman Cocks and President Peters of the Long Island Railroad, held a conference with some of the leading farmers of Long Island at Riverhead, L. I., on Wednesday, April 17. The object of the conference was to talk over and suggest remedies for the various vegetable pests that farmers are troubled with; Mr. Parrot in speaking of the San Jose scale, stated that the sulphur wash was absolutely the best combatant, and advised using it in the early Spring before the buds began to burst.

Mrs. Forbes, the mother of Alex. Forbes of Peter Henderson & Company, died at her home at 385 Arlington avenue, Jersey City, on Sunday night, the 21st inst., at the age of 82 years. Funeral services were held at her late residence Tuesday evening, the interment taking place on the day following.

A. Dacre, who for some time has been conducting a retail florist store on West Thirtieth street, has closed up his business and is at present visiting in Montreal, Canada.

Rudolph Fischer, Great Neck, L. I., will sell by auction at his place there, on April 25, his farm implements, florists' requisites, Abundance carnations and other stock.

B. S. Slinn, wholesale florist of 55 West Twenty-sixth street, will, on or about May 15, leave for a vacation to be spent in Arizona, hoping that the dry climate there will afford him some relief from the severe attacks of rheumatism from which he suffers occasionally.

Pesenecker & Son, the florists of Bergen and Bidwell avenues, Jersey City, have sold their greenhouses to Halliday & Smith, possession to be taken July 1.

The greenhouses at 687 Bergen avenue, Jersey City, which have been leased for a number of years by Thomas Young, Jr., will be dismantled shortly

and the property cut up into building lots.

The large tent which is used by the plant growers who attend the market at Canal and Washington streets was damaged quite severely by the high winds which prevailed last Saturday.

A. J. Guttman, wholesale florist at 43 West Twenty-eight street, left on Saturday last for a trip to Cuba.

The cold weather that has been experienced lately has served to check to a considerable extent the counter trade in the retail seed stores.

W. H. Lutton of Jersey City has secured the contract for the erection of a range of greenhouses for E. W. Pengar, Newark, N. J. The houses will be of modern type, iron construction and heated by hot water. The contract price is in the neighborhood of \$35,000. Mr. Lutton has also secured the contract for the erection of greenhouses for Wm. Gahrs at Newark, N. J.

Paule de Nave, who for four years was with the orchid firm of Lager & Hurrell, Summit, N. J., will operate an orchid establishment at Madison, N. J., under the firm name of Ordenez de Nave.

Godfrey Aschmann, the well-known plant grower and importer of Philadelphia, Pa., was in town last week.

Henry Hession, Clarkson Street, Brooklyn, N. Y., will build a new greenhouse, 20x100 feet.

Death of V. H. Hallock.

Valentine H. Hallock, formerly in the florist business on Long Island with John Thorpe, died on the 17th inst. at his home in Queens, L. I., aged 85 years. The funeral was held on Sunday last. Mr. Hallock was a descendant from the thirteen Quaker families that immigrated from Connecticut and settled on Long Island in 1640.

Mr. Hallock was born September 22, 1822, at Milton, N. Y. He was brought up on his father's farm there, and after his marriage engaged in farming on his own account at various points, becoming a successful breeder of Cotswold sheep. About 1863 he moved to Queens, L. I., and engaged in the milk business. A few years later he sold this place to C. L. Allen, then of Brooklyn, who built greenhouses, and went largely into the culture of lilies and gladioli, besides greenhouse plants and cut flowers. Through changes Mr. Hallock had to take the farm again, and went into plant and bulb growing, as V. H. Hallock & Son. At one time they held the largest stock of gladioli in the trade. Later they took into the business John Thorpe, and the firm name became V. H. Hallock, Son & Thorpe. During this time the Queen's Scarlet rose was put out by the firm, and is still grown; Mr. Thorpe also introduced some fine new geraniums of which he was a successful breeder.

Although Mr. Hallock was at the head of the firm, the details were carried out by his son E. V. Hallock, the father at that time being connected with the Wallabout Mills, in Brooklyn, where he became noted as an expert in milling matters, and was frequently consulted as such. He invented a damper for regulating the steam pressure of the boilers; it was a great success as a coal saver, and from this he received a considerable income. He sold out his interest in the mill, having previously disposed of the plant and bulb trade to John Lewis Childs, since which time he had not been actively engaged in any business.

About 5 years ago Mr. Hallock was seriously injured by a runaway accident, his life being undoubtedly shortened by it. Last January he had a severe fall which confined him to his bed, from which accident he never fully recovered. He was in the office assisting his son until a few days before his death, which came very suddenly and painlessly.

Boston.

News Notes.

William Rust, gardener to Dr. C. G. Weld, Brookline, exhibited at Horticultural Hall on Saturday an exceptionally fine plant of Himalayan rhododendron Lady Alice Fitzwilliams and was awarded a silver medal for the same.

A. H. Hewes & Company, flower pot manufacturers, have started a large force of men on getting out clay for their factory. The business of this firm is now so large that all the time available is occupied in filling their storage sheds with clay in order to keep their works going the whole year.

Welch Brothers received a shipment of Marechal Niel roses one day last week—the first they have handled in five years. The sight of these flowers reminded one of old times, Rogers of Pomfret, Conn., was the grower.

The A. T. Stearns Lumber Company are exceedingly busy these days; they have several large contracts for greenhouse cypress and their mills are consequently a place of activity.

Mayflowers have made their appearance this week and large quantities are received daily from the Cape and Plymouth districts.

Several cases of blood poisoning from rose thorns have been reported lately. P. J. Donoghue of the Waban rose salesroom has had an arm in bad shape for some time and Joseph White of Doyle's has both hands in bad condition.

Miss Eleanor McAdam, bookkeeper for Julius Zinn, celebrated her birthday on Thursday and was agreeably surprised to find her desk handsomely decorated by her associates in the store in honor of the event.

The banquet of the Gardeners and Florists' Club, which was held in the lecture room of Horticultural Hall on Wednesday evening last, was in every way a grand success and an event long to be remembered by those who attended. About a hundred and fifty ladies and gentlemen were present. Cook served an elegant dinner, and the decorations in the hall were very artistic. Very noticeable on the tables were the fronds of Nephrolepis Whitmanii, which make a unique decoration.

The genial Edward Hatch was master of ceremonies and during the evening kept the members in good humor by his kind and witty remarks. Dancing was kept up till a late hour, the order of dances numbering twelve; music was furnished by Astrella Brothers' orchestra. Peter Miller was an able floor director during the dancing. Dunce Finlayson was chairman of the reception committee; J. W. Duncean had charge of the decorations and Edward Hatch took charge of that part he so ably fills seeing that the dinner tables are amply provided for.

David Lumsden has purchased the Varnum Frost estate, Waverly, containing ten acres land and dwelling and three greenhouses, 200x30 feet each, and will make a specialty of growing palms and ferns for the Boston market.

Visitors this week included Wm. Tricker and Harry A. Baynard, New York. J. W. DUNCAN.

CARNATIONS

I always plant in flats simply because it saves a lot of work and when set out in the field I believe the plants take hold quicker than out of pots.
 The advantage of growing young carnations in flats over growing them in pots, at least in my soil, which is a clay loam, is, first, a saving of labor in potting and repotting and handling; second, they do not suffer from want of water so quickly, which is worth while, because in the Spring rush they are apt to be neglected. Third, about the last of April or the first of May they can be planted outside, where a water pipe is handy laid. This outdoor treatment, with cool nights, brings the strength and vigor right into them and they are then in tip-top condition to plant in the field. In case of a hard frost they are easily covered with a large cotton cloth, which is sufficient protection at this time of the year.
Removing the Plants from Flats.
 By cutting with a sharp knife both ways between the rows of plants, then holding the flat up on one side, giving it a sharp downward tap upon a solid block, the plants are loosened and easily taken out in good shape with all the soil clinging to the nice mass of roots which they always have.
 These plants, with roots looking out in every direction (not like a pot-bound plant), but ready to take hold of their new quarters, always make fine healthy stock.
 So far I have planted out in the field as early as possible, sometimes commencing the last of April, when we still have hard frosts, and find the earliest out always make the best plants. They are planted eight to nine inches apart, and the rows 30 inches, so that cultivating can be done with a horse. This should be done as soon as possible after every rain.—A. J. Stahelin before Detroit Florists' Club.

REVIEW OF THE MARKET

NEW YORK.—The demand for cut flowers has taken on a little livelier aspect and stock generally is moving at figures that are considered fairly satisfactory. The best grade of American Beauty roses are in good demand, as also are Richmond, Bride and Bridesmaid. There is some mildewed stock of the latter coming in, but, of course, this does not, nor never will, clear out satisfactorily in this market; for good, clean stock the prices on teas run anywhere from 2c for the Number twos up to 8c and 10c for the best grades.

Carnations are not quite so plentiful as they were and prices have stiffened materially; satisfactory clearances are the rule. Lily of the valley also is selling better than it has done for some time, and the same remark will apply to narcissus in the many varieties that are coming in. On the other hand, such flowers as orchids and gardenias, through some unexplainable reason or other, are not meeting with much demand and prices are weaker to quite an extent. Lilies are not at all plentiful; at the same time they are not bringing prices in proportion to their scarcity. Trailing arbutus has appeared and small lots can be easily disposed of. Thanks to the non-appearance of Southern lilac this year, the home-grown product is selling fairly well. It would seem that this is one of the years when the Southern lilac will be conspicuous by its absence, owing to the backwardness of the season. Violets are about over for this year; the number coming in is very insignificant.

CHICAGO.—The market here has, with slight variations, held as strong as since our last report. While with-out any appearance of a glut, roses have at all times been sufficient to fill all orders, and any scarcity that has been evident has been in white or Enchantress carnations. Lily of the valley of the best quality has grown a little stronger in price; and violets, which have been of a little better quality, are more than holding their own. Otherwise the market offers little that is new.

BOSTON.—Trade has been fairly good all the week and prices, in most cases, have been steady. American Beauty roses, which have been so scarce this season, are now quite plentiful; \$25 per 100 is the ruling price, although some extra fine long-stemmed flowers bring \$4 per dozen. Other roses are very plentiful and the quality is exceptional. Carnations are abundant and the grades of blooms are very good. Violets are yet seen in quantities, ranging in price from 50c. to 75c. Sweet peas are good and sell well at 50c. and 75c. Lilies are very plentiful with little demand, and prices have dropped to \$6 and \$8. Lily of the valley is selling better at from \$2 to \$4. Bulbous stock is still very plentiful and moves rather slowly.

INDIANAPOLIS.—Heavy frosts continue to destroy every blossom that does make its appearance. The fruit crop as well as early vegetables and flowers will be more affected than at any time in twenty years.

Counter-trade is brisker than for some time, but it is difficult to obtain a variety of select stock. The growers are hooking heavy orders for bedding stock. It being apparent that the cold snap will stimulate this end of the business. Preparations are making for a heavy rush when the season opens. Carnations are nearly all off crop, so the local retailers are forced to order elsewhere; prices for fancy varieties have advanced to \$4 a hundred. Few are retailed at less than 75c. per dozen. It is not always possible to obtain tea roses in this section and shipping orders are often refused. Select, Bride, Bridesmaid and Golden Gate bring \$8 to \$10 a hundred; Madame Abel Chateaufort and Richmond roses are par excellence, the stems often being four feet in length.

Sweet peas are always acceptable at \$1 to \$1.50 a hundred. Bunches of well grown candytuft and Ten-week stocks sell rapidly at 25c. per bunch. An abundance of green goods is available; seven foot smilax brings \$12.50 per hundred strings. A regular cut of callas and Harrisii lilies gives much satisfaction at \$10 to \$12.

The display of potted plants is still meager, but the call continues and orders are often filled with difficulty. Flats of pansies and forget-me-not find a ready market.

PHILADELPHIA.—While flowers are not exactly scarce, the market is cleaned up every day. For American Beauty roses \$4 per dozen is being obtained for the very best, while large lots are going at \$25 per 100. Tea roses are in fair supply; the best are quoted at \$12 per 100. Sweet peas are plentiful, selling at from 75c. to \$1.50 per 100, a few extra choice reaching \$2. Cornflowers are in good demand at \$1.50 per 100. Antirrhinums continue in active call at \$1.50 per dozen; a few extra choice go at \$2. Gardenias are selling at \$1.50 per dozen with better prices for the retailer when a large lot is wanted.

Carnations are rather scarce; all growers appear to be off crop at once. Yet with the scarcity some extra choice flowers are coming in; some of these sold at \$5 and \$6 per 100 on Monday. Lower grade stock has stiffened in price, being up to \$3 and \$4 per 100 this week. Common grades have been scarce in this market, and some of our dealers ordered from the South; much of this stock was worthless on arrival here, too many being packed in one package, which caused heating.

DAVID RUST.

ST. LOUIS.—Business is more lively among the retailers in work of all kinds. A few Spring weddings kept most of the downtown florists busy with decorations. The downtown florists had to take in their cheap cut flower signs the past week owing to the scarcity of stock in all grades, and had to buy flowers at all the four wholesale houses to fill their orders, which only a few weeks ago one house could have filled without much trouble. The weather is beginning to look more Spring-like, which gives many the push to the plantmen who are ready for planting out with plenty of orders ahead to keep them busy all through the month of May.

In looking through the wholesale houses this Monday morning we find very little stock coming in, with plenty of buyers to snap up almost anything in sight at any price. Roses have gone as high as \$10 per 100 for extra fancy, long, and \$5 and \$8 for next choice, with \$3 and \$4 for short grades. Long-stemmed American Beauty have been more plentiful of late, selling as low as \$3 per dozen, with medium and shorts not so abundant.

In carnations a scarcity was noted all of the past week and up to to-day (Monday, April 22). The demand is active and none are left over, at from \$3 to \$4 per 100, with a few extra fancy at \$5. The great call is for white, pink and Enchantress.

Bulbous stock is almost cleaned out; a few tulips are still coming in. Fine lily of the valley is obtainable at \$3 to \$4 per 100 for fancy. Sweet peas are very scarce at \$1 per 100 for the best. Callas and Harrisii lilies are becoming scarce. Asparagus plumosus sells well also. A Sprengerii Smilax, too, has a good call. Fancy ferns are very poor at \$3 per 100.

ST. PATRICK.

COLUMBUS, OHIO.—We are having a more settled and a steady market than since before Easter. The unseasonably cold weather has no doubt retarded trade, still it has been a great blessing to have the enormous quantities of stock that the intense heat was forcing upon us reduced to something like the demands of our market. Business continues very good indeed; quite a few weddings, several important social functions, and an unusually large number of funeral orders, have given good commissions to all. Those members of the craft who keep their places of business open on Sundays, are watching with a vital interest the effect upon their trade that the closing of our Protestant cemetery to Sunday funerals will have; as the Board of Trustees of Green Lawn cemetery have voted that on and after the first Sunday in May next, and until further notice, no interments will be permitted on Sundays, except the burial of such persons as may have died from contagious diseases, and which under the rules and regulations of the Board of Health require immediate interment. It will, of course be impossible to say for some time, how such a radical change as going away with Sunday funerals will affect trade, but every one's first thought is, that it will reduce the orders for funeral flowers. While several cities in this country have lately adopted the foregoing plan,

still such a breaking away from old-established and honored customs will need time to adjust itself.

Since the cooler weather arrived prices have become more uniform, and in a few cases quite a little higher, especially for carnations and violets. The former bring 50c. to 75c. a dozen, with a few very choice Enchantress at \$1. As regards violets there has been a good demand at \$1.50 a hundred, in any size bunch the customer wishes. Roses are bringing better rates, and it begins to look as if in future the superior Richmond would divide honors with American Beauty, the former being in such good demand. American Beauty are at \$3 to \$7; Richmond, \$2 to \$2.50; other roses \$1.50 to \$2 a dozen.

F. W.

MINNEAPOLIS.—Business with all the past week has been very good; while prices have not remained firm, all of the trade have done very well. The Greeks and the department stores have taken advantage of the present condition and have offered stock at any old figure. Roses on Saturday sold at 50c per dozen, and about every florist had a hand in it. The larger growers peddled fine long stemmed roses of the different varieties at \$2 per 100. Carnations also fell in line; while the sunnily among the growers here is small, large consignments were received from the East and were offered at 25c. and 35c per dozen. Funeral work has been exceptionally good, the demand apparently coming from outside towns, so that all inferior stock has been moved to good advantage.

Orders for plants for bedding purposes are few, undoubtedly due to the backward season. Inquiries for Memorial Day stock are being received daily, and the majority of the trade anticipate a brisk demand and from present appearances a heavy supply.

PAUL.

WASHINGTON.—We are still (April 20) in the grasp of Jack Frost, and all outside vegetation is at a standstill. Some fruit has been killed along the lower lands, but on the high ground only slight damage has resulted. Snipeas and a few hardy annuals are in blossom, and sell at fair prices. The bright sunshine and cold weather have improved the indoor crops in both quality and quantity over conditions prevailing a week ago. Good roses are coming in and bringing about 8c, and while carnations are less abundant than usual at this season, they bring from 2c to 4c, and are, as a rule, of good quality. Asparagus is scarce and short, as the crop has been cut pretty close all winter in order to supply the increasing demand. Violets are becoming scarcer every day, as their blooming period is about over. Sweet peas of good quality are more abundant and move at satisfactory prices.

The death roll continues among the more prominent people of Washington, thus creating a demand for much funeral work of the higher and more remunerative class.

J. L. C.

CHANGES IN BUSINESS.

VRDUN, QUEBEC, CAN.—William Hinton has sold his greenhouse and property to A. E. Pagels.

SPRINGVILLE, N. Y.—M. L. Hampton & Company have rented the Robertson property south of this village and will build a greenhouse, making carnations a specialty.

WATERVILLE, ME.—The florist's establishment, which has been carried on by Percy Loder on Common street, next door to the vestoffice, since shortly before Easter, has been closed and the furnishing removed to Clinton.

MUSKOGON, MICH.—Silas Butterworth, manager of the Glenwood hotel at Lake Harbor, became the owner of the entire city block adjacent to and south of Hackley hospital. Butterworth will at once build on the land nine 150-foot greenhouses. The plant will be carried on under the latest and most approved system and besides the usual greenhouse flowers, table delicacies for the local market will be grown.

LAURITUM, MICH.—Dale Brothers will build greenhouses and engage in the florist business here. The work will commence on the buildings as soon as the snow is off the ground, and it is quite likely that they will be ready for business before next Fall. Both the brothers are experienced florists. James H. Dale is now in the employ of A. M. York, Hancock; he was at one time employed with Tutay of the Calumet greenhouses. Walter Dale recently came to this country and has a reputation as a florist of great ability.

Washington, D. C.

Within the walls of the edifice which he had built and consecrated, funeral services for Teunis S. Hamlin, late pastor of The Church of the Covenant at Washington, were held on Sunday, April 21. The floral tributes were of the most elegant and elaborate character. A number of the offerings were arranged in front of the pulpit, while two especially elegant pieces, consisting of orchids and lilies, gave height at either end of the platform. Palms, ferns, and lilies hid the choir from view. The casket was a mass of violets. J. H. Small & Sons had the decorative work, while many of the elegant designs sent by members of the congregation, were supplied by various other members of the trade.

JAS. L. CARBERY.

Philadelphia.

Trade Notes.

Many of the retail stores have been busy on wedding decorations. Hydrangea otaksa, which could not be got in for Easter, has come in very nicely for this work. Pennock Brothers had several nice wedding orders, some being out of town. The Habermehls had a busy week—a large banquet at Horticultural Hall on Monday, two large weddings on Wednesday, and a banquet of 100 covers at the Bellevue-Stratford on Wednesday. This was to be at a round table, occupying the entire hall room, the center to have a sunken garden decoration effect.

C. P. Bernard, North Brook, Chester County, Pa., has given Lord & Burnham Company an order for material for a house 33x160 feet of semi-iron construction, with concrete walls. This is one of the places that years ago used to produce extra choice Buttercup and Eldorado carnations.

Wm. J. Moore has given up the commission business, having closed up his part of the building in the Flower Market last week.

On Friday last we had the second game of ten pins in the tri-city match between Baltimore, Washington and Philadelphia; the teams finished in the order given. In the two games played, Washington now leads by 17 pins, Philadelphia being 200 pins behind the leader. The next match will be played in Baltimore.

DAVID RUST.

Hazleton, Pa.

In the person of George E. Seidel the florists of this town have an addition to their ranks. Mr. Seidel has opened a flower store on Broad street where he handles a general line of cut flowers, and does considerable work in the decorative line.

E. Howard Smith has recently moved to a handsome store on West Broad street. The store is well lighted and spacious and gives Mr. Smith a good opportunity to display his stock to the best advantage. He will continue to run both stores for the present—the old one and the new. Last Fall Mr. Smith had to remove his greenhouses that were upon leased land required for other purposes. He intends to build a few good greenhouses the coming Summer, on some property he has recently acquired in the suburbs, as well as a nice show house for decorative stock in the rear of his new store on Broad street.

Conrad Ackerman is also identified with the florist trade of Hazleton. When only 9 years of age he lost his eyesight in a railroad accident. He is quite a young man of more than ordinary intelligence and can converse freely about all classes of plants and flowers with a familiarity that is surprising. Considering the fact that his eyes are forever closed to all that is beautiful in art as well as nature, it is most interesting to hear him talk of the colors and varieties of the different plants he handles. He can tell by a simple touch of the hand the name of any plant, bulb or tuber he has in stock.

A. D. Montgomery is at present the only florist in this place that has any greenhouses. He grows a general line of bedding plants for the local market.

Detroit, Mich.
News Notes.
The Detroit Florists' Club will have charge of a lecture to be given in Harmonie Hall by the Dayton Cash Register people, who have very kindly consented to send their agent here to deliver his lecture on outdoor planting, which will be beautifully illustrated, as those who were present at the S. A. F. convention know. This social function will in all probability take place May 1, 1907.

In spite of the cold snap Superintendent Diger has been doing some preliminary planting at Belle Isle Park.
The market here has been kept remarkably clean thus far this Spring. Carnations are snapped up at once; roses are also scarce; lily of the valley sells readily at three and four cents. If bad weather continues, and funerals also come in large numbers, the flower merchants here will be unable to supply their wants. HARRY.

Minneapolis.
News Notes.
Amundson & Kirschner advertised roses at 50c. per dozen and they disposed of a large number.

Ralph Latham, Tenth street, is branching out considerably; he contemplates operating a number of stores in the city. He practically takes the output of the Carlson & Sondberg greenhouses, and the stock has been exceptionally fine, so far.

Will & Son's roses are in full crop and their large plant is now supplying the most of the trade.

Donaldson's department store has cut into the trade materially the past week. Stock has been offered at close prices, much to the disadvantage of the regular florists. PAUL.

Rochester, N. Y. A Record Cold Spell.

Table with columns for Boston, Buffalo, Detroit, Cincinnati, Baltimore, Milwaukee, Philadelphia, Pittsburg, St. Louis and rows for various flower varieties like Beauty, Bride, Golden Gate, etc.

Up to date, according to the local weather bureau report, the cold spell has broken the previous lowest record for the month of April, 1874, at which time the average was 36 degrees, the average for the present month being 34 degrees. Such conditions have had their effect on the coal bins of florists here, many of whom have had to store in more coal to carry them through. The supply of cut flowers has not been overdone, the general line of stock clearing out at fair figures—roses, \$4 to \$8; carnations, \$2 to \$3 per 100. Violets, which are much more desirable now on account of cooler weather than before Easter, are disposed of to better advantage at from 35c. to 65c. per 100. The supply of bulbous stock is on the wane, and a little difficulty is experienced in securing first class flowers. Outdoor bulbous stock is real late, and some anxiety is felt for it on account of rapid growth made in March, and the heavy frost it has been subjected to since. Strike in a Nursery. The early start secured this Spring for the shipment of nursery orders received a set-back at the Ellinger & Barry nurseries, the entire force of laborers going "on strike" and demanding an increase in pay. Their demands were finally compromised, and all returned to work at an increase of 25c. per day. News Notes. Among the unique window dressings seen here might be mentioned a display, used as a lawn grass advertisement, by Salter Brothers. It represented a house and lawn, flower beds, walks, windmill, etc., and was certainly a great drawing card, especially the family wash hanging on the clothes line. Somebody with a freak idea wrote an editorial in a local newspaper, concerning the formation of a society for the prevention of cruelty to azaleas, lilies and other plants. Needless to say, nothing more has been heard of it, and perhaps 'twas only a lamentation of some tender-hearted lover of Nature who gazed on the dry and neglected plants in the stores during Spring openings COCKNEY.

Your Money is well spent when you advertise in THE FLORISTS' EXCHANGE

Chicago. The Week's News.

Charles A. Johnson, formerly the Limits Florist, was calling on his old friends and associates here last week.
George C. Harbison, for many years foreman at William H. Elliott's Brighton, Mass. establishment accompanied by George Elliott, was a recent visitor.
Kruchten & Johnson have dissolved partnership and the commission business will be carried on by the first named, Mr. Johnson retiring.
At the north side of the city, considerable repairing and rebuilding are going on; much more in this line, in fact, than of new construction.
It is evident that Mayor Busse intends to carry out his pre-election promises by endeavoring to make Chicago, "The Garden City," or "The City Beautiful," and undoubtedly he will gladly avail himself of the kindly aid of the committee recently appointed by the Florists' Club to assist him should he so desire.
Some very handsome long-stemmed American Beauty roses were sent from the Atlas Building to President Comiskey on the opening of the White Sox season last week.
The family of William H. Kidwell has the sympathy of their many friends owing to the loss of a member, Wm. Louis Kidwell, early last week shortly after his return from New Mexico where he had been for his health. He was eighteen years of age and his illness and death are directly traceable to a football accident. The funeral was attended by a delegation of wholesale and retail florists.
The Winter's Seed Store catalogue, which has just been published, is a neat little affair embellished by a good reproduction of the American Beauty rose.
Among our recent visitors were George F. Crabb, of Crabb & Hunter, Grand

Rapids, Mich., Gust Frederickson, Glen Lord, Mich., and E. Calvert, of Calvert & Son, Lake Forest, Ill., who dropped in on his way back from the Pacific Coast.

C. M. Dickinson was busy the latter part of last and the first of this week moving to Park Ridge.

O. W. Freese, who is still on jury duty, reports, gets off, and goes back each time with a different view of the present jury system.

J. G. Crozier, Cedar Rapids, Ia., was in town the first of the week.

At the Flower Growers' market at 60 Wabash avenue all the stallholders, some ten in number, most of whom are growers as well as agents, have enjoyed the recent success in trade. W. K. W.

Cincinnati, O. The Weather and Trade.

The cold, Fall weather is with us this Spring. The small bit of Summer that paid us a visit just before Easter, certainly played a very unkind April fool trick upon the lilac and other outdoor flowers and shrubs. To-day, April 22, the poor blooms of the lilac droop their heads, and their usually beautiful color is now black. The leaves on the trees had commenced to burst forth, only to be arrested by Jack Frost and severely punished. What shall we have when Memorial Day arrives, to offer for that occasion? Time and weather only can tell.

A Baseball Decoration.

During the first week in April some of the baseball magnates were visiting our city, and President Hermann of the National League concluded it the nice thing to do to give them a big banquet. So the new Hotel Sinton banquet hall was engaged, and Hardesty & Co. decorated the tables and hall. The tables were so arranged and decorated as to represent a baseball diamond. The pitcher's box was made of American Beauty roses, the greens of ferns, using about six thousand. Outside the tables was the high board fence enclosing the diamond, upon which was the usual display advertising. Trees planted in tubs were distributed here and there, and there was a turnstile, with a ticket office. Each guest was required to go to the box office and get his ticket, which by the way was numbered 23. He then passed through the turnstile to his seat at the table. The idea and decoration were quite unique, and Hardesty & Company received several hundred dollars for the job.

Business is quite good, stock is scarce and everything arriving is sold; better prices are paid, and less grumbling is heard. It has always been my experience that when stock is scarce business is much more satisfactory to grower and wholesaler, and I think, the retailer might be included also.

C. J. Ohmer leaves on the 30th inst. for Los Angeles, San Diego, San Francisco, Cal., the Grand Canyon and Yellowstone Park—about a six weeks' trip.

Frank Huntsman is getting to be quite a seedling carnation enthusiast, and has a strain of scarlets that some of our specialists might be proud of.

Extensive plans are now drawn for the extension and beautifying of our parks which, if carried out, will make the Queen City of the West more attractive than any of her sisters. But it will cost millions to do the work, and several years must elapse before it can be completed. E. G. GILLET.

DAVENPORT, IA.—The annual installation of officers of the Tri-City Florists' Association was held Thursday evening, April 11, at Fejervary park, and one of the most successful and enjoyable meetings of the year was held. It was Ladies' Night and a large number were present. John T. Temple, retiring president of the association, was the installing officer. After the new officers took their places, Mr. Temple gave an address and William Knees of Moline, president, responded. Five minute talks were given by the other new officers. The discussion during the evening was on "The Most Profitable Plants for the Spring Trade." Following this a banquet was held. The next meeting will be with Henry Meyer of Rock Island on May 9. The topic for discussion will be "Peony Culture."

Trade Notes.

Trade has been active during the past week. Roses are plentiful, but good carnations are becoming scarcer every day. The weather is still rather cool; both ornamental and flowering trees and shrubs have been nipped in the bud over and over again, but they are nevertheless advancing slightly and with desperation. The hulk and pansy displays in our public parks and squares promise to be fairly good. A large amount of outdoor work, especially in the planting of flowering ornamental trees and shrubs, is being done both by the Park Department and private places; this work is being favored by a backward Spring.

A Bowling Match.

The following members of the local Florists' Club visited Philadelphia in company with the Washington team: M. Richmond, Jas Boone, Wm. Kramer, J. J. Perry, C. L. Seybold, O. Guerth and F. G. Burger; only the afternoon and evening of Friday, April 19, was spent, but it goes without saying that the fourteen Baltimore and Washington florists enjoyed themselves immensely. Deacon Harris and Commodore Westcott together with Captain H. Graham, David Rust and the Philadelphia bowling team took charge of the visitors. An afternoon match was played on the Horticultural Hall alleys; two games between the Deacon's and the Commodore's each winning a game. At night the regular match between Philadelphia, Washington and Baltimore was held on the Casino alleys, for the Baltimore silver loving cup, this being the second series of games; the first was held in Washington a month ago. This time Baltimore was victorious, the totals being 2601 pins to Washington's 2539 and Philadelphia's 2418.

The total scores for the whole six five man games are as follows:

Washington	Baltimore	Philadelphia
757	745	767
840	800	798
854	828	797
852	815	760
880	841	834
807	945	824
4990	4974	4780

The total in nine games will decide the permanent ownership of the cup, and it has been decided to roll the remaining three games in Baltimore on Friday, May 3 next. It will be seen that Washington is but 16 pins ahead of Baltimore.
C. L. SEYBOLD.

DENISON, TEXAS.—Arrangements are well under way for the annual flower show, to be held November 7, 8 and 9, under the auspices of the Denison Civic Improvement League. Our people were greatly enthused by the splendid success of last year's event and anticipate an even greater success this year. A very vigorous campaign is being conducted in the public schools, which furnished some very fine exhibits last year. More than five thousand packets of seed have been distributed among the school children and a liberal list of prizes has been offered for best results obtained.
T. W. LARKIN, Secretary.

Columbus, O.

A Cold April.

For ten days before Easter, with the heat persistently registering 80 degrees and over, the whole craft here were a unit in predicting an intensely busy but short season in every horticultural line. The most radical reverse of this has been the fact. Since April came in we have had very cold, and one may truly say wintry weather; snow flurries almost daily, and a temperature running between 25 and 50 degrees. Our nurserymen, from utter discouragement, will have one of the longest planting seasons in years—as the ground has been in fine condition for hardy stock, for almost two months. The seedsmen also are having a good steady run of orders, and these are the conditions that make for a great total when the final accounting comes.

News Notes.

For many years the Fifth Avenue Floral Company have been doing an ever increasing business; which now makes necessary an enlargement of their plant. They will erect, on recently acquired property on Seventh avenue, two large houses, each 27x400 feet. Their present fine establishment on Fifth avenue will also be much improved. At a recent meeting of the stockholders, C. K. Seibert was elected president, G. H. Woodrow, secretary and treasurer, and I. D. Seibert, general manager.

E. F. Jones is opening the season for bedded plants at his stand on the Central Market. He always has a large stock of geraniums in all the best varieties; prices are as last season.

C. V. Heikes & Company of Troy, O., secured the contract and have finished the planting of the grounds about the William McKinley Memorial in the State Capitol inclosure. Besides a California privet hedge many shrubs have been used, including spiraea, hydrangeas, weigelas, snowfalls, and other hardy and suitable subjects.

The Board of Education at its last meeting, voted to purchase thirty-eight sets of garden tools, consisting of spade, rake and hoe, so that the children might be equipped for their school garden work.

The extensive grounds of the United States Army reservation here, are becoming more and more a pleasure park for visitors; especially since they have been so greatly imported by judicious planting. The fine concerts, several times a week, are well attended.

The City Federation of Women's Clubs are doing much for the civic improvement work here. Amongst other plans, they will distribute to the school children some six or more thousand packets of flower seeds, which the Columbus Florists' Club have prepared for them.

Goodale Park begins to take on a Spring appearance; the display of hyacinths, tulips, and narcissus has been particularly fine this season. Superintendent M. S. Hains has done well with the small appropriation allowed by the city.

R. A. Currie, the vice-president of the Columbus Florists' Club, made a flying trip into Kentucky on personal business last week.

By a natural gas explosion in the residence of C. S. Davis; the Rev. J. J. Blackshear was burned to death, and Alonzo Davis the son very badly injured. Mr. Davis has for years had charge of the greenhouses at the Institution for the Blind.
F. W.

NEW HAVEN, CONN.—Charles Munro has purchased a building lot fronting 60 feet on Chapel street, and will improve the property.

When Writing Please Mention **THE TRADE ONLY—THE FLORISTS' EXCHANGE.**

A New Giblin Boiler.

We present herewith illustrations of a new steam and hot water sectional boiler, manufactured by Giblin & Company, Utica, N. Y., regarding which the firm furnishes the following information:

"To supply the demand for boilers of larger capacity than provided in our

every respect all that we anticipated, and that they stand in the lead, in points of merit and actual results, over any other make now on the market.

"The generally accepted correct grate and heating surface proportions for boilers as advocated by the highest authorities on boilers have been embodied in 400 Series. In this feature these boilers stand practically alone among cast-iron sectional boilers as per-

made in one piece, giving rigidity to the boiler when erected and doing away with the necessity of making water connections to the front and back sections. Both the front and back sections on the inside are recessed so as to enlarge the grate surface and fire chamber, and on the sides exposed to the fire are corrugated. The front and back sections extend fully to the top in the middle, and the ends of the header are connected into the sections horizontally front and rear, by nipples, instead of by side connections as in the other form. The front doors are bolted directly to the front casting instead of having a shell or uncored front. The draft door is provided in the ash door, instead of having a lift door on the side of the ash pit. The intermediate sections are in half sections as in our other boiler, but because of the greater width of the section more flues are provided and the heat more evenly and thoroughly distributed.

"Cleanout doors are provided both front and rear in such numbers that when open the entire flue surface is exposed both front and rear and every part is accessible for cleaning. Separate cleanout doors are provided for the top and bottom front side flues, and being fitted directly to the castings, are absolutely air and gas tight. The grate bars are of slightly different pattern, but the change has resulted in greater strength and crushing power of the teeth, and less liability to warp and wear out. The air spaces in the grate are properly proportioned for the admission of the proper amount of air to insure thorough and perfect combustion of the fuel. The header is unusually large, thereby giving a large steam chamber and allowing in the hot water boilers large tappings for special work. The tappings in this boiler are nicely proportioned; the side tappings are so devised that the circulation in the return sections is not only upward in the section itself, but outward at the bottom at the sides in the two adjoining sections, thereby more evenly distributing the returning water. The smoke pipe opening is extremely large and made oval in size, so that it can be adapted to almost any size smoke pipe required.

"With the exception of the features enumerated above, and the increased size, our 400 Series standard sectional boiler is substantially the same in construction and operation as our regular standard sectional boiler. It is a boiler well adapted for doing heavy work for both steam and hot water heating."

The New Giblin Boiler

regular Standard Sectional Series, we have made a new line, which we call the 400 Series, for the use of both steam and hot water. This series was designed especially for heavy duty service where large quantities of heat with minimum cost for fuel are demanded. "The regular Standard Sectional Series, after several years test, proved to be a thorough success for work it was designed to do, and having received many flattering testimonials from customers regarding these boilers after tests of years, we decided to construct the 400 Series boilers on the same gen-

erally proportioned boilers. The general run of sectional boilers have less heating surface than called for by rules recognized by heating engineers as correct. The 400 Series boilers contain a large amount of overhanging heating surfaces within the fire box, directly over the fire, in addition to the large amount of plain and corrugated surfaces forming the walls of same. The eight long direct flues over the fire box add immensely to the direct heating surfaces mentioned above. Four indirect flues (two on each side of boiler) add materially to the other boiler surfaces, and

The New Giblin Boiler

eral principles and add several other features to insure greater power, economy and durability, for the class of work designed to be performed. "The 400 Series boilers have been subjected to hard tests in different kinds of heavy work, and from results obtained we know that they are in with the reversible down draft feature

in the last mentioned flues added to the draft travel in the direct flues, the heated gases travel three times the full length of the boiler, and produce results in transmission of heat and economy of fuel that cannot be secured in boilers that do not contain the above mentioned features. "The front and back sections are

Look Here Mr. Florist and Gardener

WE have just passed through an unusually severe winter and you are apt to forget the many sleepless nights you spent worrying about the temperature of that No. so and so house.

Or the many zero nights that you spent in the boiler pit; maybe you did not have to do the stoking and firing, but **you** certainly had to do the worrying and pay the coal bills.

Now keep the vows you made on those trying occasions, **And Send for me.** I have solved the problem for others, I can do it for you; and remember, I will come recommended by some of the most prominent commercial florists and gardeners in the East, "Personal friends of yours."

Wm. H. Lutton, Heating Engineer

U. G. SCOLLAY, Manager.

EVERYBODY IS TALKING

about their material and each one says he has the only kind of greenhouse material that ought to be used. You read each advertisement and are at a loss to know where to buy material for your new houses. You begin to wonder which one of the advertisers is honest and will give you just what he talks about—you get right up to that question again when you begin to look over the estimates. You finally give the order to the lowest bidder or to the fellow you have the most confidence in. Now we have been doing business for forty years and have made nothing but greenhouse material—we have the largest list of satisfied customers—we have the best facilities for handling the work and hundreds of testimonials backing up our talk. If you want quality and honest value we want your order—if you don't care, give it to the other fellow.

Sash opening apparatus and all kinds of greenhouse structural material.

Your Money is well spent when you advertise in THE FLORISTS' EXCHANGE

Now, Suppose a Man Gives You a Bid of, Say, \$2,400 On Materials For a Greenhouse You Are About To Build.

Then you get a bid from us and find we are somewhat higher, you at once jump to the conclusion that we are "way too high," and that you "can't do any business with us." Now when you got the bid of that fellow did he furnish you with an itemized list of all the materials that were to go into this house, or did he simply lump the matter and just mention a few items, leaving the so-called "unimportant details" covered in a sort of general way?

¶ When we give you an estimate we send with it, if you so desire, a list of absolutely everything that goes into that house, even down to so small an item as the galvanized hinges with brass pins, which we use on our ventilating sash to insure them against all rust. Now we know that the other fellow's materials will be shy a lot of things, that they won't include Angle Iron Eave Plate, Sash Bar Clasps, Cast Iron Foot Pieces, Base Board Bracket, Giant Arch and so on through all the iron parts that go into our estimates. You can't compare two estimates of that kind on the high and low basis. You must compare them dollar for dollar on what those estimates cover.

¶ Then there is another side to this question; we have been building these houses for half a century; we are known to give the square deal. Is it not some little satisfaction to you, to say nothing of the superiority of our houses, to do business with a firm in whom you have absolute confidence?

¶ Let us hear from you.

