16. And God made two great lights; the greater light to rule the day, and the lesser light to rule the night: he made the stars also.

17. And God set them in the firmament of the heaven, to give light upon the earth.

18. And to rule over the day and over the night, and to divide the light from the darkness: and God saw that it was good.

19. And the evening and the morning were the fourth day.

Can even John Birnie maintain that nature herself (whom we freely admit "created" our new Bush limas) ever created any plant life a day before there was heat and light? Mr. Burbank does not pretend to "create,"—if by creation is meant the making of something out of nothing. He only claims to be a close student of nature and by combination of different forces make what are in the right sense called "new creations," that is types of plants that were not in existence before.

Since dictating the above it occurs to me that it is only fair to "a house of the pretensions of the one referred to" to give your readers the exact words of the opening paragraphs of page 10 of the Farm Annual.

TWO UNIQUE BUSH LIMAS FOR 1907.—FORDHOOK AND THE BURPEE-IMPROVED.

Both of which are entirely "New Creations!" Nature, with her millions of crosses, occasionally surpasses any efforts of the most successful hybridizers. These wonderful Novelties, now exclusively introduced by us, have been bred from two plants (one of each type) discovered in a crop of Challenger Pole limas, in 1903, by our friend Henry Fish, of Santa Barbara County, California.

Burpee's Bush Lima, originating in Chester County, Pa., blazed the way for the wonderful popularity of the Bush Lima to-day. Since then improved selections have been developed—notably Burpee's Quarter-Century Strain—but little did we think that Nature would so completely eclipse all the efforts of man, and directly from the parent Pole Lima produce in distant California two new types that would surpass not only all other Bush Limas but—in size of beans—all existing Pole Limas!

If your business department thinks this gives too much free advertising to Nature's two unique "New Creations" you are authorized to charge this part of the letter at full advertising rates.

Philadelphia W. ATLEE BURPEE.

Tuberous-Rooted Begonias for Outdoor Bedding.

In one of Mr. Timme's recent articles I find a good word for begonias (tuberous-rooted) for bedding, and also the advice in effect that to have satisfactory results these plants should have a temporary shade placed over them for a time after being planted out. This advice is not only sound, if it is desired (as it always is, no doubt) that the plants receive no check when first planted out. Last Summer I happened to be in Newport, at a time when William Galvin was just completing the planting of a large bed of these plants on a Bellevue avenue estate. The plants were then (about the middle of June) in full flower, and a gorgeous sight they were. When the planting was completed a light shade made of gauze was placed over the bed, and, as I was told, to remain there for a week at least. I happened to be again in Newport in August, when I made it my business to look at that bed of begonias, and on doing so I thought I seldom, if ever, had seen a handsomer or a more dazzling bed of plants.

In bedding these plants outdoors it is important to have them grown and somewhat well established in pots.

F. N.

Effect of Magnesium Salts Upon Plant Growth.

The New York Botanical Garden has been conducting some experiments to determine the effect of magnesium salts upon plant growth. Magnesium salts in the absence of calcium salts are generally considered to be toxic to plants. Dr. Loew makes the statement that "Plants succumb soon when placed in diluted solutions of magnesium salts and no other. In fact, magnesium salts can exercise their nutritive functions only in the presence of a sufficient amount of calcium salts." With the view that the inhibitory effects noted by Loew might have been due to the use of excessive amounts of magnesium, experiments were undertaken to determine the effects of magnesium sulphate in dilute solutions using the water culture method. Seedlings of abutilon, pea and corn about 3 cm. long were used. They were suspended over the mouth of beakers either through holes in paraffined cork, or from glass rods. Growth was measured for the first 168 hours. The magnesium sulphate solutions were made up with distilled water and chemically tested Kahlbaum salts. In each series seedlings were grown in distilled water as a control. From the results obtained these conclusions are drawn: that as with calcium, so with magnesium, there is a dilution in which the toxic action is lost and stimulation begins, this dilution varying with the type of seedling; that from this point there is a gradual increase in stimulation with each successive dilution until a maximum is reached beyond which the growth decreases to the control; and that the vitality of seedlings grown in proper dilutions of magnesium sulphate is greater than in seedlings grown in distilled water.

Hybridizing Roses.

(Paper prepared by John Cook, Baltimore, Md., and read by Secretary McCauley before the Florists' Club of Washington, D. C., February 5, 1907.)

Having been requested by President Bisset and Secretary Chas. McCauley to give some of my experience in hybridizing. I do so with reluctance, as I find the longer I study and work in this line, the more I find there is no ending to the mysterious workings of nature.

Early Hybridizing Work.

Hybridization has been carried on by botanists for nearly 200 years, but more for scientific knowledge than for the improvement of florist flowers, in particular, the rose. The first hybrid tea rose was raised by Wm. Bennett of England, and the work was rapidly followed up by German and French rose growers. The first hybrid tea rose in this country, namely Souvenir de Weotton, was raised by the writer about 20 years ago. It was the outcome of crossing Bon Silene, with Louis Van Houtte. In attempting to recross this rose for several years, I found it had a tendency to reproduce itself, and I abandoned it. Then came Marion Dingee, out of Caserta, a good dark red rose for outdoor purposes. Mrs. Robert Garrett came from Sombreuil and Mme. Caroline Testout.

Thousands of seedlings have since been raised. Some of them have produced extra fine flowers, but the habit, in the way of growth and the production of bloom for commercial purposes, was such that it would not pay to grow them. I found by recrossing some of these seedlings which have the least faults, we are more apt to get good roses for commercial purposes. I have one now which has some good points for commercial Winter work. It is the second generation of my white seedling, Madonna, and the Enchanter. It has a stronger growth than either of these, a stiff stem and large pink flower of a shade lighter than that of the Enchanter. Another is one which is the outcome of one of my unnamed seedlings crossed with another unnamed one which had American Beauty blood on the male side. The plant is now 10 months old from seed, and has produced during this Winter five beautiful, shell-pink flowers, as large as those of the American Beauty, with 3 and 4-foot stiff stems, foliage larger and handsomer than that of Beauty. The future will tell how satisfactory this rose is going to prove. There are many other recrossed seedlings in sight, of which I will not speak now.

Imperfect Organs a Drawback.

The trouble with most of our Winter-flowering standard varieties is that the organs in ninety-nine cases out of a hundred are imperfect. This is so in the case of Bride, Bridesmaid, and Golden Gate. In red we have good material to work on, such as Richmond, Cardinal and Liberty. The very best in pink are Caroline Testout and Marie Van Houtte, with its strong, healthy growth; it makes a good seed bearer; also Etoile de France. As this latter rose proved to be too double, I thought of using the pollen from a less double rose I used Richmond; the result was that two seedlings came up, and bloomed for the first time a month ago. One of them was perfectly single, with a more rapid growth than the Richmond; the other was double as Etoile de France. I have several seedlings where the pollen was taken from three and four different varieties mixed together, and they are the richest color in red of any I have ever raised.

Choosing Parents.

In most cases, if you cross a white variety with a pink one, the product will be lighter than the parent pink; and if you cross a pink rose with a red one, it will be darker.

For the seed bearer I would use the strongest grower; and for the pollen bearer one having the best color. It takes four or five months for the seed to ripen. When perfectly ripe, bruise the heps or seed balls and put them in sand, where the flesh will soon rot, when you can wash out the seed, and sow it at once. It will take from three to ten months for some of the seedlings to come up. You will find that not nearly as many seeds will germinate as you expect. The reason of this is, by investigating a great many of the pistils will be found crooked and twisted, consequently the pollen cannot be carried down to the ovules. I always take a little pollen from the seed bearer in order to get as much of its habit as possible, as the pollen sometimes used for pollenizing dominates over the seed-bearer and you lose exactly what you have been trying to preserve—a strong growing habit.

Time to Fertilize.

Under glass I fertilize any time—Summer or Winter. Outdoors in Summer you have to do the work early, as the pollen on a hot day, toward noon, gets hard. It is then worthless. If the pistils on the surface have a watery appearance then is the time to apply the pollen. If the flower which you wish to fertilize is not quite ready to receive the pollen, you can cut the flower with which you wish to pollenize, put it in a tumbler of water, in a cool shady place, and it will keep for two or three days.

BOOKS RECEIVED.

THE DAHLIA MANUAL; a Treatise on Dahlia Culture. Illustrated. By W. W. Wilmore, Denver, Col. Price, 35 cents. Paper.

The author of this Manual is one of the most successful growers of the dahlia in the United States, making a specialty of this class of plants. It follows, therefore, that what he has to say on the subject of the dahlia is fit once most serviceable and instructive. In his little book Mr. Wilmore tells us that it is twenty-five years ago since he began the study of the dahlia, being first attracted to the flower by some blooms seen growing in a neighboring yard. The past twenty years of his work has been that of a commercial grower and originator of new varieties.

The author gives the following classification of the dahlia:

Cactus—These have long, narrow petals; some varieties quite regular in form, others with curved and twisted petals. They may be solid in color, or shaded and variegated.

Decorative—These have broad, flat petals. The flower is also flattened in form. This class also has a wide range of colors and variegation.

Fancy—This name is generally applied to the large rounded full flowers, with two or more colors, which may appear in the form of a lighter tip on the petal or in streaked or dotted petals. It is proper, however, to refer to any variegated flower as Fancy, regardless of the class to which it belongs.

Pompon—Small flowers, rounded and full. This class takes in all miniature varieties of the Show and Fancy classes.

Show—Large rounded flowers, showing only solid or self colors, but may frequently have shadings of color. To distinguish between Show and Fancy varieties, apply this rule: If the tip of the petal is lighter than the ground color it is variegated. If the tip is darker than the ground color it is a Show variety.

Single—This class is too well known to require description. A seventh class may yet call for a place on the list.

The French Collarete—This is a single form with a fringe around the disc.

The history of the dahlia is very fully gone into, from the time of the discovery of the plant, about 1657, to its introduction from Mexico to France, thence to Spain, England and other countries. The first double form was raised by M. Donkelaar in 1814. The first cactus dahlia originated in 1872, but

W. W. Wilmore

Regarding florists' varieties, he recommends that the list should be short and suitable to the purpose. A few varieties are preferable to many, and these should be clear, bright, self-colored flowers, though not necessarily deep colors; but should be selected to conform to the popular color tastes of the day. He is of the opinion that six to eight good varieties would meet the requirements of the cut flower trade, say red, scarlet, yellow, two shades of pink, and two white, one large and one small for design work.

As we have said, Mr. Wilmore's Manual will be found of the greatest practical service to all interested in the popular dahlia.

LAWNS AND HOW TO MAKE THEM. By Leonard Barron. Publishers, Doubleday, Page & Company, New York. Price, \$1.10.

Bailey, in his Cyclopaedia of American Horti-

greensward in any sort of soil where grass can be made to grow."

Copies of the volume, which is attractively gotten up, can be supplied by The Florists' Exchange at the price named—\$1.10.

The Jamestown Exposition.

The peculiar charm of the exposition at Jamestown, Va., and in this respect it is exceptionally fortunate, is due to the natural beauty and adaptiveness of its surroundings. The great sweep of water the century old cypress forests, its creeks, heavily shaded, and on all sides its wealth of verdure, lend it a character entirely new to such expositions. The grounds are in reality a great park artfully contrived to appear entirely natural. It will doubtless be this atmosphere of restfulness which will first appeal to the visitor, and afterwards it will doubtless be this memory which will linger longest in one's recollections of the great fair.

This same distinctive note greets one before even entering the grounds. Surrounding the exposition, in place of the customary wall or fence, there has been grown a beautiful hedge. A fence of barbed wire was stretched about the grounds some two years ago and along this has been trailed a wealth of Virginia creepers, honeysuckle and wild roses. Already the wire has been completely overgrown, so that it is in reality a thick hedge, quite impenetrable, and fragrant with roses and columbine. The long stretches of this flowering hedge serve admirably as a fence, while at the same time it gives the boundaries of the exposition grounds the appearance of some well cultivated park rather than a walled enclosure.

Then again the light tone of the many groups of buildings is everywhere relieved by the heavy foliage. As one approaches the grounds the sky line is dominated by groups of great cypress trees which have all the charm of a landscape in Lombardy. For several years a considerable portion of the grounds has been utilized as an immense nursery for growing shrubs, trees and flowers for the exposition, and more than one million plants have been raised for the general decoration. Since it has only been necessary to carry the plants a short distance, it has been possible to grow them to un-

Cactus

Show.

Decorative

CLASSIFICATION OF DAHLIAS

From Wilmore's Dahlia Manual

was not placed on the market until 1880. Mr. Wilmore says that although the dahlia is very much inclined to sport, yet all attempts to fix these sports into a new variety have been fruitless, for sooner or later they return to the parent color. The dahlia is a native of Central America and Southern Mexico, where it grows wild upon the meadows and table lands to an altitude of 10,000 feet.

The Manual then goes on to give very practical cultural directions, and tells how to store the tubers in winter. Mr. Wilmore, very sensibly, we think, leaves the varieties to plant open to public taste. He advises to deal only with reliable dealers and not to plant too many kinds. The cactus types are leading in popular favor, although it is plainly evident that the older types—especially the decorative forms—will find favor with the public. The single varieties are also growing in popularity, which would be intensified were it not for a weakness they have of dropping their petals quickly.

In regard to the cutting of the blooms, Mr. Wilmore says that they should never be cut in the heat of the day; the work should be done in the early evening or early morning—preferably the evening, as they will then have the cool night in which to harden. He does not recommend dahlia foliage for a green, as it wilts quickly, and where the foliage is attached to the stem with the bloom, it causes the bloom to wilt also.

Among suggested reforms, the author is of the opinion that the list of varieties grown and catalogued should be curtailed. Of the one thousand and more named sorts now before the public, he says, six hundred should be discarded at once, and the remaining four hundred should then be made to pass in review before a critical public, and after one hundred to one hundred and fifty have been selected, the balance may be permanently excused.

culture, says: "In recent years, the making of horticultural literature is passing more and more from the working horticulturist to the specially trained student and writer." The volume before us is an exemplification of the truth of Professor Bailey's statement. It demonstrates, too, that the "working horticulturist" is not the only one who can produce a good serviceable book; for in this accomplishment Mr. Barron has, with the assistance rendered him, succeeded admirably. The making of lawns is a subject dealt with in most of the catalogues of our leading seed houses, more or less comprehensively. In this work, however, the author goes into the matter most exhaustively, treating upon the digging and plowing of the lawn, the selection of site, seeding and turfing; in fact, all the minutiae that in the aggregate mean a sward of refreshing green. The volume is profusely illustrated; several of the pictures depicting work of the most elemental character, of questionable value to any one, while others are quite informative. Mr. Barron has not omitted to provide instructions for the making of putting greens, and quotes the remarks of Travis, the golf champion, on the important part played by a well-constructed green in the enjoyment of that now popular game.

A very useful part of the book is that chapter termed "A guide to the best lawn grasses," being a tabular presentation of the essential differences of the seventeen standard lawn grasses, their soil preferences, and uses; prices, weights, and quantities to sow.

As a whole the book well carries out the aim of the author, who states "its purpose is to enable any one to establish a respectable and adequate

usual size before transplanting, to the obvious advantage of the decorative scheme. To cite a single instance: the Lee parade ground, one of the largest fields for its purpose in the country, has been surrounded with apple trees full grown. The gnarled trunks and the rich green of their foliage will, of course, supply a beautiful background for the brilliant troops of many nations who will maneuver here.

One of the most striking of the government exhibits will be that of drugs and medicinal plants. The poisonous plant exhibit consists of actual plants growing under glass, and water color illustrations of a great number which could not be so displayed. A number of valuable plants which bear a close resemblance to poisonous varieties will be shown in juxtaposition, so that one may not be mistaken for the other. There will also be an exhibit showing foreign plants which have been successfully introduced into America, and others which are deemed worthy of serious attention by American agriculturists. A very complete exhibit of grasses and forage plants will be shown and farm demonstration work, including cattle ranges and stock farms, will be illustrated by transparencies. Cereal investigations, studies of fibre plants and the experiment station will be conducted in epitome at the exposition.

Throughout the exposition the Department of Agriculture will present exhibits and make experiments which will have great value to the scientific agriculturist. The Bureau of Plant Industry will conduct investigations devoted to the cause and cure of diseases to which cultivated crops are liable, and to the best methods of producing certain crops under given conditions. Various seeds, plants, fertilizers, etc., will be tested and experiments made to show the practical results which follow certain scientific methods.—N. Y. Herald.

CARNATIONS

Bedding Carnations.

The demand for outdoor carnations is growing from year to year. Florists who deal in plants for the garden cannot afford to ignore the constantly increasing call for bedding carnations, hardy sorts and such that furnish flowers for cutting during the summer. The retail grower who is not trying to do his best to meet this demand in some creditable way is missing an opportunity for developing a good line of trade.

It is strange, too, that American growers, justly noted for their alertness in matters of business possibilities, should approach the question of how to utilize carnations in ways other than indoor forcing, so haltingly and with such undecided interest. The assertion often made that carnations in outdoor plantings will not do as well here as in Europe is not true. In all my trials with nearly all of the species that come under the head of true carnations, I never saw them behave otherwise than splendidly as regards health, vigor, durability and willingness to bloom, though, of course, but few possessed the essential qualities, all combined in any one species, that would make it a bedding carnation par excellence. It is this that we are fervently looking for, hoping to see it come forth some time in the near future.

Meanwhile it is not at all impossible—not even difficult—to find among the many species embraced in the genus *Dianthus*, some that might safely be taken in hand by the commercial grower for the purpose of supplying his customers with good garden sorts in presentable shape and promising condition. Raised in a gardener-like manner and offered in as good a form as all other florists' stock, they never fail to give entire satisfaction.

At this season of the year with Spring close at hand, it seems timely to review the various types found in *Dianthus*, to see in how far they may be made to serve the purpose under consideration. In doing this we must bear in mind that none of our greenhouse varieties are of any value whatever for effective outdoor bedding, as has been proved in the repeated trials made with some of the best promising sorts in our public parks. If potted up in the Fall, kept partially dormant during the winter and planted out in the Spring, they will furnish a good many flowers throughout the summer for picking. Large numbers can be sold for this particular use every Spring. But only some of the varieties are good for the purpose and these only when rested during the winter, so that this is not the kind of stock which will prove especially profitable to handle. For this reason we must have recourse to sorts more satisfactory in every respect, harder of constitution, easier and less expensive to raise, and more fully answering the various purposes for which they are wanted. All of them are desirable and fast-selling florists' stock, each species and variety possessing its own peculiar merit.

Beginning with the least important of the entire genus we have for the low border *Dianthus chinensis*, a species excellent for massing and quite showy. The flowers are not fragrant, but are produced in large numbers throughout the summer. There are many varieties, all of them good for bedding. Chinese pinks, as also the Japanese varieties belonging to this class, are best when treated as an

Dianthus barbatus

Photo by John F. Johnston

annual species. The seeds may be sown at any time in the Spring, since the plants come into bloom in a shorter time after the seeds are sown than any other known species of the entire order.

Next we come to the tribe of hardy garden pinks, useful for the mixed border, the flowers fragrant and good for picking. Most of the varieties flower in May or June, a few of them the greater part of summer, such as *Cyclops* and others of the *semperflorens* type. They all are fairly hardy with little in the way of protection. Propagation is by cuttings, division or from seeds. Some few of the varieties, if the seeds are sown very early, will bloom the first season. To this class belong also the well known Sweet William, *Dianthus barbatus*, and the Scotch pink or Pheasant's eye, *Dianthus plumarius*, this latter having the distinction of be-

ing the most fragrant of all the pinks. They are easily multiplied by division or raised from seeds, sown in April or May.

A splendid sort of massing in beds, partially shaded, is *Dianthus latifolius atrococcineus*, a kind greatly resembling in its bearing Sweet William but remaining in bloom much longer. Its dazzling red flowers, borne in the form of compact trusses, produce a splendid effect. The plants are quite hardy. It is best to raise them from seeds, which if sown early will grow into flowering plants the first year.

A comparatively new variety, one which promises to be the very finest of hardy pinks but as yet some what scarce and high priced, is *Dianthus Napoleon III*. It flowers from early until late in the season and, as it appears to me, would be a good thing for the regular flower bed if planted about fourteen inches each way. It grows into immense bushes and seems, as far as I can see now, to winter well under slight protection. The flowers are double, blood red, very bright, and emit a pleasant, spicy odor. Nothing better for picking.

The next step brings us into carnations proper. Of least value to the commercial grower are the ordinary strains of Marguerite carnations. Although these flower in a few months after the seed is sown it is not the kind of stock to offer to our customers, though there is quite a call for Marguerite carnations every Spring. This call, however, should be met with well-grown plants of the best and most important newer varieties of Marguerites, of which there are several that combine all the good traits distinguishing the perfect bedding carnation from the unsightly row of stragglers along the back fence.

Foremost among improved Marguerite carnations stands the variety *Chabaud*. The seeds should be sown early in March to obtain good-sized 2-inch plants for marketing five or six weeks later. They will begin to bloom soon after being set out and continue throughout Summer. The habit of the plants is upright and compact; the flowers are held erect, are large, very sweet, good for cutting, as also quite effective in bedding arrangements. All the colors found in carnations are represented, not excepting pure and striped yellows. The plants if wanted for another season must be taken up in the Fall and wintered over in any cool but frost-proof place. This variety surpasses in point of utility for outdoor planting many of our best bedders.

Another excellent sort for bedding, to be treated like the foregoing, is the sub-variety *Glowing Coal*. Most of the plants will produce scarlet flowers, very double and exceedingly fragrant. A variety of recent introduction.

A very good bedding carnation of the Marguerite type is the *Guillaud* strain, inasmuch as the habit of the plants is all that can be desired for the purpose. The flowers are of good size and form, coming in an endless diversity of colors, and are produced in great abundance all through the Summer and late Fall, even continuing during the entire Winter, if the plants are potted up and taken in before hard frosts occur. Best raised from seeds which must be sown rather early to obtain good results the first year. This variety does best in light sandy soil.

Well-tried bedding carnations—not belonging to the Marguerite class—are the Grenadin and dwarf Vienna species, both of them quite hardy, but not enough so to stand our Winters without carefully placed protection. I consider these the most suitable and most satisfactory sorts for the general plant trade, though they are a trifle more expensive to raise, since they do not flower the first year, when raised from seeds, which, after all, gives the finest and most floriferous plants. The seeds are sown in April or May in outdoor frames, are transplanted into the field when the plants are large enough to stand the shifting, and they invariably grow into large clumps by November, when they are potted up or simply lifted with all the soil adhering to the roots and stored away under some cool bench or corner of the shed. In early March they are cleaned of dead and dry leaves and slowly started into growth, which now is a multitude of strong, fast pushing shoots from the crown of the old plants. By the time sales begin these plants are a mass of buds and, later on, a perfect sheet of bright color, the bloom lasting until away into Fall. There is only a pure white variety of Grenadin, but the original type only produced flowers of the brightest scarlet. In the dwarf Vienna strain flowers vary greatly in color, and for this reason the Grenadins are to be preferred for highly effective border planting. FRED. W. TIMME.

Sweet William (*Dianthus Barbatus*).

The sweet williams of our garden is *Dianthus barbatus*, a member of the pink family. It is one of the oldest of garden flowers; something is wanting if it is not found in the old-fashioned gardens. It possesses many charms endearing itself to all who love the old-time flowers. The blooms are of various colors, exceedingly attractive, and the plants are free flowering. The sweet william is really a perennial, but better results are obtained if it is treated as a biennial. Seed sown in July in the open border will furnish good plants for the following season's flowering. In addition to the many beautiful single varieties there are numerous double ones which continue in flower for a longer period. Never let the hardy border be without the dear old sweet william. L. I. JOHN F. JOHNSTON.

FOR THE RETAILER

A Window Decoration.

This is not the first time I have gone into the subject of artistic window decorations, but this week I was particularly impressed with the display of a Fifth avenue florist noted for his novel window decorations. A great deal of thought and mechanical skill must have been expended to obtain such splendid results.

Much has been said of the remarkable skill of the Japanese displayed in their wonderful miniature landscapes depicting their unique style of gardening; but the particular decoration to which I refer was the work of a New York florist, who has certainly something more in his head than the making of bouquets and "buttonholes."

The whole window was devoted to this display. In the background, to the left of the picture, was a country farm house and water-mill; cattle, pigs, and poultry were in the yard, outhouses, dog kennels, farming implements, and, in fact, everything that goes to make up a well equipped farm. To the right, crowning the top of a hill, was a windmill, the sails being kept revolving by a mechanical contrivance. In the foreground, to the left, was depicted a well-kept garden, with terraces and lawns; and a little to the right was a sunken Italian garden, its principal ornament being a fountain in the center. A miniature group of the "Three Graces," who were continually showered by the tiny fountain, made the scene complete. Still further to the

Montreal Gardeners and Florists' Club Cup, for Largest and Best Exhibit of Carnations
Won by F. R. Pierson Co., at Toronto Exhibition A. C. S.

right, and occupying the main part of the window, were rolling meadows formed by artfully placed lumps of green moss, through which roamed cattle and sheep. Tiny streams having their source at the pond behind the water-mill wound their way around miniature hills and huge boulders, finally emptying into a pond at the extreme right which in itself was a work of art. Clumps of bushes and reeds were on the banks; water lilies and gold fish were in the water, cattle quenching their thirst at the water's edge, in most natural poses. The whole landscape apparently took in several acres and was complete in every detail, making a window decoration both attractive and novel.

Florists' Greens.

It has been my experience that no matter in what quantities cut flowers are sent into this market there seldom, if ever, seems to be a surplus of green material, unless on rare occasions we have too much smilax. But something usually comes along to use it up, and very little is thrown away. The popularity of Asparagus Sprengeri is evidently on the wane, and the favorite A. plumosus is back in its old place, although the former still has its uses and is indispensable in some cases, its light green coloring being its chief recommendation. A quantity of first-class A. plumosus is now being shipped from the South to this market. The bunches contain 25 good sprays, while those of the local shippers always contain about 50 per cent. short ends and rubbish, which are very disappointing when one comes to use them.

The introduction of Adiantum Croweanum has been a great help to the retailer, and the regular supply of that fern has done much to lighten the troubles of the buyer, as there was no regular supply before its introduction.

A tenerum is being received by one wholesaler, and I have often wondered why it is not more grown. He has been getting good prices for the fronds. I know from experience that it is not more difficult to grow than A. cuneatum, and it is one of the handsomest of the adiantums splendid for large effects and to use with large flowers, such as lilies, and chrysanthemums. Adiantum tenerum Farleyense, which is a relation of A. tenerum, has been in good supply this Winter, but the demand has not been extensive. This fern has also sold slowly as a pot plant.

Anything new in the way of green would be a welcome addition. Stevia covers the need for a short time, but there is little to take its place. Customers demand so much with their flowers nowadays, and are indignant if you ask them to pay for it. Lencothoe sprays and fancy ferns are a great help for filling up but do not satisfy our best buyers who demand asparagus or maidenhair fern. There is a great need of a supply of some soft, feathery stock to take the place of asparagus, which is a slow grower and therefore expensive, becoming very scarce as the season advances. Tamarix and the edible asparagus help out in the Summer months, and if they could be forced, would be welcome now.

I have often used Southern smilax for large table effects, and if care is taken in selecting good shapely sprays some very good effects may be obtained with it. But the leaves are too large for small table work; for general decorative work, however, it, of course, has no rival.

A visit to Covent Garden market, London, would give the home growers some useful hints as to what is used by the London florists in the way of green; in fact, everything that can be spared is sent in there. Croton leaves appear regularly at this center and are used for funeral work, and even for bouquets. This finer leaved sort make up admirably with orchids and other choice flowers. Several varieties of pteris are used. Pteris serrulata being grown for that purpose. Bunches of mixed ferns cut from ragged or overgrown plants, dracenas, pandanus and every conceivable variety of foliage are regularly sent in from one source or another.

Rose foliage is seldom to be had in this market; and what is finer for use with roses! The same may be said of carnation grass; it is only on rare occasions or at the flower show that you see carnations with their own buds and foliage. The exhibitor knows how to stage his carnations for effect by using the natural foliage, but the retailer seldom has the opportunity to do this for lack of the material.

While we have an immense variety of flowers to offer to our customers the different kinds of green, or foliage, could almost be counted on the five fingers; and I think the subject is well worth the attention of enterprising growers. Any addition to the regular supply would be eagerly welcomed by the retail florist.
D. RAYBUN.

British Credit System.

Consul Rufus Fleming of Edinburgh, in the annexed report on the British credit system, furnishes information regarding methods in Scotland which will be serviceable to those exporting merchandise to that country:

Each year extends and confirms the thirty-day credit rule in the domestic trade of British industries and wholesale houses. Manufacturers and exporters on the continent of Europe doing business here are also conforming to the generally accepted system. It is not so much a restriction of credit as an acquiescence in the common wish of dealers themselves. On the part of most dealers longer credit is neither required nor favored. In fact there are few established firms that do not pay cash for wares and merchandise on thirty-day bills or accounts if they thereby get the benefit of even a fraction of 1 per cent discount. Some leading firms buying large quantities of goods abroad deal through their own agents, the discount for cash paying the agents' commissions.

Speaking of this part of Scotland only—although conditions are probably much the same in all sections—I find that prominent business men take the view that the object of trade credits is fully served (except in special cases) when the period covers delivery of the goods. A longer term offers a temptation to the purchaser to pay interest on the money value of the goods, thereby reducing his profits. The advantages of short credits—the lowest prices and also the best opportunities for the future—are lost in proportion as length of credit may create a sense of obligation for a favor. The average Scottish business man esteems above everything else his independence in business matters, and therefore dislikes above everything else the fetters of favors received. He wishes to discharge any obligation with the least possible delay, to feel free to deal with whom he chooses, and to secure the best bargains obtainable. What specially commends the short-credit system to the trading community as a whole is that it simplifies business and reduces to the minimum the friction in the machinery of trade.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Avenue. My facilities for delivering flowers for any and all occasions are unequalled. I can give prompt service to steamer and theatre trade. Telegraphic orders solicited.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Washington, D. C.

GUDE BROS., 1214 F Street, N. W. We excel in high-class flowers and design work of every description; quick service, reasonable charges and liberal treatment have placed us on top. Try us.

Milwaukee, Wis.

THE C. C. POLLWORTH CO., Wholesale Florists, will take care of all your Retail orders for the delivery of flowers anywhere in Wisconsin.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLORAL CO., 1706 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Cincinnati, O.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dallas, Texas.

LANG, THE FLOREST, the largest flower store in the South, Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Texas, Louisiana. Mail and telegraphic orders solicited.

George A. Sutherland.

George A. Sutherland, president and manager of the G. A. Sutherland Company, Boston, Mass., was found dead in the basement of his store, 34 Hawley Street, on Monday morning, where he had deliberately turned on the gas and awaited death. The news came as quite a shock, and his death was the chief topic of conversation in the flower district with which he had been identified for nearly twenty years.

Mr. Sutherland first started in business in partnership with the late L. M. Peck under the firm name of Peck & Sutherland, which firm bought out the wholesale house of Wm. J. Stewart on Bromfield street, Boston. The business was continued at the same location until forced to move on account of rebuilding, when quarters were secured on Hawley street. Of recent years Mr. Sutherland had met with many business reverses, and these combined with ill health are said to have worked on his mind and been the cause of his sad act. He is survived by a widow, but no children.
J. W. D.

An esteemed Chicago contemporary says it "has more subscribers in the State of New York than in any other State in the Union." That may be, and still the statement may signify but little. We congratulate the other States and extend our sympathy to New York.

CLUB AND SOCIETY DOINGS.

NEW YORK FLORISTS' CLUB.—The meeting on Monday evening, Feb. 11, was well attended, despite the fact that the night was extremely cold. There was an interesting display of carnations and sweet peas. President Totty occupied the chair. The outing committee reported the progress it had made in arranging for that annual event. Witzel's Point Grove is spoken of as the place, and Tuesday, July 2, as the date. The committee, in its report, suggested that the club might appropriate \$100 from the treasury toward defraying the expenses of the outing in the matter of prizes for the sports, and otherwise. This brought out considerable discussion, some of the members favoring the proposition, others being against drawing on the club's funds for such a purpose. It was believed that the appropriation would obviate, to a degree, the necessity of the club soliciting from members and outsiders advertisements for the program of sports, which was regarded as undignified and more or less of an imposition on the generosity of the craft simply for the detection of the picknickers. A motion to make the price of the double ticket \$5, and \$3 for ladies, presented by Mr. O'Mara, was tabled. Finally Mr. Butterfield gave notice that at next meeting he would submit a motion, calling for the appropriation asked by the committee. All the best features of preceding outings will be repeated this year, and everything will be done to make the affair the most enjoyable.

Mr. Sheridan, on behalf of the dinner committee, stated that all arrangements had been made for the annual feast, which would take place at the St. Denis Hotel, on Saturday, February 23, at 7.30 p. m. Tickets are \$5 each, and an early response is respectfully requested to facilitate the committee's work in providing for all who intend being present. Some novel features in the way of entertainment will be furnished; and it is expected that several noted post-prandial speakers will add to the pleasure of this always pleasurable affair. The number in attendance should be a large one. Let all go who can.

The following were elected members: Henry Hornecker, R. E. Berry, Albert Weisenberger, A. Begerow, A. F. Faulkner, and Geo. E. Dickinson.

H. Tause, A. R. Kennedy, E. Eckles and J. M. Gerachty were proposed for membership. The resignation of E. W. Hitchings was received with regrets.

A suggestion was made by Treasurer Wheeler that a membership committee be appointed to pass upon the eligibility of candidates, and Mr. Sheridan gave notice that he would embody that in a motion to be presented at next meeting.

The trustees recommended the adoption of Mr. Wheeler's motion to change the by-laws, placing the treasurer under bonds. The mover of the motion, however, had subsequently discovered that the club's funds were well safeguarded under the existing by-laws, and the matter was laid on the table.

A shew of hands favoring the formation of a bowling club demonstrated but little enthusiasm by the members in this healthful sport.

Alex. J. Guttman gave a short talk on the recent meeting and exhibition of the American Carnation Society at Toronto. He praised the cordiality and hospitality of the Canadian brethren. The banquet was, he said, more like a state function, and every speaker "was a man." He spoke a good word for the trade press reports of the affair; and added that carnation growers generally should feel jubilant over present conditions. He warned rose growers that unless they take heed their flower would surely lose much prestige. The carnation was preferred by flower buyers on account of its durability; but as a larger profit was made by the retailers through handling roses, they, of course, continued to push the latter. He thought if the buds were not cut so tight that roses would last much longer in the living room. Color in a carnation was not of so much importance, provided it was a good clear one, and the bloom had a good stem. Seedling raisers should be encouraged; and, in his opinion, every new variety advertised at the present time was worthy of trial by growers.

Mr. O'Mara took up the certificate question, particularly in regard to inspection by visiting committees before final award. He commended the club's method of judging varieties on the exhibition table as well as at the growing establishment, by different scales; and it had happened where some sorts scored higher in the greenhouse than on the table. Of course, the grower himself had a great deal to do with the success of a variety; this was shown by the fact that flowers of the same carnation were graded before being sent to market. The best knowledge of a variety was obtained by viewing it in the greenhouse; and the speaker thought it would have been better had the Carnation Society's committee submitted some plan of inspection, even if it were not possible to carry out that plan under all circumstances. Most of the leading hybridizers and introducers of new varieties are comparatively near the large centers of population, rendering inspection easy of accomplishment; and he thought it would have been better for all concerned had the committee been bolder and presented a plan of inspection, instead of being afraid of falling down in the carrying out of its details. Mr. O'Mara referred to one grower's price list

wherein, with respect to a novelty, it was stated that it had developed unforeseen tendencies necessitating, in justice to the disseminators and to the public, the withdrawal of the variety at the present time. That was good business policy, but, unfortunately, there were some who had not that courage.

President Totty agreed with Mr. O'Mara and with the views presented in John Birnie's paper. If the Carnation Society as a society could not make these inspection visits the work could be delegated to sub-committees, preferably those of the leading florists' clubs. Mr. Totty, too, was of opinion that the Carnation Society lacked the boldness shown by the New York Florists' Club in this particular respect.

Mr. Birnie repeated his views on the subject; and emphasized the necessity of an inspection of the propagating house where cuttings of new varieties were growing. He instanced a case where he had found the thermometer in a carnation propagating house, in the month of February, standing at 72 degrees. Such treatment of young stock was responsible for many of the failures with new carnations. If the Carnation Society is to do its duty to the buyer, he argued that its method of awarding certificates should be changed or it should cease to give certificates.

Canadian Horticultural Association Trophy. For best Six Vases of Carnations, 50 each. Won by F. R. Pierson Co., at Toronto Exhibition A. C. S.

Mr. Butterfield thought a good deal could be said on both sides, but it seemed to him unreasonable to expect the Carnation Society to do work of the nature suggested for the small amount asked as annual dues.

Mr. Guttman also endorsed the inspection plan; he considered the subject was decided as it was at Toronto because no one was present at the meeting to support the recommendations contained in Mr. Birnie's paper.

After Secretary Young and others had told of the pleasant time they had at Toronto, on motion of Mr. Young the club voted its thanks to the Canadian Gardeners and Florists' Association for their generous and kind treatment of the members who journeyed across the border.

The award committee reported the result of their visit to the establishment of Dailedouze Brothers at Flatbush, N. Y., to inspect that firm's pink sport of Lawson, which has been named Welcome. The committee found the stock in excellent condition, free from disease, and stated that Welcome should prove an excellent commercial variety. They scored it 9½ points, and recommended that it be awarded a certificate of merit. Anton Zvelanek made a nice display of sweet peas, among which were Mrs. Dolansky, a light pink; Mrs. E. Wild, scarlet; Mrs. Wm. Sim, salmon pink; Mrs. Alex. Wallace, lavender; and Mrs. H. M. Gould, a pink and white, for which a cultural certificate was awarded. J. D. Ceckroft, Northport, L. I., showed two nice carnations—Georgia, a white, and Harvard, crimson; the latter scored 86 points and being awarded a preliminary certificate. From H. Weber & Sons, Oakland, Md., came

Torador, a flaked variety, something on the order of Prosperity and Mabelle, their new cerise variety. The award committee scored Torador 87 points and awarded a preliminary certificate. F. R. Pierson, Tarrytown, N. Y., showed fine flowers of carnation Winsor. This variety has already been certificated. Daillehouze Brothers, Flatbush, staged a nice vase of Welcome. John E. Haines of Bethlehem, Pa., exhibited a few flowers each of the varieties Imperial and Pink Imperial. L. C. Enggren of Woodhaven, L. I., showed a vase of his seedling, a very light pink of pleasing color. John Reimels, also of Woodhaven, had his red seedling Number 25, and the pink variety Winsome. F. Boulon & Son, of the Sea Cliff Nurseries, exhibited a vase of Princess of Wales violets.

LENOX (MASS.) HORTICULTURAL SOCIETY. The regular meeting of the society was held Saturday, February 2, 1907. President F. Heeremans in the chair. Three new members were elected. George H. Instone was elected secretary to succeed George Foulsham, who has gone to Savannah, Ga., to become superintendent of Mr. Shutter's estate. New carnations were exhibited by the F. R. Pierson Company, of Tarrytown, N. Y.; among them were White Enchantress, Winsor, Melody and Helen Gould, all of which were very fine. A diploma was awarded for each of them. This being the night of the annual dinner, no further business was done.

The seventh annual dinner was held in the Curtis Hotel directly after the meeting on Saturday evening. There were one hundred present, and the dinner was the best the society has ever had. Every guest got a souvenir in the shape of a menu card done in red. On the front cover was the seal of the society which bears the date of organization, January, 1893.

President Frederick Heeremans read the opening address, and introduced A. H. Wingett, a former president, as toastmaster. Among the many speakers were Messrs. A. MacConachie, E. Jenkins, of Lenox; John H. Sarbuck, of Pittsfield; Selectman Eustice Jacques, Editor White, of Lee, ex-selectman Richard Stanley, John K. M. L. Farquhar, of Boston; James T. Scott, of New York; W. D. Curtis, proprietor of the hotel, and A. J. Lovless, president of the Chrysanthemum Society of America. Vocal selections were rendered during the evening.

A special meeting of the society was held on January 30, to reconsider the holding of a ball; it was unanimously voted to hold one, the time set being February 11. J. T.

THE COLUMBUS FLORISTS' CLUB has held both its January meetings since my last report. In a way both of these continued the same business. Perhaps the feature of the most real value and interest to the members has been the recently introduced plan of having displays of plants and flowers at each meeting of the club. As I have previously explained, we have introduced a point system of awards, that is, we give to every exhibitor a certain number of points, (maximum twenty-five), for each and every exhibit made. At the end of the season to the members having the largest total number of points a prize of \$5 will be awarded by the club, also a second prize of \$3 and a third prize of \$2 to the next two exhibitors having the next greatest point totals. This plan to encourage floral displays at every meeting is succeeding beyond the most sanguine expectations of its sponsors; greater interest is already manifest in the club, many new members are joining us, and the most pleasing feature of all is, that the old members are coming more regularly; in fact, lately the number present at each meeting is averaging more than double what the attendance was a year ago.

The past two meetings have in cut flowers been devoted to carnations, and fine indeed have been the displays. The most elaborate exhibit of these was made by President Sherman Stephens, who has shown the following varieties in very fine form: Victory, Enchantress, Pink Enchantress, Flamingo, Lady Bountiful, Mrs. M. A. Patten, and Prosperity. The Fifth Avenue Floral Company also made a display of some elegantly grown Enchantress. The Franklin Park Floral Company displayed a very fine lot of Pink Enchantress. In plants some excellent displays have also been made. For a *Primula obconica*, M. B. Faxon was awarded 15 points; I. D. Seibert received 12 points for a fine *Pandanus Veitchii*; Vice-President Currie brought in an *Araucaria excelsa* for which the committee gave 6 points; for a well-grown *goldfussia* President Stephens received 15; and Treasurer Reichert the same number of points for a fine vase of Pink Enchantress carnations. The Fifth Avenue Floral Company made an exhibit of Princess of Wales violets; they were by all odds the best seen in Columbus this year; a special award was made. At this meeting Andrew Blumh, who is with the Clover Hill Greenhouses, was elected an active member.

The plans for various forthcoming shows were given attention. Messrs. Faxon, Knopf, Woodrow, Stephens, Mills, Williams, Batelle and others discussed fully the show matter; but nothing definite was decided. The committee on prizes consisted of Messrs. Williams, Baeler, Metzmaier, Torrey and Hilbs. During the evening some very enjoyable music was furnished by Miss Williams, and Earl Knopf, Jr. It is needless to say that our members fully appreciated this feature. We are now fairly settled in our new rooms in the Brent Building, and everything could not be in better shape for a successful Winter. F. W.

Feb 16, 1907

are potted up every Spring, and by some buyers are even considered extra fine— an opinion I do not share in.

In buying young stock of kinds largely handled by retail growers in the Spring, it is always better, according to my experience, to order rooted cuttings if they can be had than plants coming out of small pots. It is not a difference in price, it is the chief role in making well rooted cuttings the more profitable goods to purchase, but because they invariably grow late better stock if potted up and started in their first pots at the buyer's own place than pot-grown plants, which usually arrive in a state either not far enough advanced or not sufficiently established for a shift into larger pots, or so mutilated and broken up in packing and transit as to render them of less value than they were before they were potted with. Rooted cuttings, having traveled some distance, should on arrival be unpacked at once, not undoling the packages, holding a dozen, twenty-five or fifty, unless the potter is ready for them. Stand them upright in trays, the tops freed of wrapping, and allow no sunshine to touch them. If frozen, thaw them out slowly; and if wilted, pot them up at once, and then water them lightly until they raise their heads; then water thoroughly.

In taking rooted cuttings from the sand it is best to take them as they come, row after row, using the bare hand in scooping them out, and pulling them apart after they have been potted on a table. There is no need of being over-particular in knocking off the sand adhering to and holding the roots in a natural position; it is well to leave it on—better than breaking some of the roots in trying to remove it. Thoroughly clear the sand in the propagating bed, as you go, of all decaying matter, rotted cuttings, leaves and root stumps, and let it dry out first before using the sand again.

For the first potting of cuttings a somewhat sandy soil, sifted, not too rich and in a pleasantly moist condition, is to be used. Freshly brought-in rotted soil is to be preferred to the stale sort, cooped up all Winter in heated sheds, but no soil should ever be used in potting up cuttings or anything else raised under glass that has not entirely lost its chilly clamminess.

After Treatment.

All newly potted-up cuttings and seedlings need a good wetting down to settle the soil and to set them ageing, which for the first time had better be done with a watering can, though a practiced, careful hand will do it nicely with a small force stream from the hose. It is best, at least cleaner, to set the potted plants where they are to remain, before watering them, which means a carrying away as fast as they are potted to prevent any wilting of the plants. Newly potted plants of all kinds must be shaded for a day or two during the hours of bright sunshine, while after that they should be afforded all the light possible at this time of the year. Placing them at once on benches where they can remain with their feet in the shade, or shading them in some convenient way for a couple of days, is a better plan than first setting them on a shady bench and afterward removing them to more favorable quarters, which is useless extra labor, something to be avoided at all times.

Newly planted stock, coming out of warm soil or sand, should never be placed in a house much colder than the place of its first raising. In so doing the stock is exposed to a setback, which, with some varieties, amounts to actual loss, while in the case of many others it will lessen their value considerably, causing the plants to become insect-ridden, stunted or diseased, a frequent first cause of stock behaving poorly ever afterward. A great help to the grower who must carry on extensive propagating is bottom-heat, not only in the seedling and cutting benches, but also throughout the greater part of his other houses. Freshly potted-up plants, placed on bottom heat, quickly display the immediate benefits derived from this source of life-imparting energy, which also acts advantageously in modifying harmful atmospheric conditions, preventing excess of moisture and sudden fall in temperature.

After the plants have passed this critical period, and have begun to show sound, rapid growth, it is time to give them water, light and sunshine in unmeasured measure. The nearer to the glass the finer a growth most of the varieties will make, and some of the hardier sorts will want an abundance of air whenever the character of the weather sets no bar to ventilation. These of the commoner kinds, to be sold out of their first pots, may safely be allowed to root through into the layer of soil or ashes on which they stand. Fast-growing sorts will do that and lose nothing in their value for planting out thereby, but should not be lifted until sold or set out in the field. When planted in small pots arrive at this stage they will easily for the want of water, and it becomes then necessary to keep a close watch.

Most trying to the grower is the care of young stock intended for indoor culture, when this becomes firmly pot-

bound long enough before it can be bunched or planted out. It is then nearly impossible to keep it supplied with moisture to last until the next watering. The plants become hard, rough-skinned, stunted, disinclined to follow up any kind of stopping with a good break; the leaves show a yellowish cast, and the roots harden and dry back. The plants, before it comes to this, must be shifted into larger pots, or simply freed of their small pots and either placed closely together in the soil of a bench or put back in their old place, giving them a little more room and packing them all around up to the stems in soil, old manure, spent hops or sawdust. They will then do nicely until wanted for planting.

FRED. W. TIMME.

FERNS MY SPECIALTY

Please notice the big reductions. *Cibotium* *Schradet*, the king of Ferns, well-known for its unequalled beauty and great keeping qualities, very easily grown:

3 in. pots \$20.00 per 100; 4 in. pots \$40.00 per 100; 5 in. " " 60.00 " 7 in. " " 1.70 each.

Large specimen, \$5.00 each. *Adiantum Regium*, a beautiful fern, also called the hardy *Parleyense*, 4 in. strong plants, \$25.00 per 100; *Adiantum Rhodophyllum*, 4 in., \$20.00. Assorted ferns for gardeners, in all the leading varieties, \$3.00 per 100, \$25.00 per 1000; 500 at 1000 rate.

BEACON CARNATION

(ORANGE-SCARLET)

ORIGINATED AT

ELLIS, MASS.

Has been tested four years and proved to be of
GREAT COMMERCIAL VALUE

Do you want
to keep the
"Blues" and
grow
Beacon?

You can't do
both

If you plant
Beacon
your help will
have to hustle
or put in extra
time picking
flowers

COMMENCING to bloom early in the Fall, it gives a profusion of flowers for Christmas (when scarlet is in demand at remunerative prices) and CONTINUES THROUGHOUT THE WINTER MONTHS. It may not score as high on the exhibition table as some, but WILL FIGURE UP ON THE RIGHT SIDE OF YOUR LEDGER in a manner highly satisfactory.

The blooms, under ordinary culture, average 2 1/4 to 3 inches in diameter, the guard petals are broad, well arranged, and of good substance, the center loosely arranged and not too full. Color, scarlet with a dash of orange, which lightens up the flower, especially during dull, dark weather, making it very brilliant and attractive. The stem is long, stiff and wiry. Calyx long and seldom bursts (less than four per cent. last winter). It propagates easily. The plant is a vigorous, healthy grower, of ideal habit, and a most profuse bloomer. A night temperature of 50 to 52 degrees suits it admirably.

A BENCH OF BEACON IN FULL BLOOM IS A SIGHT NOT EASILY FORGOTTEN

REVIEW OF THE MARKET

NEW YORK.—The Lenten season commenced this week, and the flower business, so far as values are concerned, has taken a great drop. Tuesday, Lincoln's birthday anniversary, was a legal holiday, but flower stores, both wholesale and retail, kept open the whole day, though business did not amount to much owing to the extremely cold weather. On that morning the temperature was 4 degrees below zero in the city, with a high wind blowing, making it very unpleasant for those who had business taking them outdoors. Many flowers arrived in a frozen condition, probably more than has been the case before on any given day for a good many years. Shipments that had but a few miles to travel were, in some instances, frozen just as badly as shipments that came twenty or thirty miles away.

Roses are becoming more plentiful, and especially among the upper grades is the dropping of prices most noticeable. Most of the special grades of Bride and Bridesmaid in particular are being offered at 12c., though in some cases efforts to do a little better than this are made. American Beauty can be bought at 75c. each, which is a 25 per cent reduction from the prices obtainable a week ago, although it cannot be said that the supply of American Beauty roses is increasing to the same extent as that of roses of other varieties.

Carnations are getting more plentiful every day, and prices have diminished materially all around. Probably the greatest increase of any flowers in the market is noted among bulbous stock. Tulips, narcissus and lily of the valley are very plentiful and are offered in quantities at figures below those given in our regular quotations. For lily of the valley, which by the way has been selling fairly well for some time, there seems to be a demand whatsoever unless it is offered at bargain prices; it can easily be bought in quantities at \$1 per 100. Cattleyas are selling a little better than they were; but gardenias have become a little more plentiful and do not clear out so satisfactorily. Freesias are becoming more of a feature in the market; reaching the city daily, though for the latter the demand is not very brisk. Sweet peas have not yet become so plentiful for the time of the year as has been the rule in past seasons. Violets are selling at anywhere from 50c. to \$1 per 100; the general price for the ordinary run of good stock is about 75c.

So far as the general supplies of flowers go prices can safely be said to be anything but firm, and there is a general feeling toward cutting values all around. One thing that is firm, however, is Adiantum. Growers of this bring its regular price every day without change.

CHICAGO.—The rose stringency in the all pervading toxic when market conditions are under consideration, and it may be said that under the delightful cultural weather conditions which ushered in the past week with ten hours and twenty minutes of unalloyed sunshine and a moderate temperature on Sunday, one is tempted to figure how long such ideal conditions would have to continue before the rose bushes would resume their normal state with an average yield. It will require several weeks at least. A few growers are, however, fortunate enough to be cutting much heavier teas than are the general run, and though in ordinary years their present crop would not look particularly bright it is this year, by comparison, an event of decided importance.

The latter part of last week carnations showed a decided tendency toward easing up, and this week opened with an advance and steadily increasing supply; notwithstanding the holiday, the Mardi Gras, and St. Valentine's Day all coming in a bunch, the supply was so much increased that prices dropped perceptibly.

Bulbous stock is somewhat more plentiful, with a slight reduction in price, though cleaning up well at a profitable figure.

Violets, which had been in rather full supply, were entirely cleaned out of the market on Saturday and Sunday, and with the anticipated increased demand for the week prices for good double stock opened up Monday at \$1 per hundred. This price could hardly be expected to maintain beyond Valentine's Day.

Smilax is off crop with the large producers of this staple here and from \$2 per dozen up is the price, \$2.50 being a fair going for good material, some fancy going as high as \$3.

W. K. W.

PHILADELPHIA.—Flowers are more plentiful this week, except the first class grades of roses. A great many more of these could be used. American Beauty are up to Christmas prices, being at \$12 per dozen for the best stock, and there is not enough of them to fill all orders at these figures. Tea roses are still scarce; a few extra choice long-stemmed Richmond have sold at \$6 per dozen, and a few Bridesmaid at \$20 per 100. The general stock of teas is selling at \$12 to \$18 per 100.

Carnations are more plentiful and prices easier than last week. A few choice flowers of Enchantress and Beacon sell at \$8 per 100, but general stock is lower than last week, ranging from \$2 to \$5 per 100.

White lilac brings \$2 per bunch; myosotis \$2 to \$4 per 100. Bulbous stock is getting very plentiful. Daffodils are \$3 per 100, much lower by the 1000; double tulips, \$5 and \$6; singles, \$3 and \$4 per 100; Paper White narcissus, \$2 and \$3. Double violets are moving well at \$1.25 and \$1.50 per 100; large singles bring 75c. and \$1 per 100. Lily of the valley is selling well at \$3 to \$5 per 100. Carnations realize \$25 per 100, sales slow; lilies at \$2 to \$15 per 100 are in good demand. Cattleyas sell at \$6 per dozen.

DAVID RUST.

BOSTON.—The supply of all kinds of flowers is increasing daily, and although prices have held up until now a decided drop is daily expected. Roses, which have of late been very scarce, are becoming much more plentiful. There are not many long-stemmed American Beauty yet, but the prospects are for plenty in the near future. Bulbous stock is doing well, and prices have dropped from those of last week. There are splendid grades of carnations in the market. Violets are fine and plentiful. Lily of the valley is steady. Lilies are in sufficient supply for all demands.

J. W. D.

ST. LOUIS.—The weather the past week was cold and unpleasant which had a bad effect on the retail trade all over the city. The greenhouse men, too, had their troubles firing up. From reports of the downtown retailers, transient trade was dull, though funeral work helped out considerably during the cold spell. Decorations among the uptown florists were made under difficulties. The wholesalers also had to suffer a little with frozen shipments. The rose market is still very dull, hardly any good first-class stock is coming in. As this has been the case the last few weeks, a week of sunshine should bring on a glut in a little while.

Carnations are selling well at \$5 per 100, top price, but the bulk of the stock is going at \$3 per 100 in large lots. There are plenty of extra fine Mrs. T. W. Lawson, Enchantress, Nelson Fisher, Boston Market, but the trade buys these as roses are so scarce. Violets have also been scarce during this cold spell and are now up to 75c. for choice; these should be more plentiful with a few bright days. In bulbous stock, Paper White narcissus have been very scarce. Roman hyacinths, lily of the valley, callas and jonquils are in plenty at all times. Only a few good sweet peas are in the market. Greens, same as last quoted.

ST. PATRICK.

INDIANAPOLIS.—Bright, warm weather has caused generous quantities of flowers to be sent in from the growers. Counter trade has been exceedingly heavy, so prices have remained firm throughout. The outlook for St. Valentine's Day business is indeed promising, as flowers will be plentiful and numerous orders are being booked. Funeral work demands most of the retailer's attention, as there is not much decorating for social occasions. The heaviest receipts for the week were of bulbous stock, such as daffodils. Roman hyacinths, Paper White narcissus and lily of the valley, at \$2 to \$4 a hundred. Miniature hyacinths sell well at \$7 to \$8 a hundred. Customers seemingly appreciate the wide selection of flowers after a couple of months in which roses, carnations and violets dominated. White and purple lilies offer many opportunities in making flower pieces; it sells at \$25 per hundred. Violets are shipped in, at \$1 to \$1.50 a hundred. Sweet peas are now a staple article, at \$1 to \$1.50 a hundred; generally they retail at 50c. per bunch of twenty-five. Carnations are more plentiful, also of better quality; \$4 a hundred is the best price for them. A majority of the number one stock brings \$2.50 to \$3 a hundred; \$1.00 a dozen is the retail price.

Roses are of uniformly good quality. The best Bridesmaid and Bride bring \$10 a hundred. The demand for thirds at \$3 a hundred is heavier than that for the best. Richmond roses are certainly fine at \$8 to \$12 a hundred. American Beauty are improving, at \$5 to \$50 a hundred.

Numerous pot plants are now in prime condition for window decoration and some beautiful displays are seen. The Chinese have engaged a number of azaleas, their favorites, for the Celestial New Years.

CINCINNATI.—Never before since I have been in business have cut flowers, especially roses and carnations, been so scarce in this market; high prices prevail. It would seem from present indications that at Easter we should have a lot of good stock to offer. The retail end of the business here is not rushing, a few funerals stimulating the small demand. It may be well that business is quiet, as it is impossible to get good stock to fill orders.

E. G. G.

ST. PAUL.—Although we have had extremely cold weather the past week we have been favored with a great deal of sunshine; as a result the market is greatly relieved, and the cuts that are being made of roses and carnations about equal the call, with the possible exception of white roses which have been in very heavy demand on account of the large amount of funeral work. Bulb stock has helped out wonderfully during the spell of cloudy weather, which lasted from two to three weeks and up until a week ago. A large number of specimen blooms of Richmond and Golden Gate roses are at present offered by the large growers, and good figures are secured for them. \$2 and \$2.50 a dozen seem to be the prevailing figures; in some places \$3 and \$4 per dozen have been obtained, but only for the best stock. Good Bride and Bridesmaid are on the market, but it seems impossible to obtain more than \$1.50 per dozen for them. Home-grown carnations are not very good, and it happens that growers in this section, who have a large amount of glass and devote certain spaces to carnations, cannot produce results such as are obtained by exclusive carnation growers; in consequence the fancy blooms are shipped in and apparently command a much better figure than our stock grown here. Bulbous stock is in abundance, and if present conditions prevail with plenty of sunshine, it is quite apparent within the next week we can expect nothing short of a glut on the market. Tulips of all colors and varieties can be purchased at, in some instances, 2c. each; in fact are bought by the box at a small figure from dealers who have a large number and do not want to take them home again. Violets are now plentiful, and one of our largest growers is cutting some of the finest violets ever produced in this section.

PAUL.

CHANGES IN BUSINESS.

OMAHA, NEB.—John H. Bath and Mrs. Maude Quarstrom Bath, for several years associated with Donague, the florist, will open a flower and candy store in Boyd's theater building.

ONSETT, W. W., MASS.—G. W. Archer has purchased the dahlia growing business of B. W. Hathaway, the Main street florist at Brockton, and has combined it with his own dahlia business here.

COLORADO SPRINGS, COL.—The Knob Hill Floral Company has been formed by Thomas J. Armstrong and Henry P. Monaghan, who have filed with the county clerk their articles of partnership.

DAVENPORT, IA.—E. L. Pope of the Allison-Pope Company has sold out his interest in the flora company on Brady street to Mrs. Amelia Miller. Mrs. Miller will be in charge of the store. Mr. Pope has not yet decided what he will do.

BINGHAMTON, N. Y.—J. L. Terwilliger, for the past 34 years with Bartlett & Co., sash, door and blind manufacturers, and Harry H. Evans of the Haskins Seed Company, 144 Court street, have formed a partnership for the sale of cut flowers, palms, ferns, etc.

SAC CITY, IA.—The partnership heretofore existing between J. Wayne and B. C. Butler, in the firm name Wayne & Butler, nurserymen, has been dissolved. J. Wayne assuming the indebtedness of the firm, if any, collecting the accounts due the firm and continuing the business.

BROOKLYN, N. Y.—Henry Eisenbarth has purchased the florists' establishment at 513 Third avenue, which has been conducted for a long time by Charles Krombach, and will hereafter conduct it. He was for years foreman for Mr. Krombach, and has had long and extensive experience in the business.

Boston.

The Week's News.

There was a large attendance at Horticultural Hall on Saturday morning. The subject of the lecturer, J. W. Duncan, was "The Home Vegetable Garden." A lively discussion followed, proving that there is much interest shown in this subject.

The New England Cemetery Association held its annual meeting at the New American House on Monday, electing the following officers: President, G. F. Standley, of Beverly; vice-president, Jas. Warren, Jr., of Providence; secretary, William Allen of Mount Auburn.

At the meeting of the board of trustees of the Massachusetts Horticultural Society Walter C. Baylies was elected to the vacancy created by the death of George F. Fabyan.

Horticultural Hall already shows the effectiveness of the new superintendent. Many improvements have been made, the most important being the changes in the lecture hall whereby it is hoped the acoustic properties will be much better than they have ever before been.

Stephen Chase, of Nashua, N. H., exhibited in Welch Brothers' market this week a seedling carnation of merit having the appearance of a much improved form of Fair Maid.

J. H. Cox sailed for England last week where he will be the representative of the F. R. Pierson Company.

There is quite an agitation among growers in this locality against the proposed legislation to include steam boilers for heating purposes in greenhouses among those that shall be operated by licensed firemen. A petition to be presented to the legislative committee is at Welch Brothers, where those who wish may sign the same.

Besides the lecture by C. W. Ross at the Gardeners and Florists' Club on the 19th there will be quite a discussion on the proposed steam boiler legislation; a delegation will be present from the Boston Market Gardeners' Association, and no doubt some decisive action will be taken by the club.

The landscape gardening classes of the Gardeners and Florists' Club are now of interest to all the attendants who should not miss an evening. Those who did not attend the preliminary lessons will now find it to their advantage to be present.

J. W. DUNCAN.

Indianapolis.

News Notes.

More flowers were displayed at Tomlinson Hall this week than at any other time this Winter. Bulbous stock, particularly tulips and daffodil plants, are brought there in quantities. Wholesale and retail business was reported as very satisfactory.

W. W. Coles of Kokomo, Ind., and Irwin Bertermann appeared before the State Board of Agriculture, which held its annual session this week. Upon Mr. Coles' solicitation, the premium list was revised and about \$250 added.

Messrs. John Hartje and William Billingsley visited the F. Dorner & Sons Company and W. Rock establishments at Lafayette last week. The seedling carnations at the first named place always prove a great attraction for visitors.

The State Florists' Association held its monthly meeting Tuesday, February 5, at A. Weigand & Son's store. Those attending enjoyed a social time, but no business of importance was transacted.

Thomas Barker is to engage in the retail business here.

Visitors, Wm. Hagemann, New York; Thomas Knipe, Kokomo, Ind.

I. B.

NEW CASTLE, IND.—The South Park Floral Company will soon ask for bids for the construction of greenhouses to cover four acres.

PHILADELPHIA CUT FLOWER CO.

Wholesale Florists
1516-18 SANSON STREET
High Grade Cut Flowers
Open Evenings until 8.
Mention the Florists' Exchange when writing.

Baltimore, Md.

Trade conditions are highly satisfactory in this locality. The Florists' Exchange disposes of everything in the cut flower line.

An important meeting of the Gardeners' Club was held Monday, February 11. Professor T. B. Symons of the Maryland Agricultural College addressed the club on the Jamestown Exposition, admonishing its members to make the Maryland horticultural exhibit, of which the professor has charge, a success. It is expected that a continuous floral, fruit and vegetable exhibit will be maintained during the entire exposition season. The club has decided to make the Jamestown display a matter of special business at the first March meeting.

On February 25 the Gardeners' Club will hold its annual banquet; an entertainment with dancing and musical selections will be part of the program.

The Maryland Agricultural College has figured out the average amount of glass devoted to the commercial florists' business in the State of Maryland, the amount being 1,154,000 square feet.

There are over one million bedding plants in the various propagating houses of the four park districts, and the quality and condition of the plants at this time are most exceptional, the crotons, alternantheras, and geraniums being very good. C. L. S.

NORA SPRINGS, IA.—Edwin R. Heiss, a horticulturist of state-wide reputation and a resident of this city fifty years, died January 30, of an apoplectic attack. He was over 80 years of age, and leaves two daughters.

News of the Week.
 Miss Frieda Schiller and Rev. John Scheuber were married on Wednesday evening of last week at the residence of the bride's mother, Mrs. Louise M. Schiller. Miss Schiller was formerly the successful manager of the concert's Jackson boulevard retail store.

The Foley Manufacturing Company has just finished up a neat order of hotbed material for melon growing consisting of nearly three hundred twelve foot frames, four sash to the frame, making upward of eleven hundred sash in all. Each frame is supplied with iron corner braces, bolted to end and side. They are made of cypress, with a twelve inch drop, the back and front being twenty and eight inches respectively.

"No twelve cent lilies for Easter this year," is the announcement of one of our largest producers of that plant, adding that not one half of his Easter crop will be on time. This statement has a sort of perennial sound, but it is probably better backed by conditions this year than is usually the case, as Easter is early, the bulbs arrived late in many cases and the weather has been unfavorable for their growth.

George Asmus had a cold when he went to Toronto where well developed symptoms of the grip appeared, and the insidious disease has been his constant companion ever since.

Mrs. Tyra Knutson, seventy-five years of age, mother of the West Huron street florist, Mrs. E. Palmin, died of pneumonia Tuesday morning of last week and was buried on Sunday.

John Pierson has opened a retail store at the corner of Forty-third street and Oakenwald avenue.

Mrs. Frances Spickerman of Sandwich, Ill., accompanied by her two sons, was among our recent visitors.

The general transformation in the Atlas Building has seemed to work advantageously to all parties concerned. The Benthey-Coatsworth Company is in possession of a much lighter, pleasanter, and healthier salesroom; and the Poehlmann Brothers Company's facilities are greatly enhanced by the acquisition of much needed additional space; while Weiland & Risch, who have for some time found their space inadequate, will be benefited to the extent of a goodly section of the old hallway which will be a great aid in giving them ample storage room for boxes.

The decision of the courts as to the legality of the tax imposed on abutters for the space utilized under the sidewalks, streets, and alleys, and which it is expected will be rendered this Spring, is awaited anxiously by the trade, as it will considerably affect rentals of at least eight wholesalers and an indefinite number of retailers.

The E. F. Winterston Company is pleased to note that its fancy ferns are averaging much better than they were a few weeks ago. Wild smilax, of which the firm has a fine lot in cold storage, is also coming out in excellent condition.

The employees of Charles A. Samuelson, 2129 Michigan avenue, are making arrangements for a ball to be given at the Unity Club House, 3140 Indiana avenue, on April 6, being the first Saturday after Easter. The affair is in charge of the following committee: Edward S. Enders, Edward J. Eisner, Charles H. Fallstrom, Edward R. Chappell.

C. W. McKellar is handling a choice lot of cyclamen plants in various sizes.

Vaughan & Sperry and Sinner Brothers have both made decided improvements in their respective sections in the Flower Growers Market by the partitioning off of a goodly part of their space for office purposes.

The new delivery wagon for Schiller the Florist made its appearance on Saturday and is certainly up-to-date.

Wietor Brothers report their rose conditions as easing perceptibly, and that at present they are making a satisfactory cut of Bride, Bridesmaid and American Beauty, the latter variety also setting a fine crop of buds.

WEST GROVE, PA.—At a meeting of the directors of the Conard & Jones Company, held after Mr. Conard's death, the company was re-organized by electing to the board of directors Mark Hughes of West Grove who was for many years associated with the Dingee & Conard Company. The board of directors also elected the four following officers: Robert Pyle, president; Antoine Wintzer, vice-president; S. Morris Jones, treasurer; and Roland T. Satterthwait, secretary.

BUFFALO.—The many friends of William Scott will be glad to learn that he is convalescing nicely, and the past two or three days has been able to get out to the greenhouses for a few moments. He has not yet regained the use of his right arm, a fact which he laments more than anything else, as he is unable to do any writing. All hope for Mr. Scott's speedy and complete recovery.

AUGUSTA, GA.—Owing to sickness in his family, President Robert C. Berckmans of the Society of Southern Florists was unable to be present at its annual meeting in New Orleans, La., this week.

staff is about to remove to De Kalb, Ill., the former home of Mrs. Vent, where he intends to grow asters, sweet peas, etc., for market, with the expectation also of shortly entering the retail field.

Scheider & Schloss, among the younger concerns competing for a share of the Chicago business in carnations, report a satisfactory season thus far and a good opening in the rotted cutting department. With something less than 50,000 square feet of glass their daily shipments to the market appear very heavy.

A. L. Barnett, representing Reed & Keller, New York, was calling on his Chicago friends a few days ago. J. A. Budlong shipped heavily last week to Southern points, especially New Orleans, where the Mardi Gras festival is being celebrated this week, and were fortunate in having on a good crop of both roses and carnations. This concern has adopted a new feature owing to a constantly increasing business in Southern greens and buys direct from the original shippers rather than depend on consignees in this market.

The grip has finally broken into the florists' ranks and W. E. Lynch, Alex. Newett, George R. Scott, and others have been more or less seriously affected.

The J. B. Deamud Company has been working overtime of late with a full line of staple goods; among specialties noted there a few days since was a consignment of handsome amaryllis.

Elitch Long of Denver, Colorado,

accompanied by Mrs. Long, has been visiting Chicago.

At Vaughan's Seed Store Spring trade is beginning to open up, and C. W. Scott, who has just returned from a trip on the road, reports a very satisfactory business.

P. J. Hauswirth transformed the Egyptian room of the Auditorium into a palm garden on Saturday evening last, the occasion being the final banquet of the Merchants Club which has now been merged with the Commercial Club.

Swainsona is appearing in small quantities.

Zech & Mann are especially strong on bulbous stock at present, some of their yellow tulips being especially noticeable.

A. L. Randall Company continues to have a run on white lilac, many orders for which the firm has been unable to fill of late. An immediate increased supply, however, is in sight.

Owing to the exorbitant prices of some of the necessary construction material, N. C. Moore & Company have decided to postpone the erection of additional greenhouses this season as was planned.

Lincoln's Birthday, the opening of Mardi Gras, and St. Valentine's Day coming on three successive days, something which, on the authority of C. L. Washburn, we may state will not occur again for ninety-eight years, made a decided strain on a short market in some lines. To further quote Mr. Washburn "Business is booming; you might say a second Christmas."

The financial difficulties of Michael Winandy, bankrupt, are being straightened out by Trustees Day, Ickes, and P. Reinberg, who on Wednesday of last week accepted, subject to confirmation of the court, a bid of \$4,500 for the bankrupt's property. The liabilities amount to more than \$75,000 upward of \$30,000 being secured by mortgage on the property. WILLIAM K. WOOD.

New York.

The Week's News.

A meeting of the directors of the American Rose Society was held in the store of Traendly & Schenck on Monday evening.

The sympathy of the craft will go out to Wm. Hackland, the well-known book-keeper for the New York Cut Flower Company, who lost his mother by death recently, the interment taking place on Monday last.

The five-year-old son of John Scott, Flatbush, N. Y., is, we are sorry to say, very ill with an attack of pneumonia.

One of the most important events in the floral circles of this city that has occurred in some time was the marriage of Charles Schenck of the well-known firm of Traendly & Schenck, doing business at 44 West Twenty-eighth street, to Miss R. Pachner. The ceremony took place on Tuesday evening in Tuxedo Hall, Fifty-ninth street and Madison avenue. The decorations were of a most elaborate character, and were executed by Herman Warrendorf. The marriage ceremony was attended by a large host of friends of both the bride and bridegroom. The happy pair left for Washington, D. C., to spend their honeymoon.

John Coan of the plant department of Bloomingdale Brothers will start in business for himself as a retail florist on March 1, at the corner of Fifty-ninth street and Madison avenue.

At the funeral of a colored gentleman in Brooklyn recently, while white flowers were rather scarce and expensive, the bereaved friends decided on a large wreath of galax leaves and yellow tulips. The piece, when finished, was much admired by those who had selected the colors, and gave general satisfaction.

At the annual dinner of the New York Florists' Club, which is to be held on Saturday evening, the 23rd inst., an effort is making to secure some well-known after-dinner speaker to entertain us. Patrick O'Mara will be toastmaster, and it goes without saying that the office will be filled to the delight and entertainment of all who attend the dinner. A prominent musician has charge of the musical part and we are assured of a very high-class program of music, both vocal and instrumental; also some good monologue work. Those who intend being present should at once send their names with the necessary five dollars, to W. F. Sheridan, 39 West Twenty-eighth street, chairman of the committee.

A petition in bankruptcy has been filed against George Vaselos, confectioner and florist, of 3201 Third avenue, by Nicholas Kontakas, a creditor for \$700, money loaned. It was alleged that Vaselos is insolvent, and on January 17 transferred his stock and fixtures to his brother Christos.

Sealed bids for furnishing flower pots, fern pans, etc., for the Forest and Prospect Park greenhouses, and for furnishing grass seed for Prospect Park, will be received by the Park Board at the office of the Department of Parks, Arsenal Building, Fifth avenue and Sixty-fourth street, New York City, until 3 o'clock, p. m., on Thursday, February 21.

A grower at South Orange, N. J., informs us that he has had very unsatisfactory dealings with the United States Express Company of late. In one instance he shipped a box of flowers from his place at South Orange, addressed to a wholesale florist in Twenty-eighth street, New York, and after two days the box was returned to him, the express company never having delivered it to the consignee. A complaint was made at the main office of the express company on Broadway, but as yet nothing has been heard from them in any way. Another case that this same grower had was one where he shipped a box of flowers to Rochester, N. Y., by the same company, which was delivered six days later. Of course, the contents of the box being perishable were spoiled entirely, and the grower had to sustain the loss. It would seem reasonable to expect that the express company would do something in both of these

cases, but whether they will or not remains to be seen.

Charles Hammond, 96 Post Road, White Plains, N. Y., has some excellent property for sale, which is well adapted for greenhouse purposes; parties who intend entering the growing business would no doubt do well to call on Mr. Hammond.

Bloomingdale Brothers have just signed a contract for the building of an addition of 2,000 feet of glass to their greenhouses on the roof of their store at Fifty-ninth street and Third avenue. When this is completed that firm will have a total of 30,000 square feet of glass situated on the roof—quite an establishment in itself.

F. N. Sanborn, representing A. T. Stearns Lumber Company, Boston, Mass., was a caller at this office on Saturday last.

Philadelphia.

Trade Notes.

There appears to be very good business going on this week; all the stores are more active, and many orders for St. Valentine's Day are coming in.

Much sympathy is expressed for Adolph Farenwald, the rose grower, at Hillside, Pa. His two new trussed houses, each 35 by 300 feet, collapsed entirely with the weight of snow last week. The houses were filled with American Beauty and Richmond roses. This accident has set prospective builders to thinking as to whether the trussed house is desirable. The snow-fall recorded was 12 inches; the snow was very light, consequently drifted badly in some sections. We have not learned the exact depth of snow that was on these houses.

H. T. Dumont has sold out his wholesale commission business at 1305 Filbert street to Berger Brothers, who are making alterations and will move in there in a few weeks. Berger Brothers are now at the old Flower Market stand and their leaving there will practically wind up this place, although the lease runs to July 1 and there are a few stall-renters yet there. Berger Brothers took care of the surplus stock of the stall men, so now another arrangement must be made.

H. T. Dumont has taken a position with Martin & Company who run the abattoirs in West Philadelphia; he has full charge of the fertilizer department.

The steamer Menominee, in collision in the English Channel on Sunday, has on board 140 cases of goods for Bayersdorfer & Company.

The Leo. Niessen Company has moved into its new building on Arch street, some four doors below the old store. The firm has now a good building, constructed of reinforced concrete, with concrete floors. It will occupy the first and second floors and basement. The first floor is taken up entirely with cut flowers; on the second are the offices. A cold storage system has been installed with a machine of latest pattern. There is a large storage room on the first floor, and a smaller one in the basement. The concern has also all the latest improvements in telephone

service, and is much better equipped and has greatly increased facilities for the handling and selling of cut flowers.
 DAVID RUST.

Washington, D. C.

The Florists' Club met in Gude's Hall on Tuesday evening, February 5. Several new varieties of carnations were on exhibition, among them Winsor and White Enchantress from F. R. Pierson Company, Tarrytown, N. Y., and Toreador and Mabelle, from H. Weber & Sons Company, Oakland, Md. Toreador was scored 90 points by the committee.

The club's officers were nominated for the ensuing year, to be balloted for at the March meeting. They were: President, Peter Bisset; vice-president, Z. D. Blackstone; secretary, Charles McCanley; treasurer, William F. Gude; directors, Charles Henlock, George Shaffer, F. H. Kramer and W. I. Clarke.

A good part of the meeting was taken up with preparations for the annual meeting of the American Rose Society, which will be held in this city March 13, 14 and 15, in the armory of the Washington Light Infantry. A feature of the three days' meeting will be a banquet to the visitors, which will probably be held at the Arlington Hotel on March 15.

Much interest is being displayed by the school children of the District in the fate of the appropriation for school gardening work, in which the little ones have become adepts. The Commissioners included in their estimates for schools \$1,000 to carry on this important branch of school work. The House struck the item from the bill, but the friends of the work hope that it will be replaced by the Senate.

The appropriation, if allowed by Congress, will be used to employ additional teachers to establish not less than five gardens of the kind conducted in South Washington in other sections of the city, and to purchase fertilizer, labor, tools, and other necessities of the work.

SUDDEN CHANGES

are severe tests on a boiler. A change of, say, 10 or 15 degrees colder in an hour—a change that your boiler must meet promptly and without endless shaking and poking—without an extravagant coal consumption—the Hitching Boilers are made that way—the right way for greenhouse boilers.

A. T. DE LA MARE PTG. & PUB. CO., Ltd., 2-8 DUANE STREET, NEW YORK

Detroit, Mich.

Carnation Night at the Club.

An ideal carnation display was staged at the Florists' Club parlors for the benefit of members only. The exhibit was not too large to be ponderous nor too small to miss attention, thanks to the establishments kindly contributing toward its success. F. R. Pierson Company, Tarrytown, N. Y., made a very liberal display of Winsor and White Enchantress. The Chicago Carnation Company, Joliet, Ill., contributed Red Riding Hood, Aristocrat and White Perfection. August von Boeslager, Mt. Clemens, had something fine in Light Pink Lawson; also Moonlight. A. J. Stahelin occupied an entire table with his stock, which was splendid. Chas. Plumb had some excellent Golden Spur and Von Sion narcissus. Lesbold Mallast showed a vase of truly old time Mrs. Lawson and violets. George Browne had a vase of White Enchantress.

After the members had examined the display the meeting was called to order. Louis F. Tause was unanimously elected a member. George Browne read a paper descriptive of the beautiful city of Toronto and the excellent meeting recently held there. He was much interested in the lack of advertising signs in the city. He visited the Dale Estate and John H. Dunlop greenhouses. The method of picking carnations struck him particularly. Every flower is laid the same way, and when a bunch is gathered it is tied up and put into a pail of water. Sugar beets are used there as a trap to catch sow bugs, while bran and Paris Green are used by Dunlop. Eaton's department store in Toronto was a source of attraction; split carnations were being sold there for 75c. per dozen. At Brampton the roses were tied down because they would have stems too long to suit the market. The lily of the valley was what Mr. Browne termed ideal.

Messrs. Rackham, Plumb and Pantke were asked to pass judgment on the carnation display. They reported as follows: Red Riding Hood appealed to them most, having a good stem, and the flower was carried well. Aristocrat showed up well under gaslight; it was not in as good

condition as Red Riding Hood. White Perfection is of good form and a pure white. Winsor is a fine flower, and if it is as prolific as beautiful it will prove a great acquisition. Von Boeslager's Pink Lawson was of nearly the same shade as Winsor and nearly as good in form; Moonlight lacked stiffness of stem. A. J. Stahelin's Rose-Pink Enchantress and White Lawson were grand, his whole exhibit reflecting great credit on the grower. He showed two seedlings, one white and one deep pink, both of which were very good. Thomas Browne staged the best lot of White Enchantress—a pure white. Mallast staged vases of Lawson that proved that variety is still in the ring if well grown. His Marie Louise violets were excellent. Plumb received honorable mention for his bulbous stock.

The Detroit Florists' Club most emphatically protest against changing the date of the S. A. F. convention from August to November; many of its members are active members of the S. A. F. The entertainment committee has saddled a black horse for February 20, 1907.

C. Aangeenburg, representing Waarner & Company, Sassenheim, Holland, was present and was called upon for a few remarks. Murray G. Patterson was proposed for membership. HARRY.

Grand Rapids, Mich.

News Notes.

With the brightening up of the weather comes a hope of more flowers, which are badly needed in Grand Rapids and vicinity. The flood of last week has subsided, and the river is again in its natural bank.

Three small children and their aunt, who is a sister of Miss Livingston, the florist, were killed by escaping coal gas. The saddest feature of the accident was that it was three days before they were found, and when discovered, one of the children was living, with feet and hands frozen. This child also died later at the hospital.

Trade is very brisk here, and all are very busy. Roses are still in great demand and the supply is far from adequate. While carnations are more plentiful, they also are moving fast. Callas and Easter lilies are in good demand now for funeral work, while roses and carnations for such work are out of the question.

The Florists' Club held its first regular meeting last Thursday night and elected Henry Smith, president; Gene Davis, vice-president; G. Freyling, secretary. They arranged to have meetings every first and third Monday, in the Board of Trade Rooms. The reports of the committees on by-laws and prices of bedding stock were read and for the most part accepted. There were twenty-three members present at this meeting, and unless the "skidoo" number is hoodooed, there seems every chance of a large and prospering club here.

G. F. Crabb of the Crabb and Hunter Floral Company is sick in bed with a severe attack of grip.

JUST THINK THIS OVER:

If you hold a dime close to your eye and a dollar a little way off, you cannot see the dollar—the pesky little dime has shut the sight of that dollar completely out. Now, it's exactly the same way with the man who buys his materials locally or gets an estimate on an all cypress, shade-trap of a house and compares it with the price on that semi-iron and cypress house of ours; and then buys the shade-trap, repair-drag-house because it's a "little cheaper." Of course it's cheaper;—but why deliberately buy repair troubles—won't enough come of themselves? Now listen! Our estimate is based on a house with Cast Iron Foot Pieces, Angle Iron Posts, Ice Clearing Eave Plate, Sash Bar Clasps, 1 1/4 inch Pipe Purlins and Posts clamped together with our Interchangeable Clamp Column Fittings; fact is, more than half our house is iron. Iron at every decay point—iron at every weak point in that other fellow's house.

That other fellow's house can't compare in any way with ours—from start to finish you will have excessive repair bills on your hands. Get that dime out of your eye and see the dollar side—the saving side of our materials—our houses. Write for prices.

THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XXIII. No. 8

NEW YORK AND CHICAGO, FEBRUARY 23, 1907

One Dollar Per Year

CARNATION WINSOR

The most talked about carnation at the Toronto Convention. Won first prize for best 100 pink

We have not advertised Winsor until now because we have not had to. It is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders, and have a fine lot of stock in the cutting bench, so that we can promise, for the present, February delivery on orders received within a short time at least.

If you have not already purchased a stock of this, you should lose no time do-

ing so. We are going to sell more Winsor than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market where our flowers are sold.

There is nothing on the market that approaches Winsor today in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities, in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high quality flowers. It practically does not split at all, notwithstanding the fact that we have had the darkest, duldest winter we have ever had, when the Echadtruss and Lawson types are splitting badly all over the country with everyone, we have not had one-half of one per cent. of split calyxes on the Winsor. In fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement extravagant as it may appear.

Anyone who fails to plant Winsor this year will regret it. Rose pink Echadtruss is good, and a good many other varieties are good, but IF YOU WANT THE WINNER, PLANT WINSOR.

We not only have a good thing in Winsor, but we are delivering good stock. As a sample of the testimonials that we are receiving, see this space in last issue. We are trying to give 110 cents on the dollar, and guarantee to please everybody with the stock sent out or we will not ask you to pay for it. We have still to receive our first complaint, and we have shipped between one and two hundred thousand cuttings to date.

Strong Rooted Cuttings. February delivery, \$12.00 per 100, \$100.00 per 1000.

F. R. PIERSON CO., TARRYTOWN-ON-HUDSON, NEW YORK.

Mention the Florists' Exchange when writing.

WE are now booking orders for early delivery of *Richmond, Killarney, Bride, Bridesmaid, Wellesley, Liberty, Kaiserin, Carnot, Bon Silene, Mrs. Oliver Ames and Safiana.*

Now is the time to get *Kaiserin Augusta Victoria* for early summer flowering. I have a large quantity of 2 1/4 inch grafted and own root stock now ready for shipment.

Have a splendid stock of *Asparagus Plumosus Nanus* seedlings; seed saved from my own plants.

CACTUS GERANIUMS

A very unique and strikingly beautiful distinct type which, originating in England but a few years ago, at once won a place in great popular favor as a pot plant, for the conservatory and window boxes, for which they are unusually pleasing and attractive, on account of their remarkably handsome and thrifty but dwarf growth, small foliage, and marvelous profusion of bloom.

The Cactus has by common consent been recognized as a distinctive term applied to certain type of Dahlias, Cinerarias, etc., but none deserve the appellation more so than the Cactus Geraniums, with their admirable elegance of form, exquisite graceful narrow petals, similar to those of the Cactus Dahlia.

We offer a collection of four varieties, and to introduce them into every collection, we will for a short time send one dozen by mail post paid for \$1.50.

PELARGONIUM PELTATO ZONAL

ALLIANCE, (Lemoine 1905)

An exquisitely beautiful novelty of the highest order. A Hybrid between an Ivy and a Zonal and which has retained all the good points of both parents, including the beautiful soft finish of the Ivy and the hardy constitution of the Zonal.

It is therefore, not an ordinary variety but an extraordinary variety in all the good points that go to make up an attractive geranium. Its color is the most exquisite shade of delicate lilac white, upper petals feathered and blotched beautiful bright crimson rose. Flowers semi-double, abundantly produced in fine large trusses on long stems.

Habit is excellent, robust, strong, close-jointed; for vases or as a pot plant it is unequalled.

25 ets. each, \$2.50 per doz.; to introduce we will send postpaid for a short time.

IVY-LEAVED GERANIUM

CAESAR FRANCK, (Lemoine 1905)

This is unquestionably destined to become the most popular Ivy Geranium yet introduced; the color is the most magnificent shade of soft crimson, with an exquisite shading of tender rose at the base of petals. The flowers are about as double as those of the Crimson Rambler Rose—which they resemble—only much richer in color and finish, produced on long stems in enormous trusses. Habit, vigorous, quick-growing and pleasing, with a strong constitution. For baskets and vases it is all that could be desired.

Considering its general good behavior, being in keeping with its other good points, we are convinced that it is a most desirable sort.

25 ets. each, \$2.50 per doz.; to introduce it everywhere we will send post paid for a short time.

R. VINCENT, Jr. & SON, White Marsh, Md.

RAWSON'S ASTERS

are just a little superior to anybody else's

The product of our seeds can always demand a better price than those grown from seeds obtained elsewhere. The following is an extract from a letter received last fall from a most critical grower:

"Your Midsummer Aster has been a great moneymaker for me. For every flower that I have brought into the Boston Market I have received from \$1.00 to \$1.50 per hundred more than for any other variety raised from seeds purchased elsewhere". J. W. Simpson.

RAWSON'S TWO GREAT QUALITY ASTERS

RAWSON'S NEW MIDSUMMER:

in White, Delicate Lavender,

Delicate Shell Pink and Bright Rose at \$2.00 per oz.; 60c. per 1/4 oz.

RAWSON'S LATE BRANCHING: in White, Shell Pink, Rose Pink, Light Blue, Dark Blue, Scarlet and Crimson at \$1.00 per oz.; 50c. per 1/4 oz.

No Florist knows what *fresh* Aster seed means unless he has tried "RAWSON'S SEED." The crop of Aster seed has been extremely short last season and it is advisable to buy at once.

THE BARTELDES SEED CO., DENVER COLO.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION

Henry W. Wood, Richmond, Va., president; C. S. Burge, Toledo, O., first vice-president; G. B. McVay, Birmingham, Ala., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; J. H. Ford, Ravenna, O., assistant secretary.

DES MOINES, IA.—We have had an unusual number of visitors lately, among others Carl Cropp of Vaughan's Seed Store of Chicago, looking after the interests of their greenhouse branch here; Charles P. Braslin of San José, Cal.; Professor Brown, head of the Pure Seed Department of Agriculture of Washington; Mr. Crossland of Northrup King & Company; Mr. Johnson of Albert Dickinson Company, Chicago; Wm. Hagemann, New York; Mr. Steinmetz, representing W. W. Barnard, and several Holland bulb and azalea men, including C. J. Von Bourgondien.

Jos. Milton, late of the Wm. Donnellson Company, of Minneapolis, has taken a position with the Iowa Seed Company.

We regret to report the death of Mrs. Kurtzwell, mother of Mathias Kurtzwell, one of the proprietors of the Iowa Seed Company. Mrs. Kurtzwell was 78 years of age. She leaves her husband and one son. W. T.

CHICAGO.—It has been stated that but a short time ago imported bulbs were still in the government warehouse which had lain there since their arrival last Fall. It is now claimed that the trouble was brought about by the agents of foreign concerns booking orders here and agreeing to place the goods free of all charges in the purchasers' store for one-third of the amount of the bill. As the duty alone is twenty-five per cent, but eight and one-third per cent, was left to pay freight rates, brokerage, and hauling on both sides of the Atlantic, insurance, etc., evidently an insufficient proportion to cover the outlay, consequently to make both ends meet or to take out a little more "velvet" on the transaction the custom of falsification and duplicate bills has been resorted to, and Uncle Sam having become wise to the proceedings has deemed it advisable to make a thorough investigation.

Seed business prospects continue excellent; in fact, as one large dealer put it, they were never better.

With a brisk demand and small holdings the remainder of the onion set crop is quoted as follows: white, \$3; yellow, \$2.25, and red, \$2 per bushel. The unusual event of a carload of sets being shipped to Texas as late as February 15 was recently recorded. Fine quality of nearby grown seed is being offered, in considerable amount, one party reporting having refused 1200 pounds on Monday at a reasonable figure.

TOLEDO, O.—The Hill & Ross Company, dealers in seeds and farm implements, and The Hayes Music Company have been merged into The Hayes Company, with a capital of \$30,000. The only interest these two concerns have had in common was that they were both doing business on the installment plan. The Hill & Ross Company had a capital of \$30,000 and was doing business for some time on Superior street, a very choice locality. The Hayes Music Company had a capital of \$9,000 and a surplus of \$40,000. The incorporators of the new company are J. M. Hayes, P. C. Hayes, A. L. Irish, J. P. McAfee and S. S. McAfee. J. M. Hayes will be the president and general manager of the new concern. The present location of both stores will be abandoned and both will move to Cherry street.

Cratz Brothers, dealers in clover seed, have quit business, giving as reasons the sudden decline and irregular fluctuations in clover seed for some time. William E. Cratz has been at the head of the business since the death of his brother two years ago. The firm has been in business since 1835, and expects to pay 50c. on the dollar. J. L. S.

PURE SEEDS IN KENTUCKY.—The inspector of seed under the Kentucky Pure Seed Laws has issued an exhaustive bulletin, No. 127, prepared by H. Garman, entomologist and botanist, and Miss M. L. Didlake, assistant, of the Kentucky Agricultural Experiment Station. Of the samples here reported thirty-six were found adulterated, as follows: Red clover, 2 (0.91 per cent.); bluegrass, 12 (3 per cent.); orchard grass 21 (19.4 per cent.); timothy, 1 (0.45 per cent.). The law makes it a misdemeanor to sell adulterated or misbranded seed, and imposes for such first offense a fine of not less than \$25 nor more than \$100, and for each subsequent offense not more than \$200, or be imprisoned six months, or both, in the discretion of the court.

FREE SEEDS IN THE SENATE.—In the discussion of the Agricultural Appropriation Bill by the Senate, the clause relating to the purchase and distribution of seeds, etc., by the Government was amended (the amendment was agreed to) to read as follows:

"And the Secretary of Agriculture is hereby directed to expend the said sum, as nearly as practicable, in the purchase, testing, and distribution of such valuable seeds, bulbs, shrubs, vines, cuttings, and plants, the best he can obtain at a public or private sale, and such as shall be suitable for the respective localities to which the same are to be apportioned, and in which same are to be distributed as hereinafter stated, and such seeds so purchased shall include a variety of vegetable and flower seeds suitable for planting and culture in the various sections of the United States. An equal proportion of five-sixths of all seeds, bulbs, shrubs, vines, cuttings, and plants shall, upon their request, after due notification by the Secretary of Agriculture that the allotment to their respective districts is ready for distribution, be supplied to Senators, Representatives and Delegates in Congress for distribution among their constituents, or mailed

Aster Seed

This should be sown now to ensure good stocky plants. The seed we offer has been gathered from specimen very double blooms. We have two good ones for the florist.

European Notes.

With the report of a heavy fall of snow in the south we are enjoying a beastly wet thaw in the north, but even this change is acceptable, as with the thermometer ranging from 15 to 25 degrees below freezing point, all trade is at a standstill and our plants are showing signs of injury. The delay in making our Spring sowings will have the effect of retarding the crops, particularly those of spinach and radish, and our friends will do well to prepare for the inevitable late deliveries. Nearly everything worth selling in these lines has now been cleared out, but a lot of 40 per cent. seed is still lying around for the unwarly.

EUROPEAN SEEDS.

NOTES FROM HOLLAND.—The beginning of the New Year was as mild as if we were getting into Summer instead of in the middle of the Winter, but those that made the mistake to let themselves be fooled by this weather had every reason to be sorry by the middle of the month. At that time a sudden change from rain to 12 degrees of frost with a killing east wind that did not fail to penetrate into the deepest corners of every protected part of the grounds, caused no little fright among the growers that had already partially uncovered their fields. However, it is not likely that any harm has been done as very probably the soaked grounds closed up into one mass of

ice and prevented the frost from getting any deeper. As, however, next day saw us in over 20 degrees of frost, with increasing wind that chilled even men to the very bone, the alarm became general but nothing could be done and we can only now await the results, which will be fully reported upon.—Horticultural Trade Journal.

CATALOGUES RECEIVED.

W. B. LONGSTRETH, Gratiot, O.—Catalogue of Garden and Flower Seeds.

PETER HENDERSON & COMPANY, New York.—Specimen Pages from "Everything for the Garden."

M. CRAWFORD COMPANY, Cuyahoga Falls, O.—Catalogue of Strawberry Plants and Gladiolus Bulbs. Illustrated.

THOMAS J. GREY & COMPANY, Boston, Mass.—Illustrated Catalogue of Vegetable and Flower Seeds, Plants, Supplies, etc., with a select list of Specialties.

CORNWALL NURSERY COMPANY, Cornwall-on-Hudson, N. Y.—Illustrated Descriptive Catalogue of Fruit and Ornamental Trees, Shrubs, Plants, Roses, etc.

F. E. CONINE NURSERY COMPANY, Stratford, Conn.—Illustrated Catalogue of Shade and Ornamental Trees, Vines, Evergreens, Shrubs, etc.—Hardy Roses a Specialty.

J. M. BASSETT, Hammonont, N. J.—Catalogue of Native Plants and Kalmias. Mr. Bassett says he has a tract of over 3000 acres of land, covering practically all of the first-class Kalmias in this section.

EASTERN NURSERIES, M. M. Dawson, manager, Jamaica Plain, Mass.—Everything for the Hardy Garden. A neatly printed and handsomely illustrated catalogue, well carrying out the title which has been given.

GEORGE H. PETERSON, Fair Lawn, N. J.—A Little Book about Roses; a very instructive, neatly printed and well-illustrated booklet. The offerings in Roses are comprehensive. Another of Mr. Peterson's specialties is the Peony, of which an interesting list is enumerated.

H. E. FISKE SEED COMPANY, Boston, Mass.—Catalogue of Seeds, Bulbs, Plants, Supplies, etc., with a carefully selected List of Novelties and Specialties. Mr. Fiske was for seventeen years with W. W. Rawson & Company, twelve of which he acted as manager of that well-known house.

WM. C. BECKERT, Allegheny, Pa.—Catalogue of Vegetable, Field and Flower Seeds, Bulbs, Plants, Supplies, etc. Illustrated Mr. Beckert's cover designs are Paris Golden Self-blanching Celery and Semple's Branching Aster in color. The offerings, as usual, are very complete in every line.

EDWIN S. MANUEL, Newport, R. I.—Catalogue and Dahlia Guide for 1907. A well printed and handy catalogue, being especially noteworthy for the large number of imported varieties and novelties listed; the former including Italian, German and French sorts in all the classes. Interesting and comprehensive enumerations of other dahlias, particularly of Cactus kinds, are also presented. Illustrated.

THE LIVINGSTON SEED COMPANY, Columbus, O.—Illustrated Catalogue of Vegetable and Flower Seeds, Plants, Fruit Trees, etc. Tomatoes constitute a leading specialty of the firm, Livingston's Hummer being among this year's novelties, a colored illustration of same forming the front cover design of the catalogue. Other interesting Novelties and Specialties are also listed. Also Wholesale List of Livingston's "True Blue" Seeds.

H. WEBER & SONS COMPANY, Oakland, Md.—Wholesale Price List of Carnations, including all the novelties and choice standard varieties. The raising of seedlings is a specialty of this well known concern; from five to ten thousand plants from carefully hand-fertilized seed being grown annually. The variety Mabelle is being introduced this year; and Toredor will be put on the market in 1908. The list is illustrated by half-tone engravings.

REASONER BROTHERS, Oneco, Fla.—Catalogue of Tropical, Semi-Tropical, and Temperate Fruit Trees and Plants, Medicinal and Economic Plants, Palms, Foliage and Flowering Plants, etc. A comprehensive and interesting Catalogue. The firm's greenhouses cover two acres, their "tropical orchard" house one acre, where rare new fruits of a tropical nature are tested. Two dozen sorts of East India mangoes are listed. The nurseries devoted to shrubs, trees, etc., of a miscellaneous character embrace about ten acres.

NATHAN SMITH & SON, Adrian, Mich.—Catalogue of Chrysanthemums, Cannas, Carnations, Phlox and General Florists' Stock. Chrysanthemums form one of this firm's leaders, and the lists enumerated are very comprehensive, the varieties being classified in their respective groups; foreign and home novelties are also listed under their respective heads, rendering reference easy. The catalogue is profusely illustrated by half-tone engravings, the front cover design showing a vase of Ongawa in color. This concern was awarded a silver medal for its display of new Geraniums, Salvias, Hardy Perennials and Chrysanthemums at the St. Louis World's Fair.

THE STORRS & HARRISON COMPANY, Painesville, O.—Catalogue of Vegetable and Flower Seeds, Plants, Ornamental Shrubs and Trees, Vines, Fruit Trees, etc. A business-like catalogue, complete in its lists of offerings in every department. The firm says: "We recognize no necessity for pages of hot-air about the excellence of our products or methods of doing business, thinking our record of fifty-three years in supplying planters direct from nursery (eliminating the middleman's profit), our development from a small local concern to the largest nursery establishment in the United States; our thousands of pleased customers in every plant and fruit-growing section of the country, should be a sufficient guarantee to those who favor us with their orders." The catalogue is profusely illustrated; the cover designs neat and attractive.

FRED'K. W. KELSEY, New York.—Catalogue of Choice Trees and Hardy Shrubs, Vines, Roses, Hardy Perennials, etc. The half-tone illustrations are particularly of the specimen Evergreens, groups of Rhododendrons and other shrubs, formal garden effect, etc., being all from excellent and original photographs, give a vivid and accurate idea of each of the subjects illustrated. The common as well as the botanical names are used, in connection with the descriptions, also by a handy key the height each variety attains is indicated, making the catalogue in effect a valuable reference book. Much care has been exercised in the selection in both the ornamental and fruit departments of such material as can be successfully and satisfactorily grown in the New England, Central, and Western States, and the selection of trained Fruit Trees, and Grape Vines for vinerias is one of the interesting features of this publication.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.
 Orlando Harrison, Berlin, Md., president; J. W. Hill, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

Privet; Manetti, Etc.