Vol. XXIII. No. 18

NEW YORK AND CHICAGO, MAY 4, 1907

One Dollar Per Year

CARNATION WINSOR

The most talked about carnation at the Toronto Convention.
Won first prize for best 100 pink

Winsor is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders, and have a fine lot of stock in the cutting bench, so that we can promise prompt delivery on orders received from now on.

If you have not already purchased a stock of this, you should lose no time doing so. We have sold more Winsor

than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market where our flowers are sold.

There is nothing on the market that approaches Winsor today in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities, in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high quality flowers. It practically does not split at all, notwithstanding the fact that we have had the darkest, dullest winter we have ever had, when the Enchantress and Lawson types are splitting badly all over the country with everyone, we have not had one-half of one per cent. of split calyxes on the Winsor. In fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement, extravagant as it may appear.

Anyone who fails to plant Winsor this year will regret it. Rose pink Enchantress is good, and a good many other varieties are good, but IF YOU WANT THE WINNER, PLANT WINSOR.

Strong Rooted Cuttings. \$12.00 per 100, \$100.00 per 1000.

Seed Trade Report.
AMERICAN SEED TRADE ASSOCIATION
Henry W. Wood, Richmond, Va., president; C. S. Burge, Toledo, O., first vice-president; G. B. McVay, Birmingham, Ala., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; J. H. Ford, Ravenna, O., assistant secretary.

The Barteldes Seed Company, Denver, Col., has issued an interesting illustrated pamphlet on Alfalfa, its Uses and Culture.

MILTON, N. Y.—Nicholas Hallock, formerly of Queens, N. Y., early in May will celebrate his eightieth birthday. He is still very much interested in fruit and flower culture and is making a specialty of perennial phlox, having some 400 varieties.

VALLEY CITY, N. D.—The Northern Seed Company has been incorporated, with a capital stock of \$10,000. Incorporators: E. S. DeLancey, E. J. DeLancey and C. H. Briggs, all of Valley City, N. D.

ST. PAUL, MINN.—The catalogue trade has been very good to date, but orders have begun to drop off somewhat, possibly due to the backward season. So far sales are ahead of last year's. Orders for grass and field seeds are numerous, particularly from the merchants throughout the Northwest. Garden seed, filling in orders, have not started to move yet, which shows that there has not yet been much done in gardening.

PAUL.

European Notes.
A dull, cheerless spell appears to have settled over the whole of Europe and in every direction people are anxious to see the sun. Except in Germany, where there has been practically no rain since the end of March, an abundant supply has fallen; even Ollioules has had a good shower at last, so the safety of the Roman hyacinth crop is now assured.
The growers of florists' flower seeds are the most anxious, particularly for the primulas which have already been "brushed" and badly need a little sun to develop the seed.
A very interesting system of fertilization was resorted to last season by one of the principal seed firms who make a specialty of cinerarias in distinct colors. A swarm of bees was hived in the house and the work was done most effectually, and without any untoward results. At present the bees have no inducement to venture forth.
The free seed force of the United States Government has brought forth imitators in London as the accompanying advertisement will show. The supply of lunatics appears to be quite equal to the demand; unfortunately, sane and responsible people have oftentimes to suffer for their folly.
The financial cloud, which has for some time past hung over the well-known house of B. S. Williams & Son, Upper Holloway, has at last been dissipated. The old firm has been liquidated and the business taken over by Henry Williams, who with his son, H. E. Williams, will carry on the business under the name of Williams & Son.
The William Whiteley Company have decided to curtail their growing department particularly in their fruit culture. This is welcome news, for the firm is noted for cutting prices.
The disastrous news from California causes some anxiety particularly as regards carrot. The first sowings last year were nearly all destroyed by drought; the second sowings were severely punished by caterpillars. The acreage planted, especially of the half long varieties, is not more than one-third of an average.

EUROPEAN SEEDS.
Importance of Full and Accurate Descriptions of Varietal Differences in Growing Seed of Market Vegetables.
(Read by W. W. Tracy before the American Breeders' Association.)
What we have to say refers to breeding and growing seed for use in producing market crops rather than to breeding for the production of new varieties or even to the improvement in the sense of modification of old ones. Under modern methods of culture and marketing vegetables, uniformity, both of growth and of product, is one of the great desiderata, and variations in individual plants, even if it comes from the greater development of an intrinsically desirable quality, is a disadvantage. This can be made clearer by an illustration:
The profit or loss on a crop of green peas is often determined by a difference of a few days in the time when the pods reach a marketable size. In our best stocks of market sorts, all the plants mature their pods so nearly together that under the most favorable conditions the greater part of the crop can be gathered in a single picking; and it should never require more than three pickings all made within ten to fourteen days to secure practically all of it. Now if to a stock of peas, in which practically all the pods mature to marketable size in 50 to 55 days, we add ten per cent. of one which matures pods in 45, we have materially hastened the average date of maturity and so seemingly increased its value; but in reality we have materially reduced it, for it is impracticable to

GLADIOLI
Beautifully illustrated catalog, colored plate, etc., describing GROFF'S HYBRIDS, NAMED NOVELTIES of rare beauty, MIXTURES and COLLECTIONS to color and fine Mixtures of all colors. Write for it.
ARTHUR COWEE, Gladiolus Specialist, MEADOWVALE FARM BERLIN, N. Y.

make a special picking of this ten per cent. of early pods. To do so would so injure the vines as to reduce the total yield by much more than ten per cent. besides requiring the extra time in picking, while if these early maturing pods are left on the vines and gathered with the bulk of the crop, they would become so mature as to lower the grade and value of the whole crop. So that in practice, while the use of stock, all or nearly all of which was five days earlier, might more than double the receipts, the use of one, only ten per cent. of which was five days earlier, would materially lessen them. The same conditions hold with reference to other qualities. The uniformity of product is often as important a factor in determining the practical value of a lot of seed as is any other quality. The exhibitor may aim at the production of superlative individuals regardless of the general average; the market man must depend upon uniformly good quality, and to him superlative individuals are often as objectionable as those which are marked inferior.

The perfection of development of a plant is perhaps most largely determined by its environment, but its character, the potentiality and limitation of development are inherent in the seed and are made up of the balance sum of influences it inherits in varying degrees from each of its ancestors back for an indefinite number of generations. Under the best modern cultural conditions the environment of different plants in a field is practically the same, but there is usually a great variation in the quantity and quality of the product, much if not most of which variation is due to differences in individual seed. There are few crops where the profit would not be greatly increased, and it could often be doubled, if the product of each one of the individual plants in the field were just equal in quantity and quality to that of the second best one-third of them.

We believe that improvement in this respect can come only through an appreciation on the part of seed growers of the importance of seed breeding and growing, of rigid adherence from year to year to precisely the same varietal types and such adherence can only be possible when such varietal types have been very clearly defined and described.

Do we have in the case of garden vegetables clear, definite and explicit descriptions of just what any particular variety should be? I think not. In the case of plants propagated asexually, exact definitions of varietal characteristics are not so important. Since we cannot change it, we can only increase the number of parts of a certain definite thing—we cannot alter its inherent character. The Baldwin apple of to-day, of 50 years hence, is precisely the same in its character, its potentialities and limitations of development as that of 50 years ago; no matter how many propagative generations it may go through, the type of the variety as a variety cannot change, yet such men as Downing, Warder and Beach have devoted years of earnest study

not only to the adaptability of the sort to certain places and uses but to formulating clear descriptions of just what it is. On the other hand, in vegetables, where the permanence of a variety and the retention of its qualities depends upon a clear statement of its distinguishing characteristics very little work has been done; and it is not surprising that the slate-colored, nearly smooth-skinned Hubbard squash of 50 years ago drifts into the densely warted, dark green Hubbard of to-day, which many claim is as unlike the original type in quality of flesh as it is in character of skin; and no man can do more than guess what the Hubbard squash of 50 years hence may be. What the original introducer now selects as an ideal and typical ear of Premo corn is very different from one he picked out as an ideal five years ago when it was first named as a distinct variety. When we remember that the relative influence of each ancestor may vary in each individual and the great variation represented in the ancestry of the different plants of most stocks of garden vegetables, it is not surprising that they are variable, nor that some individuals are very different and of immensely greater practical usefulness than are others, though they fail to transmit that superiority to their descendants.

The only way we can secure seed certain to develop plants of any exact type is to make sure that each and all of its ancestors are of that exact type; and to do this, we must have the type clearly defined and in selection adhere rigidly to it and not be tempted into the use of plants that vary from the type even though they be individually superior. The first requisite for this is the formation and general acceptance of minute and exact descriptions of varietal types. This is by no means an easy task. We must first distinguish between what are real varietal and hereditary characteristics and those which are simply the result of environment of the individual; for it must be admitted that conditions of environment sometimes induce modifications in the character of the plant, and when the same conditions are continued from year to year they have a cumulative influence the effects of which may become hereditary; but such variations are less common and generally of far less importance than characteristics which are inherent in the nature and habit of the plant itself and quite independent of environment.

Again the comparative and practical importance of a variation should be considered. Often there are correlations of qualities through which a readily seed variation, which is of itself of little moment, becomes very important because it is very distinctly characteristic of the sort or is invariably correlated with some important quality which cannot readily be seen.

Again the relative importance of certain qualities will vary with the conditions under which the plant is to be grown and the uses to which it is to be put. I have known of a num-

ber of instances when the very qualities which made a sort desirable for certain places and uses and the development of which was the only reason for its existence as a distinct variety have been bred out of it, because, under the conditions and for the purposes with which the seed grower was familiar, these qualities were objectionable rather than desirable.

These conditions make it seem to me that the formation of full, minute and carefully written out descriptions of what the ideal plant of a variety shall be and the rigid adherence in selection to that exact type from year

to year is the essential foundation for all really successful seed growing. And that there is to-day no greater horticultural need than the formation of such full and accurate varietal descriptions of vegetables as we now have of fruits.

POINSETTIAS

2 1/2 in. pots, \$5.00 per 100; \$40.00 per 1000. 5 per cent. discount on all orders received before July 1st accompanied by cash. July and August delivery.

During 1906 we furnished to the trade over One Hundred Thousand of the below described leaflets.

CULTURAL DIRECTIONS

Specially written for the use of your amateur customers. Send Twenty-five cents for complete sample set, which amount will be deducted from order for first thousand.

The universal favor in which these Directions are held, as shown by the many orders received therefor, encourages us in the belief that these Leaflets are just the neat little factor to help promote business and establish better relations between the dealer and his customer.

TRY SOME!

BIG BUSINESS ASSISTANT

TO SAVE TIME, QUICKEN SALES, AND AID YOU PLEASE YOUR CUSTOMER, WE HAVE PREPARED

Cultural Directions

COVERING A NUMBER OF THOSE PLANTS AND BULBS MOST LARGELY IN DEMAND

THE "CULTURALS" have been written by experts; they are fuller, and contain more detailed directions than it is possible to embrace in a catalogue. Equipped with these, just hand one out with each sale, and save yourself considerable present and future trouble, as the customer will then be able to consult the directions, grow his plants, seeds or bulbs intelligently, and so receive satisfactory results, without having to continually resort to you for advice.

The following "Culturals" are now ready:

HERBACEOUS PERENNIALS

We offer a fine stock of perennials as follows

Table listing various perennials such as Achillea, Agrostemma, Aquilegia, Artemisia, etc., with prices per dozen and per 100.

(85) Geraniums Losing Color.—Can you tell me the cause of good, healthy geranium plants turning their color in two and a half weeks' time? What can be done to prevent them doing this? They are all full grown plants, many of them being in full bloom. Mass.

—From the appearance of the leaves sent for examination, we are of the opinion that the plants are too crowded on the benches, and that syringing or watering from overhead has been done during the bright sunshine at a time when the plants were dry at the roots, which caused the leaves to scald somewhat badly. We would recommend that the plants be given more room on the benches, and no watering overhead be practiced.

(86) Summer Care of Callas, etc.—Kindly inform me the best way to care for callas in pots during the Summer. Also what would be the best kind of flowering plants to grow in pots? I sell all I produce at home, and would like to have flowering plants in pots from Fall to Spring. Ft. B.

—The best thing to do with callas that have been grown in pots is to lay the pots on their sides outdoors in some shady place when it is seen that their growth is completed, which will probably be some time in the early part of June. By laying them down on their sides they will dry out gradually, and they may be allowed to remain in that position until the middle of August, when the plants should be shaken out of the pots and re-potted in fresh soil and started into growth again.

A list of suitable plants for commercial purposes during the Winter and early Spring would include chrysanthemums, begonias, cyclamens, primulas, geraniums, and such bulbous plants as lilies, hyacinths, narcissus and tulips.

10,000 FERNS 10,000 POTTED CANNAS ALL FINE STOCK

Cannas, 3 1/2 and 4 in. pot plants, ready to plant. Will do 500 or 1000 in fair proportion from list at \$40.00; or my own selection for \$35.00 per 100.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.
Orlando Harrison, Berlin, Md., president; J. W. Hill, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

MANGUM, OKLA.—An extensive nursery is to be established here, not far from the city limits. It is said the enterprise will be under the direction of Stark Brothers.

ST. PAUL.—L. L. May & Company expect to finish up their Spring delivery the coming week. Their new storage warehouse has helped them out considerably in the way of making early deliveries in the Spring and Fall. The stock is hauled from their nurseries at Mayfield, Minn., in the Fall and held in the large warehouse, and their packing is completed in the warehouse. Rainy or stormy weather does not affect them in any way. Cars are run through the warehouse and a Spring delivery can be made in just one half the time it took to complete it at their nursery. Mr. May built it at an expense of \$10,000, but is confident that it will pay for itself in two or three seasons. The dimensions of the building are 200 feet long by 150 feet wide.

PAUL.

THE CALIFORNIA PRIVET.—Can you inform me how the California privet comes by its name? Is this not the English privet? I am sure it is not a native of California, and would like to have this question answered.

JOHN VALLANCE.

Cal.

—What is called California privet is *Ligustrum ovalifolium*. It is well understood that it is a Japanese species, and that its common name, California privet, comes from its reaching the East by way of California. The English privet is *Ligustrum vulgare*. The California is much used for hedging from Boston southward, but is not the equal in hardiness to the *ibota* and *Regeliana*, both of which make good hedges, though without the shining foliage of the California privet.

J. M.

Seasonable Topics.

In the case of hazels, walnuts and hickories the male flowers come earlier than the female ones in some seasons, hence the non-production of nuts. It is sometimes possible to bring branches of male flowers and hang them on the trees that are short of them.

Root cuttings of *Pyrus japonica* set out in Spring grow freely. The variegated-leaved variety comes true raised in the same way. The *pyrus* often fruits freely, and plants are raised from the seeds; but root cuttings are looked to for the main supply.

Many have noticed the injury to vegetation when it comes in contact with galvanized wire. This is because of the acid used in galvanizing. Before being used for trellises and other purposes the wire should be well painted, which will prevent any trouble from its employment. Were railings to cemetery lots so painted it would prevent the killing of the grass beneath them.

The old custom of turning a pot plant upside down when infested with insects and dipping it in water heated to 120 degrees is still a good one. One or two such immersions would free plants from their enemies.

Viburnum nudum has the usual corymbs of white flowers common to *viburnums*. It differs, however, in its berries. These go through various colors as they ripen. Starting with green, there follow white, rosy pink and deep purple. When the rosy pink stage is reached the bush is extremely ornamental.

Wherever *Euonymus japonicus* succeeds it makes a fine evergreen hedge. Good ones are reputed as existing at Atlanta, Ga.; and in all South Jersey there are to be seen fine specimens of it. As a seashore shrub it has a good reputation.

Which hazel, *Hamamelis virginica*, is associated with our thoughts of the very latest of the Autumn flowering shrubs. It is often found in bloom in sheltered woods some time after the early frozings of Winter have set in. Its singular habit of "firing" its seeds is known to many. When the pods open the seeds are ejected sometimes 15 feet away from the shrub.

The once rare fern, *Asplenium pinnatifidum*, is still to be found in its old locality along the Schuylkill River, Philadelphia, the plants from which afforded the specimens from which Nuttall gave it its name.

Sowing Catalpa Seeds.

An Ohio correspondent asks for a few directions for sowing catalpa seeds. It happens that this is a seed that grows easily. It needs but to be covered with soil to about its own depth, and growing is almost assured. Seeds should be sown as early in Spring as the ground is fit, then they sprout before the dry weather comes, and by Fall there is a nice growth to show.

Mention has been made before of the value of the catalpa as a street tree, and the time will come when nurserymen will find a demand for the tree for this purpose. There are two available species—*C. speciosa* and *C. bignonioides*. The former is taller and hardier than the other. *C. bignonioides* is of more rounded growth, less tree-like in appearance, and would be unsuitable where a tall tree would be required. On the other hand, where flowers are to be considered *C. bignonioides* is much the handsomer of the two, but with the flowers come the long seed pods which hang on all Winter. *Bignonioides* is not hardy north of the Middle States, while *C. speciosa* can be grown in the coldest States.

Catalpa speciosa, because of its straight growth, hardiness and the value of its timber, is in great demand for forestry purposes, and if we mistake not it will take a prominent place among the trees recommended for street planting.

be distinguished by the color of the wood as it can by the leaves at other times.

This horse chestnut is not a large tree; quite the reverse. Because of this it finds a place for lining the sides of avenues of moderate width, where the ordinary European species, with its immense growth, would be quite out of place. Wherever its native home may be, it assuredly prefers the climate of England to ours. As seen there its growth is magnificent. In the abundant moisture of the atmosphere it thrives to perfection; and it is worth a trip across the water to see the trees in bloom, especially when lining avenues, as they so often do.

Mentioning the liking of this tree for a moist air, it is so with all horse chestnuts. The European one, *Hippocastanum*, and all its varieties suffer from our dry air in Summer. They like moisture for the leaves and moisture for the roots and coolness, too, for both, if to do their best; and this likewise applies to *rubicunda* and

Æsculus Rubicunda, Red Flowered Horse Chestnut

Æsculus Rubicunda, Red-Flowered Horse Chestnut.

What is uniformly admitted to be one of the handsomest of our flowering trees is the red-flowered horse chestnut, *Æsculus rubicunda*. When in perfection of growth and bloom it is one of the trees that those who see it are sure to endeavor to obtain from their nurseryman. The demand for this tree appears to increase every year, it is such an addition to a collection of horse chestnuts.

There are not many true horse chestnuts natives of our country. The *Æsculus glabra* and the one of which we write, *rubicunda*, are the only two in general cultivation, and it must be said here that although leading botanists place the *rubicunda* as a native here, others appear to think its origin obscure. No one can give the locality where it can be seen in a wild state, hence in some works its origin is given as a matter of doubt. Others again think it of hybrid origin.

No matter just now where it sprung from, it is one of the most ornamental of trees, for besides its handsome panicles of reddish scarlet flowers, it has uncommonly rich dark green leaves, so dark, indeed, that when mixed with other sorts there is no difficulty in selecting one from the other. And this darkness of color is characteristic of the bark of the wood as well, so much so that in the season when bare of leaves it can

the native one, *glabra*. When these are set out on lawns having deep soils and where large trees partly shade them in the heat of the day, and the turf keeps the soil cool, it is not uncommon to see them pass through our Summers in splendid health; but when in situations the reverse of this the leaves scorch badly in late Summer, and become the prey of a fungus which sometimes destroys every vestige of foliage. Still, as the late Thomas Meehan used to say, everything that could be said against the tree could be accepted if need be and still it deserves planting for its great beauty in the early days of Spring and Summer.

Looking at the picture it will be seen that the leaves have a drooping habit, pretty and distinctive; and this is another character in which it differs from others of the family.

What nurserymen regard as curious is, that it does not produce seeds. We are not sure that it never does, but do not recollect seeing any on a tree. This necessitates the increasing of it by budding, in which way a stock is not hard to obtain.

Some botanists make several species of horse chestnuts as indigenous to this country, doing this by including the *pavina*, but the old-time distinction of treating as horse chestnuts those with prickly shells, and buckeyes those with smooth ones, seems a very good one.

California Plant Notes.

Some facts relative to Persea gratissima, alligator pear, that have come under my observation during the two years past may be of interest to the readers of The Florists' Exchange, especially those of them who live where the tree can be successfully grown. It is the most delicious of all the fruit grown in this part of the country, and retails in our markets at fabulous prices—\$3 to \$9 per dozen fruit. One tree near Los Angeles produced \$137 worth last year. One fact, and a most important one to those who would plant it for profit, is that at least 75 per cent. of the seedlings are barren, some of them do not bloom at all, and of the remaining 25 per cent., some bear fruit with so little meat covering the large seed that they are of little value. These different seedlings (the writer knows of no budded or grafted trees), bear fruit differing in size and shape, the meat varying in thickness from a quarter of an inch to an inch. The shape is of no value, but the edible part is. A deep sandy loam soil seems to produce the most luxuriant growth, but the trees that have produced the most fruit are growing on heavy clay soils; yet this productiveness may not be due to soil, but the nature of the tree. It will stand eight degrees of frost without injury, and requires plenty of water during the Summer for its best development. In our fertile soils the question of manure is not yet considered. So far as a money-maker is concerned, it beats walnut orchards, and orange and lemon groves—the staple productions of Southern California—16 to 1, but planters must bear in mind that stock propagated from fruiting trees is the only kind that will pay for the time and expense necessary to bring an orchard into bearing. The seed germinates better in soil than it does suspended in water—a method one occasionally sees practiced in greenhouse establishments. The writer is experimenting with ripe wood cuttings under glass; if successful there will be none to sell, but the result will be made known in these columns. No insect pest or disease has yet affected any trees growing here, and there are some large ones. The largest one never blooms. P. D. B.

A Useful Greenhouse Adjunct.

The Improved Economy Bracket, manufactured by Buxton & Allard, Nashua, N. H., an illustration of which appears herewith, is highly spoken of by florists who have used it, among whom are such well-known firms as S. J. Goddard, Pat-ten & Company and F. H. Kramer.

These brackets are constructed of best grey iron, properly proportioned to combine strength and beauty, and made as light as consistent for the work they

The Improved Economy Bracket

have to perform. The clasps are made from best Norway iron and, when tightened about the standard and through the brackets, each will carry a load of over 2,000 pounds.

The Improved Economy Bracket is an economizer of space; by placing the brackets throughout the house from post to post, thousands of plants, cuttings and seedlings could be raised, which now are not as they take up valuable room occupied by other plants. The bracket doubles the capacity of the output for seedlings, etc., at no extra expense. When not in use, by turning the nut, the bracket is easily removed. They do not obstruct the light as do wooden frames, and are just the thing for exhibition plants. Many florists are making the pipes which run from bracket to bracket answer two purposes, i. e., supports for the boxes and water supply pipes.

If desired, timber can be used in place of pipe, as each bracket has a flat top for such place, the old style being adapted only for timber.

Greenhouse Showing Economy Bracket in Place

ASPARAGUS

Robustus, similar to Plimous but better for pots, pans, and vases; extra fine stock ready for 4-inch pots at \$6.00 per 100. Sample for ten cents.

CARNATIONS

Ready April 29th. Queen at \$10.00 per 1000. Nelson Fisher at \$12.50 per 1000. Cuttings from sand.

GERANIUMS

Rooted cuttings only, ready May 16th, at the uniform price of \$10.00 per 1000. Null, Perkins, Buchner, Castellane, Francis, Vlaud, Poitevine, Jaulin, and Ricard.

Decorative Plant Notes.

CROTONS are now making growth rapidly, and as that is what is most desired every inducement for them to go ahead should be given them. The plants require an abundance of water judiciously applied at the roots as well as frequent syringing overhead to keep them in a clean and healthy condition. Liquid manure is not in any way a necessity for crotons until the roots begin to exhaust the nourishing properties of the soil; in fact, I think applications of liquid manure early in their growth is harmful to them ultimately, especially to those plants remaining in the same pots of necessity from now on, because recourse to that treatment will lessen the benefit when the plants are in absolute need later on. Well-furnished croton plants form an enviable possession, but there is no need of desiring much less of discarding plants somewhat bare of foliage below, because these can be advantageously utilized for various purposes throughout the late Summer and in the Winter. For filling fireplaces poor crotons are just as good as perfect specimens; and again, in Winter, there are a hundred and one ways in which such plants can be disposed of in conjunction with other material. If there are in the houses a greater number than can be conveniently cared for the hardest may be planted out in the open ground.

DRACAENAS.—Like crotons dracaenas are now rapidly developing their growth, and like crotons also the kinder treatment they receive for the next few months the better the plants will be able to stand any slight check that may be forced upon them when they are being brought to their limit in coloring. A light shade may be necessary in order to safeguard the plants from being burned in spots by the sun, although I have never experienced any difficulty in keeping the foliage perfect with the plants fully exposed to the sunlight. But I have always kept the house inordinately moist, and perhaps that is how I managed to save them invariably. The foliage of dracaenas should be occasionally sponged carefully so as to keep them clear of insect pests. It may seem tedious as well as expensive work to do that, but in the end it will be found a paying proposition by those who practice it.

When syringing dracaenas, which should be done twice each day with a fine rose used with force, the water should be applied to the under part of the leaves. Dracaenas of the choicer varieties are coming to the front rapidly, and little wonder, considering the unapproachable beauty of their foliage, and the comparative ease with which good specimens may be grown within a year. If it is contemplated to plant any of the colored varieties outdoors they should be given a somewhat shaded situation in a sheltered corner of the grounds. D. M.

ALBERT M. HERR, Lancaster, Pa.

None but good stock sent out. ASTERS Queen of the Market, white and purple; mixed, Dreer's, Vlek's and Semple's branching, transplanted, all healthy stock, 4c. per 100, \$3.00 per 1000. S. A. PINKSTONE, 20-22 Philip St., UTICA, N. Y.

Dreer's Hardy Perennial Phlox

We are the largest growers of Perennial Phlox in the world. Our collection is unequalled, and we are prepared to furnish the new and rare kinds as well as all the popular and standard varieties in large quantities.

The plants we offer are nearly all strong one-year-old field-grown plants or equally strong divisions, and will make a fine display of flowers this season. This stock is much superior to and must not be confounded with young Winter propagated stock such as is generally sent out in the Spring of the year.

New and Rare Hardy Phlox and Varieties of Special Merit

	Per doz.	100	1000
Aiblon (Tall). A variety which originated with us several years since and which is now offered for the first time. Strong grower, pure white with faint aniline red eye.....	\$1.50	\$10.00	\$30.00

CLUB AND SOCIETY DOINGS.

American Carnation Society.

Variety Registered.

By Stanley B. Fillow, Westport, Conn.

"JUNITA" "JUANITA," a bright scarlet, of the largest size and a very strong stem; a very free bloomer and an easy rooter.

ALBERT M. HERR, Secretary.

NEW ENGLAND DAHLIA SOCIETY.—Secretaries of horticultural societies in America would render a great service to the New England Dahlia Society to inform Maurice Fuld, Secretary, 5 Union street, Boston, Mass., of the dates of Fall exhibitions where dahlias are included in the schedule.

THE ELBERON (N. J.) HORTICULTURAL SOCIETY held its regular meeting on April 22, President W. D. Robertson in the chair. Peter Murray, superintendent for Mr. S. R. Guggenheim, read an instructive paper on "Hardy Shrubs."

There was the usual interesting exhibit. Cultural certificates were awarded to Walter Swain for a specimen hydrangea, and to P. Murray for a vase of American Beauty roses.

THE NASSAU COUNTY (N. Y.) HORTICULTURAL SOCIETY has published its list of active and honorary members, and officers for 1907. The former numbers 82, the latter, 17. The officers are: Alexander Mackenzie, president; H. F. Meyer, vice-president; John F. Johnston, secretary; Ernest J. Brown, treasurer; John W. Everett, corresponding secretary. Executive committee, Thomas Harrison, Albert Johnson, James Duthie, Charles Bertanzel and William Maher.

THE HORTICULTURAL SOCIETY OF NEW YORK.—Dates have been fixed for the International Conference on Plant Hardiness and Acclimatization, which is being organized by the Horticultural Society of New York. The conference will extend over three days. The opening session on September 30 will be held in the rooms of the American Institute; the second day will be devoted to an excursion to some point of interest in the neighborhood, and the final day's session of the conference, on October 2, will be held in the Museum building of the New York Botanical Garden.

The preliminary program is being put into shape and will shortly be issued. A list of about two dozen titles has already been prepared, and a very interesting conference is assured.

The secretary is still open to receive suggestions and promises of communications from horticulturists. Communications should be addressed to the office of the society, room 60, 55 Liberty street, New York City.

LEONARD BARRON, Secretary.

Gladiolus America.

M. Crawford of Shiocton, Wis., has been endeavoring to discover definitely the origin of Gladiolus America, which has recently been the subject of discussion in the trade press. It may be remembered that this variety was introduced under the name of R. H. Warder by Frank Banning, Kinsman, O., who disposed of all the stock to John Lewis Childs, Floral Park, N. Y., for \$4,000. Mr. Childs changed the name to America. It has been generally supposed that Mr. Banning raised it from seed, although he never has said so explicitly. Last Winter, at a meeting of the American Breeders' Association, held in Columbus, O., H. H. Groff, the Canadian specialist, claimed that he originated the America and sent it out ten years ago. Knowing that Wilbur A. Christy, a neighbor of Mr. Banning's, and an experienced grower of the gladiolus, also claimed to be entitled to the credit of originating the America, Mr. Crawford tried to get each of the three men to give their reasons for claiming this honor. Mr. Christy alone complied with this request, and his statement appears in the horticultural department of the Shiocton (Wis.) News of April 26, 1907, from which we make the subjoined extract:

"It is my purpose here to give briefly some known facts, and collateral evidence which led me some years ago to believe that it originated in the seedling-bed of my Mapleshade collection, from seed grown and planted by myself, that it passed out of my hands in a perfectly legitimate way, before its value was made known, and which also led me to make public this claim at the earliest date of its introduction to the public.

"Gladiolus America was propagated and multiplied by Mr. Banning, of Kinsman, subsequent to the year 1900, and sold by him to John Lewis Childs early in 1904, the delivery of stock taking place previous to the planting season of 1905. Mr. Childs changed its name from R. H. Warder to America, and after growing and testing for one season, offered it to the trade in 1906. The fact is apparent that Mr. Childs did not originate it, and it is plainly impossible to reconcile the facts with the supposition that Mr. Banning did so. The only tenable conclusion is that the latter simply propagated a choice sort which in some way came into his possession. To this conclusion all the facts tend, and this it was from stock received from me that he selected it, seems the probable truth."

Mr. Christy then goes on to explain that for five years previous to 1900 Mr. Banning had acted as his salesman for his Mapleshade collection of gladiolus, established twenty years ago; that after March, 1900, Mr. Banning determined to plant a collection on his own account, having then in his possession the entire output of gladiolus bulbs, of all sizes, grown by Mr. Christy the previous year, and that Mr. Banning used these as the basis of his collection, among which were thousands of untested seedlings, one of which, according to Mr. Christy, was the variety R. H. Warder. He also shows how it would have been impossible for Mr. Banning to secure the quantity of stock of the variety he ultimately disposed of within the period when Banning first began growing gladiolus and the date of sale of the variety, and asserts that trustworthy reports have come to him to the effect that Mr. Banning had stated "he did not know where it originated, it just appeared in some stock he had gotten somewhere"; also that a Mr. Allen, grower for Banning, has always said that it was simply "a sort that Banning selected out of their mixed collection for propagation."

Regarding the use of the phrase made in connection with America, that the variety was obtained from "Childs's X Gandavensis," Mr. Christy says: "that whether furnished by Mr. Banning or Mr. Childs or both conjointly, it is, in my opinion, nothing but a 'manufactured pedigree.' It is used without any just grounds, for the reason that neither of these parties is possessed of such knowledge as to the ancestry of the variety, and the characteristics of the variety deny such parentage, but are such as indicate a pure Gandavensis descent."

Coming to Mr. Groff's claim as being the originator of America, Mr. Christy states:

"Now, I may refer briefly to the claim of Mr. Groff, so lately put forth. I corresponded with Mr. Groff some years ago in regard to this question, stating to him my belief, during the St. Louis Exposition. He assented to the validity of my claim, and accepted it as well supported, even proposing the name 'Christy' for the new variety. This attitude he maintained until the present season, when he claimed to recognize it as a variety he had originated and sent out in collections previous to 1896. To this claim I replied at the time, pointing out some weak points in the claim, and asking him to furnish certain items of evidence which to me seemed as necessary to its acceptance. He not only failed to furnish this proof, but even to make any reply, and I heard no more of it until his public claim at Columbus, still unsupported by the proof which I deemed then to be essential, and still consider so, and which is certainly not beyond his power to produce, if in existence. As to his claimed recognition, it seems to me, in the absence of the definite proof referred to, that it may have been a mistake. He will no doubt scout the idea as preposterous, perhaps as a reflection upon his judgment, but all practical growers know that the diversity between two plants of the same variety is often as great as identification is often difficult, and sometimes impossible. I grow varieties which can be most easily distinguished by the characteristics that appear in the flower. Every season I have spikes sent me from growers for identification, and this present season had such sent me by prominent growers to learn if it

were America. If such difficulty exist when the spikes are at hand to be compared, what shall be said of an identification based on a recollection ten years old? To me this seems far less difficult to believe than some other unavoidable corollaries of his proposition. Take this one for instance. If this variety really has been disseminated for ten or twelve years, and largely in the hands of the growers, how is it to be explained that it has remained absolutely unknown? All the growers of this country have for years drawn upon Groff's strains to improve and replenish their stock, and yet after ten or more years of this, none of them have America. Could this be? And is it creditable that a variety of such beauty and prolificacy should fall to be noticed and propagated during all this time. To me, this is far more incredible than the other horn of the dilemma—a mistake in recognition. Some things are harder to believe than others, and I prefer the line of least resistance in a matter of this kind. We all know that this variety would have forced itself into notice—a variety so prolific as this, numerous enough a dozen years ago in the hands of its originator to be sent out promiscuously, would ere this have been numbered by millions, and that without any special care. And when we recollect the fact of its beauty which would have attracted attention anywhere, it is simply incredible that if in the hands of growers for such a period as this, it should not have forged the front somewhere, that it should to-day be unknown. No one has it, no one knows it, no one recognizes it—save Mr. Groff—and it is hailed all over the land as a new, hitherto unknown, glorious addition to the world's list of worthy varieties. Well, this is a mystery at least, but it seems as if this hypothesis creates more difficulties than it explains. So far as known, the stock in America is confined to those who have obtained the supply, directly or indirectly, from the stock grown here and disseminated by Mr. Childs. When this enigma is solved we may turn our attention to the error in judgment, to say the least, so little to be looked for in this quarter, which led Mr. Groff to rate it, and leads him still to consider it as being only a second-rate sort, if indeed so good as this. Does not this excite, or confirm the suspicion that it must have been some similar, but altogether other inferior variety, to which his recollection recurs in its review of the years gone by? Surely none of our present growers, with genuine stock from the introducer, would concur in such an opinion.

"When we consider what was accomplished by Mr. Banning in the propagation of this variety, in a very few years, we are compelled to believe, that had it been in the hands of dealers for so long a period as Mr. Groff states, it would now be the most common variety in cultivation, diffused everywhere and well known. The capabilities of the variety have been amply proved, and the inducement to other growers were equally great, had they but the opportunity. We can not believe that among the numerous growers of the country, one only was capable of seeing the value of the variety, and the only possible conclusion is that other growers did not have it.

"So far nothing has been presented that, in the absence of positive truth, tends to weaken the belief stated in the opening sentences of this article, and while this position is based largely upon probabilities, and must therefore yield to positive testimony, should any such be presented, I will await the actual appearance of such proof before revising my opinion."

ANOTHER DOUBLE RICHARDIA.—John A. Meagher, florist, Ardsley, N. Y., favored this office with a double flowered calla, similar in its formation to the one illustrated on page 550, issue of April 20, 1907. Mr. Meagher informs us that his flower was cut from a tuber that had not previously yielded any blossoms.

NATIONAL COUNCIL OF HORTICULTURE.—The tenth installment of the press service of the Council has just been distributed by Mr. Burdett and includes articles on Deutzias, Beans, Gooseberries, etc.

The "Anglo-American" remountant carnations is the subject of an extended illustrated article in the Revue de L'Hort'ulture Belge et Etrangere, of April 15, 1907. A colored plate of Cardinal, Mrs. T. W. Lawson and Harlowarden is presented with that issue.

The April, 1907, issue of The Dahlia News (Vol. 1, No. 2) is quite "newsy," containing bits of interesting information from European countries, articles on The Dahlia, Its History, Progress, and Culture, and Dahlias from Seed. The New England Dahlia Society will hold a joint exhibition with the Massachusetts Horticultural Society at Boston on September 4 and 5 next.

John Cotterill.

John Cotterill, a prominent florist, died at his residence in the northern part of Toronto, Ont., on Monday morning, April 22, after a few days' illness of pneumonia. Mr. Cotterill was a robust man and his death came as a shock to his many friends who did not know he was sick. He had been in business for a number of years, and a few years ago took a prominent part at the exhibitions held in his home town, showing some fine plants, but for the last two years he had not exhibited and had given his whole attention to the building up of a good business in other lines. The funeral, which took place April 24, was largely attended by his brother florists. He leaves a widow and a large family to mourn his loss.

T. M.

OUR READERS' VIEWS

A Pertinent Inquiry.

Editor Florists' Exchange:

Inasmuch as the twenty-eight truly good Pittsburgers have never been named, we rise to inquire if the present treasurer and prospective president of the S. A. F. O. II. is alluded to in the following stanzas from last Sunday's New York Times:

A golden harp for each of them,
A halo for each pate, Sir;
And angel hands are fast at work
With wings for twenty-eight, Sir.
For they are paragons of good,
Of righteousness the models;
They hit the line of Evil hard—
They are not mollicoddles.

JOHN G. ESLER.

Winter-Flowering Sweet Peas.

Editor Florists' Exchange:

I accepted the invitation of Charles M. Weaver to visit his establishment at Ronks, Pa., to see his so-called sports of sweet peas. I went over in company with W. W. Bidwell, one of the first sweet pea growers, on Saturday, April 20, and we were well repaid for our visit. The establishments of Mr. Weaver and his cousin are quite interesting, especially the new greenhouse which he and his brother have built of concrete, sides as well as the posts, the house being handsome and practical.

Mr. Weaver has several varieties of tomatoes planted in the house. Sim's Comet was the only one then beginning to fruit; the others were just in bloom, planted side by side.

We found what Mr. Weaver calls a sport in sweet peas one exactly resembling the variety which I have registered as Mrs. Charles H. Totty. Neither Mr. Bidwell nor myself could see any difference between these two kinds.

ANT. C. ZVOLANEK.

Editor Florists' Exchange:

In response to Mr. Engelmann's letter appearing in the Horticultural Advertiser of England of April 10, wherein Mr. Engelmann seems to have become excited over my communication in 'The Florists' Exchange' (almost an exact copy of which was sent to the Horticultural Advertiser, but not published), in regard to my statement that sweet peas never sport, I repeat that statement and will hold to my opinion until some one can convince me to the contrary.

Mr. Engelmann says he has "sports" of Captain of the Blues, Dorothy Eckford, Lady Grisel Hamilton and Miss Willmott, but at the same time he states that they are identical with my varieties, seeds of which he obtained from me. These four early varieties Mr. Engelmann states are his "sports," but over fifty others of mine have been grown for many years, exhibited and certificated several times, and have been grown in mixture since 1904 by florists all over the United States as well as in Europe, and for two years past in separate colors. The same trustworthy growers have had seeds from me on free trial, and in addition I have sold during the past year to over 1,100 florists in different countries, fifty of my varieties in mixture. It is my custom to send my new kinds for trial for several years before putting them on the market, because I am a cut-flower grower and sell seed exclusively to growers, and I never like to disappoint any of my 3,000 customers.

I do not know how long Mr. Engelmann has had his "sports," but it cannot be long. The first time I ever heard of them was over a year ago, when Mr. W. Adee Burpee of Philadelphia paid me a visit to see my different varieties of sweet peas. He noticed one whole bench of Christmas Captain, and asked me if I knew Mr. Engelmann. I told him that I had done some business with that gentleman and had sent him over 40 varieties of my sweet peas for trial. Mr. Burpee then told me that Mr. Engelmann had offered to sell him the early flowering Captain of the Blues, and he (Mr. Burpee) was glad that he had not bought it after seeing mine. My Christmas Captain has been grown over nine years; it was shown at the New York Florists' Club the first year after I obtained the variety, which is a seedling from Christmas Pink × Captain of the Blues.

Mr. Engelmann has knocked the bottom out of his argument completely when he offers his varieties as new after having grown mine for two years and stating that they are the same as his.

I do not claim positively that Mr. Engelmann is trying to sell my hybrids; he may have obtained several varieties from the common sweet peas, because I myself have seen one single, early flowering plant in a whole house of common sweet peas, but that was not by any means "a sport," which I will shortly explain. The grower purchased seed which had probably been raised in California, where hundreds of acres are devoted to the cultivation of sweet peas for seed and a great many varieties of the common and early are grown side by side. There is, therefore, a chance of the pollen being mixed in the field by insects, which might bring about the same results as hand hybridization.

Mr. Engelmann refers to my article in Möller's Deutsche Gärtner-Zeitung of 1892. I do not have a copy of that journal of that date before me, but I have the original copy of my letter sent to it, wherein I plainly stated that "I discovered Florence Denzer in a bunch of sweet peas which had been crossed by the Christmas."

In another paper Mr. Engelmann claims that the American varieties are much stronger and larger than the European sorts. Now he says he does not see much difference between Mount Blanc and Florence Denzer. This was a puzzle to me until a short time ago, and I should like to give the readers of this paper an idea of how the resemblance might have resulted. As I mentioned, last year Mr. Burpee paid me a visit. At that time he saw half of a bench planted to my Watchung, a black seeded white, every plant being from eight to ten feet high and full of flowers. This variety I had sent for trial to several florists two years before. Mr. Burpee informed me that several weeks previous he had put on the market a black seeded dwarf, growing early, white variety, which he had named Earliest White. At the same time he pointed to my Watchung and said that it was the same as his, though the latter was not so tall or as strong a grower. I purchased seed of the Earliest White and planted it side by side with that of Watchung to discover the difference, if any, between the two. Earliest White began to bloom when eighteen inches high; Watchung seven days later, being four feet high. Earliest White reached the height of four feet; Watchung nine feet. These two varieties are certainly different; but I would state that when Mr. Burpee selects, adding pollen of the stronger growing sweet peas, within three years his variety will be greatly improved and no marked difference between Watchung and Earliest White will then be observed. Every one of my Winter-flowering sweet peas which I have obtained by crossing with the common kinds in the first year of blooming, were of dwarf growing habit, seldom over three feet high, and only by crossing and re-crossing did they grow taller and stronger. This shows that Earliest White is not a "sport," but the result of a cross between some other common kind. A sport of any flower or plant can never be increased in size, and very seldom does a plant sport fully at once, the variation appearing in a single flower or a branch. I claim that if Mr. Engelmann's "sports" were found among the common sweet peas they are probably not over four feet in height, and had been crossed on the seed farm. If they are strong and tall growing, they have been obtained only from my stray seeds. I once more assert that sweet peas do not sport.

In regard to the vetch theory: I am not a theorist, believing only in praxis. I claim that any of my sweet peas can be bred to the vetch in a few years by crossing and from the vetch to sweet peas. That they have vetch blood in them is shown by the fact that they like much more moisture, soil, and a cooler temperature than the common sweet peas, and as Mr. Wallace of Victoria, B. C., says, the tendrils are similar to those of the vetch.

I have used two kinds of vetch for crossing, both of which grow in Central Europe in mountainous localities and in a cool climate. One is of a light brick color, the other blue and purple, similar to that of Captain of the Blues sweet pea. Mr. Engelmann could demonstrate that my sweet peas have vetch blood in them by the following: Take one white sweet pea of the old flowering kinds and cross it with any of my early white varieties; the result obtained from this cross will probably be several white, early flowering plants, and several late flowering ones; but the flowers of the latter will very seldom be white as they would be in the case of the early ones, but most of the time blue or red, just as seen in the vetch flowers. The same results will be obtained from crosses made with Blanche Ferry and Christmas. I claim that my sweet peas, if not re-selected and re-crossed, will revert to the old varieties, but not, as Mr. Engelmann says, to the vetch. This is very easily understood. The common varieties are much stronger growers than the early ones, besides they are more extensively cultivated and are being constantly hybridized.

ANT. C. ZVOLANEK.

Bound Brook, N. J.

Editor Florists' Exchange:

I was much interested in the remarks made by Ant. Zvolanek, respecting his early flowering sweet peas, but I must express amazement when he states that he has never yet seen sports among his sweet peas. Among the ordinary kinds, sporting is quite common, and it is safe to say that a great many varieties came into being without the aid of the hybridist.

The now famous Countess Spencer has yielded a great number of breaks, and Gladys Unwin, although usually considered quite fixed, has sported on more than one occasion. These two varieties were at first supposed to be sports from Prima Donna, but the former has been declared to be the result of several crosses. There are, however, many still who think Countess Spencer is a chance seedling. At any rate, this variety has given a number of color sports, many of which retain the wavy appearance. Helen Lewis is one of them.

John Ingman and Mrs. H. Sykes are said to be from crosses, but nevertheless their counterparts have been found among Countess Spencer. Enchantress and Cadillac Rose are deep pink breaks from Countess, as is Mrs. Chas. Pester the lavender sort. George Herbert is said to be a sport; yet it closely resembles John Ingman. Mrs. Chas. Pester also has sported, the new Mrs. Mender being from it. Paradise is undoubtedly a break from Countess Spencer or one of its progeny. Eric Hinton, a variety akin to Countess, and sent out in the same year from quite a different source, sported a beautiful lavender last year, and I have reason to think it appeared in America as well as here.

Then again, there is the case of Dorothy Eckford, which broke from Miss Willmott; and this year are here Mrs. Collier, which is a cream sport from Dorothy Eckford, and Miss Willmott also. Strange to say two other sorts now being sent out are akin to Mrs. Collier, although said to be raised from crosses.

I might cite many such cases, for I have known Mrs. Walter Wright to sport a magenta, the seeds of which have varied, when they produced flowers. Last year the crimson King Edward gave us a plum sport.

Not a few of the American varieties are sports from older sorts. Cupids and Bush are natural breaks. Earliest of All is a break from Blanche Ferry, and Earliest White is a break from Earliest of All.

This brings us to the subject of early flowering varieties which Mr. Zvolanek deals so largely with. In the Sweet Pea Annual, Mr. Engelmann states that his first early break came out of Captain of the Blues, other varieties following, while by crossing he has raised still more.

The Telemly (Algerian) strain, first came from the American Earliest of All. By means of crossing and natural sports, the Rev. Arkwright has secured a number of early sorts, which differ from ordinary kinds, not only in earliness of flowering but also in growth, the foliage being narrower, and the stems more woody. These facts will explain the scepticism among home raisers respecting Mr. Zvolanek's "vetch" cross. I cannot quite fall in with the statement respecting the waiting for sports; these come all unexpectedly, and one can never know when they are coming.

From Mr. Zvolanek's remarks, we are led to think that it is possible to get nearly any color to order. This is on a par with the statement made here, that by certain culture sweet peas can be made to sport any color; but my reply is, let me see it done. Let Mr. Zvolanek or anyone else produce a pure yellow, or a pure salvia-colored blue, or a pure scarlet and we will believe.

From what I have seen of sweet pea crossing one can never tell what will result. The most pronounced opposite will often result. One would not expect a lavender from a pink and white cross, nor a plum color from a cream and mauve. I have known instances where a pod of seed from a special cross has given different colors from each seed. Further, these seedlings again varied the following year.

Under the circumstances I cannot understand how Mr. Zvolanek can allow his seedlings to leave his hands so quickly. It is easy enough to raise and send out a variety as he states, especially when early sorts are being dealt with, but no great demand could be met. We ourselves could make a cross this season, between two later flowering sorts, and bloom them in time for the Temple Show in May, 1908, and send out seed in the Spring of 1909, or the Autumn of 1908 for that matter. But we couldn't guarantee the seed to come true, as it takes from three to six years to thoroughly fix a variety, and it may even break after a dozen years.

Your London correspondent does not quite grip the meaning of the audit lists of the National Sweet Pea Society. These lists indicate the popularity of any certain variety. Standard sorts only get placed on their merits. New sorts, of course, frequently get well placed because there are special classes for such varieties. Growers do not, however, rely upon the audit as judgment of the true value of novelties. Mr. Hemsley's remarks regarding confining certain varieties to the large classes are applicable, one in the special classification classes.

There are now 20 classified colors, and under each heading are grouped the best of the varieties such as pink, crimson, blue, white, etc. The competitor must show 15 out of the 20 colors. The object of the classification class is to show the leading variety in each color. New seedlings may be shown in most other large classes, and there is also a special seedling class.

New varieties cannot expect to find their proper place until the second or third year. They are generally too expensive for most people the first season, and not infrequently they do not attain their full vigor until the second or third year. One of our best raiser's novelties never show true form until they have been to California and back again to be re-grown here.

Respecting Paradise, this variety was too near alike several others for the judges to give it a hasty award. It is closely like Cadillac Rose, sent out last year. Olive Bolton is also closely akin to it. Paradise, to my mind, is different to the Unwin type, being a true Spencer in form.

Kent, Eng.

T. A. WESTON.

Winter-Flowering Sweet Peas.

Editor Florists' Exchange:

The question of the origin of these useful flowers has aroused an interest among the seed trade in this country. You have already published some of the correspondence which has appeared in the Horticultural Advertiser; the following additional items of information may be of interest to some of your readers:

Some few years back a collection of so-called Algerian sweet peas was exhibited quite early in the year at the Royal Horticultural Society's meetings in London. A short article on the origin and merits of the strain, from the Rev. Edwyn Arkwright, the originator, appears in the Sweet Pea Annual for 1907, in which he states that "the first of these early sweet peas was a sport from Blanche Ferry." I therefore wrote to Mr. Arkwright asking him if the seed of Blanche Ferry had been obtained by him from America. To this he replied under date March 26 from Télemly, Algeria, as follows:

"Though I did not myself get Blanche Ferry from America. I remember that the gardener who gave me the first seeds, called it an early American sweet pea, and it blossomed in March and was so well known here that I have heard it called the 'Arab' sweet pea, though I always knew that to be a mistake. There has never been a sport like mine in other gardens and it is odd that they should all have come to me.

"Now that I have been selling the Télemly sweet peas for the benefit of our Cottage Hospital at four shillings per 100 seeds, it is pretty common in all the English gardens about, but I still often see Blanche Ferry alone in March in French gardens.

"I have failed entirely with artificial hybridizing; the result is that I fail to get the English colors that I want, and the plant loses its own early properties whichever way I hybridize.

"I enclose a few leaves and petals which may interest you in showing what there may be of difference between them and the English peas."

A careful examination of Mr. Arkwright's flowers (some of which I enclose, Mr. Editor, for your inspection) shows them to be of large size, with three flowers on a stem, but all with notched standard of the parent variety.

In Mr. Zvolanek's "Bit of History" which appeared in The Florists' Exchange of July 28, 1906, he stated that "The first seedling of value which appeared was obtained from Blanche Ferry and came of the same color." I note that in the plate accompanying the article only two of the six varieties shown have notched standards.

In the correspondence which has appeared in the Horticultural Advertiser between Mr. Engelmann and Mr. Zvolanek, the latter claims to have furnished Mr. Engelmann with the seed which has produced the strain now offered by Mr. Engelmann as the product of a "habit sport" from Captain of the Blues. More will doubtless be heard from both parties on this subject, but it is a remarkable fact that the blooms which have been exhibited by Mr. Engelmann in London during the present Winter are identical in appearance with the strain of Mr. Zvolanek as illustrated in The Florists' Exchange.

Assuming then that all three strains are sports from Blanche Ferry it is not very strange that they should appear in three countries so widely separated as Africa, America and England, when we remember that the Cupid strain appeared at about the same time, both in Europe and America.

If I remember rightly Peter Henderson & Company claimed that Emily Henderson, the earliest white known at that time, also made its appearance in a field of Blanche Ferry. Ernst Benary in offering Mont Blanc in his catalogue for 1900-01 stated: "Mont Blanc made its appearance some three years ago in a field of Earliest Blanche Ferry." Both these varieties also possess the parental notch; having seen the complete comparative tests made by Mr. Benary in 1900 I can testify that in habit the two varieties are quite distinct.

The question then arises, are we to conclude that Jas. Justice in 1754 and Henry Eckford in 1898 were right in claiming that the Painted Lady, from which Blanche Ferry certainly sprung, is the parent variety? Or as the modern progeny of the charming dame is admittedly more precocious and graceful in form than the undoubted descendants of Cupani's Sicilian purple, is there not after all a possibility that it is of tropical origin?

It will be remembered that when Emily Henderson was first sent out a goodly number of colored varieties were found in it; but later, as a result of very careful roguing, the character became fixed. Is it not possible that if the colored varieties had been perpetuated an early flowering strain such as we now possess, might have been developed?

As a closing remark I have pleasure in stating that the Rev. E. Arkwright has just been awarded the gold medal of the Algerian Société Horticole for the introduction of this "new Winter-flowering plant."

The enclosed copy of a 200-year-old portrait of John Ray, one of the earliest authors to mention the sweet pea, may be of interest.

S. B. DICKS.

London, Eng., April 13, 1907.

Since writing on the 13th inst., I have received The Florists' Exchange for April 6, and have read Mr. Zvolanek's letter with very great interest. He is one of the fortunate few who have lived to see his labors of a quarter of a century crowned with success.

I have written to him for the proffered samples and hope to be able to test them by the side of the Télemly strain.

Some plants of the Télemly strain are now in bloom at Kew Gardens. Mr. Engelmann, who has inspected them, is of opinion that they are identical with his own and those of Mr. Zvolanek.

The editor of the Gardeners' Chronicle, Dr. Masters F. R. S., fairly expresses the prevailing opinion respecting this new class. He says: "As a member of the general public I do not care for them as I consider auriculas, daffodils and other Spring flowers are preferable at this time of year; but from the trader's standpoint I think them valuable and useful."

S. B. DICKS.

Our London Letter.

BY A. HEMSLEY.

RAMBLER ROSES.—These are now seen in grand condition. It was the first week in April that I noted really good plants in the market. The Crimson Rambler was the first to make its appearance; some plants were

John Ray, M. A., F. R. S.

Author of Historia Plantarum. Born at Black Notley, Essex, Eng., November 29, 1627. Died there, 1723. One of the earliest authors to mention the Sweet Pea.

not so well flowered, but best specimens were making higher prices than they did when first introduced. A great many are now grown erect instead of being twisted round sticks. Prices vary, from five shillings upwards. I find Messrs. Rochford & Sons have made as much as two guineas for extra fine specimens. Lady Gay is likely to become a general favorite. Messrs. Cripps & Son, Tunbridge Wells, had this variety in fine condition at the Royal Horticultural Society's meeting on April 17. I have also seen it good in the market; and I find that a little later on several growers will have it in flower. Wedding Bells was well shown by Messrs. F. Cant & Company, Colchester; the specimens were about 6 feet high. The large clusters of bloom were produced on drooping branches on nearly the whole length of the stems. It is evidently one of the best. The best white is Waltham Bride. This variety was shown in splendid condition by the introducers, Messrs. W. Paul & Son, Waltham Cross, on April 16—specimens, 8 to 9 feet high, with long drooping branches loaded with bloom, and the foliage was also remarkably good. Nymph, a single white, was also pretty, but I doubt if this sort will be so much appreciated by floral decorators. Philadelphia, as I have seen it this season, though good in color, does not seem quite free enough, yet we may see it better a little later on. I find growers still keep to Dorothy Perkins; it is remarkably free, and

though not quite so deep in color as Lady Gay some appreciate the soft shade. Hiawatha should be available for decorators this season, but I find most growers have cut up their plants for propagating from. Another season will see it in large quantities, for it roots freely from the base of every joint and can be readily increased from cuttings.

Coming to the question of propagating, it is remarkable that the Crimson Rambler, though such a vigorous grower, does not succeed on the briar (Rosa canina), but does splendidly on the manetti stock. With all these useful Ramblers, success depends chiefly on the early treatment. Early growth, well ripened in the Autumn, is essential; and in starting to force them excessive heat should be avoided, especially in dull weather. For early flowering much depends on the ripening off in the Autumn; they start naturally without much warmth, after they have had a rest. The most important point is to avoid the temperature falling low when we get a change in the weather. It is the cause of failure with other roses. A check through fall of temperature will be followed by failure. Madame Levassieur we get all the year through; with this variety no ripening is necessary, for all the bloom is produced from shoots thrown up from the base. Yet with this, strong plants, which have been grown, well exposed, in good ground for one season, are the best for flowering in pots; or started in pots they should be well exposed in the early stages. Whether a bush or a climber, any rose must have a well-matured base if it is to flower satisfactorily.

We are getting splendid roses in the market now (early in April). The chief varieties are, in red, Captain Hayward, Ulrich Brunner, Liberty (this is very fine from several growers), and Richmond. The last named has made higher prices than any other rose this season. In white, the Bride, Kaiserin Augusta Victoria and Frau Karl Druschki take the lead, but the old favorite Niphetos is still extensively grown. In pink we have no better tea varieties than Catherine Mermet and Bridesmaid. These vary in color. From some growers we get the Mermet as deep in color as others have Bridesmaid. Mrs. John Laing, Mrs. Sharman-Crawford and La France are favorites. Souvenir du President Carnot is fine just now, but we get only a short crop of it. Joseph Hill, a new hybrid tea, from W. C. Wallace, Eaton Bay, Dunstable, appears to be a promising variety, and was given an award of merit by the R. H. Society on April 16. Messrs. W. Paul & Son exhibited Warrior in grand form, perfect foliage and bright flowers standing up without any support. It is not quite what is wanted for market, but makes a grand pot rose.

CARNATIONS.—Messrs. Cutbush & Sons are growing most of the American varieties. They recently exhibited Robert Craig in much finer condition than we have ever before seen it, certainly the best deep scarlet we have. Crimson Glow was also well shown. This appears to be an improvement on Harlowarden and the other deep crimson varieties. White Perfection gains in favor. Among the more recent exhibitors of the American varieties are Messrs. Veitch & Sons, Chelsea; recently they staged a remarkably fine lot of blooms. Britannia and Mrs. H. Burnett have fully sustained their character throughout the Winter; the last named seems to improve. Mr. Dutton's improved White Lawson has been well shown. Fiancée, though rather inclined to burst the calyx, is certainly a fine carnation. Eachentress will want something good to displace it; several growers now have it in grand condition.

The March show of the Winter Flowering Carnation Society was a great success. The Guernsey growers exhibited well.

In the market prices have fallen a little this season, owing to excessive supplies. The demand for best quality blooms is on the increase.

DAFFODILS.—Our markets have been overloaded with these this season, and to make a profit it is necessary to select the very best varieties. Already we are getting new sorts. In the large yellow self Trumpet varieties, Messrs. W. T. Ware, Ltd., Bath, are to the front with Queen of the West, an improved form of Golden Spur, of a very deep yellow and of great size. This variety gained an award of merit from the R. H. Society recently, and the same award was given to Mrs. F. W. Currey, Lisimore, Ireland, for Atalanta, a pure white of medium size. King Alfred, King's Norton, Duke of Bedford and Weardale Perfection are large sorts which will be worth looking after for florists' work. Some fine new things are seen among the Barri and the incomparabilis types. I may add that Peter Barr is the best white Trumpet variety yet seen this season. Of sorts grown for market at present Emperor, Golden Spur, Maximus, Henry Irving, Sir Watkin, Horsfield, Victorie, obvallaris (the earliest), and for later Barri conspicuous comes in. Princess is grown to some extent, and Princeps is largely planted owing to its freedom. The great difficulty with daffodils is that varieties are too numerous. At the last R. H. S. meeting Messrs. W. Bull & Sons, Chelsea, put up a number of very fine yellow Trumpet varieties, and they were so nearly alike that one would require to see them growing to decide which were the best. They were all good.

Calanthe Veitchii.

This is an excellent orchid that is popular everywhere. Gardeners all the world over strive to produce it at perfection, and there are some notable gardens in England where calanthes generally, and Veitchii in particular, form an especial feature every year in February and March. The houseful of flowering plants here shown were grown at Fulsham Hall, in Cheshire, where Alex. Traill is the successful head gardener. His method of cultivation may not be equally adaptable for the U. S. A., but to allow your orchidist readers to compare for themselves, I quote from Mr. Traill's own writing:

"The culture is simple. A melon house suits them well. Pot in February before they start into growth; put four of the largest bulbs into an 8-inch pot, or four medium-sized into a 7-inch pot, or four of the smallest into a 6-inch pot. These small bulbs give a useful small spray. The compost I give them is equal parts loam, peat, sphagnum moss, half-decayed leaves (beech or oak), and crock as for ordinary plants. When many crocks are used this drains the material too much and makes frequent watering necessary. Of course, when the plants begin to lose their leaves they do not like so much moisture, but they don't like to get dry altogether till their foliage dies, and when many crocks are used there is a tendency to dry up too quickly.

"The watering ought to be carefully done to avoid saturation, which proves so often fatal to them. When in flower the top ventilators should be up an inch or two night and day, so that no condensation of moisture occurs to cause the flowers to decay. Our average bulbs are 8 inches in length, and the average spike 2 to 3 feet, with thirty to forty flowers. An extra large bulb has spikes 4 feet long, bearing about 50 flowers. The beautiful pink, arching racemes are greatly admired and most useful for many forms of decoration in the home. They last well on the plants, for quite eight weeks. The picture gives a good representation, and shows some of the large spikes, of which there are about 200 on the plants." J. H. D.

Window Boxes.

The filling of window boxes and tubs forms a considerable part of the retail florist's work every year, and there is every reason to believe that there is an increase in the demand for that kind of ornamentation equal to that of any other form. When an order comes in for window boxes there is usually no choice with the florist but to fill them according to the wishes of the customer. There are occasions, however, when the man who gets the order is not handicapped by being tied down to certain kinds of material at a price barely sufficient to make the supplying of so many feet of boxes profitable; then when the matter is left much to the discretion of the florist there is an opportunity to break away from the common run of window boxes with the result that something original and effective is turned out.

It is very often the case that plants in window boxes suffer extreme neglect and for that reason plants that are able to successfully stand such hardship should be chosen in preference to subjects less hardy although more effective. It seldom happens that boxes are refilled during the season, then it should be borne in mind that a continuation of bloom is necessary and that the plants in the boxes should be capable of fulfilling that requirement to the end of the season, for bright cheery effect. There are few things that surpass geraniums for the main part of the box, with variegated vincas for trailing or hanging downward. Choice of colors depends much on the architectural features predominating in the building in which the boxes are to be placed, more especially the color of the paint, stone or brick. Some customers may desire flowers to brighten up a dull, sombre exterior of a dwelling or other building, others again may be very particular that the colors of the flowers will blend harmoniously with those of the buildings. And when an opinion either way is expressed it will be good business policy for the dealer to pay heed to it.

The styles of boxes, both in material and design, vary fully as much as the stocks with which they are filled. For buildings of costly material and elaborate ornamental work in stone or other material very fancy boxes are sometimes used, while for suburban and country dwellings common wooden boxes painted the color of the woodwork of the buildings, or any desired color, answer the purpose fully as well as more costly contrivances.

There are besides geraniums numerous kinds of plants suitable for filling window boxes. Hydrangeas do fairly well, but they are not suitable in many cases, because they are not long enough in flower. But sometimes it is very desirable to have plants of large dimensions in certain places, and then it may happen that hydrangeas will fill the bill better than anything else. Abutilons are very varied in character both as regards stature and color of foliage as well as color of flower; many of the varieties are well adapted for window boxes. *Dracæna indivisa* is very suitable for window boxes, not only because of its decorative habit, but also because it stands fully as well as less desirable plants. A very good effect may be produced if *Dracæna indivisa* is used

as isolated specimens, filling in with geraniums or some other flowering plants. For tall effects in exposed places cannas are very serviceable and effective; and when there is the advantage of shelter and a slight shade kentias and phoenix may be used with pleasing effect. In bright sunny places crotons are very envying by the bright tints of their foliage. Other plants adapted for window boxes are begonias, marguerites, salvias, alyssum, fuchsias, nasturtiums, petunias, lobelias, ageratums, centaureas, English ivy, German ivy, maurandias, coleus and alysanthes.

In order to secure success with plants in window boxes good soil must be provided for the plants to live in, and in addition to that there ought to be some good bone meal or any other good fertilizer mixed therewith. It is also just as important that the plants should be carefully watered throughout the season. M.

Notes on New Freesias.

FREESIA TUBERGENI.—Under this name the bulb-growing establishment of C. G. Van Tubergen, Jr., Haarlem, Holland, sent out last year the first commercial hybrids produced between the common florist's freesia, *F. refracta* alba and *F. Armstrongi*, the new pink-colored species from South Africa. Corms obtained last August from the growers bloomed very freely in the Rural Grounds greenhouse during February and March. The typical variety sold as Tubergeni has finely-formed blooms in racemes of five to 12, of a pretty shade of rosy lilac or mauve, lighter than that

YELLOW KINDS COMING.—Messrs. Van Tubergen inform us that some promising yellow varieties also resulted from their breeding experiments with *Freesia Armstrongi*, which they soon hope to introduce. An attractive buff-colored variety has been exhibited and introduced, under the name of *Freesia Chapman*, by Herbert Chapman, Rye, England, who raised it from the old orange-colored species or variety known as *F. aurea*. It is said to possess more fragrance, and is much better adapted to culture than its parent. *F. Chapmani* received an award of merit at a recent meeting of the Royal Horticultural Society of London. With rose, pink, purple and various yellow shades at hand, the freesia promises in the near future much diversity of character.—Rural New Yorker.

Usefulness of the Ostrich Fern.

The ostrich fern, *Struthiopteris germanica*, to use its old name, is an extremely useful one, because of the rambling character of its underground rhizomes. These extend long distances from the parent plant, the distance increasing year by year, as the point of each rhizome produces a plant. Its common name comes from the appearance of its barren fronds; these are arranged around in a circle, giving a bird's nest appearance of large size to a plant, and these fronds grow to a height of from 2 to 2½ feet. Fertile fronds are entirely separate. These come from the center of the plant, are about a foot in height, stiff, and brown when

House of *Calanthe Veitchii* as Grown in England

of *F. Armstrongi*. The throat is yellow and there is an occasional orange blotch in the throat. The flowers are nearly as large as good samples of *refracta*, and there is much of the pleasing fragrance found in the latter. The blooms of *F. Armstrongi* itself are small and scentless, but very bright and freely produced. This species naturally blooms about a month later than *refracta*, while the hybrid Tubergeni comes in between when all are planted at the same time.

Samples of a very superior unnamed hybrid of the same parentage raised by the Messrs. Tubergen were secured at the same time. One moderate-sized corm threw up two spikes producing in all 116 flowers, the longest raceme opening 14 large and perfect blooms. They are carried very upright, and somewhat resemble in shade of color and slenderness of tube the old and highly-popular single *Petunia*, Countess of Ellesmere. They are, however, somewhat smaller in size than the best white *refractas*, and have yellow throats. There is considerable fragrance. The foliage is good, and the effect, when in bloom, very cheerful. We imagine this new variety, which will probably be sent out the coming season, may find favor with florists. The color is a sufficiently pure shade of pink to bear artificial lighting and to associate with white and yellow in other flowers, while the vigor of growth and freedom of bloom leave little to be desired. Our own experience in crossing *F. Armstrongi* with *refracta* and also with *F. Leichtlini* does not reproduce the Tubergeni varieties, but rather tends to the production of purple, lavender and odd shades of bronze and orange, usually with considerable fragrance. These newcomers are attractive as novelties, but whether they possess commercial interest remains to be seen.

ripe; and unlike the barren ones, they persist all winter. This fern is just the thing to use where one has a piece of ground he wishes to become a thicket of fern, for the plant will quickly form a large mass, it spreads so fast. J. M.

JASMINUMS FOR POT CULTURE.—Since the beautiful plants of *Jasminum primulinum* which we saw early last year, growers have been giving attention to other sorts. *J. nudiflorum* is one of the best plants we have for town gardens, and it also makes an effective subject when grown for decorations as a pot plant. It was prominent at the last meeting of the Royal Horticultural Society, but I have seen better specimens than those shown on that occasion. It is a plant which requires but little cultural skill. Potted into the size pots they are to be flowered in, they can be plunged into the ground and remain until they have made plants of sufficient size for use, and they then only require to be under cover and kept from bad weather, and there will sure to be a profusion of bloom. Years ago we used to get *Jasminum grandiflorum flore pleno* in nice plants, but I have not seen it so good of late years. I believe they were imported from Belgium. They were grafted on stems about a foot high, and if not very showy were much appreciated for their beautiful scent. *J. primulinum*, though not shown in such grand plants as we saw early last year, has been taken up by several growers and shown in well-flowered plants of medium size. I find that it is only the plants with well matured growth that are satisfactory for flowering. With the different style of decorations now in fashion, any tall plants that flower well are appreciated, and the jasminums should be worth a trial.—Metropolitan, in Horticultural Advertiser, Eng.

FOR THE RETAILER

Window Boxes.

The filling of window boxes and the general beautifying of houses at this season forms no mean part of the New York florists' business, and those who do this class of work usually have all they can handle. New Yorkers are gradually getting educated to the window box, or window garden, as it is sometimes called; and one can observe a gradual increase of these every year. There is no doubt that the European trip has been in a large measure responsible for this. London might almost be called the home of the window box; the west end is ablaze with flowers at this season, and the custom is by no means confined to private residences. Victoria street, from the station to Westminster Abbey, is usually one long continuous line of beautiful window boxes, and many of the principal business thoroughfares are the same in this respect, all vying with each other in trying to make the most attractive display.

London, however, has the advantage of us in the matter of climatic conditions. The extreme heat experienced in this city is not at all conducive to luxuriant growth especially where plants are confined to the narrow limits of a wooden box. But they seem to revel under like conditions in London's comparatively cool climate.

The European florists do not confine themselves to geraniums and marguerites; every variety of bedding plant is brought into use. Zonal geraniums, pelargoniums, marguerites, coleus and fuchsias form the back-

I think the most successful filling for Summer is a mixture of foliage plants; they will, if watered, at least live and perhaps grow, and invariably look well. Palms, dracaenas, crotons and *Anthericum vittatum* are among the best to use. Very good and lasting effects can be obtained with *Aucuba japonica*, *Ficus elastica*, and *Nephrolepis bostoniensis*. Ivies are the most successful as vines and grow rapidly during the Summer; even in hot weather.

In addition to window boxes there is a large demand for ornamental shrubs in tubs. *Buxus*, *Lauris nobilis*, standard and pyramidal, are in great demand for hotels and private residences, and many architects call for this style of ornamentation as a finish to buildings. Such plants undoubtedly lend a style and finish that can be obtained in no other way.

My reference to window boxes, although pessimistic as far as New York is concerned, in no wise refers to the United States as a whole. A trip to Bar Harbor, Me., during the season would be a revelation to any one who has never been there. Its close proximity to the Arctic stream creates a climate which is almost identical with that found in England, with the result that every plant does remarkably well there. Their window boxes are wonderful, being a mass of flower throughout the Summer. *Nasturtiums* planted along the tops of walls are a feature of the place. Doubtless similar results are obtained in many different localities throughout the United States.

Chrysanthemums in April.

A Broadway florist has been displaying chrysanthemums during the past week; they are white and very good in quality, but they impress one as being superfluous at this season of the year. We are all glad to greet such heralds of Spring as arbutus and apple blossoms, but everyone associates chrysanthemums with falling leaves, not budding trees.

D. RAYBUN.

The Force of Example.

The premises of florists are favorite places for the general public to visit when leisure permits them, and it is safe to say that few noteworthy features of those premises escape the attention of a goodly proportion of the visitors. It very often happens that an effective group of plants strikes some visitor so forcibly that he or she is tempted to make inquiries regarding the cost of its reproduction, resulting in business being done in short order. In order to still further induce the public to visit their places it would be well for florists and growers for the retail trade to make their grounds as inviting as the expenditure of a reasonable amount of money will permit, resting assured that the chances are more than ten to one that they will be well repaid in the business such an expenditure will bring ultimately.

Window boxes and tubs tastefully filled with plants placed alluringly will attract the attention of passersby. Plants for these baiting boxes and tubs may be hardened immediately in order to be of the intended service for this season. Over these boxes and tubs or close to them, neatly designed placards with the prices inscribed would be a help in case some timid ones might not venture to make inquiries fearing their means would not permit the gratification of their desires. These are only a few of the ways by which the force of example may be made beneficial to the grower and dealer. B.

MISTLETOE.—In the protest of F. B. Vandegriff & Company against the assessment of duty by the collector of customs at the port of Philadelphia, Pa., mistletoe stems, with the natural berries attached, are held by the Board of General Appraisers to be free of duty as a crude vegetable substance under paragraph 617, tariff act of 1897.

CYCAS AND SAGO LEAVES, dyed and prepared, are held by the Board of General Appraisers to have been properly classified under paragraph 425, tariff act of 1897, as ornamental leaves, etc.

Increasing Magnolia Hypoleuca.

Magnolia hypoleuca has a resemblance to our native one, *M. tripetala*, but it is a rather handsome species. Its style of growth is more like that of *tripetala* than any other. Its leaves are of thicker substance, however, and have reddish colored veins. The flowers, which come in June, are very large, white, with a small crimson center, and are slightly sweet scented. Seed pods follow the flowers just as they do those of *M. tripetala*, and from these seeds can be had and seedlings raised just as in the case of the other. Then there is grafting and inarching to be followed as well, the many ways of propagating affording chances of increasing the stock rapidly. As with *M. tripetala*, it does not take many years for a tree of *M. hypoleuca* to reach a flowering size, after which seeds may be looked for annually.

To have the seeds grow, they should be mixed with damp soil as soon as gathered, and then be sown immediately the beds are prepared for them; or kept in the soil in a cool place and sown in Spring. Dried out seeds will not grow.

J. M.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words: each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonal varieties of flowers always on hand. Wire me your orders.

Washington, D. C.

GUDE BROS., 1214 F Street, N. W. We excel in high-class flowers and design work of every description; quick service, reasonable charges and liberal treatment have placed us on top. Try us.

Milwaukee, Wis.

THE C. C. POLLWORTH CO., Wholesale Florists, will take care of all your Retail orders for the delivery of flowers anywhere in Wisconsin.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenues. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLORAL CO., 1706 Broadway. J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Cincinnati, O.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dayton, O.

W. G. MATTHEWS, FLOEBIST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Long distance Telephones.

Dallas, Texas.

LANG, THE FLOEBIST, the largest flower store in the South. Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Texas, Louisiana. Mail and telegraphic orders solicited.

Pot-Grown Japanese Snowballs.

The demand for pot plants for Easter and other occasions is a growing one, as all florists tell us. The display is more lasting than that from cut flowers is one reason for it, besides which the pot plants are, many of them, hardy, rendering them of use for outdoor planting when Winter is over. The case of the Japanese snowball illustrates this. There is the beauty of the flowers in the first place, their long-keeping qualities and the hardness of the plant itself.

When grown outdoors this snowball flowers from the 15th to the 30th of May, as a rule; the earlier date should the weather be warm, the later one, otherwise. When forced it requires about six weeks to bring it into flower; and when the blooms are in perfection they last fully two weeks.

The plant illustrated was potted early in Autumn and kept in a cold shed until the time came for forcing it. Many prefer to grow it on in a pot from quite small plants, which plan is a good one, but when so raised it must be well fed when growing, in order to have a supply of thrifty young shoots, as it is these shoots that give the flowers.

The Japanese snowball is greatly prized for Easter uses, as it is also for the lawn; and florists find great calls for its flowers for Memorial Day uses from Grand Army Posts and those who decorate graves on that day. The plant illustrated was grown by Mrs. A. Woltemate, florist, Germantown, Pa.

JOSEPH MEEHAN.

Vinum Plicatum as a Pot Plant

ground, then a row of petunias, ageratum, cuphea or some other lower growing plant. English ivy is seldom used as a drooping vine; *Vinca variegata*, German ivy and *nasturtiums* being most generally employed. The ivy leaved geraniums are also great favorites for this purpose, as they flower profusely and fall gracefully over the side of the box.

When the window boxes are filled the plants soon take root and grow, flowering continuously throughout the Summer. But here conditions are different. In the early Spring, often early enough to brave the frost, our window boxes are filled with pansies, sometimes alone but more frequently mixed with some bulbous plants, such as hyacinths and narcissus. A few hot days and the pansies refuse to flower, the bulbs show a bit of color for a few days and then die down. Then it is time for marguerites and geraniums. These look very bright and pretty for a while, but the sun soon discourages them, and a flower shows itself here and there once in a while, and you have a "bit of green" for the rest of the Summer. These conditions are discouraging to customers, especially those who have seen the luxuriant displays on the Continent.

There is a great deal depending on the florist and grower for the successful filling of window boxes. Drainage, good soil, and good plants are the first and all important considerations. I believe the most frequent cause of failure is in using plants that are not well established. The majority of plants that come into this market are very little better than rooted cuttings, while those used in London are all plants that have been cut back two or three times and are good vigorous stock that has a fighting chance under all conditions.

IN EVERYBODY'S MOUTH

LIKE THE BEE

A PROSPEROUS florist is never idle; do like this busy insect—the bee—take advantage of the great work the never-resting florist, Godfrey Aschmann, and his people have done since Easter, 1,000 of them swarming and enjoying their lives in Aschmann's Greenhouses. Oh! Aschmann's flowers taste so sweet. "The bees say: 'we cannot stop; we have a big field to work on; 100,000 of the choicest; every hole and corner full; let us harvest.'" Secure Bargains now, and for Decoration Day. Please write our lowest prices.

From the lands afar, where the choicest are, I gather the plants I supply; Or grow my own, with care unknown, So the best are the ones you buy. Then send in your orders and see your trade grow, None can surpass Aschmann's, wherever you go.

GERANIUMS, from 4 in. pots. S. A. Nutt, double crimson; La Favorite, double white; Md. Thibaud, Gloriosa, double pink; John Doyle, double red. Have eight varieties of the newer sorts, such as E. H. Trego, beautiful variegated crimson, the model of perfection, double. Telegraph, free bloomer, deep orange, cerise, double. Mrs. E. Rawson, single, deep rose, free bloomer, immense large flowers. Berthe De Presilly, semi-double flowers, of great strong habit, trusses silver rose. Countess d'Harcourt, best double white, large trusses; stands the sun well. Double Grant, immense large flowers. Jean de la Brete, rose carmine, shading to white, camelia shaped, large trusses. Marquise de Castellane, beautiful, soft crimson trusses, as large as a hydrangea, semi-double. Above eight varieties, 4 in. pots, 15c. each; \$1.75 per doz.; \$12.00 per 100.

AGERATUM, dwarf, best blue variety, 4 in. pots, \$7.00 per 100; 2 1/2 in., \$4.00 per 100.

BEGONIA VERNON, finest strain, flowers as dark as blood. Seeds of this beautiful variety picked by myself from specimen plants in Zurich, Switzerland, on my trip to Europe last Summer, 1906, 4 in. pots, \$10.00 per 100; 3 in. pots, \$7.00 per 100.

BEGONIA ERFORDI, the true variety, seeds of my own gathering from specimen plants in Europe last year (1906). This is one of the finest pink varieties in cultivation; 4 in. pots, \$12.00 per 100; 3 in. pots, \$9.00 per 100.

SCARLET SAGE or SALVIA. This is the genuine Clara Bedman or Boasire variety of medium tall habit. It is a sight to see them bloom. It looks as if the whole bush is on fire and decorates the finest residences in England, Germany, Paris and Switzerland. Seeds of this novelty Sage collected by myself from specimen plants grown on one of the beautiful landscapes in Switzerland. Have fully 5,000 plants in 4 in. pots to sell, now in bud and bloom, of this fine variety. Price, 4 in. pots, strong plants, \$10.00 per 100; 3 in., \$7.00 per 100.

HELIOTROPES, 4 in. pots, \$7.00 per 100.