What is your opinion of Privet *amaranthus*? Where did it come from, and why is it superior to California privet?

What quantity of manetti stock is imported from Europe for grafting? What quantity of roses and other grafted hardy shrubs are imported?

R. V.

—I do not know of any privet *amaranthus*. You probably mean *amurensis*. This is a Japanese sort, much valued as a hedge plant in the South, and now being used North as well. It is also called *ibota*. It is claimed that it is harder than the California privet, so-called, hence is preferred where the latter sort will not endure the winter.

I regret being unable to say what quality of manetti stocks and grafted shrubs are imported, but importations of all kinds are growing larger every year. Try the Bureau of Statistics at Washington, D. C., for the latter information. J. M.

Besides the destruction of oak forests for the making of railroad ties, great quantities of the wood are used for barrel staves, the Southern and South-western States leading in the latter industry.

The foliage of the white pine is said to be a good barometer. When rain or snow threatens, the needles droop; in fair weather they stand erect.

Lombardy poplar is not a native of Lombardy, but of Persia; but its introduction to general cultivation was from Lombardy, hence its name.

English gooseberries will not thrive in open places as our ordinary sorts will, but to the customer who has a half shady place for them they may be sold without any compunction whatsoever, for in such positions they thrive well.

Monterey pine, *Pinus insignis*, is in great demand in many countries, presumably because of its rapid growth and intensely green foliage. Pacific Coast lumbermen say of its timber that it is almost worthless; even being of little account for firewood. It is a magnificent ornamental tree, but not sufficiently hardy for the Middle States.

As an ornamental tree the Osage orange is worthy of attention. It forms a round-headed outline of great attraction. It is in demand for forestry purposes, the wood being hard and durable; as a seashore tree it has been found of great value. The roots penetrate deeply, sustaining the growth well, and the cheerful green color of its foliage is good to look upon.

In sandy situations such as border on seacoasts in many places the allantherus has been found to succeed well. Although noted for its suckering propensities it is well known that it does not sucker to any extent when its roots are undisturbed. The seed-bearing ones are free from the objectionable odor the flowers of the male ones are justly charged with.

Visitors from Europe who are here when our *Magnolia conspicua* and *M. Soulangeana* are in flower become enthusiastic in their praise. Large trees studded with large white flowers such as the *M. conspicua* presents, when in blossom, is something no other country can show but our own. The lack of our hot summer is against the full blooming of these magnolias in Europe.

Grafting Magnolia Glauca.

Those who wish to have *Magnolia glauca* of a larger size than it would make naturally can accomplish this by grafting it on a strong growing deciduous sort, either the *tripetala* or the *acuminata*. Permitted to grow as it will it makes a small tree, and when grafted on the strong stocks suggested it becomes a tree as large as those it is grafted on would make. It can be either grafted in Spring or budded in Summer; and worked either way a fair proportion will grow. Where growing wild the *Magnolia glauca* usually is seen as a shrub more or less bushy, but when in cultivation, if all shoots but one are cut away, a small tree will result in time.

This magnolia and all others are easily raised from seeds if these are properly cared for from the time of their ripening. This proper care consists of keeping them in a moist condition. As good a way as any is to wash the seeds free of pulp and then keep them over winter, mixed with damp soil. They can be sown in a greenhouse in February or in the open ground in the early days of Spring. In a greenhouse the seeds germinate in two to three weeks.

The *Magnolia glauca* has much to recommend it. It is nearly evergreen in the North, and quite so where freezings are slight; its flowering period is from May until July, and its blossoms are deliciously fragrant.

Green Ash for Street Planting.

The use of the green ash as a street tree in the prairie States was recommended years ago by the late Dr. Warder. It does not grow as large as the white ash, suiting it for a street tree; and being a native of the West, which the white ash is not, it is better in this way as well. The foliage of the green ash is of a shining green, differing in this respect from the white ash, which has higher colored leaves, greyish white on the under side. The foliage of the green ash falls earlier in Autumn than that of the white ash, but not before it can be dispensed with.

The green ash is *Fraxinus viridis*; the white, *F. americana*. Although the two sorts differ so much in foliage and appearance that they can be easily distinguished even when mixed in nursery rows, it is one of the commonest errors in the West to call the green ash white ash. Sending to old established nurseries there for either seeds or plants of white ash, one is almost sure to receive the green.

Mentioning seeds, it has been found that when these are sown as soon as ripe in Autumn seedlings will appear in the Spring, but if kept dry and not sown until Spring, a whole year will pass before the seeds sprout. But if kept damp in sand through the winter and then sown in Spring, seedlings may be looked for in a few weeks.

list. It is often said that just as they are about to make growth is the best time to plant them; but if the ground is in good condition so that it can be got to clasp the roots closely, the work is better done in early Spring. Unless the soil can be got to settle close to the roots evergreens will not do well at any time. The soil has to be dry enough that it will work in closely about the roots to make a success of the job. A method finding a good deal of favor with planters, as it deserves to, is to fill in about the roots of trees with sand. This insures close contact, and after the roots are well covered with this material, then the ordinary soil can be thrown in. In this way it is not necessary to wait for dryish soil, which fact permits of the planting the very first days of Spring. The trees are then well settled and ready to start into growth with others surrounding them, and usually make a fine growth, much superior to that of those set out ere.

Pyrus Malus Baccata.

There are so many *pyrus* species that have come to us from Japan and under such different names that there are but few horticulturists who can say precisely what any one kind really is. Before us is one sent out as *Pyrus Malus baccata plena*, but there seems something amiss with the name. *Plena* will not do, to commence with. The subject of our

Pyrus Malus Baccata Plena

Early Planting in Spring.

It is no wonder that customers who are experienced planters insist on getting their stock early in Spring, for all who are acquainted with the subject know that the success of the planting depends on this. Many argue that a tree in a completely dormant state does as well set out in late Spring as in the early days of the season, but this is not so. The date has much to do with it. In early Spring the newly set out tree does not meet at once hot and dry weather, as it is apt to do later on, so that whether dormant or not late planting is not as good for the tree as early Spring planting.

Nurserymen themselves are fully alive to the value of early planting. It is not now as it used to be, that the nursery rows are filled after orders have been attended to, but there are men whose duty it is to start planting as early in Spring as it is possible. There is this to be said too in favor of early planting, that such early budding trees as larch are then secure, while if left alone until later there will be losses and poor growth to submit to.

Evergreens may be included in the early planted

illustration is single-flowered, but other observers have said they have seen the same kind with semi-double-flowers. The remainder of its name may be allowed although, again, the *baccata* is supposed to represent a true species—the wild crab of Siberia. Whatever may be its true position as regards nomenclature, it goes under the name given at the head of this article; and it is a lovely small tree. In color the blossoms are of a light pink, quite like those of some of the fruiting apples; and what a display is made when the tree is in flower may be gathered from the appearance of the one illustrated. This is its habit of flowering every season; but we must admit we thought it more beautiful than usual when we had it photographed. Every one delights to feast the eye on the common apple when in blossom. An orchard in bloom is one of the sights of Spring. In the case of the Japanese *pyrus* illustrated, the tree being of but dwarf growth the flowers are brought near to one and are thus more enjoyed. And further its small growth enables one to plant the tree on lawns, among small growing trees and even among shrubs, where common apple trees would not be admitted. Nursery lists of today are embracing many of these Japanese *pyrus*, and both for their flowers and their fruit they are considered great acquisitions.

California Plant Notes.

SENECIO MIKANOIODES, German Ivy, now in full bloom, is one of our most attractive Winter-blooming vines. If given room and some attention, it covers a large space in one Summer and looks like a fountain of golden-colored water in Winter. When done blooming it cut back severely the plant presents a neater appearance.

OUR NATIVE BAY TREE, *Umbellularia californica*, is too little known in the horticultural world. Where it is not hardy it could be as easily cared for as the European bay, *Laurus nobilis*. The foliage is not so broad and both bark and foliage are of a much lighter green than those of the foreign tree, while the aroma of the leaves is very much greater, and to the writer more delightful. The tree grows to an immense size near the coast, and seeds freely, the seeds germinating readily. It should have a place in every collection of plants, either in the conservatory or in the open.

CHELONE GLABRA is one of our attractive evergreen, perpetual blooming shrubs; light green in color both foliage and stems. The white flowers are borne in great profusion at all seasons of the year. It makes a beautiful background for dark-colored shrubs bearing red flowers. It is easily propagated from cuttings.

The three members of the Sterulia family of plants—trees, perhaps, would be more correct—as they grow here are so diverse in character that when seen out of flower few people would suspect they were in any way related. *S. diversifolia* does not show any diversity in foliage after it passes out of its seedling stage of development. As a street tree it is one of the most desirable, where the soil is a deep sandy loam, but when planted where the subsoil is hard pan or stony or gravelly it soon becomes diseased, and dies. The trunk is the most symmetrical in form of any tree the writer knows anything about. The roots, growing as they do, directly down, do not break up sidewalks and curbing, as do those trees whose roots grow in a horizontal direction.

S. acerfolia (Australian flame tree) maintains its leaf characteristics throughout its life. In its young state, growing in the open ground, it looks so nearly like *Aralia quercifolia* that it is difficult to distinguish one from the other. This tree when seen in full bloom is a sight never to be forgotten. About the time that the flower spikes appear it sheds its leaves. The scarlet blossoms are borne on stems 12 to 18 inches long, of a bright red color, too, though not so brilliant as the bloom. A peculiarity of this tree is, that it has no set time to flower; any time from June to November it is likely to do so, and some years not at all. Freezing will affect the young growth and injure the flowering buds, but three consecutive favorable seasons do not seem to change its erratic disposition. There are fine specimens here two feet diameter at base and fifty feet high. Both varieties will stand eight degrees of frost without injury.

The other variety, *S. platanifolia*, is deciduous. When planted in a deep, rich soil and given room for development, it is a magnificent tree. The flowers appear in early Summer, though not every year, in the greatest profusion in panicles two feet long. They are almost white, striped pink and yellow, curiously twisted. In this respect they differ from the symmetrical cup-shaped bloom of the two varieties before named. So also the seed vessels differ greatly. Those of the first two have a tightly-closed hard, brown-colored shell; those of the last are a soft clump of leaves containing perhaps a half ounce of fluid until the seeds are ripe, when this capsule bursts open and the seed is fast to the mid-rib of these leaves.

None of these subjects is drought-resistant in the sense that the term is used.

Another beautiful exotic which grows to perfection is the Carob, or St. John's bread, *Ceratonia siliqua*, an evergreen tree with dark green shining leaves, intensely persistent. It thrives in the dust and grime of

DREER'S RELIABLE FLOWER SEEDS

NEW ORCHID-FLOWERED SWEET PEAS

ORCHID-FLOWERED SWEET PEA, NORA UNWIN

These are a distinct "break" in Sweet Peas, differing from the standard sorts by the extraordinary size of their flowers, usually measuring 2 inches across, and by the standards being crinkled and wavy, while the wings are large and spreading. Another splendid feature is that a very large percentage bear four blossoms to the stem, which are long and strong. To sum up, they possess every characteristic that can be desired in Sweet Peas, and will undoubtedly supersede standard sorts of same color as soon as they become more plentiful.

Countess Spencer. A lovely clear pink, shading darker at the edges. 10 cts. per oz.; 25 cts. per ¼ lb.; 75 cts. per lb.

E. J. Castle. Rich carmine-rose, shaded with salmon, very striking, especially under artificial light. 17 cts. per pkt.; 5 pkts. 75 cts.

Frank Dolby. The largest and finest pale lavender-blue. 17 cts. per pkt.; 5 pkts., 75 cts.

Gladys Unwin. Charming shade of pale rose-pink; extra long stems and very valuable for cutting. 10 cts. per oz.; 25 cts. per ¼ lb.; 75 cts. per lb.

Helen Lewis. (Orange Countess.) Brilliant orange-rose. 25 cts. per oz.

Helen Pierce. This is the new gloxinia-flowered Sweet Pea, being marbled blue on a white ground, with the veins showing a little deeper, exactly like a mottled Gloxinia. 15 cts. per oz.; 50 cts. per ¼ lb.

John Ingman. Rich salmon-rose. 15 cts. per oz.; 50 cts. per ¼ lb.

Mrs. Alfred Watkins. A superb pale pink, similar in shade to the old Princess Beatrice. 17 cts. per pkt.; 5 pkts., 75 cts.

Nora Unwin. The finest white now in existence. 17 cts. per pkt.; 5 pkts., 75 cts.

Phyllis Unwin. A veritable giant among Sweet Peas; color a deep rose-carmine. 15 cts. per oz.; 50 cts. per ¼ lb.

For complete list of Standard Sweet Peas, as well as Flower Seeds of all kinds, see our Wholesale Price List, free on application to all florists.

the city, the brilliant sunlight, the great daily range of temperature, and the low relative humidity of our Autumn months. When given room it forms a top as dense and graceful in outline as the holly of the Atlantic States. How much frost it will stand the writer does not know, but would suggest to planters of the interior valleys of the State to give it a trial. It is not known as algarobia here. The tree known here by that name, which produces a large edible pod also, is quite different in foliage and character, and is only in its experimental stage in Southern California.

GRAND NEW CANNAS

William Saunders

The flowers are large, of splendid form, and are born very freely in immense clusters. The color is a deep rich shining scarlet lightly dappled with crimson. Foliage is a rich bronze. Height, 3 1/2 to 4 feet. We believe that Wm. Saunders is decidedly the most perfect canna of this type that has been introduced. 50c. each; \$5.00 per doz.; \$35.00 per 100.

Ottawa

is a strong grower, very robust and 5 to 5 feet high. The flowers are large and beautifully formed, color is carmine with tints of old rose and deep coral, add to this the silken sheen and you can imagine the effect a few plants will produce.

Note:—We had this canna on trial among the Canadian experimental stations last summer and this is the official report of their expert:
Quite distinct and one of the most beautiful shades of color I ever saw in cannas. Of 70 sassed in one bed during the past season, this was the most floriferous in the collection, coming into bloom early and continuing until cut down by frost, as many as 13 expanded heads of bloom being counted at one time on a plant, and not a poor one among them, all being of immense size." 50c. each; \$5.00 per doz.; \$35.00 per 100.

New York

Has the Orchid type of flower. They have much more substance than the flowers of the other varieties of this class, and will stand the hot sunshine as well as the toughest varieties of cannas. The color is a solid rich scarlet covered with a beautiful glowing sheen. The flowers are large and contrast beautifully with the dark bronze foliage. 50c. each; \$5.00 per doz.; \$35.00 per 100.

Send for our list and prices of 60 other leading varieties of cannas.

RAWSON'S SUPERB DAHLIAS

ARE KNOWN FROM MAINE TO CALIFORNIA

WE have a special DAHLIA FARM in Connecticut for the purpose of growing bulbs. This farm is under the supervision of a grower who has had experience with this flower for the last 25 years. We guarantee our bulbs to be true to name and are willing to replace same if they are found otherwise. We are offering this year nearly 250 varieties of CACTUS DAHLIAS alone, not mentioning the other classes.

We extend a cordial invitation to every Florist in the country during the Summer and Fall to visit our

Exhibition Farm of Dahlias occupying two acres, right in the heart of the old historic town of Marblehead, Mass., where we grow fully one thousand varieties of DAHLIAS for exhibition purposes only. Every Novelty of account, either European or American, may be seen.

**We do not grow Dahlias for quantity
but for quality.**

The demand for DAHLIAS as cut flowers has been steadily on the increase and some of the choicer

varieties of CACTUS DAHLIAS are prized as high as any of the choicest varieties of Roses.

Our Complete List of varieties with illustrations and descriptions covers 12 pages in

"Rawson's Garden Manual for 1907"

a catalogue which every florist should possess.

It represents the highest art of "American Catalogue Printing," as it is completely new from page 1 to 144.

We offer this season seven new American seedlings of DAHLIAS, which have created a sensation wherever shown last Fall and which The Florists' Exchange has considered important enough to mention at length in its columns.

Now that the "New England Dahlia Society" is an active and live society, the future of the DAHLIA is established and every florist in the country can add considerably to his income

by devoting a quarter of an acre or more to the cultivation of this profitable flower.

Never wait till the growing season is here, but let us book your order now, thus assuring you no disappointment.

CHOICE VARIETIES ARE ALWAYS SCARCE

Mention The Florists' Exchange when writing.

ROSES

The past two weeks of bright, clear weather has made a remarkable change in the appearance of the plants, and upon examination it will be found that a good many of them are breaking from the bottom. Keep them well tied, therefore, so that these canes can have plenty of light and air; and above all things give the plants plenty of food. As before stated liquid manure is the easiest to apply, though as the season advances a mulch becomes necessary as well to keep the plants from drying out too fast. The ventilators will have to be watched a little more closely if mildew is to be kept out. On bright, clear days shut off the heat quite early so that the artificial heat is not too strong when the sun fairly strikes the houses, otherwise too much air must be put on at once to keep the temperature from running too high, and the plants thus receive a chill. Paint a little sulphur on the heating pipes once a week as a precaution; do not wait till mildew puts in an appearance. Screen the sulphur through a mosquito netting and mix it with warm water; if well stirred up it is easily applied. A very small quantity of lime can be added to make it stick better.

Where the planting of young stock is to be done in June, the cuttings should be put in now to be just right in 4-inch pots. From present indications even larger plantings of Richmond will be made this year. This is about the easiest rose to root and grow; its only fault is that the flowers are hardly double enough to last well. But the growth and color are all that could be desired. Some growers complain that Killarney does not come well colored and is subject to mildew, but by growing it a little warmer in the daytime the flowers with us come as pink as those of Bridesmaid, and mildew on it we have not seen as yet. This rose certainly is a great producer, though one-year-old plants do not give as long stems as two-year-old ones. Care must be taken not to chill or overwater this rose, and the foliage must never remain wet over night, otherwise a large part of the leaves will turn yellow and drop. Both Richmond and Killarney are rank feeders, and if the plants are healthy from now on will take a large amount of feeding. As the foliage on these varieties is tough and hard, red spider is very difficult to dislodge, and unless the plants are syringed very thoroughly and often this little pest will soon ruin them.

PENN.

Roses! Cannas! Violets!

Roses. We have in stock upward of 1000 different varieties, consisting of the very latest European varieties, as well as all the leading varieties of American origin. Stock from 2 1/2 and 4 and 5 in. pots, all on own roots. Ask for catalogue.

Boston. School gardens was the subject in the lecture course at Horticultural Hall on Saturday, Miss Anne Wittington was the speaker.

About a dozen members of the Gardeners and Florists' Club attended the annual dinner of the North Shore Horticultural Society at Manchester on Friday.

Maurice Hambro, formerly with Houghton & Dutton, has opened a flower store on school street.

Club Meeting. There was an enthusiastic meeting of the Gardeners and Florists' Club at Horticultural Hall on Tuesday evening.

President Westwood occupied the chair, and many prominent growers were present and took part in the discussion on steam boiler legislation.

In the absence of the lecturer, C. W. Ross, who was unavoidably detained, his very able paper on "Road-making" was read by James H. Morton.

President Westwood appointed the following committees to serve for the year: Committee on exhibits—K. Finlayson, George M. Anderson, George Harbison, H. A. Stevens, A. H. Fewkes, Peter Fisher, R. T. McGorum, James Mitchell and John W. Duncan.

On the exhibition tables were the following, for which votes of thanks were given, high awards having been previously given for them.

METROPOLITAN MATERIAL CO. Greenhouse Wreckers

1398-1408 Metropolitan Avenue, BROOKLYN, N. Y. Company of Boston. The remainder of the evening was spent in dancing.

HARTFORD, CONN.—George A. Parker, superintendent of parks, is seriously ill at the St. Francis Hospital, where he has been for a little over a week. He was operated on for a carbuncle in his back and has since been very weak, suffering much pain a great deal of the time. It is thought that he is gaining ground slowly and will recover, unless some unforeseen complication ensues.

THE WEEK'S WORK.

Timme's Timely Teachings.

Among the Ferns.

Unmistakable signs of renewed activity in all parts of the fern house broken the nearness of Spring. It is now time to bestow special attention to a department which for months gave so little cause for exceptional exertion or undue anxiety. From now on a light shading on the glass is of benefit, not a heavy, light-absorbing layer, but merely enough to shield the freely pushing new fronds from the bright sunshine of approaching Spring. The wisdom on staging and benches should be relieved by a thorough-going over and resetting, always the most expeditious way of reaching every plant and every spot of rearrangement. Free play for effective rearrangement. You keep a sharp lookout about the crowns will find them near and about the mature of the smaller ferns, on the mature of the larger specimens, adhering to the sides of slimy pots and in darkened spaces and corners of old benches. If over-abundant, let it be a thorough-going clean-up with brush and soap, any kind if it has a fishy smell of whale-oil soap forms an objection. Ferns dislike over-potting. Large ones needing to be transplanted now, unless it had best be done now, unless they show whole crowns of new fronds just uncurling, when the operation may be deferred until this first growth is well developed. Small ferns can be repotted at any time from now until several short shifts in the spring until tember, if they are to grow quickly into good salable specimens. Seeding ferns should be pricked off as soon as in pans or pots, and the young ones they show the first true fronds springing from the core of prothallus or sporophary growth of the breaking them. These are best handled by clumps and gently up into little tufts or clumps and gently pressing them into the new soil, allowing reasonable space between the clusters for perfect development and separating the single plants later on when large enough for being potted up. Many varieties of ferns allow of speedy propagation by division, and a deal of his work may be undertaken to advantage. Adjoining are the various kinds, among these are the useful A. Farleyense, are slow the ever useful A. Farleyense, are slow in overcoming the setback in vital energy following the process of dividing old plants into as many pieces as there are small crowns. These later, before being potted up, must first be made to form roots and a few fronds, which is best accomplished by pricking them off in a tolerably warm but sparingly moist propagating case. No ferns should ever be potted thoroughly, but any excess in soil moisture offers a ready foothold for the most dreaded of all destroyers in fern, the malicious fungus mold, to house, which many of the species readily yield, and then again, the cleanliness and purity of air greatly contribute to the wellbeing of ferns as well as to that of all other kinds of plants, it is of great importance in the culture of ferns to avoid cold drafts, especially in the days of early Spring.

In the Palm House.

Holding the larger sizes of palms in a sort of inactive condition during the gloomy Winter season is a part of good culture. All the growth made during those short days is but a questionable gain. But now when all indications point to an early re-awakening of nature's creative forces, plant life under heated glass structures receives its first impulse, and of all plants thus emerging from a partial rest palms are foremost in responding to this mighty call. There is no time more favorable for an all around overhauling, cleaning and re-arranging of all the stock in this line than just now. The yearly repotting of salable palms is now in order, to be confined only to such as stand in urgent need of it. The over-potting of palms is a common practice, but nevertheless an unpardonable mistake. In the repotting of large palms well enriched, heavy sod compost is best, and firm packing essential. All the stock in palms of the smaller sizes requires frequent shifts and fairly warm quarters to grow it rapidly in the marketable sizes and grades. Most of the species, such as kentias, arecas, etc. assume a stouter bearing and less squatly shape by being closely stood together, when small, and somewhat stunted in room all along as they attain height, until the desired size is reached, when they should be afforded ample space for graceful spread. Latanas, coryphas, chamxrops, sabal, phoenix, rhaps, listonias and similar types require more room for perfect development, are therefore more expensive to raise on this account alone, saying nothing of their comparatively slow growth. This is one reason, one of greater force than the alleged preference of the public for kentias and arecas, why these latter are grown in such enormous numbers to the almost entire exclusion of the rarer species with such exceptions as latanas, cocos and phoenix.

The palm house now needs shading to avert a bleaching or burning of the fast developing new leaves by piercing sunshine, more liable to damage the tender new growth now after the continued siege of dark and dismal weather than in the days of Midsummer. A palm with but a single leaf disfigured through sunburn or careless handling has lost half of its value.

Rooting Rubbers.

A high temperature is necessary for the propagation of Ficus elastica. We have plenty of heat in the Summer, it is true, but cannot depend on its being as steady and regular as that supplied by our boiler throughout Winter, and therefore the propagation of all warm blooded plants always meets with a more decided success when undertaken in artificially heated houses than when attempted at a season when fire heat is not available. While firing is still in full swing and the near approach of the best growing season can also be figured upon as a helpful factor in the rooting of hothouse cuttings, and the loss of stock in work-cess when undertaken in artificially heated houses than when attempted at a season when fire heat is not available. While firing is still in full swing and the near approach of the best growing season can also be figured upon as a helpful factor in the rooting of hothouse cuttings, and the loss of stock in work-

There are several ways in which the stock in rubber plants may be increased. The rooting of the tops on lanky odd pieces is a method by which good-sized plants may be obtained in the shortest space of time. The stem at any joint below the upper crown of leaves is cut about half way through, a piece of wood or a kernel of grain is placed in the wound to keep it open, and around all is tied a handful of moss which must be kept constantly moist. The warmer the place in which plants so operated upon are kept, the sooner will their tops be rooted, usually in about 25 days, in a temperature of 75 degrees. The tops should not be cut off until the roots plainly show in the moss. Then after detaching them from the old plant, the cut to be made below the moss, they are potted up with the moss to be left on undisturbed, and if placed warm they will soon become thoroughly established.

The bare stems of the old plants, now devoid of top growth, if well ripened and not too long-jointed, can now be cut into single joints and these rooted in a pretty warm propagating case. These pieces will root quicker if there is a sound leaf to them. But altogether this is the slowest way of propagating rubber trees and does not always result in plants of shapely form and rapid growth.

The very best and quickest method to be employed in working up a good supply in this line of plants is the rooting of side shoots coming from the ripened wood all along the stems of topped plants, and called forth by keeping these fairly warm and somewhat on the dry side. When these little shoots show a few good leaves and have attained some substance they are taken off with a heel from the old wood, and inserted in a warm propagating case. Kept moist and not too close they will soon root, but must be kept in warm quarters until well established in their first pots, after which they are treated like all warm house plants that are beyond the risky period in their rearing.

Begonias.

A section of begonias somewhat neglected and slighted by commercial plantmen nowadays is the shrubby and semi-woody ones. Why begonias of this kind should be relegated to the rear is difficult to see. Most of them are Winter-flowering plants, of which we certainly have none too many. Then what a wealth of attractive diversity in foliage and flowers there is displayed in a well-chosen collection of varieties from this interesting class of indoor plants! And in view of the vital point in estimating their value, it cannot justly be said that they are non-paying stock commercially; at least not there where the character of the plant trade demands variety in what is offered to lovers and buyers of potted plants. I have not noticed that these begonias have ceased to attract buyers or lost in favor. That they are, with few exceptions, good dwelling house plants is well known, and this also must plead for them.

There are numerous varieties, all more or less easily managed, and I advise retail growers who so far have not thought it worth while to add this class of begonias to their stock in trade, to order a few of each, give them fair attention, and let their customers see them when they are at their best. Here are a few of the handsomest and best known varieties: Begonia Sandersoni, B. Gilsoni, B. incarnata, B. Thurstoni, B. suaveolens, B. Nightingale, B. maculata, B. rubra, B. mallica and B. semperflorens gigantea. All these will do finely during the Winter in a temperature of 60 or 65 degrees, if afforded all the light possible with plenty of room between the plants and a reasonable amount of moisture at their roots. This is the best time for propagating cuttings, where the stock plants are at hand. Side shoots or the tops of branches are used for the purpose, and they strike roots in a few weeks in any fairly warm propagating bed. Potted up when well rooted, shifted

along as they grow and never over-watered, they rapidly grow into size. In the Summer, with some slight protection against fierce sunshine, they do well in an open frame. Here they will need some close attention as to watering and also in long continued spells of heavy rain, when covering becomes advisable. By growing them into size in the open field during the warm part of Summer and potting them up early in the Fall, large plants are obtained.

Cinerarias.

No plant objects to real forcing so much or is more surely spoiled by it than Cineraria hybrida. I have seen them do a deal of growing in a house with no more than 40 degrees of heat, and cinerarias will at all times be finer plants if their main growth has been made in a low temperature than when given the regular greenhouse accommodation. If well grown they are the showiest of Easter plants, especially if particular care has been given to obtaining the finest strain of seeds when making the first start. Those intended for that holiday should plainly show their buds now, and in that case 45 degrees from now on should be the maximum point under fire heat, while a few degrees higher on sunny days will do no harm to any so far advanced. Plants fast becoming pot-bound and getting ready to bloom need frequent watering; but any over-generosity in liquid feeding should be avoided. What will do them more good is plenty of elbow room, a stand close up to the light, a thick layer of fresh tobacco stems between the pots and all the air that it is possible to give without calling into play cold currents or sweeping drafts. A shading at the brightest hours on sunny days will also be of benefit.

In Cineraria stellata we have a class much less exacting in its cultural requirements than the hybrids of the foregoing type. The plants are taller, not so much troubled by aphid, stand quite a deal of reasonable forcing, and can also be brought into bloom at Easter. It is a desirable kind for the retail grower, because it not only a good indoor plant but also eminently serviceable for decorative purposes, enduring rough handling fairly well. And, finally, these cinerarias produce flowers that admit of being used in a cut state, very effective and long-lasting.

Reminders

Transplant thickly sown seedlings into other boxes before they become too lanky, such as lobelias, petunias, etc. Cyclamens sown last Fall will soon be ready for pots. Do not plant deeper than up to the middle of the little bulbs. They will now need a light shading on bright days.

Gardenias for planting in June should now be in 3-inch pots and will need another shift in April. Anthuriums now need much water and a humid atmosphere at all times. Old plants can now be divided.

Eucharis amazonica, if individual specimens are to be of uncommon size, should now be replanted. In dividing worn-out plants, several bulbs may be planted together.

Start now the bulbs, corms and tubers of fancy caladiums, tuberous begonias, gloxinias and achiemenes.

Cannas and Dahlias need not be started before another week or two, unless wanted very early.

Nip away the fresh growth appearing on azaleas held back for Easter. The seeds of Ardisia crenulata may now be sown.

Do not neglect the frequent sprinkling of lilacs and other hardy flowering shrubs under forcing.

Seeds of mignonette, candytuft and stocks sown now will amount to good plants for Memorial day.

It is not yet too late for the propagation of Dracena terminalis, while steady firing is on.

Keep geraniums cleaned of dry and dead leaves and once more pinch back the lanky growth.

This is a good time for the propagation of bouvardias, either by pieces of the roots or by cuttings.

Order now what you may need in young stock. FRED. W. TIMME.

Two Unique "New Creations" in Bush Limas!

FORDHOOK AND THE BURPEE-IMPROVED,— Both of which are entirely "New Creations!"

NATURE with her millions of crosses, occasionally surpasses any efforts of the most successful hybridizers. These wonderful Novelties, now exclusively introduced by us, have been bred from two plants (one of each type) discovered in a crop of Challenger Pole Limas, in 1903, by our friend Henry Fish, of Santa Barbara County, California.

BURPEE'S BUSH LIMA, originating in Chester County, Pa., *blazed the way* for the wonderful popularity of the Bush Lima to-day. Since then improved selections have been developed,—notably *Burpee's Quarter-Century Strain*,—but little did we think that Nature would so completely eclipse all the efforts of man, and directly from the *parent pole Lima* produce in distant California two new types that would surpass not only all other Bush Limas, but—in size of beans—all existing pole Limas!

These Two Bush Limas are sold only in sealed packets. Each packet contains twelve perfect hand picked beans. **Per pkt. 25 cts.** With our discount of one-third these two Bush Limas will be mailed to Market Gardeners and Florists at the net rate of any 3 pkts. for 50 cts.; 6 pkts. for \$1.00, or \$2.00 per doz. pkts., assorted as desired.

Three Pods, exactly natural size reproduced from a Photograph of the Unique FORDHOOK BUSH LIMA now first introduced

The New Burpee-Improved Bush Lima

"This is the finest Bu. Lima that has ever been introduced.

The bush is sturdy in habit and twenty to twenty-four inches high, with large leaves. It bears its beans on long spikes in very prolific clusters, well out from the plant. There are from four to seven pods in each cluster and often as many as eleven. Each pod contains three, four, or five beans, and there are more pods containing five than there are containing three beans; so that there is an improvement of from one to two beans in each pod, and this, taken with the greatest number of pods borne, makes the yield enormous. In quality this bean ranks with the very best and the beans are of large size. In earliness it comes between Henderson's and Burpee's Bush, and is about a week earlier than the latter variety. This bean is bound to be the greatest, most popular Bush Lima,—a continuous bearer."

Quoted verbatim from Report sent us August 29, 1906, when the crop was inspected (between the time of our two visits) by our friends, MESSRS. C. C. MORSE & CO., the well-known seedsmen of that state. After the writer had returned from Santa Barbara County, in July last, he met the son of "the discoverer" in the office of The Morse Company, San Francisco. Mr. Morse was so interested in the story of these New Beans that he said he would have the crops examined, although his firm had no pecuniary interest in either variety.

Fordhook Bush Lima

"This bean is of the type of Dreer's Bush Lima, which it most nearly resembles. Its height is from twenty-two to twenty-four inches, and it bears its beans in clusters of two to five well out from the plant on long spikes. There are from three to five beans in each pod with an average of four. The beans are round and thick like those of Dreer's Bush and have the same mild, delicious flavor. This bean (like the above) is far ahead of anything which anybody has known in Lima beans up to the present. Its productiveness is far ahead of Dreer's Bush,—is earlier by four or five days and is better all around."—Quoted from letter dated August 29, 1906, of MESSRS. C. C. MORSE & CO., San Francisco, California, after their representative had inspected the crop.—see note above. For our own description see page 12 of BURPEE'S FARM ANNUAL.

Pods, Natural Size, of THE NEW "BURPEE-IMPROVED" BUSH LIMA

One Thousand Dollars in Cash Prizes

Never before in the history of the Seed trade have there been presented two such unique REMARKABLE NEW VEGETABLES! We are determined, therefore, to have their merits established in this first year of their introduction. With one prize of \$150.00,

—several of \$50.00 each, and other liberal cash prizes,—we will pay, on these two new Limas, this season, more than

One Thousand Dollars—see page 199 of BURPEE'S FARM ANNUAL for 1907

"The Leading American Seed Catalog"
The "Silent Salesman" of the world's largest mail-order seed trade. An Elegant New Book of 200 pages with hundreds of illustrations from photographs, it tells only the plain truth about the very best SEEDS THAT GROW. It describes Grand Novelties in Flowers and Vegetables, of unusual importance, which cannot be obtained elsewhere. If interested, write to-day, name The Florist's Exchange,—and the book is yours.

BURPEE'S NEW BLUE LIST

Most complete of all wholesale catalogs of Seeds, gives special prices to Florists and Market Gardeners. If you have not received a copy, write to-day.

With our usual discount of 33 1/3 per cent. on Retail Packets, Florists and Market Gardeners (who order early!) can obtain THESE TWO NEW BUSH LIMAS any 3 pkts. for 50c.; 6 pkts. for \$1.00 or 12 pkts. for \$2.00, (assorted as desired), and sent by mail postpaid.

Obituary

Jonathan Aucock.

Jonathan Aucock, one of the pioneer florists, and a well known and highly esteemed resident of West Utica, N. Y., for many years, died at his home, 178 Steuben street on Friday, February 15, 1907. Mr. Aucock had been ailing for some time. His death was due to heart trouble and the infirmities of age.

The deceased was born in Yorkshire, England, and was in his 79th year. He came to this country over fifty years ago and located at Annandale on the Hudson, where he had charge of a large estate as landscape gardener for about ten years. He then moved to Utica, N. Y., and purchased a farm on the Champlain road which he conducted for about ten years and then moved to upper Whitesboro street where he started in the florist business, and was the only florist in that section of the city for a number of years. Later he conducted the same business on Columbia street. About twelve years ago he sold out his business to William Pfeiffer, who now operates it.

Since his retirement from the florists' trade Mr. Aucock had busied himself in landscape work throughout the city. He was of a cheerful disposition and there is a very large circle of friends who will regret to learn of his death. He was the first president of the Utica Florists' Club and of late years had been an honorary member of that organization. He was formerly a member of the old St. George's Society.

Besides his widow Mr. Aucock is survived by three sons and one daughter.

William Adams Bruce.

William Adams Bruce died at his home in Jersey City, N. J., on Tuesday, February 12, 1907. He was born in Brechin, Forfarshire, Scotland, in 1865 and served his apprenticeship as a seedsmen with James Young in that city. After coming to America Mr. Bruce was employed with the Cleveland Seed Company, subsequently with Peter Henderson & Company, with which firm he remained ten years, later with James M. Thorburn & Company, as shipping clerk for about a similar period. Interment was in Bay View Cemetery, Greenville, N. J., on Friday, February 15. Mr. Bruce, who was well and favorably known by many in the trade, leaves a widow and two children to mourn his loss.

The Proposed National Flower Show.

The committee of fifty, with ex-President Wm. F. Kasting as chairman and P. J. Hauswirth, secretary, appointed by the Board of Directors of the S. A. F. O. H., at a special meeting held in Chicago on November 8, 1905, are bending their energies to have the full amount of the necessary guarantee fund of \$10,000 subscribed before the date of the annual meeting of the S. A. F. O. H. directors, which takes place on March 11 next. About \$6,500 has now been subscribed; and in order that every one interested may have the opportunity to participate in the affair, the committee has set the minimum amount of the subscription at \$10.

It is confidently believed that the proposed exhibition, which it is intended shall be held in Chicago in November, 1908, will be a financial success, and that it will be possible to return to the grantors the full amount of their contributions. Any surplus is to be paid into the treasury of the S. A. F. O. H.

The object of this guarantee fund is to relieve the active management of the show of all financial annoyance and responsibility; and as no actual work can be undertaken until the full amount of \$10,000 has been subscribed, an early response to the committee's appeal is respectfully requested.

The full importance of such a show to the trade in general and to the S. A. F. O. H. in particular cannot be overestimated. It has long been the desire of those most interested in the welfare of the society that exhibitions of the character contemplated should be held under the auspices of the national organization. They have felt that such shows would create an interest and enthusiasm in the work of the society that could be brought about by no other means; and that in no other or better way could the S. A. F. O. H. contribute to the benefit of those engaged in the business generally.

Now that an earnest endeavor is making along these lines, an effort that is meeting with much approval as is evidenced by the amount already subscribed to the guarantee fund, it behooves every supporter of the S. A. F. O. H., and those who are its beneficiaries, both directly and indirectly—which means every man and woman engaged in this industry—to do their duty by the society, toward bringing about the culmination of an event which tends so much to the organization's own well-being and usefulness as well as to the general weal.

Subscriptions toward the guarantee fund will be received and duly acknowledged by Wm. F. Kasting, Buffalo, N. Y.

The list of subscribers as reported to January 1, 1907, is as under:

In the classic words of the committee's circular, "Get busy and get your names with the bunch."

PAMPHLETS RECEIVED.

INSTRUCTIONS FOR ERECTING GREENHOUSES. Issued by John C. Moninger Company, Chicago.

While the instructions furnished in this interesting pamphlet primarily apply to the material supplied by this enterprising house, yet there is much information given that will be found generally serviceable. Those who contemplate building greenhouses should send for a copy of the booklet to the Messrs. Moninger, enclosing ten cents in stamps. As the firm says in its introduction the publication "does not aim to give a complete set of rules nor does it pretend to cover all the details, but if you follow the instructions closely you will not go very far wrong in the erection of your greenhouses." Mention this paper when you write the firm for a copy of the pamphlet.

OUR READERS' VIEWS

Sports.

Editor Florists' Exchange:

I have not been able before this date to catch up my horticultural reading enough to be able to give you an opinion on Mr. O'Mara's discussion of "Sports" in the December issue of The Florists' Exchange. I have now read the article. I am always glad to read the opinions and experiences of persons who are directly concerned in the production of plants in a commercial way. I like both the facts that such persons are able to present and also their point of view; therefore, I have been very much interested in Mr. O'Mara's article.

If we are to use the terminology of DeVries, I suppose we should say of the roses, bouvardias, ferns and other plants that Mr. O'Mara mentions that they are in their "mutation period." This phrase gives us no explanation of the ultimate or physiological causes of sporting, but it enables us somewhat more clearly to classify our ideas concerning the subject. DeVries supposes that plants may be in a sporting or mutating period for a certain number of generations, and thereafter they may pass out of this stage into one of relative stability. This means that the sporting in some way is associated with the internal or essential constitution of the plant, and is not due primarily to local external conditions. DeVries classifies variation into two categories; the small individual variations or fluctuations that are presumably due to environment and which may be "improved" to a certain extent by selection; the real mutations or sports, the origin of which is farther back and at present unknown, which are usually more pronounced and are hereditary in their essential attributes. It is probable that the Mendelian would explain some of these sports on the theory of the reappearance of recessive characters.

What we now need is a thorough study of the facts concerning sports. We need data or records in regard to the kinds of sports and under what observed conditions they seem to appear, whether they are permanent or tend again to break up; and what is the nature of the difference between them and their parents. The gardeners can render a distinct service in making such records.

Cornell University.

L. H. BAILEY.

Dahlia Sports.

Editor Florists' Exchange:

Some time ago Patrick O'Mara brought forward the subject of sports; but, unfortunately, other questions seemed to be of greater importance, and little was brought out about this most interesting part of nature, except that the scientist knew practically nothing about it. Now a practical man, and one quoted as an authority says: "Although the dahlia is very much inclined to sport, yet all attempts to fix these sports into a new variety have been fruitless."

This coming from such a source is amazing. There is no difference between a sport in dahlias and a sport in any other flower. It would have been nearer the mark to say, all attempts to keep fancy dahlias to a fixed type have been fruitless, because they are so determinedly inclined to vary or sport and it is only through constant selection and judicious propagation that they can be kept to their true type. Else this authority should have said that his attempts had all been fruitless, as we should not attempt to judge others by our own limitations.

On the other hand, when a fancy dahlia sports to a solid color, its character generally becomes fixed, or by careful selection and propagation along scientific lines easily becomes fixed. Many examples could be given, but my experience with the fancy dahlia Dandy should be sufficient.

This variety was a rose pink striped dark maroon, shaded black. By careful selections we soon fixed the dark type, which was called John Sladden; but, we had great trouble with the true type. It began to give not only solid black, but solid pink flowers. The black always stayed black but the pink continued to vary. Six years constant selections were required to get the variegated type 95 per cent. true. In the meantime we had fixed the pink type, Pink Dandy. The second year we propagated the Pink Dandy, it sported pure white and was called White Dandy.

From this one fancy dahlia Dandy we have the black, John Sladden, Pink Dandy and White Dandy, all fixed and recognized commercial varieties; results certainly anything but fruitless.

What is a sport? What is a variation? You can improve a variety by selection or you can develop two or more strains by selections on different lines. This is variation, and is so controlled that it is impossible to fix any type so it cannot be changed by conditions and environment.

A sport is the work of nature and although man can help and even encourage it, yet it is beyond his control, strictly speaking.

The sport is undoubtedly the connecting link between bud and seed variation. Who can tell me the difference between sport and seedling? The eye of the stem, the eye of the root or crown, and the eye of the seed, each properly handled will produce a plant. Under certain conditions the seed

will reproduce itself as exactly as the top cutting or the root division. In fact, with the possibility of variation or sport neither would be absolutely sure to reproduce themselves.

The latest sport in my experience was last September, when I found a vermillion sport of Hohenzollern, and another with half of the flowers vermillion. The peculiar part of this was, that the sport was identical with Cloriosa, showing that Hohenzollern raised in Germany, and Cloriosa, of English origin are identical except in color. Can the scientists figure back to the common parentage? Nature has united the progeny.

In conclusion, man has his limits and without nature all his efforts will prove fruitless; but nothing is impossible with nature, and she will fix sports of dahlias, man to the contrary notwithstanding.

LAURENCE K. PEACOCK.

Atco, N. J.

Mixing Carnation Pollen.

Editor Florists' Exchange:

The statement that carnation Winsor was the ultimate product of a cross involving the use, at one and the same time, of pollen from two different varieties, is certainly fit cause to let the hybridizers and raisers of seedling carnations come forward, show and prove to the fraternity the possibility or impossibility of such a cross. All raisers and hybridizers of plants are aware that there is still chance to explore an almost entirely new field, when we come to reduce to final laws the different effects of our efforts at hybridizing and cross-fertilization. At the same time, though, we should be careful about promulgating any statements like the above, not only because it does not prove what it implies, but mostly because, in our estimation, it is actually contradictory to all known laws of fecundation; certainly none of us have ever heard of anything having two fathers, as a fact.

Of course, it is easy enough to collect and intermingle pollen from different flowers or varieties and apply any part of this mixture at the same moment to the same stigma. This probably has been often attempted purposely in fertilization, and where insects or winds are natural agents must necessarily occur in untold instances; but pollen employed in this way is not "mixed pollen" in the sense of the statement in question. A mixture of pollen from different flowers or varieties may and most times probably will effect either cross-fertilization or hybridization, accordingly, through the agency of any of the different pollen grains getting a chance of becoming the father of one particular seed.

It may also be possible, and observation seems to prove it, that when any of the several stigmas or even different parts of one stigma have been impregnated by individually different pollen grains, one seed pod may produce seeds which, after germination, will plainly show that the different varieties of pollen have left their mark, each on its particular ovule. In this way, we may simultaneously produce crosses between, say, J. H. Manley, Queen or Mrs. Lawson on Enchantress, all at one time and in the same seed pod.

But all this does not mean "mixed pollen" according to the interpretation which we are forced to arrive at, when the matter of two fathers comes to our notice.

Mixed pollen in this sense would let us infer that the pollen from Albertini and Daybreak had been (naturally or forcibly) amalgamated into one homogeneous pollen grain capable of performing the act of fecundation. This we may say without fear, is an impossibility and against all laws of nature as at present understood. Making one of the two would naturally presuppose the destruction of both, and the subsequent formation of their matter into one pollen grain. One grain only ever acts in the fertilization of one ovule.

If we reject an interpretation of "mixed pollen" in the resulting seed. There has never any theory of the pollen grains from Albertini and Daybreak acting on the receptive part of the ovule of Lawson at one and the same time, and each of the two different pollen grains asserting its influence in common with the other and so as to show each its own particular characteristics intermingled with it in the resulting seed. There has never any theory come our way, which even hinted at such a possibility.

As for ourselves we have so far not tried to give to one seed two fathers. Come to think of it, there might be lots of trouble in the end, in such a proceeding. Let us suppose a seedling takes a little more after one of the fathers and we keep it on that account, put it on the market at a good stiff price and after a while the thing gets disgusted with that particular parent and takes after the other, which happens to be of a disreputable character, where will the disseminator get it? If we grant that it is possible to give our seedlings two fathers, then we may easily understand why many have behaved so disgracefully after we were sure of having a good thing.

Very likely Mr. Murray will explain the parentage of Winsor in accordance with the editor's note on page 109.

GUSTAVE THOMMEN,

Foreman at Patten & Co.

Tewksbury, Mass.

That Burbank Letter.

Editor Florists' Exchange:

Mr. Burpee's communication makes very interesting reading, and throws considerable light on some things in that "strictly private" letter on page four of The Florists' Exchange which were before rather obscure.

On reading first that "postscript" and then the "strictly private letter" it will be noticed that the ideas of Mr. Burbank do not quite coincide with those of Mr. Burpee. For instance, that "mutual friend" is characterized by Mr. Burbank as "old-fashioned, bigoted and ignorant"; evidently not much friendship there, "mutual" or otherwise!

Mr. Burbank then proceeds to administer a sharp rebuke to Mr. Burpee for his admission "that Nature can surpass even the most skillful hybridizers." Evidently Mr. Burbank takes this as an insult, and informs Mr. Burpee that, "though I (emphasis on the I) may be self-confident, I can readily prove that my experiments in new creations are fully as successful as those of Nature herself!" It is to be hoped that Mr. Burpee will know better next time.

Mr. Burpee need not trouble himself about the "faith of your correspondent," as it cannot be used for advertising purposes; and regarding my belief in the "literal interpretation of the Bible narrative of the creation" I certainly believe it, and can see no reason for not doing so. Scientists have from time immemorial been advancing theories which have one after another proved to be fallacies. Many instances of this could be given. Obviously there are a great many things in the constitution of the Universe which we don't quite understand. But I don't see why it should be impossible for Mr. Burpee to believe that nice Bible story. One who can believe that Burbank creates hens, as he claims to do, would be expected to believe anything. The word "create" in the Bible always signifies making something out of nothing, which is the real meaning of the word. When means are used to attain an end the result can not be called a creation, therefore, even if Mr. Burbank laid the eggs himself and hatched them after twenty-one days and nights patient "sitting," it would be ridiculous for him to claim that he had created hens; he would only have chicks after all, and I doubt if he would make good once in a hundred times at that; he had better refrain from trying to usurp the prerogative of either the hen or the rooster.

This brings to mind the story of the New York alderman, who, when it was suggested that twenty gondolas should be bought for Central Park lake, argued that it would be far more sensible to buy two, a male and female, and "let nature take its course."

It is a pity that a man of the calibre of Mr. Burbank evidently is should be suffered to bring ridicule on a profession which has hitherto maintained a dignity second to none. His achievements so far do not entitle him to be classed higher than a fourth-rate plant breeder. The assertion in one of the magazines that "with one stroke of his wizard's wand he could transform the desert into a fertile plain," is as ridiculous as his own claim in his letter to Mr. Burpee that he "creates" hens and plants.

JOHN BIRNIE.

Reflections on Current Topics.

MR. EDITOR:—In common with most of your readers, I presume, I have immensely enjoyed reading the capital report of the American Carnation Society's Toronto convention and exhibition appearing in your columns. Not only is it the work done by this society per se that is interesting, but the aftermath of criticism on what was accomplished and left undone also proves instructive. I remember when the society was able to get through with all of its business on one day; now two are insufficient, and three days are proposed; showing the greatly increased enthusiasm in the carnation cult and the consequent added responsibility of the society itself.

The certificate question seems to have received its quietus, at Toronto, so far as the Carnation Society is concerned; but the decision arrived at does not appear to be generally satisfactory. The society's committee is accused of lacking boldness and courage because they did not recommend some plan of inspection of new varieties at growers' establishments. The society's decision to refrain from "nosing" into a man's business, seems to me to be a wise one; and to the belief to the contrary may be applied the adage "fools rush in where angels fear to tread." I believe it is generally conceded that no one knows a variety and all that to it pertains better than he who lives with it from day to day, therefore, to doubt his statements concerning it, advance on his establishment surreptitiously to discover and prove whether he is a liar or a truthful person, seems to me to simply insult his manhood. Fraud will regulate itself; and there are few who do not believe "honesty is the best policy" after all, and conduct their business affairs accordingly. Woe betide those who do not!

The reports concerning the banquet at Toronto have also proven interesting reading to me. One participant relates that the now famous feast was "more like a state function," and that every speaker "was a man." The latter statement may imply that on previous similar occasions some of the orators may have been of the opposite sex; or perhaps, worthy of the epithet applied to certain male individuals on account of their volubility—old women. I for one am glad the Canadians selected all "men" for their post-prandial speakers. We may now have, if this example is followed, some

common sense comments in the "feast of reason and flow of soul" instead of fulsome adulation and insincere "nothings" that make up the bulk of after dinner so-called orations.

At Toronto, too, one effort is characterized as "a classic." That shows what a man outside a good square meal can accomplish. It is too bad, though, that this "gem of purest ray serene," should not see the light of day. Being so uncommon on occasions of the kind, it seems to me, on that account alone it deserves the greatest publicity. Deepest oblivion should not be its fate. Can't we have it, Mr. Editor?

Brother McGorum I see, thinks that I share the views of his country's one time pedantic ruler—that the King can do no wrong. Only Scotsmen tolerated and embraced that belief; and it sticks to them yet, both as regards sovereign and subject. No, sir; I am in accord with the scientific experts these days, that anyone afflicted either with the "exaggerated ego" or "logorhœa" (flow of words) is a fit subject for the nearest lunatic asylum. Strange that the results of these ailments when they disclose themselves among trade press scribes, should be termed "wisdom," rose house, and other kinds, so much does the lay mind differ from that of the scientist.

Mr. McGorum also suggests that along with himself, John Birnie, George Watson, and others, I partake of what he calls a "haggis," at the Philadelphia convention of the S. A. F. O. H. I am ignorant of what that particular animal is; but as it appears to be something of which only the Scotch are fond, I have a premonition that I myself would detest it. I therefore decline the invitation with exceeding thanks.

An anonymous, skulking scribbler, in a recent issue, passes some remarks on the portrait of John Birnie which recently adorned your pages and those of others, coupling my honored name therewith. We have now seen Birnie's signature, and his counterfeit presentment, and if these are to be relied upon, one can, with the aid of his oft-appearing views on many subjects, form some opinion of the man himself. The portrait looks like that of a person who had sent home a well-directed thrust, with a "now will you be good?" expression and hen-like, had turned his head, waiting for a retort. It is the face of a "scrapper," therefore, no blame can be attributed to the bemasked scribbler in question likening Birnie to General Grant. In fact, one is inclined to regard Grant as having been flattered by the comparison. The similarity between the two men, so far as pugnacity and persistency are concerned, is apropos. Both seem to be imbued with the idea that "to fight it out on these lines," is the correct one; but while Grant's lines were straight, Birnie's often go off at a tangent. Each seems to have been a Scripture scholar. The general, too, was said to be a good judge of "Ferintosh;" and the gardener's knowledge of that beverage is not to be sneezed at. Grant became President of the United States; there seems no good or sufficient reason why Birnie should not become president of the American Carnation Society, despite the apathy of West Hoboken to local genius. But why continue the comparison? Suffice it to say, that I am pleased to look upon the fac-simile features of the man, who like myself is endeavoring to regulate the horticultural world. I might just add that, while my own picture was, owing to native modesty, confined to the columns of one paper, it does not necessarily follow that conceit, or vanity, was the cause of the appearance of Birnie's portrait in three or four papers. It is right that real genius should be rewarded with all available publicity. That, at least, is how it appears to

JOB.

New England Dahlia Society.

The secretary of the New England Dahlia Society reports that the membership is constantly increasing and that the society has now so well progressed that the executive committee at the last meeting decided to issue a monthly bulletin beginning with March which shall be called the "Dahlia News." It will contain each month, at least one article by some renowned grower of dahlias, giving cultivation or treating of the plant's peculiarities. It will also contain the dahlia news of the world, inform the members what is going on, giving descriptions of the new varieties that are introduced and in general supply the information that the dahlia growers are looking for. The last page of this paper will be devoted to advertising, and the returns from same are expected to pay for the cost of publishing the paper.

We feel that the society will outrival in membership any of the others of a similar nature in this country or Europe, as we expect a membership of fully 1,000 by the end of the year. We have now members residing in every State in the Union and the interest in the dahlia at large is surprising.

The secretary of the New England Dahlia Society would appreciate very much if the secretaries of the different horticultural societies would inform him of the dates of their shows where dahlias are included, so that the members may be informed thereof and make exhibits wherever and whenever possible.

All growers of dahlias should join the society at once in order to get the benefit which a membership will give.

Boston, Mass.

MAURICE FULD,
Secretary.

AMONG THE GROWERS

Jensen & Dekema, Chicago.

To do what you do, well, in fact as well as it can be done, is the precept which has stimulated J. E. Jensen throughout his horticultural career; and when asked if the carnation had not always been his chief love, he replied, "It is all; I know nothing else and have never tried to grow anything else." This is unquestionably the day of the specialist, and Mr. Jensen is a good example of what may be accomplished when the right material for a foundation, is formed and all one's time and energies are constantly concentrated in the same objective ambition.

The senior member of the concern of Jensen & Dekema is still a young man, a score and a half of years not yet having been placed to his account, yet a more thoroughly equipped and carefully and practically prepared carnation grower would be difficult to find. Born in Viborg, Denmark, in 1878, he early showed a predilection toward floricultural pursuits, and while still but a lad served four years as an apprentice in the town of his birth, after which he enlarged his sphere to Germany and then to London, working for the leading concerns of the sections as his world grew and storing away a constantly increasing stock of knowledge and experience until on the 17th of March, eight years ago, he reached New York, and shortly after commenced his successful career in the New World by entering the employ of Hugo Book of Worcester, Mass. It was but a short time later that history records Mr. Jensen as removing to Ellis, Mass., and joining the Peter Fisher force, where he met with such marked success that within eighteen months, young man though he was, he was given general charge of the Fisher establishment. We next find Mr. Jensen located at Joliet, Ill., managing the houses of the J. D. Thompson Carnation Co., until three years ago this Spring he made a trip to the Pacific Coast, on his return from which the present copartnership was established.

Besides the numerous florists' organizations with which he is allied he is counted a Mason and an Elk, and to those who don't know him we may add that he is an unassuming young man of most sincere and genial composition and agreeable manners.

John L. Dekema is nearly a year younger than his partner, and a native of Amsterdam, Holland, where he was born June 23, 1879. He early decided on his future career, and after an apprenticeship of two and a half years in Amsterdam he spent a year at the Royal Botanic Garden at Lieden, whence he pushed on to Germany and England, working and studying as he progressed, and emigrating to this country about seven years ago. He was successful and enjoyed the confidence of several employers in different sections until he joined forces with Mr. Jensen, coming here from Bobbink & Atkins, Rutherford, N. J. The present concern was established, and the fifty thousand square feet range of glass erected at 643 W. Foster avenue in North Chicago about two years ago. Mr. Dekema is at present combining business with a sight-seeing and health-seeking trip to the Southwest and Pacific Coast.

Few if any concerns can show such clean, unhampered strides of progress in two years as are evidenced by these enterprising young men. Their establishment embraces upward of 50,000 square feet of glass and is complete and up-to-date in every detail, all new and steam heated, devoted exclusively to the cultivation of carnations of which about 40,000 plants are annually benched. Though probably no grower can claim to be perfectly immune from the trials, tribulations and miscellaneous impediments associated with commercial horticulture, such drawbacks will be found here in a minimum proportion.

Their business is almost exclusively shipping, and their patrons cover a wide range of territory which is accessible from this great railroad center. Mrs. T. W. Lawson, Enchantress, Boston Market and Lady Bountiful are the varieties most in evidence. In novelties all the promising sorts are given a fair trial, among the varieties of this season being Aristocrat, Winsor, White Enchantress and Beacon as specialties.

An important part of the business of the house at this season of the year is the furnishing of rooted cuttings in large or small quantities.

W. K. WOOD.

Some Pollenating Experiments.

Mardner of Germany was the first to give the florists some real good things in azaleas. The first crossing of tuberous-rooted begonias was made by Veitch & Sons of London in 1869. Much has been written lately about the pollenation of the pear. My first attempt in this line was about 15 years ago. I crossed the Duchess with the Seckel, and Kieffer with the Seckel, carefully pollenating them for two days in succession. As the flowers appear in clusters, I pollenated every one on one cluster. In a few days after, I examined them and found that half of them were dropping off. I had noticed at the beginning that some of the stems that carry the flowers were of a much paler green than others. By close examination on dissection I found it was the fault of the stem that supplies the flower with nourishment, and any amount of pollen would not set any fruit. For a number of years I met with the same result. This only shows that the fault of not setting fruit is put on the wrong side. Plants

J. E. Jensen

are capable of forming the fleshy part, or the shell, case, or whatever you may call it, that surrounds the germ or the seed, without any pollen. We have seedless apples and pears, provided the organs that come through the stem are perfect and feed them. I have a *Cycas revoluta* which every other year never brings a crop of seed. The fleshy part and the shell that surrounds the little bulbous part inside are always perfect. All it would need would be some pollen to fertilize it.

My advice to young men is to begin early and study plant anatomy, and plant physiology. Dissect the flowers and fruit; follow up the organs; see where they start from, and where they go. Without this study one is working in a fog, but by study we are able to gather a few pebbles on the shore of horticultural knowledge. JOHN COOK.

THE AMERICAN CARNATION SOCIETY held its meeting on British Territory, viz., in the city of Toronto, on January 23, 24. Every preparation was made for a successful meeting, and we trust that nothing occurred to spoil what was after all a family party. Whether we islanders should care in Mid-winter to take a journey of a thousand miles, to an exhibition and conference in such a climate, as some of our American cousins are prepared to do, is another matter.—Gardeners' Chronicle, London.

J. S. Dekema

CARNATIONS

Carnation Show at Chicago.

The carnation show, which has been an important feature of the yearly routine of proceedings of the Chicago Florists' Club, was held in Handel Hall on the evening of Thursday, February 14, being the regular meeting night of the organization. The show itself was the most successful of this nature in the club's history. There were five or six thousand carnations on the tables, all of rare excellence, the production of local talent and of specialists from a distance, and embracing a good representation of the popular standard varieties of to-day as well as several novelties which are being disseminated this Spring or will be placed on the market in the near future.

The exhibitors, especially of new varieties, were asked to accompany their offerings with a few descriptive or cultural notes, which was done in some cases. In the following mention of the individual contributions the data offered by the exhibitor are given in quotations and at the end of each notice are quoted the remarks of the judges and the score achieved by their decision on new varieties, those scaling 85 points or over being entitled to the club's certificate.

The judges were W. N. Rudd, F. F. Benthey and James G. Hancock, Mr. Rudd of course withdrawing during the examination of his own exhibit.

The Chicago Carnation Company was on hand with an excellent display of their products of a quality fully up to the standard of excellence for which this concern has established a reputation. Six varieties were included in this collection in vases of fifty and one hundred blooms as follows; Aristocrat, White Perfection, Enchantress, Daybreak, Mrs. Lawson, Variegated Lawson, and Red Riding Hood (new). Judges' report: "Chicago Carnation Company, a number of good vases of standard varieties and Red Riding Hood scaled 82 points. Aristocrat and White Perfection very fine."

R. Witterstaetter of Cincinnati forwarded a large vase of his seedling 1009 F, which has been christened Snowdrift. The exhibit was not accompanied with data, but showed up in good shape, of the purest white, large size, strong stem and apparently a valuable acquisition. Scaled 84 points.

Baur & Smith, Indianapolis, sent May, of pleasing shade and medium size. It might be classed as between Morning Glory and Enchantress both in size and color. According to the committee's decision this variety scored 78 points.

Peter Reinberg made a creditable showing of some of the varieties which he finds under his treatment the most satisfactory for commercial purposes; and the exhibit evidenced a high state of cultivation and embraced Robert Craig, Lady Bountiful, Mrs. T. W. Lawson and Enchantress. Of this collection the committee said, "Peter Reinberg, an excellent exhibit of standard varieties."

Bassett & Washburn showed a vase of their scarlet seedling No. 20 1902 (Crane Prosperity), which received much attention, and though lacking the intense brilliancy of the Crane parent it is endowed with so many good qualities that it is certainly a variety to be reckoned with in the near future. In speaking of this seedling Mr. Washburn said: "This is its fourth year and we have 1,100 plants which have averaged from 50 to 60 flowers per day since November 15; stems from 28 to 30 inches in length, flowers about 3 1/2 inches in diameter. It is the best shipper we ever had." The committee scaled this flower at 87 points which entitles it to a certificate.

The Poehlmann Brothers Company were at the top of variety the largest exhibitors, showing eight vases of commercial carnations. The flowers were all of superior quality, the committee referring to them as an "excellent exhibit of standard varieties, the vase of White Lawson being especially commended."

Jensen & Dekema filled a table with choice specimens of the varieties to which a large portion of their range is devoted, the quality being all that could be desired and speaking volumes for the energy and ability of this young concern. They showed Victory, Enchantress, Mrs. M. A. Patten, Lady Bountiful, Boston Market, and Governor Wolcott, the judges referring to them as "a fine exhibit of standard varieties." This concern acting as representatives for E. R. Pierson Company tabled a fine exhibit of Winsor which had been shipped on the previous Monday. The judges scaled this variety at 88 points which entitles it to a certificate and the honor of the highest scoring of any of the new varieties in the show. Of Winsor Mr. Pierson wrote "Winsor seems to be an unusually easy variety to grow. We believe that most varieties that are good can be grown generally well. The great difficulty is there are too many varieties sent out that should never be disseminated. This is the third year that we have grown Winsor. We had a limited stock of it two years ago and that year grew 2,000 plants; this year we have 25,000 plants; We have grown it in a low temperature, with Enchantress, and in higher temperatures averaging 56 degrees at night. It seems to do well in both temperatures, but we prefer to grow it rather warm, as we think it is more profitable. It is a variety that will stand a good deal more heat than the Enchantress types, as it has a stiff stem. Even under the exceedingly cloudy conditions which have prevailed this year, we have maintained in one

house a temperature of 54 to 56 degrees at night without weakening the stem the slightest; in fact, we have given it almost a rose temperature. We believe that, like all varieties of this type it will do best planted inside, and that the best results would be obtained by planting it immediately after Decoration Day, using either young plants from the benches or good strong plants from 3 1/2-inch pots if one has stock in shape as early as that. If not, then from smaller plants. We do not think it should be pinched much if any after July 4. This will bring it into bloom early in the Fall and will give earlier flowers and better stems than if transplanted from the field at a later date. We grow 16,000 plants of it in this way and planted 9,000 from the field about September 1. The plants grown under glass have given us very much earlier flowers, with longer stems, and more flowers than plants taken from the field and planted about September 1. The more we see of Winsor, the better we like it. We were satisfied last year that it was a phenomenally good variety, but it really grows better and better. It is not giving one half of one per cent. split flowers; in fact no calyx is split so as to render the bloom unmarketable. The stem is good, the keeping qualities phenomenal, the color one that has long been needed, and, as far as habit and growth and productiveness are concerned, it leaves little to be desired. Winsor is to be the commercial variety of the future, in our estimation."

M. A. Ryerson showed a red sport of Mrs. Lawson of which the committee said "apparently identical with Red Lawson."

There were few features in the hall that attracted so much attention as W. N. Rudd's scarlet seedling No. 163, A 1902, a product of excellent characteristics evidently possessing the requisite qualifications of the fancy carnation of the present day. Said to be free, a good seller, and of unquestioned health and vigor. It is understood that this variety will be placed on the market next year. It scaled 87 points, and will accordingly be certificated.

J. A. Budlong Estate showed half a dozen vases of finely developed flowers of their favorite commercial sorts, including Enchantress, Lady Bountiful, White Lawson, Mrs. T. W. Lawson, Cardinal and Nelson Fisher. These blooms evidenced good culture, of which the committee said, "A number of vases of standard varieties excellently done."

Anton Then was represented by a table containing seven varieties, with one exception all well-known in commerce including Harlowarden, Mrs. T. W. Lawson, Enchantress, White Lawson, Mrs. E. A. Nelson, Lady Bountiful and Winnemac, a variegated seedling. Of these the committee said, "A number of good vases of standard varieties."

The H. Weber & Sons Company, Oakland, Md., sent on two of their new creations—Mabelle and Toreador—which showed up well and were scaled 79 and 85 points respectively, the latter receiving a certificate. The following notes accompanied them. "Mabelle is unique in color, showing absolutely no traces of lavender or purple, as most pink varieties do. It is also unique from the fact that it does not fade. Not an exhibition flower, but recommended as a very vigorous, free-producing commercial variety. No other carnation blooms earlier in the Fall, and it can be cut with long stems right at the start. Requires rather a cool temperature and about the same cultural treatment as Enchantress, which it will fully equal in the production of bloom and cover a longer season."

"Toreador will not be disseminated until 1908. Arrangements are under way to have a trial batch of 1000 plants of this variety grown in the West and one of like number grown in the East. Prosperity has not been as profitable as most other good varieties. Toreador is not only an improvement on that variety in color, but in nearly all other respects as well. In addition, it can be planted as close again as Prosperity, thus doubling the returns from the bench space occupied, which will bring it on a par with the best money-making varieties of the day."

John E. Haines, Bethlehem, Pa., shipped a striking exhibit of his two new offerings Imperial and Pink Imperial, which appear to bear out what is claimed for them practically as follows: "Imperial, the new variegated seedling, has been largely shown and has been awarded ten certificates of merit and diplomas. The color is a variegation of delicate pink similar to the shade in Enchantress, but somewhat deeper and more pleasing. The stem is said to be a wonder, attaining a length of 3 or 4 feet, and even in early September often reaching 30 inches. The flowers, invariably measure from 3 to 4 inches in diameter, nicely formed and very fragrant with a strong calyx. Scaled 79 points. For the Pink Imperial which showed up better here, the grower claims the "greatest wonder" of 1907. It is evidently a winner as is claimed for it, a pleasing shade of pink, being a sport of the preceding variety and in some ways superior to it, as in the judgment of the committee it was entitled to a rating of 84 points."

H. N. Bruns placed on the table a handsome bunch of his special Lily of the valley which was very generally admired.

The account of the meeting which followed the exhibition will be found under the caption "Club and Society Doings" in this issue.

WILLIAM K. WOOD.

The Recent Toronto Show of Carnation Society.

(Remarks by Edward A. Stead, Overbrook, Pa., before the Florists' Club of Philadelphia, February 5, 1907.)

Our worthy president, Mr. Pennock, William P. Craig, Mr. Beattie, my foreman, and myself left the Reading Terminal at 6:30 Tuesday evening, expecting to arrive in Toronto for the Carnation Society's convention at 10:30 next morning, but the train was delayed, not reaching its destination until 1 p. m., so that we had barely time to get to the hall and stage the few flowers I had sent before the opening of the convention. I will not attempt to go into the detail of the proceedings, or of the prizes awarded. What the members want to know, I think, is my opinion of the varieties shown, and their respective merits.

I am more than ever convinced that a line must be drawn between what may be termed the exhibition and the commercial carnation, just as we class our chrysanthemums. I want to impress members with the fact that the prize awards are very misleading. The question of how many flowers per square foot, and how these flowers are cut through the various months of the year, are facts which can be gained only through experience.

I will take the carnations in their colors, starting with the white section.

Whites.

Alma Ward stood out prominently. It certainly is an exquisite flower and has improved considerably since shown at Boston. It is particularly adapted to the New York market, where it can command the price of which it is worthy. I suppose you noticed that this variety was awarded the silver medal; the gold medal was withheld because the judges did not consider any variety up to the

New Petunia, The Queen,
Originators, Yates Floral Company

standard required by a gold medal, and I might add that, taking all the exhibits, none was at its best, owing doubtless to the unfavorable weather all over the country the week previous.

While Perfection, well spoken of by many, is a fine, large flower, a good, clean white and an improvement over Lady Bountiful except in stem. I have some doubts as to its keeping qualities.

White Lawson comes such a poor color and so short-stemmed early in the season that it is not just all that is desired. The whites were poorly represented. I do not recall a vase of Lady Bountiful, which was so prominent at the Boston show. The general impression among the trade is that it lacks petalage, is neither early enough, nor free enough. There is a great opening for a new white, and I wish some one would originate one to fill the bill.

A new white called Georgia looks as though it might be a good thing commercially. It does not have the size of White Perfection, but has a better stem and, I should judge, is a free bloomer.

The Reds.

Robert Craig still holds first honors, according to the judges. It is no doubt a fine red, and where a fancy price can be obtained it would be profitable to grow.

Beacon was well represented by Peter Fisher, Cottage Gardens, and the Stratford Flower Farm. We think well of Beacon. The habit of the plant is similar to that of Enchantress and shows excellent breeding. It is free, healthy and of good size as to flower. I have heard some criticism as to its color. Personally I see no objection to it, as

my experience with red carnations has proven that the orange-reds are better keepers and shippers and without the habit of bruising, as do Cardinal, Adonis and Flamingo. I am satisfied with Beacon and expect to grow a quantity next year.

Victory was not shown extensively. It has the same good qualities as Beacon in regard to its keeping powers and color. If it has any faults it may be considered a trifle weak in stem and form of flower.

A new red of merit was a seedling from Bassett & Washburn. As I saw it on the table it looked like a good commercial variety.

Red Chief, exhibited by F. Dörner & Sons Company, while of a good color, showed a weakness of stem which made it undesirable to me. This fault, I understand, was owing to the climatic conditions. I was informed that Lady Bountiful, when first shown as a seedling, looked much the same way.

Mr. Haines' red has done poorly at Stratford. If I could grow it the way Mr. Haines does it would be fine, but, unfortunately, I have not yet been able to do so; it does not feel at home at Stratford and the difficulty looks to me like a question of soil. I saw it doing beautifully at Mr. Widener's place at Elkins Park.

In Pink.

In the class designated as the Scott shade of pink, Winsor was shown by the F. R. Pierson Company, in quantity and it certainly appeals to me. It is what is wanted in color and, while it may be slightly undersized, and may be a little short in stem, its freedom and color offset, to my mind, anything that may be said against it.

Winsome was one I did not examine closely. It seemed a pleasing shade and one that would be desirable. Dailedouze Bros. exhibited a pink sport of Lawson.

The cerise class, or Lawson shade of pink, was better represented than any other class. The great objection, it seemed to me, was the bluish cast most of them had. Two the colors of which pleased me, were Afterglow and Mr. Weber's new seedling, Mabelle. Both of these arrived too late to be judged. Aristocrat is a fine, large flower. Its color did not strike me favorably. Perhaps I am too critical.

Dailedouze Bros.' new seedling, No. 348, which won the bronze medal, is a large, fine flower, but again I did not admire the color.

Mrs. C. W. Ward was attractive. I understand Mr. Ward thinks so much of it that it is not to be put on the market.

Elsa Struss did not show as well as at Boston.

Helen Goddard looked good commercially.

Pink Imperial showed good flowers and probably the longest stems in the show.

Variegated.

In the variegated section was Helen Gould, a sport of Enchantress. As a novelty it will make a place for itself.

Toreador, by Weber & Sons Company, an improved Prosperity, has good form and much better stem.

Bay State, or seedling No. 9, by A. Roper, is a much improved Mrs. M. A. Patten, and if a free bloomer should be a good thing. Mrs. Patten still holds its own.

Imperial attracted attention by its magnificent stems. It is a novelty pure and simple.

Other Varieties.

In the class for Enchantress shade of pink, Enchantress itself, so generally well known, hardly needs description. There is nothing to displace it. One competitor by Baur & Smith, called May, was a better color but undersized.

Some seedlings exhibited by F. Dörner & Sons Company, are worthy of mention. One, a scarlet, No. 305, I think will be heard from, also seedling No. 9703, a maroon shade, attracted my attention.

I hope my remarks will be taken in the spirit they are meant. I have tried to give my opinion as the flowers appeared to me personally, and I trust no one will be misled by it. Next year, when we meet at Washington, I hope we will have a large delegation from Philadelphia.

The Queen Petunia.

Editor Florists' Exchange:

The new petunia "The Queen" has been grown by us for the past five years. It is a wonderful bloomer; the flowers are of an enormous size, and measure from four to four and one-half inches in diameter. They are white, mingled with purple, very nicely fringed, making one of the handsomest plants grown. It is an early bloomer; in fact, one of the best sellers for Decoration Day. The Queen petunia planted outdoors will continue to bloom all Summer. The flowers can be used to good advantage in design work.

YATES FLORAL COMPANY,
Canajoharie, N. Y. Joseph Trandt, proprietor.

American Carnation Society.

Variety Registered.

By Wa-nq-ka Greenhouses, Barneveld, N. Y.

CLIMAX, a decided improvement over Enchantress, being a shade or two deeper, of better form, stem and calyx, and more productive.

ALBERT M. HERR,
Secretary.

Society of Southern Florists

FIRST ANNUAL CONVENTION AT NEW ORLEANS, LA., FEBRUARY 14-16, 1907, A GREAT SUCCESS. JAMES A. NEWSHAM, ELECTED PRESIDENT.

The first convention of the Society of Southern Florists and Ornamental Horticulturists, held in New Orleans, La., on February 14, 15 and 16, 1907, was in every respect a success, although it is to be regretted that there were not more members from the adjoining states present. However, the Louisiana craftsmen made up for this defect, both in number and enthusiasm.

The Exhibition.

The exhibition, also, considering the youth of the society, was quite large and interesting. Among the exhibitors were Kroeschell Brothers Company of Chicago, with a model of their well-known boiler. Caldwell the Woodsman, Evergreen, Ala., made a nice display of wild smilax, and was represented by George O. Stoddard. George R. Carter, also of Evergreen, Ala., had a fine showing of wild smilax. The Paducah Pottery Company, Paducah, Ky., exhibited pots, vases, etc. The Target brand of scale destroyer was exhibited by the New Orleans agent, C. W. Eichling. The Joseph Steckler Seed Company made a neat display of seeds, and vegetables grown from seed supplied by them. Abele Brothers' exhibit consisted of palms, ferns and flowering plants. This firm had a novelty in miniature flower pots and saucers containing growing plants. M. Cook's Sons had a display of sweet olives in pots, one of their specialties. B. M. Wichers & Sons, Gretna, La., had on exhibition ferns, bostoniensis and its sports. Especially noticeable was *Nephrolepis Whitmani*. Charles Eble staged palms, ferns, pyramid box, etc. James A. Newsham had a group composed of palms, ferns, dracenas and pandanus. He also showed standard and pyramid bays, rhododendrons in flower, and other plants. C. W. Eichling had a table of his specialties—*Adiantum hybridum* and *A. Capillus-veneris magnificum*. In cut flowers U. J. Virgin showed American Beauty roses. W. B. Patterson, Jr., Montgomery, Ala., exhibited carnations, which were the admiration of every one on account of their fresh appearance, quite different from the kind the Western florists have been shipping to New Orleans this season. A. L. Randall Company, Chicago, sent an exhibit of cut roses. Nosacka & Company staged samples of their wire work.

First Day—Morning Session.

All the sessions were well attended, and the various papers were listened to attentively. The meetings were held at the hall in 202-212 Camp street. President R. C. Berkman was unable to be present, and Vice-president C. W. Eichling presided. Paul Abele acted as secretary in the absence of Secretary J. F. Wilson. Treasurer Joseph Steckler was at his post, and during the sessions received the dues of several new members.

Vice-president Eichling introduced Mayor Behrman, who delivered an address of welcome, in the course of which he complimented the florists on the progress they had made in the scientific branch of their business, overcoming many obstacles to practical success. Dr. W. C. Stubbs responded to the address of welcome in an eloquent manner, referring to the vast possibilities of horticulture in the South, and emphasizing the great things that could be accomplished by an organization of this kind.

Mr. Eichling in his address referred to the bright outlook for the society. If horticulture in the South is yet in its infancy, the many natural inducements offered to the florists in that region are being more and more utilized, he said, and the progress made during the last decade is, to say the least, very gratifying. He spoke of the advantages possessed by the Southern florists as regards climatic conditions, and touched upon the good quality of the ferns, palms and other stock grown there. He urged the necessity of home production, and better acquaintance of the florists one with the other. In closing Mr. Eichling said that there is no doubt but that the Southern florists, when they meet again, could look back upon a successful year, successful business and a prosperous society.

The first paper read was by F. P. Davis, of Mobile, Ala., on "Chrysanthemum Growing in the South."

Messrs. Newsham and Eichling added their experience in the cultivation of chrysanthemums. The latter urged the desirability of a variety which would mature before All Saints' Day. Mr. Newsham stated that he had obtained very good results by planting in June. He considered that it was better to keep the plants in the open until the bud first appeared, then placing them under glass.

First Day—Evening Session.

The evening session was largely taken up with a discussion of the cultivation of roses under glass in the South. The subject was opened by a very able paper by R. Lockerbie, who gave ample proof that roses could be grown successfully in the

Robert Lockerbie
Chairman Com. of Arrangements

South, despite the general belief that it cannot be done. He said that the houses should be light, airy, up-to-date and well drained, and great care should be taken with the ventilation and other points.

A discussion of the best trees for street planting was then engaged in. Ex-Superintendent Baker of Audubon Park stated that all the native trees here were suitable, but many things had to be taken into consideration in planting them; for instance, the space allowed for the roots, the character of grounds they were to adorn and the general harmony of the surroundings. He recommended as the time for planting all but the live oak the season approaching Winter, but as the live oak partook of the nature of an evergreen, it should be planted on the approach of Spring.

The subject of lilies was also taken up. Mr. Abele spoke of his success this year in raising them; while, on the other hand, Mr. Lockerbie said that he knew of one batch where 50 per cent. of the plants were diseased. Mr. Eichling also took part in the discussion.

The nominations of officers resulted as follows: For president, J. A. Newsham, New Orleans, La.; first vice-president, F. P. Davis, Mobile, Ala.; second vice-president, W. B. Patterson, Jr., Montgomery, Ala.; treasurer, Joseph Steckler, New Orleans, secretary, Paul Abele, New Orleans. These officers were at a later session elected, along with the following executive committee: E. H. R. Green, Dallas, Tex.; C. R. Panter, Ed. Baker and R. Lockerbie of New Orleans.

Second Day.

The morning session was opened by the reading of a paper on "Packing, Shipping and Express Rates," by Mr. Eichling. He was followed by J. A. Newsham with a paper on "Profitable Orchids for the Florist." The reading and discussion of these papers consumed the morning session.

At the evening session a question on the method

Charles Eble, Essayist

of treatment to produce plants with variegated leaves was discussed. It was the consensus of opinion that plenty of sunlight, starvation and dry soil were necessary to produce variegation.

B. M. Wichers read a paper on "What the South can Grow for Northern Markets." He divided his subject into five classes; namely, ferns, palms, aquatics, bulbs and roots, and foliage and flowering plants. We hope to give this paper in a later issue. The matter was discussed by Messrs. Eichling, Lockerbie and Abele.

Prof. A. A. Rosenfeld then read a paper, discussing the value of laws and regulations against insects. He dwelt particularly on the effectiveness of the entomological work in behalf of the nurserymen, and said that this year there had been forty-three certificates issued, and an increase of 400 per cent. in the output in one year.

The selection of next place of meeting was left in the hands of the executive committee.

Last Day's Sessions.

The executive committee read its report regarding the exhibits. The programme features of this session were a paper by Mr. Patterson of Montgomery, on his experience with carnations in Alabama, followed by C. Eble of New Orleans on "Needs of the Retail Trade."

Mr. Eichling presented C. R. Panter, who had managed the exhibit, and whose suggestion, at the dinner of the Horticultural Society, led to the formation of the Southern society. He received a cordial greeting, and discussed the work of the organization, expressing his great gratification at the auspicious manner in which it had been inaugurated.

The proceedings were brought to a close with a banquet on Saturday night, tendered the society by the members of the New Orleans Horticultural Society, at A. J. Fabacher's restaurant. About forty of the local florists were present. Otto Abele, President of the New Orleans Horticultural Society, presided, and C. R. Panter acted as toastmaster.

The following were the toasts and those who responded to them:

"Future of the New Orleans Horticultural Society and the Society of Southern Florists," C. W. Eichling; "The City of New Orleans," Hon. John F. C. Waldo, speaking for Mayor Martin Behrman, suffering with grip and unable to attend; "The Arrangement Committee," R. Lockerbie; "The New Orleans Horticultural Society," Edward Baker; "The Ladies" (drunk standing), P. A. Chopin; "Prosperity to the Society of Southern Florists," James A. Newsham; "Our Guests," W. B. Patterson, Jr., of Montgomery, Ala.; "The Secretary," Paul Abele; "Flowers and New Orleans," John Eble; "The Seed Industry of the South," Jos. Steckler; "The Press," C. R. Panter; "Badges and Blossoms," C. Eble.

Those who participated in the pleasant affair were: Messrs. C. W. Eichling, E. Valdejo, A. Alot, M. de Lapouyade, H. S. Despormier, Richard Eblen, Henry Cook, Claude Paz, E. Baker, J. S. Dodds, W. B. Patterson, Jr., R. Lockerbie, H. S. Kanbenich, Jos. Steckler, Chas. R. Panter, Otto Abele, J. A. Newsham, John F. C. Waldo, Paul Abele, P. A. Chopin, J. H. Menard, John Eble, I. Perez, E. Eblen, C. Woietress, H. Kraik, Otto Werner, Chas. Eble, E. Ratelle, H. Papworth, J. Werburg, B. Murphy, A. P. Holcombe, Paul J. Brand, Lee Adams, J. R. Echazabal, J. Robertson and others.

Growing Chrysanthemums Under Glass in the South

(Paper by F. P. Davis, Mobile, Ala., read before the Society of Southern Florists at New Orleans meeting.)

The chrysanthemum to be a commercial flower must have perfectly clean foliage and the delicate texture which can only be had under glass, and, therefore, the chrysanthemum of commerce must be so grown. Many inquiries have been made by beginners as to how to grow chrysanthemums in the garden in the South. I have read some of the answers by authorities on the subject of chrysanthemum growing in cold climates, and have been as often amused. When such queries have been submitted to me my invariable answer has been, "It cannot be done." Surely the plant will grow and grow luxuriantly in the open, but the flower is coarse, soiled, weather-beaten, thrips-eaten, and what not. Some of our retailers grow it outside and use it largely for funeral work, for which it is well known anything can be used, as the dead man never kicks, and his family, however unattractive the flowers sent in by friends may be, would not give expression to wound the feelings of such friends.

I make this apology for having to address the Society of Southern Florists on growing chrysanthemums under glass, when there is no other way.

Passed the Guessing Stage.

Chrysanthemum growing in the South, unlike most of the other commercial flowers, has passed the age of guessing. There is no difference as to the knowledge required to produce fine flowers in Chicago or in New Orleans. The difference is in applying the knowledge to the conditions, and in choosing the varieties that respond to the conditions. The Southern grower must not be misled by the achievements of our brother workers of the North with any variety. He must do his own experimenting, without fear of cost, and with the courage to quickly throw away hundreds of varieties that are sure to disappoint him. He must make his own selection.

Very early varieties are useless for experimental purposes. Anything that gives a flower sooner than Mrs. O. P. Bassett and Mrs. Henry Robinson, is sure failure. Only varieties that open quickly and produce perfect flowers will do. Such varieties as Jeannie Nonin and Timothy Eaton are always disappointing; it takes them too long to finish.

When to Propagate.

To begin we must propagate as late as possible. The shorter time in the growth, the shorter time of exposure to the ravages of the twenty or more insect enemies we have to encounter. I propagate the latter part of April for best results. Here I encounter the most stubborn problem in growing chrysanthemums in a hot climate. The stock plants are in vigorous growth and the cuttings naturally soft and apt to damp off in the sand. I find this tendency to damp off greatly encouraged by the fungus from the pine wood of the bench, and to prevent this I struck on the idea of lining the propagating bench with glass. With copious watering and entire shade, the striking of the cuttings is easy.

The flowers will be from three weeks to a month later than the Northern grown chrysanthemums, and so the later planting is equalized by the later blooming. It is with all science and great difficulty that we get Mrs. Henry Robinson for All Saints' Day.

Treatment During Growth.

As to the treatment during growth, there is no difference whether it be in Canada or Mexico. What applies to Chicago in August will apply here in September. The preventive treatment for insects is the same, except that the greatest caution must be taken in fumigating on account of heat. Cyanide is the surest for the destruction of all insects, but very dangerous except in the hands of the most experienced. I do not mean dangerous to man, but great caution must be had lest we sicken our plants beyond recovery. I cannot, therefore, advise its general use. Experiment on a small scale, and learn to handle it, and it is a luxury and the cheapest. Light and frequent use of tobacco in any form is effective and safe for all except mealy bugs, and a man who is negligent enough to let the mealy-bug get into his plants does not deserve to succeed. His worst enemy is thrips. They come after the harvest is in sight, and they surely come. After their presence is known it is too late to fight. Regular and frequent fumigating with tobacco in some shape is the only hope of keeping thrips out and in very dry seasons at blooming time, even this fails.

As to Varieties.

As to varieties, everyone must choose for himself, from his own tests, in his own locality. After trying almost every variety introduced in the past twenty years, I have settled on Bassett, Mrs. Robinson, Ivory, Col. D. Appleton, Mrs. Jerome Jones, Yellow Jones, W. H. Chadwick, Golden Chadwick, Old Golden Gate, Golden Wedding, Queen or Alice Byron, Mrs. Weeks and perhaps White Bonaffen. You may notice that pink and the darker shades are not in my list. They are all disappointing in color and seldom called for. Every chrysanthemum plant I grow must produce a salable bloom. You may notice, also, that all of these are old varieties, ancient varieties, I may say.

All I can say of last year's varieties is that none of them stands a wind of ninety-four miles an hour. On the twenty-sixth of September such a wind came along my way, and when it had died down sufficiently for me to put my head out of the cellar, a few scraps of broken glass was what was left of my chrysanthemum house. Some of my hopeful new varieties landed over in the next county, and somehow I lost interest in last year's introductions.

Of the year previous I had hopes of Jeannie Nonin, Roi de France, and Beatrice May but I find nothing to displace in my standard list, except that I would add the latter variety but for its softness. I am growing nothing in the modern list because I am unwilling to throw away what experience has taught me to be better. The season is once a year and short, and as yet with us, it is the flower that is novel, and not the variety.

My standard is that every plant must give a perfect salable flower and the bloom must unfold quickly. On account of the character of help I am sometimes compelled to put up with, there must be no great science in taking the bud. In my list you may notice that I have named only varieties that give sure flowers from any, or the best looking bud that appears. Robinson and Bassett are the only exceptions, and I take the crown on these as it gives a better stem.

In this trespass on your time I have made no effort to instruct the beginner. I am conscious of addressing an audience in which many of the growers could instruct me. I have endeavored to give only my experience on a subject common to the humblest florist, and so thoroughly thrashed out by the brains of the floral world that only the conceited novice would venture to give instruction. You may notice that my experience has been only as relates to the commercial flower. The exhibition chrysanthemum is not yet needed. The local show of the New Orleans Society is the only effort in the show direction in our near locality. This will all come in good time, however; the organization of the Society of Southern Florists is a right move.

Packing and Express Rates.

(Paper read by C. W. Eichling before the Society of Southern Florists at New Orleans, La., February 15, 1907.)

If we consider that the plants and flowers annually shipped over the United States are valued at millions of dollars the immense business of transportation companies, and especially the express companies, becomes evident.

Why do shippers of plants, bulbs and seeds enjoy special low express rates? Simply because the express companies compete with the United States mail. Uncle Sam was the first good friend of the florist; he offered to carry his plants, bulbs and seeds to any part of the United States at the rate of two ounces for one cent, or eight cents per pound, in packages up to four pounds. Now comes the express company and goes Uncle Sam one better, and says to the florist: "If you will pack right, we will carry your goods at the same rate as Uncle Sam, and give you a receipt, which Uncle Sam refuses to do; and if you prepay your shipments we will return you two cents on every shipment weighing from 50 to 74 ounces." A package weighing 50 ounces would cost 25 cents by mail and 23 cents by express if prepaid. The minimum express charge is 10 cents on packages up to twenty ounces. This prepaid matter is called in the Express Tariff Section D matter, and the rate applies on packages up to 74 ounces. The difference between mail and express rates in this class is a saving of two cents per package if shipped by express, besides getting a receipt for it.

The General Special Rate.

Packages weighing over 74 ounces are billed out, whether prepaid or not, at what is called the "General Special Rate," which I shall now explain. If the florists were compelled to pay regular merchandise rates on plant shipments there would be no end to complaints, and yet, why should the florist be the favored one among the great number of other industries, who all pay regular merchandise rates, with a few exceptions? The florist enjoys the general special rate which is from 20 to 33 1-3 per cent. lower than the regular merchandise rate. The rates are adopted by all express companies belonging to the Traffic Committee, and it becomes the duty of every shipper or receiver of bulbs, plants and seeds to study these rates in order to avoid and to be able to correct mistakes.

A plant shipment to enjoy this special rate must be packed in a closed box, so that it may be handled with other express matter without any special care. Plants packed in baskets do not come under this class; they must be handled with more care, and the express company charges you for this extra work by applying the pound rate, which is a little higher than the general special rate, but still much less than the regular merchandise rate. For instance, where a ten-pound package at merchandise rate from Chicago to New Orleans would cost \$1.10, a ten-pound basket of plants would cost 40 cents, and if packed in a box, only 35 cents. Thirty-five cents is the minimum charge for a box or package of plants at general special rates.

The general special rate adopted by the Traffic Committee is as follows:

If Mdse. Rate per 100 lbs. is	General Special Rate is
\$1.00	\$0.80
2.00	1.50
3.00	2.25
4.00	2.90
5.00	3.40
6.00	4.00

Merchandise rate between New Orleans and Springfield, Ohio, is \$3.50 per 100 lbs., or \$2.90 special rate, which means 2 9-10 cents per pound. Then, a box of plants weighing sixty pounds would be carried between these two points for \$1.74.

Regulations Not Always Studied.

It must be said, in justice to express companies, that all their employees are instructed to observe the tariff on general specials, but the trouble is that very few bill clerks ever study these regulations. Especially agents in small towns, where general specials are an exception, are liable to overcharge on plant shipments, and the receiver, who may not be familiar with the correct charges, gets disgusted with the high express rates. Thousands of customers are annually lost in this manner, and it becomes the duty of the shipper to call the express agent's attention to the class of matter to which his shipment belongs. This may be done by having on your shipping tags the remark, printed in bold type: "LIVE PLANTS—SPECIAL RATE," or by attaching a special card, stating weight and correct express charges to destination. This requires a complete knowledge of rates between the different points, which may be obtained at any express office. It is advisable for a receiver of a plant shipment before paying charges, to ask the agent whether the shipment is billed at special rate, and in most cases, mistakes will be avoided.

Packing.

Now, as regards proper packing. This subject, treated in detail, would fill a book, and I shall confine myself to pointing out a few advantages and abuses in packing. In the proper packing of plants a number of things have to be considered, and it is as difficult to teach packing by a lecture as it is to cure a disease by correspondence. Experience, practice and good judgment are the only teachers,

and here is where the necessity comes in of a young man learning his trade under an experienced foreman.

With an order before you in the packing shed, look at the nature of the shipment and the distance it has to travel. Then pick out a box of proper size and strength. Too often unnecessary charges are paid on boxes too large and too heavy for the contents. I have here a striking example of "how not to do it," and when this box arrived I called in several brother florists to witness the weight, style of packing and condition of contents. The box was received from Philadelphia, with a few small palms, primulas, Gloire de Lorraine begonias and cyclamen, valued at \$10.95. The box and paper alone weighed 83 pounds; the entire weight was 180 pounds; express charges \$6.12 at special rate, while the plants were worth, as just stated, \$10.95! On opening the monster we found that the plants had slipped through the cleats, and we pulled out a mass of paper, root balls, broken begonias and primulas, with enough of mashed cyclamen to complete the limit. What we had to show for our seventeen dollars was hardly worth seventeen cents—except the box, which is good for years to come. We complained to the shipper, stating all the facts, and expressed our belief that he was ignorant of the careless way in which the shipment was handled. He had our money, and simply advised us to get our damage out of the express company who was not in the least to blame, as it was a physical impossibility to damage the monstrous box which you see before you in perfect condition.

Example of Good Packing.

As a rule, it is a pleasure to open a box of plants from one of our large shipping houses. Young roses in large collection, wrapped five of a kind in paper with a long wooden label, a layer of paper dividing the varieties, the box well filled so that the plants can not move in transit they will not get mixed nor damaged, and the box being of proper strength, the express charges will add but little to the cost of the plants. Soft stock, such as geraniums, heliotropes, etc., may be packed in the same manner, with damp sphagnum moss at the roots, and dry excelsior or moss around the foliage for protection. Packed in this manner we have received large boxes of adiantum from Washington, D. C., and never lost over three per cent. of the tender plants.

Large shipments of tender plants should be packed in separate boxes of from 40 to 50 pounds each, or if packed in large boxes, a wooden partition should be nailed in after the box is half filled, so that the bottom layers will not have to carry the entire weight of the contents. Heating and decay are much easier avoided by this precaution. Large cyclamen in bloom, Begonia Gloire de Lorraine, Adiantum Farleyense and plants of this nature travel best in the pots, standing upright in the box, the box crated to the full height of the plants, which must be staked and wrapped with from four to six thicknesses of paper. Tight packing between the pots is essential to avoid slipping. Large palms, araucarias, dracenas, etc., with solid pot balls should be cleated to the ends of the box, foliage to the center. Great care must be used to wrap and tie the root balls, as otherwise they will slip through the cleats and damage is the result. Such large plants should go by freight, at a season when damage by heat or cold are least expected. During warm weather, ventilating holes must be cut in the boxes, and protected with wire cloth against rats. During cold weather, boxes must be lined with several layers of paper and cotton, or corrugated pasteboard. We have received cases of palms in cold weather, the foliage wrapped in paper and the spaces between the plants entirely filled with short cut straw. This is light, and a good protector against zero weather.

Large roses, shrubs and trees for short distance shipping are best packed in bales; damp straw between and around the roots, a layer of dry material over this, and the bale well tied with rope; over this a covering of burlap to make a clean package that will travel with safety and at special rate. For freight shipments which are sometimes for weeks in transit, strong boxes with iron corner straps are preferable, and plenty of moisture at the roots is the most essential necessity in this style of packing.

In conclusion I would say that the packing of plants has been improved in the course of time to the point of real art. No florist who would make a success of his shipping business can afford to neglect the potting shed.

American Rose Society

The executive committee of the American Rose Society have been favored with more prizes for the coming Washington show, one of \$25 for Killarney, offered by Ex-President Fred. R. Newbold of Poughkeepsie; and another by L. A. Roe of Madison, N. J., of \$25 for Uncle John.

An addition to the prize list of the Washington Florists' Club is a premium of \$25 for a group of decorative plants, covering at least 100 square feet of floor space, offered by Wm. H. Ernest of Washington.

A special report of the society's doings, with the constitution and by-laws and a chapter on garden roses, of much interest to amateur growers, embraced therein, is mailed to all members of the society and a number sent out to the general public.

BENJAMIN HAMMOND,
Secretary

FOR THE RETAILER

The Lenten Season.

Florists expect poor business during the Lenten season, more especially the first week of it; but according to reports this year there has been an agreeable disappointment, trade being particularly brisk with some stores. Roses are still remarkably scarce, American Beauty, Richmond and the choicer varieties being exceptionally so for this season.

Several entertainments were given the past week, including many dinners. St. Valentine's Day also had a tendency to help trade along, there being a noticeable demand for red blooms, myosotis (forget-me-not), pansies and other flowers "with a history" being at a premium.

A very excellent window decoration for this occasion was seen in a Broadway store. A large heart made of Beacon carnations occupied the center of the window. This was entwined with streamers of red ribbon reaching to all parts of the window, each end being held by a Cupid. Others were stationed in various positions, with drawn bows and several spent arrows had found their way to the heart. The arrangement was both appropriate and attractive. Some retailers even carried heart-shaped violet boxes for the occasion.

Perhaps one of the most attractive dinner decorations of the week was one in which Acacia pubescens and Blanche Ferry sweet peas were used. A large center-piece composed of Acacia pubescens occupied the center of the table. This was made in the form of a many-pointed star; or perhaps a sunburst would better describe it. Irregular clusters of sweet peas were filled in between the long sprays of acacia, making a very pleasing combination. Other sprays of acacia radiated from the center-piece, and a low bowl of sweet peas was placed at each corner. Freesia Purity was used as a finger bowl embellishment.

On another occasion this acacia was employed as follows: Several small tables occupied the dining room. The entire center of each was covered with rich green moss. From the center of this again rose a tall standard acacia apparently growing. This effect was obtained by using tall standard rose stems, at the top of each stem being fastened an umbrella of wire, painted green. The sprays of acacia were fastened to this, falling in festoons, in some instances, almost to the table-cloth. There were eight tables, and the effect on entering the room was well worth seeing.

Another large dinner for forty was very good. The guests were seated around a hollow circle, the table being only two feet wide. The intervening space was filled in with Adiantum Farleyense, forming banks around the inside of the table. This circular bank sloped gradually to a common center, which was occupied by a playing fountain. Scattered promiscuously throughout the Adiantum Farleyense were a number of orchid plants in variety, *Oncidium splendendum*, with its large erect spikes, being particularly noticeable. *Cattleyas*, *Cœlogyne cristata*, and *Phalænopsis amabilis*, and *Schilleriana* overhung the water's edge.

At the large annual ball and dinner given by a society leader the tables were arranged as follows: A dormant fruit tree was erected in the center of each table, the space at the foot of each tree being filled in with Spring flowers, tulips, narcissus, hyacinths, etc., being used. On the branches of the dormant trees were tied, to look as natural as possible, branches of forced fruit trees and flowering shrubs—apple blossoms, peach, pear, Japanese flowering cherry and forsythia, each table being different. The trees rose to the height of ten feet, with large spreading branches, the effect being that of an orchard in full flower. An order of this kind can only be filled on long notice, as the grower must be notified in plenty of time to force enough material for a large affair of this character.

D. RAYBURN.

MORRIS COUNTY (N. J.) GARDENERS AND FLORISTS' SOCIETY.—The February meeting of this society was devoted mostly to discussing plans for the future and trying to get new ideas on an old subject, about twenty-eight members taking part. March 13 will be carnation night, and we are expecting a goodly number of novelties as well as special exhibits in standard varieties. Carnation night was almost famous last year with us. We are to have three short papers read. One by Wm. Duckham on "Planting in from Pots vs. Open Ground," one from R. M. Schultz on "The Commercial Aspect of the Carnation, Best Varieties, Etc." and one from Percy Herbert on "Methods of Propagation." The reading of each paper is to be followed by a general discussion. An interesting time is anticipated.

E. R.

PITTSBURG AND ALLEGHENY FLORISTS AND GARDENERS' CLUB.—At the regular meeting of this club on the 5th inst., the following officers were elected to serve for 1907: John W. Jones, president; E. C. Reimann, vice-president; Fred. Burki, treasurer; H. P. Joslin, secretary; E. C. Ludwig, assistant-secretary; P. S. Randolph, John Bader, and Fred. Burki, executive committee. The club meets the first Tuesday of each month at 422 Sixth avenue, Pittsburgh, at 8 p. m.

H. P. J.

CLUB AND SOCIETY DOINGS.

THE CHICAGO FLORISTS' CLUB held its regular monthly meeting on Thursday evening of last week under most pleasant auspices, one half of Handel Hall being occupied by the carnation exhibition elsewhere described, which had doubtless done much to attract the large attendance of members and their friends who were present. The regular order of business was proceeded with as expeditiously as possible, two members withdrawing and three—A. T. Pyfer, Joliet; Harry Manheim and H. Cheeseman, Chicago—being elected to membership; and the applications of Andrew C. Benson, Hinsdale and Van Zimmerman for membership were according to the rules carried over to the next meeting.

The trustees were authorized to negotiate a lease for one year for the present quarters on the existing terms.

Chairman Rudd of the Committee of Examination of Exhibits read the report of the Committee, after which President Bruns called on a number of those present for remarks especially alluding to the subject, owing to the time, the place and the surroundings, which was uppermost in everyone's mind, the carnation. Among those who contributed to the pleasure of the evening along this line were J. A. Valentine of Denver; William Kennedy of Milwaukee; J. D. Thompson of Joliet; Andrew Benson of Hinsdale; W. N. Rudd, A. T. Pyfer, and August Pöhlmann. P. J. Foley described the recent trip of the committee to the State Capital in behalf of favorable legislation for the establishment of the experiment station, a resolution in favor of which was also adopted by the club. P. J. Hauswirth made a report on the condition of the Hartshorne memorial fund which from all sources now amounts to between \$1250 and \$1300 and expressed the hope and expectation of the committee to increase the amount to \$2000.

A vote of thanks was extended to the exhibitors and to the judges.

The club voted to extend an invitation to the American Rose Society to meet in Chicago next year; after which it was announced that at the next meeting, which would occur two or three weeks before Easter, J. S. Wilson would speak on "Easter Plants" and other well-known authorities have been invited to participate. The meeting will take place on the evening of March 14.

W. K. W.

THE ST. LOUIS FLORISTS' CLUB held one of the largest gatherings it has ever had on last Thursday afternoon, the occasion being our annual carnation meeting. The exhibition was very large and very fine. There was a number of outside exhibitors, and the local growers also did themselves proud in showing some extra fine quality blooms. The attendance, including visitors, according to Secretary Beneke, was 60, and much good feeling prevailed.

The following well-known firms from outside of the city exhibited blooms; F. R. Pierson Co., Tarrytown, N. Y., sent their famous Winsor; H. Weber & Sons Co., Oakland, Md., Mabelle; Baur & Smith Indianapolis, had a new light pink, May; The Chicago Carnation Company, Joliet, Ill., Aristocrat; John E. Haines, Bethlehem, Pa., John E. Haines, Imperial and Pink Imperial. J. F. Ammann, Edwardsville Ill., staged a fine display of Lady Bountiful, Enchantress, Mrs. M. A. Patten and Mrs. T. W. Lawson. Henry Johan of Collinsville, Ill., had a vase each of Enchantress and Cardinal, which were well grown.

Among local growers John Stiedel staged Rose-Pink Enchantress, Nelson Fisher, Cardinal, Mrs. M. A. Patten and Lady Bountiful. A Jablonsky showed Robert Craig, Enchantress, Aristocrat, White Perfection, Mrs. M. A. Patten, Rose-Pink Enchantress and Lady Bountiful. Wm. Winter had a vase each of Cardinal and Lady Bountiful. The Oakland Floral Company two fine vases, one of Enchantress, the other of Mrs. T. W. Lawson. Henry Brown, foreman for A. Boix, staged a fine vase of well grown Mrs. T. W. Lawson. A. C. Brown of Springfield, Ill., made a nice exhibit of seedlings, some extra fine blooms which attracted the attention of our local growers.

The meeting was called to order by President Irish. Frank A. Weber, chairman of the flower show committee, reported that the committee had failed to raise the \$10,000 subscription at the specified time, and moved that the flower show be dropped for this year at least. He said that as long as the membership was divided on the flower show proposition, the club would be unable to hold a successful exhibition and the club voted to this end.

Henry Niemeyer and Pierre Schneider both Kirkwood growers, were elected to membership by a full vote.

The club subscribed \$100 toward the fund of the national flower show to be held in Chicago in the Fall of 1908. Fred Ammann, who is president of the Illinois State Florists' Association, invited the members to attend the second annual meeting in Bloomington, Ill., February 19-20, which many promised to do. The president appointed Messrs. Brown, Fillmore and F. C. Weber as judges of the carnations on exhibition; they reported as follows: Twenty-five blooms, red—Wm. Winter first, with Cardinal, John Stiedel, second, with Cardinal; A. Jablonsky, third, with Robert Craig. Twenty-five

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words: each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Avenue. My facilities for delivering flowers for any and all occasions are unequalled. I can give prompt service to steamer and theatre trade. Telegraphic orders solicited.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonal varieties of flowers always on hand. Wire me your orders.

Washington, D. C.

GUDE BROS., 1214 F Street, N. W. We excel in high-class flowers and design work of every description; quick service, reasonable charges and liberal treatment have placed us on top. Try us.

Milwaukee, Wis.

THE C. C. FOLLWORTH CO., Wholesale Florists, will take care of all your Retail orders for the delivery of flowers anywhere in Wisconsin.

Detroit, Mich.

JOHN BREITMYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLORAL CO., 1706 Broadway. J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Cincinnati, O.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dallas, Texas.

LANG, THE FLORIST, the largest flower store in the South, Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Texas, Louisiana. Mail and telegraphic orders solicited.

light pink—Oakland Floral Company, first and A. Jablonsky, second, both with Enchantress. Twenty-five rose-pink—John Stiedel, first, with Rose-Pink Enchantress. Twenty-five dark pink—Oakland Floral Company, first, with Mrs. T. W. Lawson; A. Jablonsky, second with Aristocrat. Twenty-five white—A. Jablonsky, first, with White Perfection; Wm. Winter, second, with Lady Bountiful. Twenty-five variegated—A. Jablonsky, first, and John Stiedel, second, both with Mrs. M. A. Patten.

Exhibition blooms scored as follows: Aristocrat, from The Chicago Carnation Company, 90 points; Winsor, from F. R. Pierson Company, 86 points; Mabelle, from H. Weber & Sons Company, 74 points; John E. Haines, from John E. Haines, 76; Pink Imperial 60 points, it being too far gone; Governor Deneen, from Brown, 65 points. The flowers of E. Schrader, Springfield, Richmond Borough, N. Y., were frozen in transit and were not staged. They came a day late.

The chair called for a few remarks from A. C. Brown, Luther Armstrong, J. F. Ammann and Dr. A. T. Halstead. Those of Mr. Armstrong were very interesting, he being one of the charter members of the club and its secretary twenty years ago. He told how the present club was organized by J. M. Jordan, Henry Michel, C. A. Juengel, W. T. Guy, Henry Shaw and himself, which interested some of the younger members very much. The question box brought out several good discussions. The auctioneer, W. C. Smith, then proceeded to auction off the prize-winning blooms for which good prices were obtained. The meeting adjourned until the second Thursday in March at 2 o'clock.

Indianapolis.

News Items.

Charles Vollrath, of Bertermann Brothers Company, is ready to build a home to be occupied by a loving couple in June.

Friends of Martin Nelson are sorry to hear that the boiler in his establishment gave way at a most inopportune time.

T. Hasselmann is making an extended tour on the Pacific coast.

A. Wiegand & Sons contemplate putting in a new heating system as soon as the weather permits.

Two commercial conservatories are being erected in Irvington. This should be a good location, as the city is rapidly moving that way.

Bert Stanley has accepted a position as gardener for Joseph Taggart. Visitors: Thos. Knipe, Kokomo; Harry Jones with R. Ward & Company, New York. I. B.

The Golden Bell.

(35) Will you kindly give me the name of the flower called "golden bell," selling in early Spring in New York City. J. H. California.

—Forsythia viridissima.

To Get Rid of Stump-Tailed Rats.

(36) I have two greenhouses planted with mint, and the entire crop is undermined by what are called stump-tailed field rats. Please inform me if there is any way by which I can get rid of them. New York. A. L. S.

—We have never before heard of this class of rats, but we presume they can be cleaned out with poison, the same as ordinary rats. We would advise getting a can of peas, mixing a good dose of rat poison with the contents, and using them about the greenhouse as a bait for the rats.

Hybrid Tea Roses for Outdoors.

(37) What are the best four ever-blooming hybrid tea roses for outdoor planting—white, yellow, pink and crimson; and also the four best ever-blooming tea roses, for Western New York? A. W.

—The following varieties of roses are recommended for New York in a recent publication: Hybrid teas, white, Kaiserin Augusta Victoria; pink, Killarney; yellow, Francis Deegen; crimson, Etoile de France. For teas—white, White Maman Cochet; pink, Maman Cochet; yellow, Doctor Grill; bright red, Jules Finger.

Calceolaria Leaves Turning Yellow.

(38) Please let me know what is the cause of calceolaria leaves turning yellow. N. P.

—The chief cause of calceolaria leaves turning yellow at this time of the year is over-watering or bad drainage. Sometimes calceolarias, if potted in a too fine soil, one that compacts easily, will turn yellow and lose their leaves. Sometimes the leaves will turn yellow from a too heavy fumigation of tobacco. If the questioner had given any particulars in his letter as to how the calceolarias were being treated, and what kind of soil they were potted in, we could, perhaps, have furnished a more definite answer to his question.

Manure on Smilax; Forcing Narcissus

(39) I bought manure one year from two horses and one cow from one of my neighbors, who uses only dry leaves from the woods for bedding the whole year around. This was last May. I have turned the manure twice since, and used it as mulching on smilax. Now it seems to me that my plants do not grow as in previous years when I had regular manure from straw. Do you think the other manure had something to do with the trouble? It was well rotted.

Please tell me how soon I can start to force Narcissus Trumpet Major and Princips. Could I have them brought in on the first of January? New York. L. E.

—Manure that has been made with leaves should be just as good for smilax as that from straw.

The Trumpet Major and Princips narcissus may be brought in any time now and will force all right. They could, of course, have been brought in early in January, but the chances are they would not have done so well if started so early.

see a solitary flower now and then, it is of the Roosevelt color. I have never seen a Harlowarden flower before. I cannot find any difference in the habit of the plants of the two varieties; they have the same growth and foliage. I do not care for that color at all, as I have a few Roosevelts, and they do not sell well. I thought Harlowarden was much lighter in color than the latter. Please tell me what the difference is, if any. J. L. Iowa.

—We cannot understand how any one could purchase the carnation Harlowarden under the impression that it was a light-colored variety, seeing that this carnation has been spoken of so often in the trade papers and its color described. Both Harlowarden and Roosevelt are classed as "crimson" varieties. We have always considered Harlowarden was the darker of the two. How they compare in general habit and foliage we are unable to say, as we have never grown Harlowarden.

Ardisia Crenulata; Camellias.

(41) Will you kindly tell me the best method of culture for *Ardisia crenulata*; the best soil and temperature, and whether the plants should be set outside or kept in the greenhouse in Summer? How long before they will fruit from seed? Is the *Camellia japonica* handled the same as the azalea? SUBSCRIBER.

New York.
—The *ardisia* is a heat-loving plant, and requires three years from seed to bring it to fruition. During the Winter months a night temperature of 58 or 60 degrees should be given, and through the Summer months the plants may be grown in frames outdoors, but where the sash can be put on at any time should occasion arise. They require a very rich soil, one that has been composted a year or more being the best, as there must be no fresh or half-rotted manure in the soil if the plants are to do their best. To save time in the cultivation of *ardisia* it would be much better to purchase one or two-year-old plants from some of the larger growers who make a specialty of them.

It can safely be said that the treatment of *camellias* is similar to that accorded azaleas, with the exception that when the former are in bud they will not stand so low a temperature as will the azaleas.

Orchids.

(42) Kindly name and give full cultural directions for the enclosed plants: Number 1, an orchid, kept in cool house, 45 degrees at night, potted in peat, in immense pans; has received no attention for years, nor bloomed. At present time it is in good shape, having made growth last Summer and Fall. Number 2, kept in a temperature of 55 to 60 degrees at night, in a 16-inch pot, much pot-bound. Height, 2½ feet. One bloom last Spring; in size and shape resembled that of a *Cattleya Trianae*, but of solid light purple. At present in healthy condition.

Will you also inform me if it is best to divide *Cypripedium insigne* when repotting. This Spring plants are much pot-bound, in 8, 10 and 12-inch pots and pans, and gave few blooms; they are kept in a temperature of 45 to 50 degrees at night, north exposure.

Conn. H. B. B.
—Number 1 is *Brassia verrucosa*; number 2, *Sobralia macrantha*. The cultural directions for these two plants it is not necessary to give here as the party making the inquiry is treating the plants right in every way; and as he also states that the plants are growing well and are in good condition, nothing more need be done. The only thing I would suggest is to move Number 1 into the house where Number 2 is grown, when the plants will probably flower.

In regard to dividing *Cypripedium insigne*, this depends whether more stock is wanted; if not it would be better to give them a shift, but not too much, as *Cypripedium insigne* flowers better when a little pot-bound. The temperature is also somewhat low; 50 to 55 degrees at night would be better. In

fact, in some places where this plant is grown and flowered to perfection, the night temperature is kept at 55 to 60 degrees. This tends to draw out the flower stems, as in a very low temperature, while the plants will live and grow, the flower stems are too short to be of much use. A little feeding is also useful.

Propagation of Ilex Verticillata.

(43) How is *Ilex verticillata* propagated? Can it be rooted in sand bench? When and how? Indiana. K. Co.

—*Ilex verticillata* can be raised from seed sown in the open ground, or it can be propagated from cuttings of ripened wood taken in Autumn and put in sand in a cold frame, where they should remain until the following Summer without being disturbed.

Shy on Stems.

(44) Will you kindly advise me of the cause of my tulips and hyacinths having scarcely any stems. Could it be possible they were brought in too quick? New York. BEGINNER.

—The probable reason for the tulips and hyacinths not having better stems is that they were put into the full light too early in their growth. When forcing bulbs the length of stem should always be a main consideration, and to obtain that end, the flats or pots in which they are grown should be placed under a bench or in some similar shaded place where there is a good heat, so that the stems will necessarily be drawn out before the flowers get far developed.

Propagating Lemon Verbena.

(45) How and when should lemon verbena be propagated? D. F.

—Lemon verbena can be easily propagated if one has some plants in active growth, by taking cuttings and rooting them in the propagating bench, under which a good, steady heat is kept. This plant can also be raised readily from seed. It will be found in the seedsman's catalogue under its proper name of *Aloysia citriodora*.

Piping.

(46) Can I use two-inch pipe in an up-hill, open system (hot water) in a house 150 feet long? D. F. New York.

—Professor Taft in his book on "Greenhouse Construction" says: "Two-inch pipe will work well up to 150 feet, but it is better in all houses over 100 feet long to use two or more short coils of 1½ inch pipe."

Carnations.

(47) Kindly tell me what varieties of carnations, scarlet, pink, white, shell pink and white penciled with red, are best suited to grow in one house. At what temperature should I run such a house? I do not desire to grow a very fancy or poor grade, but a good medium grade. As I have not had a great deal of experience in growing carnations I would prefer those not too difficult to manage. I live on Long Island, and intend to ship to New York market. Which is better for carnations—a solid bed or raised bench? New York. A. N.

—For such a collection of carnations we would keep the house at a night temperature of from 52 to 54 degrees, and would plant the following varieties: For white, White Lawson or White Perfection; for light pink, Welcome; for scarlet, Beacon; for variegated, Mrs. M. A. Patten; for shell pink, Enchantress. As to which is the better, solid beds, or raised benches, the latter are preferable where the plants are grown outdoors through the Summer and planted in the houses in the Fall; but if the plants are grown indoors all Summer, solid beds are preferred.

A Rose Trouble.

(48) I dried our roses off well, and about one month ago cut them back, starting them in a house at about one inch long I put on a mulch break, and when the growth was about 56 degrees night temperature. They began to make a fine, healthy

PREPARE FOR EASTER

In Philadelphia there's a florist noted,
Aschmann, his name, his plants beyond compare;
To a sweet girl his heart is all devoted,
Next rank his *Araucarias*, passing fair;
When seen together they're a pair so charming—
Brinful of beauty—both he cannot keep;
So to his heart he'll hold his winsome darling,
While you may have the *Araucarias* cheap.

An immense stock of choice Easter plants, blooming Easter week or earlier if desired, are now ready for immediate shipment.

COME or Mail your order direct to Headquarters. Our reputation over the entire country, from the Atlantic to the Pacific, in growing Easter stock for many years past, is sufficient guarantee to prove what I say.

We have every house, nook, hole and corner full; plants were never so fine as they are this year, 1907.

While laborers, merchants, jobbers, contractors, builders, etc., have increased their prices nearly double, we DO NOT advance our prices; look! we sell our plants at the same old prices charged two or three years ago when the producing of plants was much cheaper.

What was my duty during my trip to Ghent, Belgium, the land of Azaleas, *Araucarias* and Palms, last Fall, 1907? Answer: The interests of my customers, of course; not speaking of the 100 Souvenir Cards which I mailed to my customers in America. I also bought for their benefit, *AZALEA INDICA* for Easter sales, the cream of Belgium's production. I am able to offer to my customers and the trade in general, two houses full of *Mme. Van Der Cruyssen* azaleas, the well-known and most favored, best double, pink azalea, giving so much satisfaction all over America. Plants as round as an apple, just covered with buds, 6 in. pots at 60c., 75c., \$1.00, \$1.25, \$1.50, \$1.75 to \$2.00 each. Other fine varieties adapted for the American Market, such as Niobe, Bernard, Andrew Alba, Deutsche Perle (double white), Prof. Wolters, Empress of India, *Vervaeckiana* (double variegated), and about eight more fine sorts, all covered with buds, price 75c., \$1.00, \$1.25, \$1.50, \$1.75 to \$2.00 each. We have a limited quantity of 50c. to 60c. azaleas, such as Apollo (double dark scarlet), *Deutsche Perle*, Simon Gardner, and a few others.

Lilium Multiflorum and *Japan Longiflorum* were never so fine as this year. All sizes; can meet all wants; 6 in. pots, 5 to 8 buds to a plant, 10c. per bud; 4 to 6 buds and under, 12c. per bud.

Spiraea Gladstonei, 6 to 7 in. pots. These plants are very large and bushy, and unusually fine this year, full of buds; price, 50c., 75c., to \$1.00 each.

Hydrangea Otakei (pink) 6 to 7 in. pots, 40c., 50c., 75c., \$1.00, \$1.25 to \$1.50 each.

Cinarraria Hybrida, have a house full, all shades, 5, 5½ to 6 in. pots, \$2.50, \$3.00, \$4.00 to \$5.00 per doz.

Crimson Rambler Roses, 3 ft. high and over, \$1.00, \$1.25, \$1.50, \$1.75 to \$2.00 each.

Bagonia, new improved Erford, an immense bloom, blooms all summer and winter through, 5½ in. pots \$3.00 per doz.; 4 in., \$1.80 per doz.

Primula Obconica, 6 in. pots, \$2.50 per doz.; 4 in., \$1.60 per doz.

Queen Alexandra and *Marguerite Daisies*, 5½ in. pots, \$2.50 per doz.

Araucaria Sappida (palm), 6 in. pots, 50c.

Dracaena Bruantii, 6 in., 50c.

FERNS, *Nephrolepis Barrowsii*, 6 in., 50c. to 75c.; 5 to 5½ in., 40c. Scottii, 8 in., very long, \$1.50 each; 5 in., 35c. Boston Ferns, 5 in. pots, 25c. to 30c.; 6 in., 40c. to 50c.; 7 in., 75c.

Kentia Forstiana, 7 in. pots, make up one large one in center, three small ones around, \$1.50 to \$1.75. *Kentia Forstiana*, single plant, 36 to 50 in. high, \$1.00, \$1.25, to \$1.50 each.

ARAUCARIA COMPACTA ROBUSTA, 5 year old, 7 in. pots, 25 to 30 in. high, same in width, 4 to 5 tiers, very swell stuff, \$1.00, \$1.75, to \$2.50 each. *Araucaria Excelsa* (Glaucia, 20 in. high, 4 tiers, 4 year old, \$1.00, \$1.25 to \$1.50 each. Specimen Glaucia, 7 in. pots, 5 year old, 5 tiers, 30 to 35 in. high, \$3.00 each. *Araucaria Excelsa*, 4 year old, 6 in. pots, 25 to 35 in. high, 5, 6 to 7 tiers, \$1.00, \$1.25 to \$1.50 each.

Hyacinths, raised from first class bulbs of my own importation. Notice: These bulbs cannot be compared with ordinary stuff flooding the market. King of the Blues, Grand Maitre (Lavender blue), Gertrude (best pink), Grassie (white), 4 in. pots, \$1.00 per 100.

Tulips, *Tournesol*, red and yellow variegated; this is the best selling tulip on the market, will stay in full bloom 10 days. 3 bulbs planted into a 4 in. pot, price \$1.00 per 100 or \$1.50 per doz. pots.

Narcissus, or Double Von Sion Daffodils best double yellow in the world, will sell on sight, 3 double nosed bulbs planted into a 5, 5½ to 6 in. pot, price \$2.50 to \$3.00 per doz. pots. All bulbs are of my own importation, now outside in cold frame, and will bloom 2 weeks after bringing them into the greenhouse.

MOON VINE, *Ipomoea Multiflora*, (A. W. Smith, originator), best pure white, largest and most fragrant moon vine in the world. We have made a specialty of it for the past 15 years, and are known as the moon vine growers of America. Grow 20,000 of them, 2½ in. pots, \$5.00 per 100; now ready. Mention if pots are wanted with all plants. Cash with order, please. All goods must travel at purchaser's risk only.

GODFREY ASCHMANN, 1012 Ontario Street, PHILADELPHIA, PA.

Mention the Florists' Exchange when writing.

of fresh cow manure. The following day they started to turn yellow; first the leaves showed a spot that looked like a scald; then the smaller leaves began to curl and drop off. Do you think this was caused by the fresh manure, or were the plants started in a too warm temperature? New York. S. BROS.

—It is quite evident that the roses were started with too much heat in the beginning, and as a result the young growths were made before root action commenced. The growths thus made would be very tender, and the fumes from the fresh manure used as a mulch caused them to turn yellow and drop off. We remember seeing a case exactly like the one mentioned, and ninety per cent. of the rose plants died from the combined effects of the green manure and being started into growth with too much heat.

Stem Rot of Lilies.

(49) Kindly tell us the cause of the stem rot of our longiflorum lilies. We have quite a number acting in the same manner as the plant sent. The plants are well rooted and the tops are healthy on all of them. Growing temperature has been 65

degrees at night for about five weeks. Never having before seen this rot among lilies we would like to know the direct cause. F. V. & H. R.

—The pot of lilies arrived here in a badly frozen condition. We notice at the collar of one of the plants, also at the junction of the stem where a leaf has been torn off, that there is an appearance of what seems to be more like a damping off of the outer skin than any general disease, and to us this would seem to have been caused by a bruise at a time when the growth first made its appearance. One of the plants does not show the trouble at all, and whatever may have caused the black or diseased part of the stem, we do not think that it will materially affect the growth of the plants. However, we cannot be sure of this, and it would be well to keep careful watch of the plants; in fact, we would, if possible, place them together at one end of the bench and pay close attention as to how they behave. At the present time we cannot offer anything further relating to the trouble.

CLASSIFIED ADVERTISEMENTS

CASH WITH ORDER. The columns under this heading are reserved for advertisements of Stock for Sale, Stock Wanted, Help Wanted, Situations Wanted or Other Vacancies; also of Greenhouses, Land, Second-hand Materials, etc., For Sale or Rent. Cultural Directions

Are leaflets written by practical men especially for the use of amateur customers. If you have a counter trade, either in plants, seeds, flowers or bulbs, you should have a supply of these leaflets on hand to present to your customers when they seek cultural information about their purchases. (The leaflets embrace over forty subjects.) We can supply them at \$2.50 per 1000, or 50¢ for large quantities. At a small extra cost we can put your imprint on each leaflet. Try a thousand and see what a help they are in selling goods. THE FLORISTS' EXCHANGE P. O. Box, 1697 NEW YORK Mention the Florists' Exchange when writing.

SMITH & GANNETT Geneva, New York

REVIEW OF THE MARKET

NEW YORK.—There is a general depreciation of values along all lines of cut flowers, with the possible exception of American Beauty roses. These latter continue so scarce in the market that 75c. each for the best grades, when they are perfect, still holds good. In Bride and Bridesmaid roses there is a general fall in prices for the best grades, and while this is the case, it is a noticeable fact that the shorter grades are much easier to dispose of than the fancies and extras. Following the increased sunshine we have been having, shipments of these roses are increasing daily.

Carnations are becoming quite plentiful, and prices have dropped considerably. It is now possible for buyers who want good varieties in quantity to get them at their own figures almost. Tulips and yellow narcissus, including double Von Sion, are coming in quite heavily, too heavy in fact for the demand, and prices on a good many of them go as low as 50c. per 100. It is impossible to clear out this class of stock, unless values are sufficiently low to make it an object for the speculators to handle the flowers in quantities. Lily of the valley is doing no better than last week; and gardenias and orchids are plentiful enough to meet all demands, with no change in values.

Violets are selling quite a little cheaper than they were a week ago, and many of them go as low as 80c. per 100, 50c. being about the average price for a real good quality. Lilac is rather plentiful, and is a very unsatisfactory proposition; the reduction in the prices of bulbous stock and carnations seems to have had a very bad effect upon lilac sales. Lilies are holding fairly firm at quoted prices, the supply seemingly not being overabundant just now.

CHICAGO.—The market has assumed a decidedly easier tone since the recent advent of bright sunshine and comparatively moderate Spring-like weather. Carnations, narcissi, tulips, and callas seem to be the lines which have been most immediately affected, and the large quantities of these flowers which have appeared on the market have caused a reduction in wholesale prices averaging from twenty-five to fifty per cent. And while it will take roses somewhat longer to recuperate, the cut has most considerably increased. The opening of Lent has not produced such a marked effect on shipping as was anticipated, but prices on rose stock are perceptibly reduced, grading is more favorable to the purchaser and little if any difficulty is experienced in filling orders as specified, with the possible exception of certain lengths and qualities of American Beauty.

Violets up to the first of this week had held well to the holiday prices of the previous week, and Monday saw the market cleaned out. If growers are holding with the expectation of a holiday stampede on the 22nd, a slump is prophesied.

Narcissi are coming in from the South, and the price of imported green ones has broken, at times to a considerable degree.

Callas, which have been in good demand for several weeks, are now seen standing in considerable quantities on many counters awaiting a buyer.

Paraguis, thymus, A. Sprengeri, and smilax are all running on the short side; while box green is in ample supply and in good demand.

Taken as a whole the market is in a healthy condition, and business is good. W. K. W.

PHILADELPHIA.—With the advent of Lent conditions have changed very much in cut flower circles. There is now plenty of stock on hand to fill all orders and prices are much easier except on roses; fancy flowers of these still maintain good figures. American Beauty are selling at \$3 and \$4 per dozen for the fancy blooms. A few Richmond roses bring \$25 and \$30 per 100; the best Liberty \$20 and fancy Bridesmaid, \$15. Some very good Mme. Abel Chatenay are coming in which bring \$20. The general run of teas are quoted at from \$8 to \$12 per 100. White roses are still scarce and in strong demand.

Carnations are much more plentiful and prices have dropped; fancy Enchantress and Beacon bring \$6 per 100 this week, the general stock of carnations ranging from \$2 to \$4, there being entirely too many on hand for the demand.

There is a large quantity of bulbous stock now coming in. Daffodils are in full supply and difficult to move. Violets are not going so well; prices range from 75c. to \$1.25 per 100. Cattleyas are selling this week at 60c. each. Gardenias are in good supply and are doing very good; \$1 per dozen was the price early in the week.

The first shipment of Southern daffodils arrived here on Tuesday.

DAVID RUST.

BOSTON.—Flowers still keep scarce but prices have not dropped so much as might have been expected. Roses were never known to be so scarce as they have been this season. There are yet only a few American Beauty with long stems, consequently exceptional values are obtained for them; \$9 and \$10 per dozen are the highest figures. There are some good Richmond and Liberty to be seen as well as Mme. Abel Chatenay and Wallacey. Killarney also is good. Bride and Bridesmaid are now of better quality than they have been; the best grades of the latter bring \$2 per dozen, while the first named realizes from \$3 to \$5 per dozen. Carnations are more plentiful but are selling well, bringing from \$3 to \$5 for the better grades. Violets are very plentiful; they bring 35c. for ordinary while the best sell at 60c. Lilies go at \$1.50 and \$2 per dozen; callas, \$1.50. Snapdragon brings \$1 and \$2 per dozen. Bulbous stock is plentiful. Sweet peas are good, at 75c. and \$1.50. Smilax is not so plentiful, bringing \$2 per dozen. Other greens have experienced no change. J. W. D.

INDIANAPOLIS, IND.—"One of the most satisfactory holidays for the florist business," is a comment relative to St. Valentine's Day that is commonly heard. Stock is now both reasonable and plentiful, and not much time is required in arranging it, as the demand is mostly for fancy boxes and plants. The various retailers interviewed report an increase for that day, particularly in the sale of sweet peas, roses, violets and carnations. Bulbous stock did not sell so well, but was constantly offered by the growers who are heavily stocked. Funeral work has been heavy, much of it coming when other lines of trade were busiest. Excellent double and single violets are shipped in at 75c. to \$1 per 100; a few home-grown ones bring the same prices.

Carnations are much improved by the bright weather, and a large cut last week, at \$3 to \$4 per 100, found a ready market. Lilac, narcissi, and forget-me-not of fine quality are now very useful in flower arrangements. The first named brings \$25 per 100 sprays; the last \$5 per 100. Azalea mollis, in the several beautiful shades, are a welcome addition to the market. All kinds of roses became scarce about the middle of the week, and there were frantic appeals for a supply from distant sources, but all in vain. The call for medium and long American Beauty was exceedingly heavy. As a rule prices did not advance. Select Bride and Bridesmaid are now bringing \$8 to \$10 per 100; seconds, \$4 to \$5, and thirds, \$2 to \$3. Fine Richmond may be had at from \$8 to \$15 per 100; American Beauty, \$5 to \$50.

Many sweet peas are cut at 75c. to \$1 per 100. A few daisies are seen at \$1.50 per 100.

The supply of plants is augmented with specimen rhododendrons, which do not sell readily, but are coming in for a supply.

The growers at Tomlinson Hail market were enabled to sell everything on hand St. Valentine's Day, as both wholesale and retail business was heavy. I. E.

ST. LOUIS.—The condition of the cut flower market has not been very satisfactory to the retailers since the first of the year. As stock of all kinds was scarce, especially so in roses, prices were very high. The demand for stock the past week, especially on St. Valentine's Day was very brisk. The big call was for violets, the price of which went up to \$1 per 100 for fancies; as many as 50,000 were disposed of at the four wholesale houses. All of these were California of the finest quality.

Roses were very scarce, but on Monday were coming in more freely, and the retailers are looking for a glut before the end of the week, as the demand for the first part of Lent is always very light. The best Bride and Bridesmaid are still at \$10 per 100, second choice, \$6 and \$8, and shorts, \$4 and \$5 per 100.

Carnations are very plentiful, with a good demand for fancy stock. Enchantress are especially plentiful. Mrs. Thos. W. Lawson, Prosperity and Robert Craig are coming in fine, as are Lady Bountiful and White Perfection. The top price is now \$5 per 100 for extra fancy; others bring from \$2 to \$3.

The fine weather of late has brought in an abundance of violets, which are now cut at 40c. per 100. A great deal of bulbous stock is being sent in to the commission houses. Roman hyacinths are bringing from \$2 to \$3; Paper White narcissus, \$3 to \$4; lily of the valley, \$3 to \$4; freesias, \$2 to \$3; tulips, \$3 to \$4. Callas have been much plentiful of late at \$1 and \$2 per 100. Some extra fine Dutch hyacinths are now in at \$4 to \$5 per 100.

In greens plenty of fine smilax, asparagus, adiantum, fancy ferns and galax are to be had. ST. PATRICK.

ST. PAUL, MINN.—St. Valentine's Day and the bright, mild weather were undoubtedly the reasons for the good week experienced by all the dealers. Stock of about everything is in abundance and prices are held down, to some extent; already special prices are named on especially fine carnations and violets. The latter have been sold in large numbers the past few days. The violet growers are now cutting some very fine stock, principally singles, which are packed up and put on the market as fast as they are brought in; one dealer disposed of 7,500 on St. Valentine's Day, and all others had a very good sale. Bulbous stock is moving quite nicely. Tulips the past few days have wholesaled at very small figures, in fact, could almost be purchased at one's own prices; large numbers were bought at 1c. each, and fine stock at that. One of our largest growers has a large stock of rubrum lilies in bloom and has supplied about every dealer in the Twin Cities at a small price. The flowers work up nicely in general orders and are purchased heavily for that purpose only. The stock of roses is fine, the quality better than at any time before during the season. Specimen blooms of Richmond, Bride and Bridesmaid are in the hands of all of the trade, and at a comparatively small purchase price. PAUL.

CHANGES IN BUSINESS.

HAMMONTON, N. J.—J. M. Bassett, with Wm. F. Bassett & Son for nine years, has embarked in business for himself, making a specialty of fine kalmias.

STOUX FALLS, S. D.—The firm of Nudd & Thomas has been dissolved, J. J. Nudd retiring. The business will be continued by G. A. Thomas under the name of The Thomas Greenhouse.

DALLAS, TEX.—The Southwestern Horticultural Company has been incorporated, capital stock \$2000. Incorporators: James MacMaster, Frank Brinthon and W. C. Yarbrough, all of Dallas.

BROOKLYN, CONN.—The Franklin & Crosby, Incorporated, of Brooklyn, has filed a certificate of incorporation, the incorporators being Vine R. Franklin, Josephine R. Franklin, Henry D. Crosby and Lucy H. Crosby. The capital is \$20,000, and the incorporators will do a real estate business.

GOSHEN, IND.—Ralph Miller, proprietor of the Jefferson Cafe, and A. J. Santschi, the florist, have organized the Jefferson Fruit & Floral Co. The company will occupy the front of the room now occupied by the cafe. At some future time the company may have different quarters. Mr. Santschi has been a florist for many years.

BUSINESS DIFFICULTIES.

BOSTON, MASS.—The Shady Hill Nursery Company, a corporation capitalized at \$100,000, which was organized in 1892 and which has been operating large nurseries at Bedford, made an assignment Monday, February 11, for the benefit of creditors. The assignees are Hebert B. Clewley, who for about a year has been manager of the nurseries, and Joseph Sargent, Jr., of 50 Congress street, an attorney. Until about a year ago E. I. Beard was manager of the corporation. The offices are at 155 Milk street. Mortgages upon the property have been foreclosed and the task of straightening out affairs is now in the hands of the assignees. Mr. Sargent, one of the assignees, said he thought there would be a substantial dividend for the creditors. He thought it would probably be at least 25 per cent. and might be considerably more, but that everything depends upon the value of certain accounts receivable and upon the disposal of the nursery stock on hand.

CANADIAN NEWS

TORONTO.—Alex. McManus, who has been swindling florists here, was sentenced recently to fifty days in jail. He admitted getting flowers from Dunlop's and Jennings' stores on King street. The Crown Attorney explained that the prisoner would call up the florists by phone and represent himself to be Stone the undertaker. He ordered flowers and said that a man would call for them. McManus then went and got the blossoms, which he sold in the hotel roundabouts.

OTTAWA.—We are having good seasonable weather, some sunshine and plenty of cold. Stock is looking very good considering the dark weather recently experienced. Carnations are in nice bearing condition and promise to keep it up; the weather has caused more splits than we like. Roses are looking very good and giving fine flowers, but only in limited numbers, so many shoots come blind. Violets are very plentiful, all of us

having a good continuous cut. Lily of the valley is good and plentiful, and bulbous stock sells well. Carnations bring 75c; roses, \$1.50 to \$2; bulbous flowers, 60c; lily of the valley, 75c.

Plants seem as if they will mostly fit in for Easter. Spiræas will be scarce; all of us lost a large proportion through receiving them in the middle of December and in the coldest weather; for all that they are very hardy, that was asking too much. E.

St. Louis, Mo.

News Notes.

Geo. W. Cohen, representing Wertheimer Brothers' ribbon house of New York, was a caller the past week.

The Michel Plant and Bulb Company have sold their Old Orchard plant to the Berclid Real Estate Company, who will cut up the place to be sold in lots.

A. C. Brown, of Springfield, Ill., was in town on Thursday of last week, and staged some extra fine new seedling carnations at the Florists' Club meeting.

The Oakland Floral Company at East Kirkwood is sending to Kuehn the finest Enchantress and Mrs. Lawson carnations that come to this market. Pierre Schneider is the grower.

E. W. Guy, of Belleville, passed through here on his way to St. James, Ill., to visit his father, T. E. Guy, an old-time local florist, who is very sick.

Hugo Gross and Robert Wolzburger, of Kirkwood, are sending daily to Smith & Company large consignments of California violets.

Our local growers are making big preparations for supplying the trade with fine blooming plants for Easter. Among them are Charles Beyer, Wm. Schray & Sons, C. C. Sanders, Bentzen Floral Company and Geo. Wandler.

The local florists' bowling team, composed of Carl Beyer, Henry Lohrenz, George Schriever, Otto Bruning, W. C. Smith and Ed. Gerlach, will roll a special match game next week with the Desoto bowling team, of which C. A. Kuehn and J. J. Benke are members. The match is to be rolled on the Desoto alleys. ST. PATRICK.

Newport, R. I.

Messrs. George A. Weaver, Wm. B. Scott & Company and H. L. DeBlois have each the agency for a special brand of fertilizer, and each firm is now putting forth all efforts for the securing of orders.

E. S. Manuel has recently received from Europe several of the latest and best dahlia novelties to complete his already large collection. Mr. Manuel thinks this Spring will be a busy one for dahlia specialists.

There is quite a demand for gardenia plants; orders were received here that could not be filled. Plants in 3½ and 4-inch pots are in most demand.

Arthur Griffin has grown melons under glass with remarkable success for a number of years without at any time encountering any insurmountable obstacle, but he admits that this Winter weather conditions have almost baffled him. Nevertheless he has been able to make regular shipments of melons to New York, of surprisingly large size and to all appearances good quality. I doubt very much if it would pay to grow them for the market in Winter under weather conditions like those we had this season.

Henry A. Dreer, Philadelphia, has offered for competition at the September show of the Newport Horticultural Society a silver cup for the best collection of vegetables, also two cash premiums for foliage plants.

The meeting of the Horticultural Society on Tuesday evening, February 26, will be Ladies' Night, when an elaborate program of music will be discussed and a collation served by the proprietor of the Perry House. D. M.

Three Grand Commercial CHRYSANTHEMUMS

HAVING raised thousands of seedlings in the last twenty years, I have three of the very best seedlings—considering fine form, color and stem for commercial purposes—in cultivation, and will offer a limited number at reasonable prices; nothing better in their season (all are certificated.)

MRS. R. N. BIRD.

Fine glistening white, incurved, outer petals reflexed; good form and stem; mid-season.

MRS. JOHN FREIS.

Large, early, incurved yellow, Bonnaffon type; the best early yellow to date; October 15.

CHAS. RAGER.

Large, pure white, incurved, ivory form, fine stem and foliage; one of the best whites in cultivation; October 25.

PRICE: Each, 25c.; dozen, \$2.50; 100, \$15.00. Equal proportion of each at dozen and 100 rates.

Decorative Plants.

GESNERAS when well grown from start to finish are very handsome plants and useful in many ways; but if, on the other hand, they are grown with the idea that they can stand rough treatment either in course of cultivation or when put to use, they will not be found profitable. There are so many other kinds of plants very similar to gesneras in their resentment of rough treatment and carelessness, when the opposite course in either would be just as convenient and cost no more, that I venture to say that very soon all of these will be grown as they should be and will be found profitable in consequence. But few other plants grown have such beautiful foliage combined with very pretty and attractive flowers as gesneras. Without good healthy foliage the plants are, however, of little value, hence the reason why great care should be taken to keep the foliage healthy. Thrips are deadly pests growers of these plants have to contend with; and since it is well known that the foliage is very tender destructive measures when the pests gets a hold are almost out of the question. The safest way is to watch carefully, and if there is any sign of thrips fumigate mildly, but always mildly, otherwise the cure will be as bad if not worse than the disease. Gesneras should be rested much the same way as gloxinias, that is, the plants after flowering are allowed to dry partially but should never be permitted to get so dry that the soil in the pots, flats or pans gets like dust because if it does the chances are that a great many of the bulbs will be shriveled up and not a few die. In early Spring, when it is desired to start gesneras into growth, they should be examined carefully, and those on the dry side should be watered with rather tepid water and then the pots or pans containing the bulbs plunged in some kind of material over bottom heat until shoots make their appearance when they

may be taken up and the bulbs separated and repotted. In repotting the number of bulbs put in each pot or pan should depend upon the use to which the plants are intended to be put; but for a 6-inch pot or pan three good bulbs are enough. For large pots or pans bulbs in proportion will succeed. It is a mistake, however, to crowd too many bulbs, meaning eventually too many plants, into one receptacle.

A good compost for gesneras is made up of about equal parts leaf-mold and fibrous loam with the addition of a little well-rotted manure and sand. After being potted the bulbs in the pots or pans should be again plunged for about a week, and the glass over them should be lightly shaded. When removing them from the material in which they are plunged they should be placed near the glass, which still should be lightly shaded but allowing a diffused light to fall on the plants.

The foliage of gesneras is so constituted that it will not stand applications of water; there is always quite enough water in the downy substance on the leaves to make an application of more highly injurious. For this reason water should be given under the foliage or right on to the soil. Mechanical watering would hardly do here, would it? Gesneras when growing like a warm temperature, as warm in fact as any of the other things grown by a florist. They are delightful subjects for the decoration of dinner tables when occasion calls for something out of the ordinary run. In baskets or vases they are also equally valuable for the exquisite and delicate ornamentation of draw-rooms.

Gesneras are propagated easily from seed and by cuttings as well as by division. D. M.

Here is some good stock, all ready to ship, with prices that are right:

- Geraniums as fine a lot as was ever offered for sale at \$18.00 per 1000. S. A. Nutt, Poitevine, La Favorite, Perkins, Bruantii, Breit, Vaud, Doyle, and several other varieties, out of 2 1-4 in. pots with or without soil.
- Fuchsias, 2 1-2 in. pots, \$3.00 per 100.
- Heliotrope, 2 1-2 in. pots, out splendidly stock, but short growing and well bushed, \$2.50 per 100.
- Sweet Alyssum, 2 1-4 in. pots, \$2.00 per 100.
- Lobelia, 2 1-4 in. pots, \$2.00 per 100.
- Ageratum, 2 1-4 in. pots, \$1.50 per 100.
- Asparagus Plumosus, 3 in. pots, \$6.00 per 100.

 J. P. CANNATA, Mt. Freedom, N. J.

New York.

News of the Week.

The annual dinner of the New York Florists' Club takes place this evening (Saturday), at the St. Denis hotel, corner of Eleventh street and Broadway. It goes without saying that every member who attends this function will have a very enjoyable evening.

The Huntington Horticultural and Agricultural Society will hold its annual carnation exhibition in the Trade School Building, Huntington, L. I., on Tuesday next, February 26. The society has distributed a schedule of prizes and in addition to those offered for carnations, there are premiums offered for roses, violets and miscellaneous plants, also greenhouse grown vegetables.

Alex. McConnell, florist, 571 Fifth avenue, has sent out a neat little booklet treating upon how to cultivate and care for decorative plants in the home.

The Lord & Burnham Company has secured the contract to furnish the material and labor for the eighteen new greenhouses of the United States Cut Flower Company at Elmira, N. Y. The greenhouses will be finished by the early part of the coming Summer.

The monthly meeting of the Nassau County Horticultural Society was held on Wednesday evening, February 13. A prize of \$2 for the best vase of carnations was awarded to Valentine Cleres. Felix Mense received a certificate of culture for a bunch of violets. C. F. Bertanzel of Roslyn, L. I., staged a beautiful collection of carnations.

On Thursday, February 14, the greenhouse of Thomas Waneh of the Old South road, Woodhaven, was completely destroyed by fire. Total damages are estimated at \$500.

The J. M. Keller Company, Jordan & Appel, proprietors, have their usual supply of Easter stock coming along in nice shape. This firm blooms about 6,000 azaleas, together with a large collection of lilies, bougainvilleas, hawthorns, acacias, genistas and ericas.

Dr. and Mrs. N. L. Britton of the Botanical Garden Bronx Park, have left for the Bahama Islands, where they will be joined by Dr. Chas. F. Millsbaugh, curator of botany in the Field Museum of Natural History in Chicago, and will proceed to explore the islands. This is the fourth trip that Dr. Britton has made to the Bahamas, and it is the intention of the party to complete the survey of this archipelago this Spring, with the exception of one or two islands.

A. T. Boddington seedsman, of 342 West Fourteenth street, is much gratified over his increasing business. Mr. Boddington is making a specialty of English varieties of culinary peas, and notes with pleasure the great demand this year for such peas as he introduced to his customers during 1906. Two varieties that he is introducing this year are Senator and Alderman, two kinds which he feels sure will prove a boon to all who grow them. Among some of the peas he introduced last year were Sherwood and King Edward VII, for which there has been a very heavy demand this Spring from those who tried them in a small way last year.

The New York Times of Sunday last devoted a full page almost to orchid flowers as used in this city, accompanied with an illustration of a table decoration done with orchids by Chas. Thorley for a dinner given to General Horace Porter. It is a good thing to see the daily press devoting space to the flower business; it makes good advertising for the trade.

From present indications it would seem that the price of lily bulbs for the coming season, both for the Japanese and Hirisil, will be somewhat in advance over last year's figures. Growers who handle cannaes in quantity are of the opinion that there will be a shortage in the varieties Alphonse Bouvier and Queen Char-

lotte. These two sorts do not seem to have kept very well through the Winter from some cause or other.

Armin B. Kretschmar, son of Herman Kretschmar, who with his brother is operating greenhouses at West Nyack, N. Y., was married on Wednesday to Miss Vyvie M. Kolesch. The ceremony took place at the bride's home, Van Siclen avenue, Brooklyn, following which the newly married couple left for a trip to Washington, D. C.

Edward Behar, who is running the McMann greenhouses at Nyack, N. Y., is growing roses and sweet peas only, and has been quite successful even since taking hold of that place last June.

C. E. Gullett of W. H. Gullett & Sons, Lincoln, Ill., was in town this week. Fred. Breitmeyer, Detroit, Mich., was also a visitor.

CINERARIAS

CINERARIAS, best strain, 6 in., fine plants ready to bloom, most in buds, \$2.00 per doz. \$15.00 per 100.
 AGERATUMS, (limitable); these Giant varieties are the best in cultivation. R. C., \$1.00 per 100; 2 1/2 in., \$2.50 per 100.

High Grade Cut Flowers
Open Evenings until 8.
Mention the Florists' Exchange when writing.

Kalamazoo, Mich.
Trade Notes.
St. Valentine's Day shows yearly an increasing demand for florists goods. Quite a considerable business in pot plants was done for that day and such stock as lily of the valley in pots, primulas, hyacinths, and other Spring flowers at prices ranging from 25c. to \$1 seemed to fill the bill nicely. Of course, violets were extremely popular, yet a nice trade was done in other kinds of cut flowers also. Funeral work has been in considerable evidence, and a number of out-of-town orders have been received of late. I noticed last week Van Bochoves were shipping several large designs to Wisconsin.
The brighter weather now prevailing helps to put better color and stem in both roses and carnations, although there is no likelihood of either being over-abundant before Easter. Lilies show many signs of disease and the prospects for cheap lilies for Easter are decidedly small; some growers being of opinion that the once prospective profits on these goods have already vanished no matter what values are realized on them for Easter.
Among the carnation men Lady Bountiful and Boston Market have been noted as the most satisfactory producers during this dull Winter, opening up regularly and few splits noticed. Mrs. Lawson is not doing so well with some as hitherto, while Enchantress has split badly this season. Nearly all of the growers are trying Winsor, as the need of a good pink has been felt for some years. Victory will also be more in evidence next Winter, as it seems to have "made good."

 Greenhouses: 35-37 Randolph St.,
 MORTON GROVE, ILL. CHICAGO.

FAIRVIEW, ILL.—J. W. Lyon, vice-president and manager of the J. W. Lyon Company, florists has resigned as manager of the greenhouses in Fairview, and retired from that position February 15. Mr. Lyon will retain his interest in the company, and be succeeded as manager by W. Williams, who has been in charge for several years of B. Eldredge's greenhouses at the premises on West Pleasant street. Herbert Anderson has also regained his position at the Lyon Company greenhouses and goes to Rockford, Ill., to take charge of the Soper greenhouses.

Chicago.
News Notes.
 The Coliseum annex, so well remembered by the florists of the country who have visited the Chicago flower shows of the past two years, was burned down on Monday night, last week, but owing to the protection of a two-foot fire wall and the energies of the firemen and twenty-five engines the main building, where a hardware show was about to open, was unharmed. The cause of the fire is unknown. The loss is placed at \$50,000, and the structure will immediately be replaced.
 Messrs. J. A. Valentine and Emil Glauber were recent visitors on business and a sight-seeing expedition among the growers of this vicinity.
 J. P. Brooks of Morton Grove is one of the growers who has made a decided success in cultivating the Queen carnation in this vicinity and now has upwards of thirty thousand cuttings in the sand.
 Robert Hand of the Poehlmann Brothers Company's greenhouse force, who was seriously injured by being hit by a locomotive when a companion was killed, as with another associate the trio were returning in a fog on the railroad track from a dance on last Thanksgiving morning, after a long siege in the hospital is at last able with the aid of one crutch to be about the greenhouses.

F. Stellow of Niles Center is quite contented, as he may well be, with his range of carnation houses, and E. Blameuser of the same suburb makes a fine showing along the same line, Rose-Pink Enchantress, Helen Goddard, White Perfection and Queen being his favorites. Of the latter he has a choice strain which he has perfected by selection.

J. M. Smely of Aurora, Ill., was in town last week.
 John Bruckner has leased quarters and moved his business to 639 West Sixty-ninth street where he will, in connection with his office and salesroom, erect a small conservatory.

The rose range of the Albert Leis houses at Niles Center, which are constructed on the Dietsch plan are in fine shape and show a marked improvement under the management of D. J. Murphy who took charge of them a few months since.

J. A. Peterson of Cincinnati, accompanied by his son, was a recent visitor.

As a rule there is a marked similarity in trade conditions at a given time, but Valentine's Day this year produced an exception, as among the wholesalers the following were some of the answers to the query as to the state of the market. "Bum" "The worst Valentine's Day we ever saw," "fair" "with the exception of last Christmas the best day we ever saw" and so on while the variation in the "day after" reports of the retailers from different sections was equally noticeable.

J. C. Vaughan, accompanied by Mrs. Vaughan, is in the East.
 Henry Wietor returned last Friday from a trip around the circle, having visited St. Louis, points in Texas and Louisiana taking in the Mardi Gras at New Orleans.

The John C. Moninger Company has issued a booklet containing instructions for constructing greenhouses which must prove of value to anyone who is erecting or about to erect a greenhouse. It contains twenty pages of valuable information, and is said to be the only book of its kind ever issued by a manufacturer of greenhouse roof construction material, and will be sent to members of the trade upon application, who forward ten cents in stamps.

The first few days of Lent certainly showed no diminution in shipping orders, though the welcome prevalence of sunshine and moderate weather so increased the supply, especially of carnations and bulbous stock, that prices for these lines eased off considerably by Saturday afternoon.

Sam Graff of Graff Brothers, Columbus, Ohio arrived in town last Saturday and was followed the first of the week by his brother William, they having been busy since reaching here with the arrangements for the wedding of their sister, Miss Maida, which will take place on Sunday, February 24 the groom being Herman Landfield, both contracting parties belonging in Chicago.

The wire business is particularly good and in this department the E. F. Winterson Company has found it necessary to put on additional hands. The writer who penned the line, "He kissed her under the silent stars," was somewhat amazed to see in print that, "He kicked her under the cellar stairs," and no less surprised was the Chicago representative of this paper to see in the last week's issue that an enterprising young concern of this city was meeting with success in its "rotted cutting department" while as a matter of fact the rooted cuttings are in the best of condition. The error was too apparent, however, to cause trouble.

The delegation of members of the Illinois State Florists' Association from Chicago and their friends took an early morning train over the Illinois Central railroad to Bloomington, where the second annual convention of the organization was held on Tuesday and Wednesday last.
C. C. Pollworth and Mrs. Pollworth of Milwaukee celebrated the anniversary

of their nuptials in Chicago. P. Reinberg forwarded some remarkably handsome roses, Uncle John, Bride, Bridesmaid and Richmond, to the exhibition held in connection with the State Association's convention at Bloomington.

E. Blameuser of Niles Centre was drawn on the jury a few days ago, but being a member of the volunteer fire department was excused.

C. H. Washburn is enthusiastic over their No. 20 scarlet seedling carnation saying he has never seen a bursted calyx on one and he is confident that it will become a commercial flower of universal popularity.

Dutch hyacinths have made their appearance in small quantities, realizing about 6c. each.

Ernest Oeschliel received severe cuts in the head and was otherwise considerably bruised by being thrown from a buggy drawn by a spirited horse that became unmanageable while being exercised on Saturday last. W. K. WOOD.

Philadelphia.

News Items. Most of the retail stores did a very good business on St. Valentine's Day, but this week trade is very quiet.

The finance committee of the Florists' Club met on Monday and took action on matters pertaining to the convention of next August.

Word has been received from Secretary Hauswirth of the S. A. F. O. H. that the board of directors of the S. A. F. O. H. will meet in this city on March 11.

The Baltimore Gardeners and Florists' Club have offered a silver cup for a bowling contest between teams representing Baltimore, Washington and Philadelphia. The first game will be played in Washington on March 15; the second in this city on March 20, and the third game in Baltimore on a date to be selected.

J. B. Keller, Rochester, N. Y., was here on Tuesday. Patrick O'Mara of New York was also a visitor this week.

The Pennsylvania Horticultural Society held its regular meeting on Tuesday, when amendments to the by-laws were presented. Mr. C. G. Roebling, Trenton, N. J., (James Goodier, gardener) exhibited Dendrobium nobile, pure white, for which a silver medal was awarded; Cypridium W. H. Harrison (Calypso Oakwoodense×villosum giganteum) certificate of merit awarded. Other exhibits from Mr. Roebling of which special mention was made were: Cypridium calypso (Spicerianum×Boxalli), cut flowers of Dendrobium nobile nobiliss the original Rollinson type; Dendrobium nobile ordinary type and Dendrobium nobile albiflorum. Mr. P. A. B. Widener (Wm. Kleinheinz, gardener) staged a grand lot of flowers of John E. Haines carnation, also fine spikes of antirrhinum. In answer to questions Mr. Kleinheinz stated that he propagated his carnations after Christmas; when rooted, potted them into thumb pots, being always careful not to allow them to become pot-bound before shifting into 3-inch; pinched any straggling growths to make bushy plants; shifted on into 4-inch pots when ready, and kept them in a house with ample ventilation. Planted out into benches the first week in July, syringing every clear day, and giving all possible air. He advised not to pinch too close, let the shoots grow and pinch before the buds form. Under this cultivation last year he cut 29,989 flowers from 2,300 plants, and this year he is doing even better.

DAVID RUST.

SPRINGFIELD, MASS.—The Republican of Sunday, February 10, contains an illustrated write-up of the florist business of this city, mentioning particularly the firms of Mark Aitken, E. Beals, N. F. Higgins, and William Schlatter. The total greenhouse area in Springfield is 75,000 square feet of glass.

Minneapolis.

News Notes.

Carlson & Sandberg have been very fortunate so far this season in cutting some of the finest roses on the market.

Will & Son are now cutting some Mme. Abel Chateaux roses which would be indeed hard to improve on; the blooms are perfect and the stems very strong. Their carnations are also coming in nicely; for white they have The Belle and Lady Bountiful.

The New York Floral Company has opened another store on Nicollet avenue, between Fourth and Fifth streets which is one of the finest locations in the city. Business at their Washington avenue store has been very good during the season; apparently they dispose of more carnations than any of the other dealers.

The Whitted Floral Company was favored with the largest St. Valentine's Day trade it has ever experienced; between seven and ten thousand violets were sold by this firm.

Amundson & Kirschner seem to be establishing a heavy trade for funeral designs; orders from outside towns have been quite heavy during the week.

PAUL.

St. Paul.

News Notes.

About every florist in the city had all the funeral work he could turn out last Thursday on account of the death of Postmaster Plowen of the city. It is estimated that the value of the floral emblems and flat bunches would amount to between \$1,000 and \$1,500. Every conceivable design was there from the plain wreath to the most artistic broken column. A large number of American Beauty sprays, in some cases as many as three and four dozen flowers in each, were delivered by L. L. May & Company, also a number of wreaths, broken wheels and pillows. Holm & Olson furnished a mammoth wreath, fully 6 feet in diameter. C. F. Vogt sent a large crescent wreath from the mailing department at the post-offices. In all there were 38 sprays from different florists both in St. Paul and Minneapolis.

Colberg & Lemke appear to be doing a good business; funeral work has kept them busy. Stock has been somewhat scarce and orders sent to the East have proved not very reliable on account of delayed trains. Express trains due here at 7:30 and 8 a. m. have not arrived until 2 and 3 o'clock in the afternoon.

The Ramaley Floral Company has turned out a number of large designs of late; sales of loose flowers they report as being quite heavy.

L. L. May & Company have had a very busy week. While they missed a large number of orders for outside towns on account of the late arrival of trains, their city business has been unusually heavy.

PAUL.

Cincinnati, O.

News Notes.

Stock is still scarce, with business good. There is quite a lot of funeral work which is using up quantities of flowers.

Burglars entered the Walnut Hill Floral Bazaar store one night last week, but were disturbed before any harm was done.

Charles Dieterich, Maysville, Ky., was married to Miss Johnson of Linton, Ky., Thursday evening. We wish them all the happiness possible.

Lent is cutting no figure with business so far, and the supply of stock will necessarily increase with the sunshine.

E. G. G.

New Orleans, La.

News Notes.

C. Eble will move into temporary quarters at 116 Baronne street on the first of March during the rebuilding of his present store which the contractor has promised to have ready by October 1.

Mr. Cook's Sons have renewed the lease of their present store for five years. This store is very desirably located.

James A. Newsham was receiving congratulations during the convention; another girl.

Rochester, N. Y.

Trade Notes.

A visit to several greenhouse plants shows unusual activity preparing for Easter. Those growing lilies have experienced considerable loss, owing to diseased bulbs, and on account of the early Easter plants in bloom will be very scarce here.

Salter Brothers are cutting some fine Richmond roses, also stocks and sweet peas.

J. B. Keller Sons have had a fine display in their store of lilacs, flowering crabapple trees, some plants of the new rose pink deutzia, which as a plant for florists' trade is very desirable, being easily forced, and the color pleasing. This should also make an excellent shrub for outdoor planting, giving change of color to the border in early Spring. This firm has also some Chinese wistarias in blossom, which are a sight to behold, with their long panicles of bloom; they find a ready sale among those who can afford them. Another plant used by them for forcing is bleeding heart (*Dielytra spectabilis*), this too being easy to bring into flower. Plants of it find a ready sale, both at St. Valentine's Day and at Easter. The forcing of these hardy plants and shrubs has had its effect in past years, in inducing people to buy them for planting in the Spring.

The weather here for the past week has had many sudden changes, the thermometer rising 36 degrees in 14 hours, next day down to zero again, so one is kept guessing as to what is coming next. Business for the past few days has been all that could be desired, especially on St. Valentine's Day. A great deal of material was disposed of then, especially heart-shaped boxes of red color, containing cut Spring flowers, and tied with red ribbon. Several dinners given by society folk used azaleas, daffodils, tulips, etc., that otherwise would have been left over.

The store men—R. Salter, F. J. Keller and others—have gone to New York and other cities in order to look up Easter novelties and plants.

George Hart reports business brisk with wholesale prices fair at this Lenten season. He has been successful in devising a very handy and economical appliance whereby plants

NEW BEDFORD, MASS.—The wife of Wm. P. Pierce, florist, was buried on Sunday, February 10. Death resulted from pneumonia. She was 41 years of age. Many of the florists sent beautiful floral tributes.

A. B. Hathaway, on Court street, is picking some fine violets, which find ready sale.

One of the florists here is advertising funeral wreaths at \$1.50, 12-inch frames 20-inch pillows at \$5. At the present cost of flowers, it is difficult to see how he can do that.

Carnation Fair Maid is a grand seller these days; it grows more popular every day.

During last week's snowstorm, the roof of one of Richard E. Nofitz's greenhouses fell in. He seems to be up against hard luck. Only the week previous he buried his wife, who was a great help to him in his business.

A meeting of the creditors of Wm. G. Kroeber was held February 21 to adjust matters. **HORTICO.**

READING, PA.—The Board of Water Commissioners held its semi-monthly meeting on Tuesday afternoon of last week. Bids for floral decorations at the various reservoir grounds were opened. In each instance, the contract was awarded to the cheapest of the three bidders, as follows: Fall planting, Penn street reservoir grounds, John H. Giles, for \$335.75. Spring planting at the Penn street reservoir grounds, the G. H. Hoskin Company, \$1,148.07. Spring planting, Hampden reservoir grounds, H. J. Huesman, for \$176.28. Spring planting Engelman reservoir grounds, the G. H. Hoskin Company, for \$139.69. Spring planting, Antietam filter grounds, H. J. Huesman, for \$156.79.

A CENTURY OR SO AGO A QUAKER

by the name of Benjamin Franklin said this wise thing: "You can get nothing for nothing and very little for a ha'penny." "Ben" was dead right and it's exactly the same way with you florists—there's no use trying to get a good thing unless you part with your good money. There are certain destructive conditions that always exist in your

greenhouse, **YOU KNOW** that perfectly—**YOU KNOW** that it's the eave line that first rots with a wooden plate having toed-on sash bar—**YOU KNOW** that a wooden post is short lived—**YOU KNOW** that every dollar you put in repairs comes straight out of your profits—**YOU KNOW** that the more light, the more flowers, the better plants—then why in all reason, put up a house with wood plate when you can buy our Ice Clearing Eave Plate with Sash Bar Clasps attached—why wooden posts when our Cast Iron Foot Pieces will last forever? Think these questions over, then write for prices—and have your new house a L. & B. laster—a repair free proposition.

Vol. XXIII. No. 9

NEW YORK AND CHICAGO, MARCH 2, 1907

One Dollar Per Year

CARNATION WINSOR

The most talked about carnation at the Toronto Convention. Won first prize for best 100 pink

We have not advertised Winsor until now because we have not had to. It is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders, and have a fine lot of stock in the cutting bench, so that we can promise, for the present, February delivery on orders received within a short time at least.

If you have not already purchased a stock of this, you should lose no time do-

ing so. We are going to sell more Winsor than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market where our flowers are sold.

There is nothing on the market that approaches Winsor today in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities, in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high quality flowers. It practically does not split at all, notwithstanding the fact that we have had the darkest, dullest winter we have ever had, when the Eucharist and Lawson types are splitting badly all over the country with everyone, we have not had one-half of one per cent. of split calyxes on the Winsor. In fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement extravagant as it may appear.

Anyone who fails to plant Winsor this year will regret it. Rose pink Eucharist is good, and a good many other varieties are good, but IF YOU WANT THE WINNER, PLANT WINSOR.

We not only have a good thing in Winsor, but we are delivering good stock. As a sample of the testimonials that we are receiving, see this space in last issue. We are trying to give 110 cents on the dollar, and guarantee to please everybody with the stock sent out or we will not ask you to pay for it. We have still to receive our first complaint, and we have shipped between one and two hundred thousand cuttings to date.

Strong Rooted Cuttings. February delivery, \$12.00 per 100, \$100.00 per 1000.

F. R. PIERSON CO., TARRYTOWN-ON-HUDSON, NEW YORK.

Mention the Florists' Exchange when writing.

WE are now booking orders for early delivery of *Richmond, Killarney, Bride, Bridesmaid, Wellesley, Liberty, Kaiserin, Carnot, Bon Silene, Mrs. Oliver Ames and Safiana.*

Now is the time to get *Kaiserin Augusta Victoria* for early summer flowering. I have a large quantity of 2 1/4 inch grafted and own root stock now ready for shipment.

Have a splendid stock of *Asparagus Plumosus Nanus* seedlings, seed saved from my own plants.

CACTUS GERANIUMS

A very unique and strikingly beautiful distinct type which, originating in England but a few years ago, at once won a place in great popular favor as a pot plant, for the conservatory and window boxes, for which they are unusually pleasing and attractive, on account of their remarkably handsome and thrifty but dwarf growth, small foliage, and marvelous profusion of bloom.

The Cactus has by common consent been recognized as a distinctive term applied to certain type of Dahlias, Cinerarias, etc., but none deserve the appellation more so than the Cactus Geraniums, with their admirable elegance of form, exquisite graceful narrow petals, similar to those of the Cactus Dahlia.

We offer a collection of four varieties, and to introduce them into every collection, we will for a short time send one dozen by mail post paid for \$1.50.

PELARGONIUM PELTATO ZONAL

ALLIANCE, (Lemoine 1905)

An exquisitely beautiful novelty of the highest order. A Hybrid between an Ivy and a Zonal and which has retained all the good points of both parents, including the beautiful soft finish of the Ivy and the hardy constitution of the Zonal.

It is therefore, not an ordinary variety but an extraordinary variety in all the good points that go to make up an attractive geranium. Its color is the most exquisite shade of delicate lilac white, upper petals feathered and blotched beautiful bright crimson rose. Flowers semi-double, abundantly produced in fine large trusses on long stems.

Habit is excellent, robust, strong, close-jointed; for vases or as a pot plant it is unequalled.

25 cts. each, \$2.50 per doz.; to introduce we will send postpaid for a short time.

IVY-LEAVED GERANIUM

CAESAR FRANCK, (Lemoine 1905)

This is unquestionably destined to become the most popular Ivy Geranium yet introduced; the color is the most magnificent shade of soft crimson, with an exquisite shading of tender rose at the base of petals. The flowers are about as double as those of the Crimson Rambler Rose—which they resemble—only much richer in color and finish, produced on long stems in enormous trusses. Habit, vigorous, quick-growing and pleasing, with a strong constitution. For baskets and vases it is all that could be desired.

Considering its general good behavior, being in keeping with its other good points, we are convinced that it is a most desirable sort.

25 cts. each, \$2.50 per doz.; to introduce it everywhere we will send post paid for a short time.

RAWSON'S ASTERS

are just a little superior to anybody else's

The product of our seeds can always demand a better price than those grown from seeds obtained elsewhere. The following is an extract from a letter received last fall from a most critical grower:

"Your Midsummer Aster has been a great money-maker for me. For every flower that I have brought into the Boston Market I have received from \$1.00 to \$1.50 per hundred more than for any other variety raised from seeds purchased elsewhere." J. W. Simpson.

Delicate Shell Pink and Bright Rose at \$2.00 per oz., 60c. per 1/2 oz.

RAWSON'S LATE BRANCHING: in White, Shell Light Blue, Dark Blue, Scarlet and Crimson at \$1.00 per oz.; 30c. per 1/2 oz.

No Florist knows what fresh Aster seed means unless he has tried "RAWSON'S SEED." The crop of Aster seed has been extremely short last season and it is advisable to buy at once.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION
Henry W. Wood, Richmond, Va., president; C. S. Burge, Toledo, O., first vice-president; G. E. McWay, Birmingham, Ala., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; J. H. Ford, Ravenna, O., assistant secretary.

WELLINGTON, O.—J. O. Johnson has moved his seed store into the basement of the Reserve Block.
The total value of seeds exported from the United States during the year 1906 was \$14,259,421 against \$3,347,024 in 1905. The value of the seeds imported in 1906 was \$5,563,019 against \$4,207,743 in 1905.

Consul H. J. Harvey, of Fort Erie, Can., reports that last Winter large quantities of clover and grass seed were sent to the United States, but this Winter there will be scarcely any exported. On account of the drought last Summer the second crop of clover from which seed is gathered, was a failure.

COLUMBUS, O.—The seedsmen are getting busier every day; at present the heavy orders of the market gardeners and small dealers are being filled. Every indication is for a great year's trade; the only drawback will be that stocks may not prove adequate to the enormous volume of business that is just ahead. F. W.

ASPARAGUS SEED.—In the protest of Peck & Velsor against the assessment of duty by the collector of customs at the port of New York. Before Board 3, General Appraisers, February 15, 1907, opinion by Waite, G. A. The protest related to asparagus seed which was claimed to be free of duty under paragraph 548, tariff act of 1897, as crude drugs. Protest overruled on the authority of Abstract 12933 (T. D. 27636).

WATERING POTS.—In the protests of George Borgfeldt & Company against the assessment of duty by the collector of customs at the port of Philadelphia. Before Board 2, General Appraisers February 14, 1907. Opinion by Fisher, G. A.: The merchandise consisted of watering pots with long spouts, such as are ordinarily used in flower gardens. The Board overruled the importers' contention that they should have been classified as toys under paragraph 418 tariff act of 1897.

FARMINGDALE, L. I.—Nostrand Brothers report a considerable increase in sales of cabbage, cucumber and other specialties for which that section is noted.
WASHINGTON, D. C.—F. W. Bolgiano reports business opening up better than usual, and there is every indication of active trade.

CAMBRIDGE, N. Y.—Edward L. Coy, who has been growing seeds in Washington County, N. Y., for over half a century, has been compelled to abandon that work on account of his age, and physical disability resulting therefrom. Mr. Coy is 76. He has arranged with Jerome B. Rice Seed Company to succeed him, and has turned over to them his stock seeds (with the exception of such special stocks as have been entrusted to him), as well as his growers and the good will of his business. Mr. Coy, in announcing his retirement from active work says:

"My successors do not need any introduction to the seed trade, nor are they new in the cucumber growing business. For many years Jerome B. Rice and I have worked side by side in Washington County, and in the same territory, without conflicting or clashing. Several years ago we united in opposing the introduction of cucumber seed machines into Washington County, and succeeded; so that all the seed grown there is carefully harvested by hand, which makes the seed white and very much superior in appearance to machine cleaned stock.

"I consider Washington County, N. Y., the very best locality in the United States for the uniformly successful growing of cucumber seed. Many other seeds are grown there successfully, but cucumber seed. Many other seeds are grown there successfully, but cucumber has been my specialty for several years, and the demand for same has been so great as to give me about all I could do."

LARAMIE, WYO.—The Wyoming Plant and Seed Breeding Company has been incorporated and has as its incorporators and directors Ora Haley, Dr. V. T. Cooke of dry farming fame and Professor E. C. Buffum, the director of the experiment station here. One of the objects for which the company has been formed is, as stated in the articles of incorporation: "By scientific plant breeding we will establish varieties more suitable and profitable than those now grown in the inter-mountain region of arid America for irrigated farms and for dry farming—supply home grown acclimated, improved, hardy and prolific shade and fruit trees, small fruits, or-

namental shrubs and flowers and best pedigreed farm and garden seeds both of our own growing and those which are grown for us and which we can recommend."

The principal place of business of the company and the principal farm will be situated at Laramie, but there is to be a branch office and farm at Worland, Wyo. The company will also begin operations at once on the Shoshone reservation, opened to settlement last July and upon the lands to be reclaimed by the big Government irrigation works.

Dr. Buffum and Dr. Cooke are men who for the past twenty years have been studying and experimenting with the problems of the arid region.

The company is to be capitalized at \$100,000 divided into 100 shares of \$100 each.

CUMMIN SEED.—Consul John H. Grant, of Valetta, reports that Malta raises a very fine grade of cummin seed, for which those islands have been noted for many years. He writes: "As far back as 1745 a noted French writer upon agricultural topics referred to Malta as being an exporter of one of the best grades of cummin seed. At the present day the seed is raised solely for exportation, not being in demand for local use. Much of it is consumed in Germany, France, and England. Two-thirds of the quantity exported goes to Germany. Occasionally fair-sized orders are filled here for the United States, being obtained through German houses. The principal grade exported is that known as the clean seed, which seems to give so much satisfaction that it is constantly in demand. American houses using cummin seed might deal to better advantage if business were done directly with the Maltese merchants. The past season Morocco has not produced either in grade or quantity anywhere near its normal amount of cummin seed. As prices in that market for this article are high, purchasers must, at least for the present, look elsewhere for their supplies. On the

Stokes' Standard Aster Seed

Stokes' Late Branching Aster—Choice, American-grown stocks in separate colors, 75c. per oz., mixed, 60c. per oz.

Truffaut's Paecy Perfection Aster—A splendid florist Aster, long-stemmed sort, in separate colors, \$1.50 per oz., mixed, \$1.25 per oz.

SALVIA BONFIRE
The best Dwarf Salvia, my own "Floracraft" grown seed, trade pkt. 25c., per oz. \$1.50, per 1/2 lb. \$5.00

RAFFIATAPE

Try it on your Easter plants; pleasing, bright green color; stronger and cheaper and better in every way than string or Raffia.

Sample Free—It is put up in coils and on reels. In handling it the coil is placed in the pocket and the tape drawn from the middle. The brass reels are hung from the vest buttonhole.

Price—Coils (enough for tying up 150 plants) 5c. each, 50c. per doz. (by mail). Reels (250 yards), 75c. each, \$8.00 per doz. (by express).

Stokes Seed Store

219 MARKET ST., PHILADELPHIA.

Mention the Florists' Exchange when writing.

other hand the Malta crop is above normal conditions, and local farmers are about to take advantage of the decrease elsewhere by planting larger crops for the coming season. It is said that the price per cantara (175 pounds) in the market of Morocco at present is \$34.06. The price is much less in Malta."

A SERIOUS INJURY to the seed trade, but more particularly to the retailer who does a small jobbing business, is to be found in the "surplus lists," that are now flooding the country to an extent that is demoralizing. When the jobber makes up a list of varieties that have not had as great a run as in former years, and sends it to the trade, but little harm is done. But when a grower takes contracts and puts out a much greater acreage than is necessary, with an average yield, to fill his contracts and then sends "surplus lists," to all the smallest dealers, making prices much below his regular contract rates, he is doing his customers great injustice. Such lists come to the writer as often as the day, and they go into the waste basket as fast as received. By the early mail this day, a "great inducement" was offered in the line of vine seeds, that might seem attractive, as the price is quoted, "for any required amount" at 8c. per pound less than any responsible grower would take a contract at.

The worst feature of this system is that, one or more houses, very well known in the trade, make a business of encouraging the smaller growers to put in a large acreage, expressly to buy up the surplus at much lower prices than could be contracted for. Fortunately, the last class have overdone this business, and begin to find themselves outwitted, as the growers were as anxious to sell as they were to buy, and a vine seed order for a number of varieties would be filled from the same bin, with the results following

IMPORTS OF SEEDS, ETC.—February 16 and 17.—American Express Company, 200 bags clover seed; D. C. Frost, 112 bags seed; A. W. Fenton, Jr., 28 packages seed; R. J. Godwin's Sons 11 bags field seed, one case flower seeds, Hensel, Bruckman & Lorbacher, 20 bags mangel beet seed, 4 bags seed, 58 bags beet seed; Maltus & Ware, 22 bags field seed, one bag mangel beet seed; Phillips & Company, 32 packages seed; A. Stillwell & Company, 66 bags seed; Springfield Seed Company, four bags field seed; J. M. Thorburn & Company, 15 bags seed; Vaughan's Seed Store, one bag seeds; S. W. Gould & Brothers, 10 bushels seed.

February 20, 1907.—Stumpff & Walter Company nine cases bulbous roots.

February 18, 1907.—Union Pacific Ry. Company, 12 bags seed; Brown Bros. & Company 25 cases pine seed.

TREE SEEDS

Send to-day for our Trade Price List and our Illustrated, Descriptive Catalog Otto Kattzenstein & Co., Atlanta, Ga

If you have not received our florist list, write us; we will mail it.

H. E. FISKE SEED CO.,
12 & 13 Faneuil Hall Sq.
BOSTON, MASS.

February 20, 1907.—P. H. Petry & Co., two bags seed; Wm. Elliot & Sons nine cases plants; Maltus & Ware, two cases flower roots, 29 cases bulbous roots, 20 cases plants, 13 cases trees and shrubs; H. Nungesser & Company, 25 bags grass seed; J. M. Thorburn & Company, six barrels garden seed.

FLORAL PARK, N. Y.—John Lewis Childs returned last week from a business and pleasure trip South and found, to his surprise, business here surprisingly good, in fact better than for several years past, both in the wholesale and retail departments. He expects to visit his California branch next month.

J. Roscoe Fuller is having the best trade in years, and, not having any remarkable novelties to offer it shows a marked improvement in staple vegetable and flower seeds.

The trucking business, that seemed doomed a few months ago, has assumed an active life recently, as the farmers find more land to rent than they thought possible a short time ago. The speculators show a disposition now to rent the farms bought for residential purposes. Some of the dealers in peas, beans, and seed potatoes say sales are fairly good.

RICHMOND VA.—This is a large business center for almost every branch of the seed trade. T. W. Wood & Sons, who do an immense grass seed trade, and are leaders in the crimson clover business, report a fine trade along all lines.

T. J. King & Company say business never before was as good. This house does a business on a plan peculiarly its own, having agents in every village in the South and Southwest.

Diggs & Beadle have every promise of a successful trade, which is largely among the truckers. Mr. Diggs has been confined to the house from a severe illness, but will be at the helm again in a few days.

The Ontario Seed Company reports a most satisfactory condition of trade.

HENRY F. MICHELL CO., 1018 Market St., Phila., Pa.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.
Orlando Harrison, Berlin, Md., president; J. W. Hill, Des Moines, Ia., vice-president; George C. Scager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

The total value of the plants, trees, shrubs, and vines imported into the United States for the year 1906 was \$1,750,160 as against \$1,574,477 in 1905.

Wants to Grow Fruit.

Having eight acres of land attached to my greenhouses, I would like to ask Mr. Meehan to suggest a list of fruits that might prove profitable to grow for market. The ground is a shallow clay loam with clay subsoil undulating enough to drain off surplus water. Pears are said to do well on such land. Does this apply to dwarf pears on quince stock or only to standards on pear stock? Are dwarf apples on Paradise stock obtainable in this country and would they succeed on clay loam?

Standard pears and plums would be suited in such soil as you describe. Neither apples, cherries nor peaches would thrive in it, nor would dwarf pears. The last named are worked on quince roots, rendering them quite unfit for such a situation as yours. Late fruits are valued for market, and in pears, commission men here say the most valued are the Lawrence, Sheldon and Kieffer, but the earlier one, Bartlett, would surely pay as well.

The Japanese plums, Abundance and Burbank, are very popular, bearing well and selling well. Among other sorts Reine Claude is popular and Lombard, Jefferson and Germau Prune are good; and there are others.

Horticultural Notes.

Thuja gigantea—*Thuja Lobii* of our English friends—is much the superior of *Thuja occidentalis* in the bright green of its foliage, but it is not sufficiently hardy to endure our Northern Winters, unless in a well-protected place.

Salisburia is found to be one of the hardiest of trees flourishing in Canada as well as in nearly all the Northern States. It is an error to suppose that no tree of it bears perfect flowers. Some do, and they fruit abundantly, as many an isolated specimen attests.

Mitchella repens, the partridge berry, is seldom seen in cultivation. As found in its wild state it is often hanging down the side of rocks. Being classed as a diocious plant accounts for its being often met with devoid of its berries.

Cotoneasters have numerous red berries in the Fall and Winter seasons. This makes them favorites with planters in Europe, as they should be here. They are quite hardy in the Middle States.

Hemlock spruce trees are far less numerous in their wild state than they were. Even in Canada, where there were acres on acres of them, they are not now as abundant as formerly. Seed collectors have difficulty in securing seeds of these trees.

When plants are frozen the sun must be kept from them, the plants sprinkled with cold water and then placed where the thawing will be gradual, such as will be the case in a temperature just above freezing. It is highly important that the thawing out be in the dark.

Kalmias transplant fairly well when taken up carefully from their wild homes. If root pruned a year or two in advance they can be moved without feeling the disturbance at all. It is the frequent removal that insures the safety of very large plants.

If the *Cedrela sinensis* has all the good qualities of the *ailanthus* as it is said to have, it will quite take its place in many plantings, the flowers having no disagreeable odor at all. The male flowers of the *ailanthus* are so sickening that windows of dwellings have often to be closed when a tree of it is near and in bloom.

Of the dozens or more of varieties of currants nurserymen find the best sellers to be the Versailles among the reds, and the White Versailles for white. These two are reliable always, bear well and regularly. The black currant is rarely planted by anyone although it does very well in our climate.

Evergreen Grafting

There is such a demand for the rarer evergreens of pines, firs, spruces and other sorts that to increase them grafting is resorted to in the case of many difficult to be had through any other system of propagation. Seedlings desired for stocks do much better when grown in pots a year or so before they are used. They should be placed in pots in Spring, the pots then plunged to their rims in the ground, where they can remain until Fall, when they should be removed to a cold frame or greenhouse, to be on hand when needed for grafting. If to be grafted during Winter, as they are by most operators, the plants should be given a warm temperature for two or three weeks in advance of grafting, that the sap may be in good circulation when the cion is inserted. After grafting, heat should be continuous through the Winter, until such time as

the natural heat is sufficient, in order that the growth of the grafted plants may continue unchecked.

There must be considered the proper placing of the roots of the plants when potting the stocks. Many of the stunted specimens on lawns owe their ill-doing to curling or twisting of their roots in the pots when first potted. Sometimes plants with roots admitting of being set in a straight position can be obtained; at any rate, bear in mind that an evergreen that has had its roots coiled in a pot is not one likely to make a satisfactory growth when planted out. The roots are apt to continue their growth in the same way; and in the case of some of the heavy topped kinds, such as the Austrian and the red pine, they are then quite liable to be blown over in gales of winds.

Norway spruce make a good stock for all the piceas; the European silver fir for the firs, and the Austrian or Scotch pine for the pines. The nearer one gets to the relationship of the cion and the stock the better is the result.

convinces one of its being a splendid subject for such a position as that of a wall of a tall building.

Somehow the idea got abroad that the plant is slow of growth. This is far from the fact. It is slow to start when young, but in a few years, when it has made good roots, it pushes ahead vigorously; and this vine on the school wall grows as fast as any other good vine that could be planted there.

The very large green leaves this hydrangea has, for a vine, are in themselves a strong recommendation; and then it clings tightly, just as ivy does. It is not in the same class as ivy, of course, not being evergreen; but in place of this can be added its desirability as a flowering vine. The flowers are not as well displayed as they would have been had it been possible to have taken a good front illustration of it, but there is view enough to show the beauty of the picture it presents. It is the large sterile flowers that attract attention, as is the case with so many hydrangeas. Its time of flowering is soon after it has made its first unfolding of leaves, which in this vicinity is toward the close of May.

Hydrangea Petiolaris (Scandens), Climbing Hydrangea

Hydrangea Petiolaris (Scandens.)

The subject of these notes, *Hydrangea petiolaris*, is better known under the name of scandens, the appellation it has been disseminated under in our country, but properly it is petiolaris. Its common name, climbing hydrangea, is well applied, the plant being of a climbing habit, and one as well not afraid to catch hold of a wall, as some vines show a reluctance to do. To Japan we owe the introduction of this vine, as we do that of so many of our hydrangeas. It is there esteemed very highly, as it makes a great display when in flower, as may be gleaned by the appearance of some fine specimens of it in this country. Our illustration is of a plant growing to the wall of the Keyser School, one of the public schools in Germantown, and it interests many of the residents of the vicinity and the writer as well on account of its having been presented to the school by the late Thomas Meehan.

To get a position, our photographer had to take a side view of the vine, a front one not being practicable; still, the picture shows the vine to fair advantage, and

A little shrub in the yard will be recognized as the Japanese snowball, and being in flower it serves to fix the date of the hydrangea's flowering, as the snowball always is in bloom toward the close of May.

Many persons have expressed their opinion that this hydrangea and another vine, *Schizophragma hydrangeoides*, are one and the same thing. They are not at all the same, despite all that may be said to the contrary. We are acquainted with both vines, and cordially endorse what Nicholson says of this hydrangea in his Dictionary of Gardening viz, "Now and then met with in gardens under the name of *Schizophragma hydrangeoides*, a very different plant."

The propagation of this hydrangea by cuttings is slow, but by allowing the shoots to run along the ground as ivy does a number of young plants may be had. Young plants raised in this way are a long time "taking hold," but when they become well rooted they grow faster, and, as aforesaid, in the end the vines keep pace in growth with almost any other species of vine. At the rate our school house vine is growing it will be but a few years before it reaches the top of the building.

ARTHUR T. BODDINGTON
 342 W. 14th St., New York.

Mention the Florists' Exchange when writing.

CHARLESTON, S. C.—The Southern Fruit Company has developed a large trade in seeds used by the truckers in that section, and is now preparing for a general local business.

AUGUSTA, GA.—N. S. Willet Seed Company, who do a large business in seeds, grown and used exclusively in the South, besides a general jobbing trade, and dealing in cabbage plants, report an increasing and satisfactory trade.

The Alexander Seed Company, formerly managed by Mr. Durban, is doing a fine local trade on a conservative plan.

ATLANTA, GA.—H. G. Hastings & Company, who are largely interested in cotton seed and have extensive trial grounds for testing new types, as well as doing a general seed trade through the South, report a most satisfactory business. Their cotton seed trade is simply immense, covering the whole cotton belt.

BIRMINGHAM, ALA.—Mr. McVay of the Amzi-Godden Seed Company says the Spring trade is opening up gradually, but very satisfactory. Mr. Durban is looking after the local trade.

MEMPHIS, TENN.—Otto Schwill & Company report an active Spring trade; choice seeds for the truckers and private gardeners being their specialty.

R. G. Craig & Company, who are almost exclusively in the box trade, have their consignments all made, and are awaiting returns.

The Ullathorne Seed Company, which does a large business along all lines, is seemingly satisfied with the outlook. Mr. Ullathorne, who alone is authorized to speak for the company, being away, our correspondent could not get details.

Southern Seed Company.—This firm is noted for the push they show along all lines in which they are interested—seeds, implements and fertilizers. An increasing and wholly satisfactory trade is reported.

LOUISVILLE, KY.—Wood, Stubbs & Company, who are doing a fine local, as well as a general wholesale and retail trade, say business is very good. They do a fine trade in onion sets, their soil and situation being seemingly well adapted for their production.

ST. LOUIS, MO.—The Schisler-Cornell Seed Company say Spring trade opens up well, in fact, an improvement along all lines over previous years.

The Tinsley Seed Company is pushing its trade with a determination that knows no failure, and success seems to crown its efforts.

D. I. Bushnell & Company, who are perhaps as well known as any seed house in the country, have nothing but good words to say regarding the business outlook. The problem of where to buy, and how to sell has long since been solved.

KBOKUK, IA.—A. Talbot & Company, who have added the seed trade to their extensive elevator business, and have a box as well as counter trade, report an increase of business—boxes all out; prospects favorable.

CHICAGO, ILL.—W. W. Barnard & Company say business is good, and that means that it is good. Their trade barometer is never misleading.

At Vaughan's Seed Store the prospects are all that could be desired. This house is conspicuous for its many departments which makes business at all seasons. No idleness here.

Peter Hollenback, the pioneer of the onion set industry, says trade is good. This house comes as near doing a safe business in sets as it is possible to do. Their gardeners' trade is a steadily increasing one.

CABBAGES FOR STOCK FEEDING.—This is the subject discussed by Samuel Fraser in Bulletin 242 of the Cornell University Agricultural Experiment Station. As to varieties Volga leads in the proportion of head to total plant, and is better than Surehead or Autumn King. The latter seemed to be better suited to clay loam soil than to gravel loam. Surehead did better than Autumn King in 1904 on gravel loam. Danish Ballhead is the lowest in yield, but has compact head. Insects and diseases, storing, marketing, etc., are all treated upon in the bulletin.

European Notes.

The following extract from one of the London daily newspapers will be read with much interest by seekers after novelties:—"A very interesting plant and one which is probably a forerunner of a new race of vegetables is the cabbage-sprout (too young as yet even to be christened), a very promising hybrid, the result of a cross between the Cambridge Champion Brussels sprout and the Winnigstadt cabbage. A new and striking vegetable is thus evolved, partaking of the qualities of both parents, the stem being studded with tight sprouts, and surmounted by a large cabbage-like head. Carter and Company hold the stock."

The late George Taber raised a very promising hybrid between the Brussels sprout and a fine strain of red cabbage, supposing that it would be freely used for pickling. In this he was much disappointed and as the plant required a lot of selection to keep it true to color and no one seemed eager to buy it, it was allowed to die out like the Albert and Dalmeny sprouts which had preceded and pre-deceased it. Another hybrid named Chou de Burghley, which is a cross between a cabbage and broccoli, has been more successful, principally on account of its extreme hardness.

To come down to more solid matters, the bloom in red clover has only been of a temporary nature and the rush of new seed on to the market has brought prices down to the old level once more. One small dealer was offered more than 200 tons on the market recently, but as there is at present no outlet, the seed remains unsold. White clover is not so abundant, but trefoil is, in Germany especially, a perfect glut. Lucerne remains firm and will go higher when the demand sets in.

The potato trade simply needs decent burial; all the life has been out of it since the season started. By the way Thorburn's Noroton Beauty has proved a great success in Sweden, where in a field test with 13 of the most highly esteemed European varieties it proved to be the earliest of all and the heaviest cropper. The average per acre was 13 English tons, the popular English Up-to-Date being second with a crop of 10½ tons per acre. It was, however, the lowest in starch production, the percentage being 13.7 per cent. but on account of the heavy crop the total product was only exceeded by the German champion, Bund der Lanwirthe.

In London the usual magnificent display of Primula sinensis varieties was to the front at the annual meeting of the Royal Horticultural Society. Several of the blooms in Cannell's collection measured 2½ inches in diameter and looked as full of substance as if they had been modeled in wax. The deep blue Czar and the rich carmine-zoned Duchess were the most striking features in the display of Sutton & Sons. A pale salmon-colored form of P. stellata attracted a good deal of attention, but the giant sinensis varieties overshadowed it. Low's salmon cyclamen improves on acquaintance and as the seed can be bought at a moderate price it deserves to find a ready sale. Winter-flowering sweet peas fell flat.

The Florists' Exchange just received, and we learn that the American Government has resolved to perpetuate the free seed farce and has voted the sum of \$230,000 for this purpose. Not being an American politician (to his great regret), the writer may be in error in the statement, but he has read somewhere that this is more than the U. S. A. pays to its worthy and able President. Why it hath been permitted to King Boodle thus to magnify himself passeth the understanding of

EUROPEAN SEEDS.

A recent consular report states that, among other things, garden tools could find a good market in the Argentine Republic.

Sphagnum Moss and Cedar Poles
Moss, 5 barrel bale, \$1.25; 2 bales, \$2.25; 5 bales, \$5.00; 10 bales, \$9.50. Poles, 2 in. butt, 14 ft. long, \$15.00 per 1000; 2½ in. butt, 10 to 12 ft. long, \$25.50 per 1000; 1½ in. butt, 5 to 7 ft. long, \$10.00.

POEHLMANN BROS. COMPANY, MORTON GROVE, ILL.

Mention the Florists' Exchange when writing.

During 1906 we furnished to the trade over One Hundred Thousand of the below described leaflets.

CULTURAL DIRECTIONS

Specially written for the use of your amateur customers. Send Twenty-five cents for complete sample set, which amount will be deducted from order for first thousand.

The universal favor in which these Directions are held, as shown by the many orders received therefor, encourages us in the belief that these Leaflets are just the neat little factor to help promote business and establish better relations between the dealer and his customer.

TRY SOME!

BIG BUSINESS ASSISTANT

TO SAVE TIME, QUICKEN SALES, AND AID YOU PLEASE YOUR CUSTOMER, WE HAVE PREPARED

Cultural Directions

COVERING A NUMBER OF THOSE PLANTS AND BULBS MOST LARGELY IN DEMAND

THE "CULTURALS" have been written by experts; they are fuller, and contain more detailed directions than it is possible to embrace in a catalogue. Equipped with these, just hand one out with each sale, and save yourself considerable present and future trouble, as the customer will then be able to consult the directions, grow his plants, seeds or bulbs intelligently, and so receive satisfactory results, without having to continually resort to you for advice.

The following "Culturals" are now ready:

AMARYLLIS(Hippeastrum)	CROCUS, Snowdrop and Scilla Sibirica	MUSHROOM CULTURE ONIONS

Saunders is decidedly the most perfect canna of this type that has been introduced. 50c. each; \$5.00 per doz.; \$35.00 per 100.

Ottawa

is a strong grower, very robust and 5 to 6 feet high. The flowers are large and beautifully formed, color is carmine with tints of old rose and deep coral, add to this the silken sheen and you can imagine the effect a few plants will produce.

Note:—We had this canna on trial among the Canadian experimental stations last summer and this is the official report of their expert: Quite distinct and one of the most beautiful shades of color I ever saw in cannas. Of 70 coming in one bed during the past season, this was the most floriferous in the collection, coming into bloom early and continuing until cut down by frost, as many as 13 expanded heads of bloom being counted at one time on a plant, and not a poor one among them, all being of immense size." 50c. each; \$5.00 per doz.; \$35.00 per 100.

New York

Has the Orchid type of flower. They have much more substance than the flowers of the other varieties of this class, and will stand the hot sunshine as well as the toughest varieties of cannas. The color is a solid rich scarlet covered with a beautiful glowing sheen. The flowers are large and contrast beautifully with the dark bronze foliage. 50c. each; \$5.00 per doz.; \$35.00 per 100.

ROSES

Are our great specialty, 2 1/2 and 4 in. pot plants we have in great variety. Teas, Hybrid Teas and H. P. Roses on their own roots. Philadelphia Rambler, Crimson Rambler, Dorothy Perkins and other climbers in strong field plants.

Shrubbery

in variety. Viburnum Plicatum, Spireas, Altheas, Deutzias, Weigelas, Barberry Thunbergii, Hydrangea Pan. Grandiflora, Honeysuckles, etc.

THE CONARD & JONES CO., WEST GROVE, PA.

Mention the Florists' Exchange when writing.

20,000 PEONIES

FOR EARLY SPRING PLANTING.

This list comprises a great many choice and rare varieties, some of which have never before been offered to the trade in quantities. The stock is now in our storage sheds and can be shipped as soon as the weather will permit. Nothing but selected three to six eye divisions will be sent out.

Week's Work, The 293

NEW BEDFORD, MASS.—The wife of A. Ashley is reported very ill; her condition is alarming. Napoleon Le May says that practically all of the orders he received for his carnation cuttings came from his advertisement in The Florists' Exchange—one more good word for your valuable paper. Most of the stores closed in the afternoon on Washington's Birthday. This has been an unusually hard winter on the coal bins. Our growers will get their lilies in on time for Easter with a little maneuvering. Peter Murray has purchased four acres of land in Fairhaven, Mass., and it is said, will erect some modern greenhouses upon it. HORTICO.

FOR SALE Ready now in Excellent Condition; Choice Colored Dracenas TERMINALIS, large plants, 50-75c. Regina, Hybrida, Amabilis, Stricta-grandis, Kneekii, 75c. to \$1.00. Lindenii, Messangeana, Gladstonii, Imperialis, \$1.00 to \$1.50. FRAGRANS and BRAZILIENSIS, 75c. Ficus Pandurata, 7 in. pots, 7-10 leaves, \$2.50; also large specimens. ROSE HILL NURSERIES, New Rochelle, N. Y. Mention the Florists' Exchange when writing.

PETUNIA "THE QUEEN" This is something new to the Petunia order, a new double, extra fine, that requires no staking, 2 1/2 in. pots, \$1.50 per doz.; \$10.00 per 100. Colors, Golden Bador, and other varieties, rooted outling, 1,000 per 100; \$5.00 per 1000. Verschaffeltii, rooted cuttings, 70c. per 100; \$6.00 per 1000. Petunias in variety, 2 1/2 in. pots, \$3.00 per 100; \$25.00 per 1000. Euchsias, in variety, 2 1/2 in. pots, \$3.00 per 100; \$25.00 per 1000. Heliotrope, in variety, 2 1/2 in. pots, \$2.50 per 100; \$20.00 per 1000. Sweet Alyssum, 2 1/2 in. pots, \$2.00 per 100. Little Gem, \$2.00 per 100. Lobelia, 2 1/2 in. pots, \$2.00 per 100; R. C., \$1.00 per 100. Rose Geranium, in variety, \$1.50 per 100; R. C., \$1.50 per 100. Happy Thought Geranium, \$2.00 per 100. German Ivy, R. C., \$1.50 per 100. English Ivy, R. C., \$1.50 per 100. Lobelia, 2 1/2 in. pots, \$2.00 per 100; R. C., \$1.50 per 100. Alternanthera, R. C., 9c. per 100. Cash with order. J. E. FELTHOUSEN, 154 Van Vranken Ave. SCHENECTADY, N. Y. Mention the Florists' Exchange when writing.

HEADQUARTERS FOR The Genuine Irish Shamrock 1/2 in. pots \$4.00 per 100; 2 in. pots \$5.00 per 100; \$1.00 per dozen. WILLIAM NICHOLSON Framingham, Mass. Mention the Florists' Exchange when writing.

Trade Notes. Business has been good the past two weeks, but owing to the scarcity of stock prices have advanced. St. Valentine's Day was an ideal one—very pleasant with the temperature about 33 above zero. This brought out many people, and business was exceedingly good. Violets were mostly in demand; one of our local florists sold 25,000 at retail. The death of former Governor Frank W. Higgins called for many flowers from our city as well as from other sections of the country. President Roosevelt sent a wreath of hyacinths, white carnations and Killarney roses. Governor Hughes sent a wreath of galax, cattleyas and ribbon. The Governor and Legislature sent the largest piece—a standing wreath five feet in diameter made of pink roses clustered with lily of the valley, orchids and violets, the base a huge mass of Harrisii lilies. W. J. Palmer made the wreath. Both Mr. Palmer and S. A. Anderson sent artists to Olean to fill their orders. Wm. Scott is rapidly recovering from his recent illness. Arthur Zirkman of M. Rice & Company, Mr. Keller of Reed & Keller, E. Hancock of S. S. Pennock-Meehan Company, and Jas. Barnett of Reed & Keller called on the trade recently. All report business very good. W. H. G. DAVENPORT, IA.—The Tri-City Florists' Club held a very delightful meeting last week in the home of William Knees in Moline. About 20 of the members were present. The discussion was on hotbeds and their care. A social time followed. The florists are planning for their annual banquet, which will be held some time in March. A committee of three, one from each city, has been appointed to arrange the details. Adolph Aird of Davenport, H. Staeps of Rock Island and Wm. Knees of Moline constitute the committee.