NASTURTIUMS, dwarf, all colors, \$7.00 per 100.

FUCHSIAS, mixed, good varieties, 5 to 5 1/2 in. pots, 15c. to 20c. each; 4 in. pots, \$1.20 per doz.

CANNAS, 10 good varieties, 4 in. pots, \$8.00 to \$10.00 per 100.

AMPELOPIS VEITCHII, 4 in. pots stacked up, 15c. each.

HONEYSUCKLE, 4 in. pots stacked up, 15c. each.

COBEA SCANDENS, 4 in. pots stacked up, 8c. to 10c. each.

DAISIES, Queen Alexandria and Marguerite (white), 5 1/2 to 6 in. pots, 20c. to 25c. each.

DELZYRA SPECTABILIS or BLEEDING HEART, planted in the Fall into 6 in. pots, and plunged outside in cold frames during Winter, growing natural now, large plants, in bud and bloom, 25c. each.

PETUNIA, double, mixed, 4 in. pots, 10c. each, single California giant, ruffled or blotched, 3 in. pots, \$5.00 per 100. Intimable or dwarf variegated, 2 1/2 in. pots, 4.00 per 100.

VERBENAS, all shades, 2 1/2 in. pots, \$4.00 per 100.

ASPARAGUS PLUMOSUS NANUS, 2 1/2 in. pots, \$3.00 per 100.

COLEUS, Queen Victoria, Golden Bedder, Verschaffelt, 2 1/2 in. pots, \$3.00 per 100. Fancy varieties, 2 1/2 in. pots, \$4.00-\$5.00 per 100.

PHLOX DRUMMONDI, 2 1/2 in. pots, \$3.00 per 100.

IVY, English or hardy, 12 in. long, 4 in. pots, \$5.00 per 100. IVY, German or Parlor, 2 1/2 in. pots, \$3.00 per 100.

CENTAUREA GYMNOCARPA or Dusty Miller, 2 1/2 in. pots, \$3.00 per 100.

CUPIEA or CIGAR PLANT, 2 1/2 in. pots, \$3.00 per 100.

LOBELIA, dwarf or trailing, 2 1/2 in. pots, \$3.00 per 100.

SWEET ALYSSUM, Little Gem, have 10,000 of them, 2 1/2 in. pots, \$3.00 per 100.

MARGOLD, Eldorado Africana and Gold King, dwarf, 3 in. pots, \$4.00 per 100.

VINCA, variegated or periwinkle, 4 in. pots, \$10.00 per 100. 2 1/2 in. pots, \$5.00 per 100. Rosea or Major, 2 1/2 to 3 in. pots, \$5.00 per 100.

COSMUS GRANDIFLORA, white, red or pink, three plants in 3 1/2 in. pot, separate colors, \$5.00 per 100.

SALPIGLOSSIS VARIABILIS (European), 2 1/2 in. pots, \$4.00 per 100.

SUMMER CHIRYANTHEMUMS, Chameleon, 3 in. pots, \$7.00 per 100.

MARSHALIA BANGLAYANA, 2 1/2 in. pots, \$4.00 per 100.

ARAUCARIA ROBUSTA COMPACTA, Spring 1906 importation. Have about 300 of this variety, only specimens, perfect tiers. Adapted for the lawn, front porches, cottages, hotels, etc. 7 in. pots, 4-5 tiers, 5 year old, 20 to 28 in. high, as broad as long, price, \$1.75-\$2.00-\$2.50 to \$3.00 each.

ARAUCARIA GLAUCA, large specimens, in wide, 5 to 6 tiers, \$3.00-\$4.00-\$5.00 each.

ARAUCARIA, new importation will arrive Saturday, May 4, per steamer Mantou, from Antwerp. First consignment about 5,000 and thereafter by every steamer up to Jan. 1. Araucaria Excela, in their original packing, left planted in pots, 3 tiers, 10 to 12 in. high, 50c. larger sizes, 60c.-75c.-\$1.00 to \$1.25 each. Robusta, Compacta and Glauca from \$1.00-\$1.25 to \$1.50 each.

DIACARIA INDIVISA, broad leaves, imported from Belgium, now arriving, 30 to 36 in. high, 50c. to 75c.

COCOS WEDDELIANA, 3 in. pots, 16 to 18 in. high, 15c. to 20c. each.

DON'T FORGET WE LEAD THE WORLD Watch and be careful; don't buy Morning Glory for Moon Vine.

We grow only the best varieties, A. W. Smith's hybrid or Ipomea Noctiflorum, for which we have during the past 20 years a world wide reputation. We ship every Spring from 20,000 to 25,000 plants to every state and territory in America as far as Mexico. 4 in. pots, nicely stacked up, 30 to 36 in. high, \$12.00 per 100; 2 1/2 in. pots, nicely stacked up, \$5.00 per 100.

NOTICE: Moon Vine is the earliest variety in existence, blooms freely, in big clusters, pure white; waxy flowers, very fragrant and as big as a saucer.

Cash with order please. All goods must travel at purchaser's risk.

GODFREY ASCHMANN, Wholesale Grower and Shipper of Pot Plants, 1012 West Ontario St., Philadelphia, Pa.

The statement is made in Cyclopaedia of American Horticulture that the Cherokee rose, R. levigata "can be grown satisfactorily away from its native regions only in a greenhouse." If the author of that sentence is still alive, and able to do so, it will pay him to cross the Continent to see a hedge of this rose fifty feet high, as many feet in diameter and eight times as long, growing on the private grounds of W. S. Tevis, at Bakersfield. When in bloom the hedge is one of the most beautiful sights of California. On this place, which is a veritable botanic garden, is a bamboo grove, variety Phyllostachys virii glaucescens. The stems are from

two to four inches in diameter, and 20 feet tall without a branch. Unlike other bamboos which the writer has seen, this one does not grow in clumps, but from underground rhizomes. A single stem will appear two to six feet away from the parent stem, which is uniform in thickness from the ground to the point where branches appear—15 or 20 feet above. In fertile soil, a warm Summer climate and abundance of water, this plant is pre-eminently adapted to making a fine grove, of medium height, 30 to 40 feet, absolutely free from insect pests and disease, and that, too, in a very few years. P. D. BARNHART. Cal.

NORTH END NURSERIES

Chester F. Brainard, Prop. Maple St. Thompsonville, Conn.

SOUTH BEND, IND.—The firm of Treanor & Rettig, for nearly a generation prominently identified with the florist trade here, has retired from business, and the establishment has been taken over by the South Bend Floral Company. Charles Treanor remains as decorator for the purchasers; William D. Rettig, who has had charge of the Treanor & Rettig greenhouses, will retain these, but will conduct them as a private venture in his own interests.

Arrangements were also made by the company to take over the lease of Treanor & Rettig on apartments in the Oliver hotel now occupied by Kinyon Brothers. The work of remodeling will begin as soon as the firm now in possession secures a site and moves. The company wants to be in the new quarters as near May 1 as possible as the lease on the Treanor & Rettig store at 218 West Washington street expires at that date. The two stores will be continued until May 1 and the present store of the floral company under the Toepp jewelry store will be continued until the company is fully established in the Oliver hotel quarters.

The Oliver floral store will be made one of the very best in this part of the country. Mammoth refrigerators have been ordered, which will be of mahogany to match the other furnishings of the hotel. Statuary holding clusters of electric bulbs will be a feature of the lighting system. The interior decorations will be very elaborate and will be in white, green and gold. The counters will be of marble. Irving Gingrich will continue as general manager for the floral company. The big greenhouse plant of the company, which is on East Dublin avenue will continue under the management of Walter Tapper.

Newport, R. I.

Trade Notes.

Among the several branches of horticulture carried on by Oscar Schultz is that of letting greenhouses to parties who have a great number of palms and other kinds of plants in and around their dwellings in Summer, but are without accommodation for them in Winter. Last year Mr. Schultz had a house built specially to accommodate the plants taken out of the houses that were torn down on the W. S. Wells estate. E. Collins Morse has another house hired by the year for the wintering of plants.

Early grapes will be about an average crop this year. Mr. McLeish and nearly all the other growers ship their early grapes to New York, but for the crops coming in from the first of June on to the latest there is usually a local demand equal to the supply.

The commercial growers try to have the bulk of their nectarines in when the season is at its height, which is usually from the last week in July to the end of August. Good peaches grown indoors sell well then too, sometimes as high as \$4 per dozen; but there are a great many more nectarines consumed than peaches.

Joseph Leikens visited Newport last week to make arrangements for the opening of his store on Bellevue avenue. While here he purchased several large kentias and hydrangeas in tubs for shipment to New York; the kentias are for the decoration of the Hotel Belmont.

Early in the week J. K. M. L. Parquhar of Boston made a flying trip to this city.

The Superintendents of Parks and Cemeteries will hold their convention in Providence this Summer. One day will be devoted to sightseeing in Newport and it is a foregone conclusion that Col. McMahon, the superintendent of the Island Cemetery, will see that their visit will be pleasant. The program for the day in Newport will include a dinner, and a carriage drive to points of interest with stops to inspect a few of the finest Summer residences and their grounds.

The many jobbing gardeners were rather late in beginning cleaning up work this Spring, but now a number of them are rushed to the extent of inconvenience. D. M.

HOUGHTON, MICH.—The Lakeside Floral Company has been organized here. The company has taken over all of the property formerly owned by what was known as the Lutey Floral Company, and later as the Lutey Greenhouses, and which went into bankruptcy some two years ago. The capitalization of the new organization is \$25,000 divided into 2000 shares issued of ten dollars each, and treasury stock amounting to \$5,000. Its headquarters will be in Houghton, and the names of its stockholders and officers, are Chas. H. Moss, cashier of the Citizens' National Bank, John G. Stone, one of the leading local attorneys, C. V. Seeber, wholesaler, and vice-president of the Citizens' bank, B. F. Chynoweth, capitalist, and A. E. Lutey, who was at the head of the former concern, and is a florist of many years of practical experience.

More or less extensive improvements are contemplated by the new organization, and work on them will probably begin as soon as the weather permits. They intend presently to be in a position to cater to the retail trade of other and neighboring towns, and to do a general wholesale, as well as a retail business at home. For this room is required, and the property formerly owned by the Lutey Floral Company is ample for the purpose. In the first place the capacity of the greenhouses at Chassel will be doubled, and a nursery will be established. For this purpose eighty acres located there make an ideal spot. The following officers have been elected: John G. Stone, president; C. V. Seeber, vice-president; Chas. H. Moss, secretary and treasurer, and A. E. Lutey, manager. At present no change will be made in the local floral store on Sheldon street, nor in its working force, but as the future business demands this will also be increased in proportion.

THE WEEK'S WORK. Timme's Timely Teachings.

Gloire de Lorraine Begonias.
Stock plants of Begonia Gloire de Lorraine, rested after their flowering season had ended, transplanted into fresh soil some five or six weeks ago and then started into new growth, should now hold forth a goodly crop of sturdy shoots, just right for propagation, this first lot of cuttings to be followed by others later on.

As long as steady fire heat can be depended upon to furnish a warm footing for the cuttings the percentage of loss throughout that period of propagation will not amount to more than five or six in a hundred and even fewer if all the cuttings are just right and conditions favorable. The first lot of cuttings, rooted thus early, usually grows into a far finer set of plants than any from the later batches, not only owing to their larger size by September or October, but because as single 6-inch pot specimens they invariably show a sturdier habit of growth and are worked into nice, shapely plants with less effort, many of them in this respect equaling those obtained early by leaf propagation. It is therefore advisable to begin propagating as soon as cuttings in fit condition can be had and to continue the work until quite late, so as to provide an ample supply of stock in all the sizes

Growers and Importers

and grades in which this most useful of flowering plants can be made to enter creditably into various phases of the plant trade. Even the smallest and least perfect of plants will prove serviceable in made-up arrangements at a time when suitable material for like purposes is none too plentiful. In the rooting of these cuttings, as also after their first shift from the sand to pots, a somewhat close atmosphere, protection against direct sunshine and caution in watering are necessary points to observe. In their later stages more air is given, a light shading on bright days and timely transplanting.

Bonvardias.
For the small bouvardias intended for indoor culture next Fall and Winter, there is no better place at present than a mild hotbed. They will there make a thriffter headway in growth with less in the way of care and attention than in the lightest and best ventilated houses. It is now, when the plants are still in their earliest stages of development, when the most in good culture can be easily accomplished by favorable conditions and proper treatment. Where hotbeds are not available it is best to select the highest bench or, better still, a shelf for young bouvardias until it is safe to transfer them to cold frames or the open border. During all this time the pinching in or cutting back of the rapidly advancing growth forms an important part in their care and leads to the making of perfectly formed, well-branched and highly prolific plants. This stopping of the young plants, needful from the very start, is a point only too often overlooked or but half attended to in the hurry skurry of Spring work. If this duty is not slighted and air and light afforded in abundance until the plants can be fully exposed to the open air, field culture will then do the rest in making them fine stock for bench or pot culture, the nipping back to be continued until July.

Eucharis.
Any one of the several few varieties of eucharis is well worth cultivating either as producers of exceedingly fine cut material or as subjects for pot culture. A mixture of friable, turfy loam, leaf-mold and old, decayed manure in equal portions is a good soil for eucharis; and drainage in bench or pot is of importance, for without this the plants soon give out. An annual transplanting is not necessary, but the exhausted top soil should be removed down to the base of the bulbs and a good, rich compost put in its place. During this operation it is well to free the main bulbs of the numerous offsets or small bulletts usually found about older plants. Three mature bulbs make a good plant in an 8-inch pot. In planting, the tips of the elongated upper part of the bulb should barely be seen when finishing off the pot, and after the soil has been settled by the first watering. In a rose house temperature eucharis do well and often bring two crops of flowers in a single season. Liquid feeding is of benefit from the time buds have formed until the flowers fade or are cut, and old plants, long established, need it more than those newly planted. A short rest of the growth after flowering, merely keeping the plants somewhat drier than usual, tends to uphold vigor for a number of years.

Amaryllis.
Though failures with amaryllis are not so frequent as with eucharis, which also is a member of the amaryllis family, there still seems to be some misunderstanding here and there as to their proper mode of treatment. That most varieties, especially those of the true amaryllis hybrids, are exceedingly showy when in bloom and worthy to be handled by any one engaged in the growing and selling of plants cannot be doubted, and the difficulties in their culture, supposed to exist, are easily overcome by avoiding a few of the most flagrant errors commonly fallen into by those not fully familiar with this class of bulbous plants. While some of the varieties are now out of bloom, others will at this time be just about ready to push up flowering spikes, but very few will have reached the period of perfect dormancy, erroneously supposed to begin with the fading of the flowers. The withholding of water at that juncture is one of the mistakes alluded to. As a matter of fact it is just then when frequent and copious watering is most needed to push to perfect development the leathery, succulent foliage, on which all of entire success with amaryllis of nearly every kind depends. Not until the leaves have

attained full size and are beginning to show signs of drying back, is water given sparingly, gradually reducing the quantity to merely enough to prevent a shriveling of the fleshy roots. From the time when the leaves have dried down completely until the new flower spike is observed to break forth, no water at all is given and after that in scanty measure at first, slowly increasing the supply as the flowers reach perfection.

A repotting is not necessary every year, but if deemed needful to success should be done when the plants are at the point of complete rest and maturity, shortly before a new cycle of activity begins. Leaf mold, sand, well-decayed manure and turfy peat soil, well mixed, forms a good compost for amaryllis, though I have had good success by making use of the first best good potting soil that came handy.

Amaryllis, even plants of one and the same variety, differ considerably as to time of flowering. While this necessitates a singling out of the most forward from a bench of plants never uniform in headway of growth, some only starting when others are already nearing the close of their season. It also provides flowering right along for a considerable length of time. Amaryllis do best in a high temperature, from 60 to 70 degrees being about right in winter.

Pyrethrum.

Not so freely used and less often to be seen in the hardy plant border, not so valuable perhaps for the home garden as some of the better known and more highly recommended perennials, but of far greater merit as a profuse yielder of exquisite blooms for cutting on any commercial grower's place, is Pyrethrum roseum. The double varieties are unequaled by any of the hardy outside stock as far as graceful form, delicate coloring and lasting quality of flowers is concerned, while all the single and semi-double flowers can be used with surprising effect in any sort of floral make-up.

The usual mode of procuring plants for permanent borders is by raising them from seeds, this being the right time for sowing, and an outdoor bed or cold frame the right place. Seeds coming from double flowers are to be preferred to those raised on single flowering plants, though only a very small percentage will come true. But among the few that prove double one or two can always be found that greatly exceed all others in point of beauty. From such a valuable stock may be worked up by division of the plants year after year. Seedlings flower the second season, but grow into large clumps the first year if started now. The plants are quite hardy, requiring little or no protection against severe freezing, but a bed of them on low or undrained land is easily ruined by overflow in early spring. It is well to transplant the young seedlings when about an inch or two in height and spread, so as to have them well established before winter sets in.

Celosias.

There are several fine strains of Celosia cristata, the true cockscomb, that might well be grown by retail florists without fear of having the stock left on their hands at the close of the busy plant season. They are still much favored by some people as peculiarly fit for some kinds of adroitly planned bedding schemes, and no doubt, when rightly made use of, surprisingly fine effects may be obtained. Then there are a few kinds of cockscombs exceedingly fine for pot culture, which, when well done, never fail to attract the admiration of the true lover of plants. Perfect specimens for the purpose are obtained by sowing the seeds in a pretty warm hotbed, transplanting the seedlings in good time and when large enough, shifting them into small pots, keeping them in the hotbed right along until they are of proper size for the last shift, after which a sunny bench in one of the houses is the best place for them.

Quite different in habit, but not less attractive and probably of greater value for florists are the half dozen or more varieties of Celosia plumosa, the best of which produce flower-spikes of great length, surmounted by feathery tufts of brightly colored bloom. The spikes of flowers, when cut, last in fine condition for a long time and constitute excellent material for the decorator and local florist. Thompson's magnifica and superba I consider the best varieties to grow for this purpose, since more plants of

Duke of Edinburgh, bright vermillion; very fine.
General Washington, heartful red, shaded carmine.
Margaret Dickson, white, pale flesh center.
Magna Charta, clear rosy pink.
Mrs. Gabriel Luize, light, satiny pink.
Mrs. Planter, white.
Ulrich Brunner, cherry red.

ARTHUR T. BODDINGTON,

Lilium Auratum

PAEONIA CHINENSIS

Double White Varieties.....	\$1 50	\$12 00
Double Pink Varieties.....	1 50	10 00
Double Red Varieties.....	1 25	9 00

Case of Chinensis containing 67 Double White, 66 Double Red, 67 Double Pink Paeonias—very strong roots, 3 to 5 eyes—200 in all, \$20.00 per case, 3 cases for \$50.00.

PAEONIA CHINENSIS

Named Varieties

Hamlet, fiery red; Fragrans, bright red; President Harrison, deep red; Mad. Benoit, soft red; Albert Victor, crimson; Elegante, pink; Pink Beauty, bright pink; Cleopatra, silvery pink; La Noblese, fine rosy pink; Marie Hamilton, lively rose; Marie Louise, soft rose; Her Majesty, rose, light center; Blushing Bride, soft rose; Sunbeam, rosy white; Comte de Nancy, silvery rosy white; Mona. Offroy, blue-white; Frinesse May, creamy white; Alba pleua, pure white; Queen Victoria, snow white; Gloria Mundi, creamy white.

Any of the above strong roots, 15 cts. each; \$1.50 per doz., \$10.00 per 100.

PAEONIA FESTIVA MAXIMA

Tree

The finest white Paeonia in cultivation, 40c. each; \$4.50 per doz.; \$35.00 per 100.

342 West 14th Street, New York City.

Gruse as Tepiltz. The great new red Rose, closely resembling Liberty in color. No Rose in commerce can compare with Gruse as Tepiltz as a hedger, \$1.50 per 10; \$12.00 per 100.

Paul's Carmine Pillar. One of the most attractive Climbing Roses. Two-year-old, field-grown, \$1.75 per 10; \$15.00 per 100.

THE TREE BABY RAMBLER

(Mad. Norbert Levavasseur)

CROWN AS A STANDARD

The popularity of the Baby Rambler has suggested the growing of it as a tree or standard. The variety is too well known for description; enough to say, it retains all its characteristics of free-blooming qualities, etc., 50c. each; \$5.00 per doz.

ENGLISH MOSS ROSES

Assorted White, Pink, Red, large dormant plants, from open ground, \$1.50 per 10; \$12.00 per 100.

PAEONIES

The roots offered below are extra strong pieces, having 3 to 5 eyes each:

PAEONIA OFFICIALIS

	Per doz.	Per 100
Ruba. Deep crimson.....	\$1 00	\$7 00
Alba. White.....	2 00	15 00
Rosea. Rose; also a good forcer.....	1 75	12 00

Schizanthus.

Another plant of remarkably fast growth, raised to perfection in an almost incredible short space of time, is schizanthus. Exceedingly beautiful and of fascinating character when well grown and covered with its daintily tinted flowers, it is utterly worthless when due attention to its simple wants is withheld when the tiny, fast developing seedlings are in their first stages of growth.

There are several good varieties, all doing fairly well if sown or planted in outdoor beds at about this time or as late as July or August. But for commercial purposes we must fall back on such sorts as hold out the fairest promise of growing into shapely, well behaving potted specimens, truly worthy of unstinted admiration. And there are such; most of the success with schizanthus, however, depending on proper and timely care, such as is or should be accorded all kinds of rapidly developing seedlings. A stand away up near the glass, plenty of direct light and air, the needful transplanting in succeeding shifts not delayed too long, staking and tying in good time and close attention to watering when the plants come into bloom, will lead to astonishing results with a class of plants altogether too sparingly grown.

FRED. W. TIMME.

Washington, D. C.

News Notes.

T. Byrd Baughan, who for a number of years has been a successful violet grower of Louisa County, Va., has purchased about eight acres in Maryland, near the Receiving Reservoir, where he intends to continue the violet growing industry. Mr. Baughan states he will use cold frames only for the first season, and subsequently erect modern houses adapted to the maximum output of good flowers. We wish him success.

The closing days of April are somewhat Spring-like, though the weather is still cool and unfavorable. Apple trees are in profuse blossom, and a rapid development has taken place. The market is scantily supplied, and all salable stock meets with a ready demand at prices above the average for this season. The greatest scarcity prevails in carnations; there are not enough to supply the demand, and prices correspond rather favorably with those of February.

JAS. L. CARRERY.

VIOLET CULTURE

Price, \$1 50 Postpaid

A. T. De La Mare Plg. & Co. Ltd., New York

these throw flowers that exhibit the grace of form and feathery daintiness to perfection than may be expected by growing inferior varieties. The seeds, when sown too early, even if started in great heat, are very apt to grow into squatly, stunted plants, flowering when barely three inches high and amounting to very little ever afterward. To secure an uncommonly fine lot of plants for an effective display on lawn or border, or for the production of a crop of valuable cut bloom during the greater part of Summer, it is best to sow until the end of this month, when a continuation of good growing weather may more safely be reckoned upon. The plants will then make a steady and most rapid headway in growth, never interrupted by a premature desire to bloom until they have reached the height of two or three feet. The deep crimson colored plumes are most desirable for cutting, and such plants, easily distinguished among the smallest of seedlings from those flowering in bright yellow or light tones, reach a greater height than the latter.

The seeds, as those of Celosia cristata, always sprout quickest and grow into finer plants if sown in a hotbed, where they, after being once transplanted or potted up, may remain until large enough for the open border.

Chicago.

News of the Week.

William Satter, representing Elbinge & Van Groos, of Boskoop, Holland, was in the city last week.

M. H. Awizzus, recently with E. C. Amling, has joined the J. A. Budlong staff.

C. R. Hills of the Grand Rapids Violet Company was a recent caller, and Henry Smith of the same city passed through Chicago last week on his way home from a Southern trip which extended as far as Texas.

A representative delegation of the trade accompanied Messrs. Lubliner and Trinz over to Milwaukee to attend the opening of their new theater, The Empire, at 557-91 Mitchell street the first of the week. The theater, which has been erected at a cost of \$35,000, is owned by Trinz, Lubliner & Trinz and is devoted to vaudeville, and the wholesale and retail friends of the proprietors from this city were profuse in their floral offerings at the opening.

C. M. Dickinson of the E. H. Hunt concert has moved to Park Ridge.

Jas. G. Crozier of Cedar Rapids, Ia., was a recent visitor.

William Hartshorne, formerly with the Chicago Carnation Company, is now acting as guard in charge of the conservatories at the Joliet State prison.

W. K. WOOD.

St. Louis, Mo.

News Notes.

We had with us the past week Arnold Ringier, traveling salesman for W. W. Barnard Company, Chicago, Ill. Mr. Ringier has been West since the first of the year, and has found business better than ever before, especially in Fall delivery in bulbs. J. Schloss, of Schloss Brothers' ribbon house, New York, was also here this week.

W. C. Smith is on crutches this week, the result of a fall from a street car.

Charles Schoenle was seen last week with a big roll of music under his arm; he is practicing for his singing stunt at the Florists' Club's celebration, June 28.

W. J. Pileber, of Kirkwood, will start building his plant this month. He reports that it was lucky he bought all his glass early and sorry he neglected to buy the piping, as it has doubled in price.

The club's trustees held a meeting the past week, and worked on the program for the twentieth celebration, which will take place next month, June 28. It will be a grand affair and a good time is in store for the members.

William Adles, formerly a well-known figure at the wholesale houses, visited them last Monday, stating his absence was caused by a long spell of sickness. He is not at present engaged in any business.

Fred Foster reports that his new location is at 905 Olive street, under the Century building, into which he will move early this week.

It will be news to many friends in the trade to hear that John W. Kunz and his wife have left the city to reside in Texas, as Mr. Kunz's health has been bad for some time. No one had more friends than he among the local florists, who wish him well and a speedy return home in good health.

State vice-president of the S. A. F. O. H., W. C. Young, is at work rounding up members to attend the convention at Philadelphia. Mr. Young will be at the next club meeting; any florist wishing to join the national society should see him there next Thursday afternoon.

Fred Alves, manager for George Augermuller, visited Belleville Sunday, spending all day there.

Every member of the Florists' Club who has the time to spare should not fail to attend the meeting next Thursday afternoon in the Burlington building, 810 Olive street. President Irish promises to be on hand, and hopes for a large attendance. It is a busy time for the plantsmen, but then the retailers and wholesalers can attend. It will be interesting to all of us. Secretary Bencke will send the usual notices in advance.
 ST. PATRICK.

MEDICINE HAT, CAN. — Messrs. Butchart & Kettles, of Winnipeg, recently met the board of trade and the council in reference to a project to establish a greenhouse plant here. The enterprise is one of great magnitude, as the intention is to raise hot-house flowers to supply the trade in the province. The establishment of the industry would mean an expenditure in the first year of from \$30,000 to \$35,000. Messrs. Butchart & Kettles expressed themselves as willing to pay the manufacturers' rate for the natural gas but asked for some assistance in securing a site, the value of land conveniently situated being almost prohibitive. The city council will meet this need by giving five acres off the park in the Johnson survey at the same figure for which it was bought last year on the conditions that the sum mentioned is invested and the industry operated as a growing concern for five years.

ROSES

I am offering my entire stock of plants at a bargain, as they are No. 1 stock, all propagated from the best of wood. Reason for selling: I am leaving the place; have no use for them.

WIETOR BROS., Wholesale Growers of Cut Flowers 51 Wabash Ave. CHICAGO

Bethlehem, Pa.

John E. Haines has made this Moravian city famous by the introduction of several carnations of merit during the past few years. Last Summer Mr. Haines completed a new house, 100x57 feet, built by the King Construction Company, for a few of his special pets. In this house he has eight 5-foot benches running the entire length of the house; one each of Pink Imperial, White Perfection and Enchantress; two of a new seedling Number 6, and the remainder in his namesake. For the benefit of the writer Mr. Haines cut a number of handsome high grade blooms from this house all with 4-foot stems.

In some of the older houses Mr. Haines has many other seedlings of merit that are undergoing a rapid system of propagation of which the specialists in this line will hear more in future.

The quiet of the Moravian city affords a fine field to solve the many problems of hybridization and cross-fertilization and Mr. Haines is making good the opportunity. Inasmuch as Bethlehem boasts of its Moravian church, Moravian seminary, Moravian hotel, Moravian cemetery and Moravian beer, coming from such surroundings a Moravian carnation would not be inappropriate for some of the future productions at the hands of Mr. Haines.

South Bethlehem is just across the Lehigh river from Bethlehem proper—a busy active city. Here Chas. Vorkeller has a nice range of greenhouses where carnations and a general line of bedding plants are grown. Mr. Vorkeller has found business good in his line as well as an increased demand for all the products of his greenhouses. To meet this demand he has now commenced the erection of two new greenhouses of considerable proportions that will give him increased capacity to meet his growing trade. Mr. Vorkeller expects to have his new houses ready by carnation planting time. J. M.

Easton, Pa.

Arthur L. Raub & Company of this place has something of a novelty in the way of plant growing establishment. This consists chiefly of one greenhouse situated on the sunny side of a well wooded hill. The entire house is under one roof of the lean-to formation with the lean-to features well extended. The house is 60 by 230 feet; the glass slopes at an angle of four inches to the foot, the 60-foot way. It is supported on the inside by iron posts leaving scarcely anything to obstruct the view from one end of the house to the other. Carnations are grown in solid beds running the full length of the house. Mr. Raub is to build the sides of all these beds of concrete this Summer. Another rather novel feature here is the presence of a good natural spring in the center of this house that sends a fast running stream down the center of the house that empties itself into a pool on the outside. A gasoline engine has to be used to give sufficient pressure for sprinkling purposes.

Arthur Kleinhaus has been growing carnations and roses for the wholesale

Now nearing completion and to be issued by May 15

THE BOOK OF Water Gardening

Giving in full detail all the practical information necessary to the selection, grouping and successful cultivation of aquatic and other plants required in the making of a Water Garden and its surroundings, and covering all conditions from that of the Amateur with a single plant to the large estate or park

A. T. De La Mare Ptg. & Pub. Co. Ltd.
2 DUANE STREET, NEW YORK

trade for the past two years. He has also one large greenhouse of even span, 325x50 feet, with seven benches running the entire length.

Howard Kleinhaus, his brother, has a range close by where a general line of plants is grown.

Charles Buenning is one of the largest growers here and does a regular plant and cut flower trade.

L. Bonnett and J. D. Freyhard, formerly connected with the trade here, are now out of it. Henry H. Weiskoff rents the Freyhard greenhouses, where he grows bedding and vegetable plants.

A. L. Raub & Company, Charles Buenning and Howard Kleinhaus have each a handsome store in the business portion of the city. J. M.

St. Paul.

News Notes.

Gus. Colberg, formerly of Colberg & Lemke, is now with Holm & Olson. Mr. Lemke will conduct the business himself.

The Ramaley Floral Company reports a fair trade. Mr. Ramaley is much enthused over a spray holder, which he is making, which consists of a wire loop, on which the maker of the spray lays the ferns and roses. This loop supports the ferns and a very shapely and pretty spray of roses or other flower can be made in a short time. The saving of ferns also the fact that the bunch can be delivered in much better condition, is indeed a very favorable point. P

Indianapolis, Ind.

News Notes.

Mrs. Alvin Schreiber, wife of one of the craft's most popular members, passed away Friday evening last. Much sympathy is expressed for Mr. Schreiber, as the six months' siege with typhoid still leaves ten children in a delicate condition. Mr. Schreiber, as general foreman for Bertermann Brothers Company for a quarter of a century, has acquired a host of florist friends who deeply regret his misfortune.

John Keller, at one time a well-known local florist, but now of Rhode Island, is making preparations to remain in Indianapolis.

Albert Warner has resigned his position in Duluth, Wis., and returned to this city.

E. A. Nelson has a belated crop of poinsettias in full bloom.

Judging from the number of circulars received the jasmine crop is an exceptionally heavy one.

Herman Junge is making his rounds with a much bandaged head, the result of a successful operation.

John Heidenreich is cutting candidum lilies of fine quality.

Claude Powers has been fully reinstated by the local Park Board.

Visitors the past week: P. J. Farney, Chicago. I. B.

OUR SPECIALTY

Nathan Smith & Son Adrian, Mich.

MANCHESTER, MASS.—The semi-monthly meeting of the North Shore Horticulture Society was held here on April 19. Robert Mitchell read a valuable article on pruning trees and shrubs, giving special attention to fruit and shade trees. James Salter exhibited a fine vase of antirrhinum for which he received a certificate of merit. On the evening of the 26th ult., the society held a special meeting for the purpose of hearing J. K. M. L. Farquhar deliver his lecture on the "Gardens of Italy." The meeting was well attended and Mr. Farquhar's lecture proved the attraction of the season. J. W. D.

CEDAR FALLS, IA.—Joseph Bancroft & Son have been increasing their business to such an extent that more space was a necessity and they have purchased the residence property of Platt Ham, which now gives them the entire block, a large portion of which is covered with their greenhouses and equipments.

Cultural Directions

Are leaflets written by practical men especially for the use of amateur customers.

If you have a counter trade, either in plants, seeds, flowers or bulbs, you should have a supply of these leaflets on hand to present to your customers when they seek cultural information about their purchases.

(The leaflets embrace over forty subjects.)
 We can supply them at \$2.50 per 1000, or 500 for \$1.50 and can make a reduction of those prices on large quantities.

At a small extra cost we can put your imprint on each leaflet.
 Try a thousand and see what a help they are in selling goods.

REVIEW OF THE MARKET

NEW YORK.—There has been a decided change in the cut flower market since last Saturday. On that day business began to diminish and it has gradually fallen off every day since. Nearly all kinds of stock seem to be increasing in quantity and the demand is always expected that the month of May is not a good flower month in this city, as it is supposed to be very unlucky to get married in May, which leaves the retail dealers to depend mostly on funeral work during that month.

Prices along all lines are tending downward. Violets may be said to be over for this year. Now that the Southern bulb stock is shortening up a little, the home grown supply is arriving in in much heavier quantities. Belated lilies are also coming in heavily, and the prices they realize are exceedingly low. Gardenias are extremely plentiful, and sometimes go as low as \$3 per 100. There are many grades of lily of the valley and its sale is erratic.

Roses of all kinds are extremely plentiful and fixed prices are out of the question; straight slips are to be had at as low a figure as was charged for No. 2 grades one week ago.

BOSTON.—Cold weather has continued and trade has been comparatively good. While there is a general abundance of all general stock prices have been fairly good and have averaged better than last week. Roses bring from \$1 to \$10; American Beauty \$2 and \$3 per dozen for the fancy long-stemmed blooms, of which there is now a good supply. Some fine Richmond, Killarney and Wellesley are seen; these bring \$2 per dozen. Carnations hold up well and prices continue good, the best grades bring \$3 and \$4. Violets are about over, although a few are to be seen at 50c. Lilies are plentiful at \$3 and \$8. Callas bring \$3 and \$10; sweet peas, 75c and \$1; bulbous stock, \$1 and \$2. There is not much of this latter from outdoors yet. Some fine Spanish iris are seen, selling at \$3 and \$4. Gladiolus are good at \$1.50 per dozen. Stocks bring \$2 and \$3; mignonette, \$2 and \$3. Snapdragon is fine at \$6 and \$8, and lily of the valley holds its own at \$2 to \$5. J. W. D.

PHILADELPHIA.—The market is in fairly good condition. There is not sufficient business to create a brisk demand, yet most stock cleans up well. We observe more inclination on the part of the wholesalers to clean up; if any particular stock goes slow the price is made an inducement in order to clear out. American Beauty of the very choicest, selected for shipping, are bringing \$4 per dozen; most of the stock by the dozen goes at \$2 to \$3. Prices by the 100 range from \$20 to \$25. Tea roses are plentiful, and values easy, even the very choice flowers of Richmond realize \$15 per 100, but go slow; choice Liberty and Mme. Abel Chatenay are held at \$10 and \$12 per 100; general stock of teas selling at 100; carnations are still off in supply; some extra choice sell at \$4 to \$5, general stock at \$2 and \$3 per 100. Violets are becoming scarce; prices this week range from 50c to 75c per 100. Lilies are not quite so plentiful at \$10 per 100. Daisies, choice yellow, go at \$3 per 100, other stock \$1.50 and \$2 per 100. Sweet peas, choice fancy colors, sell at \$2; regular stock, \$1 per 100. Gardenias, supply large, general price \$12.50 per 100. Antirrhinum majus bring \$1.50 to \$2 per 100 for extra long choice spikes; lily of the valley, \$2 to \$4 per 100; stocks, white and pink, \$2 to \$5 per 100; Cattleya Mossia, \$50 to \$60 per 100. DAVID RUST.

NEW BEDFORD, MASS.—The cut flower business continues active, with funeral work quite plentiful. The supply of stock is none too plentiful as yet. Prices remain unchanged.

We are now getting a little warmer weather, which will help out matters a little. Garden work is now in full swing, most of the florists have got large gangs at work rolling lawns, etc.

Memorial Day will soon be here with its rush, and everyone is busy preparing for that day. Pansies are now in full bloom; they bring 25c, 35c and 50c per dozen, according to grade.

HORTICO.

INDIANAPOLIS.—Exceptional conditions still characterize the flower business. The weather remains cool, and stock of all kinds is at a premium. Counter trade, also funeral work, have been brisk, but it is with difficulty that a variety of flowers is obtained with which to fill orders. Bulbous stock which a month previous would have been passed by, is now eagerly taken at winter prices.

The anticipated carnation shortage is being seriously felt; medium grades are wholesaling at \$4 per 100; increased prices, though, do not cause a sufficient supply.

Many inquiries from surrounding towns indicate that the school commencement season has begun. The orders for Indiana's graduates are mostly unpretentious, but the numbers add decidedly to the shipping trade.

It has been necessary to frequently order roses from a distance, as the local supply is short. Prices have an upward tendency. Select Bride, Bridesmaid and Golden Gate wholesale at \$8 per 100. American Beauty have had a popular week at \$5 to \$35 per 100. Richmond, too, sell well, as the quality is excellent, at \$8 to \$12 per 100.

Many thousand sweet peas are being marketed at a most opportune time; 75c to \$1 per 100 is the prevailing price for the growers. These flowers are usually offered by the store men in 25c. and 50c. bunches. Callas and Harrisii lilies are taken early in the day at \$3 to \$10 per 100. Marguerites, candytuft, heliotrope and ranunculus stocks are in evidence at Tomlinson Hall market. Both wholesale and retail houses have been active enough to enable all to sell out early.

The plant situation, bedding stock expected, is a most desolate one. A few roses and hydrangeas constitute everything offered.

ST. LOUIS.—The market the past week was in a fairly good condition, with everything in season except carnations, which are reported very scarce. The retailers seemed to have had a good deal of work last week for wedding receptions, dinner parties and funeral work; for the latter quite a number of very large designs were made up. The plantsmen are all ready for planting out just as soon as the weather permits, all having plenty of fine stock and orders to keep them busy right into the month of June.

The stock of cut flowers at the wholesale market this Monday morning seems to be limited. Carnations are in very short supply, and prices up to \$5 per 100 on fancy grades; \$3 to \$4 on ordinary stock, and \$2 for common and splits. With roses it is just the other way; there are plenty of them and prices are low for 1,000 lots. Bride and Bridesmaid are more plentiful than any of the others. Richmond and Killarney are good quality. The prices range from \$6 to \$8 for choice, \$3 to \$4 for firsts, and \$1 to \$2 for shorts in 100 lots. American Beauty, in the long fancy grades, are selling low; \$3 per dozen. Other grades of these are in plenty and sell at about the price of the smaller roses. Lily of the valley is not going so well, and the market has plenty of good stock at \$3 and \$4 per 100. Harrisii are selling well; so are callas, at \$10 to \$12.50 per 100. Outdoor stock, such as Cape jasmines, peonies and irises, are expected soon.

All greens are in plenty with a good demand. Fancy ferns are not any too extra in quality, with prices up to \$3.50 per 100. ST. PATRICK.