FOR SALE—Boilers, No. 18 Hitchings, \$50.00; 11 Sectional and Porcupine. Cheap. C. D. Zimmerman, 181 Norwood avenue, Buffalo, N. Y.

CONSTANTLY on hand, second-hand pipe with new threads and couplings; also boiler tubes without scale, ends cut square. Fraft & Kendall, Foundry Street, Newark, N. J. FOR SALE—Greenhouse material and hot bed sash milled from Gulf Cypress, to hot detail furnished. Oxford patty, specially made for greenhouse and hot bed sash. V. E. Reisch, 1429 Metropolitan Avenue, Brooklyn, N. Y.

SEVERAL good second-hand boilers of standard make on hand, thoroughly tested, complete in every detail. William H. Water, boiler & slide Avenue Station, C. R. R. of N. J., Jersey City N. J.

FOR SALE CHEAP—Florists' refrigerator, 6 ft., 3 in. high; 4 ft. wide; 2 ft., 3 in. deep. Bird's eye maple, trimmed with cherry. Three sides entirely plate glass and mirrors. Large mirror inside of back. New; never been used. Write for price. E. E. Wheeler, Box 152, Bridgeport, Conn.

PLANT FOR NAME.—I enclose portion of a greenhouse shrub that is in flower at the present time. It grows about two feet high. Can you tell me the name of the same?
New York. J. W.

—The greenhouse shrub sent for name is *Rhynchospermum jasmuinoides* (sometimes called *Trachelospermum*)

Sweet Peas for Memorial Day.

(50) When should sweet peas be sown outdoors to be in full bloom for Memorial Day? What varieties, in all colors, should be sown?

MEMORIAL DAY.

—We think it will be quite impossible to have sweet peas in bloom outdoors for Memorial Day, as to attain that object one would have to sow the seed early in March, and then have fine weather from that time right along. For a list of good varieties, consult some seedman's catalogue.

Sterilizing Soil for Violets.

(51) Is the sterilization of soil by steam practiced by the best violet growers and what is the effect upon the growth of the plants and upon diseases that are communicated to the violet through the soil—so-called root disease, etc.?
Wash. H. E. S.

—The sterilization of soil is not practiced to any extent by violet growers so far as we know. Perhaps some violet grower who has sterilized his soil will kindly supply the desired information.

Bulbous Flowers for Easter.

(52) I have still outdoors Dutch Roman hyacinths and tulips. When should they be brought in? What temperature and treatment will they require to be in for Easter?
New Jersey. INQUIRER.

—The bulbs mentioned should be brought in at once and given a temperature of about 50 degrees at night for the first few days, and should also be shaded from direct sunlight. In a few days the shade can be removed and the plants may be given a few degrees warmer temperature through the night. This will bring them in in nice time for Easter delivery.

Adding Ammonia to Manure.

(53) Kindly inform me whether 20 per cent. ammonia added to liquid manure is advantageous for Easter lilies and spiraea. I have used it and find that it turns the leaves yellow, and then they dry up.
Pa. L. K.

—It is very unwise to use ammonia with liquid manure, as one does not know the exact portion of the different ingredients of plant food con-

C. F. W. Gentemann.

C. F. William Gentemann, the well-known florist, of Eleventh and Payson avenue, Quincy, Ill., passed away Saturday afternoon, February 16, at Miami, Fla., where for the past three years he spent the Winter. He was afflicted with rheumatism, which became aggravated during the Winter months. By going South until Spring and spending the Summer there he kept in good health. He left Quincy November 1 last Fall and was planning for his return when his death came.

Mr. Gentemann was born in Germany, March 15, 1837. He went to Quincy at the age of fifteen years and later, being a trained florist, secured a position as such with Governor John Wood. A few years later he went into business for himself. He was very successful and five years ago retired, turning the business over to his sons, Herman and Philip and his daughter, Miss Minnie. Besides these three he leaves his widow, two sons, two daughters and three sisters. Mr. Gentemann was held in the highest regard by all who knew him.

Ferdinand Tschupp.

Ferdinand Tschupp, a well known florist of North Bergen, N. J., died at his home on Sunday, February 24, at the age of 66 years.

Mr. Tschupp was well known in the trade as a grower of ferns and General Jacqueminot roses, disposing of his output direct to the retailers, usually. He had been ill for several weeks before his death and the end was not unexpected.

Funeral services were held on Thursday, February 28, interment being in Weehawken Cemetery, a large attendance from various clubs and societies, of which deceased was a member, being present at the obsequies.

Rose Night at Philadelphia.

At the meeting of the Florists' Club of Philadelphia to be held Tuesday evening, March 5, 1907 P. J. Lynch, secretary and treasurer of the Dinee & Conard Company, West Grove, Pa., has kindly consented to deliver a paper on "Rose Plants by Mail," and in this connection it was decided to invite novelties among roses to be exhibited the same evening. All those who have novelties among roses will kindly ship same in care of David Rust, Horticultural Hall, Broad street, above Spruce, Philadelphia, Pa., sufficiently early so that the exhibits may reach destination in ample time to be examined by the members and friends of the club.

EDWIN LONSDALE, Secretary.

OUR READERS' VIEWS

Reflections on Job's Reflections.

Editor Florists' Exchange:

After so long a period of rest it was only natural to suppose that when Job reappeared to adorn the pages of The Florists' Exchange it would be with renewed vigor and a full consciousness of what might under the circumstances be reasonably expected from him. That the matter as well as the form of Job's polished reflections lend color to the suspicion that his effusions are the result as much of inspiration as of an inborn desire to bring about horticultural regularity, may only be the envious thoughts of the poor victims of his pitiless lash. And that being so (if it is so), the more credit is due Job for his unaided accomplishment of a task as arduous in execution as it is excellent in its finished state. If there exists even the most remote possibility of further improvement in the literary efforts of Job, we can only hope that they will be shown in a still closer attention to personal details and a more exclusive use of unadulterated billingsgate in his application of original as well as borrowed epithets; because only along these lines will any deviation from his already well-marked course be conducive to the furtherance of the interests of Job himself and the numberless readers whose views he expresses so delicately yet so vigorously. To some people it may appear superfluous to thus enlarge upon the already well-known reputation of the author of "Reflections on Current Topics," but an acknowledgment of sincere gratitude and appreciation is but a cheap price (and it ought to be paid ungrudgingly) for the intellectual feast so cheerfully served by one owing us nothing unless it be a grudge, and the mere suggestion of such a thought—banish it, even John Birnie. Job is above yielding to a resort to revenge, even in the event of the existence of what might to some minds be justification.

F. D.

Mixing Carnation Pollen.

Editor Florists' Exchange:

I have frequently used two to four different varieties of pollen upon the same flower. I did not mix the pollen, but where I used two varieties I usually fertilized one pistil only with a variety, using the other variety on the other pistil. Again where I use four varieties of pollen I will fertilize the upper half of one pistil with one variety and the lower half with another variety, and use the two remaining varieties of pollen in the same way upon the other pistil. Now, I do this only where I have a limited number of flowers upon a seedling plant and wish to make quite a large number of crosses. It has this disadvantage that in the pedigree of any seedling which may be produced from this polygamous hybridizing you will not be certain as to which variety is the pollen parent of your seedling.

Again, as to whether any two varieties of pollen could possibly influence one particular seed at the same time I would say that this might be very difficult to determine. It may be possible that the pistil on some varieties of flowers may be sufficiently large and coarse and the tubes which lead from the hair-like growths on the pistil down through the pistil and connect with the embryonic seed might be sufficiently large to allow of two grains of pollen germinating and seeding the mycelum-like rootlets down through the tubes, fertilizing the embryo at one and the same time; but this is hardly likely. What might occur is this: I am quite certain that the pollen grain upon the point of one of the tubes would fertilize the seed connected with that particular tube. Consequently different grains of pollen from different varieties, each resting upon its own individual tube, would fertilize the seed connected with that tube so that it would be decidedly possible for different individual seed growing in the same seed pod to be fertilized by several different varieties of pollen.

Now, as to whether any plant grown from any one seed produced in a pod fertilized in that way, would show characteristics of the several different varieties of pollen used, I am inclined to think that it might be possible. In order to consider this proposition it will be necessary for us to review some of the phenomena connected with the reproduction of the animal species. It is a well known fact in the reproduction of the human species that where a woman has given birth to children by a first husband and becomes a widow and marries again, the earlier children of the second husband generally show traits and characteristics undoubtedly inherited from the first husband, and in many instances they will resemble the first husband fully as strongly as the second, thus proving that characteristics common to both husbands have been blended in the offspring by the second husband through the impression which has been left upon the ova of the mother through her bearing children by the first husband. Again, in the case of breeding blooded trotting horses, the breeders of trotting horses or of any hooded stock are particularly careful not to allow their thorough blood mares to become foaled by any mongrel stock, for the simple reason that once a thoroughbred has borne a mongrel, she will never produce thoroughbreds thereafter, no matter if sired with thoroughbreds. Now, if characteristics can be blended in offspring produced from separate and distinct conceptions taking place at widely varying

times, could not characteristics be blended in the ovule contained in a carnation pod where a number of seeds were produced each having been separately and distinctly fertilized at the same time by separate varieties of pollen? While I have no proof or data that would enable me to demonstrate that this could be a possibility, I am not yet prepared to deny that it could be accomplished.

C. W. WARD.

Queens, N. Y.

Editor Florists' Exchange:

To my knowledge and experience, when pollen of two or more varieties is used in pollinating a flower, no mixture is effected, and can not have any influence on the progeny, as only one of the varieties from which the pollen is used can be the pollen parent. Pollen grains are individual, the same as the grains of seed grown from that flower. In our work we are very careful not to get any pollen mixed, as we wish to preserve a true record. In mixing the pollen a true record is certainly lost.

Lafayette, Ind.

FRED. DORNER, SR.

CLUB AND SOCIETY DOINGS.

American Rose Society.

The Annual Proceedings and Bulletin for 1906 has been distributed by Secretary Hammond. It is a document of some 48 pages and contains a report of last year's Boston meeting and exhibition, with the exception of the special essays prepared for that occasion, reference being given as to where those interested may find these papers published. A chapter on "The Rose from 'A Woman's Hardy Garden'" is also included, as well as a copy of the constitution and by-laws of the society, a brief record of its organization, lists of officers, life and annual members, etc. A portrait of President Robert Simpson forms a frontispiece, and several illustrations appear throughout the pages of the pamphlet.

The society seems to be working along right lines in the matter of distributing its literature; and with proper support will be in a better position than it now is to furnish reading matter that will be of service and interest both to the professional and amateur rose grower. The present publication reflects much credit on the ability of Secretary Hammond, as well as testifying to his enthusiasm in the work of the organization.

The next annual meeting and exhibition will be held at Washington, D. C., March 13 to 15, 1907, inclusive.

Illinois State Florists' Association.

About one hundred representatives of the craft and its allied trades and professions, nearly all members of the organization, met at Bloomington, Ill., on Tuesday and Wednesday of last week on the occasion of the second annual convention of the Illinois State Florists' Association, which had its initial meeting at Peoria on March 9 last year. The delegations from the various sections of the State were thoroughly representative of the trade; the local members of the profession were in every detail equal to the occasion, and whenever opportunity presented itself successfully ministered to the pleasure, comfort and general wellbeing of the visitors.

The gathering was called to order on Tuesday afternoon by President J. F. Ammann of Edwardsville and the address of welcome made by H. H. Green, President of the Business Men's Association, who heartily greeted the visitors on behalf of the city. A pleasant response was delivered by W. N. Rudd.

In the president's address he alluded to the healthy condition of the organization as it approached the close of the first year of its existence, to the purposes for which it was created, to what has been done and what remains to be accomplished and in closing, paid a deserved and touching tribute to the memory of the late James Hartsborne, one of the founders and leading spirits of the association and the presiding officer at the first meeting last year.

The reports of the secretary and the treasurer were read and approved and the following essays were delivered: Willis N. Rudd, Mt. Greenwood, "Carnations at the Toronto Show;" A. C. Beal, University of Illinois, "The Florists and the Experiment Station;" H. Hasselbring, University of Chicago, "The Effect of Light and Shade on Plants;" Professor J. C. Blair, Champaign, "The Development of Floriculture in Illinois."

Springfield, the State Capital, was chosen as the meeting place for 1908; and the following officers were elected: President, Albert T. Hey, Springfield; vice-presidents, J. F. Ammann, Edwardsville; Wilbur Gullett, Lincoln; Charles Loveridge, Peoria; William Hehl, Jacksonville; August Poehlmann, Morton Grove; H. Hasselbring, Chicago; A. S. Halstead, Belleville; secretary, A. C. Beal, Champaign; treasurer, George A. Kuhl, Pekin.

The Bloomington Florists' Club tendered a banquet at the Illinois Hotel at 9:30 o'clock on the opening evening to the members of the association, which proved to be one of the brilliant features of the gathering. The menu embraced quite an elaborate list of epicurean delights and the post-prandial exercises with W. N. Rudd in one of his hap-

plest moods as toastmaster, included the following toasts and responses, "The State Society and its Object," Professor A. C. Beal; "Our Hoosier Neighbors," J. D. Carmody; "The S. A. F. and Florists' Clubs," P. J. Hauswirth; "The Sunny Side of the Florists' Business," W. J. Gullett; "Why Isn't a Florist as Good as Any Other Man?" H. Hasselbring. George Asmus, J. F. Ammann, Professor J. C. Blair and several others aided to the enjoyment of the occasion with pertinent remarks on divers subjects pertaining to the interests of the assemblage.

The success of this convention will undoubtedly stimulate the interest in the association and its future importance and stability seem assured.

The Exhibition.

The trade exhibit was very creditable and was on the whole considerably more extensive and comprehensive than was generally anticipated. The exhibition hall was open to the public from 6 to 9 p. m., and was well filled with interested spectators. I. L. Pillsbury, P. J. Hauswirth, and C. Loveridge acted as judges, and reported as follows:

We find the display in general very good and we wish to commend all the exhibitors to your society. We wish to make special mention of the following: Aristocrat, White Perfection, and Red Riding Hood, by the Chicago Carnation Company, all of which were very fine; red seedling Number 20 by Bassett & Washburn, good size and color; Killarney and Morton Grove roses, the latter a sport of Mme. Abel Chateau, by Pochlmann Brothers Company, both of fine color and showed well; Governor Deneen carnation, a royal purple of large size, by A. C. Brown; Whitmani ferns, splendidly grown specimens, by George A. Kuhl.

And we wish to mention the following: Chicago Carnation Company, Joliet, six vases of carnations, two of Aristocrat, Red Riding Hood, White Perfection, Enchantress and Melody;

Bassett & Washburn, Chicago, two vases of red seedling carnation Number 20.

W. H. Gullett & Sons, Lincoln, two vases, one of Bride and one of Bridesmaid roses, of very high quality; three vases of carnations.

Pochlmann Brothers Company, Chicago, vases of Richmond, Killarney, Bride, Bridesmaid, Morton Grove, and Uncle John roses all very good.

Peter Reinberg, Chicago, vases of Richmond, Bride, Bridesmaid, and Uncle John roses, a good display.

Swan Peterson, Gibson City, Ill., a fine vase of Nelson Fisher, vase of white seedling Number 127 and dark crimson Number 103.

John E. Haines, Bethlehem, Pa., vases of Imperial and Pink Imperial; did not show to good advantage as they arrived in bad shape.

Erant & Noe Floral Company, Chicago, five vases of carnations.

Henry Baer, Peoria, Ill., vases of Lady Bountiful, Robert Craig, Enchantress, Mrs. M. A. Patten carnations, and vase of mignonette, all of which showed to good advantage.

W. C. Hill Floral Company, Streator, Ill., a vase of carnation Melody.

Baur & Smith, Indianapolis, Ind., vase of May, a light pink, which showed well.

W. N. Rike, Le Roy, Ill., a vase of Enchantress.

A. C. Brown, Springfield, Ill., vases of carnation Governor Deneen, seedling pink Number 202, Mrs. Lawson, Nelson Fisher, and three vases of mixed seedlings.

J. W. Schrader, Mattoon, Ill., vases of Enchantress and Rose-pink Enchantress.

George A. Kuhl, Pekin, Ill., a display of well-grown plants, including cyclamen, Primula obconica, Whitmani, Boston, and other ferns and begonias, all of which showed good cultivation.

Vaughan's Seed Store, Chicago, a general line of bulbs, Whitmani ferns, h. p. roses, fern balls, dracaenas, etc.

Davis Brothers, Morrison, Ill., Whitmani fern.

A. L. Randall Company, Chicago, a fine and large display of florists' supplies, including baskets, chiffons, ribbons, imported novelties in vases and baskets, boxes, wheat sheaves, etc.

B. P. Winterson Company, Chicago, display of florists' supplies.

Bombayreed Manufacturing Company, Columbia, S. C., display of Bombayreed jardiniere.

Advance Company, Richmond, Ind., ventilating apparatus for greenhouses.

A. Dietsch Company, Chicago, gutters and gutter supports with iron posts.

Ionia Pottery Company, Ionia, Mich., flower pots, lawn vases, hanging baskets, etc.

Geo. Kellar & Son, Chicago, flower pots, fern pans, hanging baskets.

G. M. Garland Company, Desplaines, Ill., iron gutters for greenhouses.

W. K. W.

PAUL ABELE,
Secretary Society of Southern Florists.

tist. The efforts of these entertainers throughout the evening were highly appreciated and many encores were demanded from them.

About fifty of the club members participated in the proceedings, and the dinner committee was highly complimented upon the efficient manner in which they had brought this annual gathering to such a successful culmination.

When the cigars and coffee had been reached Toastmaster Patrick O'Mara arose and addressed the assemblage in his usual sparkling manner. He referred to the aesthetic side of the florist's business, and said that in a gathering like this there always had to be a certain amount of hot air emitted. There was no one in the business but what had periods of thought and moments when he thinks, or when he thinks he thinks. The divine spark of feeling and a love for nature, he said, was highly developed in members of our trade, and they yield to no man in aestheticism. The speaker also referred briefly to our national society and the New York Florists' Club, and drew attention to the fact that there has never been a man better fitted to be at the head of our club than the present president, Charles H. Totty. (Applause.) He called upon that gentleman to respond to the toast: "The New York Florists' Club."

Mr. Totty replied briefly and made a reference to the good work that had been done along horticultural lines recently by pricking the bubble of Burbankism.

J. C. Vaughan was called upon to respond for the S. A. F. O. H., and made an urgent plea for the coming national show to be held under the auspices of

that society. Mr. Vaughan said, in part, that unity and organization must be the keynote if success is to be achieved. He asked that every firm or individual that was in any way connected with the business be present, and also exhibit at this show. He referred to the great growth that had been made in our business during the last twenty years, and particularly to the development along cut flower lines during that period. Less than twenty years ago, he said, one of our present largest growers was a market gardener, was digging potatoes and selling them for 50c. per bushel; to-day that gentleman is worth three-quarters of a million dollars, all of which has been made in the cut flower business within the last twenty years. We should be interested in all of the many sides of horticulture, and the present time really demands such a show as has been planned by the national organization. Mr. Vaughan also referred to the fact that the newspapers were now glad to get horticultural matter and use it in their columns. This feature is one that promotes our interests and gives us a needed opportunity, as every branch of the business was helped materially by the publication of horticultural matter in the daily press. The speaker hoped that every one would be so impressed by the importance of this national show that they would be determined to grow something for it, to exhibit there, and also be present in person.

Harry Turner, superintendent of Castle Gould, L. I., replied to the toast "State Development," following which the guest of the evening, Senator F. Minturn, spoke on agriculture and her fairest daughter, horticulture. The senator is an accomplished orator and his words were listened to with the greatest interest. Referring to the Jersey agriculturists, he said they always knew a good thing when they saw it, and that was the reason he was present, though he could not see why or what relevancy and consistency there was in asking a lawyer to come and talk about flowers. The senator gave a brief but glowing description of the mightiness of other nations, particularly the Romans, and showed during his remarks that that nation began to fail just as soon as the reins of government were taken hold of by those the farthest away from the land—that is, the dwellers in cities. He said that it was the farmers' sons and daughters that the prosperity, the success and the continuation of self-government must be relied upon. All the greatest men have come from the country. The environments that surround the farmer, the agriculturist and the horticulturist, are necessary for the bringing out of great characters, and whenever a country has been subdued by some other nation and has been made to grovel at the feet of some conqueror, it has only been because the crop of men had failed. The speaker was cheered immensely at the close of his remarks, after which W. F. Sheridan was called upon to respond to the toast "Our Night," which he did in a most acceptable manner.

J. E. Lager responded to the toast "The Explorer," recounting some of his thrilling adventures while collecting orchids in the mountain ranges of South America.

John Birnie responded to the toast "Exhibitions as Educators." J. A. Shaw spoke for "The Ladies," and S. S. Butterfield for the "Horticultural Press," by which time it was past 1 o'clock, Sunday morning, and the 1907 dinner of the New York Florists' Club passed into history.

THE ST. LOUIS HORTICULTURAL SOCIETY.—

Tuesday afternoon, February 19, the executive committee of this society held its regular monthly meeting at the Hamilton Hotel with all members present, except Theo. Miller and F. H. Meinhardt, both having for excuse that their wives had the grip. Nineteen new members were enrolled. The Spring flower show committee made report and after a few minor changes the rules and premium schedule were approved and adopted. The exhibition will be held in the Masonic Temple Hall, where a successful show was held some years back. In addition to the regular exhibits some of the most prominent florists will make up booths and exhibit attractions in floral art. Professor Dillwyn M. Hazlett has been engaged to give illustrated lectures, which fact alone will attract immense attention. Moreover, the committee is still working hard on the finer points of the show, which will be given by and for the upper set, and will present something worthy of the attention of those who are invited as well as being creditable to the society, under whose auspices it is held. Entries or inquiries for information should be addressed to the undersigned.

OTTO G. KOENIG, Secretary.

THE ELBERON (N. J.) HORTICULTURAL SOCIETY

held its regular meeting on February 18 with President Robertson in the chair. James Kennedy, superintendent for G. W. Young, Esq., read a very interesting and instructive paper on "Outdoor Roses." The exhibition table was covered with cut flowers, and it was conceded by all that it was the finest exhibit that has yet been staged at the meeting. The exhibitors were: P. Murray, who scored highest with a vase of Eresia Purity; W. D. Robertson, a vase of gardenias; A. Bauer, Beauty of Nice stocks, and carnation Victory; A. Greib, a bouquet of violet Princess of Wales; H. Wood, a vase of callas; F. Dettlinger, a bouquet of California violet; E. Petzel, a vase of white carnations; W. Swain, a collection of cut flowers, and J. Kennedy, a vase of tulips, Yellow Pottebakker; W. Kennedy, of Redhank, showed a vase of seedling carnations.

ALBERT T. HEY,
Pres.-Elect Ill. State Florists' Assn.

NEW YORK FLORISTS' CLUB DINNER.—The annual dinner of The New York Florists' Club took place on Saturday evening last, February 23, in the St. Denis Hotel, corner of Eleventh street and Broadway. The committee of arrangements was composed of W. F. Sheridan, chairman; John Birnie and John Scott. The management of the St. Denis Hotel provided a most agreeable menu, and the dinner, from the first course to the end, passed off very smoothly, every one who sat down being more than satisfied with the many good things placed before them. The tables were decorated profusely with carnations and narcissus, and a boutonniere of Dendrobium nobilis was laid at each plate. A beautiful vase of Alma Ward carnations, donated by the Cottage Gardens Company, Queens, N. Y., graced the table at which the officers sat, and there were also vases of carnation, Welcome from Dailedouze Brothers, Flatbush, N. Y., and carnation Winsor from F. R. Pierson Company, Tarrytown, N. Y., together with Narcissus Princeps from Secretary John Young. The orchid boutonnières from presented by Lager & Hurrell of Summit, N. J.

The committee also provided a first-class entertainment, the musical part of which was under the direction of Professor Charles Hirst, and included instrumental music, a good vocalist and a monologue ar-

CARNATIONS

Carnation Culture in the South.

(Paper read by W. B. Patterson, Jr., Montgomery, Ala., before the Society of Southern Florists at its New Orleans meeting.)

I have been asked to write a paper on "Carnation Culture in the South." It strikes me that this is quite a broad subject, for we have a very large area when we take in what is known as "the South." In fact, I am sure there are just as wide differences as to climate, soil, etc., as there are between the New England and the Western States. My knowledge being limited to my own and adjoining states, I will endeavor to give my personal experience and those facts which I have picked up from neighboring growers, rather than to attempt a broader scope. I believe that we growers in the South have a far more difficult problem in growing carnations than our Northern brethren. Our long hot Summers and lack of good soil are our most serious handicaps.

Treatment of Cuttings.

I will now endeavor to give you my personal experience step by step. In selecting the cuttings I am always careful to take them from the healthiest and strongest plants, using side cuttings from the blooming stem always, except when we wish to work up the stock of a certain variety, then we use top cuttings also. But we have found the side cuttings root better and make the strongest and best shaped plants.

We use fine, clean sand. It does not make very much difference about the sand, just so it is clean and entirely free from decayed matter of any kind.

We use a little bottom heat, about 56 to 58 degrees, with a top or outside temperature of 48 to 50 degrees. With too much bottom heat the vitality of the plant is injured. Our first effort six years ago to root carnations was a total failure, due entirely to too little water. For the first two weeks you cannot give the cuttings too much water, then afterward, very lightly, until after three weeks none at all. In thirty days most varieties will be rooted well. If you can so arrange it that the cuttings can get full sun after two weeks, then they will make better stock. The more light the better after the cuttings are struck. We transplant them into a bench in about two-and-one-half inches of soil; planting them one-and-one-half inches apart in the row, the rows about two-and-a-half inches apart. We find this method better than pots, for then the cuttings are not liable to become stunted or pot-bound and do not dry as when they are planted in pots. When the time comes to plant them in the field then we cut them out with a flat trowel.

Field Culture.

We always try to plant in the field the first good weather we get after March 25, believing in an early start and early planting in the houses afterward. In our locality this date is not too early, for we never have cold weather enough to injure the plants after March 25. Probably this date would be somewhat early for those north of our latitude. After getting them planted we keep the cultivator and hoes going once or twice a week; in fact, as often as the weather will permit. We cultivate shallow and often, keeping a light loose layer of soil on top all the time. By the second week in July we are ready to plant indoors again. But before taking up this, I will take up the soil.

Soil.

Here we have our most vexing problem. We have been using just ordinary red clay subsoil mixed with manure in the proportion of three parts clay to one part manure. This soil is made up one year before using. In fact, this soil is the only kind used by the majority of growers in Alabama, Georgia and Mississippi. The top soil in most of these localities is too light and sandy.

We have just this year invested in thirty-two acres of an old pasture. This soil is what is known as black prairie soil, and this is the best farming soil in the State. It can be found in all degrees of stiffness, to a sandy loam. It closely resembles the prairie soil of the Western States, and is found in limited areas in Georgia, Alabama and Mississippi, the belt of it in Alabama running just south of Montgomery.

Removing from Field.

We use about four to five inches of soil on benches and give the plants a distance of ten to twelve inches, depending on the size of plant and variety planted. We have an experienced man in the field to dig the plants, being careful to get as many roots as possible and to injure as few as possible. Just before planting we give the soil a light dressing of bone meal. We are careful not to give too much, for I believe too much of it retards the early taking hold of the soil by the plants. After planting, being careful not to plant too deep, we give the plants a thorough soaking. When the soil becomes dry enough, we keep one half inch of the top scratched and loose so that the air is admitted freely to the soil. We are careful not to give the plants too much water to start with, but keep them rather on the dry side for the first month or six weeks. As the plants take a firmer hold they require more water.

Staking.

After the plants have begun to grow nicely then we stake them, getting the lanky growing varieties staked first. We use the Model carnation support, but believe a combination of this support and string and wire is just as good, using the rings to support the body of the plant and the wire and string to support the shoots.

After Treatment.

We always spray our carnations on bright sunny days, trying to get as much force as possible, and using judgment as to varieties more subject to rust, being sure that the day will be clear. We are always able to keep down the red spider and have no trouble with the rust, except where some varieties have contracted it before housing, especially during a wet Summer which we sometimes have. A solution of this, I believe, is early housing or indoor culture, about which I will have more to say a little later.

The first feeding is given about the middle of November or the first of December, in the form of one-half inch of well-decayed cow manure, with light dressing of hard wood ashes and bone meal. By the first of January the roots are all through this mulch, then we begin feeding liquid manure, using it weak at the first, giving three or four applications and making it a little stronger each watering. We give the plants a watering with this once a week. We use all wood ashes and a little bone

Single Bloom of Carnation Winsome

meal about twice a month, mixing it with a little rotted manure, affording it to the plants in the form of a light dressing, letting the water wash it into the soil. Toward the first of April, when the sun gets hotter and the soil begins to crack lightly, especially along the edges of the benches, we give them another mulch, a little heavier than the one applied in the early Winter.

Insects.

Our most dangerous enemy is the thrips, in fact it is very hard to get entirely rid of them, for you can find them on every plant out of doors during the Summer. Our best remedy is fumigating with tobacco dust and red pepper. Spraying with Tobakine with a fine spray pump is also a very effective remedy. We find the latter a little more expensive than tobacco dust, but I believe it has a quicker effect in that it reaches the insects quicker and more readily than the smoke. We keep a close lookout for this insect, for it soon ruins the plants. In fact, after the plants have taken good hold of the soil, I think it a good plan to spray them with Tobakine once a week, even if we do not see signs of thrips present, or fumigate with tobacco and red pepper as soon as the houses are closed in.

The aphid is very easily handled; we get rid of all of them in trying to keep down thrips. With careful spraying we never have much trouble with red spider.

Diseases.

The most dreaded and the only disease that has given us any trouble is stem rot. This was due mostly in planting the carnations in the same field more than one year in succession. I think it a good plan never to plant carnations in the same plot of ground the succeeding year; carrying this plan out

strictly, and being sure that no kindred disease, as wilt or stem rot in other plants, has been in the field we intend to plant, I am sure this disease will give us no trouble. Sometimes when the Summers are very rainy we usually have trouble with rust; but by housing early in July this is usually avoided, for we generally have this rainy spell in August.

Indoor Culture Entirely.

I would like to say here a little about indoor culture entirely. From the little experience that I have had in this line, and what I have seen from greenhouses in adjoining cities, I am sure it can be made a success. Mrs. Lawson, Enchantress and kindred types have already proved adaptable to indoor culture and I think with more experience as to the care and growing of the plants indoors it will supplant field culture, and I feel sure that I will be able to say more about this next year.

Varieties.

The following are the varieties grown by us. For white our mainstays are Boston Market and White Cloud. We also grow Governor Wolcott, Moonlight, Fred. Burki, White Perfection, Lieutenant Peary and the Queen. White Perfection is undoubtedly the best commercial white to date.

For pink we grow mostly Mrs. E. A. Nelson and Mrs. Lawson. We also grow Mrs. Frances Joost, Nelson Fisher and Helen Goddard in limited numbers. For light pink we grow Enchantress only. What is the use of growing others in this shade when you have Enchantress? We have a rose-pink sport of Enchantress which is a good one; probably the same thing that is on the market elsewhere.

For red we grow Crusader and Cardinal as the best. We also grow Red Lawson and America.

For maroon shades we grow Harlowarden and Glow Worm. The last named I consider better than Harlowarden.

We have invested in some of the newer varieties, namely Winsor, Helen Gould, White Enchantress, Aristocrat, Victory, Red Chief and Beacon, which we cannot say much about until they have had a thorough trial.

I feel very much encouraged that we Southern florists and growers are now able to organize as a body and can get together and talk over our experiences, and I believe that this first convention marks an epoch in our growth. It means that the South is to come forward soon in the introduction of new varieties of carnations, roses and other greenhouse and garden plants, and I believe that in this way we will be able to get varieties specially adapted to our soil and climate, etc.

John Reimels's New Carnations.

WINSOME is a seedling of 1901 and is a cross between Mrs. James Dean and Prosperity. The flowers are of the William Scott shade of pink and somewhat resemble that variety in form, but are much larger, averaging about 3½ inches in diameter. It has a good stem and is a good bloomer all the year round. Toward Spring, flowers can be picked with stems up to 42 inches in length. It blooms late in the Spring and has proven the best Summer flower we have, producing blooms, until thrown out in July, that are fully as large as they are in the Winter, consequently sell for three to four times as much as other varieties that become smaller just as soon as the hot weather comes.

SEEDLING NO. 32 is of a brilliant scarlet color, and is in its fifth year. It is a cross of G. H. Crane and Maude Adams. It is a free bloomer, comparing favorably with Victory in this respect. This seedling is a vigorous grower and is very healthy, having very long, stiff stems. At present we are cutting flowers with stems about 30 inches in length. The blooms average about 3 inches in diameter, and they keep well and have proven good sellers.

JOHN REIMELS.

Woodhaven L. I.

Trumpet Vines.

The best known of the trumpet vines is the native one, Tecoma radicans, and its varieties. There is a variety with a dark crimson flower, and another with a yellow flower, the typical one being considered a red. Formerly the crimson one went under the name of Fortune, but this is now considered a decided mistake. The yellow one is comparatively new and a decided acquisition. It originated in Texas, whether as a sport in cultivation or not, is not stated, but it is a most desirable vine.

Another Tecoma now fairly well known is T. grandiflora, a Chinese species. The flowers are larger than those of the others named and are of an orange-crimson color. It is a more attractive sort than the others and although it has been in cultivation in these parts for over 50 years at least it is still classed as uncommon.

All the above named Tecomas are easily raised from root cuttings, made in Spring, or through the Winter, and set out in rows or in a bed as soon as the season opens. Owing to its scarcity in collections T. grandiflora is often propagated by grafting on roots of T. radicans. They grow well in this way; but in cases of a desire to propagate it from roots care must be taken that the plant is on its own roots.

The evergreen trumpet vine, known as Bignonia capreolata, is a Southern species, hardy at Philadelphia. It can be increased both by cuttings of the half ripened wood or by seeds, and probably also by root cuttings.

J. M.

The Development of Illinois Floriculture.

(Paper read by J. C. Blair, Chief in Horticulture, University of Illinois, before the Illinois State Florists' Association at its Bloomington meeting, February 19, 1907.)

It has been my privilege to speak before other gatherings upon the development of Illinois horticulture and the development of landscape gardening. I turn from these subjects to my present one with great pleasure. Lest I be misinterpreted here, let me explain—I have watched for eleven years the growth of Illinois along general horticultural lines. I have seen spraying and sprayers laughed at by fruit growers throughout the fruit growing section of the state. I have seen clean cultivation and so on most conspicuous by their absence, but I have lived to see not only the conversion of these mockers, but their adoption of the latest devices for orchard treatment. I have seen the Department of Horticulture of the State University grow from one man power to a staff numbering fourteen individuals each equipped by special training for his own particular work. I have seen landscape gardening developing gradually into its rightful prominence, but up to the present time I have not seen just the advance of floricultural interests which I had hoped for—hence my pleasure in meeting with you to-day to discuss the development of this industry.

Floriculture's Drawback.

If it be true that floricultural interests have not gone forward hand in hand with other lines of work it is due in large measure to the fact that our equipment and appropriations have not been sufficient to enable us to go to any length in matters pertaining to floriculture. If you refer to Page 303 of The Florists' Exchange for March 1901, you will find some statements relative to the then existing relations between the experiment stations and the florists' trade. Those reports show that the florists are receiving far too slight assistance when taking into consideration the importance of the industry. Going back a step further then, it is equally true that the fault lies in large measure with the florists themselves in that they have not demanded state appropriations for the carrying on of this work. It is a fact, too, that the florists of Illinois were not so organized that they were in a position to seek specific appropriations until two years ago. With the birth of this organization which is here assembled, in its second annual convention, there was put on foot a movement which, if rightly directed, will perpetuate for all time the leadership of our state in all matters pertaining to floriculture. Of course, I would not belittle the good work which has been done by the several local florists' organizations within the state. All of these are necessary but their work should be co-ordinated with some general organization, preferably the state association which you now have.

Praise for the Association.

Perhaps I may be pardoned for saying that your organization is so new that the novelty of its newness has not yet worn off and that it is hardly to be expected that you would have gotten down to much serious business by this time. I want to say though, that I am delighted not only with the large membership which you have but with the business-like methods with which you are pursuing your work. Certainly, too, the exhibition which you have put before us is a noteworthy one. I only wish that each one of our leading citizens throughout the state could feast their eyes upon the many fine specimens which you are showing. The appropriation which your organization is now asking of the state would then be assured. At least their curiosity would be so aroused that they would seek information with regard to the accomplishments of floriculture not only during the past years of its life but they would be even more eager to learn something of its probable future development.

Floriculture's Progress.

I wish I had the power to adequately convey to the minds of all my hearers or readers just what a wonderful evolution has been taking place in the world of floriculture. If this were done, it would leave no room for question with regard to the future development of the industry and there would be no need to lay the lash on and tell you what is your present duty as an organization. However, I am not going to attempt to tell you anything with regard to the past of Illinois floriculture. At least what I have to say touching this point will be in general terms and that only so far as it will suit my purpose in dealing with what I conceive to be the gist of this paper, namely—a correct interpretation of the present status of Illinois floriculture. When this is done we may fairly and fearlessly speculate as to the future development of the industry.

Where Illinois Stands.

Floriculture as we find it in Illinois to-day concerns itself with two more or less clearly defined branches, commercial floriculture and amateur floriculture, the former flourishing near the larger centers of population and the latter being more or less general over the state. The interests of both commercial and amateur floriculture are large. The cut flower trade of Illinois is probably to-day greater than that of any other state in the Union. In 1900 it ranked second, but its growth since that time has been phenomenal and the authorities in

the Department of Agriculture at Washington are now inclined to place Illinois first in rank. It is very difficult to obtain reliable figures on the extent of the flower-raising industry in the state. In the best figures at our command only the produce of the commercial florists, of course, considered,

glass for different counties, it appears at once that there is considerable range in the returns per square foot. For instance La Salle county reports a return of \$10,470 from 29,250 square feet of glass whereas Logan county reports slightly less, \$10,375 from 70,000 feet of glass; Champaign county reports \$9,776 from 22,200 feet of glass and Ford county \$9,955 from 70,665 feet of glass; Grundy county reports \$8,565 from 29,400 feet of glass; whereas Peoria county reports \$8,122 from 86,509 feet of glass. In fact, the returns from various counties per square foot of glass run from 13 cents or less to nearly \$1, a discrepancy hard to account for.

(To be continued)

What a Southern Florist Can Produce for the Northern Trade.

(Paper read before the Society of Southern Florists' on February 15, 1907, at New Orleans, La., by B. M. Wickers, of Gretna, La.)

This embraces a very large field, and I think myself hardly able to cover it, as there are such a large variety to take up. I will divide the subject into five classes as follows: Ferns, palms, aquatics, bulbs and roots, and foliage and flowering plants.

Ferns.

Ferns are my specialty and so I will make a few remarks on them first. The Nephrolepis in all its old and new varieties is the most profitable for the Southern florist to grow. My attention was first called to these ferns some twenty-five years ago when I lived in South Florida, where there were hundreds of acres of *N. exaltata* growing wild. I started advertising and sold thousands of them all over the United States and Canada. In 1893 I returned to Louisiana and saw that very little effort was made here to supply the North with ferns. I at once made them my specialty. Very little artificial heat is needed here to grow them. I generally begin the first of April to move the plants outside, either in pots or plant them in the open field without any protection from the sun but a careful watch has to be kept over them all Summer to keep them well watered. The varieties I grow in the full sun are: *N. exaltata*, *N. compacta*, *N. tuberosa*, *N. bostoniensis*, *N. Piersoni*, *N. elegantissima*, *N. Barrowsii*, *N. Whitmani*, *N. Wittholdi*, and *N. Washingtoniensis*.

N. Scottii and *N. davalliodes* and all adiantums and other ferns need slight protection from the sun. A lattice shade giving $\frac{1}{4}$ shade and $\frac{3}{4}$ sun will make a good protection. By the middle of November they all should be in the house at about that time, as we generally have a light frost. Plants grown in this way will be full and stocky, and far superior to the Northern-grown greenhouse stock, either as decorative plants or for cutting.

Last Summer I kept a record of a batch of *N. Whitmani* and they averaged 40 runners to a plant in six months. I have shipped them by freight and had them three weeks on the road and they arrived in perfect condition.

Palms.

The palm is our next plant of great importance. All varieties can be produced here cheaper than in any other State. Some can be kept the entire year outside, while others need a little protection by cold frame, and only a few kinds need a greenhouse for three or four months in the year. In the Summer almost all palms need a lattice shade to protect them against the hot sun.

Bulbs and Roots.

Now as to the bulb and root industry, it is very inviting for the Southern florist. I will only mention a few which are well adapted to one or another of the Southern States. All amaryllis and crinum, hedychium, curcuma, alpinia, phrynum, cooperias, zephyranthes, pancratium, white Roman hyacinths, narcissus, tuberoses, fancy and other calladiums and alocasias and many other bulbs grow here to perfection.

Aquatics.

Next in order are the aquatics. All tender and hardy water lilies can be grown here the year round outside with the least attention.

If I could sell, for instance, all the tender water lilies I could produce at \$4 per hundred, I would grow nothing else.

Plants in General.

To close I will make a few remarks on plants in general. There are many good plants you don't see catalogued, because it costs too much to keep a sufficient number of stock plants to propagate from, in the North. In the South it is different, the florists have no trouble to Winter over a lot of stock plants and can make cuttings the entire year; and the plants here are often far superior to the Northern product. For instance, a *Clerodendron Balfourii* rooted in the South from a hard wood cutting will produce large bunches of flowers in a 2-inch pot, where a plant from a soft cutting growing in the North will not produce a flower under ordinary circumstances for two years.

There are also some plants that are not grown in this country at all which could be produced in some of the Southern States, such as the *Laurus nobilis*, the azalea and others.

In conclusion I will say that 99 per cent. of all plants grown in the North, the South should produce.

Carnation Winsome

Originator John Reimels

and it is questionable if in the realm of floriculture the amateur interests are not of an importance that compares favorably with those of the commercial grower. It becomes necessary then to deal with the commercial and the amateur phases of Illinois floriculture separately and to estimate their importance by somewhat different standards and from somewhat different view points.

A Few Figures.

Taking then the phase of commercial floriculture, it will be noted that such statistics as we have are suggestive and helpful in arriving at an estimation of its importance in the state. The area of glass reported in the florists' establishments in 1900, according to the United States census for that year was 8,414,541 square feet. The sales amounted to \$1,894,960, mostly wholesale. The value of the property was \$4,468,056 and the amount expended for labor was estimated at \$420,538.

Reimels' Seedling, No. 32

It is hard to check these figures by any means at our disposal. Data of this kind had never been gathered at any preceding census (excepting the year 1890); and even if it had been, the industry is of such recent growth that comparisons with preceding reports would mean nothing. In comparing the amount of sales with the number of square feet of

FOR THE RETAILER

Funeral Work.

We all admit this is rather a gloomy subject but ever an important one with the retail florist, especially at this season of the year when any kind of work is welcome. It is something we must expect at any time and all the time; it comes when we least expect it, and sometimes, as during holiday rushes, when we least require it. But whether it comes the day before Christmas or on the Fourth of July, it has to be attended to.

Funeral work, as with everything else in the florist business, admits of no delays. The general acceptance of colors in the designing of funeral pieces has been a great help to the florist, and often assists in cleaning up stock that would otherwise go to waste. And the occasion is rare nowadays where all white flowers are used without the addition of some color. I have often heard the remark from customers in giving their orders: "I want something that will not be too funeral," which really sounds odd when they are ordering for that purpose. Years ago, to use colors in making up funeral designs would have been little short of sacrilege.

I gained my first experience with funeral work in a small town in the south of England, where we never dreamed of using anything but white flowers; nowadays there are few colors that are not employed for this purpose, a wreath of Narcissus Golden Spur being the subject for a wreath which was described in a recent number of this paper, showing that even yellow is used on some occasions. It would seem that scarlet carnations would be rather out of place for work of this kind, but I saw them utilized recently, in depicting the emblem of the "bleeding heart."

Funeral designs are not as fashionable in New York City as in former years, and it is only on rare occasions that one will see a first-class store making anything more elaborate than a wreath or a cross, although among the poorer classes there is still a large demand for fancy designs, especially in provincial towns, and out West, to which region large shipments of fancy wirework are made every week from New York.

There is, also, almost a total absence of lettering, or words, in first-class work, which is really as it should be, as they certainly have a tendency to cheapen the look of otherwise artistic work. There are very few things that the wireworker has not been called upon to make at some time or other, either emblematical of a trade or profession, but more often of a secret society; yet there is nothing handsomer, or that carries more dignity, than a really beautiful wreath or cross. And so many and varied are the styles, and there are so many beautiful combinations of flowers, that anything else in the way of design seems superfluous.

The flat or funeral bunch is also in great demand in the higher class of funeral work, and, of course, the floral pall, or casket cover, is no doubt here to stay.

The introduction of the galax leaf did much to revolutionize funeral work, both the bronze and green leaves now being a necessity. They practically have driven out the beautiful ivy leaf, which seems so appropriate and is really hard to beat.

One of the best casket covers I have seen was formed entirely of ivy leaves, and covered the whole casket, top and sides. A wire mosquito netting frame was used; this was covered with smilax in a thick layer, the leaves being stemmed on wires in bunches of three and four. Every leaf had been cleaned and rubbed over with sweet oil to give a lustre. They were attached to the frame in such a manner that each individual leaf stood out and showed to the best advantage, the effect obtained being that of ivy growing naturally. The only adornment in the way of flowers was a large cross the full length of the casket, made of *Colegyne cristata*, the pure white of the orchid forming a beautiful contrast.

Galax leaves, however, have two advantages over ivy, one being that they can be had in unlimited supply; the other, their cheapness. There is nothing to take their place so far, and it is doubtful if there ever will be.

Leucothoe sprays, both bronze and green, which came some time after galax, are also very good, and a great time-saver where large effects are to be obtained, as all that is necessary in their case is to sharpen the ends, and push them in the moss.

A very handsome wreath was made of bronze leucothoe sprays; it was in crescent form, about two-thirds being of the sprays and the remaining third a cluster of cattleyas and lily of the valley. The base was made entirely of the latter, and the stem, which had been mossed, was filled with the same flower, stemmed quite short to form a column.

Some varieties of *herberis* are very good for funeral work and are sometimes so employed. The best lot I have seen came from near Seattle, Wash., and were imported by a retail florist.

Variegated foliage of all sorts is very good, especially croton leaves which make handsome designs when combined with violets, lilies, etc.

Orchids are a great factor with the high-grade florist, and have become an almost indispensable commodity; entire casket covers are often made of orchids several hundreds being used in one order. One of the most elaborate designs that has come under my notice was made up as follows: The main portion of the casket cover was composed of *Cattleya Trianae* and *Adiantum Farleyense*; a small cross of gardenias rested at the foot, its length being about thirty inches. A fringe of lily of the valley was attached to the lower part of the pall, extending all the way around. At the same funeral was a wreath made of *Colegyne cristata*, with a large spray cluster of *Phalenopsis Schilleriana*.

A florists' supply house in New York is showing a new casket top that will doubtless prove very useful. It has very much the appearance of the old style mosquito netting wire frame cover; but it has the advantage of being adjustable when the piece is made up. Every retail florist will at once see the advantage of this, as it is most annoying to arrive at a house and find the casket cover too large or too small, as the case may be.

Cycas leaves are still used in large quantities. The fresh cut ones are usually to be obtained in this market, and are much handsomer than the dried and painted product. An immense wreath of cycas leaves was the "piece de resistance" at a recent funeral; it stood nine

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dallas, Texas.

LANG, THE FLORIST, the largest flower store in the South, Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Texas, Louisiana. Mail and telegraphic orders solicited.

feet high from the base to the top, and was tied with purple ribbon twelve inches wide. The base was filled with the immense leaves of *Cycas circinalis*, some of them being six feet in length and fourteen inches wide. The effect was colossal. The *Cycas circinalis* leaves are imported from Trinidad and others of the West India group of islands, but are seldom to be had even in this market. They are undeniably handsome, and splendid for large effects. D. RAYBUN.

Peonies for Oregon for Memorial Day.

Editor Florists' Exchange:

Replying to the inquiry relative to "Peonies for Memorial Day in Oregon" L'Esperance Peony is always in bloom before that day, and continues to flower a week after. It is one that can be depended on, besides the official ones which are generally a week ahead. L'Esperance is not the correct name, but the variety has been sold pretty generally in this country by that designation. *Edulis superba* is most likely the right name, while some growers think *Duchess de Nemours* (Gusar. 1840) the correct one. We hope to have this straightened out at Ithaca, N. Y., next June. The above named early peony is a most valuable variety. J. F. ROSEFIELD.

West Point, Neb.

Editor Florists' Exchange:

Referring to question Number 33, page 215, I have been trying to get several growers to keep a record of dates without success. The coming season we will make a note of date of blooming, height, etc. Several of my customers will record dates; I can then advise inquirer. The late midseason sorts should about fill his requirements.

Canal Dover, O.

C. BETSCHER.

Floral Pillow

The Eighteenth Annual
Spring Number
OF
THE FLORISTS' EXCHANGE

WILL BE PUBLISHED ON

Saturday, March 23, 1907

and all advertisements intended for that issue should reach us on or before **WEDNESDAY, MARCH 20.**

IN drawing attention to this announcement, we would state that firms who have placed their advertisements in our **SPRING NUMBERS** of previous years have invariably found them pre-eminently successful as business bringers; so much so, in fact, that with each succeeding year the demand for space becomes more pronounced.

The date of publication of our 1907 **SPRING NUMBER** has been selected after careful consideration of the many phases attendant on the *Florist, Nursery and Seed Trade* and allied industries.

As a means of offering your trade specialties to the greatest number of possible buyers at a time when these purchasers are actually looking for supplies, we submit that **THE FLORISTS' EXCHANGE**, through its **SPRING NUMBER**, presents an unequalled opportunity, *and at much less expense than any other method affords.*

There will be no advance in our advertising rates. Our schedule of charges never varies, and no one advertiser is favored at the expense of another advertiser.

Our paid-up circulation more than adequately covers the entire country, a fact that assures advertisers finding customers for their offerings in every City, Town or Village where a Florist, Seed or Nursery business has been established.

THE FLORISTS' EXCHANGE has, ever since its inception, borne the reputation of being the representative business medium of the trade; thus it is that advertisers continue to give it the cream of their business.

THE FLORISTS' EXCHANGE is, we assert, the best and cheapest medium in its class for advertisers; not that the cost per inch is cheap, but because of the fact, as already stated, that it is the representative trade paper, and has, in addition, the largest number of readers who are the biggest buyers. It stands to reason that it therefore must create a large purchasing clientele for the advertiser.

The question with the progressive, up-to-date merchant is not one of the cost per inch of space, but, Will my advertisement in that paper sell my goods?

Think it over.

Three Grand Commercial CHRYSANTHEMUMS

HAVING raised thousands of seedlings in the last twenty years, I have three of the very best seedlings—considering fine form, color and stem for commercial purposes—in cultivation, and will offer a limited number at reasonable prices; nothing better in their season (all are certificated.)

MRS. R. N. BIRD.

Fine glistening white, incurved, outer petals reflexed; good form and stem; mid-season.

MRS. JOHN FREIS.

Large, early, incurved yellow, Bonnafon type; the best early yellow to date; October 15.

CHAS. RAGER.

Large, pure white, incurved, ivory form, fine stem and foliage; one of the best whites in cultivation; October 25.

PRICE: Each, 25c.; dozen, \$2.50; 100, \$15.00. Equal proportion of each at dozen and 100 rates.

MABELLE--New Pink Carnation for 1907

Color--A peculiar shade of lovely pink, with a faint yellowish cast, several shades lighter than the Lawson. Unlike most pinks, the brightest sun does not injure the color. Size--Three to four inches in diameter when established. Odor--Pleasant, but not strong. Stems--Invariably strong, but always graceful, ranging from 12 to 20 inches during the season. Habit, etc.--A very quick active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Gets away rapidly, blooms early and gives long stems right from the start. Productiveness--Prodigious is the best word we know of to describe here. It is the most incessant bloomer early and late, we have ever grown. Stock limited. No discounts. First class certificates Madison and Indianapolis. Delivery Jan. 6th to 10th and later. Price, \$12.00 per 100, \$100.00 per 1000.

JOHN E. HAINES,
 BETHLEHEM, PA.

ANNOUNCEMENT.

AS we have not made all the deliveries for **Aristocrat** as promised we beg to announce to our patrons that all orders are being filled strictly in rotation and all orders will be completed by the 20th of March as we have 50,000 cuttings in the sand nearly rooted and 150,000 cuttings that have been put in the past ten days. These will be ready for delivery before the end of March, which is not too late for **Aristocrat** as it is a very rapid grower, free from disease and will do as well as earlier cuttings when benched in the fall. The variety is an easy rooter but owing to the very unfavorable weather, cuttings did not root as quickly as we expected, besides we are growing them cool which takes a little longer. All of the stock we have sent out has given the best of satisfaction, as it is our aim to see that every cutting is first class in every respect.

We wish to thank our patrons for their patience and assuring you of our very best attention and that your order will be filled by time stated.

REVIEW OF THE MARKET

NEW YORK.—The weather continues very cold; traffic is much impeded by a heavy fall of snow on Sunday last, and the flower business is suffering to some extent from this combination of circumstances. Prices along all lines are inclining to be weaker, and supplies, while not yet very plentiful, excepting in bulbous stock, are more than ample for what demand there is. Violets particularly have been dragging in an unsatisfactory manner since Washington's Birthday; in fact, there were supplies in hand on Tuesday that had been in the market ever since that holiday. Had the weather been more propitious these violets would have been cleared out to the street merchants at some price or other.

Narcissus Princeps is a glut just now, and upon asking one prominent dealer, who is carrying a lot of this variety of narcissus this season what the prevailing price was, we were informed that he would gladly clear out the entire stock for twenty-five cents a hundred. Narcissus Horsfieldi is meeting with a somewhat better reception from the buyers, still prices are anything but satisfactory. Tulips are not quite so plentiful as they were a few days ago, yet there are plenty to fill all wants. Freesia and sweet peas are coming in in heavier supply as the season advances. There are so many different grades of these flowers, however, that fixed prices are unknown; values range anywhere from 5c. to 20c. per bunch.

Lily of the valley is still held at low figures and there is a big supply on hand constantly. Gardenias were never before so plentiful, and as only a few of the longer stemmed flowers can be disposed of, the result can easily be imagined.

Carnations are plentiful enough so that a first-class grade in select varieties can be obtained at \$3 per 100; ordinary stock is going at much lower figures.

Roses, while not having become plentiful as at yet, have to be cut in price to quite an extent in order to effect clearances; number two grades may be said to be holding fairly firm, in fact, the short stock is the only kind that is clearing out satisfactorily.

Lilac is selling poorly, lilies remain fairly firm because they do not get plentiful. Daisies, forget-me-not and wall-flowers are not meeting with the same brisk call that has been experienced for them in former recent years.

What with the Lenten season, and present weather conditions, it may safely be said that business just now is rather heavily handicapped.

CHICAGO.—While roses continue to be good property with increased supply, a healthy demand, and a somewhat reduced price, other lines of cut flowers have been constantly increasing in supply beyond the demands of the market, and the latter part of last and the first of the present week have developed what might be termed a very strong tendency toward a glut in certain stocks, notably carnations, narcissus in variety, tulips of the commoner sorts, callas, freesias and violets, the latter having been in decided over-supply at times.

The favorable weather has not only greatly increased the cut sent in by the growers from all directions but a very perceptible improvement in quality is noticeable so that the price has not only dropped but the grade improved, much to the consolation of the retailer who is fortunate enough to be booking a goodly list of orders.

All kinds of green are moving freely and at good prices. The local trade is generally reported rather quiet, with shipping holding up fairly well. W. K. W.

PHILADELPHIA.—The cut flower market this week is in very poor condition—lots of stock and but little business. The very best flowers are quoted as follows: American Beauty roses, \$9 per dozen; tea roses, \$15 per 100 for a few; general stock \$6 and upwards. Carnations, \$2 per 100 up with sales poor. Violets have to be very good to bring 75c. per 100.

Bulbous stock goes very slowly. There is a complete glut of it; daffodils can scarcely be given away. Sweet peas are quoted at \$1 and \$1.50 per 100 for extra choice fresh stock, but these prices are hard to obtain; the flowers are offered by the 1000 at from \$4 to \$7.

Cattleyas are scarce; prices have advanced to 75c. per flower. Good Asparagus plumosus is also scarce and wanted. DAVID RUST.

BOSTON.—The surplus of all kinds of flowers seems to increase daily. Roses are the best selling stock but this is on account of their scarcity. American Beauty have dropped in price and are more plentiful than they have been. Some fine flowers of other varieties are now to be seen.

Carnations have increased in quantity, consequently prices have been reduced. Enchantress is the best selling variety at the present time. Lilies are getting more plentiful; heretofore there has only been a limited quantity but now there seems to be abundance of them.

Violets are very plentiful, in fact so much so as to be druggery. Bulbous stock of all kinds is now in abundance and prices have been reduced; in fact, it is sometimes difficult to move these flowers at any price. J. W. D.

ST. LOUIS.—There is little complaint heard as to very dull business among the retail florists. As to stock at the commission houses, we find extra fine quality roses still scarce. Everybody expected to see a glut by this time. Bride, Bridesmaid, Richmond and Killarney are in good demand, with orders only half filled. Prices on fancies run from \$8 to \$10 per 100; \$5 and \$6 for shorts. American Beauty, too, are very scarce, with top price at \$6 per dozen.

Carnations are selling well and there are many more coming in than the demand calls for. Enchantress, Mrs. T. W. Lawson, Nelson Fisher, White Perfection and Lady Bountiful have the call. Some extra fine Robert Craig are in the market. There are more Enchantress arriving than of any of the other varieties; \$4 per 100 for extra fancy, \$2 and \$3 for firsts and \$1.50 for common are the prices, and we look for a drop in these before the end of the week.

Bulbous stock as a rule cleans up pretty well each day, except in Von Sion narcissus and lily of the valley which are selling slowly. Dutch hyacinths sell well at from \$3 to \$4 per 100; good Roman hyacinths bring \$2. Paper White narcissus are scarce this week. Violets are becoming druggery, with the price down to \$3 per 100 and 40c. in single bunch lots. Lilies are scarce, but many are expected soon to come in from all quarters. A great many extra quality sweet peas are arriving now, which sell at \$1 per 100. In greens, smilax goes slowly; plenty of it is in the market at \$12.50 per 100 strings. Other greens are abundant. ST. PATRICK.

INDIANAPOLIS, IND.—The ease with which an average business has been conducted makes it evident that counter trade has been heavy, as funeral work or decorations always make more or less haste. Stock is being cut in heavy quantities, but so far none has been lost. Washington's Birthday did not affect this market materially; a few natural cherry trees adorned with artificial fruit or flowers met with favor.

Bulbous stock is not bringing the prices of a week ago; \$3 to \$3.50 per hundred for tulips, jonquils, Paper White narcissus and Roman hyacinths is the price generally paid. Trouble is experienced in obtaining regular lots of high grade violets, which wholesale at 75c. to \$1 a hundred. Well-grown sweet peas are plentiful at 75c. to \$1 a hundred.

Carnations are certainly elegant and the demand brisk considering the masses of carnations by the growers each day at \$2 to \$3.50 a hundred. Prices for roses are considerably lower and will probably continue so. Select Bridesmaid and Bride bring \$7 to \$8 a hundred; \$1.50 to \$2 a dozen is the usual retail price. Fine Richmond are plentiful at \$10 to \$12 per hundred. American Beauty are selling slowly at 5c. to \$50 a hundred.

Spring is already with the florist when it comes to the plant line. Rhododendrons, azaleas, forget-me-nots, lilacs and camellias inspire even the busy retailer to hold communion with nature's visible forms from a sentimental standpoint. I. B.

MINNEAPOLIS.—The Lenten season does not appear to affect trade to any great extent, as the retailers report a good week's business; practically all of them have had considerable funeral work and as we are now having nice sunshiny weather the demand for cut flowers is quite large. Stock is again plentiful. Roses with nearly all of the growers are in crop and some very fine. Richmond, Kate Moulton, Mme. Abel Chatenay, Bride and Bridesmaid are on the market. With some of the grow-

1000 Ideas

are contained in that little booklet of ours and you will find it a gold mine of information. It tells in a simple, plain way all about greenhouse erecting, how to build benches, how to glaze, all about painting and just how every piece is nailed. It will show you how to have a perfect greenhouse and is worth its weight in gold to every florist who has greenhouses or ever intends to build one. There are only a few of these booklets and you should get one now—they can be used with any kind of material but if you use ours we will send you one free. Write for one to-day enclosing ten cents in stamps to cover cost of mailing, postage, etc. Address

THE METAIRIE RIDGE NURSERY COMPANY LTD.
NEW ORLEANS, LA.
GROWERS OF CHOICE CUT FLOWERS
Roses, Carnations, Orchids, Etc.

We are fully prepared to fill orders for shipping by Steamers and Express all through the Southern States.

ers Mme. Abel Chatenay has done remarkably well and appears to be in heavy demand, especially so when good stock is offered. The price does not seem to cut any figure for the best stock; in some places they are sold at \$3 and \$4 per dozen. Kate Moniton command a good price and are eagerly sought after by some who apparently have worked up a trade on this variety. Carnations are now quite plentiful. The stock is fine, especially Enchantress. Robert Craig has not done as well as was expected, consequently we are a little short on red.

Bulbous stock is plentiful and is offered at close prices, especially tulips. The fine weather has created a heavy demand for violets; a great many are cut by the different growers, but the price has not declined to any great extent; the growers are getting \$1.25. Easter stock looks fine, and every indication points to a good supply of all plants. PAUL.

NEW BEDFORD, MASS.—The cut flower trade is very active, with stock quite scarce. Prices remain the same as usual: 60c. and 75c. for carnations; roses, \$3 per dozen; violets, \$1 and \$1.50 per 100; bulbous stock, 50c. and 60c. per dozen. Sweet peas bring \$1 per 100 for the best. HORTICO.

CHANGES IN BUSINESS.

MONROE, MICH.—Mr. and Mrs. Vandergift will conduct a florist business here.

FINDLAY, O.—J. J. Waaland has purchased the stock of plants of S. M. Hartman, at Van Buren, and will bring it to Findlay and place it with his large stock here. There were about two thousand plants in the lot purchased.

GREENSBORO, N. C.—Jas. Duffy has sold his entire stock to Messrs. F. B. Duffy (his son), W. C. Porter, and D. Earle Powell. Mr. Porter has had about ten years experience in the seed business and the new concern, namely, the Greensboro Floral & Seed Company, is doing business in wholesale and retail seeds, and also carry a full line of flowers, plants, etc.

SALEM, O.—V. A. Cowgill, of Alliance, has closed a lease with Joseph E. Bonsall, of this city, for that portion of his greenhouses lying east of Garfield avenue. Mr. Cowgill will conduct a retail business in cut flowers and potted plants. O. W. Bundry, who has been with Mr. Bonsall, will remain with the new firm. Mr. Bonsall retains the greenhouses on the west of Garfield avenue, and will continue to conduct a wholesale business.

Marie Louise Violets

Will have a fine crop of blooms for Easter from houses that have been run cold. Write for prices.

FIRMS WHO ARE BUILDING.

ALBION, MICH.—A. H. Dew will shortly erect a new range of greenhouses here.

TUSLA, IND. TER.—T. A. Butler, formerly of Shawnee, Okla., in all probability will establish here a modern greenhouse and nursery in a short time. The new institution will be put in at a cost of \$15,000.

WINONA, MINN.—Kirchner & Son are preparing to enlarge their present greenhouses at the corner of Minnesota and West King streets, and when the work is completed the capacity of the houses will be doubled. A larger boiler will also be installed.

BATAVIA, ILL.—A company headed by a Mr. Powell, of Chicago, will build three greenhouses on the Rhutal farm, southwest of town. They have purchased the property and will build this Spring. The houses will be 27 by 90 feet in dimensions.

WILBESBARRE, PA.—Ira G. Marvin has leased the Beck greenhouse and grounds surrounding it located on North Main street and filed plans for the erection of a new greenhouse. When completed the structure will be used as a storage house for palms and lilies.

SPRINGFIELD, ILL.—A committee of the Illinois Florists' Association, composed of J. F. Ammann of Edwardsville, president; J. G. Vaughan and P. J. Hauswirth of Chicago, secretary of the national association, Prof. J. C. Beal of Urbana, and others were in Springfield the past week in the interest of a bill introduced in the legislature, calling for an appropriation to create a branch of the work at the State experimental station to deal with flowers and vegetables. A sum of \$10,000 is asked for the investigation of insects and diseases, affecting hot-house plants. Judge C. J. Lindley of Greenville has fathered the bill, and the committee has hopes of its passage.

Minneapolis.

News Notes.
 A visit to the Minneapolis Floral Company finds their place in the finest condition. Heavy cuts of roses are made daily, but not in sufficient numbers to supply the trade. In addition to their own product, they have contracted to take the cut of another plant of about 50,000 feet of glass. Their lilies are better this year than they have been for some time—all of about a uniform height with every appearance of turning out remarkably well. They have been cutting some very nice white lilac, which seems to have taken well with the trade.
 Ralph Latham intends enlarging his place of business considerably.

Philadelphia.

Business is unusually quiet. There is generally a revival the second week of Lent, but it has not come this year. The inclement weather has hurt transient trade very much, even the street flower sellers very sparingly, as the streets have been in bad condition. The wholesale houses are loaded down with bulbous stock; daffodils being thrown away. Bayersdorfer & Company are very busy on orders for Easter goods; they have an unusually large supply of baskets and Easter novelties this year.

Stockton & Howe, rose growers of Princeton, N. J., were in town Tuesday. This firm shipped about the only white roses in quantity that came to this city during the past two months.

Walter Yates says their loss in Harrisii lilies this season was only 18 per cent.; other growers report 30 and 40 per cent. loss. In the case of Yates & Company they began cutting for Thanksgiving and have kept it up right along, so probably if the Harrisii lily is kept going all the time, results would be better—at least their experience would so indicate.

We are sorry to report that Miss Annie H. Lonsdale, the only daughter of Edwin Lonsdale, is very sick with pneumonia. DAVID RUST.

Only Two Regrets.

Another year has rolled around and another dollar is due for the florists' best paper. The only regrets are that the Carnation Society's certificate question has not been settled, and John Birnie has not told us how to raise 5,000 geranium plants from 50 stock plants.

Wishing you continued success.

New Orleans, La.
News Notes.
At the meeting of New Orleans Horticultural Society, held on February 21, the committee having in charge the Fall flower show, adopted the premium list, after making some changes in the classification.
Mr. Panter made a most important suggestion, which met with the approval of the committee, namely, that prizes be offered for different classes of plants and flowers, grown by school children. C. W. Eichling was the first to offer a prize for this class of exhibits, and gave some valuable suggestions as to classifying the plants and flowers sent by the children.
J. A. Newsham has on the way from his collector his first consignment of orchids, consisting of Cattleyas Dowiana and Skinneri.
CRESCENT CITY.

Chicago.
The Week's News.
E. J. Murchie, of Sharon, Pa., passed through this city last week on his way to Wisconsin, where he will visit friends.
Even in Lent there appears to be something going on all the time here to produce the necessary aid to the florists. The contributory features last week, gave a heading from a daily paper were, "Grand Opera, Grover and George." Every little helps.
H. K. Hughes has made a marked success of his original advertising features. Besides his unique list of neatly executed folders, specially adapted to particular lines of goods or floral events, his genius crops out in many ways about his Van Buren street store. Upward of ninety feet of plate glass frontage are artistically arranged with cork bark, many colored electric lights, plants, cut flowers, rural scenes, symbolization of the seasons, gold fish tanks, etc., while back of the office and conservatory he has fenced in a good-sized area, facing on Lincoln street, giving ample room for the disporting of three young deer, that attract many people into the store to ask questions, and this indirectly helps along the good work of the establishment.
Mrs. John Simpson, the Ogden avenue florist, has been seriously ill with tonsillitis and a touch of pneumonia.
Presence of mind and of person at the opportune moment, won for J. P. Foley, while at Bloomington last week, what should be the ever enduring thanks of a young mother of that place, who, while piloting a perambulator, left the vehicle and its occupant for the purpose of studying the charms of an attractive show window, when suddenly, the sidewalk being on an incline, the baby carriage attained impetus, upset and deposited the infant among the feet of a horse, which became frightened at the disturbance and would undoubtedly have crushed the life out of the child, but for Mr. Foley, who rescued it from its hazardous position.
The Jackson boulevard branch store of Schiller, the florist, was completely consumed by fire on the afternoon of Washington's birthday, the fire starting at half-past five, by the explosion of an oil stove. The entire stock and fixtures were destroyed, entailing a loss of about \$2,000 which was covered by insurance. Miss Bailey, a clerk, had but just left the immediate vicinity of the stove, thus fortunately avoiding what might have been a serious casualty. Work will commence immediately on rebuilding and will be pushed to the utmost, hopes being expressed that Easter will find the new building occupied.
Mr. Keller, of Reed & Keller, New York, spent a few days in town last week.
Kennicott Brothers Company take up the undertaking of moving to their new store 48 to 50 Wabash avenue immediately after Easter.
J. A. Budlong reports a continued activity especially in shipping, with ample stock of fine quality.
The Poehlmann Brothers Company are receiving from their houses excellent cuts in all their reasonable lines.
J. B. Deamud Company are consignees of a fine line of the favorite Murillo tulips.
At Vaughan's Seed Store the mail order business is reported to be 25 per cent. in advance of the same date a year ago.
At Peter Reinberg's salesroom the management claim a full crop of everything on the place. Especially mentionable in addition to a complete list of roses and carnations is a fine run of lily of the valley and L. Harrisii.
C. W. McKellar has in a stock of the Easter folding eggs and has also just received an attractive line of new ribbons including shades to harmonize with orchids and Killarney, Marechal Niel and American Beauty roses.
The Gloede Floral Company of Evans-ton have a large stock of their new geraniums Mrs. R. F. Gloede and Kenilworth which they are disseminating this season.
Wietor Brothers are making a satisfactory cut in all lines and report a fair market with the best prospect for an Easter crop they have ever had five weeks ahead.
At George Reinberg's it is said that the bright weather is bringing in steadily a good showing of stock, and the market cleaning up the roses well.

St. Louis, Mo.

News Notes.

The St. Louis Horticultural Society held its regular monthly meeting on Tuesday of last week, President Harry Young in the chair with a good attendance. The exhibition committee, composed of Messrs. Miller, Koenig and Meinhardt, reported on the premium list which was revised and ordered printed. The society will hold its first Spring flower show in the Odeon Building, Masonic Temple, March 5, 6, 7. There will be no charge for admission, which will be only by invitation card. About \$500 will be offered in prizes. The members are looking forward to a successful show and a boom for the society. All the members are hard workers and success is assured.

George M. Kellogg, of Pleasant Hill, Mo., who conducts a large wholesale and retail store in Kansas City, spent Friday in the city on his way to Hot Springs for a few weeks rest. Mr. Kellogg reports that he will build one of the finest retail establishments in the West this Spring. Talking of his business, he says it has doubled itself this season, with plenty of first-class stock at all times.

Chairman F. H. Weber called a meeting of the flower show committee and it was decided to return to the subscribers the amount of their subscriptions, thanking them for their interest and stating the reasons why the flower show fell through. The committee will make its final report at the March meeting of the Florists' Club.

James Young, president of the C. Young & Sons Company, reports the seed and plant trade opening well, and that preparations have been made to handle their big Spring business. James Arata, who has charge of the cut flower department, says his department has been kept busy all through the month with plenty of funeral work.

Superintendent Irish of the Missouri Botanical Garden reports that the three vacancies for scholarships at the Garden will be filled, one by the Missouri Horticultural Society and the other two by the director of the Garden. Any worthy young man wishing a scholarship should communicate with any one connected with the Garden.

ST. PATRICK.

Indianapolis.

News Notes.

Tomlinson Hall market men have been augmented by two dealers who were previously connected with the trade. H. Demperley, one of them, was formerly with the Indianapolis Plant & Floral Company. Business has been most satisfactory, as the retail trade consumed about everything not taken by the store men earlier in the day.

John Grande has fine Harrisii lilies for this market. His reserve for Easter is larger than usual.

St. Patrick's Day coming on Sunday should make the green carnation business holier than ever.

Messrs. Henry Rieman, Herman Junge and Carl Sonnenschmidt are to visit the Richmond florists this week.

The Indiana State Florists' Association will hold its monthly meeting on Tuesday, March 5. Arrangements for a Spring show will be completed.

Wm. Don intends renting his greenhouses on College avenue so he may study medicine.

John Heidenreich has about completed a new house for Summer roses. I. B.

The State Board of Horticulture of Utah reports to Governor Cutler that \$25,000 worth of cut flowers were imported into the State during the year 1906.

Club News.

Pittsburg.

The night of the last meeting of the Florists' Club was a cold one and not as many members were present as usual. It was carnation night, and a good display of blooms was made. F. R. Pierson Company of Tarrytown N. Y., showed a nice bunch of the famous Winsor which was pronounced the best of its kind and admired by all present, also White Enchantress, fine blooms. The Bakerstown Rose and Carnation Company staged 14 vases of nice flowers, among them White Perfection, Lady Bountiful, white, pink and red Lawson, Lieutenant Peary, Pink Enchantress, Fred Burki's Flamingo and red and pink seedlings of Murchie, from Sharon. Both of the latter seemed good sorts and a suggestion was made by Mr. Falconer that one should be named in honor of our President Jones T. Jenkinson, gardener to Mr. F. R. Peacock, one of the finest private places in the city, showed a fine bunch of well grown carnations. Albert Lorch had white and pink Lawson; E. C. Ludwig staged blooms such as he gets from his growers daily. The Florists' Exchange showed flowers from their growers. J. Wyland had nice blooms of Lady Bountiful, Mrs. Lawson, Enchantress and Rose-pink Enchantress.

Messrs. Burki and Wyland, who were in attendance at the Carnation Society's convention, stated that the meeting and exhibition were equal to any heretofore. The sessions were better attended and more interesting than for some time. The best and most talked of carnation was the Winsor and each thought it so good that they placed nice orders for it. Other varieties were also shown from our best growers. The Canadian blooms were as good as our own.

A lively discussion took place as to outdoor and under-glass cultivation of carnations. Mr. Wyland thought the time was coming when all plants will be cultivated under glass, and his experience was that it was the best way to grow good stock and the safest. Mr. Burki and several other growers contended that the old way was the best and most profitable, as the blooming plants would have to be thrown out too soon to plant new stock, thereby losing thousands of flowers when there is a fair demand for them.

Mr. Burki, a member of the Carnation Society, suggested that the Florists' Club extend an invitation to that society to hold its convention in Pittsburg, and the secretary was instructed to send an invitation for the year 1909 unless Indianapolis wants it at that time, then the following year.

The Baur Floral Company, Erie, Pa., exhibited their carnation mender showing bloom with calyx wired very neatly, the clip being hardly perceptible. The Maxfield and Diamond Manufacturing Company, Warren, R. I., also showed a device for saving splits, an artificial calyx to slip over the natural one until the flowers are fully developed.

The treasurer's report showed a nice balance in bank and a membership of over 150. Two new members were elected and one proposed. The election of officers resulted in the old ticket being re-elected for the year. The secretary's salary for the new year was raised.

For the next meeting in March, Mr. Falconer was asked to get some one to give a talk on some subject of interest to the members.

The Pittsburg wholesale florists' employees held a dance in the Cyclorama Parlors, Allegheny, last week.

C. Rieger, florists' wire design manufacturer, had a narrow escape from fire last week the building across the street from him was destroyed by fire and the heat broke many lights of glass in his building.

E. C. REINEMAN.

SCRANTON, PA.—The Florists' Club is planning for a flower show, which will take place in the large hall in the Guernsey building, Friday, March 15. This will be the first of its kind that the club has undertaken and it is expected that there will be a beautiful exhibit. Admission will be by invitation only.

News Notes.

Active preparations are now making by the exhibition committee of the Massachusetts Horticultural Society for the annual Spring show on March 22, 23 and 24. This exhibition promises to be up to the usual standard. The committee also announces many special features for the chrysanthemum show next Fall, when about \$700 in special prizes will be offered. A special circular will be issued in the near future.

State Forester Wm. F. Rane was the lecturer at Horticultural Hall on Saturday, his subject being "Forestry from a Commercial Standpoint."

Wm. H. Elliott is planning the erection of another enormous greenhouse at his Madbury establishment, and expects to begin taking out the foundation as soon as the frost will permit. Mr. Elliott is now on his annual trip in Cuba, but is expected home in about ten days.

W. A. Manda, South Orange, N. J., was in town the past week, bringing with him a bunch of a new seedling carnation of a fine pink color, which he intended exhibiting at the meeting of the Gardeners and Florists' Club Unfortunately, W. A. does not read the up-to-date trade papers, and so was a day late in getting to Boston. His blooms were exhibited to good advantage in Welch Brothers' store for several days, nevertheless.

W. W. Rawson & Company are sending out this week two booklets entitled "Guide for Vegetable Growing," and "Guide for Flowers," which will be found pertinent and practical by many of their customers and especially amateurs for whom the pamphlets are mainly written.

The meeting of the Gardeners and Florists' Club on March 19, will be devoted especially to carnations and some interesting exhibits are expected.

J. W. D.

Detroit, Mich.

News Notes.

The Detroit Florists' Club gave an entertainment for the ladies on Wednesday, February 20, which was largely attended, there being present about one hundred couples. The committee did themselves proud, as was shown by the program, and consisted of Wm. Brown, Robert Rahaley and Wm. E. Hielscher. They had several talented singers, nearly all of whom had had experience behind the footlights. Master Lewis of Pontiac, a son of one of the members, rendered several popular ballads, which met with great favor and much applause. Refreshments were served.

George Brown, who has become a carnation enthusiast, showed an elegant vase of white Enchantress.

E. A. Fetters has returned to Detroit.
HARRY.

OKLAHOMA CITY, OKLA.—At its recent annual meeting the Oklahoma Nurserymen's Association resolved to support any movement for the inauguration of uniform inspection laws of nursery stock in the United States. The following officers were elected: President, J. A. Lopeman, Enid; vice-president, J. W. Teterick, Blackwell; secretary and treasurer, C. E. Garee, Noble, Okla.

News Gittings.

The reference in this column a few weeks ago to a reported organization of Greek flower buyers has called forth a meaningless sermon from a Boston editor. The subject had become passe, however before the labored editorial appeared, so what was the use of trying to instigate discord and incite factional feeling? It was too late, full explanations had been made, and everybody was happy.

The question most often asked just now is: Why were there not more members of the Florists' Club in attendance at the annual dinner last Saturday night? Out of a membership of over 200, only 50 sat down to the dinner. Surely we ought to do better than that! Those who were present had the time of their lives. The dinner was good, the speechmaking was appropriate to the occasion, and most enjoyable, and the jokes fired at us by the monologue artist were all of the latest vintage—all new and brimful of laughter. With all due respect to the toast-master we think there were one or two slight omissions and that several gentlemen present were disappointed at not being called upon. Ex-president F. H. Traendly should have had an opportunity to speak on the use and abuse of iron and porcelain in modern floral art. Secretary John Young, if called upon, could have given us a most interesting talk on the North American Indian, and whether that aborigine was or was not a detriment to the progress of civilization. Of course, everybody could not be called upon to speak; there was not time, but next year, well, perhaps we can start the dinner earlier.

Fire broke out in the store of A. T. Boddington, seedsman, 342 West Fourteenth street on Sunday morning last, but aside from the breaking of the glass in the front door, little damage was done, as the fire was soon discovered after its start, and was quickly extinguished.

J. B. Kidd, who for some time has been with the firm of Wm. Elliott & Sons, has secured the appointment of customs inspector in the seed, bulb and plant department, for the Port of New York, and commenced his duties on Friday, March 1. Mr. Kidd is well known to the trade and his many friends will be glad to hear of his success in securing this appointment, one, by the way, for which he is eminently fitted.

Early in March the plant auction season will be commenced at Wm. Elliott & Sons' mart, 201 Fulton street.

H. O. May, Summit, N. J., with his aunt, left on Friday, March 1, for a trip to Florida.

Visitors this week included J. C. Vaughan, Chicago, Ill.; Mr. Goodwin, of W. W. Barnard & Company, also of Chicago, and W. C. Hall, Montreal.

Myer, the retail florist at 611 Madison avenue, used miniature Japanese landscapes at a dinner decoration one day this week. Twelve of these gardens were used, they being placed through the center of the table. The general effect was pronounced most charming by those who were present.

The H. H. Berger Company, seed and bulb merchants at 47 Barclay street, will move on the first of May to more commodious quarters at 70 Warren street, first floor, near West Broadway.

Grand Rapids, Mich.

The Florists' Club met on February 18, twenty-six being present. This gives lots of hope for the future of the new club. At this meeting the vegetable growers held sway for the most part. Many interesting discussions took place and lots of useful information changed hands. The club decided to have a small exhibition the third Monday in April in their rooms. The show will consist of Spring bedding stock and various vases of cut blooms, also exhibits of choice vegetables made by the vegetable men. A committee was appointed to look after the details and solicit prizes from the business men in town.

G. F. Crabb is now on the road to recovery from his severe attack of pneumonia, and entertains hopes of being around in two weeks.

A number of prominent vegetable growers of this city have formed a stock company to more easily facilitate the marketing of their goods. The name of this new company is the Grand Rapids Greenhouse Company, Ltd., and it is capitalized at \$160,000 with a paid in capital of \$90,000. The officers are, president, F. M. Strong; vice-president, Frank J. Cook; treasurer, Wm. G. Taylor; manager, S. A. Perry. The company will confine itself for the present to vegetables, but in the Fall will grow chrysanthemums, most of which will be marketed in Chicago. The greenhouses of each member will be run as before, but will act as a feeder for a large central plant, which will be erected as soon as a desirable place with good shipping facilities is found. A newspaper report gave Alfred Hanna, of the Grand Rapids Floral Company, as a member, but this Mr. Hanna denies. The company expects to sell the balance of its stock in and about Grand Rapids.

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XXIII. No. 10

NEW YORK AND CHICAGO, MARCH 9, 1907

One Dollar Per Year

CARNATION WINSOR

The most talked about carnation at the Toronto Convention. Won first prize for best 100 pink

We have not advertised Winsor until now because we have had to. It is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders, and have a fine lot of stock in the cutting bench, so that we can promise, for the present, February delivery on orders received within a short time at least.

If you have not already purchased a stock of this, you should lose no time do-

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high quality flowers. It practically does not split at all, notwithstanding the fact that we have had the darkest, dullest winter we have ever had, when the Eochantress and Lawson types are splitting badly all over the country with everyone, we have not had one-half of one per cent. of split calyxes on the Winsor. In fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement extravagant as it may appear.

Anyone who fails to plant Winsor this year will regret it. Rose pink Enochantress is good, and a good many other varieties are good, but IF YOU WANT THE WINNER, PLANT WINSOR. We not only have a good thing in Winsor, but we are delivering good stock. As a sample of the testimonials that we are receiving, see this space in last issue. We are trying to give 110 cents on the dollar, and guarantee to please everybody with the stock sent out or we will not ask you to pay for it. We have still to receive our first complaint, and we have shipped between one and two hundred thousand cuttings to date.

Strong Rooted Cuttings. February delivery, \$12.00 per 100, \$100.00 per 1000.

F. R. PIERSON CO., TARRYTOWN-ON-HUDSON, NEW YORK.

Mention the Florists' Exchange when writing.

WE are now booking orders for early delivery of *Richmond, Killarney, Bride, Bridesmaid, Wellesley, Liberty, Kaiserin, Carnot, Bon Silene, Mrs. Oliver Ames and Safiana.*

Now is the time to get *Kaiserin Augusta Victoria* for early summer flowering. I have a large quantity of 2 1/4 inch grafted and own root stock now ready for shipment.

Have a splendid stock of *Asparagus Plumosus Nanus* seedlings, seed saved from my own plants.

CHICAGO, 84-86 Randolph Street. Greenhouses, Western Springs, Ill.

Hardy Chrysanthemums

The following list contains a collection of **HARDY CHRYSANTHEMUMS** which we are satisfied are second to none in the country, as we have made a specialty of these for the past 15 years, introducing many new varieties, representative of which will be found in every collection. The demand for them as cut flowers was very heavy last fall and commission houses and retail men are advising their growers to plant heavily this season.

HARDY CHRYSANTHEMUMS

Large flowering or Aster Varieties.
50c. per doz., \$3.00 per 100.

Arabella, Crimson Salmon; very dwarf.
Ashbury, Sulphur-white.
Aunt Jane, Yellow shaded bronze.
Bertha, Large white; open center.
Bohemia, Fine pure yellow.
Boston, Golden bronze.
Ethel, Exquisite violet-red; long sprays.
Findon, Violet rose.
Fred J., Red orange.
Gladya, Flushed pearl.
Gertrude, Pure white, open center.
Hester, Pearl-white, shaded flesh.
Hijoa, Beautiful primrose pink.
Jerry, Rose, lilac.
Julia Lagravere, Crimson maroon.
King Henry, Rich rose pink.
Lady Naylor, White.
Louisa, Large white, long stem.
Mrs. Porter, Bright bronze.
Mrs. Snyder, Splendid early yellow.
Penelopa, Large-white, tall.
Peto, Rich bronze.
Paragon, Early white, open center.
Prince of Wales, Best pure white.
Queen of Bnl, Violet rose.
Salem, Silver rose, long quilled.
Sir Michael, Silver rose, quilled petals.
The Hub, Fine white, open center.
Willie, Lilac and white.

HARDY POMPON CHRYSANTHEMUMS

Small flowering or Button Varieties.
40c. per doz., \$2.00 per 100, except as noted.

Alice Cary, Pure yellow.
Cerise Queen, Cerise pink.
Dawn, Daybreak pink.
Edna, Beautiful glowing violet red.
Ermine, Bright orange-scarlet.
Golden Pheasant, Deep orange-yellow.
Henrietta, Bronze yellow edge.
Jamaa Boon, Pure white.
Jeannetta, Silver bronze and rose.
Little Pet, Rich violet red.
Rhoda, Pink shaded white.
Sunshine, Bright golden yellow. \$3.00 per 100.
Tennyson, Pure yellow.

ANEMONE VARIETIES

50c. per doz., \$3.00 per 100.
Earl, Pearl-white, silver-rose, center dwarf.
Lady Olivia, Beautiful white.
Gracie, White, full center.
Matilda, White.
Oban Silver, Pink, full anemone center.
Success, Silver rose, pearl white center.

SINGLE VARIETIES

50c. per doz., \$3.00 per 100.
Aaron, Bronze scarlet.
Northumberland, Bright scarlet, yellow disc.
Princess of Thule, Red-orange.
Rosy Morn, Silver pink.

R. VINCENT, Jr. & SON, White Marsh, Md.

WM. ELLIOTT & SONS, 201 Fulton St., N. Y.

Mention the Florists' Exchange when writing.

RAWSON'S ASTERS

are just a little superior to anybody else's

The product of our seeds can always demand a better price than those grown from seeds obtained elsewhere. The following is an extract from a letter received last fall from a most critical grower:

"Your Midsummer Aster has been a great money-maker for me. For every flower that I have brought into the Boston Market I have received from \$1.00 to \$1.50 per hundred more than for any other variety raised from seeds purchased elsewhere". J. W. Simpson.

RAWSON'S TWO GREAT QUALITY ASTERS

RAWSON'S NEW MIDSUMMER:

in White, Delicate Lavender.

Delicate Shell Pink and Bright Rose at \$2.00 per oz.; 60c. per 1/4 oz.

RAWSON'S LATE BRANCHING: in White, Shell Pink, Rose Pink, Light Blue, Dark Blue, Scarlet and Crimson at \$1.00 per oz.; 30c. per 1/4 oz.

No Florist knows what fresh Aster seed means unless he has tried "RAWSON'S SEED." The crop of Aster seed has been extremely short last season and it is advisable to buy at once.

W. W. RAWSON & CO.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION

Henry W. Wood, Richmond, Va., president; C. S. Burge, Toledo, O., first vice-president; G. B. McVay, Birmingham, Ala., second vice-president; C. E. Kendall, Cleveland, O., secretary and treasurer; J. H. Ford, Ravenna, O., assistant secretary.

The Australasian tariff imposes a duty of one shilling and sixpence per cental on canary, hemp, and rape seed; and on cotton seed four shillings.

All agricultural products imported into Egypt are subject to an ad valorem rate of 8 per cent.

YOKOHAMA, JAPAN.—The Shanghai (China) branch of L. Boehmer & Company has been acquired by Theo. Eckardt, who will continue the business under the name of the Shanghai Nurseries, with officers at 103 avenue, Paul Brunat, as before.

BULLETIN 25 of the University of Nebraska Agricultural Experiment Station, at Lincoln, deals with the subject of "The Seed of Cheat, Meadow Fescue and Brome Grass." It is stated that cheat, or ches, seed is being largely used as an adulterant. The bulletin contains illustrations showing seeds and spikelets of cheat, brome grass, and meadow fescue.

THE COLORADO GRAIN AND SEED GROWERS' ASSOCIATION has been organized to encourage the general use of improved seed with a view to largely increasing the yield and improving the quality of the grain crops of Colorado. Those interested in this movement should write F. Knorr, Secretary of the State Association, Fort Collins, Colorado, for rules and regulations which have just been issued, enclosing stamp to prepay postage.

LOS ANGELES, CAL.—An effort is making by seedmen and growers of ornamental stock to form a society for mutual protection in the trade. Charles Winsel has been elected president and Theodore Payne, secretary. The Morris & Snow Seed Company has sent out of its initial catalogue 25,000 copies which contain some original illustrations of trees as they grow on this coast.

The California Seed-Growing Company of Westminster, has planted 2,800 pounds of onion seed this season. Last year this firm shipped 1,000 tons of onion sets to Texas; how many were sold in this State the writer does not know. Mr. Murdoch, who is considered an authority on vegetable growing in this part of the state, is superintendent of the seed farm.
 P. D. B.

IMPORTS OF SEEDS, BULBS, ETC.—February 26, 1907.—J. M. Thorburn & Co., four bags and three packages seed; Stump & Walter Company, six cases seeds; J. M. Thorburn & Co., 13 bags grass seed; Vaughan's Seed Store, one case seed. February 27, 1907.—Aug. Rhotert, two packages seed; H. Spence 42 packages plants; F. B. Vandegriff & Company, 44 packages plants; Wm. Elliott & Sons, one case plants; Holland-American Line, 10 barrels garden seeds; Reed & Keller, nine cases.

February 28, 1907—Maltus & Ware, 16 cases plants.

EXPORTS OF SEEDS, BULBS, ETC.—February 25, 1907.—To Darmstadt, one barrel seeds, value, \$209 and five packages seeds, value, \$218. To Hamburg, 3,305 bags grass seed, value, \$20,053, 20 bags seed, value, \$5.184 and 371 bags clover seed, value, \$5.184. February 26, 1907.—To Copenhagen, 19 barrels bulbs, value, \$100; 283 bags grass seed, value, \$1-325. February 27, 1907.—To Buenos Ayres, 38 bags of seed, value, \$648; to Calcutta nine packages seeds, value \$116.

February 28, 1907.—To Buenos Ayres, 16 bags grass seed, value, \$120; to Bremen, two cases seeds, value, \$525; to Cartagena, 20 packages seeds, value \$225; to Hamburg, 1514 bags grass seed, value \$6768; to London, 50 bags grass seed, value \$310; to Ystad, 125 bags grass seed, value \$2,000.

March 2, 1907.—To Glasgow, 34 bags clover seed, value, \$570; to Havre, three packages seeds, value, \$121; to Liverpool, two cases seeds, value, \$173; to London, 231 bags grass seed, value, \$1,550; 50 bags clover seed, value, \$815; 19 bags seed, value, \$140.

Free Seeds.

The bloated trusts they may restrain, The railroads they may fetter, Make common grafters howl with pain And promise to do better. Keep most disbursements to our needs, But still we'll have our garden seeds.

Economy may be the cry, But still the mails will carry The seeds they might prefer to buy To Tom and Dick and Harry. Meanwhile the prudent farmer feeds His chickens with those garden seeds.

Hard wheat they send to Maryland And rice to North Dakota, With cotton for the strong demand In northern Minnesota. No sense of fitness e'er impedes The distribution of the seeds.

But anything you want to grow You only need to mention, Your congressman is glad to show Constituents attention. In lieu of other acts and deeds He'll send a sack of garden seeds. —KENNETH HARRIS, in Chicago Daily News.

Free Seeds Continued.

The Bucks County, (Pa.) Gazette of March 1 contains the following information concerning a bill which Congress may have to consider in the not far distant future:

As the almost peremptory demand on Congress for Free Seeds by the entire people of the United States, without regard to section, sex, color or condition, is irresistible, it is under consideration not only to continue for all time the Congressional Free Seed Distribution, but to increase the issue in the future up to 500 millions of packets that each individual man, woman and child, and even the down-trodden emigrant, his wife and children newly arrived from Sicilia, Romania or elsewhere, can have as many as six packets apiece, our Legislators and the Honorable Secretary of Agriculture believing that in no other way can be promoted the great interests of agriculture.

Congress with its paternal foresight realizes that this free distribution of garden seeds of ten times the value of any past issue will so completely satisfy the nation's want for garden seeds that it will result in the drying up of the business of nearly all seed sellers, whether wholesale or retail. Consequently, the following bill it is said, at the instigation of the big hearted Secretary of Agriculture, is believed will be passed: 63d Congress 2nd Session,

H. R. 4-11-44

In the House of Representatives John Wesley Golt introduced the following Bill:

A BILL for the erection of National Homes exclusively for broken down Seedsmen.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled.

As the contemplated increase of the Congressional Free Seed Distribution to 500 millions of packets will result, it is assumed, in the shutting up of many private Seed Establishments, the proprietor of which should in view of Congress be taken care of as having been forced out of their established business, Congress in line with its established policy will assume proper measures of relief.

To this end the Honorable Secretary of Agriculture is authorized and empowered to purchase three sites of proper size and location respectively in the neighborhoods of Atlantic City, Chicago and St. Louis, none of which pieces of land shall exceed the purchase price of \$100,000.

The Honorable Secretary of Agriculture after the purchase of the three properties is authorized and empowered to erect of proper dimensions upon each tract a building of sufficient size and appointments to accommodate five hundred families of broken down seedsmen, each family estimated in number of five persons.

When these structures are completed and ready for occupancy, the Honorable Secretary of Agriculture is authorized and empowered to appoint a Commission to examine applicants for accommodation, only those being admitted who can prove that they were once engaged in the business of either wholesaling or retailing seeds.

When these National Homes are completed, if the applicants be in excess of the accommodations, the excess number shall be accommodated in the outlying sheds; but if in any one of the locations of Atlantic City, Chicago or St. Louis there be not sufficient applicants to fill

BEGONIA BULBS

These should be planted more extensively by florists as the plants are very salable and bring good prices.

the structure, the Honorable Secretary of Agriculture is authorized and empowered to at once stop the sale of Seeds in that locality under injunction processes and cast any recalcitrant seedsmen into those Houses which a paternal nation has provided for them.

European Notes.

The rush of the past few days, the result of mild open weather, has been checked by a return of Winter, and with 15 degrees of frost. Spring sowings are at a standstill. As we have no snow to protect our growing plants, and midday is fine and warm, it looks rather bad for the ragged remnant that decorates (?) our fields. We shall see.

as cultural notes are provided, and the catalogue is profusely and handsomely illustrated by half tone engravings. The cover designs—blue spruce in color, and a view of the company's general offices and grounds—are neat and attractive. The catalogue is excellently printed, and its general get up and the complete and interesting character of its contents reflect much credit on this enterprising concern.

NURSERY DEPARTMENT.

Conducted by Joseph Mehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

Orlando Harrison, Berlin, Md., president; J. W. Hill, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yate, Rochester, N. Y., treasurer.

The Lime-Sulphur-Salt Wash and its Substitutes is the subject discussed by J. K. Haywood, Chief of Miscellaneous Laboratory, in collaboration with the Bureau of Entomology, Department of Agriculture, in Bulletin No. 101, Bureau of Chemistry.

AMERICAN POMOLOGICAL SOCIETY.

The executive committee of the American Pomological Society have decided to hold the thirtieth biennial meeting of this national organization on the grounds of the Jamestown Exposition Company, September 25-26 1907. The desirability of this as a meeting place was very thoroughly canvassed. Invitations from various cities were very carefully considered, and the agreement to call the next meeting of the society at Jamestown is practically unanimous. While it is conceded that expositions do not, as a rule, furnish the most favorable conditions for business conventions, yet there are sufficiently cogent reasons why the policy of the society favors Jamestown at this time. The exposition, more than any of its kind, will bear upon the historical and the educational—features always promoted by the American Pomological Society. Again, the next meeting of the society should go to the South. It is a long time since the society met in that region, and this seems an auspicious time for returning to it. The horticultural associations of the immediate section promise to unite in making the convention one of the most memorable in its history.

A number of important matters will come before the society at this time. Reports on the grading and inspection of fruits for home distribution and export purposes are due, and the members of the committee having this matter in hand have been working earnestly for the purpose of making a report which will record substantial progress. The committee on judging and score cards will add to the excellent reports already presented and include a number of fruits not yet dealt with.

The history of fruit growing in this, one of the oldest sections of the country, is exceedingly interesting and carries with it many important lessons. This will be presented by competent authorities as time permits. In addition various matters bearing upon the technical phases of fruit growing will be presented and discussed. It is not the intention of the executive to hold three sessions each day, but rather to confine the work to morning and afternoon sessions, allowing the evening to be free for such other recreations or duties as may offer themselves.

The exposition authorities have met us fully half way in the matter, and we shall have ample facilities for holding our meetings and for making a creditable exhibit. The sessions will be held in the convention hall, and the exhibit will be staged in the interior court of the States Exhibit building.

The latter part of September will be a desirable time to visit the exposition. The many natural attractions of the region, and the adequate hotel facilities all promise a pleasant and agreeable time. Later circulars will give hotel facilities and transportation arrangements, and additional particulars. At the present moment, we are to bear in mind that this meeting will be the most important pomological event of the coming year, and we must plan to attend it.

The Society for Horticultural Science, (Dean L. H. Bailey of the Cornell College of Agriculture, Ithaca, N. Y., president, and Professor V. A. Clark of the Arizona Experiment Station, Tucson, Ariz., secretary, will meet in joint session with the American Pomological Society this year. This general announcement is made under the authority of the executive committee—Captain C. L. Watrous, Des Moines, Ia., chairman, L. A. Goodman, 4000 Warwick boulevard, Kansas City, Mo., president of the society, and John Craig, Ithaca, N. Y., secretary.

Horticultural Notes.

Hyacinthus candicans is one of our hardest perennials not requiring the care of a cold frame in Winter, as one of our European horticultural journals says it does.

Convolvulus arvensis, the European bindweed, is a great pest wherever it gets a foothold, as every bit of its roots will make a plant. Constant hoeing it off as soon as seen above ground is the only way to exterminate it.

Gladiolus communis is a pretty, hardy species. It flowers in June, bearing spikes of purple blossoms, of a lighter color inside the segments.

There are several heaths quite hardy in the Middle States, notably the *Erica vagans*, *E. carnea*, *E. stricta* and the common heather, *Calluna vulgaris*. But though hardy they miss the moist air of their native countries, and so are thankful for a little protection from the dry winds of our Winters—protection which a little brush scattered over them gives.

Nurserymen find a growing demand for black walnut seedlings. It comes from the use of the lumber for so many purposes. Although the English say they prefer their own walnut, *Juglans regia*, it is known that great quantities of the black walnut are used for gun stocks there, as here; and seedlings of it are now exported to that country. A manufacturer of gun stocks here states that he uses our black walnut for nine-tenths of all he makes.

A Bristol, Pa., correspondent mentions that the rose *Gloire de Dijon* is quite hardy there, as it is here in Philadelphia. It is the only hardy climbing

Then every year or so one of these shoots should be cut back to where it started from, that a fresh shoot may develop from it. Unless this is done such roses will soon become bare of shoots at the base, all being at the top, and often out of reach and close contact. In this respect they are like a grape vine; and both need pruning in the same way.

Chamaecyparis (Cupressus) Lawsoniana.

Our old friend, *Cupressus Lawsoniana*, is now recognized as being properly *Chamaecyparis Lawsoniana*, but in general practice its common name, Lawson's cypress, still holds good, and this name, like the Douglas spruce for the old *Abies Douglasii*, is too endeared to many to be changed for any other.

The photograph we had taken of a specimen growing at Philadelphia does not represent the illustrations of the tree as usually seen, and for the reason that the tree was made of bushy growth when young by pruning back the central shoot, causing a growth of several strong shoots as leaders instead of but one, as is generally seen. When with but a single leader and the tree is in vigorous health, a specimen of broad conical outline results, of great beauty. Our illustration represents but a moderate tree, but it pleases us to present it to our readers to prove that this cypress can be grown in this latitude, so many persons believing that it is not of sufficient hardiness for the purpose. Because of this belief not many of it have been set out, and really, this is the only nice one we know of in this vicinity. It is growing at Chestnut Hill, the highest point in Philadelphia County, and a glance at it will be sufficient, we think, to satisfy any one as to its hardiness; and it has to be said, too, that it has been in its present position for nearly ten years.

There is no question that there are varieties of trees much hardier than others, for such examples are met with frequently, and probably this one specimen represents a hardy type of the Lawson's cypress; and it is the one to be propagated from. We are satisfied our readers will be pleased to see this picture and to know from it that it is quite possible to grow this tree in this vicinity.

The Lawson's cypress is a native of Northern California and Washington and vicinity, and in its wilds is not subject to great cold, but evidently, it does not mind zero occasionally, for the one pictured has stood several degrees below zero more than once.

In its native home the Lawson cypress grows to a height of nearly 100 feet. Its timber is considered very valuable, and for this reason the seeds are in demand in countries the climates of which suit it. The seeds are very light, and are always composed of both full and hollow ones; it seems that all are never perfect. Seedlings are preferred for forestry purposes, but when it is a question of hardiness, as it is here, it is better to rely on plants raised from cuttings of some hardy subject, such as the one we illustrate. Time and again imported trees have died out; even, the well-rooted large plants.

There are many lovely varieties of this cypress to be found in English collections, some with silver variegations, others golden tipped; some of extremely erect habit and vivid green foliage, and anywhere South from Philadelphia these, the type and all, would thrive, and by their grace of growth would add very much to the beauty of lawns. JOSEPH MECHAN.

Nursery Notes from Newport, R. I.

Norway maples lead all other varieties in demand for planting on private estates. The specimen sizes of this tree are especially hard to obtain and good prices are therefore offered by those requiring them.

English lindens are also scarce in the medium and large sizes.

White spruce is one of the most satisfactory trees for seashore planting, but nurserymen when opportunity offers should advise planting in groups, when such planting is at all possible, because in that way one tree is able to be of material help in the way of shelter to the other; and then when they get used to the weather and other conditions of their surroundings, thinning may be with advantage resorted to, affording in addition material for planting on other portions of the estate.

English ivy got killed early in the Winter in considerable numbers in New England—a fact likely to cause a demand brisker than usual in the Spring.

Specimen box and box for edging will be called for in more or less larger quantities than usual this Spring by reason of the fashion for gardening effects produced by plants of the character of box.

The market in New England for privet in sizes fit for immediate effect will be strong; there is plenty of small stock but the larger sizes are not in over-supply. D. M.

Chamaecyparis (Cupressus) Lawsoniana

tea rose we have; and its ever-blooming character, with its fragrance, making it unrivaled.

Many cactuses are called night-blooming but the true night-blooming cereus is named *C. grandiflorus*. There are few plants preferring the night for blooming, which fact adds interest to those that do.

Pruning Shrubs, Roses, Etc.

The closing of Winter brings the time to hand to prune shrubs, roses, and whatever else needs pruning before the Spring season opens. Besides the pruning to give flowers there is the good shape of the bushes to be considered, and this can be given them by careful pruning now as well as by judicious Summer pruning.

It is well understood among gardeners that in pruning there are two kinds of shrubs to be considered—those that flower in Spring or early Summer, and those that bloom in late Summer or Autumn. Those in the first class flower on the shoots made the previous season, and therefore these shoots must not be cut away. There may be a shortening of some shoots, to give shape to the bushes, but it must be kept in mind that all shoots of the previous year are those that bear the flowers. The second class of shrubs, those that flower later in the season, should be well pruned, for flowery come from strong new shoots, and strong shoots follow close pruning. *Hydrangea paniculata grandiflora* is in this class, and the closer it is pruned back the larger the head of flowers it produces. *Althæas*, *caryopteris* and *vibex* are also in this class.

The same rule holds good with roses. Just consider when they bloom, and how to prune them will be known at once. The June roses, so called, are largely of the hybrid perpetual class, and these flower on the last season's shoots. Still, when these shoots are very long and slim at the upper end they may be cut back partly to advantage, to increase the size of bloom that follows. Tea roses, China, Bourbon and the numerous intermediate varieties should be well cut back. Though flowering earlier than Autumn to some extent the best show of blossoms is made later; often the very best display of all is that of very late Autumn. Climbing roses of all classes require good, strong shoots of the previous season to give good flowers. In order to get these shoots and from near the ground, such roses should be so pruned when young as to start off from the base with two or three shoots.

GRAND NEW CANNAS

William Saunders
The flowers are large, of splendid form, and are born very freely in immense clusters. The color is a deep rich shining scarlet lightly dappled with crimson. Foliage is a rich bronze. Height, 3 1/2 to 4 feet. We believe that Wm. Saunders is decidedly the most perfect canna of this type that has been introduced. 50c. each; \$5.00 per doz.; \$35.00 per 100.

Ottawa
is a strong grower, very robust and 5 to 6 feet high. The flowers are large and beautifully formed, color is carmine with tints of old rose and deep coral, add to this the silken sheen and you can imagine the effect a few plants will produce.
Note:—We had this canna on trial among the Canadian experimental stations last summer and this is the official report of their expert:
Quite distinct and one of the most beautiful shades of color I ever saw in cannas. Of 70 massed in one bed during the past season, this was the most floriferous in the collection, coming into bloom early and continuing until cut down by frost, as many as 13 expanded heads of bloom being counted at one time on a plant, and not a poor one among them, all being of immense size," 50c. each; \$5.00 per doz.; \$35.00 per 100.

New York
Has the Orchid type of flower. They have much more substance than the flowers of the other varieties of this class, and will stand the hot sunshine as well as the toughest varieties of cannas. The color is a solid rich scarlet covered with a beautiful glowing sheen. The flowers are large and contrast beautifully with the dark bronze foliage. 50c. each; \$5.00 per doz.; \$35.00 per 100.

Send for our list and prices of 50 other leading varieties of cannas.
ROSES
Are our great specialty, 2 1/2 and 4 in. pot plants we have to great variety. Teas, Hybrid Teas and H. P. Roses on their own roots. Philadelphia Rambler, Crimason Rambler, Dorothy Perkins and other climbers in strong field plants.
Shrubbery
in variety. Viburnum Plicatum, Spireas, Altheas, Deutzias, Weigelas, Barberry Thunbergii, Hydrangea Pan. Grandiflora, Honeysuckles, etc.
Send for our Price Lists.

CULTURAL DIRECTIONS

Specially written for the use of your amateur customers. Send Twenty-five cents for complete sample set, which amount will be deducted from order for first thousand.

The universal favor in which these Directions are held, as shown by the many orders received therefor, encourages us in the belief that these Leaflets are just the neat little factor to help promote business and establish better relations between the dealer and his customer.

TRY SOME!
BIG BUSINESS ASSISTANT
TO SAVE TIME, QUICKEN SALES, AND AID YOU PLEASE YOUR CUSTOMER, WE HAVE PREPARED

Cultural Directions

COVERING A NUMBER OF THOSE PLANTS AND BULBS MOST LARGELY IN DEMAND

THE "CULTURALS" have been written by experts; they are fuller, and contain more detailed directions than it is possible to embrace in a catalogue. Equipped with these, just hand one out with each sale, and save yourself considerable present and future trouble, as the customer will then be able to consult the directions, grow his plants, seeds or bulbs intelligently, and so receive satisfactory results, without having to continually resort to you for advice.

The following "Culturals" are now ready:

THE WEEK'S WORK.

Timme's Timely Teachings.

The Hotbed.

Amply justified in placing but little value on antiquated ideas and old-fashioned ways of doing things, the up-to-date florist is very apt to look with derision upon such a primitive affair as the hotbed. Nevertheless it is still largely in evidence, commencing a time, remote and strange, when horticulture was still in its infancy. And this because it is as efficient in promoting plant growth as anything ever hit upon by human ingenuity, and as helpful a contrivance to gardening today as it was centuries ago. Simple as it is in its conception and make up, it offers but slender scope for being improved upon.

A line of hotbeds, or a whole block of them, proves most serviceable on any place where small stock is to be raised in quantity, be this for the general Spring trade or the replenishment of greenhouse and garden crops. I have found the middle of March to be the best time for the making of hotbeds, though truck farmers have need of them much earlier. But there is little necessity for florists to start in with hotbeds any sooner. A well-firmed layer of fresh horse manure, about 18 inches high, extending a foot or more beyond the space inclosed by the frame, will generate enough heat by decay to belated cold spells and to last until all danger is past. The later the material is made, the less fermenting matter is needed, and the more straw, hay or tree leaves are mixed with the fresh manure the less intense will be the heat, but the longer it will last. Three or four inches of soil is enough for the raising of seedlings or cuttings, and less if potted plants are to be placed in the frame. This layer of earth should not be spread until the first rank heat has escaped, at least until the heat has settled down to a steadily held agreeable point. Should it be set up, a covering of the tightly closed sashes with hay or straw mats and all around the frame will soon start the heat, when this covering can be dispensed with, unless very cold nights and a low degree of heat under the sashes render its use advisable. Although hotbeds, sunk in the ground, keep the heat longer than those built up from the level of the surface, it is safer not to excavate if there is reason to fear a flooding by Spring thaws. In setting up a row or several of hotbeds some regard should be had for tidiness, order and neat appearance when the job is done. A sheltered position with a clear southern exposure and shielded from the north and west by some sort of a high windbreak is a good place for hotbeds.

The Care of Hotbeds.

There are few kinds of seeds, bulbs, cuttings, roots or small potted plants that could not successfully be started and raised in well-working hotbeds. But much of this success depends on the bestowal of proper attention to a few details in the management of hotbeds which do not admit of the slightest neglect. The ventilation of the hotbed is one of these. An outlet for any excess of generated heat and moisture is necessary at all times, even in the coldest nights, after the bed has been stocked with plants and is still at its greatest heat. Then again, there being but a small space between the glass and the plants, it is easily seen that on clear days the sun heat alone would raise the temperature under the glass to a killing height, in a very short space of time, and a force allied with the heat from the manure would mean the ruin of the entire contents in less than an hour, were the sashes to remain closed owing to forgetfulness or neglect on the part of the attendant. This happens very too often on some fine sunny mornings following severely cold nights. In such exceptional cases if the plants are still alive, they may yet be saved by opening the sashes little by little, by shading the glass and thus very slowly cooling off the plants. This is a better plan than throwing the sashes wide open at once, allowing the cold air to sweep through the half-cooked plants and then laying them flat with a needless drenching from the watering can. It is just as easy, and fully as disastrous, to forget the closing of the sashes at the proper time in the evening when a cold night is following in the wake of a bright day. When to open sashes and how much air to admit depends on the condition of the hotbed and that of the weather as also on the character of the stock in the frame. A watchful eye and an observant mind coupled with experience among plant life, hold forth les-

sons of a clearer understanding on these points than all my teachings in black and white, and anyone having had no experience with hotbeds until this Spring, if he heeds my warning as to the danger of neglect in venting, and is not over-new in the raising of plants, will have no difficulty in making the attempt a successful one.

Cold Frames.

Even those florists, large and small, who deem the making of hotbeds too troublesome or not needful, find good use for cold frames in whatever cultures they may be engaged. Such frames are most serviceable at nearly all times of the year, indispensable adjuncts to a great many establishments and of considerable value in the early Spring months to the grower of market and border plants. The cold frame is exceedingly simple in its construction. It is merely a square frame of planking, six or eight inches higher in the rear than in the front, firmly joined or nailed together, placed on or sunk into the ground and covered with well-fitting sashes. Cross bars are let into the upper edge of the rear from the sides where the sashes join for these to rest and slide in. This is the cold frame in its simplest form. Anybody handy with tools can build it, and I have yet to find the first gardener that isn't. Frames of this description can be set up at short notice and can be moved about with ease from one place to another if necessity demands.

In going a step further we come to the elaborately designed and carefully constructed frame of a type conceived in times of old, but still made to do good service to-day on many places. In some instances the frame is built up in brick or cement, in others they are a heavy posting and solid planking; some of them are equipped with hot water or steam heating, supplied by a nearby boiler shed or greenhouse, and all of them are stationary or permanent structures, built to last for years. Most of these beds are dug-outs, some of them so deep below the surface that they come nearer to being a regular pit than a frame. I used to have sixty feet of this old, but very useful kind of frames, but finding that to work them was mighty trying on the human spine I tried to improve upon the original design by raising the top to a height sufficient to allow of walking and working room inside. Before I knew I had a sash house, which for years answered my purpose quite as well as the erstwhile pit-like row of frames, and—I am almost sorry to say—for the raising of common market plants it proved more suitable than the house of modern construction that now occupies the place. This bit of evolution only exemplifies the struggle for betterment in structural accommodation as going on all over the country; certainly a good sign. But this onward push with its outward tendencies so far has failed to banish the lowly cold frame from the face of the earth. That it is even more made use of now than formerly speaks highly for it. The simple, movable frame, to be set up at any time when needed and at any place deemed most convenient, is of incalculable value to all and every commercial grower. A substantially built frame, including the sashes, if well taken care of, should last at least five years, and during that time it should repay its cost many times over.

Frame Cultures.

Lacking the heat of the hotbed the cold frame is not a safe institution for the deposit of tender or even half-hardy stock before the first part of April. It comes handy enough any time after that, even if put to no other use than to accommodate the overflow from the densely crowded houses. This should be the frame's principal mission in early Spring. But I advise the exercise of judgment and caution, because much stock is ruined every year by a too early removal from greenhouse to frame. One must take into account that even hardy plants, when started in fire-heated houses, are as easily injured by these of the more tender classes by sudden exposure to uncongenial conditions. In filling frames with house-grown stock the warmest hours of a fine day should be chosen for the work, and for the first few days air should be admitted in moderation; a hardening off by slow degrees being the object and the safest course to follow in every instance. During belated cold spells, which may always with certainty be looked for in early Spring, the frames are, of course, kept tightly closed and must even be covered with mats, or in some other way, to keep out the severe cold at times. As the season advances and natural warmth is more generously supplied, it becomes proper to admit air in abundance to anything growing in frames and by that time well weaned to direct ventilation. The time will then be near at hand when the sashes can be removed from the frame entirely. Plants thus freely exposed, and probably well furnished with vital roots, will then need attention more than usual as regards watering, lest all so far gained by frame culture is forfeited.

JOHN BADER, Mt. Troy, Allegheny, Pa.
 Mention the Florists' Exchange when writing.

Many kinds of bedding and garden plants, annuals in particular, as also perennials for the next year may to advantage be raised from seeds in cold frames. By sowing thinly and transplanting in time excellent stock can be grown in this manner, far better than is possible in the most improved of glass structures. But the same degree of watchfulness in opening and closing the sashes mornings and evenings on bright days alternating with cold nights is necessary in the care of cold frames as in that of hotbeds, though the damage resulting from neglect in this particular may not be so heavy, since the growth is not so soft as that made in hotbeds. This latter circumstance is one of the advantages found in the cold frame and in further comparing it with the hotbed it is easy to discover others. It is less expensive, can be stocked with plants or seeds as soon as set up, these do not dry out as fast, and altogether the frame needs less in the way of close attention than the hotbed, while this can be started earlier and is equal with a force for the promotion of plant growth, entirely lacking in the cold frame. In the same degree as the hotbed cools down will it come nearer to being a cold frame, and will then answer the same purposes.

Glasshouse Structures.

We are again entering the building season. The constantly increasing business in all lines of floricultural products in the first place means expansion in glass area all over the country. The establishment of new concerns, the enlargement of others, and the ever increasing reconstruction of old houses will, as usual, be the cause for considerable activity in building operations. This is one of the most important lines of work connected with gardening, requiring wise planning and thorough-going deliberation, even before the first step is taken, fraught with opportunities for the making of mistakes, difficult or impossible to correct after the structure is completed. For this reason, and because I have grown plants in all sorts of glass houses, in the construction of which I have been personally active, I venture a few remarks in the nature of advice to those who contemplate building, but lacking the experience necessary for the avoidance of errors in design or construction.

It is an easy matter to build a whole block of new houses, an entire new range on clear, unobstructed ground after plans carefully worked out by owner or expert, if these houses are to serve one purpose only—the raising of roses or carnations, for instance. In such a case my advice is not needed. But in adding a house or two to a small or medium-sized establishment, growing all sorts of commercial stock, cramped for room and the place dotted all over with obstructions in the form of outbuildings, sheds, trees or valuable garden space, it becomes extremely difficult to decide just what to do or how to proceed, and yet the increase of glass area here is an urgent need and room for the new houses must be found. In a case like this we have to accommodate our plans to the space available, first making sure by exact measurement what room it is possible to clear and at our disposal before we can safely work out the details on paper. As far as it is possible we must keep away from tall trees or buildings, must arrange matters in the house can be worked conveniently as regards the transfer of soil, boiler connection, ventilation, etc. In some such cramped quarters most of our best paying retail concerns are located, but it is only a question of time when florists in this category will find it much more profitable to buy plants and flowers than to raise them on high-priced ground.

Whatever kind of houses we may have pictured in our minds as most suitable for our particular trade, for this or that special culture, they should never in their design lack adaptability for other uses if necessity demands such a change from one culture to another. In any case they should be built of the best material, substantial in every way and equipped with the latest and most improved of working facilities and apparatus. It is wiser to build one first-class house than three of miserly makey or sliphod construction.

Three-quarter span houses running east and west, the long slope facing south, give best service in the raising of winter-flowering crops. In such houses it is not at all impossible to raise good potted and market plants, especially the smaller kinds of plants for a general Spring trade, intends to build or rebuild, he will do well to erect even-span houses of moderate width, running north and south, provided with abundant means for ventilation, the benches being raised to the glass and at least half of them furnished with plenty of piping underneath.

Acacias.

There are many varieties of the true acacia that well merit a place in all plant collections, having some clearness of completeness. And there are not a few

Grafted Roses

We offer this year the following assortment: **Bride, Bridesmaid, Bon Silene, Etoile de France, Franz Deegan, Golden Gate, Ivory, Gen. McArthur, Kate Moulton, Kaiserin Augusta, La Boria, Killarney, La Mame, Mme. Abel Chateaux, Mme. Caroline Testout, Mme. Hoete, Mrs. Pierpont Morgan, Maman Cochet, Marechal Niel, Perle Des Jardins, Papa Gontier, Richmond, Rosalind Orr English, Souv. Du President Carnot, Souvenir De Wootton, Tom Field, Uncle John Wellaley.**
The above grafted from 2 1/2 inch pots \$15.00 per 100; \$120.00 per 1,000 for A No. 1 stock; nothing else will be sent out. On their own roots, from 2 1/2 inch pots, repotted from 2 inch, \$6.00 per 100; \$50.00 per 1,000.

The Baby Rambler, \$2.50 per doz.; \$15.00 per 100.

AMERICAN BEAUTY

On own roots, from 2 1/2 inch pots, \$8.00 per 100; \$75.00 per 1,000; 3 inch pots \$2.00 per 100; \$100.00 per 1,000; April, May and June delivery.

OUR GUARANTEE GOES WITH EVERY PLANT.

A. N. PIERSON, Cromwell, Conn.

2 YEAR OLD

ROSES

4 in. pots; Climbers, in assortment, at \$8.00 per 100. 2 1/2 in. Roses, 40 varieties, all colors, at \$2.00 per 100; \$16.00 per 1000.

2 1/2 in. stock GERANIUMS, AGEERATUM, PEBREWINKLES, VIOLETS, HIBISCUS, F. BEGONIA, FUCHSIAS, HELIOTROPE, HONEYSUCKLE, ASPARAGUS, \$2.50 per 100. COLEUS, ALTERNANTHERAS, at \$2.00 per 100. FERNS, 2 1/2 in., Boston, Pieroni, Scottish, at \$3.00 per 100. Tarrytown, Barrows, at \$5.00 per 100.

THE NATIONAL PLANT CO., Dayton, O.
Mention The Florists' Exchange when writing.

that may profitably be grown by commercial florists whose trade in plants and flowers demands diversity in the stock put forth. The class of plants is raised and grown without perplexing difficulty; the first cost is small, and yet the well-finished plants bring the exceptional prices always willingly paid for finely grown exotics of uncommon character. Full grown specimens are easily and quickly obtained either from cuttings or seeds, so that the grower need not rely entirely upon imported stock. Cuttings may be struck at any time from now until June, and for the starting of seeds of such kinds as can in that way be raised to advantage it is now the right time.

For a trade in easily managed plants of the usual market sizes the dwarf varieties are found the best and most satisfactory in every way. *Acacia paradoxa*, *A. armata*, *A. cordata*, *A. lineata*, *A. grandis* and many others belong to this class, all of them being easily propagated from cuttings. Of the fast growing taller varieties there are also several, as *Acacia Drummondii*, *A. dealbata* and *A. lophanta*, which may be grown with little care and considerable profit to anyone willing to grant them the needed root and head-room. Permanently established in well-drained solid beds, they annually make a wonderful growth and never fail to be covered with bloom. They stand a severe cutting down every year, and this is necessary to keep them in bounds. The many varieties of *Acacia lophanta* are raised from seeds, and plants two feet high may thus be obtained in one season.

Berried Plants.

Ardisia crenulata stands at the head of berried plants grown for the Christmas trade. If good seeds are at hand a sowing should be made now, for it is none too early if fair-eried plants are to be ready by next Fall. They grow amazingly slow and respond unwillingly to any kind of hastening measures. Seed trays should be stood over bottom heat, and later on the potted-up seedlings should also be placed in a temperature of 60 or 65 degrees with a little extra heat underneath, if this can be managed. This will insure a good start and the plants will then make a fair progress during the Summer. By next Fall most of them will be smart little bushes, some of them good enough for the coming Christmas trade. But if carried over another year they will be the right kind of stock for the best class of trade, and I do not think I am mistaken in saying that the two-year process in raising *ardisia*, is, after all, the most profitable.

Christmas, or celestial peppers, when well done, are also good and great many of them are readily disposed of at the Winter holidays. They are of

IF YOU ARE IN NEED OF

GOOD STOCK

We are fully confident that we are in a position to fill your wants.

Why? Because we carry the kind of stock that you are looking for, as we make a specialty of producing high grade stock of all kinds, being strong in

ROSES AND CARNATIONS

In addition to the cutting of a choice line of stock from our own large green-houses, we also handle the production of a number of the best growers in this city, thereby placing us in a position to fill all orders in a very satisfactory manner, as a trial order will convince you.

So if you wish to avoid disappointments and want your orders filled satisfactorily, just give us a call and you will be more than pleased that you called upon us.

Judges for the show will be Messrs. Hauswirth, Kaating and Robert Craig; and an additional invitation is to be extended to Messrs. W. K. Harris, Vincent, H. Weber and Seybold to officiate in that capacity.

CANADIAN NEWS

TORONTO, ONT.—Business continues good and stock fairly plentiful. Roses are coming in in ample supply and generally are of fine quality.

Other speakers called upon were E. Palmer, J. K. M. L. Farquhar, W. J. Stewart, J. G. Butterworth (who read a poem he had prepared for the occasion touching on the abilities of the officers of the club, especially the able secretary, W. N. Craig), Alex. Montgomery, T. H. Westwood, Jackson Dawson, J. W. Duncan, J. H. Morton, W. N. Craig, M. Norton and G. M. Anderson.

LONDON, ONT.—The executive committee of the Canadian Horticultural Association will meet here on March 14 to make arrangements for the coming convention which is to be held in this city some time during next August.

Washington, D. C.

The last regular monthly meeting of The Washington Florists' Club, prior to the convention, was held March 5 with good attendance. All the officers of the preceding year were unanimously re-elected as follows: Peter Bisset, president; Z. D. Blackstone, vice-president; Chas. McCauley, secretary; W. H. Ernest, treasurer, board W. S. Clark; awards committee, Chas. McCauley, W. S. Clark, John Robertson, Jos. Freeman, Jr., and Thos. Field.

F. H. Kramer has offered a \$50 cup to be bowled for on March 15. New prizes adding most attractive features to the exhibit are being tendered daily, not only by the trade, but from other lines of business.

Stock of all kind is rapidly regaining its normal condition, and trade has improved wonderfully. Easter stock is coming up very fast at present and the lilies that two weeks ago looked as if they would not be out before May day, will probably be in all right for Easter.

Contents

Table listing contents of the publication, including American Carnation Society, American Rose Society, and various notices.

EDMONTON, ALBERTA.

None but those who actually experienced the intensely cold weather of the past two months can appreciate the welcome change of the last two weeks—from January and the first few days of February with a mean temperature of 22 below zero and every night 35 to 50 below, to the bright Spring-like weather of the present; which gives every indication of continuing.

A live horticultural society is at present in contemplation; great interest is being taken by some of the leading citizens, and the prospects are that the first horticultural exhibition in the Far West will be held in connection with the Provincial Fair, in July.

FINDLAY, O.—Last year S. J. McMichael added two new greenhouses to his establishment and has now some 12,500 feet under glass devoted to growing vegetables and flowering plants, for which he finds a good demand.

PREPARE FOR EASTER

In Philadelphia there's a florist noted, Aschmann, his name, his plants beyond compare; To a sweet girl his heart is all devoted, Next rank his Araucarias, passing fair; When seen together they're a pair so charming—Brimful of beauty—both he cannot keep; So to his heart he'll hold his winsome darling, While you may have the Araucarias cheap.

An immense stock of choice Easter plants, blooming Easter week or earlier if desired, are now ready for immediate shipment.

COME or Mail your order direct to Headquarters. Our reputation over the entire country, from the Atlantic to the Pacific, in growing Easter stock for many years past, is sufficient guarantee to prove what I say. We have every house, nook, hole and corner full; plants were never so fine as they are this year, 1907.

While laborers, merchants, jobbers, contractors, builders, etc., have increased their prices nearly double, we DD NOT advance our prices; look! we sell our plants at the same old prices charged two or three years ago when the producing of plants was much cheaper.

MR. GODFREY ASCHMANN, Philadelphia, Pa. Dear Sir:—I received your plants in good condition. Satisfactory to me in every way. I am pleased. Respectfully yours, EDWARD LEIZMANN. 227 Loyallhanna St. [The amount of plants was \$86.25 for Azaleas, Kentias, Araucarias and Ferns.]

MR. GODFREY ASCHMANN, Philadelphia, Pa. Dear Sir:—I was well pleased with the plants that I received of you last year, so I send you another order this year. (Here follows description of order.) Yours truly, LEANDER D. HURD.

"I have seen Mr. Aschmann's Easter stock and I can truthfully say that it never looked finer, and stock never before so large, and I am pleased to recommend our customers to Mr. Aschmann." F. J. MICHELL, Of the firm of Henry F. Michell Co.

What was my duty during my trip to Ghent, Belgium, the land of Azaleas, Araucarias and Palms—last Fall, 1906? The interests of my customers, of course; not speaking of the 1100 Souvenir Cards which I mailed to my customers in America. I also bought for their benefit, AZALEA INDICA for Easter sales, the cream of Belgium's production. I am able to offer to my customers and the trade in general, two houses full of Mme. Van Der Cruyssen azaleas, the well-known and most favored, best double, pink azalea, giving so much satisfaction all over America. Plants as round as an apple, just covered with buds, 6-7 in. pots at 60c., 75c., \$1.00, \$1.25, \$1.50, \$1.75 to \$2.00 each. Other fine varieties adapted for the American Market, such as Niobe, Bernard Andrew, Alba, Deutsche Perle (double white), Prof. Wolters, Empress of India, Veraneana (double variegated), and about eight more fine sorts, all covered with buds, price 75c., \$1.00, \$1.25, \$1.50, \$1.75 to \$2.00 each. We have a limited quantity of 50c. to 60c. azaleas, such as Apollo (double dark scarlet), Deutsche Perle, Simon Mardner, and a few others.

Lilium Muliflorum and Japan Longiflorum were never so fine as this year. All sizes; can meet all wants 6 in. pots 5 to 8 buds to a plant, 10c. per bud; four buds and under, 12c. per bud.

Spiraea Gladstone, 6 to 7 in. pots. These plants are very large and bushy, and unusually fine this year, full of buds; price, 50c., 75c. to \$1.00 each.

Hydrangea Otaka's (pink) 6 to 7 in. pots, 40c., 50c., 75c., \$1.00, \$1.25 to \$1.50 each.

Cinarraria Hybrida, have a house full, all shades, 5, 5 1/2 to 6 in. pots, \$2.50, \$3.00, \$4.00 to \$5.00 per doz.

Crimson Rambler Rosas, 3 ft. high and over, \$1.00, \$1.25, \$1.50, \$1.75 to \$2.00 each.

Begonia, new improved Erfordi, an immense bloomer, blooms all summer and winter through, 5 1/2 in. pots \$3.00 per doz.; 4 in., \$1.80 per doz.

Frimula Obconica, 5 1/2 in. pots \$2.50 per doz.; 4 in., \$1.80 per doz.

Arcia Sapida (palm), 6 in. pots, 50c.

Draecena Branti, 6 in., 50c.

FERNs. Nephrolepis Barrowsi, 6 in., 50c. to 75c.; 5 to 5 1/2 in., 40c. Scottii, 8 in., very long, \$1.50 each; 5 in. Boston Ferns, 5 in. pots, 25c. to 30c.; 6 in., 40c. to 50c.; 7 in., 75c.

Kentia Forsteriana, 7 in. pots, make up one large one in center, three small ones around, \$1.50 to \$1.75. Kentia Fosteriana, single plant, 30, 45 to 50 in. high, \$1.00, \$1.25, to \$1.50 each.

ARAUCARIA COMPACTA ROBUSTA, 5 year old, 7 in. pots, 25 to 30 in. high, same in width, 4 to 5 tiers, very well stuff, \$1.00, \$1.75 to \$2.50 each. Araucaria Excelsa Glauca, 20 in. high, 4 tiers, 4 year old, \$1.00, \$1.25 to \$1.50 each. Specimen Glauca, 7 in. pots, 5 year old, 5 tiers, 30 to 35 in. high, \$3.00 each. Araucaria Excelsa, 4 year old, 6 in. pots, 25 to 35 in. high, 5, 6 to 7 tiers, \$1.00, \$1.25 to \$1.50 each.

Hyacinths, raised from first class bulbs of my own importation. Notice: These bulbs cannot be compared with ordinary stuff flooding the market. King of the Blues, Grand Maitre (Lavender blue), Gertrude (best pink), Grandesse (white), 4 in. pots, \$12.00 per 100.

Tulips. Tournasol, red and yellow variegated; this is the best selling tulip on the market, will stay in full bloom 10 days, 3 bulbs planted into a 4 in. pot; price \$12.00 per 100 or \$1.50 per doz. pots.

Narcissus, or Double Von Sion Dafodilis best double yellow in the world, will sell on sight, 3 double nosed bulbs planted into a 5 1/2 to 6 in. pot; price, \$2.50 to \$3.00 per doz. pots. All bulbs are of my own importation, now outside in cold frame, and will bloom 2 weeks after bringing them into the greenhouse.

MOON VINE, Ipomoea Multiflora, (A. W. Smith, originator), best pure white, largest and most fragrant moon vine in the world. We have made a specialty of it for the past 15 years, and are known as the moon vine growers of America. Grow 20,000 of them, 2 1/2 in. pots, \$5.00 per 100; now ready.

Mention if pots are wanted with all plants. For the reason that the cultivation of Lilies is expensive, and because we sell our Lilies cheap, some other plants must be taken in connection with them. Cash with order, please. All goods must travel at purchaser's risk only.

Number of Plants for a Round Bed.

(54) How can I figure the number of plants it will take for a round bed? J. C. B.

New York.

—To find out how many plants are required for a circular bed, square the diameter of the bed in inches, multiply the answer by .7854, then divide the total by the number of inches apart the plants will be set.

New Jersey.

—Flower pots painted either on the inside or outside or on both sides, are not so good for growing plants as they are when unpainted, for the simple reason that the coat of paint gives a glazed surface and renders the pot no longer porous.

Painted Pots.

(55) Can you inform me through your paper if pots painted on the outside or inside are injurious to plants growing in same? W. W.

New Jersey.

—Flower pots painted either on the inside or outside or on both sides, are not so good for growing plants as they are when unpainted, for the simple reason that the coat of paint gives a glazed surface and renders the pot no longer porous.

Propagating Salvia.

(56) Will salvia do the best raised from seed or cuttings, and what plant would make a pretty border for a bed of the same? C. M. S.

Mich.

—Salvia do probably better when grown from seed than they do when grown from cuttings; their flowering season seems to last longer. At the same time it is rather late now to sow salvia seed, as the plants would not be large enough to flower until quite late in the season. A good border plant for a bed of salvia would be Coleus Verschaffeltii.

Utilizing a Small Greenhouse.

(57) I have a small greenhouse, 20 x 30, all ready for use, but have never used it for commercial purposes, thinking it too small. Can any of your readers suggest any flower or vegetable that they think I could grow profitably, provided I do all the work myself. SUBSCRIBER.

New Jersey.

—A greenhouse, 20 x 30 feet, is too small to do anything with in a commercial way, as there would not be work enough there to keep one busy all the time; and if any other business is conducted in conjunction with the greenhouse, the chances are the latter would likely be neglected at some important time and a total failure result from any crop that was being grown. We would suggest, however, that to run such a greenhouse with the least danger of injury from neglect, would be to use it for potted plants such as geraniums, fuchsias, coleus, salvias, etc., which could probably be sold locally at a reasonable profit.

Geraniums for Cutting.

(58) Will some one having experience with geraniums for Winter-blooming give a list of six or eight varieties suitable for growing for cutting; they must be double varieties. L. M.

New York.

—So far as the best geraniums for Winter-flowering are concerned, varieties commonly used for bedding work will answer this purpose as well as any; they are all about equally free in their flowering during the Winter season, and we would suggest such sorts as Alphonse Ricard, Miss Frances Perkins, S. A. Nutt, La Favorite, John Doyle, General Grant, Double Dryden and Jean Viand.

Early Chrysanthemums.

(59) Which are the best three very early chrysanthemums for florist's use, in white, yellow, and pink? L. M. New York.

—As to which are the best three early chrysanthemums, what one grower would call the best might not coincide with some other grower's opinion, but we would suggest Glory of the Pacific, Polly Rose and October Sunshine.

To Give Color to Tomato Foliage.

(60) Can you tell me what I can give my tomato plants this Spring that will bring a good, green color? I grow about 3,000 boxes of tomatoes for Spring sales. I use good soil with manure, but the plants do not grow even, and they turn yellow. I was told to put nitrate of soda into the soil. Could you recommend anything that will help to give them strength and a good, green color, and how much to a bushel of soil? BEGINNER.

New York. —If the soil in which the tomatoes are growing has been prepared carefully, as the writer implies has been the case, it is evident that the foliage is turning yellow owing either to the plants being given too much water or that too great changes occur in temperature conditions. It will be advisable to obviate, if possible, the cause of the leaves turning yellow; but do not attempt to do so by feeding the plants with liquid manure, nitrate of soda or other fertilizer, as that certainly would not help matters, and would tend to spoil the plants so far as their future fruiting is concerned. The feeding of young plants of any kind should never be attempted, especially if they are to be sold while in the young state, as such over-feeding will only produce plants that would never give satisfaction to those who purchase them.

Fancy Caladiums, Palms.

(61) Kindly let me know how to treat fancy caladiums to give them a start, also palms. READER.

—To start fancy caladiums, pot them in 4 or 5-inch pots, using a soil in which there is no fresh manure (plenty of leaf soil among it is a good thing if that is obtainable) also sand enough to be sure of good drainage. After the bulbs are potted give them one good watering; place them in a house where the temperature is maintained at 60 degrees at night, and shade them either with cloth or paper until growth starts. Be very careful about affording water between the time they are potted until it is seen that the top growth is started, as any sodden condition of the soil at this time is almost sure to make the bulbs decay.

We presume from the mention of palms that raising them from seed is meant. To grow palms from seeds it is a good plan to use shallow flats in which there is two or three inches of leaf soil or other light soil. Spread the seeds on the top of that evenly, then cover with sphagnum moss that has been chopped fine, place under a bench in a warm house, and keep continually moist. As soon as it is seen that the seeds have germinated the seedlings can be pricked out and potted up separately in small pots and placed on the greenhouse bench. A house where a temperature of 60 degrees at night is maintained is best for the raising of palms from seed.

Callas.

(62) If calla bulbs are planted in a solid bed (12 inches soil, sand underneath), placed in a carnation temperature of 55-60 degrees, do they bloom just as well as in pots? Can they remain two or three years in the same bed undisturbed? How should they be left resting (drying out); how long and for what length of time? If taken up, could the same soil be used again with manure worked in? What is the cause of a good many calla blooms (plants in solid bed) coming green or spotted (rotten)? I gave them a mulching of stable manure (covering the surface) in January. AN OLD-TIMER.

New York. —To question number one we would answer, no, because the depth of soil is too much and the plants would make heavy growth but would not flower so well. To question number two we would answer, no, because to have callas do well they should have new soil every year. To question number three we would say: Don't treat the callas in

WHOLESALE TRADE LIST

- ASPARAGUS PLUMOSUS, 2 1/2 inch pots, \$3.00 per 100.
CARNATIONS: R. C. Enchantress, Lawson, White Lawson, Red Sport, Boston Market, and Vesper. Price on application.
CLEMATIS PANICULATA, 4 inch pots, \$1.50 per doz., \$10.00 per 100; 3 inch pots, 75c. per doz.; \$5.00 per 100.
FUCHSIAS, Heliotrope, yellow Daisy, from 2 1/2 in. pots 50c. per doz., \$3.00 per 100.
GERANIUMS, best varieties from 3 inch pots, \$4.00 per 100.
IVY, Hardy English, 3 in. pots, \$5.00 per 100; 4 in. pots, \$1.50 per doz.; \$10.00 per 100.
MOONVINES, the true variety, 3 in. pots, 75c. per doz.; \$5.00 per 100.
SANSEVIERA (Zebra plant), 4 in. pots, strong, \$1.50 per doz.; 3 in. pots, \$1.00 per doz.
ROOTED CUTTINGS: Heliotrope, dark blue; Fuchsiads, Elm City; Cupheas, Parlor Ivy, Alderatum, blue and white, \$1.00 per 100.
HYACINTHS, first size bulbs, red, white and blue, in bloom for Easter, \$1.50 per doz., \$10.00 per 100.
TULIPS, Journefol, double, La Reine, single White, 3 bulbs in 4 in. pot, \$1.50 per doz., \$10.00 per 100.
SEEDLINGS from flats. Asparagus Sprengeri, Smilax, Ageratium, blue Perfection, Petunias, Howards Star and Rosy Morn, \$1.00 per 100.
C. EISELE, 11th & Roy Streets, PHILADELPHIA, PA.

that way, as greenhouse room is too expensive to have the house idle two or three months in the year. To question number four we would say, no. The old soil would be apt to get sour and the plants would not grow satisfactorily. To question number five, there is no doubt in our mind but that the trouble comes from the callas being planted in too deep a soil and from the house temperature being too low. If the callas are wanted to bloom satisfactorily through the whole season, the night temperature should never go below 60 degrees, and the fact of the flowers coming greenish is sure evidence that the temperature has been too low.

GRAFTED ROSES

Money-Makers for Commercial Growers

Our list includes only the most profitable commercial varieties for forcing—no "has-beens" nor "franks". (Consult the Flower Market reports, and see what the sellers are). Here's our list:

Table with 2 columns: Variety Name and Price. Includes RICHMOND, CHATENAY, BRIDE, BRIDESMAID, UNCLE JOHN, GOLDEN GATE, KILLARNEY, WELLESLEY, KAISERIN, CARNOT, IVORY, MISS KATE MOULTON.

These are the markets top-notchers. Our plants are grafted on the best selected English Manetti stocks, and we are booking orders now for early delivery, or when wanted.

THE 1907 NOVELTIES, Lady Gay, Minnehaha, and Hiawatha, can be had in strong stock; descriptions and prices on request.

SPECIAL--American Beauty, 2 years, dormant, (field-grown) budded, fine plants for forcing, at \$2.00 per 100.

CELLAR-STORED SHRUBS, VINES, etc., in full assortment, ready for immediate shipment; send for Complete Price List.

PAMPHLETS RECEIVED.

ORCHID HYBRIDS. Addenda to Sander's List, 1905-1907. Published by Sander & Sons, St. Albans, England. Price One Shilling, post paid.

In this document the Messrs. Sander furnish tables of hybrids, consisting of those crosses raised and recorded since the publication of their Orchid Hybrid List in separate form, thus bringing the list down to date. The subject matter is, as said, arranged in tabular form, rendering reference easy. Table I gives the names of the hybrids alphabetically arranged, with the seed and pollen parents in the second and third columns respectively. Table II records, in alphabetical order, those plants which have been used as seed parents—the second column giving the names of the plants with which they were pollinated, the third column being the resultant product. In Table III the pollen bearing parents are arranged in the first column, the plants which carried the seed in the second, and the product in the third.

The completed list should prove a boon to everyone interested in the cultivation of orchids.

"HOW TO MAKE MONEY IN MUSHROOMS" is the title of a practical little pamphlet issued and distributed upon application by A. V. Jackson, 3267 North Western avenue, Chicago, who claims to be the largest mushroom grower in America. The establishment is certainly an interesting one, the houses which are built about one half above and one half below ground forming three sides of a hollow square upward of one hundred feet on a side. The buildings are some 40 feet in depth and are filled with four tiers of mushroom benches. From these houses at the present time are being gathered some 500 to 600 pounds of product per week, and at the height of the season there have been picked 2000 pounds a week for eight consecutive weeks. Ten years ago Mr. Jackson gave up commercial horticulture and launched out on the unknown sea of mushroom growing, and successful and constantly increasing crops have resulted.

American Carnation Society.

Varieties Registered.

By R. Wittertaetter, Cincinnati, O.

THE CARDINAL, color a deep, rich scarlet; habit similar to that of Estelle but stronger.

THE ARISTOCRAT, color a deep, lively cerise; long-stemmed flower, three to three and one half inches in diameter; habit, no surplus grass, a rapid grower, quite healthy and with long-jointed stems.

ANTERGLOW, color a light, rosy cerise; a three-inch bloom, guard petals standing out straight with a high built center; habit, a strong vigorous grower; stems the length of those of Aristocrat but more rigid. Destined to be grown as largely as Mrs. Lawson in its time.

ALBERT M. HERR, Secretary.

American Rose Society.

Next week, on Wednesday, Thursday, and Friday, March 13-15 inclusive, the American Rose Society will hold its annual meeting and exhibition at the Washington Light Infantry Hall, Fifteenth and E. Eighth streets, Washington, D. C. The exhibition will be held in conjunction with the Spring show of the local florists' club.

Never in the history of the Rose Society have so many valuable special premiums been offered in competition as this year, a fact testifying to the energy and enthusiasm of its officers, and one calculated to bring out an unsurpassed display of roses, in the various classes, at the Capital City. In addition to the special prizes, a list of which has already appeared in our column, the gold medal of the organization will be given for the best new rose not yet disseminated, whether of domestic or foreign origin. The variety winning this trophy must score not less than 95 points, judged under the society's scale. A silver medal is offered at the same time and under the same conditions for a novelty scoring not less than 85 points.

Exhibitors should bear in mind that all exhibits for competition must be in position by noon Wednesday, March 13, and are not to be removed before Saturday, March 16. An entrance fee of \$3 is required for all new members; any person paying annual dues is entitled to make entry without further fee. Exhibits sent from a distance should be addressed to Louis Freeman, superintendent of Exhibition, Washington Light Infantry Hall, Fifteenth and E. streets N. W.

Several papers will be presented at the annual meeting, one by E. G. Hill, on the subject of "New Varieties." The originator of the Richmond rose is always interesting, and there are few men in the trade better fitted than he to talk on the topic that has been assigned to him. The other essayists are also capable men, and their papers will be equally instructive. Then, too, the members will discuss the matter of what definite work the society can take up in behalf of its members in particular, and the rose-loving public in general, that it does not now perform. Also as to how its membership may be increased; and whence shall come the readiest response to the appeal thereat—from professional florists and gardeners, or from what are commonly called "amateurs."

Whatever the outcome of the deliberations on these two subjects, it is plausibly evident that any added undertaking by the society is contingent upon increased new membership. No good work can be done unless funds are available for its proper performance. One thing is certain, the "amateur" interest cannot be fully developed through exhibitions and these, too, in which the amateur cannot, by force of circumstance, compete; something more is necessary to cater to, and enlist the affiliation of this class of rose growers and rose lovers. The list of those who grow roses for the pleasure the flowers afford is an ever-increasing one; and what these people most need, and would greatly welcome, is instruction on the cultivation of the plants, and advice as to varieties suitable for various purposes. In this latter connection, we have before us as we write the English National Rose Society's latest official catalogue of roses, an interesting and valuable document compiled in order to meet the wants of amateur rosarians generally and not principally from an exhibitor's point of view. The following table of contents of this hand-book will show its scope and the character of the information supplied. Chapters are devoted to Descriptive Catalogue of Roses, Synonymous Roses, List of Roses according to the classes to which they belong; Selections of Roses for the various purposes mentioned in the catalogue, namely—for general garden cultivation, bedding standards, tall weeping standards, walls, pillars, pergolas, covering banks, pegging down, forming a hedge, growing as bushes, edging, buttonholes, towns and suburbs, pot and greenhouse culture and greenhouse climbers. There are also given lists of Fragrant Roses, Hybrid Perpetuals and Hybrid Teas for Exhibition, and Teas and Noisettes for Exhibition.

We cite the foregoing simply to demonstrate what the National Rose Society of England, the prototype of the American Rose Society, is doing in behalf of amateur rosarians, a class, which as we understand it, forms the bulk of the British organization's membership; also to provide a foundation upon which our own society may build, should it elect to devote a greater portion of its labors than now to promote the welfare of the amateur rose-grower, which, directly and indirectly, means the welfare of the professional rosarian as well.

Of course, as before said, to carry on work of this nature means added financial support accorded the society. In the meantime, however, we think it might be worth while to consider whether some of the money now given as prizes could not just as profitably be expended on propaganda connected with the rose of the character herein outlined. The commercial man will grow the flowers he exhibits, anyway; the amateur has to be interested, instructed, encouraged and advised.

OUR READERS' VIEWS

Recent Collapse of Trussed Roof Houses.

Editor Florists' Exchange:

Owing to the report having been made in your paper of the collapse of the trussed roof greenhouses at Adolf Farenwald's place near Philadelphia we find ourselves placed in a very unfair position. As we introduced this method of greenhouse construction, and as your report did not state who designed the house that collapsed, most of the people have jumped at the conclusion that these houses were of our design and construction. We therefore think it only right that we mention the fact that these houses were not of our construction.

KING CONSTRUCTION COMPANY.

North Tonawanda, N. Y.

To Dye Carnations Green.

Editor Florists' Exchange:

For the benefit of the readers of The Florists' Exchange, those interested in the coloring of carnations, or any other white flower, green, take 10c. worth of each of aniline blue and aniline yellow; mix same and bring it to the boiling point. The above quantity will make one gallon; or if too strong add more hot water. Don't put the flowers in the dye until it is cold. If the aniline dye is not satisfactory, use methylene blue and aniline (?) yellow. These dyes are harmless and are used in coloring candy.

I have been successful with both of the above named dyes. I am sending a sample of the methylene blue and aniline (?) yellow coloring. Stick a white carnation in it, and see it turn green! I don't sell the material.

Newport, Ky.

L. BENSON.

Mitchella Repens.

Editor Florists' Exchange:

In your issue of March 2, under "Horticultural Notes," *Mitchella repens* is spoken of as a diocious plant, which is a mistake. The flowers of *Mitchella* are all perfect; that is, they contain both pistils and stamens, but they are what botanists term heterogeneous dimorphic forms. The pistils in one set of flowers are exerted, or protruding beyond the corolla, and the stamens included; and in another set the stamens are exerted and the pistils included, which seems to be one of Nature's wonderful provisions for wide fertilization or crossing by insects conveying the pollen, by coming in contact with the exerted stamens in one case and the protruding pistils in the next. Both kinds of flowers bear fruit, and the fact of plants being devoid of berries is easily accounted for by a fondness certain birds have for them. It is an attractive little plant in a cool, damp and partly shaded situation.

New Jersey.

E. R.

A Protest Against Green Carnations (?)

Editor Florists' Exchange:

There are many things daily occurring which prove that this part of the hemisphere at least is inhabited by a few queer mortals. The attempt to gain pecuniary advantage by the deliberate prostitution of the Divine flower by dyeing or coloring white flowers green, is only a sample of what some men find it necessary to do in order to exist. It is pleasing to note that no Irishman is engaged in this degradation of flowers, and we are sure none of the Irish race will be found wearing these "green" carnations on St. Patrick's Day.

These foolish attempts to beguile a weaker part of a most intelligent people by unscrupulous offerings in the way of artificially colored flowers and fake shamrocks deserves the severest condemnation, and it seems to me regrettable that the horticultural press of these United States should seem to encourage this depraved trading. Perhaps the American Carnation Society might consistently take some action toward discouraging the offering for sale of "green carnations."

J. IVERA DONLAN.

Growing Gladiolus with Carnations.

Editor Florists' Exchange:

We have just finished an experiment to our loss, and although one does not like to make known to others a failure so readily as a success, we often think there is as much learned from one as the other.

It was in this way: Last Fall we had two hundred white and light-colored gladiolus bulbs. They had been forced last Spring and had been well dried off. About the end of October we had a carnation bed which we considered too thinly planted. We planted these gladiolus bulbs between the carnation rows alternately. They soon came up and grew rapidly; we staked and tied them neatly. We noticed lately that they were affected with red spider. A number turned yellow, died off and did not show flower. We may say that they were kept syringed on all bright days. To-day, March 1, we pronounced the gladiolus this year a failure, generally.

We have given the effect; now do we know the cause? We think we can answer the question. For several years past we have produced 95 per cent. good spikes, but the corms were planted later and run cooler. This year we thought we would have them in for Easter, ran the house at 60 degrees at night, and

March 9, 1907

with sun, 70 degrees by day, but they did not like the treatment. They are natives of the Cape of Good Hope (not tropical plants). We have planted heretofore about January, ran the house at 50 degrees at night and 60 degrees by day. They produced good spikes about the end of May. However, we will know better the next time. The experiment is worth something to us, and we thought it might be to other readers of The Florists' Exchange. J. BEBBINGTON & SONS.

Mixing Carnation Pollen.

Editor Florists' Exchange:

We notice a discussion going on in your columns concerning mixed pollen used in the cross-fertilization of carnations. It is perfectly feasible to use the pollen from almost any number of varieties in making a cross, but we scarcely would advise this, as it is so impossible to trace heredity in the seedlings resulting from such crosses. The theory of Mr. Thommen is quite correct, as a flower represents not one individual, but a group of individuals, of which each ovule is the unit. Only one pollen grain can fertilize any one ovule, but there is no reason why a dozen different ovules may not be fertilized by as many varieties of pollen even though they exist in the same pod. According to the articles it seems that some of these experiments have been tried, but as to the usefulness of such experiments we can see no advantage either one way or the other. We do not think that any plant breeder has been enabled to get any better results from the mixing of pollen than by keeping his crosses perfectly distinct, as there is no absolute certainty as to the results of any given cross. The nearest we have been able to arrive at any definite conclusion has been that certain varieties will transmit to their offspring greater vigor than others; this cannot be determined without specific trial, for in the experience of the writer he has found that some varieties, which in themselves have little merit, will produce in the offspring far better characters than are produced by either or both of the parents.

When we began work in the field of hybridization, we had a theory that such varieties as Mrs. Lawson, Lerna, Enchantress and a few others were absolutely certain to produce high grade seedlings. To verify results, however, we admitted some varieties that were not considered especially meritorious, and in the resulting seedlings discovered that some of the latter were more productive of results than of the former. We have not yet proceeded far enough with our experiments to absolutely prove the truth of this statement, but that is the conclusion we must draw at this time. In fact, several of our most promising seedlings resulted from a cross of Golden Beauty upon Prosperity. Of course, Prosperity is a vigorous grower with good flower, but it must be conceded that Golden Beauty is a very ordinary variety. We think, however, that the seed parent must be of great merit to insure a reasonable percentage of merit in the offspring. This matter has been, and will for many years in the future, be a source of deep study by the writer. It is only by carefully tabulating the data of these crosses that we can trace heredity and discover such laws as may exist, of the transmission of character in the plant.

The writer has gone into this matter considerably further than he intended when starting out and has perhaps said many things that are beside the point raised in the articles referred to.

As to the parentage of the carnation Winsor, we should think from the statement that the Editor's view was correct. IRVING GINGRICH.

Acacias.

Editor Florists' Exchange:

The article on acacias in a recent issue of The Florists' Exchange interested me greatly, for the reason that it gave the method of cultivation necessary to grow the plant successfully in pots under glass. In this land of sunshine, with never a drop of rain during the Summer months, more of this family are being planted for street trees than all other varieties combined, and of all the varieties tested *A. melanoxylon*, known here as black acacia, gives the most satisfaction. It is drought-resistant, free from disease and the attacks of insect pests, makes a fine head without pruning, adapts itself to any kind of soil, and does not break up side walks and curbing. While it blooms profusely, it is not nearly so conspicuous as other varieties, because the flowers are hidden among the dark green foliage.

For wonderful beauty *A. mollissima* easily stands at the head of the list of all large flowering trees grown in this climate. I should like to see the pen capable of describing trees in full bloom, as they are now, February 12—one great pyramid of golden-colored, fluffy blossoms, delicately scented, and this large pyramid composed of hundreds upon hundreds of smaller ones, twelve to eighteen inches long, six to twelve inches diameter, the whole beautiful beyond description. Specimens of this subject may be seen here of two feet diameter of trunk at base with a top of thirty feet spread.

Of the small growing sorts, *A. Baileyana* is, in the opinion of the writer, the handsomest. The fine lace-like, silver gray foliage makes it a desirable shrub for that characteristic alone; but it too, when in bloom is gorgeous. The flowers are borne on stems two to four inches long from the axils of the leaves, and in such great profusion as to look like a great bouquet six feet diameter, eight to ten feet high.

A. cultriformis is equal in beauty to *A. Baileyana* when in bloom, but not so when out of flower. The foliage is curiously set along the stem, reminding one of the teeth of an old-fashioned cross-cut saw.

A. latifolia belongs to the class that bears flowers in form like the "pussy willows" of the East. In the axil of every leaf, in early Spring. There is one variety, *A. floribunda*, which is in bloom every day of the year. The seedlings vary in habit of growth and floriferousness, but a good variety of this low growing tree is very desirable for small places.

A. armata is one of the least attractive varieties that we grow. The foliage lacks in delicate beauty and gracefulness, and when in bloom the plant does not compare favorably with the varieties named above.

A. farnesiana blooms during the Winter months, the flowers being the darkest in color, and the most strongly scented of any variety the writer knows anything about.

A. Julibrissin, known also as *Albizzia Julibrissin*, is a deciduous tree, of irregular growth. The flowers are globe-shaped an inch in diameter, of a most beautiful iridescent color. The foliage, which is compound, has the characteristic of folding up at night.

A near relative of this family is *mimosa*. A fine specimen, and the only one growing here, is *M. Spigazini*. It is a low-growing, very spiny shrub with small compound foliage of a dark metallic hue. The flowers are globular, light purple in color, borne in the axils of the leaves. The seed pods are flat, breaking into single seeded sections, which are held together by a filament on each side, which gives it a curious and interesting appearance. New varieties of this order of plants are being introduced annually, many of which are not yet old enough to flower. P. D. BARNHART.

Fullerton, Cal.

American Rose Society.

The Spring rose show will open in Washington Light Infantry Hall, Fifteenth and E streets, N. W., Washington, D. C., on next Wednesday, March 13, to be open until Friday, March 15, inclusive. The superintendent of exhibition is Louis Freeman, 1307 F. street, N. W., Washington, D. C.

M. H. Walsh of Woods Hole, Mass., advises that he will send on some fine samples of his climbing roses. The judges are Messrs. Robert Craig of Philadelphia; Wm. P. Kasting of Buffalo; and P. J. Hauswirth of Chicago. Papers will be prepared as follows: "The Hybridization of Roses, the Ideals Before the Worker, and the Means Used to Work Up to Those Ideals," by E. Gurney Hill, Richmond, Ind.; "Everblooming Roses for the Garden, What to Grow and How to Grow Them," by Theodore Wirth, Superintendent of Parks, Minneapolis, Minn.; "Climbing and Trailing Roses in the Hardy Rose Garden," by M. H. Walsh, Woods Hole, Mass.

The headquarters of the society will be at the Arlington Hotel. The secretary will be in Washington on Tuesday, March 12, to attend to matters pertaining to the society and show.

There is a particular prize offered by Moore, Hentz & Nash, New York, of \$15 and \$10 in cash to be given to the grower, (that is the man who did the actual work of growing), for the best two samples of roses shown in the exhibition. This is in recognition of the actual workmanship, whether he be the exhibitor or an employee of the exhibitor. Corbey Brothers Bakery offers a cash prize of \$25 for the best mantel decoration. There are altogether 35 special premiums offered outside of the regular society prizes. About three-fourths of the membership have already sent in their annual dues, and several new men have forwarded their checks. BENJAMIN HAMMOND, Secretary.

NEWPORT HORTICULTURAL SOCIETY.—On Tuesday evening of last week this society gave an entertainment for the members and their families, which was a most enjoyable affair. The regular business meeting was of very short duration. One new member was proposed (another dahlia man), and favorable action was taken in the case of another.

The first part of the entertainment included songs by Louis Walker, the noted blind tenor of Taunton, Mass.; T. F. Connelly, Augustus H. Swan and John T. Allan, Jr., the boy soprano. The latter loomed up as the star of the evening. Following were readings by Newport's favorite dramatic elocutionist, Miss Lillian E. Maher, and Mr. Rankin, violin and piano solos by Mr. Ressen and Miss Finn respectively. A collation was served by the committee, with the assistance of the proprietor of the Perry House, Mr. Wiswell. Bruce Bnterton as host did his part admirably. John T. Allan as chairman of the entertainment committee carried the affair to a most satisfactory conclusion. This was the first meeting of the kind held in many years, but it was the best; and it is safe to predict that so long a time will not elapse before there will be another. D. M.

AMERICAN ASSOCIATION OF PARK SUPERINTENDENTS.—The executive committee of the American Association of Park Superintendents held its Midwinter meeting at Manchester, N. H., Saturday, March 2. The business before the meeting was principally the arranging for the annual convention of the association at Toronto next August. The report of Secretary-Treasurer Mulford showed the organization to be in a flourishing condition, having eighty members in good standing.

Among those present at the meeting were: President Byron Worthen, Manchester; Secretary-Treasurer F. L. Mulford, Harrisburg, and Vice-Presidents John F. Cowell of Buffalo, N. Y.; Chas. E. Keith, Bridgeport, Conn.; and John W. Duncan, Boston. Others present included J. A. Pettigrew and W. J. Stewart of Boston. J. W. D.

Philip Winter.

Philip Winter, aged eighty-three years, died last week at the residence of his daughter, Mrs. J. A. Brack, Lakeview road, Glenville. Mr. Winter was one of the pioneer florists of Cleveland. He went there in 1853 and at once engaged in the business of growing and selling flowers. Four children survive him.

Mrs. Arthur H. Ashley.

Louise J., wife of Arthur H. Ashley, florist, New Bedford, Mass., died on Monday, February 25, at the age of 52 years. The funeral was held on Thursday, February 28, and was largely attended by members of the profession and other friends of the deceased lady.

John Henkel.

John Henkel, aged 72 years, died last week at his residence in Allegheny, Pa., after an illness of several months. He was born in Hesse, Germany, and came to this country in 1860. A few years afterwards he opened a seed and farm implement business in Pittsburg which he conducted until a few years ago. His property was taken by the Wahash railroad and he moved over to Allegheny, still continuing in the same business. He was one of the oldest members of the Pittsburg Chamber of Commerce. E. C. R.

O. D. Munn.

Orson D. Munn, proprietor of the "Scientific American," identified for forty years with Llewellyn Park, Orange, N. J., which he did much to beautify, died last week at his residence in New York, aged 83 years. "The Terraces," Mr. Munn's Summer home, consisting of sixty acres of the picturesque woodland of the Orange mountains, was one of the show places of that celebrated locality, taking its name from nine terraces immediately back of the residence, upon which eight gardeners are employed under the superintendence of John Hayes. Mr. Munn designed and donated the spring with its landscape adornments at the entrance to the park and was instrumental in placing the statue there of its founder—Llewellyn S. Haskell. He was a frequent exhibitor at the shows of the New Jersey Floricultural Society. JOSEPH B. DAVIS.

Herman C. Baartman.

Sad in every sense of the word is the news of the death, by drowning, of Herman C. Baartman, Sassenheim, Holland. He was in the bulb business for a great many years, and by his honesty and the high grade of goods he handled he had built up a large business. Mr. Koning was taken in as partner, and the business was conducted under the style of Baartman & Koning. For twelve successive years Mr. Baartman had made his annual business trip to this country, but owing to personal matters at home he decided to send his partner this year. A short trip necessitated his going to England, and on his return he unfortunately took passage on the ill-fated steamer Berlin, when only 14 of the 143 passengers were saved.

Mr. Baartman was 33 years of age. On the solicitation of Ex-President Kasting he became a life member of the S. A. F. O. H., being, we believe, the only foreigner on the life membership list of that organization.

The business will be carried on by his partner, John Koning, who is traveling in this country now.

Mr. Baartman has gone from us, but the memory of the man, and his many fine characteristics will long be honored by his associates, not only in his own country, but also in this land of ours. W. H. G.

Ladies' Auxiliary S. A. F. O. H.

STUB— ETAOINNN Ladies, please take notice, the following states have furnished members for the Ladies Auxiliary S. A. F. O. H.: Missouri, Michigan, Pennsylvania, Illinois, Ohio, Massachusetts, Indiana, New York, Connecticut, Louisiana, Wisconsin and State of Washington. I would like to hear from ladies in the District of Columbia, New Jersey, Colorado, Iowa, Kansas, Kentucky, Maryland, Nebraska, and other states not mentioned. Our supply of pins is becoming small; I hope to have to order more. MRS. CHAS. H. MAYNARD, Secretary.

219 Horton avenue, Detroit, Mich.

A plant has been discovered in the Malay Peninsula, which, it is said, has successfully cured Chinese of the opium habit. The name of the plant is *Combretrum sandaieum*, Miquel. It is a weedy climber with opposite leaves, in size and shape somewhat resembling that of the pear tree, and bears globular clusters of small white flowers arranged in panicles, the flower being followed by a red fruit about an inch long, furnished with four longitudinal wings. The plant is abundant on the plains around Kuala Lumpur, in Selangore, Malay Peninsula. The properties of the *Combretracae*, the natural order to which it belongs, are very little known; some are used in malarial fevers, two are known to possess vermifuge properties, and one is used for poisoning bats.

FRANK R. PIERSON
Vice-President A. R. S.

In a carelessness manner, the grower, if he be interested in the progress of the society, will seek to outdo his brother grower in results, with the twofold advantage of which I have spoken. This is the monetary view of the good that the society has done, and apart from this commercial phase it has brought to light where the rose-loving public may see the creations of the world beautiful to a high degree of perfection, thus demonstrating the skill of our growers. These exhibitions are productive of benefits even to the grower who does not exhibit, but who in order to compete in the open market must perforce grow first-class flowers to hold his own. In short, our society is the harbinger of better prices for every grower.

Number of New Roses Increasing.

While we do not have the great number of new Roses that the European growers exhibit at their great shows, yet we are steadily increasing in the creation of new varieties, as has been well testified to in the past three years, during which time there have been more new roses of merit introduced by American growers than perhaps in a decade previous to that time. Interest in hybridization has been stimulated, and while the work differs very materially from that in carnations, inasmuch as the latter flower responds so readily to the efforts of improvement, yet we are proud of the many new roses that have first seen the light of day in America and have been shown at the exhibits of the American Rose Society.

Then, again, in this branch of the work the necessity for roses that will adapt themselves to our varying climate has been clearly shown, and by intelligent efforts we have accomplished something we have never had before, and that is the creation of roses to suit the planter of the South, as well as the grower in the North, not only for the commercial florists, but especially for the amateur grower, who after all is first to be considered, because if we can enlist the support of the great masses of amateur rose growers in all parts of the country, by helping them to succeed, we know not to what extent the power and influence may extend in beautifying our land and increasing the revenues of our growers.

Few European Sorts Suit American Conditions.

We have found by experience that out of the multitude of new roses sent us from Europe there are but few that have adapted themselves to our climatic conditions, so that it would seem to be the cardinal work of this society to demonstrate that which is best and that which is not best for professionals and amateurs alike, and this can be only accomplished by unity of action among growers, enthusiastic love for the rose, and a spirit that what is good for one of us is good for all. The wants of the buyer of our product vacillates from time to time, and in order to keep abreast of the times and secure flowers that will bring the best price we must needs have some means of acquiring this knowledge, as well as of disseminating it. While Bride, Bridesmaid, Golden Gate and other tea roses of similar character, whose popularity perhaps has not diminished because of the increased number of people who buy, yet it would seem, to touch upon this subject briefly, that as Ex-President Montgomery of the Rose society very aptly stated, "the rose of the future will undoubtedly be raised from a mixture of tea and hybrid tea, producing a hybrid tea of the type of Tom Field and Queen Beatrix, your home roses, Richmond, Liberty, Miss Kate Moulton and others, all roses of the hybrid tea class, because of their high and positive colors, which are now so much wanted. Then, too, these roses require more skill in growing, which means more attention, resulting in the very condition spoken of previously, that the grower secures in the end a greater return for his labor than he could hope to do were we to continue to be satisfied with the favorites of former years. So much for what the society has tried to do in the past.

What May be Done.

Now as to what it may expect to do in the future, and in this city, the subject is one I would not attempt to outline, because it is entirely dependent upon the combined effort of the growers what may be accomplished. If the society goes forward as rapidly as it has done it will accomplish a wonderful good for everyone engaged in the florists' business, not to speak of the great masses of people outside of the florists' trade who are interested in roses. My purpose of being with you is more to ask that the Florists' Club of Washington will give us that earnest support that we know they will, feeling that in doing so we are helping each other. We want more members, not only florists but those outside of the trade, and in order to make the exhibition here a success let us bend every possible effort to increase the membership of the society and stimulate the public interest in our efforts, and with your hearty co-operation we shall have, without doubt, the best meeting and most attractive exhibition ever given by the American Rose Society.

As to what we may expect to do at the forthcoming exhibition in your city, I am unable to give a

ROBERT SIMPSON
President A. R. S.

list of the number of prizes to be offered, but you may depend upon it that there will be a splendid showing. In Boston, if I recall properly, we had about fifty prizes, cups and in cash, with over one hundred competitors. Our President, Mr. Simpson, at the meeting of the Executive Committee a few days ago in New York, informed us that there would be more prizes of greater value offered this year than ever before, and this list will be ready for publication in a very short time. It is yet early for entries, but with your co-operation I feel safe in saying that this will be one of the greatest exhibitions ever held in this country. I would specially urge that if possible the Washington society people be asked to donate some special premiums, to be published in the supplementary list, in order that we may secure their hearty co-operation in bringing the attendance up to the highest mark.

Before closing these remarks, let me again urge your club to give us the very best hand you can in order to push forward the good work, so that it may be said that the Washington exhibition far outshone that which has become so famous held in Boston last year.

If there are any present who are not members, now is the time to get aboard and get a seat in the prow of the boat, even though, as Mr. Montgomery has said, "you do get splashed with an occasional wave."

HARRY O. MAY
Treasurer A. R. S.

are as good, if not better, than any I have ever before seen."

Benefit of Its Exhibitions.

The society's exhibitions have been instrumental in bringing about a keen but friendly rivalry between our commercial growers, and the value of this is readily apparent, because it stimulates the grower to give the cultivation and care of his plants that attention necessary to bring them to the highest degree of perfection, for the purpose of exhibition, thereby increasing the productiveness of his business in cash returns. Then, too, in setting a higher standard of excellence he advances the popularity of the rose in bringing forth its wonderful possibilities. Instead of going about his work

BENJAMIN HAMMOND
Secretary A. R. S.

FOR THE RETAILER

Bulbous Flowers.

Bulbous flowers, or Spring flowers as they are more generally termed, are now at their zenith. There is scarcely a wholesale florist in New York who has not got them by the thousands, and the mystery is, where do they go; what becomes of them? These are the questions that arise from year to year, and yet I am sure the quantity doubles each season, and still they are disposed of. This has undoubtedly been a season of great scarcity and high prices; the advent of the bulbous flower has been a relief all around, and the retailers are at last able to give their customers something for their money. Even the poor can have flowers on their tables. The effect of the great influx of Spring flowers is, of course, "bearish;" roses and carnations have to suffer, and prices naturally ebb toward low water mark. This is not quite as it should be, as any one who has been in close touch with the season's market knows the grower has had far from a good time of it; and now that rose houses are beginning to show a little color other than green, it seems hard that values could not have held to high water mark a little longer. But these are the conditions, and "it's an ill wind," etc., says the man on the street.

There is little change as to variety in the supply of bulbous flowers; about everything has been forced that can be forced, and the quality is up to the usual standard. Bulbous stock in pots and pans is a welcome addition for our plant lovers. Besides hyacinths, tulips, and narcissus I have seen some very pretty pans of Scilla præcox, the blue squill, and the pretty little muscaria, or grape hyacinth, which sell well as novelties.

Luncheons for "ladies only" are the popular entertainment for the Lenten season, and Spring flowers seem to be the correct thing to use for these occasions, which is undoubtedly proper, as the coloring of the blossoms is always seen to the best advantage in daylight. Yellows lose much of their brilliancy under artificial light.

An arrangement noticed during the week was as follows: The center-piece was made of mixed Spring flowers, tulips, hyacinths, narcissus, sweet peas, and several other sorts being introduced and arranged in groups. Beside each plate was a small basket arranged with the same variety of flower as was used in the main decoration, each basket being different and tied with narrow ribbon to match the flowers. Another table was covered entirely with Narcissus poeticus; these were arranged in irregular groups, and were apparently growing out of the rich velvety moss which covered the entire table with the exception of a small margin left for service. Narcissus Golden Spur, combined with Acacia pubescens, was another good suggestion. The table was used without covering, the bare portions being strewn with Princess of Wales violets.

A large table for forty was arranged as follows: The center was occupied by a sundial, the table being laid out in triangular beds, eight in number. These were separated by narrow gravel paths edged with green moss. The effect—yellow and white—was obtained with tulips and narcissus. The dinner was given by an architect. D. RAYBUN.

Seasonable Advertising.

What is known as "seasonable" advertising is nothing more nor less than rowing with the stream. It is taking advantage of circumstances outside of one's own jurisdiction and turning them to profitable account.

The grocer, the dry goods man, the tailor and the candy man, and many others make use of

seasonable advertising, so why should not the florist? In the Fall and Spring the tailor announces his new fabrics; the confectioner advertises his candies at Christmas time. Men will buy clothes when the seasons change, and children will eat candy during the holidays; so advertising for these lines at such times is simply taking advantage of needs and desires that exist and trying to appropriate to one's self as much as possible the privilege of gratifying them.

To the florist seasonable advertising can easily be made profitable. At Christmas, St. Valentine's Day, Easter, Decoration Day, etc., a little preliminary advertising judiciously placed will make itself felt.

One week before St. Valentine's Day this year I decided that it would be possible to induce many a man who intended sending a valentine to send flowers instead. In fact, I believed that many people would do so readily if the thought only occurred to them. With this idea in view, I printed several thousand postcards, like the reproduction, on a good quality of cardboard. One of these was sent to every customer who ever bought more than a dollar's worth of goods from me. The remainder were distributed carefully in the territory from which I draw trade.

The result was very satisfactory indeed. In fact, it was one of the most satisfactory pieces of advertising literature I ever put out, in view of the fact that results were necessarily so prompt.

The cards cost me something like \$18 and produced approximately \$140 in direct business. Much of the business came by telephone. Just as I anticipated, much of it was business that I would otherwise never have received, since the card suggested to the recipient his first thought of sending flowers for a valentine.

H. R. HUGHES.

CLUB AND SOCIETY DOINGS.

NEW JERSEY FLORICULTURAL SOCIETY.—The competitive monthly floral displays of this society were inaugurated February 1 for the current year with three exhibitors under the class for regular gardeners upon estates having glass, and one under class having limited facilities, but with no special provision for orchid displays as in previous years. Orchids were shown by Lager & Hurrell—a table of Laelio-Cattleya Arnoldiana, Dendrobium nobile album and Cattleya Schroedera; Julius Roehrs Company exhibited Oncidium splendens, Cattleya Schroedera, white and colored, and lilac Laura Spathe, Orson A. Miller staged lycastes, Odontoglossum, crispum, Oncidium fuscatum, and Dendrobium virginale, being awarded first-class certificates. Roses and carnations were shown by William Runkle, (gardener, D. Kindsgrab); S. and A. Colgate (gardener, Wm. Reid), A. C. Van Gaasbeek (gardener, W. J. Bennett); Chas. Hathaway, (gardener, Max Schneider). A standard heliotrope grown by Peter Duff, gardener for J. Crosby Brown, Esq., and a specimen begonia grown by Albert Larson, whose name was placed in nomination for membership. The judges for the evening were: William F. Ross, Arthur T. Caparn, and William Reid.

E. R. Pierson Company, Tarrytown, N. Y., made offer through their representative, William F. Ross, of a prize of \$10 for the best twenty-five blooms of carnation Winsor to be exhibited at the society's Fall show.

A committee consisting of M. MacRorie, D. Kindsgrab, and H. Halbig, were appointed to frame resolutions of condolence upon the death of O. D. Munn, a member and patron of the society since 1896.

J. B. D.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words: each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Avenue. My facilities for delivering flowers for any and all occasions are unequalled. I can give prompt service to steamer and theatre trade. Telegraphic orders solicited.

Kansas City, Mo.

SAMUEL MUBBAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Washington, D. C.

GUDE BROS., 1214 F Street, N. W. We excel in high-class flowers and design work of every description; quick service, reasonable charges and liberal treatment have placed us on top. Try us.

Milwaukee, Wis.

THE C. C. FOLLWORTH CO., Wholesale Florists, will take care of all your Retail orders for the delivery of flowers anywhere in Wisconsin.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLOREAL CO., 1706 Broadway. J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Cincinnati, O.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dallas, Texas.

LANG, THE FLOREALIST, the largest flower store in the South, floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Texas, Louisiana. Mail and telegraphic orders solicited.

TARRYTOWN (N. Y.) HORTICULTURAL SOCIETY.—The February meeting of this society was held in the regular meeting rooms on the 26th, President Howard Nichols in the chair. Enoch Evans and A. L. Marshall were nominated for active membership. A fine vase of the new scarlet carnation Beacon from Peter Fisher, Ellis, Mass., was on exhibition, and was awarded a certificate of merit. Three well grown plants of Primula stellata were exhibited by Thos. Atkinson, gardener to Mrs. Henry Seigel, Mamaroneck, N. Y., who was awarded a cultural certificate for same. The monthly prize for the best twelve roses other than American Beauty was won by James Ballantyne with Bridesmaid. It was decided to hold the June show on June 14, and the date of the Fall show was fixed for November 6, 7, and 8. A communication from David Fraser, Pittsburg, offering a prize of \$25 for the best twelve blooms of chrysanthemum Miss Clay Frick at the Fall show was thankfully received, and it was decided by the society to offer the amount as \$15 for first, and \$10 for second prize. A third prize of \$10 was then donated for a similar exhibit by James Regua. James I. Donlan read a paper on "Decorative Work" and gave some good illustrations in the arrangement of cut flowers. Jos. Bradley contributed the cut flowers, among which were Roman hyacinths, Primula obconica, mignonette, cyclamen, carnations, and sweet peas. A very lively discussion followed. This was conceded to be the most animated meeting the society has had in many months, and was thoroughly enjoyed by all. At the March meeting an essay will be read on "Outdoor Roses." D. McFARLANE.

A FULL REPORT of the convention and exhibition of The American Rose Society, to be held at Washington, D. C., March 13-15, inclusive, will appear in next week's issue. A splendid advertising opportunity is afforded the progressive Rose Grower, to present his offerings to the trade in that number. Don't miss it.

LET ME SEND YOUR VALENTINE FOR YOU

EVERYONE sends someone a valentine on St. Valentine's Day. It's one of our most beautiful customs. Next Thursday you will want to send some one a valentine. Let me make a suggestion. It is nothing more appropriate for such a remembrance than flowers, and nothing that will be more appreciated by a woman. I am preparing a Special Valentine Box of Flowers, made up of a large assortment of beautiful and seasonable flowers. I will deliver one of these boxes, with your card, to any address in the city on St. Valentine's Day. Price of the box, complete and delivered, \$1.00. Whether it's a mother, a sister, a wife, a sweetheart, or a friend, you may take my word for it that a Valentine Box of Flowers will reach her heart. Special floral novelties for Valentine Day. Miniature automobiles, 30c. Wheelbarrows of goldfish, 50c. Goldfish outfits, 25c up. Decorative plants, palms, ferns, rubber plants, etc. Vases, jardinières, etc., for decorative purposes. Estimates freely furnished for floral decorations for all occasions—weddings, parties, receptions, banquets, etc.

March 9, 1907

New York.

The Week's News.

On Monday evening, March 11, the New York Florists' Club meeting will be held in the club room, corner of Twenty-third street and Eighth avenue. There is much important business to come before the meeting, and exhibits of reasonable stock will be gladly welcomed by the exhibition committee. It is expected that John Birnie will talk on the city's needs as regards a plant market, and that Secretary Hammond of the American Rose Society will make a few remarks on the forthcoming show of that organization.

The annual meeting and exhibition of the American Rose Society takes place in Washington next week, and we understand that there will be several delegates from this city in attendance there.

There is much complaint among plant growers this year on account of the large percentage of lily bulbs that have turned out failures. It seems to be the general impression that fully 50 per cent. of the bulbs purchased have had to be thrown out. This is certainly a great loss to greenhouse men who make a specialty of forcing lilies, and it seems but reasonable to expect that something should be done to ameliorate or minimize this annual loss to bulb growers. It is a well-known fact that the disease of the bulbs does not show itself until the plant is fairly well developed, and by the time the grower can distinguish the good from the bad and throw away those that are not going to flower, he has used the room in his greenhouse for several weeks, such room, therefore, being actually wasted, so far as his receiving any profit from the space is concerned. If there could be some arrangement made between the bulb grower and the bulb dealer whereby the grower only paid for the bulbs that grew satisfactorily, it would be some slight recompense for the florist who was trying to grow lilies and make a profit on them.

It is also noticeable in many places that there are a good many of the roses being forced for Easter coming blind. This is, no doubt, due to climatic conditions; at the same time it is going to make really good pot roses somewhat scarce for Easter, and it is but reasonable to expect that prices for both pot roses and lilies will be somewhat higher this year than they have been for a long time.

The award committee of the New York Florists' Club made a trip to Bound Brook, N. J., on Tuesday to inspect the new varieties of sweet peas of Anton Zvolanek.

A new feature in the salesroom of the Cut Flower Exchange, corner of Twenty-sixth street and Sixth avenue, is a large diagram of the floor, with the spaces all numbered, ready for the owners' names, which has been placed on the wall. When the name of each standholder is painted in the respective spaces on the diagram, one will be able to see at a glance just where each grower is located in the market.

Early last Sunday morning about a ton of dynamite exploded at Homestead, N. J., where it was stored ready to be used in the tunnel that is making under the Palisades. The explosion was so terrific that it was felt at points 25 or 30 miles away, and in the neighborhood of the explosion much broken glass was the result. Located near that point are the greenhouses of Ernst Asmus' Sons, H. C. Steinhoff, John Birnie and many others. At the Asmus place it was believed that about \$1,000 worth of glass had been broken. At Mr. Steinhoff's place it took a little over fifty boxes to repair the damage. Mr. Birnie lost 300 lights of 16 x 24 glass. Fortunately the weather was not very severe, and aside from the loss of glass no other damage resulted.

L. W. Wheeler of Vaughan's Seed Store was called to Wisconsin on Sunday last owing to the severe illness of his mother. Mr. Wheeler was enabled to get back to business again on Monday of this week, and reported that his mother had taken a turn for the better and her full recovery was looked for.

One of the pretty things seen in the retail florists' windows this week were pots of crocuses in full bloom. Nothing seems more suggestive of Spring than the crocus.

Gardenias were seen on the trays of some of the street peddlers this week. Nothing appears to be too good for the itinerant flower peddler; he will likely be handling cattleyas in due time.

The sympathy of the craft will go out to Wm. Bogart, the well-known buyer for his brother, P. L. Bogart, retail florist at 970 Sixth avenue, whose seven-year old daughter died of pneumonia on Monday evening.

E. E. Bogan, the venerable retail florist at Twentieth street and Third avenue, met with an accident several weeks ago, from which he sustained a broken arm. We are glad to say that Mr. Bogan is improving every day, and it is not likely that he will suffer any permanent injury. He is over eighty years old yet attends to his business every day.

Wm. Elliott & Sons will commence their auction season in their rooms at 201 Fulton street on Tuesday next, March 12. W. J. Elliott, the popular and well-known auctioneer, will at that time offer a splendid lot of hardy decorative stock. Sales will be continued from that date every Tuesday throughout the season.

Vaughan's Seed Store received this week a carload of tuberose and caladium bulbs, also a carload of onion sets.

The florist store of Chas. Stahl, together with the building in which it is located, 610 East One Hundred and Forty-third street, was destroyed by fire on Friday, March 1.

At the recent flower show held by the

(one of the largest growers, said 40 per cent.), while the late arrival of bulbs and the early date of Easter leave some uncertainty in many places as to what proportion will be ready on time. Some growers are equipping their lily houses with extra pipes, and one house visited last week was enduring a temperature of 96 degrees at 4 p. m. which seemed pretty hot treatment, especially when I was informed that it had been up to 110 in the middle of the day. It is generally conceded that there will not be as many lilies as in preceding years and as the market would freely care for, which presages somewhat stronger prices for the select goods at least.

Frank Williams is about to make a decided change of base, having become interested in the new store at the corner of Wabash avenue and Adams street which will have in all its furnishings by March 15, and on May 1 he will abandon the Masonic Temple store on State street.

Sam Pearce's range on Clybourn and Southport avenues is a busy place these days with fifteen thousand pots of lilies approaching maturity for the Easter trade, a seasonable portion of his annual venture of one hundred thousand Holland bulbs, and a thrifty lot of azaleas in different stages of development. The

The dealers who handle the green coloring for 17th of March carnation trade report a large sale.

J. J. Hanswirth left Friday for a two weeks Eastern trip, his itinerary circuit including New York, Philadelphia, where the board of directors of the S. A. F. O. H. will meet on March 11, and Washington, where he will act as one of the judges at the exhibition of the American Rose Society, which takes place on March 13, 14, and 15. At the time of writing it was planned that unless something unforeseen should turn up to prevent, his son Ed. will accompany him on the trip.

Miss Halladay, bookkeeper for Scheiden & Schoes, of the Flower Growers' Market, is anticipating a pleasant visit, directly after Easter, to her former home in Dallas, Texas.

The crop of Easter lilies, estimated at from twenty-five to thirty thousand, out at Poehlmann Brothers Company's, seems to be well in hand and far enough advanced to be considered over the hill, and all were found the latter part of last week in rather cool temperatures, hardening; and though many of them may yet require some encouraging, no anxiety is felt as to developing them comfortably in the remaining time.

Charles S. Stewart of the Winterson force has met with satisfactory success with his green carnation coloring, for which he claims the additional quality of preserving the flowers a day or two longer than under normal conditions.

Invitations quite generally circulated among the gardeners and florists, and reading, "High Ridge gardeners and florists will give a smoker at Weseman's Hall, 4375 N. Clark street, Wednesday evening, March 6, 1907; yourself and gardener or florist friends are cordially invited to attend," gave promise at this writing of bringing together a large gathering for the purpose of a fraternal chat and the renewing and enlarging of acquaintances.

Phil. Breitmeyer of Detroit and Robert Klage of Mount Clemens were among the last week's visitors.

The J. A. Budlong concern is booking advance Easter orders and sees a prospect of an especially bright Easter trade.

Wieter Brothers are among the very few growers who are cutting long-stemmed American Beauty in large numbers. Their teas, too, are especially fine and the outlook for the Easter crop particularly brilliant.

C. L. Washburn left on Monday for the St. Louis show with an exhibit of scarlet seedling No. 20. As an exemplification of the remarkable keeping qualities of this carnation, Mr. Washburn mentions that a bunch was picked on the morning of February 5 and shipped that evening to Mr. Bassett, who sailed from New York on the 8th and who wrote from Funchal, Madeira Islands, on the 13th stating that they were still on the table in good condition—nine days after they were picked in Chicago.

The A. L. Randall Company have had a splendid sale of their Easter novelty supplies and were looking this week for the arrival of a second importation.

The E. F. Winterson Company for the next month will be prepared on short notice to supply orange blossoms, the price averaging about \$2.00 per bunch. This concern was the recipient last week of a consignment of narcissus blooms from California, but the distance proved too great as the flowers arrived in an unsalable condition.

D. T. McCarthy of D. T. McCarthy & Sons, Lockport, N. Y., is spending a few days visiting the interesting points about Chicago.

Leonard Kill left Monday for St. Louis, taking with him a sample of the Peter Reinberg rose products. This concern reports an excellent outlook for Easter business.

Flint Kennicott is fighting his old enemy rheumatism from a new point, it having taken possession of his left elbow.

Bassett & Washburn say that only from 10 to 15 per cent. of their anticipated crop of lilies for Easter will materialize; that American Beauty roses will also be in short supply, but of other roses and carnations an excellent crop is promised.

At the headquarters of the J. B. Deamud, Company affairs assumed a lively garb with the opening of the week, and the report is made that the magnitude of the concern's business the past winter is far in excess of any preceding

Pink and White Sport of Rose Bride

Originated with Bernard Lapp, New Providence, N. J.

Carnation Club at Huntington, L. I., it was conceded that the most magnificent carnation shown was the variety Alma Ward, grown and exhibited by the Cottage Gardens Company, Queens, N. Y. The variety Winsor, exhibited by E. R. Pierson Company, was also considered one of the best of its color ever introduced. Among the prize winners at this exhibition were the Cottage Gardens Company for the best in dark pink, white, scarlet and crimson; Jas. D. Cockcroft of Northport, L. I., taking second prize in each of the following colors: Dark pink, light pink, white, scarlet and crimson; first for twenty-five mixed; first for any variety not disseminated and third for light pink.

John King Duer, a cousin of Mrs. Clarence H. Mackay, and until recently connected with the Mutual Life Insurance Company, has gone into the florist business, opening a retail store on Madison avenue, above Fifty-ninth street. Mr. Duer has become tired of being connected with the business that has been so strenuously probed of late, and thinks the florist business will be a more pleasant and agreeable occupation. C. W. Ward, Queens, N. Y., sails for Bermuda to-day (Saturday) for a couple of weeks' rest.

Chicago.

News Notes.

The Easter lily question seems to be the paramount issue of the day. Much forcing in many cases this year seems requisite, and it is probable that large numbers of flowers will just pull through in time. A recent tour among several of the larger growers elicits the fact that they feel more or less uncertainty as to the outcome. The loss on bulbs from disease appears to be about the average of late years, running probably from twenty to thirty per cent.

lilies as a whole are looking well, divided up into eight houses according to height and state of advancement. Mr. Pearce says that most of them are all right for Easter without too much forcing.

How would callas stand the cold storage process? If some of the large numbers which have been put on the market in the past few weeks could have been kept until Easter it would have proved advantageous in several ways to many people.

Next Thursday evening, March 14, the regular club meeting will be held in Handel Hall and should be largely attended, as the subject for discussion, "Easter Plants," is an important and timely one and the essayists, J. S. Wilson and others, are among the most competent culturalists.

The Secretary of State has licensed the Foley Manufacturing Company of Chicago to increase its capital from \$25,000 to \$100,000.

Sphagnum moss at double the usual price is the present condition. Owing to the inability of the pickers to dry the crop before the freezing weather set in last Fall the supply is very short, customary \$1 bales selling for \$2, with a prospect that the stock will be soon exhausted.

H. E. Klunder has been working under difficulties of late having recently crushed the thumb of his right hand as he was alighting from a street car.

L. W. Wheeler, manager of Vaughan's Seed Store, New York, passed through this city last week on his way to the bed side of his mother, who is seriously ill in Wisconsin.

Mr. Graver of Shotwell & Graver of Fargo, North Dakota, was a recent visitor.

Vaughan's Seed Store received a carload of Caladium esculentum bulbs last week.

Now Ready For Delivery

NEW HAVEN, CONN.—The nurserymen of the State of Connecticut met at the Hotel Garde on March 5, and formed a permanent organization to be known as the "Connecticut Nurserymen's Association," with the following officers: John S. Barnes of Barnes Brothers, president; R. H. Gardener of Gardener's Nurseries, vice-president; Frank Elmer Conine of The F. E. Conine Nursery Company, secretary; and W. W. Hunt of Hunt & Company, treasurer; Edwin Hoyt, C. R. Burr and E. F. Coe, committeemen.

STREATOR, ILL.—The Hill Floral Company has shipped 500 cuttings of its new carnation Melody to a firm in Kent, England.

Pittsburg.

Trade Notes.

The florists' trade the past few weeks has been fair; funeral work was the main factor. The weather conditions had much to do to keep up prices considering the Lenten season, but a slight change is now noticeable in the weather as well as values. Carnations have dropped to \$25 per thousand, Roses are slightly reduced and bulbous stock is dirt cheap. Fair tulips are offered at \$15 per thousand, although home-grown stock brings double that price. Daffodils are away down and over abundant; cut Dutch hyacinths are cheap. Callas and Harrisii lilies are more abundant at 15c. Violets are in fair demand.

A visit to several growers in our Western Pennsylvania carnation belt showed things in pretty good shape. J. Wyland has a nice lot of carnations of the best sorts, and bought quite a stock of the new Winsor, which he received some weeks ago; they are the best looking stock of any new carnation that has been sent out for many years. A hench of the Richmond rose was in fine condition, but Mr. Wyland will quit growing roses after this year, devoting his whole plant to carnations. Mr. Wyland's place at De Haven is about 10 or 12 miles by railroad, easily reached, and in a few months an electric car line will pass his establishment, so it can be reached in a few minutes.

C. Hoffman's place adjoins Wyland's. Only carnations are grown here, and they are in good shape.

Several other plants are in the neighborhood devoted to carnations. Mr. Meischke, who has only been in the florist business a few years, is growing a nice stock of roses and carnations principally at his plant at Castle Shannon. He intends to build considerably the coming season, already having purchased material for that purpose.

McCray & Jenkinson, on the West Penn. R. R., are growing some of the finest stock of flowering plants ever offered to the trade and find ready sale for them; they expect a nice lot ready for Easter.

Since the weather has become more Spring-like plants have been selling fairly well and the markets show a good variety. Azaleas are fine so far and there will be enough of them in our vicinity for all needs; John Bader, as usual, has a very large stock.

E. C. R.

St. Louis, Mo.

Newa Notes.

S. S. Skidelsky of Philadelphia was a visitor this week, calling on the trade and attending the Spring flower show given by the Horticultural Society. Walter Retzer has left the employ of Mrs. M. M. Ayers, and it is said, has taken a position with the St. Louis Seed Company.

The exhibition committee is, this Monday morning, hard at work in the Masonic Temple getting everything in readiness for the Spring flower show to be given by the St. Louis Horticultural Society. As this is to be a free show, admission being by card, a large attendance is expected. The premium list was sent out last week and quite a few entries have been made. President Harry Young expects a large number to join the society. Every florist, with the exception of a few, was sent a liberal supply of tickets. The show opens Tuesday afternoon and continues three days.

Frank Fillmore reports that he and Walter Weber visited James Dunford, A. Jablonsky and John Steidle in St. Louis county the past week. They found everything in fine shape in these three places.

C. DeWever, one of our landscape gardeners, has been very sick for the past three weeks, but is now on the road to recovery, and will be ready for Spring work.

E. W. Guy passed through here to his home in Belleville from a visit to his father, T. W. Guy, who has been very sick at St. James, Mo. T. W. Guy, one of the old-time florists, is now retired and lives on his farm at St. James.

C. A. Kuehn reports a large sale of green fluid for carnations, made up of the Manchester Chemical Company, and says the pleasing emerald hue which this fluid brings out catches the eye of the buyer.

Berning handled a large number of California violets the past week, also carnations and bulbous stock.

ST. PATRICK.

The Eighteenth Annual
Spring Number
OF
THE FLORISTS' EXCHANGE

WILL BE PUBLISHED ON

Saturday, March 23, 1907

and all advertisements intended for that issue should reach us on or before **WEDNESDAY, MARCH 20.**

IN drawing attention to this announcement, we would state that firms who have placed their advertisements in our **SPRING NUMBERS** of previous years have invariably found them pre-eminently successful as business bringers; so much so, in fact, that with each succeeding year the demand for space becomes more pronounced.

The date of publication of our **1907 SPRING NUMBER** has been selected after careful consideration of the many phases attendant on the *Florist, Nursery and Seed Trade* and allied industries.

As a means of offering your trade specialties to the greatest number of possible buyers at a time when these purchasers are actually looking for supplies, we submit that **THE FLORISTS' EXCHANGE**, through its **SPRING NUMBER**, presents an unequaled opportunity, *and at much less expense than any other method affords.*

There will be no advance in our advertising rates. Our schedule of charges never varies, and no one advertiser is favored at the expense of another advertiser.

Our paid-up circulation more than adequately covers the entire country, a fact that assures advertisers finding customers for their offerings in every City, Town or Village where a Florist, Seed or Nursery business has been established.

THE FLORISTS' EXCHANGE has, ever since its inception, borne the reputation of being the representative business medium of the trade; thus it is that advertisers continue to give it the cream of their business.

THE FLORISTS' EXCHANGE is, we assert, the best and cheapest medium in its class for advertisers; not that the cost per inch is cheap, but because of the fact, as already stated, that it is the representative trade paper, and has, in addition, the largest number of readers who are the biggest buyers. It stands to reason that it therefore must create a large purchasing clientele for the advertiser.

The question with the progressive, up-to-date merchant is not one of the cost per inch of space, but, Will my advertisement in that paper sell my goods?

Think it over.

CLASSIFIED ADVERTISEMENTS

CASH WITH ORDER.

Newport, R. I.

News Notes.
After many years of hard work and patient waiting the hearts of the horticulturists at the Rhode Island College of Agriculture are made glad by the completion of an up-to-date greenhouse. Besides the greenhouse which is, because of what will be required of it, divided into several sections, there is connected therewith a commodious office for the use of Professor Stone. There is no doubt that the Rhode Island College was seriously handicapped in the past lacking a greenhouse, and now that a good one has been provided there is every reason to suppose that full advantage will be taken of the facilities it provides for the advancement of horticultural progress.

Although there are not many changes in gardening positions in so far as head men are concerned thus far in Rhode Island, there is nevertheless an unusual demand for young single men of some practical training and experience at wages higher than formerly. Fifty dollars per month, a year or two ago was considered good wages for a young greenhouse man, now there are many receiving fifty-five and quite a number sixty dollars per month.

BAUR FLORAL CO., Erie, Pa.

MABELLE--New Pink Carnation for 1907

Color.—A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Lawson. Unlike most pinks, the brightest sun does not injure the color. Size.—Three to four inches in diameter when established. Odor.—Pleasant, but not strong. Stems.—Tolerably strong, but always graceful, ranging from 12 to 30 inches during the season. Habit, etc.—A very quick active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Gets away rapidly, blooms early and gives long stems right from the start. Productiveness.—Prodigious in the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. Stock limited. No discounts. First class certificates Mason and Indianapolis. Delivery Jan. 15 to 10th and later. Price, \$12.00 per 100, \$100.00 per 1000.

Indianapolis.

News Notes.
 Almost all of the regular growers attended Tomlinson Hall market this week with a heavy supply of stock. Both wholesale and retail business was very brisk.

Sidney Smith, Anthony Wiegand and Edward Larsen visited the growers at Richmond, Ind., last Sunday. E. G. Hill Company's new rose, Miss Rhea Reid, must certainly be fine. Some aver that it eclipses the American Beauty in almost every attribute.

Charles Knopf and E. T. Grave are well equipped with seedling carnations.

The Smith & Young Company is to plant fifteen acres of their Cumberland plant in fruit this Spring.

E. A. Nelson has lost his mother by death; she was closely associated with him.

Henry Rieman intends installing a water motor for his soft water system. Bertermann Brothers Company is to increase its Cumberland establishment as soon as the weather permits.

Fred Huckreide has a quantity of fine Harrisii lilies for Easter.

Baur & Smith are to erect a large rose house this Summer.

Robert Ellis, carnation foreman for Bertermann Brothers Company, is at Anderson, Ind., this week attending the funeral of his mother at the home place. The boys extend their sympathy to Bob.

S. S. Skidelsky spent some time here this week. He is much interested in the coming national show, and has been successful in securing over one thousand dollars for the guarantee fund.

Other visitors: E. J. Fancourt, Philadelphia; S. Keller of Reed & Keller. I. B.

REVIEW OF THE MARKET

NEW YORK.—Everything is exceedingly quiet in cut flower circles just now. From the limited amount of stock that prominent retailers are purchasing, it is quiet evident that branch of the business is very quiet. Whether it is on account of it being the Lenten season or unfavorable weather conditions, that the flower trade is so inert, is hard to determine. Aside from funeral work there is nothing much doing.

American Beauty roses seem to be off crop with everybody, judging from the supply at present reaching the city, and it can safely be said that this rose is about the only commodity in the market that is holding up to fair prices. Bride and Bridemaid roses are much more plentiful than formerly, and as the season advances the percentage of the short grades is getting smaller. This makes it rather a hard proposition for the dealers, as what demand there is for roses is nearly all for the short grades, and as a natural consequence, these are bringing a fairly reasonable price all the time owing to their very scarcity, while the long-stemmed flowers have to be sacrificed in order to clear them out. There is a fair supply of Richmond coming and the number of Richmond grades dominate; and the general grade stock is not plentiful at any time, and for the American Beauty grower, perhaps it is a good thing that this is so, as many people are willing to take the long-stemmed Richmond flowers when they can get them, and use them in place of American Beauty, they being much cheaper and very similar for their decorative purposes.