CINCINNATI.—Business remains very good and flowers are not plentiful. Bride, Bridesmaid and Kaiserin Augusta Victoria are selling at 3c, 4c, 5c, and 6c. Carnations are very scarce and 2c, 3c, and 4c. is the price obtained for them. Lilies and callas fetch \$1 per dozen; lily of the valley, 4c; Baby's breath, 50c per 100; stocks, 3c to 4c; snapdragon, 4c; forget-me-not, 50c per 100; fancy ferns, 25c per 100; adiantum, \$1 per 100; galax, 15c per 100; \$1 per 1000; leucothea sprays, 50c, per 100; green sheet moss, \$1 per bundle; sphagnum moss, \$1.25.

All stock is well cleaned up daily, which keeps the market in a good, healthy state. Sweet peas are getting a little more plentiful and fetch 5c. to 75c. per 100 for ordinary stock. Some Richmond roses are selling at 12½c. The outlook for Memorial Day is very gloomy; all outdoor stock is killed. E. G. G.

THE METARIE RIDGE NURSERY COMPANY LTD.
NEW ORLEANS, LA.
GROWERS OF CHOICE CUT FLOWERS
Roses, Carnations, Orchids, Etc.

We are fully prepared to fill orders for shipping by Steamers and Express all through the Southern States.

ST. PAUL.—The weather the past week was the principal factor in the cut flower business. Trade and the supply were about on an equal basis, the fore part of the week; business began to lag the latter part and to finish it up Saturday we had one of the worst snowstorms of the year, consequently business was brought to a standstill. The inclement weather of a few days previous to Saturday was apparently a sufficient warning to the retailers and the stock carried by all of them was indeed small. The government weather bureau predicts zero weather, so we can not expect to do much for the next three or four days at least. The growers in general have been sending in some very fine stocks. Roses are much better than what we had them all season, Richmond and Killarney being especially fine; and the market has kept to from \$6 to \$10 per 100. The price of other varieties has dropped somewhat, Bridesmaid being quoted at from \$5 to \$8 per 100. American Beauty remain firm at from \$3 to \$5 per dozen. Carnations are shipped in in large numbers; the prices on them have fallen to \$1, the best blooms being offered at \$2 and \$4 per 100. Tulips and Paper White narcissus are about through, the small number still on the market are offered at \$1.50 and \$2 per 100. Smilax and asparagus are still scarce, the former being quoted at \$35 per 100 strings, the latter at \$50. Lily of the valley has suffered somewhat; there appears to be a great deal of it on hand, but the demand is so small that some loss is felt. Violets are about over for the season; only one grower has them and he quotes them at from 75c to \$1 per 100. PAUL.

KALAMAZOO, MICH.—The continued cold and cloudy weather during April has had the effect of stiffening prices somewhat, even if business is rather more dull than it ought to be. Carnations are getting to be quite scarce and there are no prospects for a very large supply for some time yet. Roses are and have been in much better supply; and enough of every other article to meet all demands. The month of May usually sees a good many roses planted, so the chances are this line of goods will diminish in supply before any glut of outdoor stock comes in.

The supply for Memorial Day, owing to the backward season, looks like an awkward prospect for the retailer, as the flowers demanded for that day require to be both freshly cut and cheap—a combination hard to meet unless there are enough outdoor flowers to help, and present indications do not encourage any large prospects for outdoor supplies this Spring.

Bedding plant trade will be hurt also by the late season; and the carnations, which ought to be planted this week, will also have to be kept under cover another week or two yet. Altogether the grower must expect to rush or crowd two weeks' work into one for a month or so after the weather becomes favorable. S. B.

COMING EXHIBITIONS.

TARRYTOWN, N. Y.—The preliminary schedule of prizes to be awarded at the ninth annual exhibition of the Tarrytown Horticultural Society has been issued by Secretary E. Neubrand. The show will be held in Music Hall, November 6, 7 and 8, 1907. A complete schedule will be issued later.

CHANGES IN BUSINESS.

RICHMOND, IND.—The B. K. & B. Florist Company has been incorporated with a capital stock of \$10,000. The directors are Charles Knopf, Louis Knopf and Nora Knopf.

FORT WORTH, Tex.—Baker Brothers Company has been incorporated, capital, \$40,000, to grow and sell seeds, flowers, plants, etc.

PORT WORTH, Tex.—Baker Brothers Company has been incorporated, capital, \$40,000, to grow and sell seeds, flowers, plants, etc.

FIRMS WHO ARE BUILDING.

CHESTER, W. VA.—The Foley Manufacturing Company, Chicago, is building for C. A. Smith extensive palm, orchid, fruit and vegetable houses.

WAUSAU, WIS.—M. Phillip is making plans for the erection of several large greenhouses on property which he recently purchased in the First ward.

PORTLAND, ME.—F. H. Chase is enlarging his greenhouse by a 100-foot addition and Leighton Bros. are planning to build a new one 80 feet in length this Spring.

YELLOW SPRINGS, O.—W. H. Brown & Sons, nurserymen, are contemplating the erection of two large greenhouses and vastly extending their business.

KALAMAZOO, MICH.—G. Van Bockhove and Brother begin shortly the erection of several more houses at their Rose Hill plant. The material is already on the ground. S. B.

SCRANTON, PA.—Morel Brothers have just about completed a fine range of new houses, erected by the King Construction Company at a cost of about \$15,000.

NORTHAMPTON, MASS.—R. B. & A. B. Graves of Bridge street, who have carried on an extensive greenhouse business for a number of years, are to enlarge their business this year by going into market gardening on an extensive scale. They are planning to raise 23 acres of vegetables this Spring and Summer and in the Fall will probably erect one or more greenhouses in which to raise Winter vegetables.

New Orleans, La.

Trade Notes.

The sale of Spring plants in this city is rather slow. Mild open Winters are very pleasant from one point of view, but from a business standpoint perhaps not so profitable, as when soft stock survives the Winter without any protection, the people keep their money in their pockets and the florist keeps his plants. After an abnormally dry Spring we are getting copious rains at last; in fact, a little too copious. Nearly seven inches of rain fell yesterday (April 25).

As the average rainfall for this vicinity for the month of April is only three inches, some idea can be formed of how it came down.

U. J. Virgin, the Canal street florist, has been elected a member of the City Park Association, which has charge of one of the two large parks of this city.

Paul Abele of the firm of Abele Brothers has a newcomer—another boy.

On Sunday, April 13, the New Orleans Horticultural Society with other gardeners and friends, upon the invitation of A. Alost repaired to Rose Villa on Gentilly avenue, where a sumptuous repast awaited them. After the usual toasts and the presentation to the host and hostess of a fine rocking chair, a stroll was taken around the grounds to view the roses growing in the open field. Here Zella Pradel is grown by the acre, and they cut it by the hamperful. Mr. Alost finds this variety very profitable for his Spring and Summer trade. The patches of Cape jasmine were noticeable for their clean, vigorous growth and well-developed flower buds. The several greenhouses of assorted plants were also found in good order.

A visitor from the North to New Orleans at the present time would be impressed with the beauty of the oleander as an outdoor shrub. The warm Winter was especially favorable to the plants, for just now they are a magnificent sight. There are numerous varieties grown here; they seem to be popular with everyone, and justly so.

Pittsburg.
Trade Notes.
Weather conditions have changed somewhat and we have had several days of real Summer which should have a good effect on trade all around. Stock is at present plentiful, but a week or more ago there was quite a scarcity, particularly of carnations. Roses are coming in fine. Lilies are also in abundance.

Plant trade should pick up now if the good weather continues. The month of April was the coldest we have had for many years, also too wet, delaying all outside work, consequently the next few weeks will be very busy ones for the grower and plantsman.
Howard Carney, with Murdoch & Company, wholesale cut flower dealers, feels very happy and shows it, too; the reason—a 12-pound boy who arrived a few days ago. Both mother and child are doing well.

The partnership heretofore existing between N. A. Blaney and D. A. Malie was dissolved a week ago. The business will be continued by Mr. Malie at the same stand in the Allegheny market.

The next meeting of the Florists' Club takes place Tuesday, May 7. The "Credit System" will be up for discussion and about six members are expected to give short talks on the subject.

D. F. Ludwig is spending a week at Cambridge Springs, taking a rest and the waters.
E. C. REINEMAN.

Allentown, Pa.
O. J. Sawyer, who has been renting the greenhouse property of Geo. W. Fetzen, has recently closed a deal for the purchase of the plant. Mr. Fetzen is now out of the florist business in this city. Mr. Sawyer is situated close to the cemetery and has a good trade in both plants and cut flowers.

Philadelphia.
News Notes.
The social season is practically at an end; most of the prominent families have gone to their country places, and while there have been many weddings they have nearly all taken place in the country.
William P. Craig on Monday last invited some of the prominent gardeners around this city to see his new fern, *Nephrolepis Amerpohlii*, and made a proposition to them, to loan each one three plants to grow on, the plants to be brought into the August meeting of the Florists' Club and prizes of \$10, \$7.50 and \$5 to be awarded to the three exhibitors having the best plants, the man taking first prize to get one plant in addition to the money. Those who entered this competition were Joseph Hurley, gardener to Mr. James W. Paul, Jr.; Wm. Kleinheinz, gardener to Mr. P. A. B. Widener; David Emory, gardener to Mr. Percival Roberts, Jr.; Thos. Long, gardener to Mr. George W. Childs Drexel; John Hedland, gardener to Mrs. A. L. Elkins; Samuel Batchelor, gardener to Mr. C. B. Newbold; John McCleary, gardener to Mrs. R. J. C. Walker; Wm. Robertson, gardener to Mr. John W. Pepper.
At the May meeting of the Florists' Club J. Otto Thilow, of Henry A. Dreer, Inc., will speak on the "Organization and Equipment of a Modern Horticultural Establishment."
H. Bayersdorfer & Company have an extra force in their factory; the demand for metal wreaths with this firm is larger than ever before. For Memorial Day they are making up wreaths on orders taken from photographs, and also many on special designs for customers.
Daniel B. Long, Buffalo, spent last Saturday in this city calling on his customers and looking up matters for next August in connection with the S. A. F. convention.
The seed stores report an unprecedented demand for lawn grass seed this Spring, owing to so many bare lawns from the ravages of the Fall grass last year.
Part of the old nursery, "now used as a retail nursery" of Thomas Mehan's Sons has been sold for building purposes. The stock is now being cleared off.

The Week's News.
 The weather is anything but warm as yet, though we are reminded that Spring is here at last by the hursting into bloom of the magnolias, and the beds of hyacinths, tulips and pansies that are taking on their color in the parks. Rarely does the month of April go through in this city without us having a decided warm spell of some days' duration, but this year has been an exception, and we would not be surprised if this did not prove a record cool month for April.
 Wm. Scollay, of the firm of John A. Scollay, horticultural engineers, Brooklyn, had a surprise the other day; his only daughter, Amelia Florence, having been married quietly to Edward Jose Sanchez. The surprise was tendered to Mr. Scollay in the shape of a note from his daughter placed on his plate at the breakfast table. That day being the twenty-first anniversary of his daughter's birthday, he combined the two events in a very pleasurable manner by getting up an elaborate marriage feast and making everybody happy. The newly married couple will reside at 255 Linden avenue, Brooklyn.

John Ringier, one of the traveling men of the seed house of Stump & Walter Company, 50 Barclay street, has had to leave for Switzerland on account of his health. His territory on the road will be covered during his absence by Mr. Sterling, one of the office staff of the firm.

At Wm. Elliott & Sons' auction mart flowering plants are becoming a prominent feature. Recently geraniums, canas and pansies were disposed of in quantities under the hammer.

The backward Spring has caused much delay to those florists who do bedding out work in Greenwood Cemetery, and now that seasonable weather for such work has at last arrived, there is an unprecedented rush. Some of the florists located near the cemetery find it quite a problem to obtain competent help, as there is so much to be done in such a short time.

One of the daily papers recently, in drawing attention to the peculiar conditions that prevail in renting places in and about City Hall Park, stated that the flower stand located under the elevated railroad stairs in that park paid only \$300 per year rent, while at the same time there is a standing offer from some other dealer who will pay \$3,000 per year for the same place.

J. H. Reese, formerly buyer for the flower and plant section in the department store of Abraham & Straus, Brooklyn, N. Y., and who has lately had charge of the books of the firm of Bonnet & Blake, wholesale florists, Brooklyn, has purchased the retail flower business of Charles Koch at 301 Flatbush avenue, and took possession on Wednesday, May 1.

One of the plate glass windows in the store of W. F. Sheridan, wholesale florist, 39 West Twenty-eighth street, was broken some time during Sunday night. Just who did the damage could not be found out. The glass was replaced on Wednesday.

Gunther Brothers moved into their new store at 114 West Twenty-eighth street on Wednesday. They are having extensive alterations made and are installing a new ice box.

Paul Loeber, traveling salesman for A. T. Boddington, who is ill in a Boston hospital, has been very low, but is now improving slowly.

Mr. and Mrs. Carl Jurgens, Jr., of Newport, R. I., were in town this week on their way to the Jamestown, Va., Exposition. Other visitors in town were Mr. Ferguson, of Dupuy & Ferguson, Montreal, Quebec; J. A. Peterson, Cincinnati, O., and Mr. and Mrs. Wm. Jurgens, Newport, R. I.; and Mr. Graham, Cleveland, O.

Harry van Koolbergler, representative of Ottolander & Nooftman, Boskoop, Holland, sailed for home on Wednesday, May 1, having had a very successful trip while in this country. He reports a large sale for the new pink Rambler rose Anny Muller.

John F. Bingham, a florist of Oyster Bay, L. I., and who recently was elected to the office of Assessor, died on Tuesday, April 30, from pneumonia. He was about 35 years old.

Syracuse, N. Y.

Trade Notes.
 Trade has been very good since Easter. The weather has been most unseasonable, snow and hard frosts prevailing most of the time. All the florists are very anxious to have settled weather so that they can get their carnations planted outside.

Hans Chinn, who was with L. E. Marquisee for more than twelve years and who is now taking a long vacation in England, recently met with a very painful accident while out shooting with a friend whose gun was accidentally discharged, the shot taking effect in Mr. Chinn's eye. It is feared the injury will be permanent.

Buffalo.

Trade News.
 Business the last few weeks has been good, considering the weather, which with the exception of the last two or three days has been nearer that of February than anything else. Flowers of all descriptions have been selling well and bringing fair prices. The funerals of several of our prominent citizens called for many fine floral designs.

Walter Stroh, of Palmer's has returned from Batavia, where he was called on account of the serious illness of his brother.

WASHINGTON, N. J.—Alonzo J. Bryan is now in his second season's business here. Mr. Bryan has a new plant and has a ready demand for all he can produce. His pansies were especially good.

THE BEST WAY
to collect an account is to place it with the
National Florists' Board of Trade
56 Pine St., New York

WHY? Because many debtors will pay the Board fearing otherwise a bad rating in our Credit List. Full information as to methods and rates given on application.

Boston.
News of the Week.

The opening of the library of the Massachusetts Horticultural Society on Sunday afternoons seems to meet with marked success. While the attendance is not large, still it is gratifying to note that those who visit the library, go for the purpose of looking up some horticultural subject on which they wish information. The library committee has decided to allow any one interested who is not a member of the society the home use of books, provided they make a written application, which shall be endorsed by a member of the society.

Joseph F. Free has tendered his resignation as manager of the Park street flower market to take effect May 15. Mr. Free will continue in the market, however, as he will sell for Dolansky of Lynn and several other growers. Thos. Stock is cutting some extra fine white Spanish iris at present, and he has a fine lot of ranunculus which make an attractive variety at this season.

W. W. Rawson & Company are planning an extensive floral show during the season at their farm in Marblehead. They will grow over six hundred varieties of dahlias besides a large variety of hardy perennials and showy annuals. They have made arrangements to have a bed of their new Gladiolus Harvard at the International Horticultural exhibition at Mannheim, Germany, this Summer.

H. M. Robinson & Company have been so successful with their wholesale cut flower department that they have commenced to enlarge their storage room, and the ice chests will soon have three times their present capacity. The firm is now receiving consignments of excellent hardy cut ferns from the South.

Ed. Crowley, salesman for the Newtonville avenue greenhouses, is happy over the arrival of a son on Friday evening.

The New England Dahlia Society will introduce the American Dahlia Mrs. Roosevelt into Europe this season, having made arrangements to have it grown and exhibited at the leading shows in England and Germany.

James Tullis, So. Sudbury, is rebuilding some of his houses into one large structure, the size of his present large house. He makes a specialty of carnations.
J. W. DUNCAN.

Columbus, O.

New Notes. This week a new firm joins the florists' craft here—The Columbus Floral Company, with headquarters at 187 South High street. Mrs. H. D. Jones is the owner and manager. Mrs. Jones is a daughter of Gustave Drobisch, who is the oldest established florist in this part of the State. Mr. Drobisch, who is the proprietor of the Cottage Rose Garden, will supply the new firm with plants; and the supply of cut flowers will be obtained from Chicago dealers. The new company has been fortunate enough to secure a nice store in a very good location, and there is no reason why a fine business should not be done, especially as Mrs. Jones has had a long and thorough training in this trade while with her father.

Business has been better the past week. Stock of all kinds is somewhat short, especially carnations, as the weather continues cold and unseasonable. For a while now roses and carnations will have to fill the gap, until with warmer conditions some outdoor stock relieves the situation, as bulbous stock and violets are practically over. Prices are therefore steadier and firmer.

Graft Brothers, who have for years by their special attention to orders for cemetery flowers, worked up quite a large business in this line, report that better weather is making this part of their business very brisk. A large trade is expected for Memorial Day.

Mrs. E. M. Krauss will this week remove from her present store at 209 South High street to 109, the same street. The new location will be much better for her increasing business, especially for over-the-counter trade in cut flowers, as she will now be in the shopping district.

We live in hopes that sometime it will get warmer than 50 degrees during the day. F. W.

TOBACCO DUST OR SAW DUST WHICH???

211 North St.
Claremont N. H. Apr 5, '07

The H. A. Stoothoff Co.
New York

Dear Sirs—

Please ship me as follows

100 lbs Fumigating Tobacco powder	\$3.00
100 " Black stuff fine	2.00
144 sheets Aphicide,	3.50
10 Fumigating plates	.50
	<u>\$9.00</u>

Send the powder by freight, the Aphicide by express prepaid. I enclose check for \$22

Three or four years ago I had a bag of the Black stuff fine and it was without exception the best tobacco powder I have ever had. Since then I got some stuff from a seed house. I paid more for the article and got left on it. It was much like sawdust than anything else. Now I am coming back to you.

Yours truly
C. E. Stevens.

Say, Stevens, we would sure like to know from you and others like you "why you stray away" to folks who don't know tobacco powder from sawdust. We have been telling you and others in a hundred different ways how smart we are in the way of tobacco powder; that we have been in the tobacco powder business for twenty years, and why our tobacco powder should be and is, twenty years **AHEAD OF ALL OTHERS.** Again we ask, why you let the fellows that don't know, skin you, who should know, that the **BLACK STUFF FINE TOBACCO POWDER**, for dusting, at 2c. per pound, in our bag holding 100 pounds, with our name, address and brand on each bag, sold only by us, direct to you, is the only one. **WE WOULD LIKE TO KNOW.**

YOU TAKE IT FOR GRANTED

because a concern talks best of materials, that they of course, mean the right thing for the right place — but you are way wrong—for instance: When anyone talks wooden eave plate and wooden posts, they are trying to sell you something that the man who cares anything about reducing the shade or saving himself from almost immediate repair bills will have nothing to do with. The men who have given this thing hard thought, and then tried their thinks out by spending money to save money, have long ago proven that the Iron Frame House with our galvanized steel eave is the house to buy. So what's the use of your spending your good money to prove up what's already been proven for you? Write us and we'll figure it out with you on a hard pan, dollar and cents basis.

TROUBLES

and requirements and we assure you we can help you. Our Line of Boilers is extensive. The one shown is the largest series, but we have boilers for every

DEMAND

This is one man's experience with it:—

W. D. SNELL, Mohawk, N. Y., Jan. 21, 1907, says: "I have to report in regard to the No. 407 Standard Sectional Steam Boiler recently installed in my greenhouses, that it gives thorough satisfaction. About January 1st, I had occasion to note an incident that I consider worth reporting. The boiler was attended to, fuel furnished, grate shaken down and everything arranged for the night at 12 o'clock midnight. At that time the boiler showed two pounds steam. To test the boiler and see how long it would run without attention, I deferred giving it any further attention until 11 o'clock the following day. At that time the fuel needed replenishing, but steam had been maintained in the system practically all the time and at the time it was replenished, the gauge stood at two pounds pressure. The experiment showed that the boiler ran without any attention whatever for eleven hours carrying 7,000 square feet glass to about 55 degrees. The weather outside was about zero."

ADVERTISING IN THE FLORISTS' EXCHANGE

IS SURE TO BRING RESULTS

If Both of Us Could Get Together and Talk it Over

about that new greenhouse, the chances are you would know more about the making of first-class material and about greenhouse construction in general—but you would not receive any better goods than if you ordered the same house on a postal card. We give every customer, large or small, a square deal—whether he calls on us or takes it up by mail. We give everybody full value for his money and the kind of material we know will make a first class greenhouse. We never sell anybody anything they do not want just to make a dollar more of profit. Honest goods, reasonable prices and fair treatment to everybody is our maxim.

If you want to know more about greenhouse construction send 10 cents for our booklet of instruction.

JOHN C. MONINGER CO.

Prices Advertised in these Columns are for

Now when you received that other estimate of the other chap that you thought would be so much lower than ours, did his price include priming the material?

Did he say HOW he primed the material? We tell you every once in a while the way we do this painting business; how cypress absorbs more oil than most woods, and that a mere brushed on prime coat could not be as lasting as our "soaked in" method. This soaked in method is simply placing the materials right in a vat of pure oil and oxide of iron, where they actually do soak. Then they are stood up to drip. The wood takes all the oil it needs; when you put on your second coat, the wood does not absorb all the oil, leaving the pigment ready to chalk off. Next week we are going to tell you something about a special white lead that we make, that prevents mildew or blisters.

Don't believe for a minute that the hardware man's or any other man's paint will do for a greenhouse. It must be a greenhouse paint made for greenhouses; that is if you don't want mildew or blisters.

For Sale:—Every part or any part for good greenhouses.

NEW YORK AND CHICAGO, MAY 11, 1907

One Dollar Per Year

CARNATION WINSOR

The most talked about carnation at the Toronto Convention.
Won first prize for best 100 pink

Winsor is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders, and have a fine lot of stock in the cutting bench, so that we can promise prompt delivery on orders received from now on.

If you have not already purchased a stock of this, you should lose no time doing so. We have sold more Winsor

than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market where our flowers are sold.

There is nothing on the market that approaches Winsor today in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities, in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high quality flowers. It practically does not split at all, notwithstanding the fact that we have had the darkest, dullest winter we have ever had, when the Enchantress and Lawson types are splitting badly all over the country with everyone, we have not had one-half of one per cent. of split calyxes on the Winsor. In fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement, extravagant as it may appear.

Anyone who fails to plant Winsor this year will regret it. Rose pink Enchantress is good, and a good many other varieties are good, but IF YOU WANT THE WINNER, PLANT WINSOR.

Strong Rooted Cuttings. \$12.00 per 100, \$100.00 per 1000.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION

Henry W. Wood, Richmond, Va., president; C. S. Burge, Toledo, O., first vice-president; G. B. McVay, Birmingham, Ala., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; J. H. Ford, Ravenna, O., assistant secretary.

CELERY is the title of Farmers' Bulletin No. 282, U. S. Department of Agriculture, Washington, D. C. The author of the bulletin is W. R. Beattie, assistant horticulturist, Bureau of Plant Industry who treats the subject practically and exhaustively.

According to the London Economist, the agriculturists in Austria-Hungary are taking a pessimistic view of their crop prospects. In Hungary laborers are all needed at the same time, and wages are rising higher every week. Some of the corn districts have been recently flooded, so that Winter corn has been destroyed. Vegetation is a month behind the average time.

During 1906 France imported from the United States 175 metric tons of seeds valued at 172,000 francs as against 165 tons of a value of 157,000 francs in 1905. In 1906 seeds to the value \$423,749 came to America from France. The value of the plants and shrubs imported into this country from France in 1906 was 954,000 francs as against 545,000 francs in 1905.

CHICAGO.—After an unusually busy early season the seed trade here now will doubtless have as successful a repetition, as much of the early planting has been destroyed by the continued cold weather, freezing and snow, covering a large section of the Middle West as late as last Friday, May 3.

FLORAL PARK, N. Y.—An idea of the magnitude of the seed and bulb industry at Floral Park, N. Y., says the Brooklyn (N. Y.) Eagle, may be gained readily from the fact that the little village has a second class post office, something far in advance of the postal conditions in many places three and four times its size. Uncle Sam does not regulate the standard of his post offices by the populations accommodated by them but their respective localities, whether the locality is thickly inhabited or not. The five big seed houses in Floral Park use enough postage stamps every year to entitle them to a second class post office. Until recently they used so many that the Floral Park office was of first class, equal in rank, if not in size, to that of New York City, and that the step that the office has recently taken from first class to second class was due to a condensation of printed matter into smaller catalogues instead of a diminution in the number of small parcels that are shipped out of the village.

COLUMBUS, O.—The State of Ohio has installed as a part of its display at the Jamestown Exposition, its official seal, which is made entirely from flower and vegetable seeds grown in the Buckeye State. Some thirty different varieties of seeds have been employed, and so perfect is the workmanship of the emblem that it looks as if it were painted.

An enormous shipment of Crystal Wax onions has the past week been received in this city from Masterson & Dutton, Laredo, Texas. Not only are the onions most rapid sellers from their very handsome appearance, but also of the finest quality. They were grown from Wildpre & Brothers' seed of Tenerife, Canary Islands, and wholesale for \$2.25 per bushel crate.

The Livingston Seed Company is beginning what is always with them enormous sales of tomato plants; for not only do they supply the market garden and retail trade, but their sales to canning establishments also run yearly into several millions of plants.

The William Morris Society will not this year make any distribution of flower and vegetable seeds to the children of the public schools, as they believe each child should pay the required cent a packet for its seeds. Free distribution only is being allowed this season.

ELIZABETH NURSERY CO., Elizabeth, N. J.

ST. JOSEPH, MICH.—The case of George Phiscator, of Oronoko township, vs. Dwight Rice, of St. Joseph, was taken up here on April 29, 1907. The Phiscator case has been tried in the circuit court before. On the first trial Judge Coolidge ordered the jury to return a verdict favorable to the defendant. Phiscator went to the supreme court and that tribunal reversed Judge Coolidge's decision and ordered a new trial. The case arises from the sale of some clover seed, which was purchased by Rice Bros. of St. Joseph. A sample of the seed was shown to purchasers and they contracted for a considerable quantity. When the seed was brought in and examined it appeared to be in good condition. Rice Brothers shipped it to a Chicago house, expecting immediate returns. Instead they received a letter informing them that the seed was found to be very bad, particularly in the middle and at the bottom of the bags. The seed was shipped back and later Phiscator was arrested for alleged fraud. He was subsequently discharged, soon afterward bringing suit against Rice for \$10,000, alleging malicious prosecution.

LIMA BEANS.—Under the name of Lima beans two distinct types are now recognized: Pole Limas and dwarf, or bush, Limas. These types are made up from two distinct species, known to botanists as Phaseolus lunatus, which includes the Sieva, or Carolina, type of Lima beans, and Phaseolus lunatus, variety macrocarpus, the true Limas of the American garden, which includes both types of Lima bean, i. e., the flat, or large-seeded Lima and the Potato Lima. The pole Lima beans, then, are made up from the Sieva, or Carolina, Limas, the true Limas, the flat, large-seeded Limas, and the Potato Limas. The dwarf Limas are represented in the Sieva type by Henderson's Dwarf Lima, in the Potato Limas by Kumerie's and Dreer's Dwarf Lima, and in the true Limas by Burpee's Dwarf Lima. It will be seen, therefore, that botanically the pole Lima and the dwarf Lima can not be separated—that varietal differences alone make the distinctions which characterize these two groups.

Lima beans are of very great commercial value, but are not sufficiently appreciated as a table food because it is not generally known that in a dry state they can be used in practically the same manner as are the common beans. In reality they are richer and more delicate in flavor than the common beans, and can be used in as many different ways. The virtues of these types as green beans need only a passing mention, and their value as an accompaniment of corn in succotash is well known to every consumer of canned goods.—L. C. Corbett in Farmers' Bulletin 289.

ACREAGE OF BEANS IN AMERICA.—There are no statistics available from which to determine the acreage or quantity of beans produced as field beans and as stragg and garden beans. The census for 1900 gives the area of the bean crop, including both field and garden beans, as 453,867 acres, and the total produce is placed at 5,064,844 bushels, an average of 11 1-5 bushels per acre. The total amount received by the producers for the crop was \$7,634,262, or an average of \$15.1 per bushel. In considering this average it must be remembered that the total includes the products of good as well as of poor cultivators and embraces regions in which the crop was a practical failure as well as those in which it was a success. For those States which make bean growing an important industry the average yield to the acre is somewhat higher than is recorded in this general average.

The three States which lead all others in the production of this crop are Michigan, New York and California, followed by Wisconsin, Maine, Virginia, North Carolina, Tennessee, Missouri, Minnesota, Illinois, Kentucky, New Mexico and West Virginia. The other States which produce a considerable acreage of garden beans, with the exception of Florida, cultivate less than 3,000 acres.

Florida is reported as cultivating 9,189 acres in 1899. The great bulk of this crop reached the market as snap or string beans. Those beans which were not marketed in this way were of course allowed to ripen and represent a small percentage of the total crop of dry beans. The States in which the great bulk of dry or field beans is produced are Michigan, New York, California and Maine.—L. C. Corbett in Farmers' Bulletin 289.

THE QUALITY OF GRASS SEED.—The Maine law regulating the sale of agricultural seeds requires that grass seed shall be sold under a guarantee as to purity. Bulletin 138 of the Maine Agricultural Experiment Station, gives analyses of the seeds which were collected by the inspector and those sent to the Experiment Station by correspondence in 1906. The dealers are very generally conforming to the law and the purity of most seeds is now guaranteed. The question naturally arises in the mind of a farmer,—Should a seed be strictly pure and if not, how nearly pure should it be?

The purity of seeds varies greatly with their kind. It is possible to grow timothy seed so clean that it shall carry practically no foreign weed seeds. It is not as easy to grow any of the other grasses or clovers so clean. There is no need for the sower to ever buy timothy seed that is much less than 99.5 per cent. pure. Samples have been examined by the Station the present year which contained not a single foreign harmful seed.

The best red clover seed will frequently carry as much as one per cent. of foreign matter, although these impurities are usually comparatively harmless. In many of the low-grade red clovers, which are only 95 per cent. pure, it sometimes happens that a large part of the impurities are harmless. It is, however, poor policy for the sower to buy a red clover seed that is less than 93 per cent. pure. The best grades of alsike clover will run about 98.5 per cent. pure on the average. It is doubtful if the purchaser should buy an alsike whose purity is less than 97.5 per cent.

Redtop is the most difficult seed of all. It will, of course, contain more or less chaff. It is difficult to grow redtop free from timothy and the seed cleaners find it difficult to separate timothy seed from redtop after it has once been introduced. Samples of redtop carrying as high as 12 or even 15 per cent of timothy are not unusual. If one could be sure that the impurities were harmless like chaff and timothy, it might be safe to buy a redtop even as low as 85 per cent. pure. Unless one is assured of the character of the impurities, it is unwise to buy a redtop less than 95 per cent. pure.

From the above it is evident that in the judgment of the Director of the Experiment Station, it is wise to buy only high grade seeds that are comparatively pure. Not only are the high grade seeds purer but they are usually larger, plumper and heavier, more of them will germinate, and they make stronger plants. There is certainly no

economy in the attempt to save one, two or even five cents a pound on the purchase of grass seed. Expensive as seed is, it is a comparatively small item in seeding down, when the cost of labor and fertilizer are taken into consideration.

IMPORTS OF SEEDS, ETC.—April 27-28.—Italo-American Express Company, one case plants; Daniel H. Burdett, three bags seeds; Hensel, Bruckman & Lorbacher, six cases plants; F. B. Vandegrift & Company, 10 bags clover seed; R. F. Godwin's Sons, nine bags field seed; Maltus & Ware, four cases plants; Benj. Stearns, seven packages plants, April 29.—C. O. Villagas, 70 cases live plants; J. De Jongh, four cases plants, April 30.—American Express Company, four packages plants; H. Frank Darrow, seven cases plants; R. F. Lang, one case plants; Maltus & Ware, one case plants; Rooney & Spence, four cases plants; P. Lorillard, two hampers plants, May 1.—H. Frank Darrow, 38 tubs laurel trees, 28 cases plants; O. G. Hempstead & Son, 43 cases plants; Hnsa & Company, 15 cases plants, 20 tubs laurel trees; Robinson Heath, three cases plants; J. McHutchison & Company, 182 tubs laurel trees, 39 cases plants; M. Mutillo, one case plants; Chas. F. Meyer, 28 cases plants, 22 tubs laurel trees; P. H. Petry & Company, eight cases plants; Maltus & Ware, 34 cases plants; J. Ter Kulle, 10 cases plants; Vaughan's Seed Store, 37 cases plants, 202 tubs hay trees; Baldwin, Austin & Company, one case plants; J. M. Thorburn & Company, one case seeds; J. DeJonge, three cases plants; A. Held, two cases wild orchids; Parke, Davis & Company, 10 bushels seed; H. Frank Darrow, 18 packages seed; R. L. French & Company, 150 sacks seed; O. G. Hempstead & Son, 24 packages plants; E. Hoenicke, 63 bags seed.

European Notes.

The continuance of the night frosts, which vary in intensity from 2 degrees Cent. in western France to 9 degrees F. in eastern England, is having a very disastrous effect upon our cultures, particularly broccoli and beet. As regards the former the warm days cause the heads to expand and throw back the leaf covering, with the result that the heads become discolored and in many cases rotten as the result of the frost. The results would be more disastrous to the growers of market produce if it were not for the fact that the markets are glutted with other green crops, which are rushed in to turn them into money before they bolt to seed.

The running of our few remaining cabbages is practically assured, in fact, this is a source of serious trouble to the market growers of this article, for in several of the most important districts nearly all the cabbages planted for market have run to seed instead. Seed saved in this manner is, of course, worthless. Beet failures are an even more serious matter, because stocks on hand of the most useful varieties are extremely small.

It is not possible for the moment to say exactly how much has really perished, but several of the growers report that from 40 to 60 per cent. of their plants have been destroyed. Crosby's Egyptian and Detroit dark red have suffered more than any other varieties thus far.

So far as we can judge at present our mangrel plants are not seriously affected. Rutabagas are looking very sickly and will certainly disappoint the growers. On the other hand, turnips on good land and in sheltered positions are improving; the continuous 24 hours' rain on Sunday last has helped them wonderfully.

As regards flower seeds, sweet peas cause us some anxiety, and in the face of the reported destruction of the crop in California the outlook is discouraging. Pansies will derive considerable benefit from the recent rains, but the weather is too cold to favor the development of seed. But there is no time lost thus far, except for those growers who demand new crop seed for Summer sowing.

Wallflowers and other biennials of the same general description have suffered severely from recent frosts.

A fire broke out in the early morning of April 25 on the premises of W. Deal & Sons, seed growers, Messing. The new warehouse, which is 50 feet by 25 feet and which contained among other seeds 13 tons of mangrel and about

6 tons of cabbage seed, was completely gutted. The damage to buildings and contents is estimated at over £3,000. The loss is covered by insurance. As the firm in question has been "bearing" the markets lately with the two articles mentioned, the disaster may prove a blessing in disguise to other dealers.

EUROPEAN SEEDS.

LILY OF THE VALLEY.—The lily of the valley, in some parts of Germany, was not a good or productive crop in 1906, and at Freienwalde on the Oder, the field crops were thoroughly inferior. The crowns were not so strong as in the previous years, and a little weaker at the roots, facts due to the drought of 1904; and because of the weakness of the forcing crowns the planting ones were, as will be understood, not well developed. Still the bells were as large, and they developed as vigorously, as those do in more favorable years. Prices ran from 23 mk. to 24 mk. per 1000 for the first quality; the second quality could not be sold, and generally had to be grown on at home. Some raisers, however, received for this kind of ware 8 mk. to 12 mk. per 1000. Planting crowns are scarce this year and almost all are reserved by the raisers themselves for planting purposes. For such the price remains at the old figure, that is, for one year old 1 mk. per 1000, and two year 1.50 mk. to 2 mk. They are sold in bundles. The old variety with white crowns occurs occasionally in the

trade, and is not much in favor, although its bells and spike are larger than those of the ordinary type, in consequence of its upper blooms not coming to perfection or not opening at all. The correspondent of Möller's Deutsche Gärtner-Zeitung states that his lily of the valley never gets frozen, and is free from injurious insects and fungi. Another writer in this same journal states that the lily of the valley harvest in 1906, in districts where the plants had not suffered from the three years' drought, were, in regard to quality and quantity, good. The new plantations are, in general, satisfactory, and promise well for next year. —Horticultural Trade Journal.

PORTLAND, ORE.—The florists of Portland met at Dennett's store on Congress street April 29, 1907 and organized for social purposes. The following officers were elected. President, L. C. Goddard; vice-president, Mrs. Lizzie Dennett; secretary, John J. Boyle; treasurer, J. W. Minott; committee on by-laws, Miss McGonnigle, Mrs. Lizzie Dennett, A. W. Dyer and Alexander Sterling. Committee on membership, J. H. Vickery and G. W. Billings.

ALVIN, TEXAS.—The jessamine growers and dealers here are looking forward to a big crop and a big business this season. The season will be about fifteen days earlier than last, and dealers are already getting out quotations.

CYCAS REVOLUTA

(STEMS)

Choice specimens just received from Japan in elegant condition. Pot now to have good salable plants for early winter sales. Special sized bulbs selected on request. 25 lbs. \$2.25; \$8.50 per 100 lbs.; 300 lb. case \$24.00.

PRIMULA SEED

Michell Prize Mixture of Chinese Primula is the cream of selection. The trusses are immense, covered with mammoth florets, excellent colors. 1/2 trade pkt. 60c.; \$1.00 per trade pkt.; 1-16 oz. \$2.00.

1018 Market St., Philadelphia

The Laxton Berry.

This is a new, hardy fruit, being introduced by Laxton Brothers of Bedford, England. It is a cross between the Logan berry and the English raspberry Superlative. The object of the cross was to secure a sweeter fruit, and also to remove the hard core of the Logan berry. This has been successfully done in both these points. Without much reducing the size, a fruit was secured with a true raspberry flavor, the acidity of the Logan berry being much reduced; at the same time the fruit parts readily from the core, as shown in the illustration. It has the habit of growth of the Logan berry, being equally vigorous and hardy. A large demand for this new plant is anticipated when it becomes known; at present the stock is limited.

Prices Advertised in these Columns are for THE TRADE ONLY—When Writing Please Mention THE FLORISTS' EXCHANGE.

DREER'S POT-GROWN HARDY PERENNIALS

The following varieties are all growing in pots and can therefore be planted now with perfect success, which is not the case with the ordinary field-grown stock at this late date.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN,
Orlando Harrison, Berlin, Md., president; J. W. Hill,
Dea Moines, Ia., vice-president; George C. Seager,
Rochester, N. Y., secretary; C. L. Yates, Rochester,
N. Y., treasurer.

Seasonable Topics.

Nurserymen say there is a marked difference in the selecting of trees on the part of customers. The average person wants every tree of a broom stick straightness, while the landscape gardeners are not nearly so particular, many of them preferring crookedness of stem in some trees as adding to the naturalness of a planting.

The poison vine, *Rhus radicans*, bears seeds freely, and these seeds are food for birds in the Winter season. This may account for the numerous poison vine covered fences met with in country places. Horses will often eat the foliage of this vine, and with no ill effects.

One of the fastest growing of useful hardy vines is the *Akebia quinata*. Its nicely divided foliage, early, sweet-scented, plum-colored flowers and pleasing green foliage, make it particularly useful and ornamental.

Pterostyrax hispida is slowly becoming known in collections. When it becomes better known, many will regret not having planted it years ago. It is a beautiful, small tree, bearing racemes of lovely white flowers in June.