There is a good supply of callas just now; also of longiflorum lilies, and prices are not quite as firm as they might be. Marguerites which they have done for several years past, through some cause or other, and this is not owing to the supply either, the quantities shipped into the market not being as heavy as in other years.

Carnations are coming in quite plentifully, and there is to be much cutting of them in order to clear them out from day to day. A good grade of carnations can now be had in quantity at \$2 per 100; in fact, this seems to be about the ruling price for the good kinds. Many of the inferior flowers are sold at \$1 per 100, and it is hard work to clear them out at that. Novelty flowers have also suffered a proportionate decrease in values.

Lilac is selling very poorly, as also is lily of the valley, and there is plenty of both coming in regularly. The greatest drug in the market is the yellow narcissus and white and yellow tulips; there are absolutely no fixed prices on these. Red tulips, not being so plentiful, can be disposed of to a little better advantage at times.

The continued cold weather has put violets in a very unsatisfactory condition. Last Sunday the weather being a little mild, the street men were engaged to cut busy, and they did, with violets, to quite an extent. They could purchase left-over stock from the dealers at prices ranging anywhere from 75c to \$1.50 per 100. These seem pretty low values, but there were many thousands of violets cleared out at these figures; in small lots, they are being sold at 20c and 30c per 100; and that gives a pretty fair index of the condition of the violet market at the present time.

Freerias and sweet peas are becoming more plentiful and move fairly well considering the present state of trade. Gardenias are much too abundant for the demand, and prices are anything but firm.

CHICAGO.—Last week was one of decided over-supply in nearly all lines of standard grades of cut flowers, and as the quality has continued to improve with longer days, narcissus, freesia, callas, carnations, and lily of the valley of good quality were much cut in price, while poorer stock was not infrequently sacrificed. Excellent violets in large quantities sold as low as \$2 to \$3 per 1000 at times, while great quantities of the valley also suffered extremely, it seeming next to impossible to move it at cut prices. Roses, which are continually increasing in supply, do not show the tendency to glut that is evidenced among the other staples, and long-stemmed American Beauty are not to be had in large numbers.

Green goods are selling pretty well there being no over-supply, unless it be in box green. Asparagus is taken up quickly, and sinlax is generally on the short side, good and even fancy prices having been paid up with no apparent relief in sight and with a very general impression among the best prophets that existing conditions will

prevail practically unchanged for the immediate future. One feature of interest on Monday was the immense stock of New York and local violets which appeared forcing the price in some instances down to \$1 per 1000.

W. K. W.

PHILADELPHIA.—The end of last week we had two mild days and this was the means of a large amount of the surplus stock of flowers being sold to the street men; consequently on Monday the market opened up in much better shape and for two days business has been very fair. But carnations and bulbous stock are rapidly accumulating. The more plentiful classes are holding up very well. American Beauty are selling at \$8 per dozen for the choicest flowers. There is a very good demand for tea roses; some fancy Richmond have sold at \$25 per 100; other grades run \$10 to \$15. Killarney is in good demand; the price ranges from \$10 to \$15 per 100 only a few reaching the latter figure. General stock of other teas runs from \$6 to \$10 per 100.

Carnations are very plentiful; fancy stock is selling at \$4 to \$5 per 100, but slowly; plenty of good flowers can be had at \$2 to \$3.

Cut lilies are in fair demand at \$15 per 100. Bulbous stock is in large supply, far beyond all demands, and prices rule low; some daffodils are selling at \$2 and \$3 per 100. Tulip go very slowly.

Sweet peas are also in excess of the demand, the very choicest stock going at \$1 per 100. Double violets are this week offered at \$70 per 100. Daisies are selling fairly well at \$1.50 to \$2 per 100. Lily of the valley is coming in in large quantities; prices run from \$2 to \$4 per 100.

Good adiantum is rather scarce; A. Crowneum is quoted at \$1.50 per 100. Asparagus plumosus is also scarce; there is a good market for choice stock.

DAVID RUST.

BOSTON.—There have been several ups and downs during the week and in the case of all kinds of stock there is a tendency to a surplus at the present time. Roses sell at from \$2 up to \$12. American Beauty are now better than they were, but prices are not so high. Carnations are plentiful at from \$1 to \$3. All sorts of bulbous stock are now very plentiful; some kinds sell in quantities at \$10 and \$12. Violets are of the first-class stock bring \$2. Mignonette realizes \$2 and \$4. Sweet peas are very plentiful at from 25c to 50c, although the superb long-stemmed blooms of some growers readily bring \$1 and \$2. Lilies are becoming more plentiful at \$10 and \$12. Violets are very abundant at 25c and 35c for the general grade, while first grade sells at 60c.

J. W. D.

ST. LOUIS.—Trade has been moderately good during the past week. All report a very good February business, and Lent does not seem to cut much of a figure this year, as a few weddings, receptions, dinners and other social affairs have been going on all during Lent. Funeral work, too, has been quite plentiful of late. The downtown florists are almost daily having a flower war on violets and carnations, each one bringing out the other at the wholesale market every morning, while the upper set are busy getting ready for their Spring flower show to be held this week. The wholesalers report a good, steady market for almost everything in season, for both local and shipping trade. Our growers are busy attending to their Easter stock, with a great many orders ahead for almost everything they will have in bloom.

A trip through the wholesale markets this Monday morning shows that roses are still scarce in all grades, and prices are up. Bride and Bridemaid are bringing \$12.50 to \$15 per 1000. Firsts, \$8 and seconds, \$5 and \$6 per 100. Ivory, Richmond, Golden Gate and Mme. Abel Chatenay run about the same. Carnations seem very plentiful, with prices for extra fancy at \$4 per 100. This is for Enchantress, White Perfecta and Aristocrat; others such as Cardinal, Mrs. T. V. Lawson, Boston Market and Nelson Fisher, are realizing \$3 for the best; next choice runs from \$1.50 to \$2 per 100.

Violets are in abundance (all California), and these are being bought up in 5000 lots at \$2 per 100; quality extra fine. Many growers think that California violets will be scarce for Easter, as too many are coming in at present.

Bulbous stock is selling well, with plenty of it coming in for all demands. Dutch hyacinths bring \$4 to \$5 per 100; Roman hyacinths, \$2; Paper White narcissus, \$3; tulips, \$3 and \$4; Von Sion narcissus, \$2 to \$3; freesia, \$2; callas, \$10 to \$12.50; lily of the valley \$3 per 100. This stock has had a good call all of the past week. Extra fine

sweet peas, white and pink, are coming in at \$1 per 100 for long and 50c. for short grades. In greens, sinlax is selling well, also fancy and common ferns. Asparagus, too, sells well. Everything else is in plenty.

ST. PATRICK.

MILWAUKEE.—With the beginning of Lent stock began to come in heavier and the usual slump in trade at this time eased up the market, leaving plenty of stock on hand to fill all orders. Roses, which have been scarce all Winter, are now coming in plentifully and the bright weather has improved the quality. Carnations are in heavy crop and with the exception of white varieties, prices are down to the dollar mark. Violets are coming in heavily and clean-up prices are prevailing. Bulbous stock is flooding the market which naturally weakens the values of all other lines. Green goods are scarce.

In plants, azaleas, cyclamen, primulas, bulbous stock in pans are abundant, but indications point to a shortage in lily plants for Easter.

C. C. P.

CHANGES IN BUSINESS.

CONCORD, N. H.—The firm of Frank A. Main & Company, composed of Mr. Main and Charles H. Barrett, has been dissolved.

CHICAGO.—Baudry's Nursery Company has been incorporated; capital, \$5,000; incorporators, Peter C. King, Frank M. Burwash, and John T. Booz.

LA CROSSE, WIS.—The International Planters' Company has been incorporated with a capital stock of \$60,000; incorporators: Nathaniel Fry, Charles F. Beckman and Charles Shorma.

ALBANY, N. Y.—William G. Gloeckner has embarked in the florist business at 97 State street, and has engaged Thomas F. Tracey who has been connected with the trade for several years.

BOSTON, MASS.—The New England Nurseries has been incorporated to grow trees shrubs, etc. Capital, \$30,000. President, W. M. Richardson, Cambridge; treasurer, A. E. Robinson, North Abington.

SAN FRANCISCO, CAL.—The San Fernando Nursery Company has been incorporated. Directors: L. C. Brand, John Wilson and B. H. Hille, all of San Fernando. Capital stock, \$25,000, and \$1,800 subscribed.

RICHMOND, VA.—The Ratcliffe & Tanner Company has been incorporated with a capital stock of \$50,000; minimum, \$25,000; to operate a florist business. The officers of the concern are: John L. Ratcliffe, president; J. T. McKenna, secretary and treasurer; E. L. Tanner, all of Richmond.

FIRMS WHO ARE BUILDING.

QUIDNICK, R. I.—J. H. Cushing has purchased a tract of land west of his present plant, and is building thereon a large greenhouse.

FIRES.

HOUGHTON, MICH.—February 25, a fire occurred in Lutey's greenhouse plant at Chassell, doing considerable damage.

BLOOMINGTON, ILL.—On February 22, fire broke out in the greenhouses of James Adams; damage \$1,000, with no insurance.

SPRINGFIELD, MASS.—On February 25 fire broke out in the store of Henry Barton; the damage to the building and contents was probably not over \$100.

WASHINGTON, D. C.—As the result of a defective flue, a fire started in the residence of Adolph and Jacob Minder, florists, living on Cottage Hill, near Seventeenth street and Maryland avenue northeast on the evening of Monday, February 25, which totally destroyed the structure. The greater part of the furniture was saved. The damage to the house, which was insured, amounted to about \$3,500.

Buffalo.

Trade Notes.

Business has been good. The deaths of several of our prominent men called for a lot of funeral work. Flowers of all descriptions are plentiful especially daffodils and tulips, which are being retailed at from 10c. to 50c. per dozen. Violets are plentiful, retailing at 50c. per bunch of 50.

B. C. Avery of West Seneca was unfortunate in breaking his arm last week; while assisting in unloading a wagon containing lumber, the chain broke.

W. H. G.

COLLEGEVILLE, PA.—During the recent storm, snow crushed in part of the roof of one of F. C. Prizer's greenhouses, doing considerable damage to plants.

Philadelphia.

Death of Miss Lonsdale.

His many friends in the trade will be grieved to learn of the awful affliction that has fallen upon Edwin Lonsdale; his only remaining daughter, Annie H., having died on Saturday last of pneumonia. Mr. Lonsdale has had three children, all daughters; two were drowned some five years ago at Ocean City, and now the eldest one has been taken. On all sides are heard expressions of the most profound sympathy for the bereaved parents.

Annie H. Lonsdale was a perfect little lady, of very quiet but perfect demeanor, painstaking and thorough in everything she undertook. For the past two years she had been bookkeeper for her uncle, John Burton, by whom she was highly esteemed.

News Items.

Berger Brothers have this week removed from the wholesale flower market building to the former store of Dumont & Company, 1305 Filbert street, which business they purchased.

Charles Gray, salesman for S. S. Pennock Mehan Company, has left them to accept a position in the same capacity with Edward Reid.

The meetings of the Board of Directors of the S. A. F. will be held on Monday and Tuesday next at the Hotel Walton, which is directly opposite Horticultural Hall. The Florists' Club will entertain the officers and directors at a banquet on Tuesday evening.

Florists' Club Meeting.

There was a very large attendance at the meeting on Tuesday evening. P. J. Lynch of the Dinee & Conard Company, West Grove, Pa. read a paper on "The Plant Mailing Trade."

The exhibition was a good one. John Cook, Baltimore, Md., staged a seedling rose, a Bridemaid pink in color, buds of good size, rather globular in shape, foliage rich glossy green, flowers quite fragrant. Edward Towill, Roslyn, Pa., exhibited some flowers of a new rose, Joseph Hill, a new tea sent out by the E. G. Hill Company, described as a bronze pink in color, showing quite a light shade under artificial light, strong and vigorous growth, and pronounced a free bloomer. Robt. Scott & Son, Sharon Hill, Pa., staged two new roses from Alex. Dickson & Sons' collection that are on trial at Sharon Hill. No. 778 is a fine large flower of a deep Malmaison color, a hybrid tea, almost thornless, quite fragrant, a strong grower, a very promising variety. No. 1458, hybrid tea, long bud, orange yellow in color, long stem.

Samuel Batchelor, gardener to Mr. C. B. Newbold, Jenkintown, Pa., exhibited a vase of mixed tea roses to show what a gardener could do with many varieties in one house.

F. C. Kramer, Washington, D. C., staged three vases of his new rose Queen Beatrice, all very good flowers on stems 30 to 36 inches in length, flowers of perfect form, of a Duchess of Albany shade of pink. It is the best dark pink rose ever exhibited here, the open flowers being as large as those of American Beauty. It appears to be a very promising variety.

John E. Haines, South Bethlehem, Pa., showed a vase of his carnation John E. Haines, also a vase of a seedling carnation of a Lawson shade of pink, fringed edge, a free bloomer.

Baur Floral Company, Erie, Pa., exhibited samples of their new wire tie for burst carnations.

Mr. Tywin, representing the King Construction Company, and Mr. Whitehill, representing Benjamin Hammond, Fishkill-on-Hudson, N. Y., were present at the meeting.

At the April meeting Paul F. Reicher of the Henry F. Michell Company will read a paper on "Bulbs."

DAVID RUST.

DAYTON, O.—The Florists' Club, at a well attended and interesting meeting held last week at the establishment of J. F. Young on East Fifth street, declared for more parks for Dayton. The city authorities were urged to make ample provision for parks. Members of the club were about equally divided in their choice of park sites, some favoring the vicinity of Idylwild, while others expressed preference for the territory contiguous to Fairview Park.

Columbus, O.

News Items.

It is understood that certain changes in management have recently been made at Cedar Hill cemetery; James Ider will remain as superintendent. Salaries are said to have been increased ten per cent.

A recent address of Representative E. W. Hill of Columbiana county, in support of his resolution making the carnation the State (Ohio) flower is to be printed for distribution among the public school children of this State.

H. M. Clair, Jr., representing S. L. Allen & Company of Philadelphia, reports the outlook especially favorable for an enormous output of Planet. Jr tools in 1907.

Jacob Shenkel, M. A. Frederick, Mentor Shenkel, J. T. Herbert, E. J. Owen and F. B. Lawrence, are the incorporators of the Globe Pottery Company at East Liverpool, Ohio, capital stock \$100,000.

Landscape Architects Austin W. Lord, of the firm of Lord & Hewlett, New York; Charles Mulford Robinson of Rochester, New York; Albert Kelsey of Philadelphia; Charles N. Lowrie of New York; and Sculptor H. A. MacNeil of New York, have been selected to formulate plans for the beautification of our parks and boulevards; \$5,000 has been appropriated by the city for the plans.

The Livingston Seed Company made a very artistic arrangement of palms, ferns, and other foliage plants, for the Spring opening of the new curtain department at Armbruster's Big Store.

By the resignation of Professor A. F. Burgess, State of Ohio loses its efficient chief inspector of orchards and nurseries. Professor Burgess goes to Massachusetts where his valuable services will be availed of by the Gypsy and Brown-Tailed Moth Commission. F. H. Ballow of Newark, O., has been appointed successor to Mr. Burgess.

The Ohio Horticultural Society have just issued a circular, offering to supply nurserymen, and in fact all who apply, spraying materials of all kinds at lowest wholesale prices.

The Clover Hill Nurseries are making a specialty of the pink Spiraea, Queen Alexandra, of Messrs. H. Van Waveren & Kruyff of Sassenheim, Holland.

Exhibits of various horticultural and agricultural products are now being collected here for the Jamestown Exposition. A very fine collection of field corn has already been secured.

By the dissolving of the East Liverpool Pottery Company, the last vestige of a trust among the pottery manufacturers of America is removed. This enterprise, with its million dollar capital, at one time threatened to revolutionize the pottery trade of the world. F. W.

Toledo, O.

A Carnation Show.

If our Florists' Club ever had a successful night it certainly was at its last meeting on February 28. This was to have been a carnation night, but in reality it was a carnation show. J. L. Schiller of the Perennial Gardens Company engineered the affair, and his efforts to get not only the local but also the out-of-town growers together were crowned with much better success than expected. The meeting was really a fete to find out if the unity is there to hold a larger show open to the general public, and personal invitations were extended to friends and acquaintances outside the trade, which brought hundreds of people to see the flowers. Invitations were also sent to the florists of

Marie Louise Violets

Will have a fine crop of blooms for Easter from houses that have been run cold. Write for prices.

C. LAWRITZEN, Box 261, Rhinebeck, N. Y.
 Mention the Florists' Exchange when writing.

nearby towns; many of them were present who had not been to Toledo for years, and no one went away regretting the journey.

A large part of the success of the affair was due to the generous contributions of carnations by the F. R. Pierson Company, John E. Haines, Chicago Carnation Company and V. E. Hall, Clyde, O.; and their flowers had the place of honor, occupying a large center table. Mr. Haines' carnations created a sensation with their long, wiry stems and immense flowers; his John E. Haines, Imperial and Pink Imperial were simply superb and prove what an expert can do. Right in the center towered a large bunch of Aristocrat from the Chicago Carnation Company, and it was pronounced the most perfect flower of any shown. The F. R. Pierson Company sent us their much heralded Winsor, certainly an exquisite shade of shell pink and perfect in shape. This firm's Helen Gould was also well liked, and their White Enchantress was fine. It is to be regretted that the flowers from John E. Haines and F. R. Pierson Company did not stand the long trip very well.

We certainly wish W. E. Hall would make more exhibits in larger cities with his scarlet carnation, E. G. Gillett; it is hard to beat and will surely be a good seller when put on the market. R. W. Hartman, Napoleon, O., exhibited Lady Bountiful and Pink Lawson, which showed good cultivation. Mrs. E. L. Hawkins of Paulding, O., showed a sport from Enchantress and some Lilium philippinense.

Our local tradesmen did well and what they put on exhibition proved that they too know how to grow the divine flower. John Gratoop's big bunch of Enchantress was very good, likewise his other carnations. A large assortment was staged by Emil Kukuke, containing Rose-Pink Enchantress, Mrs. M. A. Patten, Pink Patten, Flamingo and others. George Bayer, our president, who leaves the growing of his excellent flowers to his carnation grower, Miss Winters, had several vases, among which were exceptionally good Mrs. Thos. W. Lawson and White Lawson. Mr. Halbic, florist at the State Hospital, had a vase of a seedling, so far unnamed, of a pure glistening white, which promises well. Krueger Brothers staged a mixed group of palms, lilac Marie Legraye, azaleas, fine grown lily of the valley, and a rose of each of the roses Bride, Bridesmaid, Richmond and Perle des Jardins.

The Perennial Gardens Company exhibited a well grown specimen of Araucaria imbricata and a collection of lily bulbs, consisting of Liliium anatum, speciosum album and speciosum rubrum. The showiest group of plants was that of Emil Kukuke, consisting of cyclamen with enormous flowers, raised from a strain mostly furnished by The Perennial Gardens Company. The plants were faultless in every respect. Callas, Boston and Scottii ferns completed the group.

A large lot of flowers were willingly furnished for souvenirs to be given to each visitor. Our local press gave us a good send off, and we hope that this will help our business. We know now that flowers will bring the people, and a demand for them must be the inevitable consequence. The meeting proper was, of course, entirely neglected, but that does not matter; we all had a good time. SCH.

Trade Notes.
At a recent meeting of the Southern California Horticultural Society Walter Raymond was re-elected president; J. G. Morley, superintendent city parks, vice-president; Earnest Braunton, secretary, and J. Dietrich of the nursery firm Dietrich & Houston treasurer. The question of a Spring flower show to be given by the society has not yet been fully decided. The difficulty in the way is a suitable place.
Dr. Schiffman of Pasadena, who brought the finest collection of orchids from the East that is growing on this coast, has disposed of the entire lot, and will from this time on devote his time to such exotics as will live in the open. P. D. B.

Cincinnati, O.
Trade Notes.
March came in on the north side, with a drizzle and a temperature of 50 degrees. Lent is moving along in its quiet and unassuming way. People are denying themselves things that they do not like to eat, and are saving their money by the excuse that it is Lent. Still business has been and is quite good, and although stock is coming in more plentifully it sells fairly well.
The opening of our new swell hotel, The Sinton, last Monday, used up quite a lot of flowers. Julius Baer had the greater part of the decorations. The Sinton is to Cincinnati what the St. Regis is to New York; but this is one thing that Cincinnati did need.
We are now prepared to care for carnations of any size. I see by the trade reports from other cities that carnations are very plentiful and prices are dropping. Such is not the case here. Carnations are in fair supply, but all sell at a fair figure though not so high as a few weeks past; \$2 and \$3 per 100 is the average price now. Multiflorum lilies are coming in nicely and fetch 10c. to 12 1/2c. each. Bride and Bridesmaid roses bring 4c., 6c., 8c., and 10c. each; quality fair. American Beauty has side-stepped this market. La Reine tulips fetch 3c.; white and fine red, 4c. to 5c. Paper White narcissus sell at 3c.; lily of the valley, 4c.; daffodils and Von Sion narcissus, go slowly at 3c.; violets, 35c. to 75c. per 100; sweet peas, variety Jos. Hill, 75c. to \$1 per 100; shorter-stemmed, 35c. to 50c.
Green goods are scarce, and good Eastern ferns fetch \$2 per 1,000. Smilax, adiantum, asparagus and other kinds bring good prices.
Park Superintendent Rodgers is rejoicing over the advent of a son.
Newport, Ky., situated across the Ohio from Cincinnati, has for its City Fathers a set of men who believe in protecting home merchants, and for that reason all wagons driving across the bridge that do not have a Newport license, "get one quick," or pay a fine. Several Cincinnatians were pinched, and now the compliment is returned. Many arrests were made at the Ohio end of the bridge during the past week. Heretofore the florists of Kentucky, who have stands in the flower market, have been free from a wagon tax, but they must now step up to the cashier's office and deposit \$3 or stay upon the other side.
J. T. Conger is out again; he had an attack of the grip. E. G. G.

Boston.
A bill has been reported in the Legislature to allow six inspectors of nurseries instead of three, and to increase the thoroughness of the State nursery inspection.
One of the most interesting lectures of the season in the course given under the auspices of the Massachusetts Horticultural Society was that on Saturday delivered by J. A. Pettigrew of the Boston Park Department. The topic was "Street Trees" and it was very ably handled by the speaker who as an authority on the subject is unequalled. Unfortunately it was a very stormy day and the rain held many at home who would have helped to swell the size of the attendance which, however, was up to the average during the season.
Elhjah Cartwright of Wellesley sustained a severe loss on Thursday of last week; three of his houses were burned and the entire stock therein destroyed. One house contained violets, another marguerites and the third carnations. In the latter were several thousands of young plants just potted off. It is not known how the fire originated. Mr. Cartwright will immediately rebuild.
D. F. Roy, Superintendent of Pine Banks Park and the Converse Estate, Waldeu, has been confined to his home with grip for the past week.
A. H. Kirkland, Superintendent of the Gypsy Moth State Bureau, is seriously ill at his home in Reading with typhoid fever.
Among the visitors in town this week were: F. L. Mulford, Harrisburg; C. E. Keith of Bridgeport; and Professor J. F. Cowell of the Buffalo Botanic Gardens. J. W. DUNCAN.

E. H. HUNT
The Old Reliable
FOR CUT FLOWERS AND SUPPLIES
76-78 Wabash Avenue, CHICAGO.
Mention the Florists' Exchange when writing.
St. Paul.

News Notes.
R. C. Seegar, who has been in business here for a number of years, evidently is in a bad way financially. A receiver has been appointed to wind up his affairs. A visit to his place finds the entire stock frozen, and things in general in a dilapidated condition. He is now in Chicago and Mrs. Seegar is winding up his affairs. His city store has been discontinued and fixtures are for sale. Mr. Seegar was a hardworking man, but things seem to have gone against him, and he was finally compelled to quit.
William Swanson of Haugen & Swanson returned from Ann Arbor, Mich., last Saturday after having taken the treatment for a bite from a supposed mad dog; he apparently feels all right again.
L. L. May & Company have had a very heavy week especially on funeral work; they turned out a great many expensive pieces, one in particular being a huge basket of white lilies and violets. City business has been particularly active, country shipments light.
Aug. S. Swanson made up a great many fancy pieces for the Foley funeral which were greatly admired. He has been cutting some of the finest houbloss stock ever offered in this market. PAUL.

ANNOUNCEMENT

THE KING CONSTRUCTION COMPANY of North Tonawanda, N. Y., and Toronto, Ont., in response to numerous inquiries by mail, states that the trussed roof greenhouses which collapsed at Mr. Farenwald's place near Philadelphia were not of the King Construction design or construction. Moreover, a number of King houses in the same neighborhood passed through the same weather conditions without any damage whatever. Also, the King Construction Company has just received an order for two trussed roof greenhouses, each 500 feet long and 28 feet wide, which are to be built for Mr. Victor Groshens on his place, which is only a couple of blocks from Mr. Farenwald's place. Owing to having introduced the trussed method of greenhouse construction and to having been identified with it for so long, the King Construction Company finds it necessary to make this announcement as a matter of self-protection.

Orange, N. J.

Chas. W. Ashmead of Stroud, England, gardener for six years to Mrs. William Pierson of East Orange, was married on February 4 to Miss Louise T. Newton of West Orange.

Thomas Maybury, for nine years gardener to E. J. Brackett, East Orange, has secured charge of the estate of Miss Coppell, Tenafly, N. J.

Joseph A. Manda is preparing his first Easter display at his recently acquired stand near Llewellyn Park, West Orange. The property is said to have doubled in value since he obtained possession of it owing to the real estate boom within the "Jersey Tunnel Zone."
J. B. D.

AMHERST, MASS.—Professor Edwin A. White of Storrs Agricultural College, Conn., has been elected assistant professor of floriculture at the Massachusetts Agricultural College and will enter upon his new duties July 1, 1907. This addition will greatly strengthen the organization of the department of horticulture, and is expected to bring substantial improvement in the courses of floriculture and landscape gardening. Mr. White has had considerable experience in greenhouse work and outdoor gardening, and his appointment has given general satisfaction.

MERIDEN, CONN.—Albert Klees, ninety years old, who was gardener at one time for Abraham Lincoln in Springfield, Ill., is reported dying in Kensington, Conn. He had been ill of inflammatory rheumatism, and although much weakened by illness he braved the cold to attend a Washington's Birthday celebration.

A LIVE PROPOSITION

It's easy enough to tell you what the man from Kalamazoo or Timbuctoo says about his greenhouse, but if you don't know the man and the quality of stock he grows, or whether he is simply making a living or making money—then what value or argument is there in his opinion? Here is our proposition: If you don't know our house you don't know the house of economy; so write us, stating what you want to grow and we will send you the name and opinion of some big man or men, who are making money, men who stand up head in their line. Their point of view about our construction will be worth something—and what we have done for others is guarantee of what we will do for you, and there's pleasant dealing besides.

FROST-PROOF ECONOMY

Ideal Hollow Concrete Block construction will protect your greenhouse from frost and secure greatest economy in fuel.

The illustration of hollow block explains its resistance to frost. With the Ideal Concrete Machine you can yourself make these blocks from sand, gravel and cement at little cost—far below the cost of brick, stone or lumber. Ideal Blocks not only give frost protection, but are absolutely fire-proof, and effect a perpetual saving in insurance.

IDEAL Concrete Machines

May be operated by any man without previous experience. The process of making blocks is simple as making mortar. Blocks for every building purpose, with plain, tumbled, ornamental face or natural stone effect made with the same machine. Simple, durable and adaptable to any size block within capacity.

Our catalogue will show you how to secure frost protection and fuel economy, as well as initial saving over cost of other materials. Write for it and it is freely yours.

THE 40 FOOTER

SOME COLD FACTS

ABOUT 20 AND 40 FOOT HOUSES

When a man builds two 20 foot Iron Frame Houses, 700 feet long, for roses, and the next time makes it a 40 footer there must be good solid reasons for it. We want you to listen while we tell them to you as near as possible as he gives them. To start with, the Iron Frame house is the house that's built to stay, and it's lighter, everybody admits that. The 40 foot house is wide enough to secure the best of heating and ventilating advantages, and can be built with 20 foot bars and no splicing. One 40 footer requires considerably less roof than two twenties, and there's just half as many sides to pay for. Then think of the ground space saved—16 feet at least between the narrow houses, every inch of which you can then use. With three twenties enough space has gone to waste, for one 40 foot house, and 8 feet to spare.

When it comes to installing the heating plant there's another reduction in trenching, pipes and connections. 20% to 25% can be saved in coal, simply because when once heated you have a

large mass of hot air acting as a reserve—an insulation against sudden changes—two sides are exposed against four.

The ventilation is uniform in its distribution, the air is thoroughly warmed before reaching the plants—and that isn't all, there is a different quality in that air. Go into a narrow house early some morning, see how heavy, lifeless the air is—the wide house will be pure and strong—you know that means better plants, more blooms.

If you are going to build this Spring choose the house of economical width and make it the Iron Frame Construction; it's the only one with a half century's lease of life. It will save in repair expenses many times over, the difference of cost of the wooden house. Send for our Iron Frame circular—it's full of hard sense.

Lord & Burnham Co., Greenhouse Designers and Manufacturers, 1133 Broadway, corner 26th St., New York. Boston Branch, 819 Tremont Building.

THE NARROW HOUSES

THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XXIII. No. 11

NEW YORK AND CHICAGO, MARCH 16, 1907

One Dollar Per Year

CARNATION WINSOR

The most talked about carnation at the Toronto Convention. Won first prize for best 100 pink

Winsor is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders, and have a fine lot of stock in the cutting bench, so that we can promise, for the present, late March delivery on orders received within a short time at least.

If you have not already purchased a stock of this, you should lose no time do-

ing so. We are going to sell more Winsor than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market where our flowers are sold.

There is nothing on the market that approaches Winsor today in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities, in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high quality flowers. It practically does not split at all, notwithstanding the fact that we have had the darkest, duldest winter we have ever had, when the Enchantress and Lawson types are splitting badly all over the country with everyone, we have not had one-half of one per cent. of split calyxes on the Winsor. In fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement extravagant as it may appear.

Anyone who fails to plant Winsor this year will regret it. Rose pink Enchantress is good, and a good many other varieties are good, but IF YOU WANT THE WINNER, PLANT WINSOR. We not only have a good thing in Winsor, but we are delivering good stock. As a sample of the testimonials that we are receiving, see this space in last issue. We are trying to give 110 cents on the dollar, and guarantee to please everybody with the stock sent out or we will not ask you to pay for it. We have still to receive our first complaint, and we have shipped between one and two hundred thousand cuttings to date.

RAWSON'S ASTERS

are just a little superior to anybody else's

The product of our seeds can always demand a better price than those grown from seeds obtained elsewhere. The following is an extract from a letter received last fall from a most critical grower:

"Your Midsummer Aster has been a great moneymaker for me. For every flower that I have brought into the Boston Market I have received from \$1.00 to \$1.50 per hundred more than for any other variety raised from seeds purchased elsewhere". J. W. Simpson.

European Notes.

The frost, to perpetrate an Irish bull, appears to have been only a "dash in the pan," and temperatures are now about normal. At the same time these sudden spells are serious checks to business, and on all sides one hears complaints of the slackness of trade. The rush will no doubt come presently, but our experience has been that a slack February invariably means a light season's trade, and that is how matters stand this year.

The farm seed catalogues, wholesale and retail, are now issued and are rather curious reading. It is common knowledge that the crops of rutabagas and yellow-fleshed turnips saved last year were very poor; as a consequence wholesale prices have advanced considerably, but the retail dealers (probably through fear of each other) hesitate to raise their prices and as a result, both wholesale and retail lists are on the same level.

Just now the retail seed trade in Northern Europe is in a rather upset condition on account of the passing of the Corrupt Practices Act in England by which the system of "graft" is practically put an end to. Some 800 of the members of the nursery and seed trades in Great Britain have resolved to discontinue giving the commissions to gardeners which have been customary from time immemorial, and the majority will doubtless honorably abide by the resolution. But already one at least of the more important firms has acted in a way which suggests a desire to evade the law in the spirit if not in the letter. More will be heard of this later on; in the meantime, as already mentioned in this column, some unscrupulous German firms are tempting the illpaid gardeners with substantial bribes which doubtless some of them would willingly accept but for the fact that it is a criminal offence for them to accept a bribe from any quarter. One result of the passing of the law has been that some of the wealthier seed firms have written to the secretaries of the numerous local horticultural societies offering very generous

prices for the annual flower shows, doubtless with the hope that these will be gained by the gardeners of their customers in the locality. One firm goes so far as to offer to duplicate any first or second prizes the gardeners may gain with the product of their seeds.

The right course to pursue is for employers to pay their gardeners an honest wage and thus lift them above the temptation.

Reverting once again to the weather, the recent spell of frost has put fresh heart into the onion growers, as the prices of bulbs have risen fully 50 per cent. during the past four weeks. This will curtail the planting for seed, so that there is very little probability of any great competition from Europe next season. There is an old saying that when onions have thick outside scales there will be a cold Winter; it is certainly true this season, but it is a question whether the thick scale is not the result of the excessive heat of 1906.

EUROPEAN SEEDS.

CHANGES AMONG FLORAL PUBLICATIONS. — Senator John Lewis Childs of Floral Park, N. Y., is out with the first number of a new publication devoted to floriculture. It is called the Guide Post and is issued at ten cents a year.

It is understood that D. Jefferson Thomas, who recently retired from the management of Floral Life of Springfield, O., will shortly start another floral journal. He has been in New York for several days and says the exact date when his periodical will appear is not settled, nor the question whether it will be published from Springfield or some eastern city.

About a year ago the Young & Bennett Company of Springfield, who published Floral Life, bought the Mayflower from Senator Childs, and the two journals were consolidated. If the purchase contract was of the usual nature, litigation over the entrance of Childs into the same field again may result. About the same time Home and Flowers and Success With Flowers were absorbed by Vick's Magazine.—Fourth Estate.

DAHLIA ROOTS

We offer strong field-grown divided clumps which can be propagated readily and also produce an abundance of bloom.

DOUBLE DAHLIAS

Admiral Dewey, rich purple.
Adolf Pfeffern, purplish crimson.
Alata, delicate bluish pink.

Sweet Peas.

The following correspondence appearing in the Horticultural Advertiser, England, will be read with interest by those who cultivate sweet peas:

Dear Sirs:—The Winter-flowering sweet peas, mine as well as the Americans', are nothing but sports of the ordinary kind. In America the white one (Sport of Emily Henderson) and pink (Sport of Blanche Ferry), have been about for some years. In Europe we have had Mont Blanc, which I have strong reason to believe is also a sport of Emily Henderson, only weaker growing than the American white. As regards my own strain, the first I had, about four years ago, was a sport of Captain of the Blues; since then I have had sports of Dorothy Eckford, Miss Willmott and Lady Grisel Hamilton. I have also made a number of crosses, and possess now nearly all colors. I don't want to blow my own trumpet but any independent judge will see that my sports, etc., are superior to the American kinds as much as their parents are superior to Emily Henderson. These sports are not color sports but habit sports, viz.:—The flowers are identical with the parent, only, instead of making a bushy plant before throwing up flower spikes, the plants, if undisturbed, run straight up and start flowering and only branch out later on so that the ordinary ones may be compared to a bush, the Winter-flowering ones to a standard. The varieties Early Bird and Sunbeam are color sports of Mont Blanc. I may mention that it is absolutely impossible to have the ordinary sweet peas in flower until later in the Spring.

C. ENGLEMANN.

Dear Sirs:—In your issue of February 20th, I note on page 30, a notice of the early flowering sweet pea shown by Mr. Englemann, at the meeting of the R. H. S. on the 12th inst. in which you state that a similar strain is being grown in the U. S. A. Your reference is doubtless to the strain described by Ant. C. Zvolanek, of Bound Brook, N. J., in The Florists' Exchange, for July 28, 1906.

It would be very interesting to sweet pea specialists to know if these two strains have a common origin; perhaps Mr. Englemann will kindly enlighten us on this point.

Mr. Zvolanek states that he made his first experiments twenty-five years ago, but did not succeed until he made a cross with the European vetch, largely grown on farms in Central Europe as green fodder. About October, 1891, he sowed some of this seed which he had hybridized with the vetch and on January 1, 1892, found two little plants, each with one open flower and several buds. The flowers were very small and the plants only 24 inches high, but by crossing and re-crossing, a strain producing large flowers on long stems, and growing 6 feet high was secured.

Presuming that the vetch here referred to is the *Vicia villosa*, I have sent a sample of the seed to Mr. C. Foster of Reading, to be sown by the side of the sweet peas sent for trial by Mr. Zvolanek, and await the results with much interest.

In this connection I would like to refer to the interesting article on "The Témely Sweet Pea," by the Rev. Edwin Arkwright, in the Sweet Pea Annual for 1907. The Témely is evidently very similar to the two strains referred to above, both as regards flowers and foliage. If all three strains have not a common origin, it is remarkable that this development should appear in such widely different countries at the same time. Can any of your readers throw any further light on the subject?

S. B. DICKS.

[Mr. Englemann's notes on this subject will be found above; we think the "vetch" theory will need strong substantiation before it is accepted here. EDS. H. A.]

Gladiolus America

is becoming more popular every day. The flowers being delicate pink with lavender tinge, are BEAUTIFUL and USEFUL.

Strong bulbs, \$10.00 per 100, \$75.00 per 1000.

Other "Top Notch" Varieties

ATTRACTION. Deep, dark, rich crimson with a very conspicuous large white center and throat. At once a most beautiful and attractive sort. \$15.00 per 100.

CARDINAL. Perfect flower and spike, very large and the brightest, cleanest and most intense cardinal scarlet yet seen. Very rich and showy. \$10.00 per 100.

CONTRAST. Flowers of great substance and a beautiful compact spike of perfect form. Color intense scarlet with a large, distinct white center which is neither tinted nor mottled. One of the most striking and beautiful Gladiolus ever introduced. \$12.00 per 100.

IRENE. Fine large flower and spike. Color a fine shade of pink freely flaked bright crimson. \$10.00 per 100.

MELROSE. White flaked pink, bright crimson center. Very large and fine. \$15.00 per 100.

OCTOORON. A beautiful salmon-pink; very distinct. A gem of its color. You will not be disappointed in Octooron. \$4.00 per 100.

Special offer: 25 bulbs each of above seven varieties for \$18.00.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

Cutting Back Hedges.

Spring is the time to cut down hedges wherever cause exists for such action. Very often from lack of judicious pruning when young and later on a privet hedge may be uneven or bare at the base; or it may be an old one, too strong and tall. Whatever the reason, if unsatisfactory saw it down to within six inches of the base, and do it before growth starts. New shoots in abundance will take the place of the old ones and they will be so strong that a nipping off of the ends of the shoots may follow as soon as they are six inches in length. The side shoots which will develop may be nipped off when of the same length; and the fresh shoots that follow are treated in the same way throughout the Summer. The appearance of the new hedge by Fall should be pleasing, for it should represent a solid foundation for a hedge that should be perfect.

All deciduous hedges come under the same rules. There are not many plants that renew their growth as readily as the privet. Osage orange, locust, buckthorn and berry hedges may be cut back, but not so close to the ground as the privet; perhaps at the height of a foot would be better than six inches.

Evergreen hedges cannot be pruned or cut down as can deciduous ones. Writers may say they can be, but they will never break afresh in the satisfactory way a deciduous hedge will. Many evergreens will not break again at all if cut below the living foliage.

there is no other hardy tree of small or large growth with foliage like this has. The leaves are very large, and of plaited appearance, quite unlike those of any other viburnum or any other shrub. It has occurred to us that this shrub must be of an evergreen character where freezings do not happen, as is the case with some trees and shrubs, for this viburnum keeps its leaves of a perfect green until they freeze off. There is never the slightest indication of a change from green to an Autumn color; instead, no change of any kind is observed, and in 24 hours, should a freezing night come, every leaf will have fallen.

The flowers of this viburnum come in large, flat heads, white, as these of all the cultivated sorts are, and looking not unlike the flowers of the laurietinus. Following the blossoms are the berries which change from green to pink, and from pink to bluish black when ripe, making in foliage, flower and fruit a series of attractions throughout the season.

In addition to the type, as described, there is a variegated leaved variety of it, but as with many other variegated leaved plants, it needs watching that the green shoots it is sure to make do not rob those having the variegated leaves.

Viburnum Sieboldi has had several names since its introduction—reticulatum, Sandankua, Japonicum among them—but all appear to have given way to Sieboldi.

One and all of the viburnums are interesting, and

Horticultural Notes.

MCKINNEY, TEX.—The McKinney Nursery Company has been incorporated, capital, \$20,000. Incorporators: E. W. Kirkpatrick, A. B. Mayhew, and C. C. Mayhew.

NEWARK, N. Y.—A. J. Perkins of Jackson & Perkins Company is enjoying a very delightful trip. After a Winter in California at the branch nursery of Jackson & Perkins Company, he is now spending several weeks in the Sandwich Islands and expects to sail March 15 from Honolulu for Yokohama. He will remain in Japan several months and will visit the leading nurseries and places of horticultural interest. Mr. Perkins is a very well informed hotanist which, along with his knowledge of commercial horticulture, should enable him to make the trip a particularly interesting and profitable one.

Dealers report that since the use of spraying compounds plum crops are now obtained as in years ago, causing a great demand for plum trees. It applies, too, in a measure, to all fruit trees.

Denver, (Col.), seedsmen say that where cattle can get to the wild yucca they eat the flower stems greedily, accounting sometimes for the scarcity of seeds.

A worm eaten acorn will grow if the cotyledons only are partly eaten and not the germ. It is the same with peas. It does not follow that because one is worm eaten it is no good. It will grow if the germ is undisturbed.

Hall's honeysuckle blooms later than any other common sort, and it is a more rapid grower. For these reasons it is usually given a place in all collections.

The beautiful flowering shrub, Xanthoceras sorbifolia, can be increased by root cuttings made in early Spring. When bushes of it are large they fruit freely, and the seeds that form germinate readily if kept in moist earth until sown.

Tulip trees, liriiodendrons, are disappearing fast from our forests, there is such a demand for them for the making of paper. Those familiar with the seeds of this tree know that the half of them are always imperfect. But those that are good grow readily, so that it is a tree that can be increased as fast as may be desired.

Stocks for Japanese Maples.

At the present day both seeds and seedlings of the Japanese maple, Acer polymorphum, are so easily obtained from Japan that there seems no need of using any other kind as a stock for the various beautiful foliaged sorts of that country, as the latter varieties are all of the polymorphum type. In former years the Acer striatum was used to some extent, as it was found suitable. Though quite unlike the polymorphum it closely resembles another Japanese species, the A. ru-finerve. But, as said, there is no need to go outside of their parent type, for very nearly all varieties of "Japanese maples" are from the polymorphum—and this one is easily had from dealers in Japanese seedlings.

Propagation may be by grafting, budding, inarching or layering, as may be most convenient.

One of the cut-leaved varieties of Japanese maples is the dissectum. This makes a growth of almost umbrella outline, hence is best worked on rather tall stems, to make specimens known as standards.

Magnolia Stellata.

Time was when the Magnolia conspicua was considered the earliest flowering magnolia, but it is not now, the M. stellata blooming well in advance of it. Stellata is the earliest of all in this respect, and because of this, and the beauty and fragrance of its flowers, it is sought for by all who know of its excellencies. The flowers are white when expanded, but are a light pink in the bud; and there is a tendency to produce semi-double blossoms. This magnolia blooms so abundantly that it is no exaggeration to say that large bushes are a sheet of white when in bloom, so closely are the flowers set over it. It is its twiggy habit of growth that causes it to have so many blossoms. All magnolias have a flower at the point of every twig; and as the growth of the M. stellata is all small twigs there are a thousand flowers on a bush, that in the case of any other kind would not have but a few hundreds. This exceedingly twiggy character causes M. stellata to grow in the shape of a bush rather than as a tree, rendering it suitable for situations where nearly all others would be considered of too large a growth. But when about to plant it, consider the color of its flowers, and set it where a white wall or similar surface will not be near it, or the effect of the flowers will be lost, and it will have no foliage of its own at that time. Where an evergreen is back of it would be a good place.

This magnolia as well as all the Chinese section are propagated by layers. Strong plants are selected for the purpose, and when Winter is over they are cut down to the ground. The strong shoots that follow are the ones to layer, as soon as they have made length sufficient.

Viburnum Sieboldi

Viburnum Sieboldi.

We owe much of the attraction of our grounds in Summer to the many species of viburnums our climate permits us to grow. From all temperate climes viburnums come, and even without any foreign sorts we have enough native species to make an interesting display.

The one shown in the accompanying illustration is a Japanese one, Viburnum Sieboldi, and it has the distinction of being decidedly dissimilar to any other of the cultivated sorts. As will be seen, it forms a handsome bush, with interesting foliage. As illustrated we have a bush, and a good type of a bush, too, but the plant is easily grown as a small tree, should such be desired. It would require that but one shoot be permitted to grow, when a tree shape would soon be assumed. Such specimens are very interesting, as

many of them beautiful. This applies not only to their flowers but to their fruit as well. Not mentioning now those having berries that change simply from green to black, there are several having pink fruit and some red or scarlet. As we write there come to mind in the pink class, cassinoidea, Lantana, and the one of our subject, Sieboldi. That is to say, at some stage of their ripening the color is pink. Then in the class of red or scarlet there are dilatatum, opulus, tomentosum and Wrightii, as in the case of the pink ones, showing red at some stage of development. Wrightii ends its ripening with the scarlet color, and it is a particularly ornamental bush.

JOSEPH MEEHAN.

For a lawn grass, Poa pratensis, the Kentucky blue grass, gives general satisfaction. A little white clover with it is desirable, as it roots deeply, and when rains come after droughts it produces a green surface in shorter time than the grass does.

Plant Notes.

ALTERNANTHERAS.—Although the somewhat stiff forms of bedding commonly called carpet bedding are not nowadays practiced to the extent they were some years ago, still alternantheras, the plants mostly grown for that kind of work, are not in consequence neglected in the way some supposed they would be. And this is because forms of arrangement are now adopted much more pleasing than those of the old school and times, when the summit of perfection was only attained when the most marvelous and intricate designs were worked out. Instead of these we now see a desire for harmony even in brilliant coloring. Where contrasts are necessary the required colors are there, not to the extent of minimizing the pleasing effect of the greater part harmonious. Alternantheras are still used in large numbers in the public parks, cemeteries and other public places much in the same way they always were, but even in these places I have noticed a tendency in recent years to have masses of one color, and that less attention is paid to designs than formerly.

The fact that has gained prominence lately of having so-called Italian gardens has, to some extent, increased the demand for alternantheras, although perhaps, begonias of the type known as Vernon are used in as large numbers as the former, because they have, in addition to dwarf habit and bronze foliage, when exposed to the sunlight, beautiful flowers. Nevertheless there is nothing grown that for many purposes can take the place of alternantheras, especially for public grounds and on large private places where there is an ever-recurring desire for something novel; and to the gardener and florist in such cases there is no more adaptable and pliant friend than alternantheras.

Even at the very reasonable prices ruling for alternanthera in recent years it is profitable to grow it, if its propagation is properly understood and the work when once commenced pushed right along to a finish. If all the plants required for Spring and Summer sales are intended to be grown in the greenhouse without the aid of a hotbed, it is now time to start right in on the operation. Taking it for granted that the stock to be worked on is now in flats, packed closely together, as it should have been all Winter, a good crop of cuttings will now be available from these stock plants. The cuttings, after they have been sheared off, or taken off by using a knife, should be put in the sand in rows. The cuttings may be put in touching one another, likewise the rows. They require a good watering when put in and shade for two or three days. If there is a nice bottom heat the cuttings will be rooted in a little more than a week, when they should be lifted out of the sand and put into flats. If pot plants are required, these, when they have made sufficient roots and are crowded in the flats, can be potted into 2 1/2-inch pots or into 3-inch, if desired.

When the stock plants have recovered from the operation of shearing the cuttings off them to the extent of showing new growths, they should be divided, and thus divided, be either potted into small pots or put into flats. If the main object, for some time at least, be to get all the cuttings possible, the better plan is to put them into flats, where in two or three weeks they will give another crop of cuttings. Two or three crops of cuttings can also be had of those first propagated; in fact, when kept going, cuttings in plenty can be got from quite a limited number of stock plants.

The comparatively new variety, known as Brilliantissima is in many ways the best red, chiefly because it holds its

color at all times and in all stages of growth; whereas the best of the older varieties vary greatly, according to age and the treatment they receive. Growers who have not a stock of Brilliantissima should lose no time this Spring in procuring it, and propagating as fast as possible; and then more than likely it will pay the first season. Last Summer this variety was greatly admired in many places. It does not flower and seed to the extent the others do, and that in itself is quite a consideration at propagating time as well as, sometimes, at planting time. It is a great deal too early yet to work on alternanthera in hotbeds.

BEGONIAS.—The begonias of the fibrous-rooted kinds are in great demand for bedding. The varieties best adapted for that purpose are gracilis, red and white Vernon and B. Erfordii in various colors. The Erfordii type had quite a run for a number of years, but it has slackened, somewhat recently. The introduction of a red flowered variety of this type a year or two ago, received interest in all of them to such an extent that, in addition to a brisk demand for the new one, the older varieties are also grown in considerable numbers. There are few things that equal Begonia Vernon for bedding out, but it ought to be always borne in mind that before offering the plants for sale they should be sufficiently hardened, so as to stand outdoors without injury, otherwise the purchaser will have a sure source of disappointment on his or her hands. This hardening cannot be properly done without frames; of course, a greenhouse may do, if sufficient air can be admitted to answer the purpose, but this is barely feasible.

Begonias of the bedding varieties will now be in the stage when they should be pricked off into flats, where they should be put, no matter whether they are destined for pots ultimately or not. Then again, if it is the intention to grow them right along in flats they can, for the first pricking off, be put in very close together and by and when they get crowded, taken out of these and put into other flats, affording the little plants sufficient room for proper development and means for showing off their decorative peculiarities to their owners and the grower's advantage. Begonias, like many other things crowded together, are in the end unsatisfactory to both the grower and planter.

THE AMERICAN CARNATION Price \$3.50

A.T. De La Mare Ptg. & Pub. Co., 2 Doane St., New York. Mention the Florists' Exchange when writing.

GRAND NEW CANNAS

William Saunders

The flowers are large, of splendid form, and are born very freely in immense clusters. The color is a deep rich shining scarlet lightly dappled with crimson. Foliage is a rich bronze. Height, 3 1/2 to 4 feet. We believe that **Wm. Saunders** is decidedly the most perfect cannas of this type that has been introduced. 50c. each; \$5.00 per doz.; \$35.00 per 100.

Ottawa

is a strong grower, very robust and 5 to 6 feet high. The flowers are large and beautifully formed, color is carmine with tints of old rose and deep coral, add to this the silken sheen and you can imagine the effect a few plants will produce.

Note:—We had this cannas on trial among the Canadian experimental stations last summer and this is the official report of their expert: Quite distinct and one of the most beautiful shades of color I ever saw in cannas. Of 70 massed in one bed during the past season, this was the most floriferous in the collection, coming into bloom early and continuing until cut down by frost, as many as 13 expanded heads of bloom being counted at one time on a plant, and not a poor one among them, all being of immense size, 50c. each; \$5.00 per doz.; \$35.00 per 100.

New York

Has the Orchid type of flower. They have much more substance than the flowers of the other varieties of this class, and will stand the hot sunshine as well as the toughest varieties of cannas. The color is a solid rich scarlet covered with a beautiful glowing sheen. The flowers are large and contrast beautifully with the dark bronze foliage. 50c. each; \$5.00 per doz.; \$35.00 per 100.

Send for our list and prices of 60 other leading varieties of cannas.

ROSES

Shrubbery

Are our great specialty, 2 1/2 and 4 in. pot plants we have in great variety. Teas, Hybrid Teas and H. P. Roses on their own roots. Philadelphia Rambler, Crimson Rambler, Dorothy Perkins and other climbers in strong field plants.

in variety. Viburnum Plucatum, Spireas, Altheas, Dentzies, Weigelia, Barberry Thunbergii, Hydrangeas Pan. Grandiflora, Honeysuckles, etc.

Send for our Price Lists.

THE WEEK'S WORK.

Timme's Timely Teachings.

Final Preparations for Easter.

Trustworthy signs in plenty presage a thriving business for plantsman and florist at Easter. There are now but two weeks left in which to bring to a satisfactory end the arduous task of being well prepared for the occasion. Flowers and plants play the major part in the celebration of the great Spring festival and the supplies in this line are greater and more varied at Easter than at any other holiday.

Much may yet be accomplished in a final effort to make good any previous loss in time or headway, all depending on the present condition of the stock and on what the weather will be in the short span of time before us. The greater part of the stock to be put forth for Easter is of a kind readily responding to extreme measures, should some hard driving seem necessary. A full week more of ordinary forcing even, with clear skies overhead and proper attention as to watering and sprinkling, will do much in opening buds and finishing up laggard stock in good season. All the ordinary run of bulbous plants stand a deal of hard forcing, so do Indian azaleas, lilies, hydrangeas and roses, should it be required. But if ever possible it should be the aim of the grower to gain a few days at the close of such a course for a gradual hardening off of the stock—a point of importance in all cases of forcing, when the plants are likely to be subjected to much exposure and frequent handling. While the sprinkling of plants under forcing is necessary it should not be continued after flowers begin to expand.

Easter being early, it is not likely that much of the stock intended for that holiday is greatly ahead of time. For the preservation of any such, now already in holiday attire, cool and somewhat darkened quarters must be chosen. The remaining days of March have yet so much of chilly Winter in them that any holding back of too forward stock, or its keeping in acceptable condition, should not prove difficult.

Many of the more common greenhouse plants will stand a fair chance of being put in the hands of our less pretentious customers. Anything in this line now in bloom, of good shape or pleasing appearance, is worthy of special attention, should be cleaned, brought forward and be in readiness for this particular trade. A day or two could now be devoted to the filling of pans, fancy dishes and baskets, even going to the extent of filling a few indoor window boxes of attractive exterior and convenient size, which last year found ready sales at good prices. Whatever is done in this line of work should give proof of artistic taste in the arrangement of the plants used and care in their making up.

Easter Lilies.

The greater share of our time and attention is likely to be required in the hastening of backward lilies wanted for the Easter trade. These, the foremost in the list of Easter plants, are far from being a success this year in many places, although not quite so disappointing in their behavior, generally speaking, as last season. As compared with recent years the bulbs when received in the Fall seemed fully as good, or to be probably more correct, they showed no signs of being worse. Nevertheless much more trouble has been experienced this season in any attempts at hard forcing, resorted to by many growers as the only means to bring them out in time for Easter. It is probable that unfavorable weather conditions had to do with retarding satisfactory developments so far, and it is safe to assert that this factor, so entirely beyond our control, must still in great part be held responsible for what might or might not be possible to accomplish in the two weeks yet remaining.

Lilies to be right for Easter should now show well advanced buds, some of these fully developed and beginning to turn from green to white. A short week of continued forcing in from 60 to 65 degrees of heat will bring these to a point when a gradual cooling off will become the last and very proper step to take. Any lilies more backward but showing rapidly swelling buds and lengthening stem, will need a stand in a higher temperature and much attention as to regular sprinkling to bring them in line with the rest of the Easter stock.

Lilies already showing opening flowers on a white buds are ready to go to a cool, shady place, where they will carry through to perfect condition under the Easter trade begins, by which time nearly every bud will be fully open. At no time should lilies be allowed to become dry at their roots. The anthers of opening flowers must be removed before they shed the pollen over the petals.

MINNEAPOLIS FLORAL CO., MINNEAPOLIS, Minn.

In speaking of lilies it is well to remind growers that now it is time to start *Lilium speciosum* for a Summer crop. Bulbs carried over from last November in cold storage are planted in pots a size or two larger than those used for *Harrisii* or Japan lilies, a pretty stiff, but well enriched soil being the best to use. A place in some cool greenhouse at first and later on a cold frame will bring about a good even start.

Asters.

The aster grower's busy season has begun. Several successive sowings of the best strains obtainable should be made from now until the middle of May and even later if a crop of flowers for the latter part of October is desired. Not always does it pay to provide for so late a picking, while a very early crop invariably has proved quite profitable in late years. But to secure a crop of good aster blooms a week or two ahead of the regular flowering season is difficult, almost impossible to do by any manner of proceeding, while it is easy enough to have asters two or even three weeks later than the main crops, by starting the seeds of late varieties four or five weeks after everybody else has made his last sowing and most of the aster fields are already stocked with good-sized plants. Starting aster seeds very early and rearing the plants in fire heat is a waste of time, room and labor. Nothing whatever is gained thereby, and the stock so raised carries with it to the field the beginning of any amount of well assorted troubles to the grower.

In order to cover the entire aster season reliance must be placed on the various types, on the early, mid-season and late sorts, the time of sowing counting for little or nothing in the hastening or prolonging of the cut. Extreme earliness in any variety of asters ordinarily is desirable but usually means inferiority of bloom as compared with that of later sorts, the flowers of the very latest varieties being always the finest.

A good place for the raising of asters is a very mild hotbed, and cold frames for the later sowings. The seedlings should be transplanted once and allowed to become of sturdy size before going into the open field.

FRED. W. TIMME.

Hardy Roses for Decoration Day

HARDY H. P. ROSES

We offer exceptionally strong two-year-old dormant, low-budded stock (on Manetti), in the following varieties:
Alfred Colomb, carmine.
Anna de Diesbach, bright carmine.
Ball of Snow, pure white.
Baron de Bonstetten, dark crimson shaded.
Baroness Rothschild, satiny pink; extra.
Captain Christy, delicate flesh color.
Duke of Edinburgh, bright vermillion; very fine.
Fisher Holmes, dark rich scarlet.
Frau Karl Druschki, the finest white in existence, \$12.00 per 100.
General Washington, rich velvety crimson.
General Washington, beautiful red, shaded carmine.
John Kopper, beautiful rose pink.
La France, the finest light pink.
Margaret Dickson, white, pale flesh center.
Magna Charta, clear rose pink.
Mrs. Gabriel Luize, light, satiny pink.
Mrs. Elchler, white.
Mrs. John Laing, soft pink; most desirable variety.
Paul Neyron, beautiful dark pink.
Prince Camille de Rohan, velvety crimson.
Ulrich Brunner, cherry red.
Prices on H. P. Roses \$1.25 per 10; \$11.00 per 100; \$100.00 per 1000.

HYBRID TEA ROSES

Maman Cochet, pink. Maman Cochet, white. Unequaled as headers for Summer bloom-

ing, producing buds of large size and of ideal form. The buds are of the color and form of Bridesmaid and Bride, but larger, and outside will yield more blooms than the latter will under glass. The two finest outdoor roses yet introduced. Strong 2-year-old plants, 10 for \$1.50; \$12.00 per 100.
American Beauty, Clothilde Soupert, Kaiserin Augusta Victoria, Carolina Testout, Hermosa. Strong, 2-year-old, \$1.50 per 10; \$12.00 per 100.

THE KILLARNEY ROSE
Irish Grown From the Kaiser.
Good strong two-year-old plants, \$3.00 per 10; \$27.50 per 100.

HARDY ROSE SOLEIL D'OR
(Golden Sun.)
Like Persian Yellow, this variety is perfectly hardy, with large, full, globular flowers, varying in color from gold and orange to reddish gold, shaded with nasturtium-red. Two-year-old budded plants, per 10, \$2.00; per 100, \$15.00.

The Grand New Rose
ETOILE DE FRANCE
Superb crimson red velvet, the center of the bloom vivid cerise red. The flowers are very fragrant and last long. This new variety is the result of a cross between Madame Abel Chateau and Fisher Holmes. Field-grown, strong two-year-old plants, \$2.75 per 10; \$25.00 per 100.

Greater Pittsburg. Pittsburg and Allegheny Consolidated.

The Supreme Court has confirmed the constitutionality of the Greater Pittsburg bill, consolidating the cities of Pittsburg and Allegheny and almost every one seemed to be overjoyed that the dream of years has at last been realized. Pittsburg is now one of the greatest cities of the world and the sixth in population in the United States, with over 550,000 population and more to come. An area of 38 square miles, of which about 1,200 acres are public parks, valued at about \$25,000,000. As a manufacturing city it ranks first in the world and as a live business place, ask any of the commercial travelers and they will tell you that if there is anything doing at all, it is in our city, particularly in the florist line.

Market Condition.

As to the florist business the past week, it seemed satisfactory, considerable funeral work helped greatly, for the weather conditions were not of the best to bring people out. Prices of stock remain about the same as the preceding week, with the exception of Liliun Harrisii, 20 cents being asked for them. Bulbous stock is too plentiful for profit. The plant trade has again been checked by a change in weather, which turned cold and still continues, with plenty of snow on the ground. The growers are very anxious to sell stock, for last Saturday the thermometer was about freezing all day, yet quite a few plants were exposed for sale in the outside market.

News of the Week. John Bader spent a few days in the East looking up Easter stock. He was accompanied by Mr. Koebel of Jeanette, Pa.

The March meeting of the Florists' Club was poorly attended. One of the worst snow storms, accompanied by thunder and lightning, was raging shortly before the meeting time and kept many away. Easter flowers and plants were discussed and exhibited by some of the private gardeners, Blind Bros., J. Bader and from the Park Conservatories. Some well grown stock was shown, the usual sorts for Easter, among the lot being Spiraea Gladstoni, from J. Bader, which was extra fine and it is no doubt the best of all the spiraea for the commercial grower. The next meeting, in April, will be rose night.

Easter lilies this year are an uncertainty and will command good prices. Most of the growers are disgusted with results, both with Harrisii and Longiflorum and some have countermanded the orders given for this year. If some of the growers realize from 10 to 20 per cent. good stock they will do well. The best lot in Pittsburg and vicinity can be seen in the Phipps conservatories in Schenley Park, and they are simply grand, both Harrisii and Longiflorum, with plenty of bloom and firm healthy foliage to the bottom, just ready for the Easter show. Mr. Jones, the foreman, stated that their loss was comparatively small, and of the largest sizes all were good, throwing ten and more blooms.

The trees along the sidewalk in Ben Avon, a suburb of the city, are doomed to death as a result of the opinion handed down by one of our judges in dismissing the preliminary injunction against the borough of Ben Avon, granted to a citizen, and restraining the borough officers from cutting down the shade trees on various properties. The officers contended, and demonstrated to the court's satisfaction that the roots of the trees are ruining the sewer system. The ruling of the judge was that while the trees are ornamental and useful, they are a menace to the health of the general public in destroying the borough sewers.

The news of the death of Herman C. Baartman, of Holland, by drowning was quite a shock to many of us, who knew him well and respected him. Among the visitors the past week were several Holland bulb men, D. Eschner of Rice & Company, Philadelphia, and W. A. Mockler of Hummel & Downing Company of Milwaukee, folding box manufacturers. E. C. REINEMAN.

Peter Henderson & Co., 35 & 37 CORTLANDT ST. NEW YORK

SALVIA ZURICH

THE EVERBLOOMING SALVIA

One of the most important novelties in bedding plants introduced for a long time, produces its wealth of flowers while very small and is in its full glory long before any other kind shows even a bud, grows also much dwarfer and more compact. Our stock is raised from cuttings and seed, which was procured in Zurich, Switzerland.

Strong plants from 2 1/2-in. pots, 75c. per doz., \$5.00 per 100, \$45.00 per 1000. For full description send for circular or see American Florists' Carnation Number, page 19, Florists' Exchange, page 183, and Horticulture, pages 140 and 202.

Next Saturday, March 23

Our Annual Spring Number

Will be published.

Next Wednesday, March 20

Our Forms close.

In other words, if your advt. is not in our hands by March 20, you will lose the opportunity to be represented in our Spring edition —one of the famous issues of the year.

As this Spring edition comes into the hands of the readers just one week before Easter Saturday, it will be a particularly timely issue for the wholesale flower merchant, as well as for the plant grower.

Purchases of Easter stock, as well as of surplus stock, are largely made from this Spring Number. Buyers are now waiting to see the announcements.

If your "copy" has not been mailed, please give this matter your immediate attention. A liberal advertisement will undoubtedly prove a good investment.

Delays are Dangerous Mail your Copy NOW.

Kalamazoo, Mich.

News Notes.

Little change in business conditions is noted since Lent began and the trade generally seem satisfied with amount of business done. Funeral work has for several weeks been very brisk and the deaths of several prominent people called for an extra large amount of flowers last week.

Out of town trade is also good and inquiries as to Easter supplies quite frequent.

The prospect for good trade at that time is said to be very promising and while it is possible some lines may be scarce a large supply of pot plants and bulb stock will certainly be available and will greatly assist any shortage in roses or carnations, which are probably the only articles that will be scarce.

An epidemic of grip has prevailed here this last month or two, very few escaping, including even the florists and their employees. Now, however, nearer normal conditions are prevailing, so the boys are amusing themselves and interesting their customers by cutting the prices on carnations, the latest effort being three dozen for 50c. Prices like this at the present time and especially after such a spell of dull weather preclude the possibility of profit and makes it difficult to get the price back again to where it belongs. This season, on the whole, has been none too kind to the average grower.

It appears that the florists' business is again attractive to other professions, as I hear of a movement being projected by several well-known business men, with the view of establishing another stock company to grow and handle plants and flowers, etc. Whether it will materialize or not, time will prove; certainly, however, Kalamazoo is well supplied at present. For an Exclusive Active Membership.

A Rochester (N. Y.) periodical designating itself as the "chief international journal of the nursery trade," is advocating in its columns changes in the operations of the American Association of Nurserymen whereby "only nurserymen should be accorded the privilege of conducting the affairs" of that organization. It is pointed out that as originally formed, in 1876, the title was "The American Association of Nurserymen, Florists and Seedsmen." Since that time the florists and the seedsmen have formed their own societies; and although in 1887, the name of the original organization was changed to the American Association of Nurserymen, it seems the original constitution was altered only as to the name, for to-day it reads: "This association shall be known as the American Association of Nurserymen, and shall embrace nurserymen, seedsmen, florists, horticultural implement makers, and dealers in supplies."

Now, however, our esteemed Rochester contemporary desires to draw the line for active membership, with full privileges, including the right to vote on all questions before the organization, at "those who are actually engaged in the nursery business." Those who are engaged in "allied trades," such as florists, seedsmen, etc., our contemporary would consider only eligible to associate membership, who "shall have the privileges of the association with the exception of voting."

We are informed by our esteemed contemporary that "there are many reasons why the active membership of the organization should be restricted to nurserymen. In the early years of the society's existence, the desire to acquire strength rapidly, led to the opening of the door to those who in any way had dealings with nurserymen from the point of view of allied trades. But the nursery trade of itself has expanded to such a degree, and the field from which strictly nurserymen can be drawn for members has become so large that the trade is entitled to a national association which shall directly and exclusively represent its interests." That is one reason, and, we think, one not showing much gratitude, surely, to those "allied traders" who took advantage of the open door to help the infant organization to "acquire strength, rapidly."

"But what direct interest has the manufacturer of spraying machines or the printer or lithographer or the label or box-strap maker in questions of legislation relating to the inspection of nursery stock or negotiations with railroad companies regarding the shipment of trees?" queries our contemporary. We don't believe they either have or take any "direct" interest in such weighty matters, although their interest in a general way, in everything calculated to benefit the trade from the operations of which a part of their income at least is obtained, is surely not one of complete indifference.

These appear to be the only two of the "many reasons" cited by our contemporary in support of its proposition. Several letters are published, the

writers of the majority of which favor exclusiveness. One correspondent says he does not "think there should be any objections to florists being active members of the association," which shows that his head is level.

Vice-president J. W. Hill of Des Moines, Ia., champions the cause of the "allied traders," adding, "I do not feel that we need to fear their action upon matters brought before our association; for none is of so great import as to justify the active nurserymen depriving any member of a vote upon these questions."

We ourselves are ignorant of the "black gentleman in the wood pile" on this occasion, but it seems to us the whole agitation is a "tempest in a teapot;" or probably—a bid for a bit of cheap notoriety. There are evidently some liberal-minded, sensible men among the nurserymen, members of their association, who believe that numerical strength has its value in several ways; and so far as the florists' connection with the nurserymen's association is concerned, it was only last year at Dayton, O., that ex-President E. Albertson made an appeal to all florists dealing in nursery stock to become members of the American Association of Nurserymen, and in other ways to co-operate in the carrying on of its work.

Members of allied trades have their uses—good ones, too—in organizations of the class to which the nurserymen's association belongs. For instance, a printer is chairman of the committee of the A. A. N., and his voice is often heard in its important deliberations. In our own S. A. F. O. H., yeoman service has many times been rendered by members of "allied trades." Last year, at Dayton, what more convincing arguments were put forth on the injustice of the tariff on glass, etc.; what better advice as to ways and means to secure redress tendered; than by a member of the "allied trades!" Then again, were there ever prettier flowers of speech presented on the floor of a convention, swinging a candidate—who had no opposition—into the presidential chair, than the oratorical bouquets that issued from the lips of an allied trader," of the S. A. F. O. H.!

Taking into account services rendered, value received in many ways, who but the most narrow-minded and illogical would seek to deprive of his vote, any man progressive enough to join an organization like the American Association of Nurserymen? All the most important work of almost every organization is done by committees. Let these, if you will, be composed of individuals "actually" engaged in the trade or industry represented by the association; but place no barrier in the way of smooth and amicable working, or of a satisfied allegiance, barriers which can only breed discord and, tend to disruption.

OUR READERS' VIEWS

Editor Florists' Exchange:

The communication of James Ivera Donlan in last week's issue of *The Florists' Exchange*, in protest against the degrading practice of dyeing carnations, is, to say the least, to the point and timely; and coming as it does from a man of Mr. Donlan's well known reputation for all that is correct in taste, it should carry considerable weight with it. That part of Mr. Donlan's communication wherein he, on behalf of the people in whose supposed interest or honor this degradation of nature is practiced, disclaims all responsibility, should prove to those engaged in it the mistaken nature of the compliment. They are in a very small minority those who are willing to go such lengths to sell a few extra flowers, and the minority will be still more insignificant when the true sense of Mr. Donlan's protest is understood and digested, if along with that it is brought home to the few still left encouraging it, that only those unaware of what constitutes good taste would touch a carnation or any other flower defiled in such a way for no other reason than the expectation on the part of the perpetrators of a little more gain through deluding a patriotic people.

St. Patrick, tradition tells us, cursed, or at least made things so hot for certain obnoxious creatures in Ireland that they left there permanently; and now even if the good Saint is away at rest the practice referred to should be almost sufficient to stir him up to corrective action.

D. M.

BEDFORD, MASS.—The New England Nurseries is a new organization incorporated under the laws of the State of Massachusetts, and has purchased the entire real and personal property formerly owned and operated by the Shady Hill Nursery Company of Bedford and Boston. Theodore J. Smith of the W. & T. Smith Company, Geneva Nursery, Geneva, N. Y., becomes president of the new corporation. Alfred E. Robinson, who was for fourteen years with W. & T. Smith Company, and who for the past four years has been manager for the Bay State Nurseries, North Abington, Mass., becomes its treasurer and manager. By this combination of interests in management, together with the large and valuable nursery property in Bedford, supplemented by the product of nearly seven hundred acres in the Geneva nursery, it

proposed to maintain, here in the East, one of the most complete and reliable horticultural establishments in the country.

The Hybridization of Roses.

Paper read by E. G. Hill, Richmond, Ind., before the American Rose Society at its Washington Meeting, March 13.

Your president and executive committee have suggested as a subject for my paper, "The advisability of having an ideal in mind when attempting to raise new and improved varieties of roses."

It would have been better if you had selected some one to prepare this paper who has had a broader and more extended experience bearing upon this particular line of work than myself; it is a subject full of interest, of mystery and of elusive leadings, and of which I am free to confess I have very little exact knowledge. The more I have tried to inquire into the laws governing cross-fertilization, the more surprised I have been at the very little tangible knowledge possessed by plant growers, for it would seem that after generations of attempts at crossing that we should find much more accurate information at hand, and at least a few formulae which might be followed with some certainty.

These, however, are not yet at hand, but that is no occasion for discouragement, for of one thing I am convinced, there are underlying laws which guide to certain results; and while at present we are only groping toward them in the dark, patient persistence will finally give us our working theorem which will prevent the present waste of utterly haphazard effort, and reduce it to a science and an art at least approaching the exact. Nature does finally reward the painstaking investigator, and she does reveal enough concerning her manners and methods to give incentive to those who would know her better.

I should say, by all means have an ideal in mind when attempting the production of a new variety of rose through the medium of cross-fertilization; in fact, the ideal is persistently forced upon the working florist by the very shortcomings of his every-day favorites. The amateur may please his fancy and delight himself with the odd and curious results of haphazard work, and there is much pure pleasure to be derived from it; but the florist, with all his love and reverence for the beautiful in nature, has a sterner purpose in view. The rose has descended to commercialism; the rose grower must raise it to a pinnacle of perfection where it can dominate its special line of commerce, without apology for any weakness; and it must be confessed at the present time that the usefulness and the profit of nearly every variety of commercial rose is greatly impaired by some serious drawback to its reliability. To eradicate these faults in the parent is impossible; to produce a seedling that shall retain the good points of the parent with the weakness eliminated is well worth working for. This, then, forms an ideal. Definiteness of purpose in any line of activity is essential to results; and quite as important as the ideal is the working plan which must be formulated to attain the end in view.

Some years ago I began working on red roses, hoping to secure something better than Meteor, Gruss an Hoptlitz and Marquise Litta, all fine in their way, though stubborn material in the hands of the rose forcer. My initial work was begun with these varieties, and only after a good lapse of time have results been forthcoming. The purpose in view was first to secure a vigorous constitution in the progeny; that must always be first. Seedlings showing exceptional vigor have again been bred with Liberty, Richmond, American Beauty, Queen of Edgely and several of the best H. P.'s. My aim has been, in this particular line of work, to secure a red rose that would flower freely under glass in Winter. Furthering this idea of improving the red varieties, pollen was taken from American Beauty, and over 300 crosses were successfully made last year (1906), and these latest seedlings are now nice little plants growing vigorously in their little pots. My hope in thus using American Beauty pollen is to secure, if possible, a long-stemmed, free blooming, Winter forcing variety. A previous effort in this line has given us a rose superior in color and size to American Beauty, with the additional advantage of producing flowers as freely as Richmond or Bridesmaid.

Quite a separate line of crossing has been to improve upon the size of Rosalind Orr English, while retaining its general color scheme. With this in view hundreds of crosses have been made with pollen taken from Richmond, Queen of Edgely, American Beauty and Paul Neyron during the season of 1905. The progeny from these have mostly flowered, with a result that some thirty have been retained for a second year's trial. Two out of the thirty selected are of unusual promise; one of these is American Beauty × Rosalind Orr English, and is especially notable for its stiff, long stem and large size; the other cross is Richmond × Rosalind Orr English, which is intermediate in color between its two parents, with the additional merit of possessing double the number of petals that either of its parents have. The above two instances are cited to show concentrated effort on a given line in a multiplicity of crosses. I give the above in detail to illustrate my conviction of having an ideal in mind when working

March 16, 1907

for a given end. Perhaps some day we will find a means to the end desired by simply making one direct cross.

Pernet's Operations.

I do not know to certainty, yet I believe that M. Joseph Pernet of Lyons has followed out a similar certain line in his raising of new varieties. I judge this by the similarity in growth, foliage and the general build of the flowers in his originations. Take *Souvenir du President Carnot* and *Antoine Riviere*; note their general characteristics, and I think it is easy to detect a similarity of lineage running down through his *Madame Rivary*, *Le Progress*, *Joseph Hill*, *Mme. Jenny Guillemot*, *Mme. Philip Riviere*, *Mme. Melanie Souper* and *Baron Sinety*, and three of his very latest introductions—*Mrs. Aaron Ward*, *Mme. de Linze* and *Renee Wilmar Urban*—show the same general characteristics. It would be interesting to know if M. Pernet had been following out Mendel's theory in his breeding of roses. Not all his productions are allied to the varieties mentioned above, for his *Etoile de France*, *Marquise Litta*, *Soleil d'Or* and *Laurent Carle* are quite distinct from the type cited above.

Suggests Interbreeding and Promiscuous Breeding.

If the law of the interbreeding be correct, gathering in only pollen from closely related varieties, then the law of heredity as applied to the animal kingdom would not hold good in the vegetable family. My suggestion would be to follow both lines of work, interbreeding and promiscuous breeding, if I may thus put it, but always have in mind the design of a given improvement.

Selection of Mother Plants.

Of late my one thought has been to select the most vigorous grower for the mother plant, for without health, vigor and a good constitution the finest new rose is a failure. I am thoroughly convinced by observation and experience that the mother plant has the most to do in giving health, vitality and constitution to the offspring. This being the case we can see at a glance how important it is to select only the very strongest among the everblooming varieties to serve as the female parent. We should select the pollen from those varieties which have pronounced qualities in the way of color, stem, length of bud and fragrance. If these qualities are present in the male you may hope that they will have an influence upon your crosses.

With the increased vigor possessed by many of the later productions in tea and Hybrid tea roses, such as *Betty*, *Pharisaer*, *Killarney*, *Kate Moulton* and others of like vigor, it need not be many years before a race bred from such parents will give greatly increased vigor over present existing varieties, and with this increased strength of growth great good will come to the grower.

Value of H. P. Blood.

The infusion of hybrid perpetual blood will also have a marked tendency to increase the vigor and growth of seedling roses, and by using the everbloomers for the seed bearer, freedom of bloom will in large measure be preserved. It ought not to be many years until the present non-flowering hybrid perpetual roses are superseded by a race equally as virile, but which will give continuous bloom. If we get vigor of growth with certainty of bud, flowers on the ends of long, straight stems, that will be the type that shall give us larger and finer flowers for our Winter forcing, as well as better varieties for our gardens.

I know that you will say that predictions of this sort are easy to make, but kindly indulge me a little; let us use any means to impress upon the mind of those just taking up this work that constitution is the foundation upon which all effort must proceed.

Advancement is Steady.

A great number of skilled and practiced workmen are enthusiastically bending their best energies toward improving the rose, and we are surely making a steady advance in the right direction, under such men as *Dicksons*, the *Pauls*, the *Souper*s, *Pernet* and others in France, and *Peter Lambert* and his colleagues in Germany, together with *Cook*, *Walsh* and others in this country. We have a right to expect even better results than have yet been obtained. Even with the combined efforts put forth by the rosarians in this and other countries, progress will appear slow to the impatient workers in our ranks, trifling advance will be noted; but better types and varieties will surely gladden our eyes and hearts; for nature has been kind in the past, both in bud-variation and by cross-fertilization, and the coming years shall be no less fruitful than the past. We shall improve upon *Malmaison*, *Maréchal Niel*, *Catherine Mermet*, *Bride*, *Perle des Jardins*, *Kaiserin Augusta Victoria*, *American Beauty*, *Frau Karl Druschki*, *Liberty* and the two *Cochets*, or, at least, she will reward us with varieties more readily amenable to our twentieth century requirements, which are stringent in the extreme.

Study Scientific Theories.

By all means let us study Mendel and his theory; note the deductions of *De Vries*, and gather all the information possible from whatever source it can be had, remembering that nature's working theorems are to be

discovered only by the painstaking application of the knowledge at hand, and that no amount of speculative theory will take the place of intelligent, persistent experiment "personally conducted."

Results from Simple Direct Crossing.

Let no one thing for a moment that good results may not be obtained by the simple direct crossing of two varieties of roses, for such is quite possible without inter-breeding. *Richmond* was obtained by using pollen from *Liberty* upon *Lady Battersen*, but it was the one valuable result out of a very large number of the same cross, so that we may say there is a chance of a good return, though it is not probable from this procedure.

I have carefully avoided the use of any scientific or technical terms and have only tried to embody in this very imperfect paper my own idea and to chronicle the results of my own observations.

The Urgent Need.

Our gardens are sadly in need of roses that will grow and bloom, as do most of the present standard varieties in England, on the Pacific coast, and in many of our Southern States; but here in the North, only a pitifully small number can be depended upon. And right here is a wide field for the hybridist to enter; a good, reliable, everblooming garden rose will give pleasure and delight to millions of American citizens. It is to be hoped that many rose lovers may enter this sadly neglected field. My ideas on this line of the subject were given in a paper read before the S. A. F. O. II. at its annual meeting at St. Louis in 1905.

This line of work might have received a fine stimulus if the trustees of the Carnegie fund had been empowered to set aside certain funds to be awarded for meritorious new garden roses. The field is not inviting to one who must earn a maintenance, but if a prize or a money consideration could be offered of sufficient size it would stimulate efforts in this direction.

Philip J. Breitmeyer
Vice-President-elect American Rose Society

Philadelphia.

Godfrey Aschmann, 10th and Ontario streets, has a grand lot of Easter stock this year. His plants are in good shape and of very desirable sizes. The stock is in excellent shape for shipping purposes for those who have room to finish the plants off themselves.

He has plenty of azaleas and lilies in condition to bring into full bloom at once.

Of lilies he has 3,000 pots, averaging 3 to 10 buds to the pot, mostly in medium sizes, all good stocky plants, clean and healthy.

Crimson Rambler roses, there are about 500 plants in 6 and 7-inch pots, clean and well flowered. There are now on the place over 7,000 plants of azaleas, mostly in 6 and 7-inch pots, nice stocky plants and ready to bring into flower as needed, all with good heads. One house is devoted entirely to *Vander Cruyssen*, there being 2,000 plants of this variety in 6 to 8-inch pots, an exceptionally fine lot of plants. In another house, the center bench is occupied with 700 *Spiraea Gladstone*,

in 6 and 7-inch pots, a very even and well grown lot and sure to give satisfaction.

Mr. Aschmann's cinerarias are exceptionally good this year. He has 1,200 plants in 6 and 7-inch pots, embracing a very choice assortment of colors.

On side benches are seen 5,000 hyacinths in 4-inch pots, in all the best commercial varieties, just showing color.

In one house on side benches are 3,000 tulips, in 4-inch pots, 3 bulbs to a pot, mostly *tourneisel*. There are also 3,000 daffodils in 5 1-2-inch pots. In another house the center table is filled with hydrangeas, in 6 and 7-inch pots, having 3 to 5 heads of flowers all nice stocky plants.

In addition to Easter stock, he has some good araucarias and a very grand lot of Boston ferns, both of which are selling well just now. All around the place in every conceivable corner are thousands of moonvines, salvias, begonias and other Spring stock, also a nice block of 5-inch *Primula obconica*.

The window of *Henry F. Michell Company*, 1018 Market street, presents this week, an exceptionally beautiful appearance. The scheme carried out is a garden, showing plantings of different kinds of seeds. The usual dull window effect is relieved by some trees which are fitted up with artificial apple blossoms, while scattered around on the surface are several large Japanese dolls. The idea is one gotten up by their window decorator, *Mr. Freud*. When lighted up at night, it presents a beautiful appearance and catches the eye of the majority of those who pass by.

S. A. F. O. H. Banquet

The banquet tendered by the Florists' Club to the officers and directors of the S. A. F. and O. H. on Tuesday evening was a very successful affair. There were 55 covers. The table was arranged in a hollow square in the foyer of Horticultural Hall. The center of the square was filled with palms, azaleas and bulbous plants, kindly supplied by the *Wm. Graham Company*, as were also some fine specimen Kentias standing around the room. *Samuel S. Pennock*, president of the Florists' Club, presided, *Robert Craig* acting as toastmaster. In addition to the officers and directors of the S. A. F. the following were present from other cities: *J. C. Vaughan*, Chicago; *Peter Crowe*, Utica, N. Y.; *Thomas Johnson*, Providence, R. I.; *G. X. Amrhn*, New Haven, Conn.; *B. S. Myers*, Buffalo, N. Y.; *Edw. Flood*, Aten, N. J.; *Col. Castle*, Boston, Mass.

From the trend of the speeches it appears that President *Stewart* has laid plans to make the August convention of a somewhat higher order than previous ones, and the essays will all tend to that end. He has outlined this policy to the directors and has been given authority to appoint committees to give consideration to the various recommendations that his address in August will contain. Some of these matters embrace the school gardening problem, the education of instructors at the State experimental stations, horticultural education of the public, enlarging the scope of the work of nomenclature and registration.

With regard to the National flower show at Chicago, in 1908, *Wm. Kastig* stated that \$7,600 was already guaranteed, the schedule was prepared, and the success of the undertaking assured.

J. C. Vaughan spoke of the good work being done by the National Council of Horticulture in supplying material for the public press.

From the speech of *J. K. M. L. Farquhar*, we learned the directors had decided to recommend that the name of the S. A. F. and O. H. be changed to that of the Society of American Horticulture. This would clear the way for all kindred associations to come in and put the Society on a higher plane than any of the European societies, and would also gain for it the support of the wealthy people of this country.

The directors, in their final resolutions, laid great stress upon the grand opportunities presented in Philadelphia for the August convention; a hall for the exhibition is offered that surpasses by far anything ever yet used by the S. A. F. both as to space and convenience; the whole convention will be central and the delegates kept well together.

The after dinner program was as follows:

Our Guests, *W. J. Stewart*, President, Society of American Florists.

The August Convention, *John Westcott*.

The West and the Workers, *Phil. J. Hauswirth*, Secretary American Florists.

The Society of American Florists, *William F. Kastig*, Buffalo, N. Y.

Song, *P. Joseph Lynch*, West Grove, Pa.

Kindred Societies, *J. C. Vaughan*, Secretary, American Rose Society.

Song, *Horace T. Dumont*.

The Seed Trade, *J. K. M. L. Farquhar*, Boston, Mass.

Song, *J. F. Hogan*.

Our Friends, the Nurserymen, *E. V. Hallock*, New York.

The Horticultural Press, *Robert Kift*.

Song, *Edward J. Donner*.

DAVID RUST.

Climbing and Trailing Roses in the Hardy Rose Garden.

(Paper prepared by M. H. Walsh, Woods Hole, Mass., and read before the Convention of the American Rose Society at Washington, D. C., March 14, 1907.)

The popularity of this class of roses is increasing yearly as their valuable qualities for garden decoration become known. It was in the year 1903 when *Wichuraiana* was first introduced into the United States. Shortly after the *Crimson Rambler* was also brought to this country. *Wichuraiana* and *Crimson Rambler* are the two parent plants from the many varieties of rambling and trailing roses and these may properly be called *Wichuraiana* and *Multiflora* hybrids, a new race of hardy garden roses. Their vigor and constitution make them desirable as they prove hardy in the coldest localities. The freedom of growth, fine foliage, and easy culture place them within reach of the amateur as well as the professional gardener. They adapt themselves to the varied conditions of soil and climate; of course, the better the soil and more attention received, the finer will be the growth and profusion of flowers. They grow in light sandy soil with less attention than most any other rose.

The various ways in which these plants may be grown as decorative plants in the garden are several. They may be trained in pyramid form on posts set in the ground about eight and one-half feet high or in bush form. They can be grown as wind-breaks on a trellis. They also make fine specimens when grown as standards about four feet high. They are being used largely at the present time for pergolas and archways and, when necessary, may be grown as ground roses trailing on the surface. They are admirably suited for covering rocks and stumps of trees. When used for pergolas, the posts should be set about ten feet apart and eight and one-half feet high. For quick effect three plants to the post will reach the top and partly cover over the first year.

Two plants usually are sufficient unless immediate effect is desired.

In 1903 there were few climbing roses which proved satisfactory. *Queen of the Prairie* and *Baltimore Belle* being the two varieties mostly called for. While these made rapid growth and gave fine effect, they were subject to attacks of insects and unless sharply looked after shed their foliage and became an eyesore.

The hybrid *Wichuraiana* and *Multiflora* are more desirable, being less liable to the attacks of insects and they produce hundreds of blooms more to the plant than the old varieties of climbing roses. The effect in the hardy rose garden produced by this new race of roses is marvelous and bewildering, almost beautiful beyond description where fine specimens may be seen in the various colors, single and double flowers. This effect could not be attained until the advent of these roses. They are ornamental when out of flower, as the foliage is distinct and shiny in many of the varieties, some having the appearance of being varnished as it were. Another most valuable consideration is the second crop of blooms produced by a few of the varieties in September continuing until frost sets in.

Planting.

To obtain the best results when planting ramblers it is well to dig a hole two and one-half feet deep and about three feet wide, enriching the soil with decomposed barnyard manure. Plants five feet long set out produce flowers the first season. The young shoots should be tied occasionally as growth requires; this keeps the wind from swaying them about.

Where insects do attack these roses a slight dusting of hellebore is usually sufficient to stop their ravages. It is easily applied and no injurious results follow from its use as is oftentimes the case when tobacco water or whaleoil solution is used, as many amateurs have found out to their sorrow.

The Season of Blooming.

The earliest variety of bloom is *Wedding Bells*, semi-double, pink and white flowers; this is a seedling from *Crimson Rambler*. Next to flower is *Debutante*, soft pink and double; the flowers are borne in large panicles. *Sweetheart* comes next, *Carissima* then follows. *Dorothy Perkins*, beautiful soft pink, flowers about the first of July as does *Wichuraiana*, *Crimson Rambler*, and *Lady Gay*. Then follow *La Fiamma*, single red; *Hiawatha*, bright crimson; base of petals white; *Minnehaha*, large double dark rose color; *Paradise*, single and a most vigorous grower, well adapted for parks and driveways and trellis work; *Coquina* is a delightful shade of porcelain pink with the base of the petals yellow; flowers are from one inch and a quarter to an inch and a half in diameter. *Delight* is consider-

ed by some, one of the very best of recent introductions. Its color is crimson with base of petals white; and has dark shiny foliage. Mr. Jackson Dawson raised valuable and most desirable varieties, *The Dawson*, *W. C. Egan*, *Farquhar* and others. *W. A. Manda* of South Orange, New Jersey, has furnished such grand varieties as *Manda's Triumph* and *Favorite*; and others have added many valuable ones to the list. So we have a good list of varieties in wide range of color. It is a matter of choice as to color. In planting, however, varieties should be selected which harmonize and not clash with each other for at this time the effect from an artistic point of view adds much to the beauty of the garden. A few varieties bloom quite freely in September by pruning. Cut back the shoots which have flowered in the early Summer to within two inches of the main shoot and shorten the long shoots a few inches. *Hiawatha*, *Debutante*, and *Delight* treated as above will produce a nice lot of blooms.

Spring Pruning.

When the shoots are too crowded, cut out the old ones, leaving shoots of the previous season's growth to produce the blooms. The number can best be determined by the space it is desired to cover, and the vigor of the variety.

This class of roses, owing to the hardness and their adapting themselves to varying conditions of soil and climate, commend them to the consideration of the amateur. New and meritorious varieties

The Chinese *Magnolia*, *fuscata*, should be seen in collections oftener than it is. It is an evergreen shrub, not hardy in the North. As a tuh plant for lawns in Summer it is valuable. Its small dull purple flowers come with its new growth in Spring, and are of delicious fragrance.

A favorite Summer vine with those acquainted with it, is the *Cobaea scandens*. It is a rapid climber, with many shoots having fair-sized leaves, and bearing handsome large flowers of a dark purple color. There is a variety with variegated leaves which is much admired. The *Cobaea* flowers from June to October. It is a good vine to recommend to customers.

When planting bulbs, set them deep, say four inches under ground for narcissus and similar sized bulbs. But those of large size, such as many of the lilies are, may be set six inches deep to advantage.

A foreign journal mentions the use of *Pyrus japonica* for dwarfing pears. It may be this stock would be an advantage where the planting was to be in lighter soil than the quince likes; in other respects the quince is quite satisfactory.

Rhododendron occidentalis, of California, is claimed to be a distinct and valuable species, but trials of it in Philadelphia have resulted in its being Winter-killed. The flowers are white with yellow throat, appearing there in July and August.

JOSEPH MEEHAN.

Carnation Elberon, grown by J. H. A. Hutchinson, Oxford, Pa.

ties in white, porcelain pink, and yellow are expected will shortly be ready for distribution. It is possible we may see perpetual blooming ramblers as free as the hybrid tea or monthly rose. Then, indeed, we shall have realized our highest expectations. The American raised hybrids give great satisfaction in Europe and the continent and are marvels of beauty, when in bloom, which almost baffles description. There are great possibilities by improving existing varieties and we hope this will continue until the highest degree of perfection is attained in all that constitutes a perfect, hardy climbing or trailing rose in various colors and perpetual flowering kinds.

Horticultural Notes.

In a letter from Delaware, the writer of it says he has found English ivy growing in a wood there, far removed from any dwellings, quite a clump of it. If a cutting was not dropped there at some time, it may be birds dropped seeds there. Along the Wissahickon, Philadelphia, Japanese honeysuckle is quite common, from trimmings that have found their way there at times.

Oregon crab apple is *Pyrus rivularis*. Besides its pretty white flowers in Spring, it bears "apples" of the size of marbles, which are quite ornamental when ripe. Several Oregon trees and shrubs are hardy in Pennsylvania.

Le Conte pear is of the Chinese type. It is valued in the Southern States where ordinary pears will not succeed. Its foliage is displayed earlier than that of any other sort in Spring, and in Autumn it changes to an almost crimson color.

Carnation Elbon.

Editor Florists' Exchange:

I have been reading your paper with much interest, and have noticed the claims made for a great many carnations. I will tell you about a variety I have been growing for four years, and it is getting better every year. *Elbon* is its name; and the color is a bright red, size medium, and the most fragrant of any red I have ever seen, having as strong a clove scent as that of *Flora Hill*. I have 460 plants in two short beds. Since October 1 to February 1, I have shipped 1,825 blooms, besides retailing nearly one-third as many; and in February, 1905, I counted the buds a few days ago, and there were over 2,600, besides spikes without number. Some of the plants have as many as 26 and 30 shoots on them. It is a strong, healthy plant, and makes three times as much money for me as any red I grow, and I have several of them. The photograph was taken before cutting. I will plant about 5,000 for our Fall trade. It is just as good a bloomer in the field as in the house, and these I have been growing in the house cost me several dollars before I planted them in. A cutting one inch long will make a strong, large plant by Fall, so I take all I can get, knowing they are all right. If Winsor beats it I will be glad, as I have purchased some of the former.

Another thing I noticed is the discussion on pollen. Two years ago I mixed the pollen of three carnations, and have one of the finest yellows, with a small pink stripe, I have ever seen. It beats the *Dorothy Whitney* very much. It bloomed all last Winter, but this season it gave a large lot of fine flowers in October and November, and then went off. It is now full of buds and will have large flowers with long, stiff stems. I think the reason it did not do so well this Winter is because, having only a few plants last Winter I cut them all up to get cuttings, instead of taking only the side shoots, which give the most flowers with all other varieties.

J. H. A. HUTCHINSON.
Oxford, Pa.

FOR THE RETAILER

Florists' Accessories.

Florists' accessories, or to use a more general term, florists' supplies, is a branch of the business that has grown to proportions almost equalling those of the florists' trade itself; so that a visit to one of our large supply houses is more like a visit to a department store, or a museum, so many and varied are the articles displayed. Every trade and almost every manufacturer is called upon to supply the wants of the retail florist. A few years ago a florists' supply house was only called upon to supply wire frames, and a few other things; now it must carry almost everything known to manufacture—iron and steel, dry goods, glassware and a host of others.

The florists' supply man has to be something more than a mere tradesman or mechanic; he has to be a genius and an inventor. His inventive powers are called into play every day, for the flower business constantly demands new ideas and new designs, which tax his ingenuity to the utmost; and it is really remarkable the variety of things he is called upon to create.

Plant Stands.

Many and varied are the devices used by the retail florist for the purpose of displaying plants, which have

It can also be raised or lowered to any desired height.

It is often desirable to suspend pots in various positions in decorative work. The angle pot holder is very good for this purpose and is a great help in window decoration. A series of these pot holders arranged on rods do away with clumsy stands that have to be hidden.

There is also a pot hook, a very simple device, that fits over the edge of a standard pot, enabling it to be suspended in any position.

Another device, which is certainly a time-saver, and almost indispensable in an up-to-date flower store, is the bouquet holder. This does away entirely with the "helper," and the artist can finish the bouquet without assistance. The best one I have seen was that invented by an assistant in a New York flower store, where all the ribbons are tied by one man. Each bouquet as it is finished is handed to him for that purpose. The holder stands on the floor and can be adjusted to any height to suit the operator. The device for holding the bouquet is quite original and holds the flowers in such a manner that the handle and other portion of the bouquet are left entirely free, so that the ribbons can be easily adjusted. A movable cover is part of the arrangement; this has a sharp end, and the bolt of ribbon to be used is passed over it so that no ribbon can fall on the wet floor; and it is right at hand for the operator. There is also a small stand attached, containing ribbon, shears, tin foil, pins, etc. One has

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 23rd St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Avenue. My facilities for delivering flowers for any and all occasions are unexcelled. I can give prompt service to steamer and theatre trade. Telegraphic orders solicited.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Washington, D. C.

GUDE BROS., 1214 F Street, N. W. We excel in high-class flowers and design work of every description; quick service, reasonable charges and liberal treatment have placed us on top. Try us.

Witthold's Combination Vase and Plant Stand

to be raised or lowered, tilted this way or that, to show them to the best advantage, and in many cases they have to be suspended. One of the very best stands I have seen comes from the George Witthold Company, Chicago. This device is very light, made of galvanized iron, and is a combination of plant stand and vase, which can be used for either purpose. The main portion of the stand is formed like an elongated cone, which may be filled with water and used for flowers, or inverted and used as a plant stand. At the small end is attached a smaller and shorter hollow cone, and at the junction of the two several steel rings have been fastened that are used for the reception of pot plants. This arrangement has proved especially suitable for window and house decorations, and will no doubt be a great help to florists. Another advantage of this stand is its compactness, the cones telescope one into the other, and take up very little room, which for transportation facilities will prove a great benefit, where space has to be considered.

Another plant stand of recent introduction will prove valuable on this account; a dozen or two can be stowed away under the seat of a wagon without effort. The pedestal consists of an iron pipe; at the base is a triangular steel plate, perforated at each angle; three pieces of steel about twelve inches in length form the legs, and these are so constructed that they slide in and out, and when not in use fit parallel to the standard.

The pot holder is also an innovation. It is made of the best spring steel, will hold firmly a pot from eight to twelve inches, and can be adjusted to any angle.

only to see this clever device in operation to appreciate its value to the busy florist.

Another more recent invention which has, I believe, been patented by Reed & Keller, New York, is used for fastening Cycas revoluta leaves together. This device is so simple that the wonder is, it had not been introduced long ago. It is made of one piece of wire. Two or more leaves may be securely fastened together without injury to the leaves. If ribbon is to be used, it is passed under the wires and the bow tied in such a manner that it does not crush or mar the pinnae, making a perfect arrangement.

The introduction of the wired stick and toothpick has been a great help to retailers, and no florist should be without them. From experience I should say they save fifty per cent. in time, and there is very little waste, as was usually the case when these articles were used separately.

The florists' supply man has done much to advance the business, and there is doubtless still room for many improvements that will save us both time and worry.

D. RAYBUN.

Carnation Night at Cornell University.

The evening of February 25 was dedicated to carnations at the Lazy Club, which is the official organization of the Horticultural Department. At the solicitation of W. H. Griffiths, gardener of the department, a number of varieties of carnations were on exhibition. The merits of these were studied and compared by students and visitors. The extraordinary improvement which has taken

place in the commercial qualities of this flower in recent years was noted and commented upon.

Collections of blooms were received from John E. Haines, Bethlehem, Pa., who forwarded an exceedingly instructive and interesting group, largely of his own origination.

The F. R. Pierson Co., Tarrytown, N. Y., showed Winsor, Melody, Helen M. Gould, White Enchantress, Rose-Pink Enchantress and Red Lawson. The interesting feature about this exhibit is that Helen Gould, White Enchantress and Rose-Pink Enchantress are all sports from the original Enchantress. The Pierson Company regard these as among the leading commercial varieties which they cultivate.

Peter Fisher, Ellis, Mass., showed a fine vase of Beacon.

The Cottage Gardens Co., Queens, L. I., presented the display with a collection of some fifteen seedlings showing a great variety of color, form and illustrating in a general way the possibilities of careful breeding when applied to the carnation. Many of the seedlings were of high merit.

The Chicago Carnation Co., Joliet, Ill., provided a striking vase of that handsome carnation, Aristocrat. This variety illustrated in splendid fashion the best points of a good commercial flower. For itself it attracted much attention from visitors.

The United States Cut Flower Company, Elmira, N. Y., showed a general collection, prominent among which were Enchantress, Red and White Lawson as well as the original Mrs. Lawson, Lady Bountiful Fred Burki, Vesper and Mrs. M. R. Paten.

It is needless to say that the exhibit provided both instruction and inspiration to the large group of students who had the privilege of examining and studying it.

AMERICAN ROSE SOCIETY

Report of Annual Meeting and Exhibition
held at Washington, March 13-14, 1907

The weather was a welcome change from the slush and snow in New York to the balmy, genial atmosphere of the Capitol City when on Wednesday, the opening day of exhibition and convention of the American Rose Society, one could comfortably dispense with an overcoat.

The exhibition was held in the basement of Washington Light Infantry Hall, where space was abundant, but light almost entirely supplied by electricity. It was the best accommodation available, but in marked contrast to the elegantly lighted Horticultural Hall, Boston, last year. President Bisset, Superintendent Freeman and his co-workers did everything in their power to facilitate staging. The display of roses was not equal to that at Boston, owing to the unfavorable weather, which has caused great scarcity of blooms everywhere. There was only one entry in several classes, among them that for fifty American Beauty. The flowers shown by George Burton, Philadelphia, wins for him Lord & Burnham Cup permanently, he having captured it twice. In most of the classes the judges had little difficulty in deciding, except perhaps for Mr. Cook's fifty dollar cup for hundred Richmond. This was the closest competition in the show. The cup was won by W. H. Elliott, Brighton, Mass., closely followed by Wm. Simpson, of Clifton, N. J. Both lots excellently grown.

Several novelties were shown which attracted considerable attention. E. G. Hill Company won the \$25 cup donated by Harry O. May for exhibition of an American seedling not yet introduced, with new red rose Rhea Reid. Myers & Samtman, Philadelphia, staged a seedling rose, a cross between American Beauty and La France, attractive deep pink color, fragrant, with beautiful foliage, which was much admired. William Clark, Washington, also had a seedling, color resembling that of Duchess of Albany. The cross is Liberty with Chatenay. F. H. Kramer, Washington, staged Queen Beatrice. A special committee of judges composed of W. H. Elliott, Peter Crowe and Patrick O'Mara scored these novelties, thus: F. H. Kramer, 83 points; Myers & Samtman, 81; Wm. Clark, 70.

The exhibition opened at 6:30 by Secretary of Agriculture Wilson, who was introduced by President Bisset, of the local club, who lauded the Secretary's good work for agriculture and horticulture.

Mr. Wilson welcomed the rosarians to Washington, and commended them on the progress made in their art. He said the aesthetic taste of Congressmen had developed greatly within ten years as evidenced by many parks and squares in Washington. The Department was not quite so much given to beauty as to mercenary considerations; it is expected to show the dollar at the end of every one of its undertakings. He spoke of the scientific side of the department work and its worth to the nation. Experiments successfully carried out and new economic plants introduced worth \$300,000,000 actually, but in a report to Congress Secretary Wilson had made the amount one-fourth of that. The question is not that the truth should be told Congressmen, but not more of the truth than they can comprehend and grasp. He spoke also of poets and flowers, the hospitality of Washington people and again bade his hearers welcome. The remarks were loudly applauded. The speaker was accompanied on the platform by Dr. B. T. Galloway, William R. Smith, Peter Bisset and the officers of the American Rose Society.

Opening Session.

The first session of the Society was called at 8:30 in the evening. President Simpson presiding. Secretary Hammond read the salient points of the printed annual report, urging the value of life membership to the Society.

President Simpson then delivered his address [Printed in full in this issue], followed by Mr. Hammond's report, as follows:

Secretary Hammond's Report.

Reviewing the work of the American Rose Society since the last annual meeting, held at Boston, March 27, 28 and 29, 1906, the secretary feels as if there was much interest scattered far and wide in this Society. Our present membership extends from Bellingham in Northwestern Washington to Schlesian, Germany. We have lost in all five life members by death; E. G. Asmus, E. M. Wood, H. Dale, George Fancourt and J. L. Dillon; the last two within the past year, and each of these men was an active rose grower. Two new life members were added to our list, S. S. Penneck and Robert Simpson, making 43. The annual membership,

who have paid up their dues for this year number 91, divided as 85 actual and six associate members. This division of associate members seems as if it may bring into touch with this Society an extended number of people interested in local societies. Dr. Spencer Sulinger, President of the Rosarians, of Bellingham, Washington, the Rev. J. R. Lawrence, of Rynham, Mass., are both clergymen, alike interested in creating a their locality a taste for civic improvement; from Germany comes Dr. G. Molves, with the hand of fellowship to those who in America have to do with roses. With this line of members, what can the Society do to interest and attach more of the same sort? One thing is a full and comprehensive report of the proceedings.

As a new man at this work I have found there is a lot of detail to keep in touch with our membership and to get a revenue sufficient to cover cost of the necessary postage, printing and clerical work to systemati-

Robert Simpson
Re-elected President of the American Rose Society

cally carry it on. It calls for an actual annual expenditure of more than the Society can well afford, unless there is some financial support more than the present limited number of annual dues.

The American Rose Society can bring itself before the general public in no more effective manner than by a liberal offering of its medals, gold, silver or bronze, as prizes to be awarded for some tangible work, by the various local societies. To illustrate, in 1901 and 1903 this Society gave as a prize to the Annandale Rose Show a silver medal. I am assured that this medal was very much appreciated, and an application was made by Miss Carolina Cruger, the secretary, at Barrytown, N. Y., for this consideration again. The executive committee then directed that a medal should be offered. Now if this is a matter of interest to one local society it would be so to many, if we can extend our usefulness in this line. The gentlemen who were active in the formation of this Society certainly did a lot of good work to give the Society a start. Our die for these medals is in storage at the Philadelphia mint, and the design is a very pretty thing.

The past year, by the advice and consent of the executive committee, I had made a design for this Society and placed thereon these words "A rose for every home. A bush for every garden" and this device makes all our stationery distinctive.

This year we printed one thousand schedules in pamphlet form and mailed one to each member and the balance were sent out as advertisements, so to speak, for the Rose Society. A few hundred were mailed to growers all about the country. The annual report was also similarly treated.

Last September I was in Chicago for several days

and attended a meeting of the Cook County Horticultural Society, and was introduced with genuine cordiality as secretary of the American Rose Society, upon which occasion the opportunity presented itself, and I put before that gathering the aims and doings of the American Rose Society. We have as one of our judges in attendance at this exhibition Mr. Hauswirth, who has come to our Society without cost of hope or reward in common with our friends. William F. Kasting, of Buffalo, and Robert Craig, the first president of the Rose Society.

The Chicago Florists' Club sends to the American Rose Society an invitation to fix the place of its next meeting in that city. Your executive committee has held six formal meetings during the past twelve months. Members coming on to New York from Washington, Boston, Hillside, Pa., South Orange, Clifton, Summit, N. J., Tarrytown and Fishkill-on-the-Hudson, N. Y. The interest shown by the committee was echoed back by the rose growers, who are here to-day in force, but to our knowledge, if the sunlight had been up to normal the past two months, this exhibition, large as it is, fine as it is, would have been more than double.

There are two questions on our programme, suggested by President Simpson, that are of imperative interest and which will be before the meeting to-morrow, and these questions, friends, are topics which your secretary, for the future prosperity of the American Rose Society, commends to your individual attention.

The report of Treasurer Harry O. May showed a balance in favor of the Society of \$324.94.

Theodore Wirth then read his paper [See page 360], receiving a vote of thanks. Patrick O'Mara characterized the essay as eminently truthful and practical. The essayist said the Richmond Rose was the best in America, or ever produced in this country.

Chicago in 1908.

Chicago was selected as the next meeting place, endorsed by Messrs. Breitmeyer, Hill, Hauswirth and others. A grand show is expected next year and a large addition to the membership from the West.

The members were invited to join the S. A. F. O. H. Friday at a hearing before the Interstate Commerce Commission on the subject of excessive express rates.

Peter Bisset announced that the delegates would be received by President Roosevelt at 2:30 p. m. Thursday.

Election of Officers.

William Simpson was re-elected president; Phil. Breitmeyer, Chicago, was elected vice-president; Benjamin Hammond and Harry O. May also re-elected, secretary and treasurer respectively. On the executive board, E. G. Hill and P. Welch were elected for three years, August Poehlmann, Chicago, for one year.

The meeting adjourned at 10:30 p. m. till Thursday at three o'clock.

At the Thursday afternoon session the papers prepared by M. H. Walsh and E. G. Hill were read, and questions on how to increase membership, and the usefulness of the Society were discussed. The essays appear in full in this issue.

On Thursday evening a banquet was tendered to the visiting delegates by the Washington Florists' Club, at the Arlington Hotel.

The Awards.

DIVISION A, 25 BLOOMS.

Bride—First, Stephen Mortensen, Southampton, Pa.; second, F. H. Kramer, Washington.
Bridesmaid—First, L. B. Coddington, Murray Hill, N. J.; second, G. E. Campbell, Flourtown, Pa.
Mrs. Pierpont Morgan—First, John N. May, Summit, N. J.
Golden Gate—First, F. H. Kramer.
Chatenay—First, Robt. Simpson, Clifton, N. J.
Oliver Ames—First, John N. May.
Ivory—First, F. H. Kramer.
Liberty—First, E. Towill, Roslyn, Pa.
Killarney—First, Wm. H. Elliott.
Richmond—First, S. Mortensen; second, G. E. Campbell.
Any other disseminated variety—First, E. Towill, with variety Joseph Hill.

DIVISION B, 12 BLOOMS.

Bride—Second, F. H. Kramer; no firsts.
Bridesmaid—Second, F. H. Kramer.
Golden Gate—Second, F. H. Kramer.
Ivory—Second, F. H. Kramer.
Liberty—First, E. Towill.
Richmond—Second, F. H. Kramer.
Any other—First, Washington Florists' Company, with Cardinal.

Special Prizes for Cut Blooms.

The Lord & Burnham trophy (the executive committee's prize), valued at \$250, offered for 50 blooms American Beauty roses, was won by George Burton, Chestnut Hill, Pa., only exhibitor, whose property it now becomes.

The Dorrance challenge cup for best display of cut roses, all varieties, was won by Robert Simpson.

The Cook cup for 100 blooms of Richmond was captured by Wm. H. Elliott, Brighton, Mass.

The Taylor cup for 50 blooms Wellesley was also captured by Wm. H. Elliott.

The Traendly & Schenek cup, offered for 50 blooms of Mme. Abel Chatenay, was won by Robert Simpson.

S. Towill was awarded the Michell silver cup for 50 blooms of Richmond.

The Dungee & Conard prize of \$25 in gold for 50 blooms of Killarney was won by Robert Simpson.

The Wm. H. Elliott prize for 50 blooms of Liberty was awarded to A. Farenwald, Roslyn, Pa.

The silver cup offered by the Pennock-Mechan Company for 50 Bridesmaid was won by L. B. Coddington.

The E. G. Hill Company's prize of \$25 in gold for 50 Richmond, was won by Robert Simpson.

The Harry O. May cup for exhibition of American seedling not yet introduced, was won by the E. G. Hill Company with Rhea Reid.

The Coddington prize for 25 Brides was captured by S. Mortensen.

Mrs. S. C. Briggs' prize for 6 blooms of any rose never before exhibited, was won by W. S. Clark, Washington.

The Hammond prize was awarded to F. H. Kramer. The Newbold cup was captured by Robert Simpson.

F. H. Kramer captured the W. Atlee Burpee silver cup, offered for 50 blooms Golden Gate.

The Nee cup was won by Robert Simpson.

Washington Club Prizes.

S. C. Briggs, Washington, was first for 6 distinct named Indian azaleas, first for pair of palms and first for 6 cereus.

F. H. Kramer, Washington, was first for display of hyacinths, three pans, ten bulbs of one variety in each pan, and single pan with twelve bulbs of one variety.

S. C. Briggs was first for 6 pots of lily of the valley. D. C. Dudley Parkersburg, Va., first for display of *Hydrangea hortensis*, three varieties.

L. M. Baxter, took first prize for fern that had been growing in a dwelling at least four months previous to exhibition.

For the best hybrid geraniums, Mrs. Cadwallar was first, and S. C. Briggs second.

For vase of 100 carnations of one variety, H. Weber & Sons, Oakland, Md., was first with Mabelle; F. R. Pierson second; and H. Weber & Sons third.

H. Kleinheinz, gardener to P. A. Widener, Philadelphia, was first for twenty-five blooms of any named dark pink variety of carnations with Lawson; H. Weber & Sons second with Martha Washington; and S. C. Briggs third with Lawson.

H. Kleinheinz was also first in the class of twenty-five blooms of any named crimson variety of carnations with Harlowarden; Washington Florist Company second with same variety.

For twenty-five blooms of carnations of a lighter pink than Mrs. Lawson, H. Weber & Sons were first with Mabelle; S. C. Briggs second with White Enchantress; F. R. Pierson Company third with Winsor.

For twenty-five blooms of any named scarlet variety of carnations, H. Kleinheinz was first with Robert Craig; Guttman & Weber second with Victory.

H. Weber & Sons were first with My Maryland for twenty-five blooms of any named white variety; H. Kleinheinz second with Lieut. Peary.

For twenty-five blooms of white variegated, Kleinheinz was first with Mrs. M. A. Patten; H. Weber & Sons second with Jessica.

For seedling, 6 or more blooms shown for first time, H. Weber & Sons were first with Seedling number 5; W. A. Manda, South Orange, N. J., second with Seedling number 1.

S. C. Briggs took first prize for display of 48 cut blooms of pansies, not less than 24 varieties.

T. Dieterich, with the variety Farghar, took first prize for display of 100 violets.

For a bunch of 100 blooms Princess of Wales violets, David Bisset, Garret Park, Md., was first; T. Dieterich second.

For display of 100 blooms of any other single violet, T. Dieterich was awarded first prize.

Lager & Hurrell of Summit, N. J., took first prize for display of orchids.

A first-class certificate of merit was awarded to W. A. Manda for a collection of new and rare plants; a certificate was also awarded the Department of Agriculture for display of plants.

A. Gude & Bro. of Washington, won the Ernest prize of \$25 for a group of decorative plants.

Kroeschell Brothers' Company, Chicago, had a model of their boiler. Schmit, Washington, showed vases and

aquaria glasses. An exhibit of smilax (*asparagoides myrtifolia*) was much admired for its gracefulness. F. R. Pierson Company had a large lot of Winsor that proved an attraction, as did the carnation display of Weber & Sons, and Lager & Hurrell's group of orchids.

H. C. Summers, exhibited the new Marguerite, Charles Summers.

M. H. Walsh, Woods Hole, Mass., had an excellent showing of Wichuraiana Hybrid roses. Cook staged an attractive group of palms, ferns, lilies, azaleas, etc. Dudley & Son, Parkersburg, Va., had a fine group of flowering plants, among them being lilies, hydrangeas, roses, etc.

The judges for the local club were: C. L. Seybold, Geo. Watson and Wm. Weber.

For the Society, Wm. P. Craig, Phil. Hauswirth and Wm. F. Kasting, F. H. Traendly acting as clerk.

President Simpson's Address.

We meet to-day in the capital city of our country as guests of the Washington Florists' Club. Many of us are growers, and I am sure that all of us are lovers of the rose. Some of you have come to Washington to place on exhibition your beautiful flowers, some of you have come chiefly, it may be, to admire the wonderful productions of others, but a goodly number of you, I trust, are here to discuss with us problems in rose growing and problems that confront our Rose Society. In any event I am sure that no one will say that mercenary motives have drawn you, some from the East, some from the West, some from the South, and others from the North, at considerable expense of time and money at this busy season of the year to attend this meeting; it is to gratify your love for the beautiful in nature, and to signify your willingness to do your part towards making this earth more beautiful and attractive that you are here to-day. I trust that our meeting may be helpful and encouraging to every grower of the rose, that we all as a result may have higher ideals, and go home more than ever in love with our business and calling and that this shall prove to be an epoch-making meeting of the Rose Society.

At the 1906 meeting in Boston the matter of selecting the place in which to hold the exhibition and annual meeting of 1907 was left in the hands of the executive committee, after a discussion, however, which showed plainly that the sentiment of the meeting was in favor of going to some city in the West, should the way be open for us, and should such a course seem to be for the best interests of the Society. The executive committee left the matter open until July, thus giving every section of the country an equal chance to compete for the privilege of having the Rose Exhibition. The Society did not receive any invitation from the West; but it did have a very hearty and pressing invitation from the Washington Florists' Club, which sent their president to New York to back up their formal written invitation.

The president, Mr. Bisset, assured us that Washington and its people would see that the local detail work of the exhibition was taken care of properly and that an exhibition there would be a success financially. Whether they have kept their promise you will be able to judge for yourselves.

There is a great amount of detail work to be done in arranging for an exhibition of this kind, particularly when it is not held in connection with some regularly organized horticultural society where men have been trained for the work, and where all the facilities for the holding of exhibitions are at hand; more perhaps than many of you realize, and I wish at this time to express my appreciation of the hearty enthusiasm with which the officers and local members of the executive committee have entered into this work, and have done willingly and gladly whatever was in their power to do. Several meetings have been held in the city of New York, and some of the officers have not failed to attend a single meeting. If the exhibition of 1907 shall prove to be equal in point of interest and enthusiasm to that of 1906, much of the credit is due to the push and energy and painstaking work of our secretary, and the enthusiasm of our young treasurer. The position of secretary of the American Rose Society is no sinecure, I assure you, if the incumbent tries to do, faithfully, the work that he finds to do, and just in proportion to the quality of the man in office will depend how much of the work shall be done, or how much shall be left undone. For good work the salary is totally inadequate, but in the present state of our treasury I dare not ask for an increase. The work of our present secretary during the past nine months will meet with your entire approval I am sure.

As the program for this meeting indicates, we have arranged for the reading of papers on inter-

esting subjects by men eminently qualified to talk on the subjects treated and I trust we may give to them our undivided attention during the delivery of the same. In the discussions that are to follow, we may be able to give out and gather in a vast store of useful information. The Society is to be congratulated on the personnel of its essayists.

It has been arranged that gentlemen of large experience and observation shall start a discussion on matters of vital interest to the Society; that of increased membership, and new work that may be done by the Society as an organization for its members and the public. I do not wish to anticipate or forestall what these gentlemen may advise, as I hope for a very full discussion when in the order of business these subjects are taken up; however, in this connection I may be permitted perhaps to make a few observations, and possibly offer a few suggestions.

Much good work might be done by the Society if we had at command funds with which to do the work; much work should be done that has as yet not even been attempted. For instance, a committee of half a dozen men representing different sections of the country and competent to deal with the peculiar climate and other conditions of the particular section, might, in conjunction with the secretary, prepare a list of roses with general cultural directions suitable to the conditions prevailing in those various sections. That would be worth much more to rose lovers than the annual membership fee. This committee could also advise as to the best roses to purchase, Dutch, French, English, home grown budded, or own root plants, department store stock, or stock direct from the nursery. There is a vast amount of ignorance among the general public along these lines, and their want of knowledge is frequently taken advantage of by unscrupulous dealers.

What the Society can offer as an inducement to membership will no doubt be a controlling factor in seeking to enlarge that membership; on the other hand, larger resources as a result of larger membership will permit the Society to undertake greater things.

If the American Rose Society should identify itself with the various horticultural societies of the country to the extent of offering its silver medal once a year for collections of cut roses, roses in pots, etc., to be judged according to the scale of the Rose Society, it would add much interest to the exhibitions and our Society would gather strength and prestige thereby.

If the financial resources of the Society were adequate I would favor the holding of an exhibition in June, as well as March, so that the rose loving public could see and become acquainted with the beautiful outdoor roses that we cannot place before them in March, such as Fran Carl Drushki, Baroness Rothschild, Mrs. John Laing, etc. The June exhibition would be more popular, more interesting and do more to educate the masses in rose culture than it is possible to do with an exhibition of indoor roses in March.

If the catalogue men of the country (we have some of the gentlemen here to-day) could be induced to give a page of their catalogue each year to a statement of the aims and purposes of the Rose Society and advocate membership in it to their customers, great possibilities would immediately loom up before the Society. It is reasonable to suppose that our membership could be multiplied several times within a year if all present would resolve to make a point to interest their friends and business acquaintances by correspondence, by personal appeal, or in any other legitimate way that presented itself.

The Society offers gold and silver medals at its exhibitions for new varieties, the object in offering these being to encourage the production of novelties of sterling merit, but in ruling that a novelty must score at least 95 points to win the gold medal we practically make it impossible to win it at all. Very few judges would be willing to say that a flower was perfect in form, in color, in fragrance or distinctiveness, or in fact in any one particular, yet the variety with as many good points as Liberty, or Killarney, or Richmond, should have a chance to win the gold medal of the Society. We should of course maintain a high standard in the giving of such awards, but we should at the same time avoid exacting impossible conditions. I ask you to consider whether or not the rule governing the judging of novelties needs to be revised.

The John Young Co. Greenhouse.

In last week's number, page 320, the dropping of a figure made the length of the rose house of the John Young Company, Bedford Station, N. Y., read 70, instead of 701 feet, the correct length.

A Few Remarks About Outdoor Rose Culture.

Paper Prepared by Theodore Wirth, Superintendent of Parks, Minneapolis, Minn., and read before the American Rose Society, at the Washington Meeting, March 14, 1907.

I consider it somewhat presumptuous on my part to appear before you expert rose growers, and to think that I might be able to say anything that may be new and possibly instructive to you; and I confess that, when I first received our president's request for a paper, I was readily inclined to decline. My eyes, however, took in the letterhead on which Mr. Simpson's invitation was written, and up in the left corner it read—"A Rose for every Home, A Bush for every Garden."

Gentlemen, this being the motto of our society, I am with you heart and soul, and I appear before you as a strong advocate of using the society's influence and working organism to advance outdoor rose culture in general and by every available means, and not as a rose grower of special experience and knowledge by whose suggestions and explanations you might profit.

Most of you, undoubtedly, are growing roses under glass, and while you take due interest in outdoor culture and probably sell plants in the planting season and cut flowers during the month of roses, still your main business interests are centered in your indoor cultures, in your winter roses which bring you satisfactory pecuniary returns, reward you for your labor, investment, energy and the patient watchful care bestowed upon your plants.

The exhibits in the hall show us your skill, your wonderful achievements in hybridization and culture, and your love for your noble profession; and with you we are proud of your achievements, and with you we enjoy our sojourn among those creations of yours, the roses of mid-Winter, while all plant life outside is dead.

But as I look over this splendid display, my thoughts wander ahead, my vision leaves the narrow enclosure of this room, the hall and your hundreds of acres of greenhouses, and my longing lands me in a fairyland, in God's own Paradise, the home of our Queen of Flowers, the outdoor rose garden.

Imaginary Trip Through a Rose Garden.

I want you to accompany me on this most pleasurable of all pleasure trips, and I want to start out early.

It is June, the month of roses, and truly the month in which I wish we could hold our convention. The sun is rising on a clear sky, and the dew is on flower, leaf, frond and blade. The atmosphere is refreshing and the birds are jubilant in their renewed joy of life. We enter our garden of well-cultivated roses, and God! what a glorious sight. How beautiful are the plants in their perfection of foliage, their abundance of sweet-scented, strong, well-built flowers; what a richness and variety of colors and shades, and what a wholesome and refreshing fragrance is in the clear morning air. Reverently we walk among those beds of indescribable beauty, under those arches of drooping bowers of flowers, all glittering and sparkling with the new-born sunshine, reflected in millions of diamond dew drops.

We here meet the rose at home in her very best form and beauty, in her modest garb and surroundings; and, gentlemen, you will all agree with me that your very best creations of forced culture, be they displayed in the costliest, most luxuriously furnished apartment of the millionaire's mansion, surrounded by priceless art treasures and draperies, are outshone in this garden, and that the wealth with which your coveted products are surrounded is an insignificant factor compared with this garden's draperies and attractive backgrounds of simple but majestic trees, shrubs and vines.

The effect of the displays of your creations and products artistically and tastefully arranged with all known arts of decoration is gorgeous, pleasing, fascinating; but the effect of our rose garden in all its simplicity is unsurprisingly sublime.

I suppose I have made myself clear by this time that I am an enthusiast on outdoor rose culture, without any attempt to belittle your efforts and achievements as indoor growers and decorators. Indoor rose culture has many advantages over outdoor culture, as it has within its reach an unlimited list of varieties and better yet a practically unobstructed field of hybridization. Yet the list of varieties of all classes of roses available for outdoor culture is so large as to satisfy practically all reasonable demands; in fact, it is nearly as much a matter of cleaning out and discarding many that are not worthy of culture because they are superseded by so many better, as it is to get new varieties.

Hybrid Teas for Outdoors.

Thanks to the earnest and successful efforts of the modern hybridizers of both America and Europe, the list of real everblooming roses adapted and hardy for outdoor culture is increasing from year to year. I refer to the class of hybrid teas.

I notice in the last catalogue of Alex. Dickson & Sons, Newtownards, Ireland, that out of a list of 82 pedigree seedling roses, 43 are hybrid teas, 21 hybrid

perpetuals, 9 teas and 9 singles. This is but the cream of a numberless list of new seedlings, but many of them, undoubtedly, will prove available for outdoor culture. The hybrid teas are now in comparatively the same epoch of development as were the hybrid perpetuals some 30 years ago, when the firm of Eugene Verdier of Paris alone offered between 40 and 50 new hybrids of that class every year from 1872-1880, and the number introduced since then is legion.

The hybrid tea rose will win for itself recognition and preference as an outdoor rose the more its bardi-ness becomes known. It is in reality this class which is entitled to the name "perpetual bloomers" in the proper sense of the word. I think that hybrid-remontant is the proper name for what we call now hybrid perpetual; for the word "remontant" really means what they do—bloom a second time (once more), but not continually during the season, as do the hybrid teas, teas and polyanthas.

Varieties for Outdoor Work.

Let us see what we have to-day among the old stand-bys and new-comers well adapted for outdoor culture. I do not claim for all those I mention the title "the best," for therein we differ according to taste, experience and observation. I simply mention them as varieties with which I have been successful and which seem to me to merit a place in every rose garden the climatic condition of which is congenial to their growth. Every color and shade is represented.

In white and shades we have the following hybrid remontants, Frau Karl Druschki, Mabel Morrison, Marchioness of Londonderry, Margaret Dickson, Maureen, Perfection des Blanches, Coquette des Blancs and Coquette des Alpes.

HYBRID TEAS—Augustine Guinoisseau, Helene Guillot, Kaiserin Augusta Victoria, Mildred Grant, Marquise Jeanne de la Chataigneraye, Souvenir de Mme. Eugenie Verdier, Maman Cochet.

In red and its many shades we have the following—HYBRID REMONTANTS: Etienne Levet, General Jacqueminot, Gloire de Margottin, Horace Vernet, Jules Margottin, Jubilee, Marie Baumann, Oscar Cordel, Prosper Laugier, Reynolds Hole, Robert Duncan, Sultan of Zanzibar.

HYBRID TEAS: Balduin, Dean Hole, Etoile de France, Ferdinand Jamin, Gruss an Teplitz, Liberty, Rev. David R. Williamson, Richmond, Papa Gontier.

In rose or pink we find—HYBRID REMONTANTS: American Beauty, Anna de Diesbach, Baroness Rothschild, Baronne Prevost, Clio, Caroline de Sansal, Comtesse Cecile de Chabrilant, Countess of Roseberry, Duchesse de Valombrosa, Dupuy Jamin, Eugenie Verdier, Heinrich Schultheis, Helen Keller, La Reine, Mme. Gabriel Luizer, Magna Charta, Marchioness of Downshire, Marchioness of Dufferin, Marguerite de Ste. Amande, Marquise de Castellane, Mrs. John Laing, Mrs. R. J. Sherman Crawford, Oakmont, Paul Neyron, Pride of Waltham, Rev. J. D. McCann, Susanne Marie Rodocanachi, Victor Verdier.

HYBRID TEAS: Captain Christy, Mme. Caroline Testout, Dr. J. Campbell Hall, Killarney, La France, Mme. Abel Chatenay, Maman Cochet, Mrs. W. J. Grant, Reine Marie Henriette, and Kate Moulton.

In a class all by themselves we have the POLYANTHA roses, which, in my opinion, are not known and grown enough. I should like to call them the children's roses; they are so easily grown and are the real bedding roses. There are as many as 30 to 40 varieties of easy culture, namely:

RED—La Proserpine, Leonie Lamesch, Liliput, Mme. Norbert Levasseur, (Baby Rambler), Ma Petite Andre, Pink Soupert, Perles des Ronges.

ROSE or PINK—Gloire des Polyantha, Ma Fillette, Mlle. Cecile Brunner, Mignonette, Petit Constant, Petite Madeleine, Philippine Lambert, Primula.

WHITE—Annie de Montraveil, Bellina Guillot, Clorhilde Soupert, Flocon de Neige, Josephine Burland, Katherine Zeimer, Marie Favier, Marie Pavie, Miniature, Mosella, Paquerette, Princesse Marie Adelaide de Luxembourg, Schneewittchen, Snowball.

YELLOW—Etoile d'Or, Etoile de Mai, Emilie Potin, Eugenie Lamesch, Filius Strassheim, Golden Fairy, Le Bourgnignon, Perle d'Or, Princess Elizabeth Lancelotti.

THE RUGOSA FAMILY is also becoming more prominent through recent introductions and we have now the following varieties:

RED—Atropurpurea, Mme. Chas. Worth, Mrs. Anthony Waterer, Rugosa rubra, Souv. de Pierre Lepedrioux.

ROSE—Belle Poitevine, Calocarpa, Conrad Ferdinand Meyer, Delicata, Rose Apples.

WHITE—Blanc double de Coubert, Fimbriata, Mme. Georges Bruant, Rugosa alba.

The following MOSS ROSES deserve a place in the garden. Red—Colina, Crimson Globe; rose—Crested, Mme. Moreau; white—Blanche Moreau, Comtesse de Mirinai, Perpetual White, White Bath.

In way of TRAILERS and CLIMBERS we have also a large variety, representing: hybrid remontants, hybrid teas, teas, noisettes, Bourbons, polyanthas, mosses, rugosas, gallicas, Wichuraianas, hybrid multifloras, moschata and sempervirens.

IN RED—Cheshunt Hybrid, H. T.; Climbing Jules Margottin, H. R.; Climbing Papa Gontier, H. R.; Crimson Rambler, Pol.; Euphrosine, Pol.; Hiawatha, H. Wich.; Paul's Carmine Pillar, H. T.; Philadelphia Rambler, Pol.; Reine Marie Henriette, H. T.; Rubin, Pol.

IN ROSE OR PINK—Climbing Caroline Testout, H. T.; Climbing Clorhilde Soupert, Pol.; Climbing La France, H. T.; Climbing Mme. de Watteville, T.; Climbing Mrs. W. J. Grant, T.; Climbing Souv. de la Malmaison, B.; Climbing Victor Verdier, H. R.; Cumberland Belle, Moss; Dawson, H. Multi.; Debutante, H. Wich.; Dorothy Perkins, H. Wich.; Helene, Pol.; Karissima, H. Wich.; Lady Gay, Pol.; Leuchtstern, Pol.; Mme. Berard, T.; Minnehaha, Paradise, Pink Pearl, H. Wich.; Pink Roamer, H. Wich.; Psyche, Pol.; Queen of the Prairies, Setigera; South Orange Perfection, H. Wich.; Sweetheart, H. Wich.; Universal Favorite, H. Wich.; Wedding Bells, Pol.; Wm. Egan, H. Wich.

IN WHITE—Aimee Vibert, N.; Brunoni fl. pl.; Mosch.; Countess of Lieven, Arv.; Gardeniaeflora, Pol.; Climbing Kaiserin Augusta Victoria, H. T.; Climbing Niphotos, T.; Mme. Alfred Carriere, H. N.; Manda's Triumph, H. Wich.; Moschata alba, Mosch.; Rampant, Spr.; Schneelicht, Rug.; Splendens, Arv.; Thalia (White Rambler) H. Mfl.

IN YELLOW—Gardenia, H. Wich.; Wm. Allen Richardson, N.

While speaking about climbers, would it not be feasible to bad the Baby Rambler in numbers, on the main shoots of the Crimson Rambler or other vigorous climber covering a trellis or arch, and so transform the ordinary Rambler into an everbloomer? I suppose this could be done successfully by relieving the Rambler of its own flowering wood and by renewing the budding yearly on the new wood, which is grown along to replace the old.

No rose garden would be complete without our WILD and NATIVE roses, and we can use them as an introductory feature in the way of border plantations around the garden. They are: Rosa alba, blanda, canina, carolinaeana, lucida, multiflora, nitida, rubiginosa, rugosa, setigera and many others.

The pretty Midget rose, Rosa multiflora nana, should be freely used for borders along trellises. They are easily grown from seed, if sown inside as early as February, potted up and planted out in May.

Other MISCELLANEOUS GARDEN ROSES not to be forgotten are: Soleil d'Or, A. B.; Persian Yellow, A. B.; Harison's Yellow, A. B.; Austrian Copper, A. B.; York and Lancaster, Gallica; Stanwell's Perpetual; Damask; Cabbage, Centifolia; White Banksian, Banks.; Yellow Banksian, Banks.; Bennett's Seedling, Ayrshire; Mme. Plantier, Gallica.

LORD PENZANCE'S SWEETBRIARS—Amy Robsart, Annie of Geierstein, Brenda, Catherine Seyton, Edith Bellenden, Flora Melvor, Green Mantle, Jeanie Deans, Julie Mannering, Lady Penzance and Lord Penzance, Lucy Ashton, Lucy Bertram, Meg Merrilies, Minna, Rose Bradwardine.

Key to abbreviations used in foregoing lists: Hybrid Remontants, H. R.; Hybrid Teas, H. T.; Hybrid Wichuraiana, H. Wich.; Hybrid Multiflora, H. Mfl.; Hybrid Noisettes, H. N.; Noisettes, N.; Teas, T.; Bourbon, B.; Austrian Briar, A. B.; Sempervirens, Spv.; Moschata, Mosch.; Banksian, Banks.; Polyanthas, Pol.; Arvensis, Arv.

Cultural Facts Should be Given.

Of all plants deserving special care and attentive culture, the rose, in my mind, is first. I regret that some of our growers and distributors to amateurs should state in their catalogues and guides on rose culture that the necessity of thorough preparation of soil, proper cultivation, etc., is a story of ancient belief, and that roses will grow in any soil, location and condition.

They will grow, yes, but will they flourish? Do not let us deceive and disappoint the lovers of roses for the sake of making easy money, for it is unjust and does not pay in the end, for, one disappointed customer will discourage many prospective buyers, while every successful amateur rose grower will induce and instruct all his friends and neighbors.

Let us tell the people that the rose is a great feeder and delights in a heavy loamy soil enriched by cow manure, and let us ask them to prepare their beds before planting to a proper depth, provide the necessary drainage, that thorough cultivation is better than continuous watering and sprinkling; in short, give them the information that will make them expert rose growers and we will make them happy and our friends forever. The real lover of roses will not shrink from the expense and labor involved in such culture and his success will convert others.

The very growers who advocate the planting of roses in any old way, seem to have to go away from home to find subjects fit for illustrations in their catalogues, intended to show good rose culture. Good rose culture, however, means good deep loam, renewed fertilization of well decomposed manure properly applied, frequent cultivation and appropriate watering at the proper time, etc. This is the treatment of the soil to which the building up and sustaining of the root system of the plant is entrusted.

Pruning.

The part of the plant above ground demands equal attention. Beginning in Spring we must induce and balance the growth of the flowering wood, by proper pruning, and to do this properly we must consider the habit, character and strength of the plants. Vigorous hybrid remontants we should relieve of all weak and superfluous wood, being satisfied with from 6 to 8 main shoots to a plant, and those we must cut back to from 5 to 7 eyes. Weaker plants we must prune more severely yet, cutting back to 3 or 4 eyes. The hybrid teas, which do better in a not too heavy soil, we must relieve of all weak and dead wood, and cut the remainder back 1-4 or 1-3 of their length. Teas and polyanthas, of course, we won't cut back at all except to remove old and dead wood, with the object in view to keep the plant vigorous by inducing and favoring a certain percentage of young growth.

General Attention.

During the flowering season we must constantly be on the watch. Passing flowers should be picked off every day and that before they drop all their petals. We can procure a second, and with some varieties of the remontants, an almost continuous crop of flowers, by pruning past flowering shoots radically back to 6 or 8 eyes during the Summer season.

We must supply the necessary atmospheric moisture to our plants by a thorough syringing from below, applied after sundown—a treatment to which the rose readily responds during dry weather. Such sprinkling, furthermore, at least partly overcomes the minor insect pests, such as the aphid, red spider and rose hopper. We must closely watch for the arch enemy of the rose, the chafer, and pick him off for his kerosene bath, while we have to crush the leaf-roller with unrelenting energy and thoroughness. Slugshot, hellebore, Bordeaux mixture, whaleoil soap and similar remedies must be on hand for ready use for other pests, mildew and other diseases, and must be applied in good season and effective manner.

Wintering.

For the wintering over of our roses we must take due precaution by providing the necessary cover. The most effective, in fact the only satisfactory method is to tie the shoots together and heap up the soil around the root-stock as high as possible, and if the plants are properly distanced, namely 2 feet to 2 feet, 6 inches for the H. R., and 16 to 20 inches for the H. T. such heaping is entirely feasible. Then after frost has set in put a good covering of manure around those hills and ordinary bedding or litter between them. In Spring remove the bedding, pull the manure down between the hills, rake your soil over it and do your pruning as soon as the eyes begin to break.

Standard roses I think are most successfully grown by lifting them every Fall and burying them in 18 inches or more of soil. Better yet, plant them in small tubs and bury tubs and all. Climbers can be bent down and buried in the ground. By this method the bark is however easily cracked if not very carefully handled, and the result is the loss of many of the main shoots. Thorough binding up in long straw with outside paper cover, therefore, seems the most advisable cover for climbers in need of such protection.

Time to Plant.

Where the Winter is not too severe, I consider Fall planting preferable to Spring planting—provided the planting is done in good season, say not later than November 15.

These in short are the general cultural directions under which I have seen the happiest results in the rigid climate of the East—Connecticut, for instance.

To us all these matters of culture are a matter of course, but for the amateur they are perplexing to begin with but should not be discouraging. No one to-day hesitates to acquire an automobile, not knowing the least thing about its mechanism or underlying principles of locomotion. To begin with he or she will be puzzled, but as gradually through experience and study the mechanism and working principles of the machine explain themselves, the amateur chauffeur becomes the self-confident master of this complicated creation of the professional machinist, and he not only runs the machine but attends to ordinary repairs and before long has some suggestions to make for improvements. Why should the same amount of intelligence not be able to solve the so much easier problems of competent and sensible rose culture?

Budded or Own Root Plants.

For instance, there is quite a difference of opinion as to the relative value of budded or grafted plants and plants on their own roots. I think we must all agree that budded plants are giving much better results as to vigor of growth and quality of bloom, but we realize that the average amateur grower may be better served with plants on their own roots, because there will be no danger of his losing his flowering plant through the unrecognized or unnoticed growth of wild suckers.

Now I think we ought to at least give our friends, the customers, credit for ordinary intelligence, by telling them that if they will compare the foliage of a

wild rose with that of a hybrid, they will soon learn to distinguish between a sucker and the real thing; and they will understand that by diligently removing the former they will have the very best results with the latter. Ardent lovers of flowers will be glad to learn that. For those who are too busy or don't care, the own root plants I admit may be better, but I believe it is only fair to state to the amateur the difference between the two, and let him have his choice.

If the roses are budded low, the stock eyes removed before planting and the roses planted good and deep, comparatively little sucker trouble will be encountered, and I for one shall want budded plants wherever I have something to say in this matter of choice.

One-Year Plants.

The planting of one-year roses, which if not especially advocated is at least widely advertised, is all right as far as it goes, but it must to a certain extent be misleading and disappointing to many amateur rose growers. The offer of one dozen rose plants for \$1. guaranteed to bloom the first year from June to October is certainly very attractive and tempting, but if this one dollar is the extent of the available funds for such investment, I would advise my customer to take 4 or 6 two-year old budded plants, plant them wider apart, be satisfied with a few flowers the first year and get the benefit of better and more blooms forever afterward.

The one-year old plants, which have been planted close, will, if they grow, crowd each other in no time, consequently should be transplanted the second or third year at the latest, which in most cases is not done. If they don't grow it is because the soil to which they have been transferred out of the pots is not congenial, and the plant in itself is not of sufficiently vigorous stock to overcome this change of soil texture and quality. Yet the buyer has planted them as directed—in any ordinary soil. The two-year old plant will fare better and give much more return and value in every case.

Before I leave the subject of one-year old plants I want to ask the question whether it is not a fact that those plants on their own roots are mostly Winter cuttings from more or less continually forced stock, and some of them second cuttings from rooted cuttings in the bench? If so, can it be reasonably expected that plants so produced will attain the vigor, productive quality and sustaining strength and hardiness so essential to outdoor culture? If not, is it not more or less a fraud on the public justifying the saying "Cheap cloth, tools or help are too dear at any price." I claim that all own-root roses intended for outdoor culture should come from soft or hardwood cuttings from outdoor plants. I say, propagate from good stock and offer good stock if you want to grow good roses and satisfy and retain your customers.

As already stated, I am not an expert rose grower and don't pretend to be, but I believe that here as elsewhere the underlying principle in securing good results is good structural foundation.

It is so evident that propagation from continuously forced plant stock and through too soft wood means degeneration and deterioration of quality and strength that I need not dwell on this subject any longer. The best proof of this statement is the rapid degeneration of so many varieties used for forcing for a period of 10 or even fewer years, compared with the same varieties grown outdoors and propagated from outdoor plants.

There is one thing the buyer of budded plants is pretty sure of, and that is, he need not fear to get in his purchased plants the weak, degenerated blood which he is apt to get by buying own root plants and so-called slips.

How to Help Rose Lovers.

To discuss such matters is the principal purpose of our gatherings. The question has been put by our executive committee, "What can the A. R. S. do to help the lovers of roses and the members of the society?" There are many ways of accomplishing the same purpose, provided said purpose is clearly defined and understood. To benefit the lover and amateur grower of roses we must reach him outdoors. We must stimulate and advocate outdoor culture, and educate those we reach with our pleas. To benefit the amateurs means to benefit the growers.

To encourage outdoor rose culture, I would suggest that we work along the following lines:

1. Suggest and advocate through our trade papers, and through all other possible means, the introduction of public rose gardens in public parks; not only in the large cities, but everywhere. Such gardens could be inaugurated and helped along through donations of plants by local growers and dealers, and where the experienced gardener is missing, help along this line might be furnished through the same sources.

2. Let the florists' clubs and other kindred societies of the country arrange for free lectures, giving the public plain, true and comprehensive instruction and information on the subject, and have, if possible, a rose show connected with the lecture.

3. Let each rose grower or nurseryman establish a small rose garden in which he practises good culture;

let him arrange for a rose show of his own, and invite his customers near and far to his grounds when the plants are at their best.

4. Let the American Rose Society direct, or through local florists' clubs, award prizes in medals or certificates to amateur rose growers for good cultures.

5. Would it be possible for the A. R. S. to establish somewhere in the Middle States in connection with a horticultural college or a reputable commercial establishment, an experiment station or trial ground, where new introductions could be tested as to their true value from all points of view, giving the varieties procuring a certificate from that station the value and distinction of high standard quality?

6. Would it be possible to have in that case a semi-annual convention at that trial garden; or could not at least a standing committee on novelties, or the executive committee, meet there every year in June to pass judgment on such plants as may be on exhibition there; and would not such reports be of great value to the grower as well as the amateur?

These are questions and ideas that have occurred to me during my services as a parkman for the last few years, and I beg to submit them to you for consideration and discussion. I know that every rose successfully planted and grown brings roses, smiles and happiness to some heart and makes it better, and I love to work with you all as a gardener in this garden of usefulness and uplifting happiness.

CLUB AND SOCIETY DOINGS.**LENOX (MASS.) HORTICULTURAL SOCIETY.**

The regular meeting of this society was held on Saturday, March 2, President Heeremans in the chair. The schedules for the June, August and Fall exhibitions were read and adopted. This being caruation night, it brought out some very fine exhibits. The following exhibitors were awarded first prizes: A. J. Loveless for an excellent vase of Robert Craig; F. Heeremans for Enchantress; A. McConnachie for Mrs. T. W. Lawson, the same exhibitor winning for a vase of mixed varieties. A. H. Wingett staged a vase of stock Queen Alexandra, which was much admired, some of the spikes being fully three feet in length; it was awarded a cultural certificate, a similar award being given him for two very fine vases of Souvenir du President Carnot, and Richmond roses. I may say that Richmond is doing remarkably well up here, although we have had a very dull Winter; all the growers speak highly of it. Three silver cups were offered and accepted by the society to be placed in competition at the Fall exhibition, Messrs. Henry A. Dreer, Philadelphia; R. & J. Farguhar, Boston, and E. Jaques of Lenox, being the donors. The following firms have also donated premiums: Messrs. Vaughan's Seed Store, A. T. Boddington, New York; Chas. H. Totty, Madison, N. J.; Julius Roehrs Company, Rutherford, N. J.; A. N. Pierson, Cromwell, Conn.; Bay State Nurseries, South Abington, Mass.; and Howard & Morrow, Pittsfield. The next meeting night is March 16.

G. INSTONE, Secretary.

THE COLUMBUS FLORISTS' CLUB held its regular first meeting of the month last Tuesday evening, in the Brent Building. President Stephens was in the chair. As has been the case for many meetings a goodly number of the members were on hand, and a very enjoyable session was held. It was finally decided that after a fair and proper notice by the secretary of the club, that the names of those in arrears should be dropped from the membership rolls. The matter of the forthcoming exhibitions was taken up, and from the enthusiasm of the members in regard to it, and especially with reference to a chrysanthemum show for the Fall, there can be no question as to the most successful outcome. The committee chosen to take charge of the chrysanthemum show, to be held in November, 1907, consists of M. B. Faxon, chairman, Albert Knopf, Guy H. Woodrow, Sherman F. Stephens, and James McKellar. The club has given its committee full power to do the proper thing next November.

As in previous years the club will again this season put up, and take charge of, the distribution of the penny packets of both flower and vegetable seeds to the children of the public schools. We have had the hardest kind of fighting the past two seasons to get a foothold here in Columbus in this school and home gardening project for children; almost everybody has opposed it—seedsmen, some of the members of the school committee and many others—but the movement has come to stay, and those who have backed it from the first are beginning to see daylight through the darkness. Mr. Faxon is to take charge of this seed packet distribution, and already the prospect is very bright for a successful outcome of the scheme for 1907.

At this meeting Vice-President Currie exhibited a very fine specimen of *Selaginella casia arborea*, for which the flower committee awarded him 15 points. Andrew Blum, who is with the Clover Hill Nurseries, was elected an active member. It was proposed, and met with the club's approval, that at a near meeting an entertainment be arranged with special reference to a ladies' night. We have many women members, and it is the earnest wish of all that they have their full and fair share of pleasure and profit from the meetings of this organization.

F. W.

NEW YORK FLORISTS' CLUB.—The meeting of the club on Monday evening, March 11, was well attended, and there was an interesting exhibit of roses and carnations. President Totty occupied the chair. Mr. Sheridan made a partial report for the dinner committee, stating that but forty-nine members were in attendance at the annual function, which he said was a most enjoyable affair. He hoped to report definitely at the next meeting. The following new members were elected: George W. Geraghty, A. R. Kennedy, Herman Pause and Wm. Eccles. George Baldwin, Seacucus, N. J., and F. Bolles, Brooklyn, N. Y., were proposed for membership. The resignation of Mr. John G. Phelps was received with regret.

Mr. Sheridan's motion to establish a committee on membership was held over until next meeting.

The motion of S. S. Butterfield providing for an appropriation of one hundred dollars to the outing committee, to obviate the necessity of the committee soliciting prizes for the children's and ladies' races, was lost by a vote of eighteen to twenty-four. In the course of the discussion Mr. O'Mara, who opposed the motion, spoke of the necessity of the club securing a home of its own, and urged the conservation of all the funds possible. The secretary of the outing committee stated that responses for advertising in the program, and also donations of prizes were coming in liberally, and he stated that it would be immaterial which way the motion was disposed of. At the same time it was noticed that he voted for the appropriation.

A pleasant feature of the proceedings was the presentation of a diamond-studded gold scarf pin to President John Scott, as a token of the club's appreciation of his work in the chair during 1906. Alex. Wallace, on behalf of the members made the presentation, the recipient suitably and feelingly replying.

A communication was received from Secretary Hammond of the American Rose Society inviting the members to the exhibition and meeting of that organization, held at Washington this week. Mr. Hammond was unable to be present at the club meeting to address the members.

Julius Rochrs, Jr., who was elected trustee, made a few remarks promising his best endeavors in behalf of the club during his term of office.

On motion of Mr. Guttman the matter of devising ways and means for securing a home was referred to the officers and the board of trustees, which action President Totty considered a step in the right direction. Robert Schultz facetiously inquired whether the home was for disabled or active members.

John Birnie then read his paper on "The Needs of New York City as regards a Plant Market," as follows:

Your essay committee has requested me to read a short paper on "The Needs of New York as Regards a Plant Market." It would be useless as well as tiresome to give in detail the efforts that have been made during the last 17 or 18 years by the plant growers who dispose of their produce in New York City to find a permanent market place suitable for their purpose. Suffice it to say that those efforts have been unsuccessful, and at the present time the growers are absolutely without a place where they can legally sell plants at wholesale.

That such conditions should prevail in a city like New York is deplorable, and shows that the Civic Government is delinquent and careless regarding the needs of the masses, who are the actual plant buyers and plant buyers. The argument that the majority of the plant growers are not citizens of New York City is humbug. The eggs that every New Yorker consumes for his breakfast are not laid on Broadway; neither is the celery which decorates the dinner tables of the 400 grown on Fifth avenue. The contention that "it won't pay" is also groundless, for notwithstanding high ground rent and other drawbacks the New York Market Florists' Association paid a dividend of 25 per cent. a year ago. However, the fact remains that a plant market for New York City is a crying need, and the subject is brought before the New York Florists' Club to-night for the purpose of eliciting suggestions as to ways whereby the desired object may be attained.

It is a subject that is of vital importance to every one in any way connected with the business, be he grower or retailer, and should interest every man and woman who has the welfare of the masses of New York City at heart. The denizen of the top-story tenement may forget to say his morning prayer, but he never forgets to water his window plant. This would suggest the idea that the introduction of plants into the homes of the masses would grow to such proportions that we would have reasonable plants to sell all the year round, as is done in European cities, some of which are much smaller in population than New York.

About 17 years ago a body of growers organized and called themselves the "New York Market Florists' Association." Four years ago this organization was incorporated under the laws of the State of New York. It has an office on Broadway, and has a paid attorney. The stock issued was \$5,000 which has only partly been subscribed for. I am of opinion that if all growers would join this organization, as it is obviously their

duty to do, subscribe for the stock not sold, and issue more, the more energetic taking office and helping those already in the harness to do the work, something could be accomplished which would be of benefit to all concerned.

We are still looking for a Moses to lead us out of the land of Egypt. Will the New York Florists' Club prove to be that Moses? Or, must we stay in Egypt for forty years?

The matter was discussed by Messrs. Janicke, O'Mara and Daly, the former referring to the plant markets in European cities and characterizing the conditions in New York as shameful, the gardeners themselves being lately to blame for such conditions. Mr. O'Mara pointed out that there was a probability of a new market being established in the near future near Gansevoort street, and it was possible that the plant growers might find stands there.

F. H. Kramer of Washington made an excellent exhibit of Queen Beatrice rose, and extended an invitation to the members to visit his houses during convention week. He spoke of the free-flowering qualities of this novelty and particularly of its keeping properties. Some of the flowers on exhibition still showed up well after having been cut for eight days.

H. Weezenaar of De Nys Brothers, Hillegom, Holland, gave an interesting talk on the method of cultivating bulbs in Holland. He stated that most of the travelers from America arrived in that country when the bulbs were in storage, and did not see the beauty of the fields when the flowers were in bloom. Land in Holland adapted for the cultivation of hyacinths, he said, runs from \$2,000 to \$3,000 per acre. The manure used amounted to something like \$1,000 an acre, in addition to which there was a big water tax, levied for service of the pumping engines, the water having to be pumped at certain seasons from the canals. This water is pumped some times at the rate of 20,000 gallons every minute, the various canals emptying into a large one which connects with the ocean. The water in the canals is so regulated that there is never an overflow at any time. The soil in which the hyacinth bulbs are planted is dug to a depth of three feet, the work being done in winter, the aim being to get as much frost as possible into the soil. When Spring arrives from 10 to 15 inches of pure cow manure is dug into the soil to a depth of one foot. In that soil are planted potatoes, peas or beans, either for seed or market. In the month of August the products are gathered. The same soil is then dug to a depth of 1-2 feet, cow manure being again applied to it. The beds are rounded and there is a ditch of about 1-2 feet broad and deep, dug along the sides of the beds to carry off the water. The bulbs are planted from 2 to 2 1-2 inches deep. The beds are then covered with reeds to a depth of 10 inches. This covering is not put on until the severe weather is past, the object being to secure freezing. Part of the mulch is removed after January, and the crops are hardened as much as possible, the mulch remaining being entirely taken off when active growth shows.

During the last two years the crop of hyacinths has only been middling. This, the speaker thought, was on account of the bulbs not having been properly ripened or well enough matured. He had found that growers all over the United States were experiencing trouble with their hyacinth bulbs and his opinion was that what he had stated was the cause of this.

As regards tulips, he stated that these bulbs were generally grown in the same place where the hyacinths had been cultivated. After the hyacinths are taken out, the soils prepared and some liquid manure afforded. After the tulips are taken off, the land is allowed to lie until the next Spring and vegetables are grown upon it, thus forming sufficient additional manurial ingredients for the tulips. It is the same with crocuses.

When it comes to daffodils, these do not require any manure at all. They enjoy a rich, peaty, fresh soil. Daffodils are grown best in places where the land has formerly been meadow or pasture soil. That soil is dug to a depth of one foot, soot having been scattered over it previously, then the daffodil bulbs are planted therein. This gives a better crop than any other bulb soil used in Holland. Daffodils do not succeed well in sandy soil, the best bulbs being raised in one containing two-thirds humus and one-third sand. Daffodils are grown extensively in the Channel Islands, but there they do not get the size the bulbs attain in Holland. The Dutchmen import lots of small bulbs from the Channel Islands and "blow them out," that is, give them shape and size after one or two years.

Mr. Weezenaar then spoke of the opportunities for pushing orchids in America, as he saw them, and thought that this had only to be done in order to educate the popular taste for flowers other than roses and carnations. He believed that some of the American millionaires would part with their money for orchids as easily as did some of the fanciers in Europe; and he told an interesting story of how the famous Cypripedium Pittianum came to be re-sold for £1200, making a profit of about £400 to the original purchaser.

After extending votes of thanks to the various speakers of the evening, the meeting adjourned at 11 p. m. The exhibition committee reported the result of its recent visit to the establishment of Anton Zvolanek,

sweet pea specialist, Bound Brook, N. J. Certificates of merit were recommended for the following varieties of sweet peas: L. Marquis, deep violet of Princess of Wales violet shade; Mrs. Alexander Wallace, light lavender; William J. Stewart, deep blue; and Mrs. William Sim, salmon pink. The variety Helen M. Gould the committee desired to see again; and Mrs. Dolansky was not in condition to be judged at its best.

F. H. Kramer of Washington, D. C., made quite an elaborate display of the new rose Queen Beatrice which he is introducing to the trade, and under the artificial light it proved quite attractive and gained much favor with those who saw it. It seems to be all that is desirable in length of stem and keeping qualities, and the introducer assures us that it is a very free bloomer. The award committee granted to the variety a preliminary certificate. Paul Niehoff of Leighton, Pa., again sent a vase of his new rose Aurora, and the flowers were in much better shape than any of this variety that have previously been exhibited. This also was awarded a preliminary certificate. E. H. Pye of Nyack, N. Y., showed an excellent bunch of the rose Kaiserin Augusta Victoria, for which he was awarded a cultural certificate. It is something unusual to see such good blooms of Kaiserin at this time of the year as Mr. Pye staged, and that gentleman informed us that the plants had been grown in quite a low temperature considering what is afforded to roses at the present time, and stated that he is cutting very freely blooms of the same quality as those shown. M. Tierney exhibited a vase of his new scarlet carnation, Mrs. Robert Hartshorne, which was scored 80 points by the award committee. A. Demeusy of Clarkson street, Brooklyn, N. Y., again showed his crimson seedling carnation, for which he received a preliminary certificate at the December meeting. The flowers were even in better form than those he staged in December, and as a preliminary certificate had already been awarded this variety, which is as yet unnamed, the committee can go no further in the matter until the variety has been seen growing at Mr. Demeusy's establishment.

Maxfield & Dimond, Warren, R. I., sent on a box of their M. & D. artificial caryxes for inspection by the members. Most of the carnation growers took a few of them home and are, no doubt, making practical experiments with this new appliance for saving carnations from splitting. W. C. Krick of Brooklyn, well-known manufacturer of Krick's letters, pot hangers, plant stands, etc., staged a bunch of carnations dyed various shades of green.

Lawrence Heint.

Lawrence Heint, one of the pioneer florists of Terre Haute, Ind., died at his home there last week.

Mr. Heint was born in Austria in 1840, and came to this country when 14 years of age. He was a member of the Nineteenth Indiana Battery, and served with credit until wounded at Perryville, Ky., when he was honorably discharged. He went to Terre Haute in 1863 and since that time had been engaged in the florist business. He is survived by a widow and three brothers, Joseph, Jacksonville, Ill.; George, Toledo, Ohio, and John G. of Terre Haute.

The funeral services were conducted by the Terre Haute Commandery No 16, Knights Templar, Morton Post No. 1, G. A. R., Eastern Star, Terre Haute Lodge No. 19, F. and A. M. Burial was at Highland Lawn Cemetery.

William Griffin.

William Griffin, for years a member of the firm of Griffin Brothers, florists, of Frankford, Pa., died Thursday, March 7, 1907, at his home, No. 4915 Willow street, after a long illness. He was 58 years old and had lived in Frankford all his life. He retired from active business some time ago and spent several months in Europe in search of health. He was a member of the School Board of the Twenty-third section and a vestryman of St. Mark's P. E. Church. He was buried on Monday afternoon with Masonic honors. The services were held in St. Mark's Church. A widow survives him.

John C. Garden.

John C. Garden, of Anacostia, died at his home on Minnesota avenue, on March 11, aged 57 years. Deceased was the eldest son of the late Alex. B. Garden, and half brother of Alex. B. Garden, the well-known grower of Washington, D. C. He came of a large family of Scotch florists and in the old country was apprenticed to a gardener. After coming to America he turned his attention to growing vegetables and bedding plants.

MABELLE-- New Pink Carna- tion for 1907

Color--A peculiar shade of lovely pink, with a faint
yellowish cast; several shades lighter than the Lawson,
Unlike most pinks, the brightest sun does not injure the
color. Size--Three to four inches in diameter when es-
tablished. Odor--Pleasant, but not strong. Stems--
Invariably strong, but always graceful, ranging from
12 to 30 inches during the season. Habit, etc.--A very
quick active grower, making specimen plants in a short
time, even from late cuttings. On account of its rapid
growth, requires supporting very soon after benching.
Gets away rapidly, blooms early and gives long stems
right from the start. Productiveness--Prodigious is
the best word we know of to use here. It is the most
incessant bloomer early and late, we have ever grown.
Stock limited. No discount. First class certifi-
cates Madison and Indianapolis. Delivery Jan. 5th to 10th
and later. Price, \$12.00 per 100, \$100.00 per 1000.

REVIEW OF THE MARKET

NEW YORK.—Business in cut flowers has undergone little change since our last report. American Beauty roses of the best grade continue scarce, though there are quite a few long-stemmed flowers coming in that are malformed and off color, which have to be sold at figures much below our quoted prices. Short grades of Bride and Bridesmaid clear out better than do the special grade stocks of these varieties. This fact would seem to indicate that most of the work for which these roses are bought is of a funeral nature.

Carnations are quite plentiful, and there is not any material change in their values over our last week's quotations. Bulbous stock of all kinds is coming in quite heavily and prices realized are anything but satisfactory. Gardenias and orchids meet with but indifferent demand; and the same remarks apply to sweet peas, lily of the valley and lilac. Violets, both double and single, are quite a glut at times and are sold at extremely low figures. The most of these are handled by the peddlers just now, and when the weather is stormy there is little demand for the flowers from that source even.

The plant trade throughout the city is also in an extremely quiet state just now.

CHICAGO.—With Easter but two full weeks and a fraction away and Lent accordingly within less than twenty days of its close, with the majority of the days more than satisfactory to flower producing and consequently with large shipments along general lines continually arriving the market has on the whole shown quite a tendency to strengthen of late. To be sure prevailing prices are low and the actual demands where stock must be had by the purchaser are so uncertain that immense quantities of goods are the subject of barter which makes the prices uncertain and difficult to quote with accuracy. Local men have shown an inclination to plunge in large lots since the surplus has broken the high prices as proven by one sale witnessed a few days since when a retailer bought from one house alone 26,000 violets for \$32.00 and 3,500 good carnations for \$52.50, of which \$104.50 worth of flowers probably not one cent's worth was engaged.

The actual condition of the market has not changed in any particular line nor to any great extent from that reported for the past two or three weeks so far as prices are concerned, but the public must be buying more freely, as the large invoices do not forecast the glutty tendency which was a feature of the very recent past.

A marked feature of the trade in the early part of this week was the scarcity of white carnations, generally attributed to a reservation of that stock being made by growers in anticipation of the large increased demand and price for dyeing green for St. Patrick's Day. Green goods are still in strong demand compared to the supply and realize good prices. W. K. W.

ST. LOUIS.—Trade as reported last week continues good in all branches. The weather has been exceedingly mild and clear the past week which brought good business from the downtown shoppers. There were quite a few weddings and plenty of funeral work, so from what we can learn from most of our retailers, Lent did not hurt any this year, so far. Roses are coming in more plentiful than for some time past and prices have gone down quite a bit on extra fancy. Bride and Bridesmaid run to \$10 per 100. Killarney, Richmond and Mme. Abel Chateau are same in price. Fancy American Beauty are \$6 for top price; in other grades, \$1, \$2 and \$3 per dozen. Carnations are in abundance in all grades. The ruling average price is \$2 to \$3 per 100 for the best in 100 lots. In 1000 lots, a cent cheaper. Enchantress are extra fine in color. So are Nelson Fisher and Prosperity. White Perfection and Lady Bountiful are the ruling varieties in white. Aristocrat, Mrs. Lawson and Robt. Craig sell well. Bulbous stock is still plentiful in all lines, especially lily of the valley and Von Sion and Dutch hyacinths; Paper White narcissus and Roman hyacinths, not too many. Tulips in light colors sell well. Longiflorum and Harrisii are somewhat scarce. For callas, \$12.50 to \$15.00 per 100 is asked. California violets have been over plentiful of late but to-day the market is a bit tight on them. The growers, no doubt, are shading them to hold out for Easter. Sweet peas sell well, when long in stems, at \$1 per 100; 50c. for shorts. Smilax had a big call last week. So did Asparagus and other fancy greens. ST. PATRICK.

BOSTON.—As might be expected during the middle of the Lenten season cut flowers of all kinds are stocking up and in some instances certain kinds are much too plentiful. American Beauty roses are, in fact, about the only flower of which there is any scarcity. Other roses are now in good supply, and sell at low prices; from \$2 to \$8 being the prices continuing all the week. Violets are more abundant than at any time during the season. Sweet peas are also very plentiful; in fact, so much so that prices are not one quarter what they were two weeks ago. There is an over supply of carnations. Lilies sell slowly, and so do all kinds of bulbous stock. Lily of the valley sells fairly well at \$2 and \$4. Mignonette brings \$1 to \$2 for small. Some fine snapdragons are seen. Hardy cut ferns are very scarce, but other greens remain about in normal supply. J. W. D.

ST. PAUL.—Trade the past week has been very unsteady and the general report is that it was somewhat quiet; outside of a few good orders for funeral flowers little has been doing. Stock of all kinds is as good as we have had it at any time during the season. Roses are especially fine. Carnations are also in good condition and the cut has been unusually heavy. Considerable bulbous stock is offered at very close prices; daffodils and tulips at \$2 per 100 and occasionally a lot could be bought at \$1. A number of lilies are used for display; but the general report is that very few church orders have been booked for Easter. In all probability this week will change conditions materially and one can count on an active demand for Easter orders. While Easter is somewhat earlier this year, the growers all appear to be prepared for it. While it is probably early to make any predictions it appears evident that the lily supply is not to be any too heavy and the general impression of the growers is, that we are not to have enough. PAUL.

COLUMBUS.—For many weeks now every member of the trade has had nothing but enthusiastic praise to offer as regards the state of affairs in business that has been done. The only drawback has been the shortage of stock, which at times has worked great hardship to many of us; in fact, we have had days when there were absolutely no roses in the city and very few carnations. Of course the state of affairs owing to practically no sun from the first of December until well into this month, has prevailed everywhere; it has only been for the past two weeks that stock has again begun to come forward freely. Had it not been for a splendid lot of bulbous flowers we should have been obliged to have stopped filling orders. As it was, the result has been advanced rates at both wholesale and retail, which will be easily now maintained until the end of the season, as customers have become used to them. Carnations bring 75c. to \$1 a dozen, and sell out clean every day. The same may be said of carnations at \$1.50 to \$2.50 a dozen, except American Beauty, which bring up to \$6 per dozen and would easily realize a larger price could stock of a higher quality be obtained. Violets have been in large demand, especially for St. Valentine's Day, and fine ready buyers, in bunches of various sizes, at \$1 to \$2 per hundred. Tulips, hyacinths, narcissus and other bulbous stock, which is in large supply and of very fine quality, bring 75c. a dozen, and large quantities are used in funeral work. Callas are now coming in quite freely, and bring 25c. each; lily of the valley sells at \$1 a dozen and is in great demand. Green rods of all kinds never sold better; especially has there been a large demand for smilax, which has been selling at 35c. per two yard string.

In roses Uncle John and Liberty at \$2 per dozen are having a great run, also are Bride and Bridesmaid at the same price. As regards over-the-counter trade, it has been the briskest in a very long time; and as good prices have ruled, this branch has been especially profitable—as it is all cash. F. W.

WEYMOUTH, MASS.—Colonel William W. Castle was awarded a verdict of \$700 by a jury in the Norfolk Superior Civil Court at Dedham on February 14, in a suit against the Boston Steam Specialty Company. He sought to recover \$2000 for the failure of the defendant company to carry out a contract to install a certain heating system in his greenhouse in 1903, by the failure of which his plants, including a number of orchids, were destroyed.

INDIANAPOLIS, IND.—It is well that counter trade is brisk and funeral work at times heavy, as there is much stock brought to market and prices generally have receded. The dearth of decorative work still continues and it has been several years since this end of the business has had so little to do. Bulbous stock in occasionally offered at prices which do not permit a profit for the grower, \$2.00 to \$3.50 a hundred are the best figures obtained for well-grown flowers. Roses have been brought on rapidly by the bright weather, but prices remain about the same, namely, \$10.00 a hundred for the best Bridesmaid, Bride and Golden Gate; \$8.00 to \$12.00 for excellent Richmond and \$5.00 to \$35.00 for American Beauty, which are off crop. Carnations, white, excepted, are everywhere in abundance. The best, such as Enchantress, are many times offered at \$2.00 to \$2.50 a hundred. The small surrounding towns are offering their surplus at this season for almost any prices obtainable. Large spikes of Antherinum find a ready market at \$10.00 per hundred. Sweet peas in liberal quantities are offered daily at 75c. to \$1.00 a hundred.

Forget-me-nots, freesias, lilacs, daisies and orchids lend variety to the market. Specimen plants of numerous varieties are seen in the shop windows. It takes little inducement to sell them in place of cut flowers to the better class of customers. I. B.

TORONTO.—Business continues good. Bulbous stock is very plentiful and cheap; in fact, some of it is sold at wholesale so cheap that one wonders how the growers can get enough out of it to pay for the bulbs. Roses are coming in very good and the best are none too plentiful. Carnations are both good and abundant, and far too many have lately found their way to the ash barrel. Lilies are arriving freely and the demand for them is fairly good.

All our retail stores are showing quantities of stock, but very few of them complain of poor business. The prospects for Easter are bright. Lilies will most likely be fairly plentiful. The best growers are holding them at 10c. to 12c. per bud and bloom, while some are already offering them as low as 8c. per bloom. Roses promise a good crop. Violets and carnations are also expected to be fairly plentiful, but there is not likely to be quite enough to go around. Bulbous stock will be in ample supply. In plants there is likely to be a shortage in spiraeas, as a good many of them have turned out poorly. Azaleas will be in fair supply. There are also likely to be some good pot roses offered.

Wm. Hill of George street is just now showing some well-grown Cattleya Trianae in his window; the plants and blooms are well done.

The weather has been quite Spring-like the last few days and our seed houses are getting quite busy.

Quite a number of our Dutch friends have been in the city, and they all report business good, so I suppose they must get paid for their bulbs, even if the growers don't make anything out of them at the present prices.

THOS. MANTON.

FIRMS WHO ARE BUILDING.

ADAMS, MASS.—T. D. Brown intends erecting two new houses this season, and installing a new boiler.

EAST HAMILTON, MASS.—A greenhouse has been erected here by Wallace Knowlton; he will grow tomato, cabbage, and lettuce plants for the market.

NEW LONDON, WIS.—E. H. Olson, the proprietor of the New London Greenhouses, states that as soon as the frost is out of the ground he will begin on the foundations of buildings which will about double the capacity of his business. His present plant now consists of two buildings each 22 x 75 feet. Upon the east end of these, additions of the same width and 32 feet long will be erected. Besides these, Mr. Olson states that it is probable that he will also build a palm house extending across the west end of his property the side of the street to be constructed of glass.

ALBION, MICH.—A. H. Dew will erect two new greenhouses. One house, 37 x 100 feet, to be of steel truss construction will be devoted to carnations. The other house, 27 x 100 feet, will be built of air dried gulf cypress, and will be planted to roses, chrysanthemums and violets. In addition to this, the Albion Lumber Company has a contract for the material for a store, 20 x 64 feet, to front on Perry street, where Mr. Dew will conduct his retail business. He will also pay considerably more attention to his wholesale trade. The large additions planned this will necessarily amount to considerable. Mr. Dew has closed twelve years of prosperous business in Albion, and his friends congratulate him on his success.

CHANGES IN BUSINESS.

ROCKFORD, ILL.—H. S. Morton has bought the Wisner greenhouses and will operate them in future.

ELYRIA, O.—The L. C. Hecock Floral Company, has been incorporated by Louis E. Hecock, John E. Hecock, Louis E. Suthoff, Earl E. Smith and E. A. Phipps.

WILKESBARRE, PA.—Misses Mayme Mooney and Margaret Weir, two of the city's most popular young women, have completed all arrangements for embarking in the florist business. The young ladies have secured the site formerly occupied by Mrs. Ellen O. M. Barret, on North Franklin street, and are now making the necessary preparations for an elaborate opening.

RIVERSIDE, CAL.—The Chase Nursery Company and the Chase Rose Company have both abandoned their business here, torn down their greenhouse, and sold pots and other material to the Orange County Nursery and Land Company. They have 1,700 acres of citrus fruits, now in full bearing, which not only occupies the ground, formerly devoted to the nursery business, but also all the time and energy of the firm. P. D. B.

PETUNIA "THE QUEEN"

This is something new in the PETUNIA order, a new double extra fine, that requires no staking, 2 1/2 in. pots, \$1.50 per doz.; \$10.00 per 100.
COLEUS, Golden Bedder, and other varieties, rooted cuttings, 60c. per 100; \$5.00 per 1000.
FUCHSIAS, in variety, 2 1/2 in. pots, \$3.00 per 100; R. C., \$1.50 per 100.
HELIOTROPE, in variety, 2 1/2 in. pots, fine, \$2.50 per 100; R. C., \$1.00 per 100.

PREPARE FOR EASTER

*In Philadelphia there's a florist noted,
 Aschmann, his name, his plants beyond compare;
 To a sweet girl his heart is all devoted,
 Next rank his Araucarias, passing fair;
 When seen together they're a pair so charming—
 Brimful of beauty—both he cannot keep;
 So to his heart he'll hold his winsome darling,
 While you may have the Araucarias cheap.*

An immense stock of choice Easter plants, blooming Easter week or earlier if desired, are now ready for immediate shipment.

COME or Mail your order direct to Headquarters.
 Our reputation over the entire country, from the Atlantic to the Pacific, in growing Easter stock for many years past, is sufficient guarantee to prove what I say.
 We have every house, nook, hole and corner full; plants were never so fine as they are this year, 1907.
 While laborers, merchants, jobbers, contractors, builders, etc., have increased their prices nearly double, we **DO NOT** advance our prices; look! we sell our plants at the same old prices charged two or three years ago when the producing of plants was much cheaper.

Mr. GODFREY ASCHMANN, Philadelphia, Pa.
 Dear Sir—I received your plants in good condition. Satisfactory to me in every way. I am pleased.
 227 Loyallanna St. Respectfully yours,
 [The amount of plants was \$96.25 for Azaleas, Kentias, Araucarias and Ferns.] EDWARD LEIZMANN.

Latrobe, Pa., February 18, 1907

Huntington, N. Y., March 1, 1907

Mr. GODFREY ASCHMANN, Philadelphia, Pa.
 Dear Sir—I was well pleased with the plants that I received of you last year, so I send you another order this year. (Here follows description of order.) Yours truly,
 LEANDER D. HURD.

Philadelphia, Pa., February 25, 1907
 "I have seen Mr. Aschmann's Easter stock and I can truthfully say that it never looked finer, and stock never before so large, and I am pleased to recommend our customers to Mr. Aschmann."
 F. J. MICHELL,
 Of the firm of Henry F. Michell Co.
 1018 Market Street.

What was my duty during my trip to Ghent, Belgium, the land of Azaleas, Araucarias and Palms—last Fall, 1906? Answer: The interests of my customers, of course; not speaking of the 1100 Souvenir Cards which I mailed to my customers in America. I also bought for their benefit, **AZALEA INDICA** for Easter sales, the cream of Belgium's production. I am able to offer to my customers and the trade in general, two houses full of Mme. Van Der Cruyssen azaleas, the well-known and most favored, best double, pink azalea, giving so much satisfaction all over America. Plants as round as an apple, just covered with buds, 6-7 in. pots, at 60c., 75c., \$1.00, \$1.25, \$1.50, \$1.75 to \$2.00 each. Other fine varieties adapted for the American Market, such as Niobe, Bernard Andrew, Alba, Deutsche Perle (double white), Prof. Wolters, Empress of India, Yervaeneana (double variegated), and about eight more fine sorts, all covered with buds, price 75c., \$1.00, \$1.25, \$1.50, \$1.75 to \$2.00 each. We have a limited quantity of 50c. to 60c. azaleas, such as Apollo (double dark scarlet), Deutsche Perle, Simon Mardner, and a few others.

Lilium Musk-florum and **Japan Longiflorum** were never so fine as this year. All sizes: can meet all wants. 6 in. pots, 5 to 8 buds to a plant, 10c. per bud; 4 large buds and under, 12c. per bud.
Spiraea Gladstone, 6 to 7 in. pots. These plants are very large and bushy, and unusually fine this year, full of buds; price, 50c., 75c. to \$1.00 each.
Hydrangea Otaksa (pink) 6 to 7 in. pots, 40c., 50c., 75c., \$1.00, \$1.25 to \$1.50 each.
Cinarraria Hybrida, have a house full, all shades, 5, 5½ to 6 in. pots, \$2.50, \$3.00; \$4.00 to \$5.00 per doz.

Rambler Roses, 3 ft. high and over, \$1.00, \$1.25, \$1.50, \$1.75 to \$2.00 each.
Begonia, new improved Erfordi, an immense bloomer, blooms all summer and winter through, 5½ in. pots \$3.00 per doz.; 4 in., \$1.80 per doz.
Primula Obconica, 5½ in. pots, \$2.50 per doz.; 4 in., \$1.80 per doz.
Arcua Sapida (palm), 6 in. pots, 50c.
Draecena Bruantii, 6 in., 60c.

FERNS, Nephrolepis Barrowsii, 6 in., 50c. to 75c.; 5 to 5½ in., 40c. Scottii, 8 in., very long, \$1.50 each; 5 in. 35c. Boston Ferns, 5 in. pots, 25c. to 30c.; 6 in., 40c. to 50c.; 7 in., 75c.
Kentia Forsteriana, 7 in. pots, make up one large one in center, three small ones around, \$1.50 to \$1.75. Kentia Forsteriana, single plant, 36, 45 to 50 in. high, \$1.00, \$1.25, to \$1.50 each.

ARAUCARIA COMPACTA ROBUSTA, 5 year old, 7 in. pots, 25 to 30 in high, same in width, 4 to 5 tiers, very well stuff, \$1.00, \$1.75 to \$2.50 each. Araucaria Excela Glauca, 20 in. high, 4 tiers, 4 year old, \$1.00, \$1.25 to \$1.50 each. Specimen Glauca, 7 in. pots, 5 year old, 5 tiers, 30 to 35 in. high, \$3.00 each. Araucaria Excela, 4 year old, 6 in. pots, 25 to 35 in. high, 5, 6 to 7 tiers; \$1.00, \$1.25 to \$1.50 each.

Hyacinths, raised from first class bulbs of my own importation. Notice: These bulbs cannot be compared with ordinary stuff flooding the market. King of the Blues, Grand Maitre (Lavender blue), Gertrude (best pink), Grandesse (white), 4 in. pots, \$12.00 per 100.

Tulips, Tournesol, red and yellow variegated; this is the best selling tulip on the market, will stay in full bloom 10 days, 3 bulbs planted into a 4 in. pot; price \$12.00 per 100 or \$1.50 per doz. pots.
Narcissus, or Double Van Slon Daffodils best double yellow in the world, will sell on sight, 3 double nosed bulbs planted into a 5, 5½ to 6 in. pot; price, \$2.50 to \$3.00 per doz. pots. All bulbs are of my own importation, now outside in cold frame, and will bloom 2 weeks after bringing them into the greenhouse.

MOON VINE, Ipomoea Multiflora, (A. W. Smith, originator), best pure white, largest and most fragrant moon vine in the world. We have made a specialty of it for the past 15 years, and are known as the moon vine growers of America. Grow 20,000 of them, 2½ in. pots, \$5.00 per 100; now ready.

Mention if pots are wanted with all plants. For the reason that the cultivation of Lilies is expensive, and because we sell our Lilies cheap, some other plants must be taken in connection with them. Cash with order, please. All goods must travel at purchaser's risk only.

The Week's News.

Our simple faith in this column being the exclusive source of information on some subjects to our Boston contemporary is, we are glad to see, properly appreciated; but why drag in cats and canaries? Esop tells about a certain fox and some sour grapes—the rest you know. News is like grapes to some editors, sour if not obtainable while fresh.

F. R. Pierson of Tarrytown, N. Y., is so busy superintending the filling of orders for his novelties, particularly Winsor carnation, that he could not attend the annual meeting of the American Rose Society in Washington this week. He was well represented at the exhibition of that society, however, sending down exhibits of roses, also a grand lot of his new carnation, Winsor. James Ivera Donlan went along to arrange the flowers, and it goes without saying that Mr. Pierson's exhibits were staged in the most artistic manner possible.

The plant auction sales commenced on Tuesday, the 12th inst., at Wm. Elliott & Sons, 201 Fulton street, with the sale of hardy decorative stock. These sales will be continued every Tuesday and Friday until the end of the season. These are the only plant auction rooms in the city, and Elliott & Sons, with their commodious quarters, have all the facilities necessary for conducting two sales every week without the slightest difficulty.

The Tarrytown Horticultural Society is considering inviting the Chrysanthemum Society of America to hold its next annual meeting and exhibition at Tarrytown.

U. G. Scollay, who is well known to our readers as having charge of the heating and building problem in our question box, and who several weeks ago underwent an operation for appendicitis, is, and is able to leave his home now for a short time daily.

S. Jacobs & Sons, manufacturers of greenhouse material—Brooklyn, have erected a five-story brick building for their factory, and expect to occupy the same in the near future.

Max Schnorr, a florist of Woodhaven, L. I., is missing. He left home on the night of March 4 to attend the meeting of a singing society of which he is a member, and has not since been heard of. As there have been several holdups in his neighborhood at various times, it is feared that he may have met with foul play. His wife is said to be prostrated with grief over his absence.

New York city storekeepers complain of the business in pot plants this winter. They say it is the worst ever known, and growers are inclined to believe that this is so, judging from the poor demand they have had for their specialties this season.

James Morton, Clarksville, Tenn., is now on the road for W. A. Manda of South Orange, N. J. Mrs. Morton will continue to run the Tennessee plant.

M. H. Norton has accepted a position as representative for F. W. Kelsey of New York in eastern New England territory. Mr. Norton has a wide acquaintance among the proprietors and gardeners in many large estates on the north and south shore, and starts on his duties with excellent prospects.

L. W. Wheeler of Vaughan's Seed Store received a telegram on Sunday, informing him of the death of his mother at her home in Dartford, Wis. The sympathy of the craft will go out to Mr. Wheeler in his sad bereavement. He had visited his mother shortly before when informed of her serious illness, and left her after a few days' visit, believing that she was on the road to recovery.

S. J. GALLOWAY, Eaton, O.

its commencement several years ago, never failed to reach the city with its load of flowers until this week on Monday morning when it did not make its appearance in the cut flower district. Evidently the heavy snow fall of last Sunday was too much for this overland express.

E. C. Horan, wholesale florist at 55 West Twenty-eighth street, is receiving in addition to a full line of other commercial flowers, a splendid cut of Princess of Wales violets. The bunches are fine and large, and fully possess that subtle and pleasing odor that is only found on fresh-picked, single violets.

F. H. Traudny left Monday for Philadelphia to attend the directors' meeting of the S. A. F. O. H. From there he will journey to Washington and take in the meeting and exhibition of the American Rose Society.

Wm. Sim, Cliftondale, Mass.; Wm. Dolansky, Lynn, Mass.; and Peter Crowe, Utica, N. Y., were among the visitors in town this week. Messrs. Sim and Dolansky made a visit of inspection to the establishment of Anton Zvolanek, Bound Brook, N. J., the sweet pea specialist.

Vaughan's are working day and night on trade and florists' orders; the demand for bulk flower seeds, sweet peas, asters, etc., being unusual.

Making the Test.
An advertising test is for the purpose of demonstrating whether or not an advertisement will pay.
One would naturally think that, for a "try out," the new advertiser would take pains to find out what are the very best mediums—the ones that always pay—and choose some of them for the test. As a rule, however, the experimental advertiser selects some low-priced paper or papers for his first trial; his reason for so doing is that he doesn't want to "stake much money on the venture." Almost invariably the results of such trials are disappointing.—Agricultural Advertising.
Quite true. The Florists' Exchange has stood the test 13 years and has always "made good." It never disappoints.

Newport, R. I.

News Notes.

It is understood that Andrew Christensen on his relinquishing charge of the estate of Miss Foster will engage in commercial horticulture on Russell avenue on land recently purchased by him with that aim in view. Mr. Christensen has already a dwelling well under way into which he will doubtless soon move.

The intimation in a contemporary that all the lilies for Easter will have to come from out of town it is hoped will prove a little too sweeping. There are doubtless here in Newport a great many lilies that will not be in for Easter; still again, there are quite a number that will be in. About half of the number grown by Gibson Brothers will be in, but even then there will be a tremendous shortage of lilies when the time comes—a word to the wise is sufficient; there is not much time now for reflection.

George L. Stoddard has just issued his first catalogue of dahlias; it contains many of the best new varieties and a number of standard sorts.

Henry J. Hass handled an unusually fine lot of Enchantress carnations last week; they were the best seen here this season. Mr. Haas, as well as many of the other florists, was kept busy last week with funeral orders.

Gibson Brothers grow quite a number of carnations, but not nearly all they need; they intend to plant a house of Winsor this year.

Mr. and Mrs. Arendt Brandt celebrated their silver wedding anniversary last week when many friends gathered at the home of the couple, bringing with them, besides congratulations, substantial tokens of esteem and respect.

at Twenty-second street and Cottage Grove avenue and entered the employ of the A. L. Randall Company.
 William G. Bunde, at one time a traveling representative of Vaughan's Seed Store, but now of St. Paul, has the sympathy of his many friends in the loss of his mother in the Twin City on March 4.

P. Lautenschlager has returned from a short trip into neighboring States in the interests of Kroeschell Brothers, having booked a good business on his trip. This concern notes that over 90 per cent. of the boilers installed this season have been equipped with the firm's new scale-bearing rocking grate which was awarded a certificate by the S. A. F. O. I. at Dayton last year.
 Lacy Young of the Deamud & Young Fern Company finishes up his Winter's city business on the 16th inst., and after a few days' recreation will leave for the woods of North Michigan where he will superintend the fern gathering for the next Summer, Fall, and Winter business.

Miss Glaser of Dubuque, Iowa, was in this city last week.
 Leonard Kill returned from the St. Louis flower show with five first prizes on roses, (every class entered) to the credit of the P. Reinberg houses; in fact Chicago may well feel proud of the result at St. Louis, as in addition to the above H. N. Bruns captured first for his famous lily of the valley. The Chicago Carnation Company four firsts (every class entered) on carnations and the J. D. Thompson Carnation Company the other two firsts and two seconds on carnations.

The John C. Moninger Company announce that owing to delay caused by the printers their catalogue will not be ready for distribution for two or three weeks. A remarkable call, however, is reported for their valuable little booklet on "Greenhouse Construction" which is forwarded to any address on receipt of a dime.

John Scott, formerly with the Waban Rose Conservatories, Natick, Mass., and for a year or more past with Joy & Son Company, Nashville, Tenn., has been visiting points of interest in this neighborhood.

N. J. Wietor left on Thursday night of last week for a tour of this and neighboring states.

Mr. Devalitis of the Parker-Bruen Manufacturing Company has been calling on the trade here.

The Lawdale Floral Company (not incorporated) at 1003 West Twenty-second street is one of the latest retail ventures backed by V. A. Kohout and F. Merker, former employees of Douglas Park. Landscape work is made a specialty in addition to a general cut flower business.

Alex. Aggerholm of the Mosbak Greenhouse Company of Onarga, Ill., was a recent visitor.

Mr. Dietch soon disposed of the entire Winandy property to John Becker of Evanston, who in turn has already sold a large share of the property.

Robert Schenk left last week to accept a position in Lancaster, Pa.

Ed. Faber of Faber Brothers, Kankakee, was about last week posting himself on market conditions.

Sam Murray, Kansas City, was in town last Saturday en route to the S. A. F. O. H. directors' meeting in Philadelphia. The wonderful beauties of Mexico, where he has recently been visiting, are most entertainingly described by Mr. Murray.

At Peter Reinberg's salesroom a per diem business is reported far in advance of preceding years attributed especially to roses being in larger supply and selling at better prices, and a rooted cuttings business of wonderful proportions.

Miss Rennison of Sioux City, Iowa, was in the city the first of the week.

Percy Jones after taking a survey of the sources of his supply feels very well satisfied with his Easter prospects.

The expected invoice of European Easter novelties was announced by the A. L. Randall Company on Monday.

The J. B. Deamud Company will handle an especially fine line of Easter plants, the Rambler roses having commenced arriving early this week.

J. A. Budlong is still well to the front with teas from his grafted stock.

William W. Abrahamson, traveling representative for E. H. Hunt, has just returned from the South, where he has been on the road since the first of the year. He reports a good business.

 News Notes.
 The idea having gone abroad that the stock of carnation Aristocrat for this Spring's delivery was exhausted, an inquiry at headquarters educed the following reply from Manager Pyfer: "We are not sold out of Aristocrat by any means, but are a little late on delivery; and if our customers will wait for another week we will be able to satisfy every one and by the end of the month will have any amount of cuttings to offer."
 H. Van Zonneveld of Van Zonneveld Brothers & Phillip, wholesale bulb growers and nurserymen, Sassenheim, Holland, was in town last week and nearly winds up the list of representatives of foreign houses who make annual pilgrimages through the States.
 Jensen & Dekema are enjoying an unprecedented sale of rooted carnation cuttings of their favorite varieties, and report the call for Winsor, for which they are acting as Western agents, as something actually phenomenal.

A. T. De La Mare Ptg. & Pub. Co.

Boston.

News Gittings.
The next meeting of the Gardeners and Florists' Club will be held on March 19. Carnations is to be the subject for the evening; the discussion of which will be opened by F. E. Palmer. The club will hold an outing at W. W. Edgar & Company's, Waverly, on Saturday, March 23. Members will take electric car at Park street Subway at 1:30 p. m.

Prof. H. H. Whetzel of Ithaca, N. Y., lectured on Bacterial Diseases of Plants before the Massachusetts Horticultural Society on Saturday last. The final lecture of the season will be on March 30, when J. K. M. L. Farquhar will talk on Italian Gardens.

Some of the finest narcissus ever seen in Boston are now being cut by John J. Fee of Jamaica Plain.

William Miller of Miller & Sons, West Lynn, started last week for a month's trip through the West Indies and Panama.

J. A. Pettigrew and W. N. Craig were among the Bostonians attending the annual banquet of the Worcester Horticultural Society on Wednesday last.

J. T. Butterworth is having a fine cut of Cattleya trianae at present; he will have a superb lot of lily of the valley in pots for Easter.

J. W. Duncan read a paper on trees and shrubs before the North Shore Horticultural Society on Friday evening.

Several European representatives have been in town this week, including Mr. Van Teylingen of Van Gaanten & Company, and W. A. Taat of Van Waveren & Company, Hillegom, and W. Griesinger, representing Horticultural Amadonia, Ghent.

Among Bostonians attending the Rose Society Convention at Washington were: W. H. Elliott, Alex. Montgomery, Jr., Robert Miller, W. J. Stewart, P. Welch and J. K. M. L. Farquhar. J. W. D. Spring Flower Show.

The annual Spring flower show of the Massachusetts Horticultural Society will be held at Horticultural Hall, Boston, on March 22, 23, and 24. The display of Spring bulbs and Easter flowering plants at this exhibition promises to eclipse anything ever before shown at Horticultural Hall.

Baltimore, Md.

Florists' Club Meeting.
The meeting of the Gardeners' Club was very well attended and most interesting.

Professor T. B. Symmons, State Entomologist and secretary of the Maryland State Horticultural Society, attended the Gardeners' Club meeting and addressed its members on the Jamestown Exposition, urging them to put forth their best efforts to make the horticultural and floral exhibit of the State a creditable one. The club appointed five of its prominent members as a committee to communicate with the florists and nurserymen of this city and State and report the result of its labors to the club previous to the opening of the Exposition in April. It is expected from the florists and nurserymen that they will do their part to furnish a continuous exhibit from April until December 1st, the close of the exposition.

The following officers have been nominated: F. C. Bauer, for president; M. Richmond, vice-president; J. J. Perry, secretary; Geo. Talbot, financial secretary; and Chas. Wagner, librarian. The election will be held at the next meeting of the club.

A good-sized delegation will attend the Rose Society Convention at Washington.

Business conditions have improved very much and cut flowers are moving with more regularity. Prices are encouraging.

ANY OLD THING WON'T DO

Neither will half the new things. Just for example: Suppose a firm does sell you materials of sap free Cypress, sun dried, and all that kind of thing, that doesn't prove you'll get a good greenhouse. There is just as much skill in knowing when not to use Cypress as when to use it. An all Cypress house can't last—our half iron frame house will. By "half iron" we mean iron at decay points, such as eave plate, posts, columns, etc. We build the house of economy—if you want that kind of house and care for pleasant dealing, write us.

The Foley Plant, Chicago.

The new manufacturing and milling plant of the Foley Manufacturing Company, Chicago, an illustration of which is herewith presented, is fast approaching completion and it is in every respect, even to the most minute detail of construction and machinery, a modern thoroughly up-to-date institution. The main building is 168 feet long and 115 feet wide, containing basement and three stories, strictly modern mill construction, very heavy timbers with joists 6x11 in. thick, floors four inches thick, all thoroughly equipped with the very latest machinery and most modern appliances for greenhouse construction work. In addition to the main building there will be a power plant and machine plant for the production of ventilating machinery. These buildings will cover 100x109 feet. The power for the plant will be furnished by a large Nordberg engine of latest improved type capable of generating 500 to 600 horse power. An independent electric light plant and heating system are included in the plans. The factory will be supplied throughout with the most perfect sprinkler system, thereby practically insuring it against fire.

The lumber yards, etc., of the firm cover in all about three acres of ground on the C. B. and Q railroad with switch track facilities sufficient to handle twelve cars at a time. The plant is in the great manufacturing district of Chicago in the neighborhood of the immense McCormick works of the International Harvesting Company, being at Twenty-sixth street and Western avenue.

It is expected that the new quarters will be completed and occupied by the Foley Company, by April, and local and visiting florists will always find a welcome when they wish to visit the factory and see how greenhouse material is made and handled by an up-to-date establishment.

In addition to the greenhouse business of this concern there is maintained a department for the manufacture of all kinds of woodwork necessary for the construction of any

and all kinds of buildings, including factories, schools, residences, apartment buildings, and churches and in its new home the company will be in a position to ship all kinds of woodwork of this character to any point in the United States under most favorable conditions. W. K. W.

The New Manufacturing and Milling Plant of the Foley Manufacturing Company, Chicago

U-BAR

TO KEEP in repair the ordinary greenhouse is no small item—the sash bars rot—frequent painting is required. U-Bar Greenhouses are the best greenhouses built because the sash bar is thoroughly protected by the steel encasing—there is none so free from frequent painting costs because the interior has an aluminum finish that lasts years and remains brilliant and mildew free almost indefinitely. We are the sole makers of U-Bar Greenhouses. Send for Catalog. Pierson U-Bar Co., Designers and Builders of U-Bar Greenhouses, Metropolitan Building, 4th Ave., and 23d St., New York.

The More Glass—More Boiler Question

When you come to putting up more glass, you'll have to have more boiler capacity. The only greenhouse boiler on the market built to take care of exactly such future wants, in a practical way, is the "Burnham." For example: You have a greenhouse, say, 100 feet long; next season you may add another 100 feet—that means you will need increased boiler capacity. Our fifty years of experience in greenhouse work has taught us to provide in the easiest, most economical way for exactly such emergencies. To increase our boiler you simply take the front section off, and add the necessary sections, and better still, you can add these additional sections to our boiler without disturbing any piping; nor do you have to take the boiler down to put in a larger base, as we have base sections to fit the corresponding number of sections added, neither do you need to buy longer tie rods to hold the "Burnham" boiler together. There are no complicated headers with their many joints requiring much time and skill to connect them; no gasket to bother with or burn out and need replacing. There's no bracing up of the sections by heavy joists when setting up the boiler, nor a chance of all the sections loosening when you saw off the joint to add each section in turn. We connect each section by itself. Each section is individually bolted, and takes care of itself. You are certain that every section with its ground push nipple connection, is absolutely tight and there to stay. You can also see what a tremendous advantage our short bolt connections must be in the case of replacing or repairing sections.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XXIII. No. 12

NEW YORK AND CHICAGO, MARCH 23, 1907

One Dollar Per Year

CARNATION WINSOR

The most talked about carnation at the Toronto Convention. Won first prize for best 100 pink

Winsor is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders, and have a fine lot of stock in the cutting bench, so that we can promise, for the present, late March delivery on orders received within a short time at least.

If you have not already purchased a stock of this, you should lose no time do-

ing so. We are going to sell more Winsor than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market where our flowers are sold.

There is nothing on the market that approaches Winsor today in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities, in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high quality flowers. It practically does not split at all, notwithstanding the fact that we have had the darkest, dullest winter we have ever had, when the Enchantress and Lawson types are splitting badly all over the country with everyone, we have not had one-half of one per cent. of split calyxes on the Winsor. In fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement extravagant as it may appear.

Anyone who fails to plant Winsor this year will regret it. Rose pink Enchantress is good, and a good many other varieties are good, but IF YOU WANT THE WINNER, PLANT WINSOR.

We not only have a good thing in Winsor, but we are delivering good stock. As a sample of the testimonials that we are receiving, see this space in last issue. We are trying to give 110 cents on the dollar, and guarantee to please everybody with the stock sent out or we will not ask you to pay for it. We have still to receive our first complaint, and we have shipped between one and two hundred thousand cuttings to date.

Strong Rooted Cuttings. \$12.00 per 100, \$100.00 per 1000.

RAWSON'S ASTERS

are just a little superior to anybody else's

The product of our seeds can always demand a better price than those grown from seeds obtained elsewhere. The following is an extract from a letter received last fall from a most critical grower:

"Your Midsummer Aster has been a great money-maker for me. For every flower that I have brought into the Boston Market I have received from \$1.00 to \$1.50 per hundred more than for any other variety raised from seeds purchased elsewhere". J. W. Simpson.

RAWSON'S TWO GREAT QUALITY ASTERS

RAWSON'S NEW MIDSUMMER:

in White, Delicate Lavender,

Delicate Shell Pink and Bright Rose at \$2.00 per oz.; 60c. per 1/4 oz.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION
 Henry W. Wood, Richmond, Va., president; C. S. Burge, Toledo, O., first vice-president; G. B. McVay, Birmingham, Ala., second vice-president; C. E. Kendal, Cleveland, O., secretary and treasurer; J. H. Ford, Ravenna, O., assistant secretary.

Luther Burbank celebrated his fiftieth birthday on March 7.
 One of the leading German seedsmen writes us as follows: "We experience a considerable loss every season through a large number of our American friends not bearing in mind that the mail rate to Europe is five cents for every half ounce, and on that account we have to pay a good sum the year through. A little attention to this matter would save a good deal of annoyance, and the unnecessary enrichment of the post-office at our expense."

We willingly give publication to what seems to be a very justifiable complaint.
 The Wall Street News, New York, devotes a page of its March 4 number to a history of the well known house of J. M. Thorburn & Company, which has been established 104 years. Portraits of Grant Thorburn, the founder, and F. W. Bruggerhof, the present president of the firm, along with the new store, are also presented. The other officers of the company are E. E. Bruggerhof (son of the president), vice-president and treasurer; and J. J. Wilson, secretary.

SHIOCTON, WIS.—Negotiations are under way by which it is expected that Arthur P. Loewe, whose home is on a farm near Milwaukee, will assist M. Crawford the coming season, in his experimental work on land of the Shiocton Garden Land Company. Mr. Loewe is at present at Cornell University, where he is taking a comprehensive course in agriculture. Among other things Mr. Crawford will have ten acres devoted to gladiolus culture.

GREENHOUSE GROWN SEEDS of the better strain of lettuce have proved nearly a total failure in Massachusetts the past season, writes a prominent grower of this crop located in the eastern part of the State. There is a decided scarcity in these seeds. "We experience," he writes, "that our hothouse lettuce crop of seed grown in

Vandegrift & Company, 46 cases trees, 13 cases plants; Vaughan's Seed Store, five cases trees and shrubs; Wakem & McLaughlin, five cases plants.