Syringa Josikæ, *S. villosa* and *S. Emodii* are Asiatic lilacs that flower after ordinary sorts are over, which makes them much valued. The flowers of *Josikæ* are light purple, those of the others nearly white. They are sweet-scented, though not as highly perfumed as the blossoms of the old type.

Azalea amena is often spoken of as having double flowers, but what looks like a double flower is the extension of the calyx, giving the appearance of a double corolla.

Pinus edulis from the Pacific Coast has not proved sufficiently hardy for the Northern States, but the Colorado form of it succeeds well. In addition to the beauty of this pine, its nuts are enjoyed by the Indians; and for fire wood no pine is better.

Cercidiphyllum japonicum was introduced to this country by the late Thomas Hogg. It succeeds best in deep soils. When the trees of different sexes are near each other the seeds are produced freely. There are many seed-bearing trees in this country now.

Ivy on trees does no harm at all, so long as its foliage does not overlap that of the tree. When the ivy commences to creep out on the limbs it should be cut away before it reaches the leaves of the trees. In this way no injury is done; and often the ivy-clothed tree is considered a great attraction.

Too Much Protection in Winter for Trees.

On many estates it is the practice to straw up many evergreens on the approach of Winter, and every Spring the appearance of such evergreens when uncovered confirms the belief of many that tight strawing is an injury rather than a help. When evergreens are tied up close the foliage is so weakened that it receives more injury than if not tied up at all. The exclusion of air from any of the foliage is a bad thing. There should be a light tying up and a light cover of straw, enough only to break the rays of the sun and the force of the wind. If both high winds and sunlight can be kept from evergreens in Winter these are better not tied up at all. The best protection is to plant trees and shrubs in groups as far as possible, then one protects the other, and all do well. Very close tying injures rather than aids the plants.

Massing Trees for Protective Purposes.

The Winter of 1906-7 afforded rare opportunities to observe the benefits of shelter for trees and shrubs. The early part of the Winter was not nearly as cold as usual; then came fairly cold weather, then a hot period followed again by cold. This variable weather acted injuriously on many trees and shrubs of supposed iron-clad nature, such sorts as *Retinispora plumosa*, Siberian *Arbor vita*, *Lihocedrus decurrens* and others suffering for the first time in years. But especially was harm done to such subjects as stood out alone and exposed to both sun and wind, while those sheltered were quite uninjured. This agrees with all experiences in so far as protection being a great aid to plants in Winter is concerned. Plants supposedly tender and those considered hardy also will be the better for a shelter in Winter, and what will give this better than a thick grouping of trees in which the more tender ones are to be included? Trees standing alone are the exceptions

in nature. All are generally massed, and how well this serves them is shown by their general well doing.

When grounds are being planted trees will make a better growth if set in such a way that there is fellowship between them as it were; and should there be any regarding which fears are entertained of their hardiness, place them in the center of the group.

Referring again to those hurt the past Winter, the most injured were those standing where the elements had free sweep on them. This is always so; and the fact appeals to all planters to consider well the planting of nurse trees in their operations.

The Selling of Trees by the Vermont Agricultural Experiment Station.

In a bulletin issued by the Vermont Agricultural Experiment Station, referring to a State Nursery for forest tree seedlings, it announces among other things that the experiment station shall as soon as may be, and as far as practicable, furnish to all applicants who are residents of or land owners in Vermont, material for forest planting at, so near as can be computed, the actual cost of the same, such material to be used only

ment stations to disseminate as much information as possible on the subject of raising trees for forestry planting, to help the people of the State all they can, but the line should be drawn at growing and selling stock.

On the same line, why should not the experiment station start a farm, sell cattle, milk and other farm produce at cost? Where is the great difference between their present project and the free seed distribution practised by the Government, and against which the whole country is protesting?

The encouragement by the State of forestry matters is a good one, and deserves commendation, but private parties and not the State should furnish the trees for planting; and if a demand spring up for the stock the people of the State will soon commence growing it, and competition will keep the price down to its proper level.

Cerasus Sieboldii Flore Plena.

Nurserymen who keep up a good supply of the flowering shrubs and trees of early Spring, especially of those with double flowers, find a ready sale for them. When

balmy Spring supplants the cold of Winter there is a rush for outdoor life, and in the garden the first of the trees and shrubs to flower are the ones that receive the greatest welcome. So it comes that the flowering almond, flowering peach, plum, apple and cherry and similar early flowering sorts are always in most demand.

Among tree-like subjects of the character named, the flowering cherries have always been popular. The one of tree size, now often seen on grounds, is that known as Chinese double-flowered cherry. On some estates it is found of the full size of an ordinary cherry tree. The blossoms are white, borne in small clusters, and old sort though it is, it is still much in demand.

The one our notes concern is the Japanese double-flowered, *Cerasus Sieboldii flore plena*. Good as the Chinese variety is, this one is better. It excels in this, that the flowers are of a pink color, very pretty in the bud, and still more so when they expand. As the blossoms begin to fade the color does also, becoming almost white.

But it is not in the flowers alone that this cherry is better than the Chinese. When Fall comes the foliage changes to yellowish crimson, presenting as pleasing a picture as any tree renowned for its Autumn color.

The reference to these two flowering cherries reminds us to say that both of them are met with under the name of *Cerasus sinensis*, and that botanists say that the true name of *sinensis* is *serrulata*. Among so many puzzles in the mix-

ture of names in these cherries it is as well to keep the designations as horticulturists have them, the one of our sketch, the Japanese, being *Cerasus Sieboldii*, and there is this reason for it, too, that even if botanically the same thing, practically in a horticultural way, they are very distinct.

When considering the planting of one of the flowering cherries, it should not be forgotten that they grow to the size of an ordinary cherry. And in the Northern States the planting should always be done in early Autumn. There is but a short time for planting in Spring, and cherries of all kinds, if left until then, are apt to push into growth early, and when they have done this they transplant safely with difficulty.

JOSEPH MEEHAN.

HOPS.—A Farmers' Bulletin, prepared in the Bureau of Plant Industry, will be issued later dealing with the propagation, planting, and cultivation of the hop, methods of pruning, trellises and systems of training, methods of picking, of curing, and of baling, cost of production, marketing, and the profits of the industry. This Farmers' Bulletin may be obtained without cost by addressing the U. S. Department of Agriculture, Washington, D. C., and will also be for distribution by Senators, Representatives, and Delegates in Congress.

Cerasus Sieboldii Flore Plena, Japanese Double Flowering Cherry

for forest planting in the State; and further that any surplus stock which may be left in the hands of such station from time to time after the demands mentioned have been supplied may be sold to parties outside of the State at fair market prices.

This action on the part of the Vermont Experiment Station comes as a surprise to the nurserymen of the country. The idea of furnishing nursery stock of forest tree seedlings free, or at cost, is not right for the State to do at all. Experiment stations are not created for the purpose of engaging in business, and they should not be permitted to sell anything whatever of what they produce. They are created for experimental purposes and to furnish useful information to the residents of the State. When they go into raising nursery stock, either for forestry purposes or any other commercial purpose, they are in opposition to any one in their own State or in any other State that makes a business of growing trees. It is not right that a State should raise trees to sell at cost. What is to become of the nursery business of any one in the State who has to raise his stock and sell it at a profit? Even if there be no one in the State who grows stock for the purposes of forestry it interferes with the business of some one outside the State who may wish to ship his product into that State. It should be the business of the experi-

Boston.

The Week's News.
On Saturday at Horticultural Hall the regular May exhibition of bulb- and Spring flowering plants was held, and although the backward season made the list of competitors small yet the quality of the flowers shown was exceedingly fine. Martin Sullivan, gardener to Mr. William Whitman, was the principal exhibitor and his pans of Darwin and May-flowering tulips were grand. He also had some very fine pelargoniums for which he received the first prize. In the collection of hardy narcissi W. N. Craig, gardener to Miss M. Ames, was first with a very fine lot of blooms; Martin Sullivan was second, and W. J. Clemson, third. J. L. Smith, gardener to Mrs. A. W. Binke, showed pansies all of exceptionally fine strains, some of the blooms being better than have been seen in Boston for years. The same exhibitor had a very nice Himalayan Rhododendron formosum. Martin Sullivan had a fine plant of Cattleya Skinneri receiving honorable mention for same. George Page, gardener to Mrs. Frederick Auger, staged some fine Marechal Niel roses of exceptional size and received a first class certificate. Perhaps the finest exhibit in the hall was the plant of Cattleya Mossie exhibited by J. T. Butterworth; a silver medal was awarded for the superior cultivation of this plant and well it might, for there were fifty-nine fully developed flowers on it.

Newport, R. I.

The faculty of the Rhode Island College of Agriculture labored unremittingly for two years in the interest of the appointment of a state commission for the suppression of the gypsy moth. At last those labors have borne fruit, not only has a commission been appointed in the person of Mr. A. E. Stone a professor at the college; but it carries with it a goodly appropriation as a means of conducting the work successfully. Oscar Schultz, who has begun the erection of greenhouses for the storage of palms, etc., has temporarily suspended operations in order to catch up with other important undertakings. The retail trade in plants has just commenced for outdoor work. Dahlia growers are encouraged by the orders thus far received and express the conviction that by the end of the season the amount of business will equal if not eclipse that of last year. The planting of deciduous trees and shrubs is not yet half completed; there are several large shipments to arrive. D. M.

Washington, D. C.

Club Notes.
The Washington Florists' Club held its regular monthly meeting on May 7, President Bisset in the chair. Owing to the inclement weather the assembly was not of its usual size, nor was the meeting of the usual duration. Secretary McCauley read several letters received from florists asking about the prizes which they had won by their entries at the show, and claiming that an error had been committed. It seems that some exhibitors were not members of either the American Rose Society or Washington Florists' Club, and who by reason of this, in order to comply with the rules governing the show, were compelled to pay an entry fee of \$3. In a few instances competitors for prizes offered by the Florists' Club deposited their money with Secretary Hammond of the Rose Society, when their exhibit was before the club. Thus the mistakes occurred. Secretary McCauley was, however, instructed to take up the matter with Mr. Hammond, and as he will do so at once, it will no doubt soon be adjusted to the entire satisfaction of all concerned.

The rhododendron exhibition of the Massachusetts Horticultural Society has, owing to the lateness of the season, been postponed one week; it will now be held on June 8. At the chrysanthemum exhibition of the society, November 8, 9 and 10, the following special prizes will be awarded in addition to those in the regular schedule: For the best large vase of 100 blooms of chrysanthemums arranged for effect, \$40, \$30, \$20, and \$10. For the best table, 8x6 feet, of cut chrysanthemums, all classes, commercial growers only, \$40, \$30, \$20, \$10. For the best table, 8x6 feet, cut chrysanthemums for retail store florists only, Autumn foliage may be used for effect, \$40, \$30, \$20 and \$10. For the best vase of 50 roses one variety, open to all, \$50, \$30 and \$20. For the best six vases of carnations distinct, 50 blooms in each vase, open to all, \$40, \$30, \$20 and \$10. Gardeners and Florists' Club prize for the best table center-piece of growing plants, table for eight covers, \$12, \$8 and \$5. For the best table of fruit, 8x6 feet, foreign and native varieties admissible and best arrangement to be considered, \$40, \$30, \$20 and \$10. For the best collection of vegetables in fifteen varieties, private gardeners only, R. & J. Farquhar & Company's silver cup (valued at \$75), \$25, \$15 and \$10. W. B. Nickerson, Cambridge, who is one of the leading amateur rose enthusiasts, a member of the American Rose Society as well as of the National Rose Society of England, last Spring offered three prizes of five pounds each to the raiser of the best hybrid perpetual rose, to the raiser of the best hybrid tea rose, and to the raiser of the best tea rose, all introduced since 1900. Sixty judges were selected by the National Rose Society of England to be equally divided between the amateurs and professionals. The decision of these judges has just been made public with the following results: One prize to the raiser of Frau Karl Druschki, this variety receiving fifty-four votes out of fifty-five, the fifty-fifth vote going to Hugh Dickson. One prize to the raiser of Dean Hole, which variety received thirty-six votes. J. P. Clark received six votes and Mildred Grant three. In tea roses the competition was more keen. One prize to the raiser of Mme. Jules Craveaux which received nineteen votes. Souvenir de Pierre Notting received sixteen votes and Lady Roberts six. F. Huber of Huber & Company, bulb growers, Guernsey and Portsmouth, Va., was a visitor this week. W. E. Coburn, of Everett, will open a retail store on Bromfield street in a few days. J. W. DUNCAN.

ROSES

Rose Growing.

Extract from Paper read before the Morris County Gardeners and Florists' Society by Andrew R. Kennedy, April 10, 1907.

Rose plants for forcing may be started by cuttings rooted in sand or by cions grafted on manetti stocks. Those started from cuttings are probably better for small growers and private gardeners, but for large commercial plants, I think the grafted stock is more easily grown, and will yield larger profits.

In propagating from cuttings, there are two points that I think cannot be mentioned too often: one is, always, and at any cost propagate from clean, vigorous stock; and the other I consider equally important: Don't hurry the rooting process. Cuttings that are kept cool and moist and are ready for potting, that is, have emitted roots a quarter of an inch long at the end of the fourth week after insertion, will invariably make better plants than those that are rooted in less time.

Potting and repotting as growth necessitates, will be in order till June; when the plants should be benched. If, for two months after benching, the growing has been as near normal as possible, the plants should be strong enough to begin cutting and forcing. Cutting is very important at this stage of growth; the prospects of the whole year are often ruined by an indiscriminate use of the knife.

Early cutting does not pay; for the prices obtained are usually low, and I do not hesitate to say that if all buds are taken, pinching those on small wood and cutting the bottom shoots with from four to six eyes, as soon as the buds show color, the future strength and productiveness of the plants will justify such treatment, for it is generally admitted that developing the buds is the greatest tax on the energy of the plant.

After cutting begins, syringing will generally furnish all the clear water necessary. All other water used should be more or less enriched, unless on some occasions when the bench would be too dry to receive manure water, when a light watering of clear water should be given first. I consider liquid feeding by far the best during Fall and Winter, for then the surface of the soil could be scratched lightly, and the whole bench will dry in less time than if covered with mulch; and if my observation is right, a bench that can be dried and watered often during the Winter, will produce more active growth than one that is kept continually wet.

About February 1, when the days get longer and brighter, the plants will readily take hold of a coating of mulch and it will act both as food and a covering for the roots that have reached the surface.

When the plants begin to break from the old wood, it is time to start pruning; by the time the new shoots have finished their foliage the greater part of the old, blind wood should be cut away, and thus during the Spring months the plants will present almost as pleasing an appearance as they did in the early Fall, and I might ask what is nicer than a neat house of roses? You may answer a bouquet of cut roses. When we say "a bouquet of roses," we mean what we say. It does not mean a bouquet in which roses predominate, bedecked with foliage of other plants, for a well-grown rose together with its beauty of flower, is furnished with beauty of foliage and rare perfume.

We have our carnation enthusiasts and our orchid and other enthusiasts, but I believe the majority of mankind, both rich and poor, are rose enthusiasts.

The rose is a flower we all enjoy. Some are fortunate enough to have roses at all times by forcing, but in June, the rose blooms for the less fortunate in any humble spot it may chance to occupy.

A RECORD TO BE PROUD OF

The Florists' Hall Association has paid 1,040 Issues amounting to \$102,000.00 For particulars address

JOHN G. ESLER, Saddle River N. J.

The season of 1906-07 is rapidly drawing to a close. It has been a very hard one on the rose grower, for while the prices realized were at times almost abnormal, the weather was very unpropitious, the number of bright days being very limited. This meant fewer flowers and higher coal bills.

We still have several weeks before planting time, and the old plants should not be neglected too much, if any; for fair prices generally are obtained in June, the month of weddings and school commencements. Keep the liquid going; overfeeding is almost impossible now. Syringe every clear day, but make sure before syringing that all the manure water is out of the pipes, otherwise the flowers may be badly spotted. The red spider multiplies very rapidly at this time of the year, and as the plants are very bushy it is hard to dislodge this insect. Greenfly should also be watched for closely, for if once a foothold is obtained by it no end of fumigating will be necessary to get rid of the pest. Watch the air very closely and keep a little sulphur on the heating pipes at all times; where hot water is used alone, a little sulphur should be dusted on the plants on clear days, to guard against mildew. Have all the watering and syringing done in the morning, so that the plants are dry again by night.

The fires should be kept going, for though it is May the weather is suitable for March; therefore don't close down early in the afternoon to save a little coal.

The young stock, however, is what takes, or at least, should take up most of our time, and yet how many growers neglect it, allowing the plants to get choked with weeds, potbound, and the soil covered with scum. On the proper handling of this stock depends our next season's success or failure to a very large extent, therefore the plants should all be thrifty and kept so. It is a paying investment to throw away the weak ones and purchase good stock from reliable people at a fair price; 2½-inch plants shifted now will make fine stock for planting in June or early July. Give them plenty of room on the bench; leave a little space between the pots, so as to allow of a free circulation of air. Remove all buds as soon as they show color, and be sure to take at least one leaf with the bud to insure a stronger break. If you have any grafted plants go over them occasionally; break off all the manetti shoots, also examine every union, and see that the binding is not cutting into the wood; if so, cut it loose and retie. All grafted plants should be staked to prevent breaking while syringing.

PENN.

BREEDING FROM THE BABY RAMBLER ROSE.—A number of cross-bred seedlings, grown from Baby Rambler, are disappointing in that none turns out to be constant-blooming, though largely pollenized with ever-blooming kinds, says Dr. Van Fleet in Rural New Yorker. All came near to the Crimson Rambler type, regardless of the habit of the pollen parent, and will probably develop into tall-climbing annual bloomers. When pollen of Baby Rambler, which has the continuous flowering Gloire des Polyanthes as one parent, is used on the stigmas of annual-blooming Ramblers of Wichuraiana hybrids, very dwarf ever-blooming plants result in large proportion, and something may perhaps be done to develop a useful group, of which Baby Rambler will likely remain the type.

THE TRADE ONLY—When Writing Please Mention THE FLORISTS' EXCHANGE.

(87) **Poinsettias for Christmas.**—Kindly give me a little information about growing poinsettias for Christmas. When should they be started, in greenhouse or outdoors, in beds, boxes or pots, and something about the culture required? **POINSETTIA.**

North Carolina.
—Poinsettias for commercial purposes are grown in various ways, it all depends upon how the grower intends to use them, whether they are to be sold as cut blooms, as large specimen plants or planted five or six together in pans for dwarf subjects at Christmas time. For the large specimen plants the cuttings should be taken some time in February, using the old cane, cutting it into two or three eye lengths and rooting them in a propagating bed where there is plenty of bottom heat. When these are rooted they are potted along and kept growing in pots right through the Summer, and require constant care all the time right up to their flowering period. For plants that are to be grown on benches for cutting purposes, the cuttings may be taken much later. To obtain these cuttings the old plants are started into growth in February or March and cuttings made of the young wood that starts, and rooted in the ordinary manner. These are grown along in pots until the middle of Summer, then planted out on benches in the greenhouse and kept growing until they flower and are ready to cut, the object being to get them in for Christmas. For dwarf plants, the old stock is kept over until such time as it can be planted outdoors; then when growth starts, cuttings are made from the young shoots and rooted in the ordinary manner. These are kept growing until they get six or seven inches high; then plant them, several plants together, in pans and grow them along in the greenhouse. These make nice, dwarf stock for Christmas flowering. It should be remembered that the poinsettia loves plenty of heat at all times and requires a fairly rich soil, but one in which no green manure has been used. Another point to be watched carefully is, that the plants never be allowed to want for water during their growth; if they once are neglected and the foliage wilts, it is sure to result in a loss of some of the lower leaves, and the plants are then spoiled past redemption, as new leaves will never form again.

(88) **Time to Sow Seeds.**—Kindly inform me the time to sow seeds of cinerarias, Primula obconica and Chinese primrose. **S. A. P.**
New York.

—We prefer to sow Primula obconica in January or February and the Chinese primroses during April. The cinerarias we also like to sow during April. At the same time all of these varieties of seeds may be sown at this time, and will make fairly good plants for next season.

BEDDING PLANTS

We have the following stock in any size and quantity:
SALVIA SPLENDENS, St. Louis and Bonfire.
COLEUS, in eight leading varieties.

SEASONABLE SURPLUSES

DRY CYCAS STEMS

Fresh imported, true long leaf variety, in cases containing about 350 lbs. each; 75 per cent. of the stems 1/2 lb. to 3 lbs. each; 25 per cent. 3 to 6 lbs. each.
Per 10 lbs., 12 cts. per lb.; 100 lbs., 10 cts. per lb.; whole case, 7 1/2 cts. per lb.

JAPANESE FERN BALLS

5 in., \$2.00 per doz.; \$15.00 per 100.

HYDRANGEA PANICULATA GRANDIFLORA

Two-year-old, 3 to 4 branches, bushy, \$1.50 per doz.; \$10.00 per 100.

ARISTOLOCHIA SIPHO

Dutchman's Pipe, strong field-grown, \$3.50 per doz.

WISTARIA SINENSIS

Extra strong field-grown plants. Blue, \$3.50 per doz.; \$25.00 per 100. White, \$5.00 per doz.; \$40.00 per 100.

HONEYSUCKLE

Extra strong field-grown plants, 5 feet long, many branches. Coccineum. Scarlet. Flava, yellow.

Serolinum Belgica (Monthly Dutch). Red. \$3.00 per doz.; \$22.50 per 100.

AMPELOPSIS

Ampelopsis maralis, large foliage, \$3.00 per doz.; \$20.00 per 100.

Quinquetolla (Virginia Creeper). Good for covering walls, verandas, or trunks of trees; affords shade quickly. 25c. each; \$2.50 per doz.; \$18.00 per 100.

Lilium Auratum

PAEONIES

The roots offered below are extra strong pieces, having 3 to 5 eyes each:

PAEONIA OFFICINALIS

	Per doz.	Per 100
Rubra. Deep crimson.....	\$1 00	\$7 00
Alba. White.....	2 00	15 00
Rosea. Rose; also a good forcer.....	1 75	12 00

PAEONIA CHINENSIS

Double White Varieties.....	\$1 50	\$12 00
Double Pink Varieties.....	1 50	10 00
Double Red Varieties.....	1 25	9 00

Case of Chinensis containing 67 Double White, 66 Double Red, 67 Double Pink Paeonias—very strong roots, 3 to 5 eyes —200 in all, \$20.00 per case, 3 cases for \$50.00.

PAEONIA CHINENSIS

Named Varieties

Hamlet, fiery red; Fragens, bright red; President Harrison, deep red; Mad. Benoit, soft red; Albert Victor, crimson; Elegant, pink; Pink Beauty, bright pink; Cleopatra, silvery pink; La Noblesse, fine rosy pink; Marie Hamilton, lively rose; Marie Louta, soft rose; Her Majesty, rose, light center; Blushing Bride, soft rose; Sunbeam, rosy white; Comte de Nancy, silvery rosy white; Mona. O'Boy, bluish-white; Princeess Mary, creamy white; Alba plena, pure white; Queen Victoria, snow white; Gloria Mundi, creamy white. Any of the above at strong roots, 15 cts. each, \$1.50 per doz., \$10.00 per 100.

PAEONIA FESTIVA MAXIMA

True

The finest white Paeonia in cultivation. 40c. each; \$4.50 per doz.; \$35.00 per 100.

ARTHUR T. BODDINGTON,

342 West 14th Street, New York City.

BOXWOOD

Bushes per pair, 50c.-75c.-\$1.00-\$1.25-\$1.50. Pyramids, per pair, \$3.00. English Ivy, \$2.00 per doz, \$15.00 per 100.

Anthericum, variegated for vases, \$1.50 per doz.

Aspidistras, green, \$12.00 per doz. in 6 in. pots; \$18.00 per doz. in 8 1/2 in. pots.

Latania or Livistonia Sinensis, 7 in. pots, \$15.00 per doz.; 8 in. pots, \$18.00 per doz.

Dracaena Indivisa, 5 1/2 in. pots, \$6.00 per doz.

Crimson Ramblers and Dorothy Perkins, fine plants well budded, \$12, \$18 and \$24 per doz.

Dracaena Fragrans, 6 in. pots, \$6.00 per doz.

Aparagus Sprengeri, 3 1/2 in. pots, \$1.25 per doz.; \$10.00 per 100.

Ardisia Crenulata, fine plants for fruiting, 4 1/2 in. pots, \$50 per 100.

Large Boston Ferns, per pair \$12.00 for hall decoration.

Kentias in all sizes, from 50c. up.

Araucaria Excelsa, \$2.00 to \$3.00 each. 8 in. and 9 in. pots.

Fern Balls, 6 in., \$4.00 per doz.; 8 in. \$9.00 per doz.

Bridal Myrtle, 4 in. pots, \$3.00 per doz.; 6 in. pots, \$12.00 per doz.

Phoenix Canariensis, 2 ft. 6 in., 10 leaves, \$3 per pair; 2 ft. 10 in., 10 leaves, \$4 per pair; 3 ft., 10 leaves, \$5 per pair; 3 ft. 4 in., 10 leaves, \$6 per pair.

Bay Tree Standards, 4 ft., 8 in. stem, \$12.00 per pair; 4 ft., 8 in. stem, \$15 per pair; 4 ft., 8 in. stem, \$18 per pair.

Society of American Florists and Ornamental Horticulturists.

Department of Plant Registration.

John A. Macrae, Providence, R. I., on February 6, submitted for registration *Chrysanthemum Golden Dome*, sport of *Yellow Eaton 1904*; form of *Major Bonafon*, color deeper yellow, but same characteristics of growth, habit and size of flower, darker foliage than the parent; height between 3-12 and 4 feet.

A. C. Zvolanek, Bound Brook, N. J., on February 28, submitted the following new Christmas-flowering sweet peas—*Le Marquis*, seedling from Wm. J. Stewart × *Gladys Unwin*, violet blue; Mrs. George Lewis, seedling from Watchung × *Gladys Unwin*, white; Mrs. A. Zvolanek, seedling from Helen Pierce × *Christmas White*, white blue notched; Mrs. Chas. H. Totty, seedling from Mrs. Alexander Wallace and light blue unnamed seedling, sky blue.

Alexander Montgomery, Waban Rose Conservatories, Natick, Mass., on March 18, submitted *Rose White Killarney*, sport from *Killarney*, with same form, habit, and more petalage; clear white.

P. J. HAUSWIRTH, Secretary.

Ladies' Auxiliary.

As the work of the Ladies' Auxiliary of the S. A. F. O. H. progresses I find many of the 800 circulars sent out November 8, 1906, found a resting place in the waste basket, as I have been so informed by some of the members of the S. A. F. Therefore, through the trade papers, I invite all ladies who are in the trade, directly or indirectly, to join the auxiliary, and meet with us at Philadelphia next Summer.

Mrs. CHAS. H. MAYNARD, Secretary.

Detroit, Mich.

AMERICAN CARNATION SOCIETY.—The proceedings of the sixteenth annual meeting of the society held in Toronto, Ont., January 23 and 24, 1907, has been distributed by Secretary Herr. It contains all the papers and reports read, with a stenographic account of the discussions, premiums awarded, certificates issued, list of varieties registered 1906-7; also the list of active and life members. The former numbers 301; the latter, 7.

The report, which is illustrated, is up to the high standard of its predecessors, as regards the practical and valuable nature of the contents. A fine portrait of Ex-president John H. Dunlop forms a frontispiece.

It has been suggested, and the suggestion is a good one, that a paper on "The Credit System" would form an interesting and helpful feature of the S. A. F. O. H. convention at Philadelphia next August. Respectfully submitted to Secretary Hauswirth.

By Way of Reply.

Editor Florists' Exchange:

We were interested in your article under the above heading which was in the nature of a reply to remarks by R. T. McGorum, in the issue of *Horticulture* for April 20. We must confess to being much amused at the persistent policy of *The Florists' Exchange* in heralding itself as the only bona fide trade horticultural organ in the U. S. A. We will remember having a subscription returned from a Chicago contemporary some 16 years ago for not being "in the trade." At a much more recent date we were refused *The Florists' Exchange* for similar reasons. Competition has completely changed all this. We believe we are not far wrong when we state that any individual who is willing to pay \$1, no matter whether he is a gardener or florist, or not, can purchase *The Florists' Exchange*, and for that matter the other trade papers printed, without any inquiries being made as to his affiliation with the horticultural trade.

In regard to purchasing trade papers at cut rates, we entered a subscription for *The Florists' Exchange* with the well-known firm of W. H. Guild & Son, 120 Tremont street, Boston, for the sum of 95c. per annum. The time has gone by for tightening any cords in questions being asked; in fact, the price remained at 95c. until we told our friend, the New England representative of *The Florists' Exchange*, that his paper could be purchased by any one at cut rates. We presume he reported this to headquarters, for the price was advanced to \$1 the following season. We might add that no other horticultural trade journals are offered through this agency.

A whole volume might be written on the question of trade advertisements. Many of the advertisers in *The Florists' Exchange* send their trade lists to private gardeners, and are very willing to furnish them what they have to offer at wholesale figures. We think this is not fair to the trade generally, but it is done right along. There are now so many readers of trade papers who are not in business themselves, many of whom are looking for bargains, that the mere printing of a notice that "These advertisements are for the Trade only" amounts to very little. These self-same advertisers are very slow to turn down an order if it is accompanied with cash or if they are reasonably sure money will be forthcoming. The time has gone by for tightening any cords in horticultural trade journalism. Under existing circumstances, each and every one of the papers caters to some extent for the private gardener's support, and not one of them can afford to throw him overboard. The tendency of the times is rather to hail him as a good fellow and solicit his support, no matter whether it be to the S. A. F. O. H., the American Rose Society, Chrysanthemum Society, Peony Society, Dahlia Society or trade papers.

We are afraid, Mr. Editor, we have wandered away from the subject we started to write about. We are sorry we cannot now save that 5c. per annum on *The Florists' Exchange* subscription. We appreciate the fact that "Job" probably hath need of any stray nickels to purchase philosophical pamphlets with.

North Easton, Mass. W. N. CRAIG.

—The editorial "we" in the above communication rather startled us until "we" had read down to the signature, when, to our relief, we found it was just friend Craig. His "rambling" letter is divided mainly into four parts, all of it interesting. He avers that *The Florists' Exchange* is persistent "in heralding itself as the only bona fide horticultural trade organ in the United States"; of this we were totally unaware until so informed by Mr. Craig, and plead not guilty. But that *The Florists' Exchange* is the best "trade organ" in the country we have often averred—and still believe.

Competition has never succeeded in changing our subscription methods, but the United States government did, in that, not so long ago, it threatened to revoke our second-class mailing permit because we refused point blank to fill a subscription to an amateur who had sent in his dollar. All other publications are in the same boat, for Uncle Sam will not admit of any discrimination. This puts it directly up to the subscriber to keep his trade paper out of sight of the amateur. As to increasing circulation, if *The Florists' Exchange* had the slightest desire to enlarge its own, outside of the trade, it could double, nay quadruple its subscription list in twelve months.

Mr. Craig is dead wrong, so far as *The Florists' Exchange* is concerned, in his statement that we do not make any inquiry as to a new subscriber's trade affiliation. Almost all papers have a way of taking care of their own interests—we believe our interests are identical with those of the trade and govern ourselves accordingly. When Mr. Craig comes to New York, if he will visit this office, we will demonstrate to him how this is done. We do not particularly care to enlighten our contemporaries.

In regard to purchasing trade papers at "cut rates." Mr. Craig is probably a better gardener than he is a newspaper subscription agent, in that we gather he is unacquainted with their business methods. We have never seen any of the club or other lists published by the agency he refers to, so can't say whether we are listed by it or not. We do know that no subscription agency has, at any time in our history, been authorized by us to take subscribers for *The Florists' Exchange* outside of the trade, and much doubt that any agency has ever been authorized to take subscriptions at all for this paper. We do know that no subscription agency can obtain our paper for a customer at less than one dollar per annum; this should be sufficient to discourage even the most enterprising of this very energetic class of business getters.

Mr. Craig says that a whole volume might be written on the question of trade advertisements. He is quite right; but, again, evidently unaware that volumes are being written monthly, almost weekly, on this very subject. We have often thought of writing a brochure ourselves, but have to date refrained, purely out of consideration for our friends. When we do get down to the subject a cautionary foot-line, repeated on every page, will be—"Do not let an outsider see your 'Trade paper.'"

In the meantime, and until the millennium, those florists who best consider their own interests will refuse to sell goods to an outsider at trade prices. That is their privilege, their right and their duty. Here is a propaganda the S. A. F. O. H. should initiate; it would be of more value than essays or even a president's reception. Interest the trade by teaching them how to put money in their coffers; endeavor to set a standard of values, wholesale and retail, for the grower. Educate the grower on cost, and more uniformity of prices will follow.

Mr. Craig says: "The time has gone by for tightening any cords in horticultural trade journalism. Under existing circumstances, each and every one of the papers caters to some extent for the private gardener's support, and not one of them can afford to throw him overboard." Mr. Craig is right and we quite agree with him in the main. The private gardener is entitled to any literature published, trade or otherwise—all except he, who to truckle favor with his employer, endeavors to purchase goods for the latter at trade prices, a right to which the employer is not entitled. The employer has possibly a right to a rate on quantity orders, but not to a trade rate.

Finally, for Mr. Craig's information, we will say that "Job," not having seen this reply, it may lack in that worthy's philosophy, polish and satire. Mr. Craig's letter is published and answered for the reason that *The Florists' Exchange* is sincerely desirous of conserving the best interests of those who represent horticulture and its allied industries, and will welcome practical advice along this line from all who have such to offer.

S. A. F. O. H. Wins in Express Rate Case.

The Inter-State Commerce Commission has rendered its opinion in the case brought by the Society of American Florists and Ornamental Horticulturists against the United States Express Company in the matter of the rate charged on cut flowers from New Jersey points to New York City which, it was asserted, was unreasonable, excessive, and unjust. This rate till July, 1906, was 50c. per 100 pounds, and at that time was raised to \$1 per 100 pounds. Commissioner Franklin Lane, who delivers the opinion of the commission, holds that the rate should be reduced to 60c. per 100 pounds.

The express company defended its increase by asserting that the delivery service given cut flowers in New York was much more expensive than that given other articles, and it could not increase its rate a sufficient amount to meet the expense of this special service without largely increasing the total rate, because of its contracts with the railroads, under which it was required to pay 45 per cent. of its gross receipts to them.

From the opinion of Commissioner Lane it appears "that the United States Express Company has contracts with the Delaware, Lackawanna & Western Railroad Company by which the railroad company receives 45 per cent. of the total gross receipts of the express company; that the service rendered by the railroad company is no greater or different under the new rate of \$1 than it was under the old rate of 50c." The Central Railroad Company of New Jersey receives 43 per cent. and the Lehigh Valley Railroad Company 40 per cent. under the same conditions. Agents are also paid on a percentage basis.

The opinion continues: "Elaborate tables have been presented by the defendant tending to prove that the rate of 50c. was unremunerative, owing to the percentage which it paid to its agents and the cost of delivery in New York. From these same figures it can also be adduced that the present rate of \$1 is unremunerative; and it may well be said that from an analysis of the charges made upon any single commodity or class of commodities transported by this company a similar result should be arrived at."

"In order to increase its business, the express company gives an especially prompt service to flower raisers. There is no evidence that this is not done by all express companies or that it does anything with respect to this traffic which transportation companies do not generally do as to certain classes of perishable freight. But, admitting that an extra return should be made over and above that received for the carrying of articles generally transported by express, no reason has been shown why the railroad charges and agents' pay should be doubled, excepting that the express company has to pay double the amount under its contracts to its agents and to the railroad company—a necessity or condition which we cannot recognize as controlling as to rates."

"The defense of this rate is not at all unlike that which a railroad might make were it to attempt to show that the value of the service which it renders was based upon contracts made with its bondholders by which the latter were entitled to receive a proportion of the proceeds of each individual rate no

matter how grossly excessive the resulting amount might be. Neither this commission nor the courts have given sanction to any such inequitable and unscientific method of rate adjustment.

"An express company cannot justify a rate which, in comparison with other rates, is excessive and unreasonable by showing that it gives a service that is exceptionally expensive, where the burden of the rate is charged therefor falling upon the shipper increases an already sufficient return to the railroad. An express company is entitled to charge a reasonable amount for the service which it gives, and this service, being partly rendered by its own agents and employees and partly rendered by a railroad, it cannot justify a rate by the production of its own contracts made with the agent and the railroad.

"To pay the agent a commission instead of a salary, and to pay the railroad a percentage instead of a fixed amount, or a mileage, or a tonnage, may be, practically, a very satisfactory arrangement between the express company and the railroad and the agent; but from the standpoint of the public such an arrangement cannot be held to support the reasonableness of any rate which the express company may choose to charge. What if the express company had contracted with its agent to pay him 50 per cent. of all gross receipts, or with the railroads to pay it 90 per cent. of such receipts?

"Such contracts are entirely between the parties themselves. They are not in the nature of fixed charges, because they are not fixed, they move upon a sliding scale, dependent entirely upon the rate. And it would be against the highest public policy to permit rates to be controlled by such contracts, because such practice must inevitably tend to promote the increase of rates on express service. The railroads could, through such contracts, control the rates to be fixed by the express companies, and it would be to their interest always to increase rates so long as the traffic would move thereon, for thereby their portion of the receipts under the contract would be increased."

The order of the commission requires the United States Express Company to desist from charging the one dollar rate after June 15, and directs it to put in a 60c. rate from Chatham and Somerville, N. J., to New York City; a 72c. rate from Allentown, Pa., to New York City, and from Philadelphia, Hillside, and Dorranceton, Pa., a 90c. rate. The order also directs the reduction on rates on empty flower boxes from New York City to the points named to the merchandise rate of 50c. per hundred pounds.

The question of reparation to injured shippers is held in abeyance subject to proofs to be taken.

The ruling of the Inter-State Commission will meet with the approval of the entire florist trade, notwithstanding the fact that only a restricted locality is affected by the result; inasmuch as it demonstrates the potency and usefulness of the S. A. F. O. H. in matters of this kind. The decision will also tend to allay all apprehensions, for the time being at least, regarding an increase in express rates generally, which, had the case been decided adversely to the national society, it was feared—and by some positively asserted—would result.

The United States Express Company has also been taught that contemptuous and contemptible treatment of an organization representing national trade interests is not the wisest thing after all; and that the rights of its patrons cannot be indifferently ignored with impunity. It is to be hoped that the lesson this grasping corporation has received will prove a permanently salutary one.

Above all, the least that those benefiting, both directly and indirectly, from the successful outcome of the efforts of the S. A. F. O. H., in the direction indicated, can now do, is to show their appreciation of the society's endeavors on their behalf by affiliating themselves with the organization—something from the doing of which a majority of the immediate beneficiaries have so far refrained.

THE TARRYTOWN (N. Y.) HORTICULTURAL SOCIETY, one of the most progressive organizations of its class, has set an example to other horticultural bodies of like nature, by deciding to lay out and decorate the grounds surrounding the new hospital of that town, exclusive of the rough grading. Practical work like this, and for such a deserving purpose, reflects the greatest credit on the society's members, and is sure to bring its own reward. It is worthy of emulation everywhere. Show the inhabitants of your town or village that you are interested in matters that make for the common weal, and interest in your own organization and its operations is bound to follow.

Sweet Pea Sports.

Editor Florists' Exchange:

Replying to Ant. C. Zvolanek, he admits that I purchased no seed from him prior to the Summer of 1906, therefore that part of the controversy is closed.

As to sweet peas sporting, my view is unchanged. In your last week's issue Messrs. Weston and Dicks set forth facts on the subject that cannot fail to convince the most skeptical.

Ronks, Pa.

CHARLES M. WEAVER.

OUR READERS' VIEWS

Winter-Flowering Sweet Peas.

Editor Florists' Exchange:

I have been very much interested in the articles on Winter-flowering sweet peas which have been appearing in your paper. I am a grower of this class of sweet peas, but not an originator. My experience dates back from the time they were first disseminated. To give the reader an idea of my observations with this class of sweet peas, the area devoted to their cultivation here should be kept in mind. We have grown for the last four years one-half acre under glass, from which are picked a daily average of 10,000 blooms through the Winter months. Two years preceding this, one house, 30x200 feet, was devoted to their culture. I have bought seed from the most reliable sources I could find. We do not save our own seed, as the blooms are worth more than if they were allowed to mature seed.

Now, if sports are of such common occurrence as some of our friends would try to make us believe, how is it that I have as yet never seen one sport here? From seed bought of Earliest of All, Mont Blanc and others, I have had plants of other varieties, but none of these are sports, as each variety was a distinct plant. One might just as well say that a batch of carnation seed will come true to the parent plant; how many do this?

My belief in regard to these stray plants is, that they are crosses which had taken place when their parents were in bloom, either by hand or by some insect. This can be clearly understood, as a great many of this class of sweet peas have their pistils and pollen fully exposed, and I have often seen bumble bees manage to get into the pollen.

Now let us see what is a sweet pea sport. I would say a sport was a growth on the parent plant bearing a different colored flower. But the parent plant must also be there bearing its flowers, otherwise how are we to know it is a sport?

Let us consider what Mr. Englemann says. He states: "The Winter-flowering sweet peas, mine as well as the American, are all sports of the ordinary kind," and goes on to mention that the white sport of Emily Henderson (by which I suppose he means Mont Blanc) and the early pink one, sport of Blanche Ferry, are sports of these varieties; also that Sunbeams is a color sport of Mont Blanc. Now in sports one usually sees some characteristic of the plants from which they sported; but in these we find none. Mont Blanc does not take after Emily Henderson, not even in color, growth or foliage. The same may be said of Earliest of All; there is not the slightest characteristic of Earliest of All in Blanche Ferry. The same remark applies to Sunbeams and Mont Blanc; not in one particular do these two look alike.

Mr. Englemann says Captain of the Blues sported with him four years ago, but he does not state what the parent plant was, so I take it for granted that his sport, so-called, was a chance seedling among some other variety. It is a common thing to see Captain of the Blues among sweet peas of other colors. He also mentions Dorothy Eckford, Lady Grisel Hamilton, and Miss Willmott as sporting with him from the late flowering to the early flowering class. Now if Mr. Englemann will produce the growers who saw these sports and examined them, and who are positive that these early flowering shoots were blooming on a late flowering plant, and the parent plant came into flower after the early flowering part had gone past, and that from the seeds saved from this sport came the early flowering kind, then will I believe he has sports. I would advise Mr. Englemann not to blow his trumpet too loud until we have seen and judged.

We here all know what Zvolanek's varieties are, and that there is still room for improvement. I have been a close observer of Mr. Zvolanek's methods for years, and I must say I never saw a sport at his establishment. I have seen whole beds of hybrids in all stages, and I might say I have seen the whole process from crossing to flowering. Now, if Mr. Englemann's varieties are so much superior to the American, why do we not hear more about them? If I think them better than what we have here, I want to buy some of them.

Zvolanek's are well enough known here not to need any mention, but to those who do not know them I would say, he has in the early flowering type practically all the colors seen in the common varieties. The only colors he does not have, to my knowledge, are those mentioned by Mr. Weston, which, I imagine, are next to impossible to secure in sweet peas.

Now we have Mr. Weaver, who has sports growing on his place without any effort to produce them. Would Mr. Weaver be kind enough to tell us what he would have, if he made an effort to secure new sorts? Mr. Weaver will have to explain things a little better before we believe he has sports. He says he saw three vines among his Earliest of All which bore flowers white, flesh-colored and scarlet. There is nothing unusual in this; in fact, it is an ordinary occurrence. Now, Mr. Weaver, if these colors are growing on the roots of Earliest of All I will believe you have sports. I notice

that Mr. Zvolanek examined these plants. What do you say, Mr. Zvolanek? Were these sports or independent plants? It is quite possible Mr. Weaver's seed was mixed when it was bought from Dreer, as they could not tell whether it was or not, even if they grew these seeds and kept close watch on them.

We find Mr. Weston taking Mr. Zvolanek to task for not yet seeing sports among sweet peas, and he goes on to mention a list of sports and breaks among the ordinary kinds. Why does not Mr. Weston mention sports and breaks among the early flowering kinds? It is these that are under discussion.

Now we have the much-talked-of Algerian strain, which turns out, by the way, to have been imported originally from America. And the man who received the seed receives a gold medal for being the originator of this class of sweet peas in Algeria! As I understand it, all these American, English and Algerian sweet peas are to be grown and tested in England to see which is the best. Would it not be well to have the same test made here? I will be willing to give the space and bear the expense of growing. Then the test will not be one-sided; and I think I can grow any of them as well as it is possible to grow them. A committee from our Florists' Club or the Massachusetts Horticultural Society could decide which were the best.

As to the vetch theory, I must say that I have never seen anything in this class of sweet peas that would indicate that there was vetch blood in them. I believe the first early flowering sweet peas were crosses which came about more by chance than good management, and after they were once observed the matter of increasing the varieties became simple.

WILLIAM SIM.

Cliftondale, Mass.

Frederick E. Shaw.

Frederick E. Shaw, florist, Utica, N. Y., died at his home there on April 28, 1907, after an illness which covered a period of about two years. Mr. Shaw was born in North Bay, on September 16, 1851. His early years were spent in Minnesota, where his parents moved when he was a child. When he was 18 years old Mr. Shaw went to LeMars, Minn., where he entered the hanking business, and for about fifteen years he was the vice-president of the First National Bank in that place. He was the cashier of a bank at Ravenna, Neb., for eight years, and in 1895 he took up his residence in Utica and engaged in the florist business. He bought the Davies greenhouse on Sunset avenue and gave it earnest and careful attention. Two years ago he was forced to give up active labor because of poor health.

Mr. Shaw was a member of Westminster Church. He was a man who won the respect and the goodwill of all who came in contact with him, either professionally or socially. He leaves a widow and two children.

John L. Bingham.

John L. Bingham, florist, of Oyster Bay, L. I., died at his home on Tuesday night, May 1, 1907, of typhoid pneumonia, at the age of 33 years. Mr. Bingham was a popular and enterprising man and was identified with many fraternal organizations; he also took an active part in town affairs. He was clerk to the Board of Education, and was elected on the Republican ticket at the last town election to be assessor. He was a member of the Nassau County Horticultural Society, and took part in many spirited debates there. He was also a Past Regent of Arbiters Council Royal Arcanum. Mr. Bingham was also a member of Martinecock Lodge, F. and A. M., and served as Junior Warden and Senior Warden. He also belonged to Melchizedek Chapter, Royal Arch Masons, and served as Master of the Third Veil. His funeral was largely attended by delegations from all the organizations, as well as many friends. Interment was in Memorial Cemetery with Masonic services. His demise is deeply mourned by all, and their sympathy goes out to his widow and four small children.

W. F. Stone.

W. F. Stone, proprietor of the Locust Grove greenhouses, Boise, Idaho, died April 28, 1907, of heart failure. He had been ill for some time, not serious enough to keep him in bed, but enough to make his family and friends apprehensive for his condition.

Mr. Stone was about 60 years of age. He went to Boise about 16 years ago. He leaves a widow, one son, R. V. Stone, and a daughter.

Mrs. Mary A. Irwin.

Mrs. Mary A. Irwin, mother of Mrs. Albert M. Herr, wife of the general secretary of the American Carnation Society, Lancaster, Pa., died on Sunday, May 5, 1907, in her 64th year. The funeral was held on Wednesday, May 8, at the Upper Octoraro Church.

The Equipment and Organization of a Modern Horticultural Establishment.

Read by J. Otto Thilow of Henry A. Dreer, Inc., before the Philadelphia Florists' Club, Tuesday, May 7, 1907.

In By-Gone Days.

The consideration of this subject lends more interest when we compare the aggressive modern establishments of the present time with those of thirty or more years ago. Then, in the absence of the enticing catalogue and the undreamed of trade papers, the grower's chief aim was to have a full supply of salable plants in bloom at the opening of the Spring season. The stock consisted of all the then known varieties of every species of bedding, basket and ornamental plant. The florist's market was any point that he could reach. The best which showed the greatest amount of endurance was hitched to the market wagon, the assistant or son, daughter, or even the wife was assigned to the task of visiting the neighboring towns with a load of plants in bloom.

This method ended with the Spring months, and the left-over stock was either advertised at bargain prices in the local papers, or thrown away as surplus.

The growers who were adjacent to cities were represented in the markets, occupying one or more stalls with the most attractive stock. At the close of the season the general routine of work was followed, that of planting out and caring for the stock plants and blooming stock for the following Winter months. The equipment of these establishments was varied, as a greater variety of plants could be found in the collections of the florists of those days than now.

The organization was modest, yet complete, as the florist and his family constituted the faculty, with extra help if needed. The duty of each was to understand the general routine of work from the office to the stock-hole, the system requiring every one to work for the one aim, that every available corner be filled with attractive stock and in bloom for the Spring season.

Value of Woman's Assistance.

The florist of the early and even the present day, has always found the wife an important factor in the organization; her judgment and ever untiring interest are indispensable; she has been the helpmeet and always will be as long as her interest in horticulture continues; woman's influence contributes almost altogether to the remarkable demand of the present day. Due credit is not given her for what she has accomplished; she is today prominent back of the counter in the florist's shop, and deeply interested in the work of the greenhouse establishment.

Woman was the first to give us a treatise in horticulture in this country; this honor fell upon Mrs. Logan, a florist of Charleston, S. C. This she did at the age of seventy years, in the year 1772.

A Comparison.

In referring to the horticultural establishments of the early days, I would not pretend to say that they were not active and lucrative for the growers. Many of the veteran florists were known to you, some of them living to-day who enjoyed their years of toil with good prices for their product. There are establishments existing to-day with modern methods, which pursued the routine above mentioned, but keeping pace with the changes demanded by the advance in commercial horticulture, they have branched out as specialists, and are classed and known as such in the trade.

It has been noticeable that certain stocks were best suited to certain localities, and to these the growers concentrated their efforts to the greatest improvement of such stock. This method has met with general success, inducing constant extension and enlargement of facilities, demanding modern construction, heating, ventilating, simple and economical methods of handling and shipping.

This condition seems to have asserted itself within the last twenty years, and has advanced the interest and the growth of the business in general, in that the growers depend on each other for special stocks, hence the florist of the present time is retail in general stock, and wholesale in special stock.

Their dealings have become reciprocal, the trade papers have entered upon the field, and all seem to be doing a thriving business, and through this medium the enterprising florists know more of each other and the skill of those in special lines.

An Example of Modern Progress.

From my own limited observations, I can say but little of other large and aggressive horticultural establishments except the one with which I have been connected for the past quarter century. Having observed the advancement and growth of this establishment, which is keeping pace with the increasing demand, largely through their own catalogue and the influence of horticultural magazines and rural home publications which are creating an intense taste among the plant and flower-loving people of our country. And what is true of the department offering the subject for this paper, is true of other aggressive establishments of this country; that

organization must be commensurate with modern equipment, so with your suffrage I beg to point with pardonable pride to the plant department of Henry A. Dreer, Inc., at Riverton, N. J., under the able management of J. D. Eisele, the vice-president of the company. I therefore make bold the assertion, that with the advance and increase in each branch of this department, may we not modestly assume it to be among the modern establishments in equipment and organization?

Stocks in Demand.

The trend in recent years has been very decided in the attention given to perennials. Many works have been published treating entirely on the old-fashioned or hardy garden. The amateurs seem to enter into this line with new zeal year after year, so that this department has grown to the enormous extent of 2,000 varieties, requiring forty acres to perpetuate the stock.

The interest in aquatics is a development of the past twelve years, and has extended from this country to Europe. Fully six acres are now devoted to this branch and many of the best introductions of recent years are of American origin.

Twenty years ago it was considered a bold plunge to devote one house, 12x100 feet, to ferns. Since 1898 over one acre is given to these, and fully a quarter million are in readiness for immediate market, and one and a half million are handled every season.

SCHIZANTHUS WISETONENSIS

For culture of Schizanthus, see page 619 issue of May 4.

Photo by John F. Johnston

Palms form the leading decorative plant. From the owner of the conservatory to the occupant of a flat embellished by a fire escape, the palm has a place, and is essential in the collection of plants for home adornment. These alone occupy four acres of glass. Seeds of the important varieties are imported from their native haunts, the most prominent being the kentia. These are sown in hatches of from 75 to 100 bushels at one time. Other varieties are used in proportion. The palm industry with that of the fern, is practically a development of the past twenty years.

The dahlia was somewhat obsolete for a number of years; has been resurrected, and many new varieties and new types have been introduced. Ten years ago less than six thousand constituted the stock, 75,000 in 1904, and now the enormous number of 300,000 is necessary to meet the demand, requiring 50 acres for maintaining the stock.

The demand for the ever popular azalea is still on the increase, ranging from 150 plants imported in 1876 to the present requirement of 60,000.

Roses for outdoor planting are among the very important of Spring stock, and have made the most marked increase—from 6,000 eight years ago, to 200,000, the present requirement.

Enumerating the above is only to show the advancement made in commercial horticulture along the line of specialties; much other of the varied stock is grown in proportion to the demand.

The Necessary Equipment.

To harbor and maintain an equipment of such magnitude, extensive glass and open area is necessary, besides many accessories with which to carry it through from season to season, viz: a glass area of from seven to eight acres of modern construction in greater part. Boiler capacity of 850 horse power which consumes 3,000 tons of coal per annum. Water capacity for all used, 300,000 gallons per day. A fumigating house of special construction as required by the State laws, for hydrocyanic acid gas, for safeguarding against even an incipient presence of scale. A complete machine shop, operated by steam power, for repairing and constructing, and supplied with saw table for cutting lumber to required sizes for cases and crates for shipment, also a carpenter shop in constant operation. A cold storage area for storing stock for Winter and early Spring shipment to Southern points. Experimental grounds for the thorough testing of new varieties of plants of foreign and home production. A supply department which is under control of one who knows the value of preventing waste. All supplies, from office stationery, tools for machine shop, and every utensil needed in under glass and open ground, to the most minute item, is guarded with vigilant exactness, replenished before exhausted, and distributed only as needed and upon orders, the working force of this establishment being 150 men, among whom are twenty order clerks, and thirty-five packers.

A horticultural establishment thus equipped requires systematic organization to cope with the ever increasing demand of the eager plant-loving public, and as the pressure and bulk of the business is confined to the short period of Spring operations, the strain is severe upon those on whom the responsibility falls. The force must be divided and assigned to the various branches, the heads of each force to assume the responsibility for the accomplishment of such work to which he is delegated.

The staff must be headed by a manager, vigilant and capable, assisted by an office force of skilled horticulturists who take up the details and carry them to completion, answering all inquiries of the departments to which they belong. He must be able to answer inquiries on all subjects in horticulture, and give information leading to same; advise the inexperienced regarding plants. He must be a fund of information, one on whom the enthusiastic amateur can and does draw freely. He must be in constant touch with his trustworthy and capable heads of each department, who with him formulate plans for the seasons ahead, anticipating the demands which catalogue and other advertising mediums might inspire.

The propagator, a dependable personage, must be capable, one with good judgment in regulating the stock quantities by general conditions and species. Only by close application and years of practice and study, does he become familiar with the wide range of plant conditions and the care of same, observing through all his work, that careful labeling is imperative. He is to propagate in such quantities as the manager may direct.

The packing department is an important one. While the order clerks may do their work carefully and to all appearances completely, yet the packer must again check up before he finally packs for shipping. He must use judgment as to the duration of transit and pack accordingly, to guard against weather conditions at destination and in transit, to pack consistently light to save heavy transportation charges. After he is through he passes the case or cases over to the shipping department, after making a record, marking date and time of his release of said packages.

The shipping department must be under the supervision of one who knows how, when, and where to ship, first by the most expeditious and cheapest route; second, at a time when safe against severe weather; third, to a point most accessible to the consignee. He is to be provided with the latest shipping guides, and be in close touch with carrying companies so as to keep himself informed of the most expeditious routes. Thus it requires one of keen scrutiny regarding shipping rules and conditions, so that the perishable stock he delivers is promptly and safely transported to destination, marked carefully and attach certificate of inspection of State Entomologist.

The modern horticultural establishment should have a corps of travelers, who have a knowledge of the stock besides their catalogue information; they must anticipate the wants of their patrons, knowing the special line of each one. They should be practical plantmen, and in all their transactions advance the integrity of their house.

The Mission of the Catalogue.

The catalogue of the modern horticultural establishment is now an indispensable medium, finding its way into the remote corners of the globe. It is the feature on which the mail trade depends as well as that of the customers who are within reach. This medium must be new every year and full of information in order to appeal to the prospective buyer.

Since the half-toning process from photography gives such real reproductions, the plant catalogue like the magazine, becomes a household pleasure and must be in

the hands of the patrons early enough to be consulted before the close of Winter when open air work is being eagerly anticipated.

The work of compiling this volume must be in the hands of one who has practical experience in all departments, as information given through a reliable catalogue is taken as authentic. It has become as much of an educator as the horticultural magazines, and must therefore be resplendent with new matter and illustrations. As photography enters largely into its compilation, a fully equipped department must be provided to observe every opportunity through the seasons for the reproduction of new features.

The one having all catalogue matter in charge should also provide the advertising matter fresh and varied for the trade papers and other mediums.

The Cut Flower Trade.

I have touched only superficially on the subject of equipment and organization, and have only cited that of the plant-producing industry. A large, if not the greater part, of those engaged in commercial horticulture are interested in cut-flower growing.

Near the busy marts of this country and of Europe are to be found extensive glass structures which find ready market for their immense product. These, too, are almost entirely given up to specialties, such as are best suited to soil, climate and conditions of their locality, and to these all forces are concentrated. I have visited some of these establishments in the East, and note from the excellent system adopted, and the success achieved, that it is entirely through proper organization and up-to-date equipment. The structures are modern in every detail. The force is divided into sections and to each of these is allotted the care of a block; the cutting, packing and shipping is in care of experts, who through long experience have learned to confine their efforts to types and varieties susceptible to the greatest improvement under intense cultivation. It is true, also, that the quality of the produce from improved varieties has greatly increased the demand and engendered a wider taste.

Proper organization is essential to the economical and successful operation of a modern horticultural establishment, more especially to see that it does not and should not increase the detail of labor of the management, but be divided among the various heads of departments in whom confidence should be reposed.

A Decade in Business.

The West Grove (Pa.) Independent, of April 25, 1907, contains a brief sketch of the firm of Conard & Jones Company, showing the success the concern has achieved during the ten years of its existence. Accompanying the sketch are portraits of these officers of the company: Robert Pyle, president; Antoine Wintzer, vice-president and propagator; and S. Morris Jones, treasurer.

Of Mr. Wintzer's work it is humorously said: "He has no peer; give him the handle of a broken garden rake and the root of a skunk cabbage and he will evolve a dainty, graceful bloom that will ornament a bridal dinner at the Bellevue-Stratford." But the real worth of this successful painstaking propagator's labors is shown by the statement that he has originated no fewer than sixty fixed and standard varieties of cannas, and a large number of new roses.

Regarding the personnel of the working staff, it is stated that Mr. Wintzer's chief helper is his eldest son, Louis, trained from boyhood in his father's footsteps. Others long skilled in the service are John Drennan, Simon Groff, Milo Weitzel, Chas. F. Brown, Donald McKay, John Brown, Wm. Floyd, Frank Harrison, Albert Brown and many more. Among his assistants this year Mr. Wintzer numbers a young Englishman, F. J. March, of the Royal Agricultural Gardens, near London. Mr. March is making a special study of canna growing, with a view of perfecting the cultivation of this splendid decorative plant across the sea. In this line of work Donald McKay, long a C. & J. expert, excels. In the great lower packing house, Roland T. Satherwaite, secretary, is Chief of Packing Department, having entire control of this important duty.

The general offices of the company are apart from the plant proper, being a large roomy building near the private grounds of the late Alfred F. Conard. No less than thirty-six clerks and stenographers are required during the busy season. Here are the private offices of President Pyle and Treasurer Jones, each with his stenographer. Miss Jessie C. Gray is superintendent over all, with S. J. Todd in charge of "marking-up" orders, Miss Mary Coletraine that of recording, while Miss Julia Drennan has charge of the seed department. John Barclay Jones assumes charge of the cashier's department, with Miss Sara Storey as assistant.

A complete telephone system with private exchange connects all departments. Upstairs is the mailing department, where more than a third million pieces of advertising is handled annually. A landscape department is attached, and this with the advertising is in charge of the president. The wholesale business centers largely with the treasurer.

"Back of the phenomenal success of this firm now ending its first ten years' term of business, is the spirit of co-operation. Annually is divided among the employees of good standing a share of the profits, insuring loyalty and intelligent service. Nor does this spirit end here, for the firm not only offers its resources but invites the co-operation of West Grove and adjoining residents toward an intelligent plan of beautifying local surroundings. Nothing is too small but to command instant attention and helpful support."

The business of the Conard & Jones Company extends from Augusta, Me., to Timbuctoo, Africa.

The Bracken as a Food.

On several occasions we have discussed the common bracken (*Pteris aquilina*) as an article of human food, both in this country and as used by the Japanese, says The Gardening World, London, England. Some of our friends give the ferns a very bad name during the process of cooking, but possibly they did not adopt the proper plan with this particular vegetable.

An article on the subject under the aegis of some one in connection with the State University, Seattle, Washington, appears in the American Botanist for March. Here the bracken is very highly commended as a nutritious article of human diet. The principal points to observe would seem to be to select the tender stems of the bracken from the time they appear above the soil until the frond commences to unroll. Even then only the tender top portions are selected before the tissues become hardened and tough. Practically this applies to asparagus and the two would appear to have very much in common when cooked.

Certain people complain of a bitterness in taste of these young stems, but the Americans have discovered that the bitterness is confined to the hairs covering the young stem and frond. The frond itself would take too much trouble in preparation and is therefore rejected. After suitable lengths of the young stem have been selected a hard brush is obtained and with that the hairs on the stems are brushed off.

To have a dish of ferns with white sauce the stems are cut into pieces one inch long and boiled for forty minutes. The water is poured off and a white sauce prepared, and after seasoning with butter, pepper and salt, the ferns are served warm. Fern greens are dealt with in the same way and cooked for forty or fifty minutes. The first water is poured off and boiling water is added, and the cooking continued for ten minutes. These greens are then eaten after seasoning to taste. Fern salad has two eggs added, a piece of butter about half the size of an egg, a teaspoonful of mustard, some pepper and salt, and a teaspoonful of vinegar. These are cooked over a fire like a soft custard. To get ferns on toast, the stems are cut up into pieces of equal length, boiled with a fair quantity of salt, and when the ferns are eaten some pieces of bread are cut up, toasted, and then dipped into the liquid in which the ferns are boiled. The latter are placed on the toast and covered with a white sauce or melted butter. They are also eaten with eggs, for which a recipe is given.

It is declared that the fern stems are softer than asparagus, less woody, and that the flavor suggests almond to many tastes. In food value it is closely similar to

cabbage, and in several respects superior to radishes, asparagus, tomatoes, lettuce, celery and cucumbers. We may state that the bracken is a native of Western Oregon, Washington and British Columbia. Under the shade of trees it varies from 3 to 8 feet in height, or even to 14 feet in hollows where the soil is rich and moist. It is claimed that the bracken reaches its highest development in that part of the world.

CLUB AND SOCIETY DOINGS.

NEW JERSEY FLORICULTURAL SOCIETY.—

The usual brilliant orchid display was this month varied by a collection of calceolarias from the Colgate Estate, grown by William Reid, and the exhibit as a collection was varied by the introduction of various specimen plants producing breaks in the continuity of it on May 3 in the society's rooms. The Julius Roehrs Company sent from their orchid collection, *Cattleya Mossiae*, *Laelio-Cattleyas* Martinelli and white Mendelii, and *L. purpurata*. Joseph A. Manda had *Cyprripedium Morganiae*, a hybrid of *C. Stonei* × *C. Veitchii*, and *Cattleya* William Murray, a hybrid of *C. Lawrenceana* × *C. Mendelii*. George C. Graves exhibited *Cyprripedium callosum* Sandersae, *Vanda tricolor* and *Miltonia vexillaria*. John Crosby Brown (Peter Duff, gardener), showed a specimen *davallia*; Chas. Hathaway (Max Schneider, gardener), carnations *Enchantress* and *Victory*, and *antirrhinum*. The Colgate Estate, besides the calceolarias, had a specimen *Medinilla magnifica*, which was awarded 97 points; Stewart Dickson (Albert Lerson, gardener), specimen *fuchsia*. An interesting collection of pansy blooms in plates from John White, Elizabeth, N. J., from his own selected strains, was shown. The judges for the evening were John White, Jr., Arthur Caparn and Joseph A. Manda.

The paper of the evening, upon "Landscape Gardening," by John White, Jr., was both historical and descriptive. The speaker defined both European and American methods and was happy in his suggestiveness of various artistic combinations.

The business portion consisted of letters read from Chas. Munn in recognition of resolutions of condolence passed at the last meeting, and from the Georgia State Horticultural Society, American Civic Association and Centennial Association of the Oranges, asking for the active co-operation of this society; reports of the progress of the guarantee fund for the Fall show and the setting of the date for this—November 6 and 7, and of the rose night for June 7. J. B. D.

TARRYTOWN (N. Y.) HORTICULTURAL SOCIETY.—The monthly meeting of the society was held April 30, President Howard Nichols in the chair. Four magnificent specimen calceolarias in 6-inch pots were exhibited by Mr. Atkinson, gardener to Henry Seigel, Esq., Mamaroneck, N. Y., who was awarded a cultural certificate. Mr. Atkinson also received a similar award for two plants of *pelargonium*s. Robert Allen, gardener to E. C. Benedict, Esq., Greenwich, Conn., was awarded a cultural certificate for a cluster of tomato *Princess of Wales*, there being 23 good-sized fruits on the cluster. The monthly prize for two foliage plants was awarded to D. McFarlane for *dracena* Lord Wolsley, and *croton* Lady Zelland.

Henry Seigel offers a silver cup for the best table of ferns and flowering plants at the Fall show. The society voted to donate \$25 towards the fund for the proposed new hospital, and to make a charge of twenty-five cents admission to the June show, the proceeds to be turned over to the hospital fund; also to lay out and decorate the grounds around the new hospital exclusive of the rough grading. D. M.

Syringa Marie Le Graye, Pot-Grown.

For forcing purposes the pretty white lilac, Marie Le Graye, is a general favorite with florists. It is a good one to flower and a good one to force. Many lilacs are shy bloomers, disappointing when forced; not so this one.

But all lilacs bloom better when pot-grown than when in the garden, the checking of the roots which pots give being conducive to flowering. For this reason it is the best plan to grow lilacs in pots a season in advance of their being used for forcing. The accompanying illustration shows a plant that has been in its pot some time. It has been cut back, to cause shoots to form from near the pot. This cutting back insures good shoots; and the dwarfing of the roots by potting secures flower buds, which is not the case to the same extent when the plant is growing freely in the open ground.

The beauty and fragrance of the lilac insures the sale of the plants any time, if before those in the open air are in bloom.

The photograph is of a plant in the collection of Mrs. Albert Wolfemate, Germantown, Pa. JOSEPH MERRIAN.

Syringa Marie LeGraye as a Pot Plant

Commercial Decorative Plants.

Palms.

Palms and ferns are still the leaders, and among the former the lack of variety is still marked, the same old species being presented year after year, though put up in slightly different styles by different growers, and on the whole of better average quality than they were ten years ago.

Kentias are still the leaders, and almost any of the others might be classed as a bad second, to quote the language of the track; and while the kentias undoubtedly merit the high position they have reached in the plant world, it may be just within the limits of possibility that some day there may be a slight reaction, such as is said to have touched the popularity of the American Beauty rose in some of the prominent markets of the country. But thus far the kentias do not seem to have reached their limit, and the fact remains

future, several of the pterises and nephrodiums being especially adapted for such culture.

Small ferns for table ferneries were used in great quantities the past season, but it must be somewhat of a trial to the retailer to have to use such poor and half developed stock as is frequently offered during the latter part of the Winter, for such plants do not last nearly so well in the fernery as those with well-matured foliage, besides requiring a double number of plants to make a show when filling a pan.

Very late potting is the cause of some of this poor stock, the ferns naturally starting away much more slowly when repotted after the end of October, even though they may have been treated to a high temperature in the hope of preparing them for the holiday trade.

Other Stock.

Pandanus seem to have been either in less demand or in much greater supply during the past Winter, or

DIRECTORY OF RELIABLE
RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 22 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Washington, D. C.

GUDE BROS., 1214 F Street, N. W. We excel in high-class flowers and design work of every description; quick service, reasonable charges and liberal treatment have placed us on top. Try us.

Milwaukee, Wis.

THE C. C. FOLLWORTH CO., Wholesale Florists, will take care of all your Retail orders for the delivery of flowers anywhere in Wisconsin.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLORAL CO., 1706 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Cincinnati, O.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dayton, O.

W. G. MATTHEWS, FLORIST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Dallas, Texas.

LANG, THE FLORIST, the largest flower store in the South. Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Texas, Louisiana. Mail and telegraphic orders solicited.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

Indianapolis, Ind.

BERTERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

gata, used to be grown to some extent for putting in fern pans, but of late years is seldom seen. This neat little plant might prove quite useful to some of those in search of a variety of stock for the retail trade. It keeps in good condition in a comparatively low temperature, say 45 to 50 degrees, propagation being effected by division of the creeping stems in the Spring.

W. H. TAPLIN.

Welch Brothers' New Store.

The illustration herewith presented shows the interior of the wholesale market of Welch Brothers, Boston, Mass., as it appears any ordinary morning when everything is activity and large quantities of cut flowers of all kinds are handled. This, the main floor, gives ample room for the unpacking and repacking of stock for the immense shipping trade which this firm has worked up through all parts of New England and the provinces. The products of over a hundred growers are here handled and the equipment of the entire establishment is up-to-date in every particular, having a complete cold storage plant and ample space for the loading and unloading of express wagons.

J. W. D.

Interior View of Store of Welch Brothers, Boston, Mass.

it may be conservatively stated that there is some little stiffening in the palm market, and that a few points higher still would not bring them up to exorbitant figures, when the increased cost of production is taken into consideration.

The fashion of making up these plants in groups, or clumps, or as our European competitors term them, "tufts," has added to the cost of the plants to the grower, while the increased demand has given the seed dealer an opportunity to give the seed market an upward turn, besides giving rise to rumors of a possible corner in this valuable commodity again this season. But the projected corner in kentia seeds did not materialize last year, and possibly the Harrimans and Gateses of the seed trade may let up on the innocent growers once more.

Ferns.

Among the ferns, those of the Nephrolepis group still occupy the most space, but during the past season were found in over-abundance in some localities, and consequently brought lower prices than heretofore; and there is some indication that various growers will curtail their output in some degree, there being a limit beyond which Boston ferns and the various relatives of that useful plant are comparatively unprofitable. These ferns occupy much space when grown properly, and \$25 to \$30 per hundred is not much of a return for plants in 6-inch pots, and there were many sold at about that price last season.

Some nicely grown plants of Pteris tremula in 5-inch and 6-inch pots were offered in moderate quantity last Winter, and were well received by the retailers, the plants in question having been evidently grown in a light house and well fed, the result being a compact well furnished plant of a good, healthy color. This is a plant of rapid growth, and would doubtless meet with some demand where a moderate priced fern was required. Large quantities of 4-inch and 5-inch ferns are used in the English markets, these being a part of the regular stock there, and there are indications that more of these sizes will be sold in our markets in the

possibly both. These causes may have contributed to the fact that these plants moved less freely than in former years. But well grown P. Veitchii usually find an opening, for many are used outdoors in the Summer, being placed in window boxes, in vases, and also in some cases having been used as a very effective edging to a croton bed.

Pandanus utilis was grown by the houseful only a few years ago, but now one would have to hunt around in many places to find a hundred good plants in 8-inch pots, if such were needed. The "spot," and also a lack of demand, are among the causes for the decadence of this fine plant, though seeds are still freely offered by the dealers.

And as to the Golden Pandanus, so-called, P. Sanderii, of which much was heard at one time—but what is the use of arousing painful memories? Suffice it to say that the demand does not near equal the supply, and the latter is not very large.

Ficus pandurata has made many friends on account of its easy culture and strong constitution, there being few foliage plants that are more enduring when exposed to dust and draughts than this fig, and it seems probable that a good market will be found for this plant during the coming season also, though at lower prices, strong 6-inch plants at \$3 each at wholesale, being too gilt-edged for a small dealer to handle.

Some plants of Aralia Veitchii and Phyllanthus nivosus have been used in basket work from time to time with very good results, both these plants adding to the variety in form and coloring that is required in this class of work; but the aralia is too slow in propagation to become a very common part of the stock used for this purpose.

Both these plants get along best in a warm greenhouse, but the phyllanthus is much easier to propagate than the aralia, the latter being usually grafted upon one of the easy rooting species of its own genus, A. reticulata being a satisfactory stock for this purpose.

The Japanese sweet flag, Acorus japonica varie-

New York.

The Week's News.

The next regular meeting of the New York Florists' Club will take place on Monday evening, May 13, when S. S. Skidelsky, Philadelphian, will present an essay treating upon the subject of the proposed national flower show, to be held in Chicago, under the auspices of the S. A. F. O. U., in November, 1908. Owing to some unforeseen circumstances, the New York Florists' Club is at present without a home, as the room in the Grand Opera House building has had to be vacated. Secretary John Young advises us that this meeting will take place in the Hotel Earlington, 55 West Twenty-seventh street, between Sixth avenue and Broadway, at 7.30 p. m. This is a very well located place for the meeting, and there should be a good attendance, as the paper by Mr. Skidelsky will, no doubt, be of great interest to all.

John Myers, who for forty-one years has conducted a florist establishment at 606 Amsterdam avenue, has to vacate these premises as the property is being cut up for building lots. Mr. Myers rented this piece of land from John Jacob Astor forty-one years ago, and has never had a lease on the property. When asking Mr. Astor for a lease that gentleman replied, "There may be changes; the city is likely to grow; suppose you pay me month by month," and for all these years Mr. Myers has been conducting his business with the possibility of a thirty-day notice to vacate hanging over him. The present value of the property is \$1,000,000, but the rent to Mr. Myers has remained the same as it was the first year he took it until the present time—\$500 per year.

Traendly & Schenck, wholesale florists, 44 West Twenty-eighth street, have made a valuable addition to their store room by putting up a substantial structure in their back yard, which connects with their store proper.

Wm. S. Parse, who for three years had charge of the Adiantum Farleyense growing for H. H. Battles, Philadelphia, Pa., has purchased from Wm. S. Dean the latter's interest in the firm of Dean & Parse, florists, Summit, N. J. The transaction occurred on May 1, and hereafter the name of the firm will be Parse Brothers.

Charles E. Robinson, who for fifteen years has been in the employ of F. R. Pierson Company, in their store at Tarrytown, N. Y., has joined partnership with H. W. Requa, and opened a retail florist store at 808 South street, Peekskill, N. Y.

George Garrecht has gone into the growing business for himself at Morris avenue, Summit, N. J. He has 600 running feet of greenhouse space and will devote it to roses and carnations.

Among the Spring lectures to be delivered in the museum building of the New York Botanical Garden at Bronx Park on Saturday afternoons at four o'clock are the following: May 11, "Jamaica, its Flora, Scenery and Recent Disaster," by Dr. M. A. Howe; May 18, "Water Lilies and other Aquatic Plants; their Relation to Horticulture," by G. V. Nash, and others. The lectures will be illustrated by lantern slides and otherwise.

On April 30 the firm of Wm. H. Brewer's Sons, retail florists at 428 Fifth avenue, was dissolved by mutual consent, L. D. Brewer retiring. In future the firm name of this old established retail store will be Wm. Brewer Son, and the business will be continued at the same address.

Last Saturday, May 4, at the stockholders' meeting of the New York Cut Flower Exchange, several new directors were elected, among them A. S. Burns of Woodside, L. I., and George Matthews of Great Neck, L. I. It was ordered that the market should be opened at 6 a. m. commencing with Sunday, May 5, instead of 5 a. m., as has been the rule during the winter.

Perkins & Schumann, wholesale florists, have moved from the ground floor of the Coogan building to more roomy quarters on the first floor of that building.

Sneak thieves got into the office of Hicks & Crawbuck, florist supply dealers, 76 Court street, Brooklyn, a few days ago, and cleaned out what loose change there was in the safe.

One day this week James McManus, wholesale florist at 42 West Twenty-eighth street, supplied 1,200 cattleyas to one retailer for funeral purposes.

The first peonies of the season ar-

rived in town Monday morning, and were seen at J. K. Allen's, wholesale florist, 106 West Twenty-eighth street.

Some of the West Hoboken florists who had their greenhouse glass broken and damaged by the dynamite explosion which occurred in connection with some of the tunnel operations in that neighborhood a short time ago, have made satisfactory settlements with the contractor who had the dynamite in storage and who is supposed to be responsible for the explosion. There are some of the florists, however, who are determined that they will make a settlement only on one condition, and that is, that they receive full value for every piece of glass broken by the explosion, consequently, it is just possible that the power of the law will be brought in to help collect from the contractor for some of the damages that occurred.

The many friends in the trade of the venerable Samuel Henshaw will hear with deep regret that he is ill, and has been for two weeks or more in the Smith Infirmary, Staten Island. Mr. Henshaw has long ago passed the threescore and ten mark, and is one of the most widely known gardeners around New York. It is believed that he is suffering from some cancerous trouble of the stomach, but his age precludes the possibility of an operation.

A few bunches of Southern lilac have appeared this week, but it is believed that we shall not be favored with much lilac from the South this year on account of the late frosts that have been so prevalent. So far as New York is concerned at this particular time, we think that the Southern lilac can be very well spared.

W. R. Smith of the National Botanic Garden, Washington, D. C., was in town Saturday, May 4.

Representatives of several express companies have declared that their companies were not affected by the recent decision of the Inter-state Commerce Commission in the rate case raised by the Society of American Florists against the United States Express Company. The companies which say that they are not affected declare that, in the first place, they had little or none of the flower-handling business to do, and that, in the next place, they had not made any special rates. The companies, outside of the United States Express Company, did not seem to think that the question of the right of the Inter-state Commerce Commission to interfere between the express companies and their contracts with the railroad companies had been affected sufficiently to make an issue of this phase of the question in the decision.

The attorneys for the United States Express Company said that the decision could not be construed as having any great bearing on the rate question, as it had been rendered on a special rate which the company had thought it right to impose. The old rates were 50, 60 and 75 cents from near-by points. The United States Express Company tried to raise the price uniformly to \$1 per hundred pounds. The commission fixed this rate at 60, 72 and 90 cents. The decision, therefore, is really a compromise.

The attorneys for the United States Express Company have not decided whether or not they will appeal.

Philadelphia.

News Notes.

The retail stores have had a very good week; on Monday and Tuesday there was considerable high-priced funeral work made up, then Wednesday brought many wedding decorations. Pennock Brothers were very busy on Monday with funeral work.

The Whildin Pottery Company is having a very busy season; the demand for all sizes of pots has been very heavy for four weeks past. Increased facilities at the Wharton street pottery have been the means of filling all orders promptly.

George Bulderston, Colora, Md., died the past week. For many years he had been a grower of General Jacqueminot roses, which he shipped to this market every Spring and for the past two years was the only shipper of these roses here.

The wedding recently of Miss Nellie Gertrude, daughter of Robt. Crawford, Jr., to Mr. George W. A. Zahn, was a very unique affair. The Crawford store occupies two properties; the wedding ceremony was performed upstairs in the living apartments, and the large store was transformed into a reception room. Counters, show cases, ice chests, etc., were entirely hidden with plants and

GERANIUMS, from 4 in. pots. S. A. Nutt, double crimson, La Favorite, double white; Md. Thibaud, Gloriosa, double pink; John Doyle, double red. Have eight varieties of the newer sorts, such as E. H. Trego, beautiful variegated crimson, the model of perfection, double Telegraph, free bloomer, deep orange cerise, double. Mrs. E. Rawson, single, deep rose, free bloomer, immense large flowers. Berthe De Prestilly, semi-double flowers, of great strong habit, trusses silver rose. Countess d'Harcourt, best double white, large trusses; stands the sun well. Double Grant, immense large flowers. Jean de la Brete, rose carmine, shading to white, camella shaped, large trusses. Marquise de Castellane, beautiful, soft crimson trusses, as large as a hydrangea, semi-double. Above eight varieties, 4 in. pots, 15c. each; \$1.75 per doz.; \$12.00 per 100.

AGERATUM, dwarf, best blue variety, 4 in. pots, \$7.00 per 100; 2 1/2 in., \$4.00 per 100.

BEONIA VERNON, finest strain, flowers as dark as blood. Seeds of this beautiful variety picked by myself from specimen plants in Zurich, Switzerland, on my trip to Europe last Summer, 1906. 4 in. pots, \$10.00 per 100; 3 in. pots, \$7.00 per 100.

BEONIA ERFORDI, the true variety, seeds of my own gathering from specimen plants in Europe last year (1906). This is one of the finest pink varieties in cultivation; 4 in. pots, \$12.00 per 100; 3 in. pots, \$9.00 per 100.

SCARLET SAGE or SALVIA. This is the genuine Clara Bedman or Bonfire variety of medium tall habit. It is a sight to see them bloom. It looks as if the whole bush is on fire and decorates the finest residences in England, Germany, Paris and Switzerland. Seeds of this novelty Sage collected by myself from specimen plants grown on one of the beautiful landscapes in Switzerland. Have fully 5,000 plants in 4 in. pots to sell, now in bud and bloom, of this fine variety. Price, 4 in. pots, strong plants, \$10.00 per 100; 3 in. pots, \$7.00 per 100.

HELIOTROPES, 4 in. pots, \$7.00 per 100.

NASTURTIUMS, dwarf, all colors, \$7.00 per 100.

FUCHSIAS, mixed, good varieties, 6 to 5 1/2 in. pots, 15c. to 20c. each; 4 in. pots, \$1.20 per doz.

CANNAS, 10 good varieties, 4 in. pots, \$8.00 to \$10.00 per 100.

ANPELOPSIS VEITCHII, 4 in. pots stacked up, 15c. each.

HONEYBUCKLE, 5 in. pots staked up, 15c. each.

COBRA SCANDENS, 4 in. pots staked up, 8c. to 10c. each.

DAISIES, Queen Alexandra and Marguerite (white), 6 1/2 in. pots, 20c. to 25c. each.

DIELYRA SPECTABILIS or BLEEDING HEART, planted in the Fall into 4 in. pots, and plunged outside in cold frames during winter growing natural, now large plants, in bud and bloom, 25c. each.

PETUNIA, double, mixed, 4 in. pots, 10c. each, single California giant, ruffled or blotched, 3 in. pots, \$5.00 per 100. Inimitable or dwarf variegated, 2 1/2 in. pots, 4.00 per 100.

VERBENAS, all shades, 2 1/2 in. pots, \$4.00 per 100.

IN EVERYBODY'S MOUTH LIKE THE BEE

A PROSPEROUS florist is never idle; do like this busy insect—the bee—take advantage of the great work the never-resting florist, Godfrey Aschmann, and his people have done since Easter, 1,000 of them swarming and enjoying their lives in Aschmann's Greenhouses. "Oh! Aschmann's flowers taste so sweet," the bees say; "we cannot stop; we have a big field to work on; 100,000 of the choicest; every hole and corner full; let us harvest." Secure Bargains now, and for Decoration Day. Please note our lowest prices.

From the lands afar, where the choicest are,
I gather the plants I supply;
Or grow my own, with care unknown,
So the best are the ones you buy.
Then send in your orders and see your trade grow,
None can surpass Aschmann's, wherever you go.

ASPARAGUS PLUMOSUS NANUS, 2 1/2 in. pots, \$3.00 per 100.

COLEUS, Queen Victoria, Golden Bedder, Verschaffeltii, 2 1/2 in. pots, \$3.00 per 100. Fancy varieties, 2 1/2 in. pots, \$4.00-\$5.00 per 100.

PIREUS DRUMMONDI, 2 1/2 in. pots, \$3.00 per 100.

IVY, English or hardy, 12 in. long, 4 in. pots, \$8.00 per 100. IVY, German or Parlor, 2 1/2 in. pots, \$3.00 per 100.

CENTAUREA CYMBICARIA or Dusty Miller, 2 1/2 in. pots, \$2.00 per 100.

CUPHEA or CIGAR PLANT, 2 1/2 in. pots, \$3.00 per 100.

LOBELIA, dwarf or trailing, 2 1/2 in. pots, \$3.00 per 100.

SWEET ALYSSUM, Little Gem, have 10,000 of them, 2 1/2 in. pots, \$3.00 per 100.

MARIGOLD, Eldorado Africana and Gold Ring, dwarf, 3 in. pots, \$4.00 per 100.

VINCA, variegated or periwinkle, 4 in. pots, \$10.00 per 100. 2 1/2 in. pots, \$5.00 per 100. Rose or Major, 2 1/2 to 3 in. pots, \$5.00 per 100.

COSMOS GRANDIFLORA, white, red or pink, three plants in a 3 in. pot, separate colors, \$5.00 per 100.

SALICIGLOSSIS VARIABILIS (European), 2 1/2 in. pots, \$4.00 per 100.

SUMMER CHRYSANTHEMUMS, Chameleon, 3 in. pots, \$7.00 per 100.

TRUBERGIA or BLACK-EYED SUSAN, 4-5 tiers, 5 year old, 20 to 28 in. high, as broad as long, price, \$1.75-\$2.00-\$2.50 to \$3.00 each.

ARAUCARIA GLAUCOA, large specimens, 6 year old, 36 to 40 in. high, 36 to 40 in. wide, 6 to 8 tiers, \$3.00-\$4.00-\$5.00 each.

ARAUCARIA, new importation. First consignment about 5,000, now arrived (Saturday, May 4), per steamer Manitou from Antwerp, and thereafter by every steamer up to June 1. Araucaria Excelsa, in their original packing, left planted in pots, 3 tiers, 10 to 12 in. high, 50c., larger sizes, 60c.-75c.-\$1.00 to \$1.25 each. Robusta, Compacta and Glauca from \$1.00-\$1.25 to \$1.50 each.

DRACAENA INDIVISA, broad leaves, imported from Belgium, now arriving, 30 to 36 in. high, 60c. to 75c.

COCOS WEDDELIANA, 3 in. pots, 16 to 18 in. high, 15c. to 20c. each.

DON'T FORGET WE LEAD THE WORLD IN MOON VINE!

Watch and be careful; don't buy Morning glory for Moon Vine.

We grow only the best varieties A. W. Sells's hybrid or Imposa Noctiflorum, for which we have during the past 20 years a world wide reputation. We ship every Spring from 20,000 to 25,000 plants to every state and territory in America as far as Mexico. 4 in. pots, nicely staked up, 30 to 36 in. high, \$12.00 per 100; 2 1/2 in. pots, nicely staked up, \$5.00 per 100.

NOTICE! Above Moon Vine is the earliest variety in existence, blooms freely, in big clusters, pure white; waxy flowers, very fragrant and as big as a saucer.

Cash with order please. All goods must travel at purchaser's risk.

GODFREY ASCHMANN, Wholesale Grower and Shipper of Pot Plants, 1012 West Ontario St., Philadelphia, Pa.

flowers. The reception was a very large affair; in fact, the parents of the bride were surprised at the large number of friends of the young couple. The marriage ceremony was performed by the Rev. Wm. Patterson, Bethany Presbyterian Church, at which church years ago the bride's father was a Sunday School scholar.

The Whildin Pottery Company will give a handsome sterling silver cup as a bowling prize at the S. A. F. O. H. convention competition here in August.

The Florists' Club meeting on Tuesday evening was one of the best held in a long time, there being a very good attendance. Edwin Lausdale resigned as secretary and David Rust was elected in

his place. J. Otto Thilow read a very interesting paper on "The Organization and Equipment of a Modern Horticultural Establishment." The committee who are soliciting funds for the convention are making very good progress; nearly all the districts have been canvassed. The executive committee will now be appointed to map out the program.

The following new members were elected: W. H. McMurray, John E. Haines, Bethlehem, Pa.; I. Rosnosky of Henry F. Mitchell Company and Godfrey Aschmann.

Miss Mooney of Mooney & Weir, Wilkesbarre, Pa., was in this city on Monday. DAVID RUST.

Prices Advertised in these Columns are for

THE TRADE ONLY—When Writing Please Mention THE FLORISTS' EXCHANGE.

Westerly, R. I.

A mysterious explosion occurred at the greenhouse plant of S. J. Reuter, the florist, on Beach street, Friday, April 23, which did physical injury to William and George Laughlin, employed there. It was first believed that some kind of an infernal machine had been placed in the path of the rose house, by some angered Italian, with the intent to kill. The Italian workmen denied this, however, stating that one of the injured men had been making dynamite cartridges, one of which exploded. William Laughlin, who claims he stepped on the bomb, or whatever it might have been, was the more seriously injured of the two men. He received a full dose of the powder in the face, chest and legs, and his right eye was badly injured. He was taken to the office of a local physician, where it was found that there was a hemorrhage of the cornea of the right eye, and he was obliged to go to Providence to be treated by an eye specialist. His face was speckled with powder and particles of his clothing were picked from the flesh of his body. George Laughlin escaped with a lacerated right leg.

Mr. Reuter says that there had been no trouble among the gang of Italians employed at his plant since the first of April. At that time he changed the schedule of working hours. From October to April the men had a half hour's nooning, but on April 1, they were given an hour's nooning and were to work until 6 o'clock. A part of the Italians refused to work under the new schedule and left their job, while a number of them returned to work.

The Laughlin brothers deny the statement made by the Italians and still believe that some of them are the cause of the explosion. William Laughlin has threatened to bring suit against Mr. Reuter for damages unless he makes a settlement for the injuries received by him in the accident.

George Laughlin has resigned his position and William Laughlin has been discharged by Mr. Reuter. It is the intention of Mr. Reuter to investigate the matter more thoroughly and find out, if possible, just who was to blame for the act.—Westerly (R. I.) Sun.

Yonkers, N. Y.

There is not much of interest in the florists' trade at this place; many of the florists make daily visits to the metropolis to secure the stock for their requirements. There have been some changes in the business of late. Charles Amman, who in past years was listed among the growers here, is now out and the business is continued at the Amman place by Wadley & Smythe of New York.

Mrs. L. W. Doyle, who has a small greenhouse plant on some valuable property, is looking for a purchaser for both greenhouses and property, and wishes to retire from active business.

George Ellis, Francis Fizzeller and John Furzey, all listed as florists here, have been out of the business for some years. Frank Knapper and Erwin Huckins are now the principal growers. Peter McDonald, J. R. Raymaster, Mrs. Millot and Mrs. E. McHenry have each a city store.

Hydrangea Otaska,

Asparagus Sprengeri,

Vinca Variegata, Smilax

Strong, clean stock, out of 2 1/4 in.,

THE WEEK'S WORK.

Timme's Timely Teachings.

Poinsettias.

Stock plants of poinsettias, if still in a dry and dormant condition, must now be started into growth. To hold them in an inactive state any longer than the middle of May lessens their value as yielders of good material for propagation. On the other hand, a very early start in the rooting of cuttings is nothing especially desirable, since the stock started too early usually makes too rank and tall a growth by next Fall to be most suitable for commercial purposes. It also is a mistake to rest poinsettias in a too cool temperature or in a place not dry enough for them. They want it warmer than most other stock plants and need no water whatever after the leaves have dropped. The first thing to do in starting them is to cut down the old canes to well-ripened wood or, if they are only wanted for the production of cuttings, to within three or four of the lower joints. After this the plants are repotted into new soil; any sort of prepared potting soil or good old bench soil, made rich by adding some decayed manure, bone meal or Clay's fertilizer, is good for the purpose. The next move now in order is a thorough watering of each plant and their removal to a light bench in one of the warmest houses. A daily syringing now will expedite matters considerably. Plants started now will have the first batch of cuttings ready by the middle or end of June and the next in three or four weeks later. In a rather warm and constantly humid atmosphere, but never allowed to become overclose or muggy, few of the cuttings will be lost through decay, unless they are taken from stock plants before they have reached proper proportions, which, if grown under the full influence of clear light, means a length of at least three inches with a heel of the old wood at the butt end, or more, if cut under a joint, leaving a few eyes at the base for the production of a second crop of cuttings later on. Small, soft shoots are of little value for propagation and should never be taken, especially not when there is plenty of time for doing the work in a manner assuring the highest possible degree of success. Frequent spraying and the presence of a reasonable amount of live moisture in the house prevent the wilting of the cuttings, to which they incline with uncommon persistence. When showing the least signs of roots and before these have made any considerable spread it is time to pot the plants, which under favorable conditions soon become established and safely beyond the risky stage in their career.

The Cyclamen.

There are several ways in which to grow cyclamens to perfection, all of them involving strictest attention to cultural duties at this season of the year, a time when neglect and sins of omission, blemished with good excuses, are most easily overlooked and most certain to result in lamentable failure. Few plants if not afforded timely care are more resentful than cyclamens. Whether they are grown in flats or in pots, in the house or in frames, their requirements as to transplanting, to shading, watering and ventilation are such as to admit of no neglect, if it is intended to have them show up in finest form next Fall or Winter. And cyclamens, not grown with that end in view, are barely worth raising.

Cyclamens started last Fall and now in 3-inch pots, should be about ready for another shift, and if to be grown in frames could now go there at any time, care to be taken to avoid direct sweeps of air at first and giving the plants a somewhat heavier shading on clear days than would be needful later on. There is no doubt as to the outdoor frame being a good place for cyclamens during the Summer, but its use for stock of this kind affords free license to excesses in treatment and thus the many advantages accredited to frame culture very often are not only lost, but actually are inducements to faulty practices. So, for instance, does the free exposure to direct air currents, most beneficial to nearly all kinds of stock, cause the little pots to dry out

rapidly. This, in itself detrimental to normal development, necessitates frequent, indiscriminate and excessive watering—a proceeding fraught with menace to the welfare of the plants. Sudden unlooked for changes of temperature and open air conditions are less easily guarded against than in the case of greenhouse cultures. More damaging to young cyclamens in frames than all this, however, is lack of good judgment in the matter of shading. In many instances, the shade thrown by contrivances used for the purpose is too dense and allowed to overspread the plants at times when there is no need for it. A shading scheme, light in weight and texture, put on and taken off in time, is all that is needed for cyclamens and such like plants in frames.

Should a suitable bench in some well ventilated and rather low-roofed house become empty in good season, a lot of fine cyclamens might be raised in it during the Summer by planting them at good distances in a properly prepared mixture of soil, in character and depth not unlike that in which bench grown Boston ferns do best. This method of growing early and late sown cyclamens into flowering size brings uncommonly good results with the least of care and labor. When the plants begin to show buds it is time to lift and pot them. The buds of cyclamen planted too deep hardly ever reach perfect development and too deep a stand of the bulbs often accounts for cyclamens otherwise finely grown, coming with deformed or few or no flowers at all. The vigor of late sown, small seedlings is more easily upheld by a transfer from tray to tray until of considerable size for being potted up than by an early start with small pots and small plants. When this latter course is held to be the more correct way of growing the plants into size, a deal of watchful attention is needful to avert lasting damage from an occasional drying out of the roots or from unavoidable delay in transplanting.

Gardenias.

There is no reason why anyone who has made his mark as a good grower commercially should not try his hand in the culture of gardenias, conducted rationally and on a somewhat extensive scale. This line of floricultural effort holds out a bright promise for the future not dimmed by any fear of possible over-production and consequent cut in prices or lack of demand. Pecuniary success in this case alone depends on cultural success, and this again depends not so much on an uncommonly high degree of skill and experience, as on the right kind of stock to begin with and properly equipped houses to grow it in, neither of which is very difficult to provide. A start with gardenias for either pot or bench culture may be made at any time from now until the close of Summer. Though there is less risk with potted plants as far as the yellowing of stems and foliage and the eventual loss of plants are concerned, than with benched stock, the latter is more easily prevented from dropping its buds than the former. But discouraging losses due to these traits in the gardenia need not occur if ordinary attention is paid to cultural details by a careful and observant grower. The principal points to be borne in mind in gardenia culture are bright, thrifty plants of small or medium size to start with, good and ample drainage in pot or bench, a porous, roughly broken up, quickly drying and not readily souring soil, rather heavy in texture and fairly rich in animal manure of earth-like nature, the crown of the roots barely below the surface of the soil in planting, the avoidance of over-watering in maintaining constant moisture at the roots, the frequent use of the syringe over, among and through the plants, a buoyant, humid atmosphere, the fullest light, bottom heat if possible and a steady temperature of not much below 70 degrees in Winter.

Hydrangeas.

It is at Easter and then again around about Memorial Day, when hydrangeas take rank among the best selling of plants. Those intended for the latter occasion will now need unstinted quantities of water and lots of room and light. Regular fumigation may still be a necessity on some places, but should be discontinued after the trusses have turned from greenish yellow to rosy blush.

OLD FASHIONED

Sweet Lavender

fine plants, 2 in. pots, 1 year old, 6c. ASPARAGUS all sold. R. C. HANFORD. Norwalk, Conn.

Hydrangeas now out of bloom and at the end of their season, should be cut back to within half the length of their wood. A harder pruning back is likely to call forth an abundant and vigorous growth from all around the base of the plants, a growth which will not flower the coming season, but may be depended upon as bringing immense trusses of bloom the following year. The later the season the less severe must be the pruning of full-sized hydrangeas, lest the best of flowering wood is cut away. No more pruning should be done after the latter end of June. The tips, then cut off, may be used to advantage as cuttings in Summer propagation. FRED. W. TIMME.

CYCLAMEN Splendens Giganteum Hybrids

This strain has no equal or better, in five true colors, including fringed varieties, twice transplanted from flats \$3.00, from 2 1/2 in. pots \$5.00, from 3 in. pots \$7.00 per 100. Satisfaction guaranteed.

WANTED—At once, two experienced rose growers to take charge of sections on large, up-to-date place. Wages, \$15.00 weekly. Address, N. G., care The Florists' Exchange.

WANTED—Experienced rose and carnation growers to take charge of sections. Give references and wages expected in first letter. Lake View Rose Gardens, Jamestown, N. Y.

WANTED—A foreman who understands growing of carnations, chrysanthemums and Easter stock. Must be a good designer. Apply to D. Y. Mellis, Holy Cross Cemetery, Flatbush, Brooklyn, N. Y.

WANTED—Competent rose grower with some knowledge of chrysanthemums and violets. In the middle West. Married man preferred. State age, nationality, wages, etc. Address, G. H., care The Florists' Exchange.

WANTED—An assistant in the houses to work under the directions of a foreman on a first-class private place. Wages to start with, \$50.00 per month. State age and full particulars to H. M., care The Florists' Exchange.

WANTED—At once, competent man to handle 15,000 ft. commercial glass in first quality flowers and plants. Wages in proportion to ability to produce results. Cottage with garden on premises. C. L. Dole, Lockport, N. Y.

MISCELLANEOUS WANTS

WANTED TO BUY—Greenhouses to be taken down. State full particulars of same when writing. Address, F. W., care The Florists' Exchange.

WANTED TO LEASE—On or about 15th of June, with privilege to buy, a commercial place, about 8,000 to 16,000 sq. ft. of glass; must have some ground and dwelling within 10 miles of New York City. Address, G. B., care The Florists' Exchange.

WANTED

1000 strong, three-year ASPARAGUS, any good variety.

1000 AMPELOPSIS VEITCHII, strong, from pots or field.

THE ELM CITY NURSERY COMPANY, NEW HAVEN, CONNECTICUT.

DISSOLUTION NOTICE.

The firm of Wm. H. Brower's Sons is this day dissolved by mutual consent, L. D. Brower retiring. John L. Brower will continue the business at the old stand, 423 Fifth avenue, New York City, where all accounts due the said concern are payable. Signed: John L. Brower—Lorenzo D. Brower. April 30, 1907.

Thirty cents is the minimum charge for advertisements on this page.

FOR SALE OR RENT

FOR SALE—Modern greenhouses in town of 18,000; one hour from Philadelphia. Retail trade earnings 25 per cent.; takes all can grow. For details and reason for selling, address, G. Z., care The Florists' Exchange.

FOR SALE—Desirable florist business, with dwelling, three greenhouses, 2,140 ft. glass, four hot beds, in growing town, 7 miles from Philadelphia. Fully stocked. Horse, wagon, tools; best reason for selling, F. R. Matsinger, Palmira, N. J.

FOR SALE—To close the estate of the late James D. Burnett, deceased. A greenhouse plant about one mile from the railroad station, Madison, New Jersey. Eleven hundred feet of glass, three and one-half acres of land and cottage. Guy Minton, trustee, Morris-town, N. J.

FOR SALE—Well established greenhouse plant, nicely stocked, for retail trade and doing good business. 10,000 feet glass in good condition; horse, wagon, tools, etc., all complete. City water. Lot 185 x 230, in growing city where real estate will advance. Sold on account of advancing years. Price and terms reasonable. George S. Belding, Middletown, N. Y.

FOR SALE—Desirable greenhouse plant, directly opposite Spring Forest Cemetery, Binghamton, N. Y. Large and increasing demand for funeral designs and bedding stock. Care of cemetery plots big item in receipts. A dwelling house, 10,000 feet of glass; land comprising 20 city lots. Paying business and open chance for increase. Sold on account of advance in years. Apply to J. B. Tully, 47 Spring Forest Avenue, Binghamton, N. Y.

FOR SALE—On account of my health, I am compelled to offer my greenhouse specialty business, which includes the Standard Duplex Cutter, which is fast coming into use by the growers. This season many thousand feet were erected, and at present am shipping a large range to California, also the Standard Steam Trap and the Ventilating Machine. My business is thoroughly established; none better; and is doing a large business all through the season. Address, E. Elppard, Youngstown, O.

RARE OPPORTUNITY—For sale at Clifton, N. J., between Passaic and Paterson, florist property, consisting of two greenhouses, Number one and two, 150 x 110 ft. each on greenhouse, Number three, 350 x 18 1/2 ft. Lord & Burnham construction. Dwelling house of seven rooms and bath; 84,000 sq. ft. of land; 1/2 block running from street to street; uninterrupted sun exposure. Whole property, including dwelling house, can be purchased for less than No. 3 greenhouse can be duplicated. Address or apply to J. Walter De Witt, 443 Broad street, Newark, N. J.

FOR SALE—A rare opportunity for rose and carnation growers. Over 40,000 sq. ft. of glass; weight houses in good shape; steady and our own water supply; stocked now and good trade in roses, carnations, sweet peas, smilax and bedding stock. Located near to three cities, outside city line. Means eight to ten hours with good cellar and other buildings. To be sold with or without the farm of twenty acres at a reasonable price. Twelve minutes drive from R. R. station, and trolley line passing. Ill health reason for selling. For further information address E. J. P., care The Florists' Exchange.

TOBACCO DUST OR SAW DUST WHICH??

211 North St.

Claremont N. H. Apr 5, 07

The H. A. Stoothoff Co. New York

Dear Sirs.

Please ship me as follows

- 100 lbs Fumigating Tobacco powder \$3.00
100 " Black stuff fine 2.00
144 sheets Aphicide, 3.50
10 Fumigating plates .60
Total \$8.00

Send the powder by freight, the Aphicide by express prepaid. I enclose check for \$2.00

Three or four years ago I had a bag of the Black stuff fine and it was without exception the best tobacco powder I have ever had. Since then I got some stuff from a seed house. I paid more for the article and got left on it. It was much like sawdust than anything else. Now I am coming back to you.

Yours truly C. E. Stevens.

Say, Stevens, we would sure like to know from you and others like you "why you stray away" to folks who don't know tobacco powder from sawdust. We have been telling you and others in a hundred different ways how smart we are in the way of tobacco powder; that we have been in the tobacco powder business for twenty years, and why our tobacco powder should be and is, twenty years AHEAD OF ALL OTHERS. Again we ask, why you let the fellows that don't know, skin you, who should know, that the BLACK STUFF FINE TOBACCO POWDER, for dusting, at 2c. per pound, in our bag holding two pounds, with our name, address and brand on each bag, sold only by us, direct to you, is the only one. WE WOULD LIKE TO KNOW.

REVIEW OF THE MARKET

NEW YORK.—The cut flower business is in about the same condition as last week. Supplies are fairly plentiful along all lines, too much so on yellow narcissus with little going on in the way of social events, and the most of the trade depending chiefly on what business comes through funeral work. Special grade American Beauty roses are perhaps not quite so plentiful as they were last week, and prices for these are holding about the same. With Bride and Bridesmaid roses values are, if anything, a little weaker. There has been no particular glut of carnations as yet, and taking all things into consideration, it can safely be said that carnations are holding their price as well as they usually do at this time of the year. Owing to a funeral that occurred in the ranks of the millionaire class, orchids have cleared up fairly well this week. Lilies are a trifle firmer, but tulips, lily of the valley, sweet peas, stocks, snapdragon, together with smilax and asparagus have experienced no change in prices since last report. A few violets are seen occasionally, but they only find their way to the buying public through the medium of the sidewalk merchant at 10c. and 15c. per bunch.

CHICAGO.—There are practically the same conditions in this market as existed a week ago, the prices in all lines holding slightly above the purchaser's inclination, as the local market has been rather on the non-receptive side, owing probably to the inclemency of the weather.

Shipping trade, though it has held good, has been more or less affected by the weakening of the local market. The special points worthy of mention are that stock of all kinds continues to come in good supply and everything holds up well for the season. The absence of peonies and lilac, which have been cut out by the frost, may tend to hold up other values, but that is not probable.

Trailing arbutus is now to be had in fairly good supply. As usual, the violet retires, as the supply becomes daily less reliable. W. K. W.

BOSTON.—There has been quite a slump in the past few days and it is feared that the fairly good prices which have been prevalent lately are now only history. Roses of all kinds are very plentiful and in quantities car be bought at ridiculously low prices. American Beauty run from \$1 for the smallest up to \$20 and \$25 for the long-stemmed grades. Other roses seldom reach over \$8, while the popular grades are \$2, \$3 and \$4. Richmond and some extra fancies bring as high as \$16. Carnations are selling low, \$1 to \$3 being the ruling price. Eubous stock from outdoors is now in large quantities, selling in 1000 lots at from \$2.50 to \$10. Lily of the valley brings \$1 to \$4. Lilies are still cheap. Sweet peas are plentiful; and fine snapdragon is seen. Gladiolus are getting plentiful, and there are several growers bringing in other specialties in small lots. J. W. D.

PHILADELPHIA.—There is a good supply of stock coming into this market and so far it is being cleaned up very nicely. Prices on some flowers are easier, but all the dealers are more inclined to clean out than in previous years. American Beauty roses are in good supply; for the very best flowers \$3 per dozen is obtained; but the 100s are offered at from \$15 to \$25. Tea roses are very plentiful; choice Richmond are selling at \$15 per 100; choice Liberty at the same price; Mme. Abel Chatenay bring \$10, top price, for the very best. The general stock of tea roses is selling at from \$3 up, and this stock is moving very slowly.

Carnations are in sufficient supply for all demands; \$4 per 100 is obtained for a few extra choice, but most of the stock goes at from \$2 to \$3. Sweet peas are much more plentiful and prices are easier; some extra good lavender varieties bring from \$1.50 to \$2 per 100, other stock from 50c. upwards. Antirrhinum majus is still a good seller. \$2 per 100 is obtained for the very best. Gardenias are very plentiful and are being sold as low as \$3 per 100. Cattleyas are cleaned up every day at \$50 per 100. Lilies are still in good supply, the best flowers bringing from \$6 to \$8 per

100. Daisies, white, realize \$1.50, yellow, \$2 per 100. Asparagus is in better supply and prices remain at 50c. to 75c. per bunch. Smilax is in limited supply and sells at \$20 to \$25 per 100. Lilac from Maryland is arriving this week; 25c. per bunch is the best price.

INDIANAPOLIS.—A heavier production of flowers, accompanied with a quantity of funeral work and lively counter trade, has made the past week a satisfactory one. Growers of bedding stock are impatiently waiting for more favorable weather to begin the planting season. The arrival of each day is expected to bring the proper temperature, but up to this time the minimum is at least 35 degrees. Several growers are sending lots of candytuft, Ten-week stocks and sweet peas to market; these aid materially in reducing the shortage of a week ago.

Carnations are still extremely scarce, but a crop is reported in many instances ere many weeks; fancy grades are wholesaling at \$4 to \$5 per 100, few are obtained under \$3. Harrisii lilies and callas are in steady supply at demand at \$10 to \$12.50 per 100.

The various roses of different grades have sold remarkably well of late. Bride and Bridesmaid are suffering in quality, going at \$4 to \$8 per 100; Mme. Abel Chatenay is the choicest pink at \$7 to \$10. This is certainly the season for Richmond, as it is now a most beautiful rose, bringing \$5 to \$12 per 100.

Wood violets in large bunches are found in the retail shops at 25c. per bunch. Little home-grown lily of the valley is to be had at \$4 per 100.

Tomlinson Hall market is enjoying a prosperous business, both wholesale and retail. Much of the choice stock is refused the store men to be held for retail trade later in the day. I. E.

ST. LOUIS.—The market in general has been somewhat quiet the past week, the trade complaining that the weather has been very unfavorable. The cold weather has kept the growers back; the retailers, too, had little to do except funeral work. The wholesale market is in good condition, with stock very plentiful in all grades and varieties, except carnations. These latter have been very scarce for the past two weeks, and not nearly enough are coming in to supply the demand, with prices up to \$4 and \$5 per 100 for choice; \$2.50 to \$3 for next best. The quality is very good for all wide varieties, Enchantress and Mrs. Thos. W. Lawson are in big demand.

In roses the market has been glutted all the past week in all varieties, including long, fancy American Beauty. All roses have been selling very cheap in 1000 lots, as low as \$5 per 1000 for Bride, Bridesmaid, Richmond and Mme. Abel Chatenay in the short grades; \$3 and \$4 per 100 for firsts, and \$5 and \$6 for fancy specials. There are more left over each morning than are sold.

The market has also been long on callas and Harrisii lilies; these are plentiful at \$8 and \$10 per 100. Sweet peas are becoming more abundant each day, and these, too, will be a glut soon. Lily of the valley is down in price; \$2 per 100 buys the very best in the market. Cape Jasmines are looked for this week from Texas, which will help out for funeral work. All greens are in plenty and of good quality, except fancy ferns; these are now up to \$4 per 1000, and poor at that.

COLUMBUS, O.—Cut stock of all kinds continues in short supply here, and will do so while the weather keeps as cold as it is. On the other hand, roses and carnations, in fact, everything in the market is especially good in quality, more active. There can be no question that the continued cold weather has wonderfully helped the cut flower trade here this Spring, as in other years at this season many society people have already begun to go away for the Summer months, which of course, is the beginning of the usual Summer dullness. Another factor the past week that has boomed the flower business has been the advertising done by the Columbus Floral Company in connection with their opening in connection with the office always that of last Saturday. I notice effective advertising, the whole craft benefits from the impetus given to the general sales.

THE METAIRIE RIDGE NURSERY COMPANY LTD.
NEW ORLEANS, LA.
GROWERS OF CHOICE CUT FLOWERS
Roses, Carnations, Orchids, Etc.

We are fully prepared to fill orders for shipping by Steamers and Express all through the Southern States.

The going price for good carnations is 75c. a dozen; in fact, for special selected Enchantress and Mrs. Thomas W. Lawson our growers are receiving up to \$5 per hundred from out of town dealers. In roses some choice Mme. Abel Chatenay and Richmond bring easily \$2 a dozen; one very fine lot of these with 24 to 30-inch stems was noted that brought as high as \$2.50 the dozen. Not before this year have American Beauty been so good, and as they can be sold at not exceeding \$5 or \$6 a dozen for the best of them, a large number has been worked off lately. Violets in any size bunch the customer wants at \$1 to \$1.50 a hundred; sweet peas at \$1 a hundred, and lily of the valley at 75c. a dozen, practically make the whole market in cut stock; as bulb stock is gone, and there are no outdoor flowers yet.

ST. PAUL.—Rain and snow have had a bad effect on the business the past week. Cut flowers have moved very slowly and the inclement weather has had a demoralizing effect on the market. Prices have dropped to some extent; good roses were offered at \$5 to \$7, fully a fall of \$1 and in some varieties \$2 per 100, which affected the retail figure. Carnations have kept up well, no doubt on account of their keeping quality. Funeral work with the larger dealers has been very heavy, the demand apparently coming from outside towns.

All of the growers are making big preparations for Memorial Day. There appears to be a considerable increase in flowering plants. Every grower has planted and will have in shape for Memorial Day fully 25 per cent. more than in previous years. The weather has been so bad that there has been no demand as yet; the call appears to be more for nursery stock than anything else, and notwithstanding the mean weather considerable planting has been accomplished. PAUL.

CHANGES IN BUSINESS.

SHREVEPORT, LA.—John Monkhouse & Son have opened a branch store on Texas Street.

MECHANICSBURG, O.—The J. E. Wing & Bros. Seed Company has been incorporated, with a capital stock of \$30,000, by Joseph E. Wing, Willis C. Wing, Charles E. Wing, Janette Wing and T. M. Clemans.

MEXICO CITY, MEX.—J. Balme Hijo has, by mutual consent, withdrawn from the firm of J. Balme & Company and is now in business for himself at 24 Coliseo Viejo. He deals in Mexican plants, seeds, bulbs, orchids, cacti, etc.

WOONSOCKET, R. I.—Thomas H. Greene, proprietor of the Summit street greenhouses, has sold houses and business to Jonas Brooks. Mr. Green has taken this step in order to devote his attention to the affairs of the Woonsocket Napping Machinery Company, of which he is president.

OAKLAND, CAL.—Clarke Brothers of Portland, Ore., and Seattle, Wash., have opened a store at Twelfth and Clay streets in this city. A great deal of time and expense makes this store one of the finest in the West. The walls are lined with mirrors, giving a maze effect, while at night the effect is accentuated by cut glass globes on the electric lights, which line the walls and hang in clusters from the ceiling.

FIRMS WHO ARE BUILDING

AUSTIN, MINN.—A. N. Kiusman finds that his present greenhouse capacity is not sufficient and has commenced two more large houses 31x148 feet and 29x148 feet for roses. He expects to have the houses completed by July 1.

NORTH WALES, PA.—The building operations of the Florex Garden Company, who purchased the Beaver farm, are going on actively with a large force of men. One large greenhouse is being glazed; the monster rose house, 700 feet long by 104 wide and 32 feet high, is fairly under way. The latter will be planted exclusively to American Beauty roses. A large office building, refrigerating plant and boiler house are also in process of erection.

Columbus, O.

Trade Notes.

The cold weather continues; that is, it does not get warmer than 50 degrees during the day, and we still have freezing weather at night. Nevertheless all branches of the trade showed improvement the past week, as everyone feels that it must now in a few days anyway warm up.

Saturday last the Columbus Floral Company opened its new store at 187 South High street to the public. The establishment was very effectively decorated for the occasion, which had been extensively advertised in both our American and German papers. Some good music, both afternoon and evening, was a feature. Every visitor was presented with a nice little plant of Asparagus Sprengeri. The new firm will make a specialty of funeral designs, and decorative work for social functions. The Columbus Refrigerator Company furnished the icebox, counters, and other fittings.

Graf Brothers have had an unusually busy week; especially well have Marie Louise violets sold with them at \$1 a hundred. Both Samuel Graf and James McKellar have had their hands full, as William Graf has been in Chicago all the week buying stock.

Mrs. E. M. Krauss is as fast as possible getting things to rights at her new location number, 109 South High street. She says that she already feels the benefit of being inside the so-called shopping district.

Fred Windmiller made us a flying visit last week, much to the pleasure of his many friends in this city. Mr. Windmiller, who is now with the Cleveland Cut Flower Company, for years had charge of the Livingston Seed Company's greenhouses here.

W. L. Meeks has had an especially good season in all lines of nursery stock which he handles; he began planting out stock two months ago, and the end is not yet in sight.

Gustave Drobisch has been the past week making very large sales of bedding plants at his stand on the Central Market. Potted roses in all hardy varieties are especially in demand.

The trade are all laying plans for the usual great Memorial Day business; but it looks now as if an absence of outdoor stock would very much curtail the usual profits. F. W.

News Notes.

The Munk Floral Company was organized here with a capital of \$20,000 by O. A. Munk, H. M. Munk, Lida P. Munk and Marietta C. Park, of Columbus, as incorporators. As outlined in the incorporation papers the company will build and operate greenhouses, and deal in flowers and plants.

Among the important improvements of the season are those of Sherman F. Stephens at Green Lawo. Mr. Stephens is erecting one extension, 26x50 feet, and another new house, 22x122 feet, which will have for side walls a concrete composed of cinders and Portland cement. While the first cost may be some more than woodwork, the construction, Mr. Stephens thinks, will be more satisfactory, especially as it will be so much more durable.

Mr. Runk, the well-known flower and vegetable grower on the west side of the river just beyond the city limits, is figuring on increasing his glass capacity by the erection of a large house in the near future. B.

Washington, D. C.
Washington, like most other cities, is having a very backward Spring, and the unseasonable weather seems prone to continue. Much inconvenience has been caused by the cold and rain, especially to the growers, some of whom have not yet finished planting carnations.
The supply of flowers has increased somewhat since last week, with the exception of carnations, which still remain scarce. Prices are above the seasonal average. All classes of bedding plants are beginning to sell, geraniums holding their usual place in public favor.
On May 2, the large equestrian statue of General George B. McClellan was unveiled. The entire statue was covered from view of the spectators by two enormous American flags so arranged that at the appointed moment they were withdrawn to either side by invisible wires, leaving the statue in full view. The decorations of the grand stand were of American flags fastened at either end to the rafters, and caught in the centers by miniature garlands or shields. In front of the platform from which President Roosevelt spoke were hung garlands and wreaths. Fred D. Owen arranged the decorations, assisted by Gude Brothers Company. JAS. L. CARBERY.

DAYTON, O.—The florists of Dayton have positively refused to fill any vases in the cemeteries this season, for the following reasons: First, for years the vases have been filled at a loss; second, the Cemetery Association does not give proper care to the plants and the florists get the blame; third, labor is higher than ever before; men who used to work for \$10 and \$12 per week, demand and get \$15 and \$18 per week, so the labor is more expensive for the florist. For these reasons many vases will go unfilled this season. M.

Baltimore, Md.

Washington Wins the Cup.
The florist teams of Washington and Baltimore met on the Monarch bowling alleys on Friday, May 3, to roll the last series of games for the Baltimore Gardeners' Club cup, with the result that Washington won the cup with 2346 pins against Baltimore's 2237 for the three games. Philadelphia did not appear, but they had a representative in Dennis T. Connor, who was present in Baltimore on business. A luncheon was served for 40 by Caterer Wolf before and after the games. Speeches were delivered and the cup was repeatedly filled. The only damper on this occasion was the non-appearance of our Philadelphia friends. A number of members of the Gardeners' Club were present and all enjoyed themselves.
Cyrus S. Bradley, proprietor of the Monarch bowling alley, has offered a cup to be bowled for by the Philadelphia, Washington and Baltimore teams.
George Cooke of Washington brought with him several dozens of the new rose—Columbiana—originated by W. S. Clark of that city. It is a dark pink, a good color, much deeper than that of a bridesmaid. The variety, which is a seedling from Mme. Abel Chatenay and Liberty, has an excellent stem and is an exceptionally good keeper.
C. L. S.

St. Paul.

News Notes.
Colberg & Lemke have dissolved partnership. Mr. Colberg is now with Holm & Olson, while Mr. Lemke continues to run the place alone.
C. F. Vogt has been very busy; in connection with the florist business he is handling a heavy line of nursery stock.
A great many florists are making a specialty of landscape work; considerable activity is displayed. One of our daily papers has been devoting a full page to horticultural matters every week, which has worked up considerable enthusiasm.
PAUL.

HUDSON, MASS.—A. M. Pitt of the firm of Pitt & Croucher, died April 21, aged 65 years. He had been in business in Hudson 20 years. Oliver Croucher succeeds to the concern and will continue it as formerly.