EXPORTS OF SEED.—March 11.—Shipped from New York to Laguayra, 59 packages seed, valued at \$655; to Melbourne, 11 bags seed, valued at \$465; March 12.—To Hamburg, 1495 bags grass seed, valued at \$7,009, 24 packages seed, valued at \$447; to Hamilton, 15 packages seed, valued at \$118; to Liverpool, 50 bags clover seed, valued at \$940; to Santos, 118 bags seed, valued at \$333; March 13.—To Wellington, four packages seed, valued at \$175; March 14.—To Bucnaventura, six packages seed, valued at \$112; to Glasgow, 320 bags grass seed, valued at \$2,424, 250 bags clover seed, valued at \$3,610.

European Notes.
 A fair estimate of the position of things assures us that the season is nearly four weeks later than the average in many parts of Europe, and so long as the night frosts continue very little progress will be made, although thus far no serious injury appears to result. A brighter spell during the past week has given a much needed fillip to trade, and orders are coming in freely. The crisis in connection with the supply of spinach seed is becoming acute, such varieties as Viroflay, Victoria and Giant Thick-leaved being quite cleared out and the demand continues to be exceptionally brisk. Holders of good

Here is a list of a few: Victorlan, Wm. Marshall, Lena Ashwell, Nelly Nemsley, Good Hope, Pilot, Sole de Italla, Volcano, Fra Diavolo, Roland Von Berlin, Schneewittchen, Ortwin, Felix, Dahin, Papa Crozy, Jeanne Charmet, Mme. Keller, McKinley, Memoria, and 500 others.
EDWIN S. MANUEL, 19 Walnut St., NEWPORT, R. I.

stocks on your side should remember that they cannot be replaced until the new crop is ready and price their offers accordingly.

Peas continue to move off slowly on very easy terms, but when sowing commences in good earnest better conditions may prevail.

The clover market is quite stagnant and all exporting appears to be at a standstill. The same is true of rape and other market seeds.

Our primulas are now fairly past their best and we are busy fertilizing the plants for our seed crops. The weather is happily much more favorable than at this time last year, and if it continues the crop will be larger and the quality better.

The most noteworthy novelty of the year is an orange salmon pink variety of *sinensis* named Orange Prince. The color is very distinct and lively and

somewhat resembles the color of Henry Eckford sweet pea. Although the flower is not exceptionally large, the plants are very floriferous and robust in habit.

Cannell & Son have just gained a well-merited award for three new varieties of an improved *stellata* hybrid strain. In this strain the graceful habit of *P. stellata* is well preserved, but the individual flowers are as large as those of some of the finer varieties of *P. sinensis*. The varieties which secured this recognition are: W. Raphael, crimson; White Clipper, pure white; and Masterpiece, blue—a trio worthy of a place in every florist's collection. A blue sport from *P. sinensis* *alba magnifica* is also worthy of special mention. A pure yellow variety appears to be as far off as ever. The Duchess type is rapidly gaining in popularity; a distinct variety named Duchess Red is especially fine.

EUROPEAN SEEDS.

A NEW TYING MATERIAL

Try it on your Easter plants; pleasing, bright green color; stronger and cheaper and better in every way than string or raffia.

Sample Free—It is put up in coils and on reels. In handling it the coil is placed in the pocket and the tape drawn from the middle. The brass reels are hung from the vest buttonhole.

Price—Coils (enough for tying up 150 plants) 5c. each. 50c. per doz. (by mail).
Reels (250 yards), 75c. each. \$3.00 per doz. (by express).

Stokes Seed Store

219 MARKET ST., PHILADELPHIA.

New Early, Dwarf Pea, Laxtonian.

Laxton Brothers, the seed specialists of Bedford, England, have succeeded in

raising this new, first early, dwarf, Marrowfat pea, which they say is undoubtedly the finest and best of its class they have ever handled.

In point of earliness it is ready to gather green several days before Gradus, (*syn.* Prosperity) or Thomas Laxton. It is a true Marrowfat, having the richness and quality of the best main crop variety. The height is about eighteen inches. It has a good constitution, is very prolific, the pods being quite as large, if not larger than those of Gradus, with nine and ten large peas of the richest flavor. It is a wonderfully hardy and vigorous grower, far excelling in this respect most of the tall, early, marrow type of peas. Both pod and haulm are of a particularly rich, velvety green; the color of the seed when ripe is blue wrinkled.

The illustrations herewith show the new pea, also the comparative size of it with that of American Wonder.

HENRY F. MICHELL CO.,

1018 Market Street, Philadelphia

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.
 Orlando Harrison, Berlin, Md., president; J. W. Hill, Dea Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yatea, Rochester, N. Y., treasurer.

KNOXVILLE, TENN.—On March 13, J. I. Tripplert secured judgment against the Knoxville Nursery Company, which is owned by Congressman N. W. Hale, for \$3,500 in the United States District Court, on the ground the fruit trees were not what they were represented to be. Evidence showed that out of a large number of Alberta peaches ordered only one proved to be an Alberta. *Knoxville Banner.*

ROCHESTER, N. Y.—Nurserymen and fruit growers may perhaps be interested to know that the farm now leased by Jas. Vick's Sons of Rochester, N. Y., contains an orchard, the culture of which is under the direction of experts of the New York Agricultural Experiment Station. Last year was the third, and the experiment is to continue through a period of ten years. One point to be determined is the relative value of a system of cultivation and allowing the orchard to remain in sod, one-half of the orchard being treated one way, the other half in the other way. All other conditions, such as spraying, use of fertilizers, etc., are the same in both parts. This last year a difference between the cultivated portion and the other portion began to be manifest, in the deeper green of the foliage, and the general healthier and hardy appearance, while more good fruit was on the trees, all of which are Baldwins. The clover raised on the sod part is cut and left on the ground for a mulch. Another test being made is that of grafting Baldwin and Northern Spy varieties, claim being made that trees thus treated bear fruit six to seven years earlier than straight varieties. C.

Seasonable Notes.

Blue dogwood, *Cornus alternifolia*, is valued in ornamental planting on account of the singular vase-like growth it makes, quite unlike that of any other well-known shrub. Its name, blue dogwood, comes from the blue berries it bears in late Summer and Autumn.

Clematis coccinea, the scarlet flowered clematis, is a good seller. True, it is but a perennial, but strong plants of it will grow ten to fifteen feet in a season. When in pots and in flower it is a plant that attracts notice, so many persons being unaware that a scarlet clematis exists.

We cannot have eucalyptus trees to drain our swamps; they are not hardy where frosts occur, but there are several fast-growing trees that will answer as well. It is the foliage of trees that does the draining by the calls the leaves make on the roots for moisture. The more foliage the quicker the swamps are drained.

Yellow locust wood is excellent for posts, but has not proven so good for railroad ties, the hard wood refusing to hold spikes satisfactorily. A great deal of seed of it is being sown looking to the setting out of groves of trees for post purposes.

Among fast growing trees the wood of which is valuable, the catalpa, osage orange and common white mulberry may be mentioned; and for frostless regions, the blue gum, *Eucalyptus globulus*. These give timber long before other good but slower growing kinds are ready.

In Europe the *Acer pseudo-platanum* is commonly known as sycamore, or sycamore maple. Here the buttonwood, *Platanus occidentalis*, is known universally as sycamore and not so well as the plane, though plane is much the better name for it.

Honeysuckles do not require a great deal of pruning. Some of the older shoots may be cut out entirely and the tops of others shortened if too long. The young growth that follows a cutting back is always pleasing, but does not at all times give the flowers older portions would.

For growing under the shade of trees periwinkle, hypericum, ivy, partridge berry and *Euonymus radicans* are all good. It needs good soil for them as trees rob the ground so much that surface rooting plants have no chance unless food is near them.

A fungus will sometimes cause a branch or more of *Ampelopsis Veitchii* to die back, but if cut off below the dead section the branch will sprout afresh, and soon make up what it lost.

Partly shaded, damp places are often untenanted by plants. Primroses, polyanthus and all the allied family do well in such spots; and then there are always ferns to fall back on. A collection of ferns is a great pleasure to look upon when in their prime of growth in early Summer.

Norway Spruce Hedges.

All who are familiar with the Norway spruce know that there are two sorts of them, if this term may be applied, one of which starts to grow considerably sooner than the other in Spring. When in hedge form this difference is very striking; and as a fact detracts from the appearance of the hedge. To have the whole line of plants break into growth at once is much more pleasing than to have them do so promiscuously. The reason why this difference in growth exists is said to be that the early growing ones are female plants, the late ones male; but whether this has ever been verified the writer does not know.

Those wishing the uniformity which a hedge all pushing at once would display can secure it by planning a year in advance. Let it be some one's task to watch a block of Norway spruce in a nursery and the strings on or otherwise mark all the ones to push early into growth. In this way a hedge could be set the season following to contain all of one kind, either all early or all late.

The early growing ones are generally of a more luxuriant appearance than the late ones; and this may have led to the supposition that they represented the female plants, as vigor is believed to indicate it.

In spite of the many changes time causes in the appearance of hedges those of the Norway spruce are useful for many a year. Their bushiness ren-

merly; on the other hand, those interested in timber culture find it useful as a screen for catalpa groves, and even as a tree to furnish posts it is of great value.

Fruiting of Hazels.

When hazel nuts are set out in open places they rarely fruit well, at times not at all, causing surprise to those accustomed to seeing them fruiting abundantly in their wild situations. The explanation suggested by those acquainted with the character of the hazel, which seems to be a proper one, is, that exposed position brings forward the male flowers in advance of the female ones, hence fertilization fails. The hazel has the two sexes apart on the same bush. The male flowers are the catkins which ornament the bush in early Spring. The females are the small red ones, close to the stems, and often not noticed unless by those who are aware of their existence. In late Spring, when cold continues a long while and then warmth comes suddenly, the two sexes are much more likely to open together than otherwise. It is the experience of those who have tried it that, when in their wild state in tangles of wood and when on the north side of a hill, growth is not as forward in Spring, and the flowers of both sorts are more likely to open together. This shows the better place to plant the hazel.

The Sand Pear as a Stock.

The sand pear and its offspring the Le Conte are found unsuitable for using as stocks for ordinary pears, much as they may be desirable for the Kieffer, Garber and other kindred bloods. When the ordinary pears are worked on them they grow nicely for a year or two, then almost cease growing and dwindle away. Whether this is true, too, in respect to the Kieffer itself, when its seed are grown, is not so well attested. As it is a hybrid between the common sand pear and a common one, supposedly the Bartlett, its seedlings may be better suited for stocks than pure sand pear seedlings would be; still, those who have tried it do not appear to consider it as good for their purpose as the common French pear stocks. Australian papers speak of the Kieffer seeds being used by the nurserymen of that country at the present time. What attracts those who use the seeds of the sand pear tribe, is, that the seedlings are just the thing for stocks for the Kieffer, this latter being popular everywhere as a profitable market pear; and then the vigorous growth of these seedlings would fit them for stocks for all sorts of pears could they be got to thrive on them.

Transplanting Hollies.

The difficulty many experience in transplanting hollies comes from inattention to the proper pruning of the bushes. Attention has often been called to the fact that unless these bushes are closely pruned and the foliage as well, success is hard to attain. Not only should the branches be shortened back fully one-half, but every leaf should be cut away as well. There are hardly any exceptions to this. Even such subjects as have been often transplanted are the better for the pruning, though it may be some would live without it. Evergreens, especially board-leaved ones, such as the holly is called, need double care when being transplanted because of their leaves. The leaves call for moisture as well as the branches, and this double demand exhausts them sooner than in the case of a shrub carrying no leaves.

Magnolia grandiflora and all evergreens not carrying balls of fibrous roots need treating just as recommended for the holly.

When difficulty is encountered in the wintering of *Magnolia grandiflora*, English holly and other evergreens that suffer in Winter, it will prove an advantage to cut off every leaf before Winter sets in. What is the use of leaving the bushes to carry foliage that will surely be browned dead by Spring? Not only are they a disfigurement; they are worse, as all Winter long they have been drawing on the roots for moisture, doubling their work and working great injury to the bushes. Evidently if dead in Spring, it will be much the better way to remove them before Winter sets in.

Lonicera Japonica.

This vine is often called Hall's honeysuckle or *Lonicera Halleana*; but more strictly speaking *Halleana* is the name given to that variety of japonica which flowers in the Fall. The foliage is dark green and very persistent; in fact, half evergreen. The flowers are white and yellow and exceedingly fragrant. This is a most useful vine in many ways. It is good for covering rough banks, trees, stumps, or rocks. As a climber for trellis work, pergolas, or porch it is indispensable. The illustration represents it as a bush.

Glen Cove, L. I. JOHN F. JOHNSTON.

Lonicera Halleana, Japanese Honeysuckle

Photo by John F. Johnston

ders them of value for screening and for defense. When of age these hedges are sometimes deficient in growth near the ground, but in this case it is as much from lack of nourishment as from any other cause, and it could be averted by giving the hedge a good dressing of manure on the advent of every Winter. This would afford the plants the food they want to keep them of a fresh and pleasing appearance.

Sowing Osage Orange Seed.

A correspondent writing from Ohio states that out of a pound of Osage orange seed he got from a seedsman last year not a plant resulted, and he blames the seedsman for selling him old seeds. It is, evidently, not known to him, as it may not be to many others, that old seed of the Osage orange will germinate very well; in fact the greater part of the seed sown by nurserymen is a year old. The large balls of Osage orange containing the seeds do not decay sufficiently to admit of the washing out the seeds until rather late in Spring, hence the use of the old seed. Just how many years it will keep viable has not been proved, but no one need hesitate over seed that is no more than one or two years old. The nursery plan is to soak the seed in tepid water for 48 hours, then sow it immediately, when good results may be confidently looked for.

There are still calls for this orange as a hedge plant, but not nearly to the same extent as for-

ROSES

Easter will be with us now in one short week, and from present indications roses will be very plentiful. The dark cold weather has held the flowers back all winter, so that now, with longer days and more of Old Sol's rays, the plants are trying to make up for lost time. This seems to be the case everywhere this year. With large quantities of roses in the market, it is safe to say that nothing but the first-class stock will bring fair returns. Any undue forcing to bring out a few extra flowers for Easter will be a very poor plan, as the blooms become smaller and lose their color and the plants are left in a condition that invites mildew.

Any attempt to hold back stock already out will also be poor policy, for only fresh flowers can be sold. Pickled stock at any time is seldom bought, and Easter is principally a plant holiday. Keep the houses cool therefore, and the blooms will be large, full and well colored.

If the plants are in good health, it is almost impossible to overfeed them from now on. A good dose of liquid twice a week if the benches dry out, will do no harm, and if some wood ashes can be procured give the benches a dusting of these, omitting the liquid at the time. If the ashes are from hard wood and unleached as they should be, you will note the change in your plants in a very few days.

The young stock will, of course, take up a lot of our time, but it is a poor plan to let the old plants shift for themselves. Keep them tied up above all things, if straight stems are to be had. Greenfly will now prove very troublesome; keep after it.

Do not keep the young stock too wet, allow the pots to get fairly dry (not white), then water thoroughly. This will insure a strong, sturdy growth.

The early potted plants may have to be shifted before Easter, but we generally like to wait until the first growth is made and well ripened. At this time it will be found the pots are full of roots, and when in this stage there should be no delay in shifting the plants. Never allow the young plants to get pot-bound or their value is greatly diminished.

The soil used now should be the same as used in the benches, to which a little ground bone has been added—about a 4-inch potful to an ordinary wheelbarrow load of soil. The pots should be crocked to provide drainage; for this purpose, cinders or potsherds are generally used, but if the coarse sod, etc., which is left after the soil is screened, is kept this will make the ideal drainage.

The pots should be set on ashes, not on the old soil, and as recommended earlier for the potted cuttings, give the plants the best and highest space possible. In potting, have the soil in a condition to pack easily, and set the plants well in the soil. Never allow the ball to stick out of the pot. Pot firmly and then give a good soaking, being careful not to puddle the soil. When knocking out the plants it is needless to say that all the scum and weeds, if any, should be carefully removed before potting; and never plant or pot a plant that is dry. PENN.

GRAND NEW CANNAS

William Saunders The flowers are large, of splendid form, and are born very freely in immense clusters. The color is a deep rich shining scarlet lightly dappled with crimson. Foliage is a rich bronze. Height, 3 1/2 to 4 feet. We believe that Wm. Saunders is decidedly the most perfect canna of this type that has been introduced. 50c. each; \$5.00 per doz.; \$35.00 per 100.

Ottawa is a strong grower, very robust and 5 to 6 feet high. The flowers are large and beautifully formed, color is carmine with tints of old rose and deep coral, add to this the silken sheen and you can imagine the effect a few plants will produce.

Note.—We had this canna on trial among the Canadian experimental stations last summer and this is the official report of their expert: Quite distinct and one of the most beautiful shades of color I ever saw in cannas. Of 70 massed in one bed during the past season, this was the most floriferous in the collection, coming into bloom early and continuing until cut down by frost, as many as 13 expanded heads of bloom being counted at one time on a plant, and not a poor one among them, all being of immense size." 50c. each; \$5.00 per doz.; \$35.00 per 100.

New York Has the Orchid type of flower. They have much more substance than the flowers of the other varieties of this class, and will stand the hot sunshine as well as the toughest varieties of canna. The color is a solid rich scarlet covered with a beautiful glowing sheen. The flowers are large and contrast beautifully with the dark bronze foliage. 50c. each; \$5.00 per doz.; \$35.00 per 100.

Send for our list and prices of 60 other leading varieties of cannas. Are our great specialty, 2 1/2 and 4 in. pot plants we have in great variety. Teas, Hybrid Teas and H. P. Roses on their own roots. Philadelphia Rambler, Crimson Rambler, Dorothy Perkins and other climbers in strong field plants.

in variety. Viburnum Plicatum, Spireas, Altheas, Deutzias, Weigelias, Barberry Thunbergii, Hydrangea Pan. Grandiflora, Honeysuckles, etc. Send for our Price Lists.

Hardy Roses for Decoration Day

HARDY H. P. ROSES

We offer exceptionally strong two-year-old dormant, low-budded stock (on Manetti), in the following varieties:
Alfred Colomb, carmine.
Anna de Diesbach, bright carmine.
Ball of Snow, pure white.
Baron de Bonstetten, dark crimson shaded.
Baronesa Rothschild, satiny pink; extra.
Captain Christy, delicate flesh color.
Dukes of Edinburgh, bright vermillion; very fine.
Fisher Holmes, dark rich scarlet.
Frau Karl Druschki, the finest white in existence, \$12.00 per 100.
General Jacquemont, rich velvety crimson.
General Washington, beautiful red, shaded carmine.
John Hopper, beautiful rose pink.
La France, the finest light pink.
Margaret Dickson, white, pale flesh center.
Magna Charta, clear rosy pink.
Mrs. Gabriel Luizet, light, satiny pink.
Mrs. Planter, white.
Mrs. John Laing, soft pink; most desirable variety.
Paul Neyron, beautiful dark pink.
Prince Camille de Rohan, velvety crimson.
Ulrich Brunner, cherry red.
Prices on H. P. Roses \$1.25 per 10; \$11.00 per 100; \$100.00 per 1000.
HYBRID TEA ROSES
Maman Cochet, pink. Maman Cochet, white. Unequaled as bedders for Summer bloom-

ing, producing buds of large size and of ideal form. The buds are of the color and form of Bridesmaid and Bride, but larger, and outside will yield more blooms than the latter will under glass. The two finest outdoor Roses yet introduced. Strong 2-year-old plants, 10 for \$1.50; \$12.00 per 100.
American Beauty, Clothids Soupart, Kaiserin Augusta Victoria, Carolins Testout, Hermosa. Strong, 2-year-old, \$1.50 per 10; \$12.00 per 100.

THE KILLARNEY ROSE
Irish Grown From the Raiser.
Good strong two-year-old plants, \$3.00 per 10; \$27.50 per 100.

HARDY ROSE SOLEIL D'OR
(Golden Sun.)
Like Persian Yellow, this variety is perfectly hardy, with large, full, globular flowers, varying in color from gold and orange to reddish gold, shaded with astringent red. Two-year-old budded plants, per 10, \$2.00; per 100, \$15.00.

The Grand New Rose
ETOILE DE FRANCE
Superb crimson red velvet, the center of the bloom vivid cerise red. The flowers are very fragrant and last long. This new variety is the result of a cross between Madame Abel Chateau and Fisher Holmes. Field-grown, strong two-year-old plants, \$2.75 per 10; \$25.00 per 100.

QUESTION BOX

Wire Grass On Lawn

(63) Can any reader inform me how to exterminate a wire grass that bears a small blue flower and that has ruined my lawn? Last year I had the lawn plowed and raked without getting out the grass.

CHICAGO.
—Will some reader give a good remedy for this pest and oblige.

Manure from Spent Mushroom Bed.

(64) Can manure from spent mushroom bed be used outdoors without injury to general bedding stock?

Penna. A. M. B.
—Manure from a spent mushroom bed is a very good fertilizer for outdoors, can be used freely and there is no danger of any injurious effects from its use.

Ants in Carnation Houses.

(65) What is the best means of eradicating ants from carnation houses?

Cal. D. B.
—A very good remedy for ants is the following: Make a mixture consisting of one-third Fowler's solution of arsenic and two-thirds common sugar syrup. Scatter a few drops of this near the runways of the ants. This is a sure remedy and one from the use of which no danger will result.

Hydrangeas in Tubs.

(66) Is it advisable to give tub hydrangeas a heavy cutting back, about the same as Hydrangea paniculata? Can a plant too large for its tub be safely divided? What soil is best for tub hydrangeas?

Mass. H. H.
—Hydrangeas that are grown in tubs flower only on the wood that was made the preceding year, consequently it will be seen that to cut these back heavily will be to cut away all the flowering wood, and by so doing a season's flowers would be entirely lost. We would advise cutting out a few of the weak growths that are not likely to be strong enough to bloom, if there are any such, and in re-tubbing we would use a soil composed of one-fifth thoroughly decomposed manure and four-fifths fresh loam. We do not think the plant could be divided with any degree of success.

Prices Advertised in these Columns are for

During 1906 we furnished to the trade over One Hundred Thousand of the below described leaflets.

CULTURAL DIRECTIONS

Specially written for the use of your amateur customers. Send Twenty-five cents for complete sample set, which amount will be deducted from order for first thousand.

The universal favor in which these Directions are held, as shown by the many orders received therefor, encourages us in the belief that these Leaflets are just the neat little factor to help promote business and establish better relations between the dealer and his customer.

TRY SOME!

BIG BUSINESS ASSISTANT

TO SAVE TIME, QUICKEN SALES, AND AID YOU PLEASE YOUR CUSTOMER, WE HAVE PREPARED

Cultural Directions

COVERING A NUMBER OF THOSE PLANTS AND BULBS MOST LARGELY IN DEMAND

THE "CULTURALS" have been written by experts; they are fuller, and contain more detailed directions than it is possible to embrace in a catalogue. Equipped with these, just hand one out with each sale, and save yourself considerable present and future trouble, as the customer will then be able to consult the directions, grow his plants, seeds or bulbs intelligently, and so receive satisfactory results, without having to continually resort to you for advice.

The following "Culturals" are now ready:

- | | | |
|---------------------------|--------------------------------------|--|
| AMARYLLIS (Hippeastrum) | CROCUS, Snowdrop and Scilla Sibirica | MUSHROOM CULTURE ONIONS |
| ANNUALS FROM SEED | DAHLIA | PALMS, House Culture of |
| ASPARAGUS | FERNS | PANSY |
| ASTERS | FRESIA | PEONIES |
| BEGONIA, TUBEROUS | GERANIUM | PERENNIALS, Hardy |
| BULBS | GLADIOLUS | PRIMULA |

Decorative Plants.

TUBEROUS BEGONIAS.—Although in Summer flowers are reasonably plentiful, also plants for decoration by retail florists, still I have often known it to occur that a difficulty arose out of the scarcity of suitable material even in the middle of Summer when an order called for plants in bloom for a table decoration. Tuberosus begonias, although now principally made use of for outdoor planting, are nevertheless very suitable for such purposes as I have referred to. For these purposes the plants can be grown in a bench and lifted when called into action; or, better than that, they can be grown in 5-inch pots and reserved for such use. This type of begonia is now so much improved that in some of the choicer varieties will be found material for very effective work in decoration. Many persons favor the double varieties, but I think there is but little if any fault to be found with a well-grown plant of the single, especially the red.

Tuberosus-rooted begonias are easily raised from seed from which, flowering plants will develop within the year, but at this time of the year, when it is a little late for seed sowing, it will be better for those desirous of securing serviceable plants to purchase bulbs from some reliable source where they can be obtained nowadays at a very reasonable price.

CALADIUMS are among the most showy and attractive of decorative foliage plants and the increasing demand for a greater variety for commercial purposes is causing more attention to be given to these beautiful plants. The culture of caladiums does not differ very much in point of difficulty at least from that of many other plants commonly grown. Caladiums are easily propagated by division of the tubers early in Spring, or just when growth commences. About the first of March it is time to start the tubers growing; and probably the best and most expeditious method is first to sort all the available tubers into sizes, keeping each size separate, and then place each separate batch in a box

of boxes, using nothing but moss in the boxes. The tubers may be placed close to one another, as their stay in the boxes will not be long enough to injure them by crowding. Cover the tubers with about three-fourths of an inch of moss. If a temperature of at least 70 degrees cannot be kept up, it will be better to construct a covered frame over the pipes, where by keeping the sash on that temperature can be maintained.

When from the tubers roots have made their appearance, the plants should be potted in the smallest size pots into which they can be put, in soil composed of leaf mold two parts with the other part of sand and peat in equal proportions. Shift the plants into larger pots whenever they show that they need it. Water should be carefully and rather sparingly given at the roots until they have made some progress in growth. For subsequent potting afford soil composed of leaf mold, fibrous loam and peat in equal parts, with the addition of a little well rotted manure and sand.

Caladiums should be grown in a position near the glass but shaded from bright sunlight. They like a rather humid atmosphere, and when growing vigorously and pushing ahead to final development a liberal supply of water is absolutely essential. In the Fall, when their season of usefulness is over, caladiums should be gradually deprived of water until they drop all their leaves, when they may be stored for the Winter underneath a bench, laying the pots on their sides. Or when ripened, as noted, the tubers may be taken out of the soil in the pots and placed in sand for the Winter. In either case the temperature surrounding them should not be under 50 degrees, neither should the tubers be allowed to get bone dry or too wet.

ALOCASIAS in their tropical luxuriance of growth are almost indispensable where a large and varied collection of plants are under cultivation in greenhouses or private estates, as well for their unmatched qualities for making such houses attractive to visit as for their usefulness when removed temporarily to conservatories for display or

even for brief periods to the less favorable conditions of private dwellings where they will, if carefully attended to, stand for a time uninjured.

It is fully as much because of the immense proportions of their leaves, their great adornment, as from any other cause incident to cultivation that alocasias are not more largely grown commercially for decorative purposes, although recently it has been noted that florists doing a first-class business have frequently made effective use of one or more noble specimens in the decoration of windows. When a florist has on hand a decoration in plants, where full scope is allowed, the use of a few alocasias will add a richness to the effect that the use of but few other plants can give.

Alocasias are propagated by suckers or cuttings of the rhizomes. These may be placed in small pots filled with peat and sand in equal proportions, and the pots plunged in a close frame over bottom heat in a temperature of 70 degrees. It is very important to put drainage material in the pots to at least fill one-third of the pot room. The stems of alocasias can also be cut up, leaving with each piece one bud, then placing them in boxes much the same way as suggested for caladiums, and treated in like manner and started about the same time. It is essential for success that in the case of the evergreen species the potting material should be raised up cone-shape above the rim of the pot, with a surface covering of live sphagnum moss. Alocasias require liberal supplies of water at the roots, but they should not be violently syringed; an occasional spraying with an atomizer will, however, benefit the foliage greatly. A humid atmosphere is a necessity to their well-doing. On nearing Winter the evergreen kinds should receive less water and be kept in a drier atmosphere than formerly. With herbaceous kinds, water can be sparingly given until finally they can be put to rest without receiving any for a time, and kept thus in a temperature not lower than 50 degrees for the Winter.

PHENIX ROEBELENI.—With in the past year it is wonderful how this palm has pushed into prominence and that considering that it is by no means a new variety; but perhaps it is still more wonderful that its claims for universal recognition were not long since recognized.

Phenix Roebelenii is for many purposes far ahead of any other variety of phenix, and I might go as far as to say that in some respects and for some practical uses it will in time take the place of Cocos Weddeliana, because it is of a more rugged constitution and capable of standing rougher usage, while at the same time it possesses, to a certain degree at least, the characteristic coccosfulness of frond that has made the coccos so much prized.

In another way it has the advantage of the coccos, in that the longer it is in the owner's possession the more valuable it becomes for more imposing effects; and although the other may also be valuable at maturity, so few survive to that stage because of the difficulty in keeping them in perfect condition, that as specimens they are not taken much into consideration. Not so with Phenix Roebelenii, however, because it becomes easier to manage the larger it gets. Anyone having use and space should not delay purchasing a number of Phenix Roebelenii; in fact, those who do not will before long understand they have made a mistake.

JAMES VICK'S SONS ROCHESTER, N. Y.

The Leading Specialists and Largest
Growers of High Grade Asters
in the World.

Five New Varieties For 1907

VICK'S SUNSET. Companion to Daybreak
and Purity, in color a delicate pink shading to
a deep rich pink in center. Profuse bloomer.
Price per packet, 25c.; 2 pkts. 40c.

VICK'S UPRIGHT. Long graceful stems
branch out at the ground and grow directly
upward. Flowers are symmetrical, double
and full to the center. Splendid for cutting.
Especially valuable for shipping. Price per
packet, 25c.; 2 pkts. 40c.

VICK'S ROYAL PURPLE. An offshoot from
the Branching. Unlike its parent it sends out
stems close to the ground. A medium early
variety but lasting until late in fall. Nearly
every stem produces specimen flowers. Price
per packet, 20c.; 2 pkts. 35c.

VICK'S BRANCHING ROSY CARMINE. A new
color in the Branching Class. Leading florists
pronounce it a shade which will be popular
with the trade. Price per packet, 25c.; 2
pkts. 40c.

VICK'S CARDINAL. The best bedding Aster
ever introduced. A good one for cutting.
With its profusion of flowers and brilliant
coloring it makes a handsome showing. Price
per packet, 25c.; 2 pkts. 40c.

For illustrations and prices per ounce see our
ASTER BOOK FOR FLORISTS.

PAINESVILLE, OHIO.

The Best Either to Buy or Sell

It has been my desire for some
time past to inform you of a re-
cent sale of greenhouse property.
The property in question is that
formerly owned by John Dingwall,
purchased by R. W. Zobel.

Mr. Dingwall, over a year, tried
to sell his property, and placed
such in the hands of every real
estate agent in this city; but they
all reported their inability to find
a purchaser. Being a personal
friend of Dingwall, I interested
myself in his affairs, and hence
suggested that if he would insert
an advertisement in The Florists'
Exchange, he would surely get a
purchaser before the Summer of
1906. Advertisement was written
up and signed "Graveline," for-
warded to The Florists' Exchange,
and in less than one month the

property was sold, and the pur-
chaser is well satisfied, and would
not sell for 50 per cent. more than
the purchase price.

My object in writing to you is
to set forth the great value of
your paper as the best advertising
medium from a florist's standpoint.

Personally, I have procured
good bargains through your paper.
Pardon this lengthy letter; the
sale was too good to keep down.
J. H. VOGEL.

Albany, N. Y.

P. S.—In a recent purchase of
glass, I procured such of the
Metropolitan Material Company of
Brooklyn at \$1 less per box than
of local houses. Again it shows
the necessity of careful perusal of
the advertisements as noted in The
Exchange.

THE WEEK'S WORK.

Timme's Timely Teachings.

Bedding Plants.

It is surprising to behold the growth
of the plant trade as the years roll by.
The annual increase in business, how-
ever this branch of horticultural activ-
ity has been made a specialty or an
important side line, has in every in-
stance been far greater than was an-
ticipated. Great numbers of potted
plants for indoor embellishment and as
holiday offerings are raised and readily
disposed of, and their culture has be-
come an item of diligent study and close
attention. But more than this has the
trade increased in bedding plants and
anything of whatever kind or class
suitable for outdoor planting in the
Spring of the year. It is a trade not
confined to any one part or locality but
flourishing and gaining in importance in
all sections of the country wherever flor-
ists are willing to give it the attention
it deserves. There is even no need of
being favorably located for the retailing
of bedding plants and they may still be
grown and disposed of by the thousands.
A few good orders from some good-sized
resorts, summering places, hotels or
brother florists running short of stock,
will often make away with the entire
contents of an establishment. A good
grower may make a specialty of any one
of the leading kinds, such as geraniums,
pansies, etc., and he will encounter no
trouble in gathering in orders in plenty;
and if his stock comes anyway near
being uncommonly good, it will soon be
known, and a sound foundation for a
thriving business is laid. As in all
other lines of trade quality is the path-
finder to success, and knowing how wins
out against all odds.

Not Everybody's Hobby.

That the culture of bedding plants,
though highly profitable, is not to every-
body's liking is a fact and it is one
not hard to understand. There are a
great many reasons which deter florists
starting into business from going into
this. The raising and oft-repeated
handling of many and varied kinds of
plants involves a great amount of labor,
diversified culture, economical manage-
ment and wise forethought, requires ade-
quate and proper facilities and all this
work of well-timed preparation finally

culminates in a few weeks of the most
strenuous business activity, each trans-
action in character differing widely from
the other, but all alike in their being
rushed along under the high pressure
force, exerted by a fleeting season and
augmented by the element of impatience
strongly manifest in every order received.
Such high-speed trading and multi-
farious activity has naturally little at-
traction in it for the man of easy going
habits and staid composure, but the
principal objection to the business in
nearly all cases is the raising and care
of many kinds of stock, a phase of
gardening that does not appeal to the
adepts of present day floriculture. To
a few of the very best of us, though,
and to a host of others it is a line of
industry eminently congenial. Those
truly interested in gardening and not op-
posed to hustling, like the business, and
the number of these is growing from
year to year. Still one cannot help but
admit that the retail florist in a good
location, who refuses no business in his
line, makes up floral pieces, plants trees,
shrubs and climbers, raises everything
in the bedding and pot plant line, makes
lawns, decorates, fills vases and boxes,
is a mighty busy man.

Care of Bedding Stock.

Making a good and timely start in
the raising of bedding plants means
much in making it a successful line of
business. Of equal importance is the
kind of care the stock receives after it
is started. Being intended for outdoor
planting, this object should never be
lost sight of by the grower, nor should
he ever forget that if his stock does well
for his customers this season it will be
more heavily called for next year. Any-
thing new, exceedingly pleasing and do-
ing finely in one garden this Summer
will certainly be wanted by a number
of new customers next Spring. Any-
thing of the more common species,
frivolous things as ordinarily grown by
the people themselves, often arouse won-
der and admiration when raised by and
bought from the florist. Asters, stocks,
zinnias and petunias are examples.
These and many others things, easily
and quickly grown into salable size,
must now be included in every complete
collection of bedding material and are
called for every Spring. It is plain that
the profit on stock of this description
must be far greater than that realized
from the sales of geraniums, pansies,
coleus and all the hundred and one kinds
of greenhouse plants carried along for
nearly a year or more. I sow petunias
in the beginning of March and sell them
in May for from 40c. to \$1 per dozen
out of two, three or four-inch pots. Of
course, it is understood that none but
the very best strains of seeds procurable
are used in handling any of these com-
mon annuals. This is one point de-
serving attention; and the other of even
more importance is stocky, robust
growth, made in cool, light and airy
quarters, as much as ever possible away
from fire heat and up to the clear light.
A temperature close down to freezing,
even occasionally dipping below the
mark, will do less harm to such things
as petunias, asters, stocks, verbenas, lo-
belias, myosotis, snapdragons, phlox,
pinks and carnations, than would a
steady temperature of 55 or 60 degrees.
Most bedding plants of this kind are
grown in too great a heat at just about
this time. From now on outdoor frames
should freely be used for the more hardy
plants, so as to gain more room in the
houses for those of tender growth, which
latter should not be transferred to
frames before May.

Bedding plants of rapid growth—and
nearly all kinds are such at this season
—should be allowed to become reason-
ably well root-bound in their pots by
the time sales begin, so that in packing,
shipping and handling they do not lose
what in being pot-grown they may have
gained in price and value. Stock thus
becoming more firmly root-bound from
day to day, while at the same time the
sun heat grows stronger right along,
needs the closest attention as to water-
ing, and if this is given as it should,
will remain in a better condition for
marketing and planting out than when
re-potted at the eleventh hour. And
here is a good place for the remark that
size and condition of the plant, of what-
ever kind it may be, should govern the
height of the price, not the size of the
pot. Needless repotting of stock which
would be in better selling shape without
it, too late a transplanting of such that
needs it, a frequent shifting of stock

A Special Light Mixture of GLADIOLI for Florists

¶ You cannot duplicate the quality for several times the price.

¶ There are varieties in this mixture you would not sell for fifteen dollars per hundred.

¶ The vitality and power of multiplication is exceptional.

What Do You Think of This UNPARALLELED OFFER?

1907

ARTHUR COWEE, Gladiolus Specialist
Meadowvale Farm, Berlin, N. Y.

Dear Sir:

Herewith find \$ _____ for which you may enter
my order for _____ thousand of your Meadowvale
our Florist's Light Mixture to be shipped via ^{freight}_{express} about
_____ F. O. B. Berlin, N. Y.

This order was given by ^{me}_{us} and taken by you with the understanding that if given proper soil and cultivation, we can, after blooming this season (1907) conscientiously say we have not received full value ^I_{we} can, at harvest time, return the stock, together with its increase in bulbs and cormels to you via ^{freight}_{express} and you will refund the above amount paid.

If returned ^{freight}_{express} charges will be paid by ^{me}_{us}.

Name _____

Town _____ County _____

State _____

This order has been accepted and entered under the above Conditions.

Berlin, N. Y., _____ 190_____

¶ For forcing I can recommend it as being almost equal to the best named varieties generally used for that purpose.

¶ It contains named novelties of merit, and hybrids bred especially to supply the needs of Florists requiring light colors.

HAVING for many years experimented extensively to the end of supplying a White and Light Mixture especially adapted to the Florist's trade, for Funeral and Decorative Work where light colors alone would be appropriate, I am now prepared to furnish my Meadowvale Florist's Light Mixture, which I can guarantee to contain the best quality obtainable in the world at the price. There is such a variation in Florist's Mixtures, as generally offered, that I do not wonder at the frequent disgust of the purchaser, and in my preparation of this stock I have endeavored to eliminate every variety with which the most critical Florist could find fault.

This Mixture was offered last Spring for the first time and over 500,000 were placed and not one complaint received, a sure indication that it was favorably received by the Florists. For this season, 1906-1907, it will be sold only by me and in lots of not less than 1,000 or more. Price \$15.00 per thousand F. O. B. Berlin, N. Y., cash with order, and will be sold subject to the conditions on above order blank.

This offer will hold good as long as the stock lasts and orders will be entered in their turn, although shipment may not be required until later.

When the stock is all sold, this offer will be withdrawn, without further notice, therefore do not delay and miss it.

May I not have the opportunity of demonstrating that I have a Mixture which, after growing one season, you would not part with for double the price paid? If so, fill out the order blank and send to me with remittance; I will sign and return duplicate to you.

Illustrated Catalogue of other collections, mixtures and named varieties will be mailed upon application.

ARTHUR COWEE, Gladiolus Specialist

from place to place when a rightly chosen position in the first potting would have answered right along until such stock is disposed of, in short, mismanagement of whatever description cuts down profits considerably.

Marketable Condition of Stock.

Bedding plants, which, of course, includes anything and everything made use of in the filling of boxes, urns and vases, must be in proper condition for the uses assigned to them when leaving the establishment of the florist. They must not only look well when sold, delivered and planted out, but must continue to do well right along when properly taken care of. The remark so often made by a large class of people that they would rather raise their own plants as best they could, than to buy plants from the "hothouse," which invariably die down with them as soon as put in the garden, tells the whole tale, and to disprove its truth should be the aim of every plantsman. The transfer of bedding stock from the florist's place to the grounds of his customers, instead of acting as a set-back, should impart renewed vigor and be a guarantee for continued well-being. In trying to build up a flourishing trade in bedding plants this point is worth while considering.

Stock especially raised and dealt in for outdoor planting should, in the first place, never be actually forced or grown under conditions causing a too rapid or a too soft growth. A gradual hardening off, a weaning to outdoor conditions as the planting season draws nearer properly prepares the stock for its last move, and renders the final change beneficial rather than a risky or harmful proceeding. As the weather becomes warmer and the plants stronger it will be safe and proper to reduce fire heat and atmospheric moisture, to expose the stock to the fullest light and to admit air in ample measure. How soon this hardening off should begin and in what manner it can best be accomplished depends largely on the character of the stock, which, of course, varies greatly.

The selling of bedding plants out of trays, as practiced years ago and still in vogue on many places, is one of the causes of disappointment to buyers. Many of the things usually so grown could just as well be raised in pots. It takes no longer to pot a plant than to transplant it into other trays, and what little more room it takes up when potted, is well paid for by the higher price it brings, by increased sales and by the greater satisfaction it gives to those that buy and plant it. A petunia, snapdragon or an aster coming out of a small pot is quite a different thing from any such dug out of trays or cold frames, which latter are possibly all right for the gardener's own use but are not what should be offered to a good patronage. To illustrate how unwise it is to follow the course set by an old custom I need only point to the difference in the price obtainable for plants

raised in either form. Verbenas, phlox, petunias and like plants, sold out of trays, bring from fifteen to twenty cents per dozen, while those coming out of two or two and a half-inch pots easily sell at more than double that price and are preferred by most buyers.

The Price of Plants.

The question coming up every Spring and forming the essence of a letter before me: "What is the proper retail price of the various kinds and sizes of plants raised for Spring sales and outdoor planting?" is one not easily answered if put in that form. Attempts have been made to establish a fixed standard of quality in plants—a thing plainly impossible to do. As long as this cannot be done—yes, and even if it could—the fixing of, and holding to a uniform standard of ruling prices will ever remain a difficult undertaking. At present retail prices of plants of the same size and grade vary considerably, even among growers located in one and the same narrow precinct. Keen competition, of course, has much to do with this and will always have to be reckoned with, more or less. Killing off a number of price-cutting competitors is probably the only remedy, but I believe that is against the law.

I probably come nearest to answering the question intelligently by briefly stating the prices asked and obtained in the last two years for the stock raised and handled on my own place. Geraniums, heliotropes, lantanas, salvias and anything from the ordinary run of greenhouse stock in four-inch pots and in bloom, excepting novelties, is sold at from \$1 to \$1.50 per dozen, from 15c. to 25c. a piece or from \$3 to \$10 per 100 (retail); the range in price being governed by grade or quality of plants. Extra good five-inch plants of this kind easily bring \$2 per dozen. Good 3-inch stock of this and all kinds of bedding plants, including cannas, dahlias, coleus, perennials, ferns, climbers, etc., brings from 60c. to \$1 a dozen, or 10c. a-piece and three for 25c.—always excepting anything new or rare. Pansies, daisies and a few other things, coming out of frames, retail at 40c. or 50c. a dozen and are often sold to customers by the hundred at \$3 per hundred, in which case they usually take them as they come, whether all in bloom or not. All the commoner kinds of bedding stock, coming out of two-inch pots, bring the same price as pansies. Any planting of purchased or ordered stock to be done by us, is charged for at the rate of 25c. per hour. All delivering within two miles is done gratis; if much farther than that, car fare or extra pay is collected. Vases of about two feet in diameter are filled for from \$3 to \$5; boxes of about nine inches in width for from 60c. to \$1 per running foot, the carting back and forth, if this is wanted, being included in the price.

FRED. W. TIMME.

**PREPARE
FOR
EASTER**

*From lands afar, where the choicest are,
I gather the plants I supply;
Or grow my own, with care unknown,
So the best are the sort you buy.
Then send in your orders, and see your
trade grow,
None can surpass Aschmann, wherever
you go.*

An immense stock of choice Easter plants, blooming Easter week or earlier if desired, are now ready for immediate shipment.

COME or Mail your order direct to Headquarters.

Our reputation over the entire country, from the Atlantic to the Pacific, in growing Easter stock for many years past, is sufficient guarantee to prove what I say. We have every house, nook, hole and corner full; plants were never so fine as they are this year, 1907.

While laborers, merchants, jobbers, contractors, builders, etc., have increased their prices nearly double, we DO NOT advance our prices; look! I sell our plants at the same old prices charged two or three years ago when the producing of plants was much cheaper.

Latrobe, Pa., February 18, 1907

MR. GODFREY ASCHMANN, Philadelphia, Pa.

Dear Sir:—I received your plants in good condition. Satisfactory to me in every way. I am pleased.
227 Loyalhanna St.
EDWARD LEIZMANN.

Providence, R. I., March 13, 1907.

MR. G. ASCHMANN, Philadelphia, Pa.

Dear Sir:—Lilies received to-day in fine condition. Am very much pleased with them; not a bud damaged. Thanking you for your kindness, I remain,
76 Atlantic Avenue. F. B. SUTKER, Florist.

Philadelphia, Pa., February 25, 1907

"I have seen Mr. Aschmann's Easter stock and I can truthfully say that it never looked finer, and stock never before so large, and I am pleased to recommend our customers to Mr. Aschmann."
F. J. MICHELL,
1018 Market Street.
Of the firm of Henry F. Michell Co.

What was my duty during my trip to Ghent, Belgium, the land of Azaleas, Araucarias and Palms, last Fall, 1906? Answer: The interests of my customers, of course; not speaking of the 1100 Souvenir Cards which I mailed to my customers in America. I also bought for their benefit, AZALEA INDICA for Easter sales, the cream of Belgium's production. I am able to offer to my customers and the trade in general, two houses full of Mme. Van Der Cruyssen azaleas, the well-known and most favored, best double, pink azalea, giving so much satisfaction all over America. Plants as round as an apple, just covered with buds, 6-7 in. pots at 60c., 75c., \$1.00, \$1.25, \$1.50, \$1.75 to \$2.00 each. Other fine varieties adapted for the American Market, such as Nibbe, Bernard Andrew, Alba, Deutsche Perle (double white), Prof. Wolters, Empresa of India, Vervaeckena (double variegated), and about eight more fine sorts, all covered with buds, price 75c., \$1.00, \$1.25, \$1.50, \$1.75 to \$2.00 each. We have a limited quantity of 50c. to 60c. azaleas, such as Apollo (double dark scarlet), Deutsche Perle, Simou Mardner, and a few others.

Lilium Multiflorum and Japan Longiflorum were never so fine as this year. All sizes; can meet all wants 6 in. pots, 5 to 8 buds to a plant, 10c. per bud; four buds and under, 12c. per bud. Fully 3/4 (one-half) of 3-4 buds to a plant must be taken in addition with 5 and above. Plants are very large and bushy, and unusually fine this year, full of buds; price, 50c., 75c. to \$1.00 each.
Hydrangea Otaksa (pink) 6 to 7 in. pots, 40c., 50c., 75c., \$1.00, \$1.25 to \$1.50 each.
Cineraria, Hybrida, have a house full, all shades, 5 1/2 to 6 in. pots, \$2.50, \$3.00, \$4.00 to \$5.00 per doz.

Crimson Rambler Rose, 3 ft. high and over, \$1.00, \$1.25, \$1.50, \$1.75 to \$2.00 each.
Begonia, new improved Erfordi, an immense bloom, blooms all summer and winter through, 5 1/2 in. pots \$3.00 per doz.; 4 in., \$1.80 per doz.
Primula Obconica, 5 1/2 in. pots, \$2.50 per doz.; 4 in., \$1.80 per doz.
Arauca Sapida (palm), 6 in. pots, 50c.
Draacna Braunii, 6 in., 50c.
FERNS, Nephrolepis Barrowsi, 6 in., 50c. to 75c.; 5 to 5 1/2 in., 40c. Scottii, 8 in., very long, \$1.50 each, 5 in. Sc. Boston Ferns, 6 in. pots, 25c. to 30c.; 6 in., 40c. to 50c.; 7 in., 75c.
Kentia Fosteriana, 7 in. pots, make up one large one in center, three small ones around, \$1.60 to \$1.75. Kentia Forsteriana, single plant, 36, 45 to 50 in. high, \$1.00, \$1.25, to \$1.50 each.

ARAUCAARIA COMPACTA ROBUSTA, 5 year old, 7 in. pot, 25 to 30 in. high, same in width, 4 to 5 tiers, very awell stuff, \$1.00, \$1.75, to \$2.50 each. Araucaria Excela Glauca, 20 in. high, 4 tiers, 4 year old, \$1.00, \$1.25 to \$1.50 each. Specimen Glauca, 7 in. pots, 5 year old, 5 tiers, 30 to 35 in. high, \$3.00 each. Araucaria Excela, 4 year old, 6 in. pots, 25 to 35 in. high, 5, 6 to 7 tiers, \$1.00, \$1.25 to \$1.60 each.

Hyalocynth, raised from first class bulbs of my own importation. Notice: These bulbs cannot be compared with ordinary stuff flooding the market. King of the Blues, Grand Maitre (Lavender blue), Gertrude (best pink), Grandese (white), 4 in. pots, \$12.00 per 100.

Tulips, Tournesol, red and yellow variegated; this is the best selling tulip on the market, will stay in full bloom 10 days, 3 bulbs planted into a 4 in. pot; price \$12.00 per 100 or \$1.50 per doz. pots.

Narcissus, or Double Von Sion Daffodils best double yellow in the world, will sell on sight, 3 double nosed bulbs planted into a 5 1/2 to 6 in. pot; price, \$2.50 to \$3.00 per doz. pots. All bulbs are of my own importation. Ready for immediate sale.

MOON VINE, Ipomoea Multiflora, (A. W. Smith, originator), best pure white, largest and most fragrant moon vine in the world. We have made a specialty of it for the past 15 years, and are known as the moon vine growers of America. Grow 20,000 of them, 2 1/2 in. pots, \$5.00 per 100; now ready.

Mention if pots are wanted with all plants. For the reason that the cultivation of Lilies is expensive and because we sell our Lilies cheap, some other plants must be taken in connection with them. Cash with order, please. All goods must travel at purchaser's risk only.

AMONG THE GROWERS

A Visit to Tarrytown and Scarborough, N. Y.

A number of gardeners from Orange N. J., on the invitation of F. R. Pierson recently visited Tarrytown and Scarborough, N. Y. The visitors were met at the Tarrytown greenhouses by F. R. Pierson, who conducted them through the place. The various stocks looked well, and much of interest was seen. A new fern of dwarf compact growth was particularly noted. This will undoubtedly be heard from later, as it will make a splendid house plant.

After the party had been hospitably entertained to dinner by Mr. Pierson at the Florence Hotel they were taken for a five-mile sleigh ride to the Scarborough greenhouses, noted these many years for roses, American Beauty in particular, and at present for Winsor carnation.

Mr. Pierson courteously explained in detail the erection and working of the new houses. Many varieties of carnations are grown and all are looking well, but Winsor stands in a class by itself. A U-Bar house, 56 feet wide and 300 feet long, filled with this variety simply loaded with bloom is a sight that will be remembered by the writer for many a year. As showing its free flowering qualities even in cloudy weather there had been cut from February 1 to 15 21,290 flowers. The beauty of this variety also is that there are practically no culls, and no splits. A look into the new flower cellar was of much interest. This building just finished is 25x50 feet and is thoroughly equipped with every convenience for ship-

Sweet Pea Christmas

Grower, William Sim, Cliftondale, Mass.

William Sim, Cliftondale, Mass.

In these days of specialization of crops no better example of the success of the master of this art can be found than at the well-known establishment of William Sim, Cliftondale, Mass. There are two specialties grown at the present time at this now mammoth establishment, violets and sweet peas. The flower-loving public of Boston have decreed that in violets the single varieties are the favorites, and it is to these flowers that Mr. Sim devotes most of his space. The variety mostly grown is Princess of Wales, and the magnificent blooms supplied from this establishment to the Boston trade have become well known and are readily sought after by those handling the better class of trade.

It is within a comparatively few years that advancement has been made in the improvement of varieties of violets, but just as surely as roses or carnations have made improvement will violets have to keep pace with the times. Apropos of this we find here a violet of superb quality, of a color and form of flower its own, in short, as much superior to the best variety we have heretofore seen as that variety is superior to the once famed California now never heard of. This variety originated with James Wheeler of Brookline, Mass., and is being grown in quantity for the first time this year by Mr. Sim. It has been named Boston, and that it will prove worthy of the appellation the growers are already assured. The individual flowers are large and well

formed, of the shape of a small sized pausy. The foliage is entirely distinct, being much more tomentose than that of any of the other varieties. It is a strong grower and free bloomer and will, without doubt, be the violet of the future. We have pleasure in presenting to our readers the first illustrations ever given of this variety. The view of the house shows the beds as they appeared during the last week of February, and the other illustration will demonstrate the distinctness of the foliage and blooms.

It is within the past five years that sweet peas have become a standard flower during all of the Winter months and I believe I am right in giving Mr. Sim the credit for making this possible. The sweet peas at this establishment this year are quite up to the record of former years. The blooms are large and have grand stems; they all average eighteen inches in length and many of them over twenty. The illustration shows the variety Christmas in its present state of perfection. The variety Mont Blanc is equally good. Besides these varieties Mr. Sim is this year trying a lot of varieties that have been originated by A. C. Zvolanek. Some very fine flowers are seen among some of the shades of lavender and purple, while among the scarlets the most striking sort seemed to be Mrs. Wild.

Mr. Sim follows his Winter crops of violets and sweet peas with tomatoes, and as an expert grower of these he has also established himself. Already thirty thousand plants are potted and of good size to fill the space in the houses which will be empty in the near future. The only variety grown is Comet, it having proven the best and most prolific sort for cultivation under glass.

JOHN W. DUNCAN.

Flowers and Leaves of Violet Boston

Grower, William Sim

ping. Among other varieties we saw a cut of 3,900 Winsor. It was a beautiful sight. The flowers are shipped in paper boxes to the New York market, 52 in a box, and a piece of tissue paper is placed between every layer. When filled in this way the boxes have a neat, taking appearance.

The two latest houses built contain the standard varieties of carnations, and although planted late these look well. These houses, size 56x350 feet, are heated by hot water on the most approved and we believe the most economical system in existence. There is one boiler to each house, and although they have lots to do in keeping such immense structures warm, Mr. Pierson assured as they did the work easily. There were over a quarter of a million carnation cuttings in the propagating benches, looking in the very best of health. The whole place was spick and span and reflects great credit on Mr. Pierson and his foreman, Mr. Hill. Many things too numerous to mention were taken note of by the party both inside and in the nurseries.

On the return journey by sleigh to Tarrytown a call was made at Wm. Rockefeller's place. Here we were escorted through the large range of houses by the genial head gardener, George Middleton. Everything looked well, and a wonderful quantity of flowers, fruits and vegetables is produced from this range in a year.

From here the sleigh was taken for Tarrytown, where Mr. Pierson bade the visitors good bye and all returned to Orange highly delighted with their pleasant outing.

MINNEAPOLIS FLORAL CO., MINNEAPOLIS, Minn.

THE NEW PINK ROSE "AURORA"

This rose is a seedling from Bon Silene and Souvenir du President Carnot. The flowers are large and full and are produced on strong and stiff stems, with a rich dark green foliage. The color is a beautiful pink with a deeper shading in the center. The keeping quality of the flowers is excellent, and it does not lose its brilliancy of color when kept in the cellar. The habit of growth is strong and vigorous; it has absolutely no tendency to go dormant during the Winter and every shoot has a flower bud.

Aurora has inherited the productiveness of Bon Silene and has the free flowering qualities of this well known prolific variety. It is easy to grow, and does not need a high temperature.

Plants from 2 1-2 in. pots, \$6.00 per doz.
\$ 30.00 per 100 } 50 at 100 rates
250.00 per 1000 } 250 at 1000 rates

Indianapolis Ind. News Items.

The outlook for an immense Easter trade was never better, notwithstanding a few dismal reports in regard to the lily situation. The bulk of humanity is well supplied with money and the local florists have an unprecedented amount of fine material to offer. Why should not this Easter be a record-breaker? Fred. Huckleide's establishment is fairly alive with a quantity of unseasonable lightning bugs. Even his best friends accuse him of burrying his lily crop with artificial light.

Week's Work, The...388

The seed business has opened up and is most gratefully received after a long period of rest. Huntington & Page are making extensive preparations to handle more trade than in the past. About twelve members attended the March meeting of the State Florists' Association. The Spring show will be held April 10th at the State House Horticultural Rooms. H. W. Rieman, F. Alley, F. Harritt and H. Schilling were appointed a committee to arrange for the exhibit. Premium lists may be had of A. F. J. Baur, secretary.

Herman Junge inspected the Noblesville greenhouses; they are to be disposed of shortly. Stuart & Haugh of Anderson, Ind., are contemplating a new water tank system.

Walter H. Bertermann transacted business in Cincinnati the latter part of the week. Bert Eschner spent Sunday in Indianapolis with friends.

Charles Ealand has accepted a position with A. Wiegand & Son. W. Dunderstadt and Homer Weigand have been taking an inventory of the Easter preparations in Chicago.

I. B. TOLEDO, OHIO—Louise K. Miller, curator of gardening in the Cleveland schools, delivered a very interesting lecture before the City Federation of Women's Clubs on "School and Home Gardening." Miss Miller talked interestingly and showed photographs of city yards before and after the planting.

Our Home Gardening Association has distributed for several years flowers and vegetable seeds to the amount of about \$150 each year and there is no question, but that this tends largely more than anything else to create love for flowers and gardening in general, and that these children when grown up will be steady customers of florists, seedsmen and nurserymen. Such institutions should certainly be encouraged by the trade through the offer of prizes for well grown plants.

Artificial Coloration of Flowers.

There are in the trade some who believe in "painting the lily," dyeing carnations green, and things of that sort, and for the information of all such we submit the following: Everybody knows, says l'Horticulture Nouvelle, that by plunging the stems in aqueous solutions of various colors, we can obtain in less than an hour's time, flowers with petals artificially tinted in a beautiful way. The solutions should be of a strength of 7 or 8 gms. to the liter of water. When the desired tint is obtained withdraw the stems and put them in plain water. The colors that may be employed are as follows: Acid yellow AT, which imparts a canary yellow. Cyanol FF, which colors a deep blue. Orange GG, tints in orange. Acidmagenta, colors in purple red. Grocline MOO, colors in salmon red. Crystal scarlet, CR, colors in pale salmon. Beta naphol black, colors a deep grey. Mixtures of equal parts of acid yellow and cyanol yield a green color; acid yellow and acid magenta, a crimson; and cyanol, with acid magenta, a purple.

ALTERNANTHERAS STRONG ROOTED CUTTINGS. RED and YELLOW at 50c. per 100, or \$4.00 per 1000. BRILLIANTISSIMA (the best red) at 60c. per 100, or \$5.00 per 1000. DAVIS BROS., Morrison, Ill.

Imperial and Pink Imperial Carnations

You Cannot Afford to be Without these Two Excellent Varieties
 Price \$12.00 per 100; \$100.00 per 1000, 250 at 1000 rates, a discount allowed when cash accompanies the order.

Roses

from 2 1/2 inch pots, \$3.00 per 100, \$25.00 per 1000. **Mme. Chatenay**, Bride, Richmond, Bridesmaid, Uncle John, Golden Gate. American Beauties from 2 1/2 inch pots \$50.00 per 1000.

Aristocrat.

As we have no more room in the propagating house we beg to offer UNROOTED cuttings of ARISTOCRAT at \$60.00 per 1000, for immediate delivery.

ARISTOCRAT is a very rapid grower and you will find this is not too late for this variety to make good plants to sell from the field this Fall.

NOTICE—We expect to have all orders for Aristocrat filled before the end of the month. We now have 100,000 cuttings in the sand for April delivery.

W. J. & M. S. VESEY, Fort Wayne, Ind.

MABELLE--New Pink Carnation for 1907

Color.—A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Lawson. Unlike most pinks, the brightest sun does not injure the color. Size.—Three to four inches in diameter when established. Odor.—Pleasing, but not strong. Stems.—Invariably strong, but always graceful, reaching from 12 to 30 inches during the season. Habit, etc.—A very quick active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after bending. Gets away rapidly, blooms early and gives long stems right from the start. Productiveness.—Productions the best word we know of to use here. It is the most incessant bloomer early and late. We have ever grown stock limited. No discounts. First class certificates Madison and Indianapolis. Delivery Jan. 5th to 15th and later. Price, \$12.00 per 100, \$100.00 per 1000.

THE H. WEBER & SONS CO., OAKLAND, MD.

White Enchantress

white sport of Enchantress, rooted cuttings \$12 per 100; \$100 per 1000.

Henry H. Barrows & Son, Whitman, Mass.

It takes long years of patient hard work to build up a wide circulation, no matter the merit of a publication. We have been at it for about two decades, and can safely say we have now on our list of subscribers every tradesman whose business is worth having. Don't be deceived by claims born of hallucinations. Advertise in a live paper and then you are sure your money will not be wasted. The Florists' Exchange will suit you exactly in every particular.

Cincinnati, O.

In connection with the explosion which occurred early Sunday morning in Avondale, in which all the glass in the Jewish Hospital and Altenheim was broken, amounting to a loss of over \$20,000, nearly all the inmates were thrown from their beds. But what I want especially to call attention to is one particular person, who by profession was a gardener. His name is Gottlieb Graul; his age, 108 years. He was at one time gardener to the Duke of Westenberg, at the time Napoleon fought the battle of Jena, and in America was gardener to Mr. Longworth, great grandfather of Congressman Longworth. Mr. Graul is in comparatively good health, and walks out every nice day. His eyesight is good and he has full control of his faculties. He undoubtedly is the oldest gardener in America.

The fates seem against Cincinnati. On last Tuesday hail at College Hill destroyed fifteen hundred or more panes of glass for George Corbett and the same number for Harry Corbett and George Magrie. Max Rudolph also was a loser, but not quite so heavily as was Walter Gray. On the other hills hail fell, but did no special damage; and with it all came a deluge that has again for the second time since January 1, brought a river, which, at this writing, is 62 feet high and is rising. Untold damage is being done to property. J. Charles McCullough has water on his floor at Second and Walnut streets, and the warehouses of both the McCullough firms are surrounded by water; but thanks to Providence, the weather is fine, and the thermometer standing at 58 to 60 degrees relieves much suffering.

Sunday morning at 7:25 o'clock, the spans at the Eighth street viaduct were washed by the extreme pressure of the water and fell. Fortunately it was Sunday, St. Patrick's Day, and few people were stirring; otherwise the death list would have been appalling. As it was, a street car had just passed over before the span fell. This viaduct leads to Price's Hill, and three lines of street cars pass over. No one was hurt, but a hundred thousand dollars' worth of damage was done to the city, and much inconvenience was caused to Price Hill people. The writer, also Louis Kyrk and Will Murphy, all live in this hill, and both Kyrk and myself had a 3 1/2-mile walk each way Sunday. Monday, and probably for three weeks to come, we shall have to walk half the distance.

Then a terrific dynamite explosion occurred at midnight, or about 1 a. m., Sunday morning, in Avondale, that broke every pane of glass in the Jewish Hospital and all the residences within two squares. Julius Baer tells me that two-thirds of all the glass in the house wherein he lives was broken, and all fell outside of the house.

So, taking it all in all, St. Patrick's Day, 1907, in Cincinnati will be remembered for many years to come.

Chas. Lodder of Hamilton, O., was a caller Saturday. He says his venerable father, who has had a hard struggle with the grim reaper, is now able to be up. Uncle John, as we all call him, is in his seventy-fifth year and is one of the veterans in the florists' business of this section—a man of truth and justice, and we hope he may be spared many more years for the good of mankind.

George F. Crabb of Crabb & Hunter, Grand Rapids, Mich., writes me he is just recovering from a severe attack of pneumonia. He also had a close call.

We now have a Greenhouse Structural Company at 840 West Fourth street, Cincinnati, O., who are prepared to do building of both iron and wood. Give them a trial. They are responsible.

The outlook for Easter is only fair. A report from the New Castle district says American Beauty will not be available, all wood gone blind. Of teas, of

course, there will be a fair supply, but not half enough to go around. Carnations, the same. There will be another question. It now looks as though the bulb growers were to be strictly in it this season. Sweet peas and violets will be good property at Easter. Ferns are very scarce and the outlook gloomy. Leucothea sprays will be good stock, as will adiantum, smilax and asparagus of all kinds.

John Evans was a caller Friday. I am glad to say he is looking much better. His brother Charlie is very poorly. E. G. GILLETT.

Pittsburg.

A Damaging Flood.

Greater Pittsburg the past week experienced the greatest flood ever known. After three days of business stagnation and floods throughout the district work was begun on cleaning up and in a few days everything was brought back to normal conditions. The highest stage of water known for the last century was 35 feet in 1832, but this time the record was 36 feet 6 inches, the water reaching as far up as Liberty street in Pittsburg and almost to beneath the Fort Wayne railroad tracks in Allegheny. Damages to property and merchandise in general will reach up in the millions of dollars. The florists' trade suffered as much as any; most of the stores being in the low district were surrounded by water. The greatest sufferer was W. C. Becker, the Allegheny seedsman on Federal street, where the water rose to about 7 feet above the level of the store room floor. All goods from the cellar and store room were removed to upper floors. Their stock was not damaged to any extent, and in a few days business went on as usual, but it required heroic work on the part of all the employees to straighten out matters just at the beginning of the busy season of the year. In Pittsburg proper, Mrs. E. A. Williams, on Penn avenue, had several feet of water on the floor; also Blind Brothers, Fifth street and L. I. Neff on Sixth street. Breitenstein & Flemm on Liberty and Market streets, just escaped, the water reaching to the curbstone on their side, but their cellar was full almost to the top and all goods were removed. The wholesale florists' commission houses had troubles in various ways; trains were delayed, roads impassable and water in cellars; besides telephones were out of order. Electric light and gas failed, poor street car service, and communication between the two cities was almost impossible; all the approaches to the bridges were under water and the Pennsylvania Railroad bridge was the only one used, trains running to and fro all day carrying thousands of people.

News Notes.

Too much rain is interfering with the growers' work in making hotbeds and other outside operations. The weather up to date has been the worst we ever had in March. The plant trade has started up and from now on should be good, as Easter is close. The market stands are almost all ready for the plant trade, making good displays, particularly with bulbous plants which seem so far to be of good quality. The cut flower business is still active and prices are higher than usual in the Lenten season. Good carnations bring \$3 and better; lilies range from 12c. up, good ones bringing 20c. The Easter crop is yet uncertain, although it looks more favorable now than a few weeks ago. Violets are abundant.

Meischke of Castle Shannon is cutting some fine stock of roses and carnations and will have a good supply for Easter.

John Bader has a good and well assorted stock of Easter plants—azaleas by the thousand well in bloom, genistas, spiraeas and a large stock of potted bulbs in fine shape. E. C. REINEMAN.

James Draper.

James Draper, secretary of the Worcester board of parks commissioners, and member of that body for the last 20 years, prominent as a horticulturist and agriculturist, and who was the first president of the Massachusetts Fruit Growers' Association, died in his home, in Worcester, Mass., on the morning of March 13, of anemia following an illness that became serious the day after Christmas.

Mr. Draper, who was one of the most prominent nurserymen in the State, was best known in Worcester through his long connection with the parks commission. Much of the beauty of several of the Worcester parks was due to his work and he was constantly interested in the development of the system. Mr. Draper was born at Worcester, Mass., in 1842. He was educated in the public schools and at the age of 18 began his business career as a market gardener. He was among the earliest in the vicinity of Worcester to engage in the cultivation of small fruits on a large scale for the market.

In 1867 he issued his first nursery catalogue. Other departments were added to those of the small fruits and they have continually increased until the reputation of the Bloomingdale nurseries extended all over New England. Mr. Draper's collection of the choicest varieties of native and foreign fruit and ornamental trees and flowers, shrubs and plants ranks among the first in this section of the country.

He was an active member of the Worcester agricultural and horticultural societies for 35 years and the special judge in the fruit department of the Horticultural Society for 15 consecutive years. He was a trustee of the Massachusetts agricultural college and one of the originators and the first president of the Massachusetts Fruit Growers' Association. He was master of the Worcester grange when it was organized in 1872 and became master of the State grange and of the national grange and was recognized as one of the leaders of the order. He was vice-president of the Worcester Five Cents savings bank and of the Rural Cemetery Corporation, being manager also of the latter.

He was also a member of Massachusetts Sons of the Revolution, Morning Star lodge A. F. & A. M., Eureka Royal Arch chapter, Worcester County Commandery, Knights Templar, Altheia Grotto, M. O. V. P. and Hiram Council R. & S. M.

A widow, five daughters and one son, James Edward, mourn his loss.

Hearing on Express Rates.

On Friday and Saturday of last week the Interstate Commerce Commission at Washington, D. C., heard the complaint of the S. A. F. O. H. against the United States Express Company regarding the recent advance in the company's tariff on cut flowers and returned empty packages between Pennsylvania and New Jersey points and New York City.

It may be remembered that these rates were advanced in May, 1906, to double what they had been previous to that date; that the S. A. F. O. H., through Secretary Stewart, had entered into communication with the United States Express Company looking toward a reduction in the rates, but his effort had been unsuccessful. Finally the matter was brought to the attention of the Interstate Commerce Commission, the society desiring that the commission shall fix a reasonable express rate on cut flowers between the points named, as the present rate is said to be excessive and discriminatory. Chairman Knapp and Commissioners Clements and Walker heard the case.

Attorney Frank Lyon, Roslyn, Va., appeared for the S. A. F. O. H. In opening the case Mr. Lyon pointed out that there was no apparent reason for the advance in rates, that conditions regarding collection and delivery of cut flowers and empties were similar to those existing before the rates were increased. He stated that the area over which the consignees in New York were located was within two or three city blocks, and that in the majority if not all of the cases, the shippers loaded their own boxes on the train at the forwarding points.

Frank L. Moore, Chatham, N. J., was the first witness called for the complainants. He testified to the extent of the cut flower traffic in the neighborhood of Chatham, Madison and Summit, N. J., the methods of packing employed; the prices obtained for the product, etc. He also stated that the increased express rate had caused the establishment of a wagon express, which is still in operation. He was followed by L. B. Coddington, Murray Hill, N. J.; L. M. Noe, Madison, N. J.; A. Farenwald, Hillside, Pa.; and Robert M. Schultz, Madison, N. J.; all of whom testified as to the apparent unjust and uncalled for increase of the rates by the United States Express Company. Frank H. Traendly and Wm. J. Stewart were also witnesses for the society, the latter explaining the aim and objects of the organization, one of these being to safeguard its members in matters of transportation.

On Saturday Mr. Stewart again took the stand, answering several questions regarding cut flower prices, both wholesale and retail, in New York City.

The attorney for the express company said the evidence so far before the commission had shown there was considerable profit in the selling of flowers; and he would show just as conclusively that there was no profit to the express company in delivering these flowers, even at the present rate of one dollar per hundred pounds. Through witnesses he brought out the information that at most of the forwarding points the agents of the express company operated on a commission basis of from 15 to 18 per cent., that the non-collection of cut flowers at the growers' places was a violation of the rules of the express company, saved nothing to the company, as the agent received his commission in any event. He tried to show that the self-imposed task of the growers' loading their own boxes on trains was really a detriment rather than a help to the agent, as all such goods were held till the last possible moment, leaving but little time to make out the necessary way bills.

The company's agent at Hoboken, N. J., testified to the especial care and attention given consignments of cut flowers. These are unloaded by special men at the passenger platform at Hoboken, N. J., instead of at the usual express terminus. Three special wagons are employed to convey the shipments to the consignees; taking no other goods. A shipment of only one box receives the same special attention. The aim was to expedite delivery as much as possible. Special collections of empties were also made daily except Sunday. The bulk of these had been greatly reduced since shippers had begun to use the "knock down" boxes. He showed that the total earnings per load of cut flowers per diem prior to May, 1906, was \$4.43; since that date \$4.32. This was partly accounted for by the fact that notwithstanding the higher rate charged, the wagon express had diverted considerable of the traffic.

Another employee of the express company testified as to the cost of delivery service, maintenance of teams, drivers' and helpers' wages, ferry charges, etc.

Alex. J. Guttman, New York, narrated his experiences with express companies other than the United States, whose scale of rates had not been advanced, and whose service was just as satisfactory in every particular. James I. Donlan gave an approximate percentage of the cut flower traffic carried by companies competing with the United States, and also showed samples of the boxes, both "knock down" paper, and wooden, in which these shipments are generally made. In his argument Attorney Lyon urged that there

should be some excellent and controlling reasons for an advance in rates of the character of that complained of. After an industry had been built up at certain rates from the point of production to market, it was unjust and unreasonable that the express company should without consultation with the producers, suddenly double these rates without any good and sufficient reason for the change. He referred to the restricted area in New York City over which the flowers had to be delivered and the empties collected. The present was the first case of its kind brought before the commission, and was peculiar in that when the traffic increased the rates had also increased, whereas the reverse condition generally prevailed. He contended that nothing had been brought before the commission by the other side showing that any extra burden had been thrown upon the express company that did not exist prior to May, 1906. It was not the duty of a common carrier to dictate to its patrons the kind of packages they shall use; and whether the florist business was a highly profitable one or not formed no justification for excessive or exorbitant express rates being charged for conveyance of their goods, which had a tendency to limit or destroy that particular industry. It was a peculiar doctrine, to say the least, to preach the throwing of the burden of the increased rate on the public.

The express company's attorney denied that the company was taking an arbitrary or unreasonable position for the purpose of dictating the policy of any one. The policy dictated, as far as choice of packages was concerned, had been to the advantage of the shippers. The burden rested on the complainants to show why the express company should do this cut flower business at a loss, when the florists' profits were abnormally high or above those of other merchants. There was no reason why express business should be done for the benefit of this class of merchandise which is classed among the luxuries and accessible only to the rich. The shippers also had failed to show that the increased rates had in any way affected the amount of their business. He referred to the agent as "bluffing" the shippers out of doing the collecting, again stating that the agent's refusal or neglect to make collections or deliveries was in violation of the company's rules. He once more urged that the cut flower traffic had been carried by the company at a tremendous loss, and on being asked by Commissioner Clements as to why the company had been living in ignorance of this for so many years, replied that he did not know; it was one of those things that had just been allowed to persist. Going into statistics the company's attorney showed that on consignments of cut flowers from Somerville, N. J., prior to the increase, 45 per cent. of every dollar was paid to the railroad; 18 per cent. the cost at point of origin; 37 7-10 per cent. cost of wagon service, making a total of 100 7-10 per cent. From Chatham the total cost was 102 7-10 per cent.; Allentown, Pa., 97 53-100, where the agent is paid a salary instead of commission; Philadelphia 102 7-10 per cent.; Hillside, where there is no delivery service, 92 7-10 per cent. In every case cited the railroad received 45 per cent.

Attorney Lyon denied that flowers were a luxury purchased only by the rich; they were used at weddings, at births, and at funerals, by the great body of the people. He called attention to the fact that the higher the rate charged by the express company, the more money it seemed to lose, according to its own figures, and submitted that the increased rates had been imposed to reimburse the company for the loss sustained through the diversion of traffic to other modes of conveyance. The fact that the express company had bad contracts with the railroad was no concern of the complainants.

Chairman Knapp announced that he would give the express company's attorney ten days in which to prepare his brief, the attorney for the S. A. F. O. H. to complete his within five days thereafter.

The hearing was then adjourned.

PAMPHLETS RECEIVED.

RAWSON'S GUIDE FOR FLOWERS, and RAWSON'S PRACTICAL GUIDE FOR VEGETABLE GROWING. Published by W. W. Rawson & Company, seedsmen, Boston, Mass., as free literature.

These booklets are written in an eminently practical manner and should prove of the greatest value to amateur gardeners; in fact, to professional gardeners as well. The firm is to be congratulated on its enterprise in distributing free literature of the kind under consideration.

Serviceable planting tables for flowers and vegetables accompany the booklets named.

THE NEW IDEA IN GARDENS is the title of a handy pamphlet published by Frank Hamilton, landscape gardener, 55 Liberty street, New York. It gives plans and practical directions for the laying out and planting of home grounds, with approximate cost for a given area—a new idea, certainly, and one to be commended.

MAURICE J. BRINTON, Christiansa, Pa.

CLUB AND SOCIETY DOINGS.

Begonia Vernon

Double White Hyacinth

Box of Tulips
Easter Stock Grown by Wm. Berger, Germantown, Pa.

THE COLUMBUS FLORISTS' CLUB has held two meetings since my last report, and both have been most enjoyable and successful. President Sherman F. Stephens occupied the chair, but at the last meeting Secretary McKellar being confined to his home by the grip, M. B. Faxon took his desk for the evening. The greatest interest has developed among our members as regards the chrysanthemum show to be held this Fall; the opinion of the club would seem to be that liberal prizes, and if necessary fewer of them, will bring out the best show. The enthusiastic members advocate a public exhibition on a large scale; others feel that if we offer say three prizes of \$10, \$8 and \$5 in each class, and have a class for each standard commercial color and a novelty division, that we can stage a show in our club rooms that will be a credit to the club and city. The chrysanthemum committee—Messrs. Faxon, Kopf, Woodrow, and McKellar—were requested to make a full report, and submit a prize list at an early meeting.

Our members have taken more interest in the displays of plants and cut flowers at these meetings than ever before; and Messrs. Roth, Sexton, Metzmaier, Reichert, Brust, Williams, Monk, and Torrey, have had their hands full awarding points, for the point total prizes of \$5, \$3 and \$2, to be awarded in May next. The awards have been as follows: To R. A. Currie 20 points for a fine specimen of Simon Mardner azalea, and 15 points for *Spiraea superba*; I. D. Siebert received the only maximum award made so far this year—25 points—for a bunch of Princess of Wales violets. The same exhibitor also was given 20 points for a Mne. Van der Cruyssen azalea, and it certainly deserved them. A. Wedemeyer took 10 points for a good plant of *Genista fragrans*. Tulips were well represented, 15 points for a vase of Murillo going to Sherman F. Stephens, and 10 points for a fine bunch of Keiserkroon being taken by Jacob Reichert. Many other entries not for competition were displayed.

Our club has for several years been greatly interested in civic improvement work, especially the distribution of both flower and vegetable seeds to the children of our public schools; and the consequent cleaning up of yards, etc., that always immediately follows this good work, has been very marked. It has been the policy of the club from the start, that each child should pay for these penny packets of seeds. This season we have a complication of matters to straighten out; some well disposed persons have donated some seeds, the Government has also sent some "free seeds," so those children who have previously paid in former seasons, see no reason why they should continue to do so, and the matter has become certainly mixed. To get in tune all these conflicting interests, and still continue the good work of "penny packets of seeds for the children," is not a sinecure for any committee, I assure you. But after a long discussion of this matter, pro and con, our club has appointed M. B. Faxon, Sherman F. Stephens, and R. A. Currie a committee to confer with the Columbus Board of Education, and try and arrange these matters to the satisfaction of all concerned. I will here state, that our club is firm in its opinion that the children should be allowed to individually pay for whatever penny packets of seeds they wish to plant. We believe a child will take much more interest in something paid for. On the other hand, no money can be collected from the school children without the permission of the Board of Education. Our club had this permission before all the confusions mentioned above so complicated affairs.

Our last meeting was a ladies' night, and the regular business was shortened so that our guests might be entertained. Our next meeting will be held Tuesday evening, March 26. F. W.

MORRIS COUNTY (N. J.) GARDENERS AND FLORISTS' SOCIETY.—March 13 was without doubt the most notable meeting this society has held in a long time. It was carnation night, and well it deserved the name. The hall was a dreamland of the divine flower. We had, too, roses, cyclamen, sweet peas and stocks in abundance but carnation was queen. The exhibits were goodly in number and high in quality. F. R. Pierson Company, Tarrytown, had Winsor and White Enchantress in great shape; each had been previously certificated. Dailedouze Brothers, Flatbush, L. I., sent Welcome and Seedling No. 303. Welcome got a certificate of merit and the other was, in the words of the judges, "Sure to be a winner in the variegated classes." Bassett & Washburn, Hinsdale, Ill., staged two vases of Red Seedling No. 20; it got a certificate of merit. John Riemels, Woodhaven, L. I., brought one vase each of Winsome and Red Seedling number 32; each was awarded a certificate of merit. Geo. Harvey, Madison, N. J., had two fine vases of carnations, one of them a very promising white seedling. Alex. J. Guttman, New York, had a fine vase of Victory. Paul Niehoff, Lehighton, Pa., sent on a fine vase of new

rose Aurora; and F. H. Kramer, Washington, D. C., sent a sensational lot of rose Queen Beatrice. Both of the rose exhibits secured a certificate of merit.

Our own members came up to the call well. A. Herington had six vases of carnations in the following kinds; Robert Craig, Eucharistess, Piancée, Pink Eucharistess, Mrs. M. A. Patten, Jessica. In the opinion of competent judges a finer lot was never before staged. H. B. Vyse, gardener to Mr. G. E. Kissell, had a

Berger Brothers, of Philadelphia, his sons, and his store on the Main street, Germantown, Pa., call for flowers and flowering plants the whole year through; and on the other hand the city house of Berger Brothers is called on largely to supply the Germantown folk with such flowers as are not produced by them.

There are six sons, I think, who with the father, William Berger, find their hands full with the city

ernul of the plants illustrated in this issue. Primula obconica, Begonia Vernon, Astilbe japonica Gladstone, and daisy Queen Alexandra among them.

Mr. Berger considers the Astilbe (Spiraea) Gladstone the best of all for forcing, the plant being more vigorous in both foliage and flower than the common japonica. Of the Paris daisy, the variety photographed is called Queen Alexandra. It is considered better than the common white one, having a larger flower and

Yellow Narcissus

Grown by Wm. Berger, Germantown, Pa.

Marguerite Queen Alexandra

Grown by Wm. Berger, Germantown, Pa.

dozen specimen plants of cyclamen. John Heeremans, gardener to Mr. A. R. Whitney, staged a fine lot of myosotis and one vase of mixed carnations. Geo. H. Hunt, gardener to Mr. R. D. Foote, had three vases of fine carnations in as many kinds. Samuel Stewart, two vases mixed carnations; E. Reagan one vase mixed carnations; Andrew Kennedy one vase of sweet pea Blanche Ferry and one vase of Victory carnation which he brought from Brooklake, Dr. L. D. Ward's place, Madison. Wm. Duckham brought one vase of Robert Craig.

The foregoing gentlemen received certificates of culture of their exhibits.

Among the visitors were: Harry A. Bunyard, New York; Fred. Heeremans, Lenox, Mass.; Wm. Ross, Tarrytown; Parker T. Barnes, of Doubleday, Page & Company, New York; John Riemels, Woodhaven, L. I., and Joseph Manda, Orange, N. J.

Three papers were read on the carnation in its different aspects, by Wm. Duckham, R. M. Schultz and Percy Herbert. A hearty vote of thanks was accorded the essayist in each case. Many questions were asked and many points were animatedly discussed to the advantage of all concerned. Deep interest was manifested in the novelty carnation classes by the assemblage, and high compliments were paid to them and to the enterprise of their introducers.

The evening of April 10 will be "rose night," and it ought to be a drawing card, for the word rose is magnetic in Madison. We want to get all the novelties we can from far and wide, and our home industry ought to be able to supply some creditable standard sorts. Two papers on the rose are to be read that night, one by David Falconer, Chatham, N. J., and one by Andrew Kennedy of Brooklake. E. R.

Our Illustrations of Easter Stock.

Visiting recently the greenhouses of William Berger, Queen Lane, Germantown, Pa., we were in time to see the beginning of the Easter rush in flowering plants. The greenhouses, above and below the hanches, were filled with plants of the general run of Easter sorts, the most of them just showing flower, excepting those of a bulbous nature which had been in frames all winter. These were just being given a place under the hanches, allowing them two weeks until Easter.

But Mr. Berger's plants are not all for Easter week.

store, the one on Main street, Germantown, and the greenhouses on Queen Lane, Germantown.

At the time of our visit, Easter was two weeks off, so the great bulk of flowering plants were not yet in bloom; but as there is a constant demand for plants the season through we were able to get photos of sev-

the disc being of a purplish color instead of yellow as the other is, making more contrast. This daisy is really a chrysanthemum—frutescens—and, humble flower though it be, it is always in demand, and always procurable, flowering the whole season through.

JOSEPH MEEHAN.

Astilbe (Spiraea) Japonica Var. Gladstone

Grown by Wm. Berger, Germantown, Pa.

Propagating Rhus Glabra Laciniata.

There is so much grace in the foliage of the Rhus glabra laciniata that it has often been said the plant should have been called fern-leaved sumach instead of cut-leaved. It finds a place wherever pretty foliaged shrubs are valued, and not only for the beauty of its Summer foliage, but for its Autumn display as well, for it then takes on the rich orange crimson color for which so many of this family are renowned.

Those not accustomed to propagating sumachs are not aware that nearly all can be increased by root cuttings. Pieces of root of about three-inch lengths, set lengthwise in the ground or upright, the top just below the surface, in Spring, will make plants the same season. The one of these notes, the cut-leaved glabra, is one that can be so handled. Whether it would come true from seed, I do not know, for on the many bushes seen at times, a seed pod has never been observed.

Although this cut-leaved variety of sumach is a distinctively American one, it was disseminated from Europe. It was found wild in a wood in Chester County, Pa., by a gardener who is still remembered by the older ones of the trade. Robert Kilvington, of Philadelphia. He disposed of it to Europe, as in those days there was more appreciation there of such varieties than here. Landscape gardeners of to-day appreciate it, as its frequent presence on lawns indicate.

JOSEPH MEEHAN.

LILY TIME

Is no special time any more—you can have lilies three hundred and sixty-five days in the year—"Excepting leap year, which comes once in four"; then it is three hundred and sixty-six; we always provide for this extra day.

Hardy Japan Lilies for Immediate Delivery

For Outdoor Planting, or Growing in Pots for Summer Flowering

LILIUM AURATUM.
Golden-Rayed Lily of Japan.
Monstrous pure white flowers, thickly studded with crimson spots, each petal marked with a wide gold band. A good forcer and excellent for outdoor effect.
8 to 9-in. per doz., 75c.; per 100, \$5.50; per 1000, \$50.00.
9 to 11-in. per doz., \$1.00; per 100, \$8.00; per 1000, \$75.00.

LILIUM SPECIOSUM ALBUM
Pure white; a grand variety.
8 to 9-in. bulbs, per doz., \$1.00; per 100, \$7.00; per 1000, \$66.00.

LILIUM SPECIOSUM MELPOMENE
Very rich crimson.
8 to 9-in. bulbs, per doz., 75c.; per 100, \$6.00; per 1000, \$55.00.
9 to 11-in. bulbs, per doz., \$1.25; per 100, \$8.50; per 1000, \$80.00.

LILIUM SPECIOSUM RUBRUM
White ground, spotted rose on each petal; very handsome.
8 to 9-in. bulbs, per doz., 75c.; per 100, \$5.50; per 1000, \$50.00.
9 to 11-in. bulbs, per doz., \$1.25; per 100, \$8.50; per 1000, \$80.00.

LILIUM AURATUM

Lilium Candidum

Last fall, to cover an increasing demand for this variety in the spring, we placed in cold storage about twenty-five cases. We have about five cases left and they are large bulbs in excellent condition, perfectly dormant and sound—and offer them as follows: \$1.00 per 12, \$7.50 per 100, \$70.00 per 1000.

LILIUM LONGIFLORUM GIGANTEUM FROM COLD STORAGE

Having placed a large quantity of *Lilium longiflorum giganteum* in cold storage upon their arrival in this country, we are in a position to furnish sound, firm bulbs all the year round. Florists all over the country are now forcing lilies in continual succession every month in the year. Why not you? We can refer you to the best people in the country, who now have orders with us, for a monthly shipment—some take 50 bulbs, some 100, others a case, still more, five cases, a month, and we shall be pleased to write you more fully on this matter. Remember that *Giganteum* is the only variety held in cold storage successfully, and you can have them delivered now for Decoration Day, or the end of September, for December Flowering. 7 to 9-inch bulbs, per 100, \$8.00; per 1000, \$75.00. 9 to 10-inch bulbs, per 100, \$13.00; per 1000, \$125.00.

CALADIUM ESCULENTUM, OR ELEPHANT'S EAR

MISCELLANEOUS SPRING BULBS

CINNAMON VINE
Largest size bulbs, per doz., 50c.; per 100, \$3.00.
First size bulbs, per doz., 40c.; per 100, \$2.50.

CALLAS—Spotted Leaf (Richardia albomaculata)
Very free summer blooming variety. \$3.00 per 100; \$25.00 per 1000.

ISMENE CALATHINA (Pancratium.)
A grand summer-flowering bulb, producing throughout the season large

Amaryllis-like, pure white, fragrant blossoms. 10c. each, \$1.00 per doz.; \$7.50 per 100.

DIELYTRA SPECTABILIS (Bleeding Heart), \$1.25 per doz.; \$7.50 per 100.

HYACINTHUS CANDICANS (CAPE HYACINTH.)
Large Bulbs, \$1.25 per 100; \$10.00 per 1000.

MADEIRA VINES
\$1.25 per 100; \$10.00 per 1000.

BODDINGTON'S QUALITY LARGE FLOWERING TUBEROUS-ROOTED BEGONIAS

For planting in beds and where color effect is desired, our stock of these bulbs will be found true to color and free from mixture.

Single-Flowering Tuberos-Rooted
Large bulbs measuring 1½ inches and upward. Crimson, Scarlet, White (pure), Rose, Pink (light), Yellow, Salmon, Orange, Copper. Separate colors, or all colors mixed.
Per doz., 35c.; per 100, \$2.25; per 1000, \$20.00.

Extra large bulbs 1½ inches and up, same colors as above. 50c. doz.; \$2.75, 100; \$25.00 per 1000.

Double-Flowering Tuberos-Rooted
These can be depended upon producing 100 per cent. double flowers and contain very large and choice show varieties.

Large bulbs measuring 1½ inches and upward. Crimson, Scarlet, Rose, White (pure), Orange, Salmon, Yellow, Copper Bronze, Light Pink. Separate colors, or all colors mixed.
Per doz., 55c.; per 100, \$4.00; per 1000, \$35.00.

Extra large bulbs 1½ inches and up, same colors as above. 75c. doz.; \$4.50, 100; \$40.00 per 1000.

CALADIUM ESCULENTUM (Elephant's Ear)

All sound and with eyes.
Bulbs measuring 6 to 8 inches in circumference, \$1.50 per 100; \$10.00 per 1000.

Bulbs measuring 8 to 10 inches in circumference, \$3.50 per 100; \$30.00 per 1000.

Bulbs measuring 10 to 12 inches in circumference, \$5.50 per 100; \$50.00 per 1000.

Monster bulbs measuring 12 inches and upward, \$10.00 per 100.

BODDINGTON'S "QUALITY" GLOXINIAS

This popular flowering plant is coming into greater vogue than ever, not only as a pot-plant for house decoration, but also for cut flower purposes. Our strains of Gloxinias are the true erect flowering type, grown by a specialist in Europe.

Blanche de Vera, white, rose bordered.
Defiance, glittering crimson.
Emperor William, blue, white border.
Etoile de Feu, carmine red.
Kaiser Frederick, scarlet, white margin.
King of the Reds, dark scarlet.
Madame Helene, white, with violet crown.
Marquise de Peralta, white, red bordered.
Mont Blanc, snow white.
Prince Albert, deep purple.
Princess Elizabeth, white, bordered blue.
Princess Mathilde, white, with rose crown.
Queen Wilhelmina, dark rose.

Price above named sorts 65c. doz., \$4.50 per 100, \$40.00 per 1000.
All Colors Mixed, 50c. doz., \$4.00 per 100, \$35.00 per 1000.

FANCY LEAVED CALADIUMS

A grand Brazilian collection containing twenty varieties personally selected by us from over one hundred sorts submitted by pressed leaves last summer—from which we selected the cream.

Extra fine bulbs in 20 varieties, per doz., \$1.50; per 100, \$12.00.

Fine bulbs in 20 varieties, per doz., \$1.25; per 100, \$10.00.

Mixed varieties, per doz., \$1.00; per 100, \$8.00.

The Twenty-four Best Dahlias for Florists

INCLUDE THE BEST DECORATIVE DAHLIA—SYLVIA. Flowers 4 to 6 inches in diameter, of fine form and full to the center, which is white, shaded to soft pink on the outer petals. One of the best cut-flower varieties. 10c. each; \$1.00 doz.; \$8.00 per 100.

Our Seed Catalogue containing all the above 24 Varieties, and much other information mailed free.

ARTHUR T. BODDINGTON, 342 West Fourteenth St., NEW YORK.

Some Dianthus—All Dianthus are Divine Flowers.

Next to the violet, these divine flowers are the sweetest and most deliciously scented of all small growing plants. They possess most exquisite colorings and are delightful in all gardens, being among the best known and most popular plants of the world. In the very smallest gardens in the remotest parts of Europe, there will be found some one or more of the dianthus family, as surely as one may find a common lilac.

Taking those members of the family in the order of their popularity, the first being carnations, they are the most prominent of the dianthus. Their several sections embrace those known as Water flowerlet, or perpetual, florists', Summer flowering, florists' picotees, tree carnations and hardy cloves.

The Water flowering carnations are to-day of nearly as much commercial importance as the rose. There are hundreds of varieties and millions of plants grown annually.

The florists' Summer flowering carnations give but one crop each year, in July. They have always been the artisan amateur's flower in England, where they need no glass of any kind to protect them. For more than 150 years these Summer flowers have been the joy of hundreds and hundreds of men whose income would not average five dollars a week, whose collections, if large, contained no more than 48 varieties and on average three or at most four pairs of plants of each. The plants are layered in pots, two plants in each pot, in round numbers 400 plants. Each pair as one clump, planted in September in prepared beds, 4 feet 6 inches wide, the front row 9 inches from the edge and the back row 9 inches from the back and the 4 rows of plants 9 inches apart—in the beds both ways. All tall growing varieties, each kind together, are planted lengthwise of the bed in the back row; the next tallest in the second back row and the shortest growing varieties in the front row. Tying, staking and handling are done from both sides of the bed, each bed being covered with roof and sides made of fringed muslin or canvas as soon as the flowers begin to show color.

Smaller collections of half the number of varieties and number of plants receive the same treatment. The beds are raised above the ground level six or more inches, and are well drained. September is the month for planting. The plants are mulched during the winter. Care is taken to keep them clean, and toward flowering time the buds are thinned out to four or six on each plant. Clubs, with a small membership fee, are general. Members compete with each other, with flowers both on and off the plants. A club collects the best flowers from its members, and exhibits them against other clubs' flowers. Nottingham against Derby, small clubs, village against village.

Carnations are divided into seven sections, crimson, pink, purple and scarlet bizzarres. These are marked with more than two colors on each flower; rose-purple and scarlet flakes on white grounds and self. Each class is shown separately as a rule, one flower of each, except in special sweepstakes, where two to five dozen are in one competition consisting of all or any classes. They are exhibited on stands 15x9 inches, painted dark green and most highly varnished, each flower on a white disc of stiff paper, large enough to write the name legibly on the lower edge, thus, "Taylor's Lord Napier." The prizes consist of anything from a silver pencil case to a silver cup or more.

All this has been going on before any railways, or street cars, when the stage coach was the only public conveyance. I have heard and do now hear men say with upturned noses, what a ridiculous way to show flowers—with paper collars on them! These same men would hardly be capable of making the paper collars, much more grow the flowers. True lovers of flowers never make such remarks.

Other carnations are the old clove, the sweetest smelling of all. A clump of the old oxblood crimson, 2 feet high, and as much through, is a sight, and a scent never forgotten. There are several lighter colored cloves all of which are desirable.

The tree carnations of the continent differ somewhat from the perpetual form of our greenhouses, some of which are acceptable.

The picotees are grown the same as the carnations and are shown in the same manner, being divided into sections, heavy purple red and rose-edged, light purple, pink and red edged, and yellow grounds.

The florists' pinks are grown more extensively, requiring less room, and are not quite as fastidious in their requirements. They are shown in the same manner as carnations and are divided into sections of crimson, red, purple and rose markings on white grounds known as lacing. Good collections consist of from 75 to 100 varieties. These florists' pinks should be more extensively cultivated here as they are as hardy as the old garden pink and require only a rich friable, well-drained soil to be successfully grown in any locality. Other pinks desirable for the garden are: Anne Boleyn, very, very old but a beauty still; Derby Day, Lord Lyons, Mrs. Jas. Welsh, Miss Owens and Rubens, finely colored varieties; Ambriata major, Lady Blanche, Mrs. Pettifer, Mrs. Sinkins, Pilgrig Park and Delicata, white and light varieties.

Still another section is the mule pinks or hybrids. The really old blood red crimson, with good sized

double flowers is rarely seen. It is one of the very best garden plants. Hybridus multiflorus, introduced around 1864 or '65, raised from Quercuili and a garden carnation, a pure white Marie Parc, a crimson; Napoleon the III, a deep rose and a rose and white striped are all excellent garden plants, and for florists' Spring plant trade there is none better, when properly cared for.

The following list of species contains only those possessing characteristics valuable for garden purposes generally.

The recorded number of known dianthus species is nearly 250.

Alpestris, flowers red, two or more together; petals margined with lighter color; leaves narrow, lance-shaped; height 6 to 10 inches. July, E. Alps, 1817. Good rockery plant.

Alpinus, flowers deep rose spotted deep crimson, very freely produced; petals fringed; leaves, short, blunt, deep green; height from 4 to 6 inches. Austrian Alps, 1759. A gem for rockeries.

Arbusculus, flowers rich, deep purple crimson borne solitary, double and single blossoms; inside petals spotted at the base with pink and cream, outer petals toothed and fringed; leaves, lanceolate glabrous; stems, strong. June-August. Height from 1 1/2 to 2 feet. China 1824. Plant not hardy; a fine Summer plant out of doors and should make a good parent.

Arenarius, flowers spotted crimson on white ground; petals, lobed, narrow at base; leaves nar-

Gigauteus, flowers many, deep purple, borne in round heads supported by leafy bracts; leaves very long and narrow on round stems; height from 2 to 4 feet. Summer, Eastern Europe, 1828. Not hardy, but a telling Summer plant, worth breeding.

Latifolius, flowers, plak to red borne in flat trusses on strong stems; leaves broad and blunt. A hardy and desirable plant. Native country not described.

Plumarius, garden pink, mother of many forms, including the florists' kinds; known also as pheasant's eye. Flowers either double or single, white, purple, red or crimson, spotted, striped and variegated; petals more or less fringed or jagged; sweet scented; leaves narrow, stiff, glaucous and numerous; stems carry two or more flowers. Height from 9 to 14 inches. Eastern Europe, 1629. Everybody's plant.

Superbus, the night scented pink, flowers deep rose colored, extremely fragrant at night, of medium size; petals much divided, bearded and feathered; leaves lance-shaped, smooth and dark green; stems smooth topped with many flowers. Height from 9 to 18 inches. All Summer. Northern Europe, 1596. A grand old plant.

With the growing interest in Summer gardening, the getting together of a number of species of one genus, and colonizing them as it were, affords not only delight to the eye, but pleasure and study to the mind in their display of structural differences.

It does seem to me that the American Carnation Society could some time, in some place, in its publications, or at some of its meetings, find room, or time, or both, to intimate that there are more than one member of the family to recognize; or is the Carnation Society an organization for cut flowers of one kind only? If so, the title is a misnomer!

JOHN THORPE.

Mixed Pollen.

Editor Florists' Exchange:

I have been somewhat amused by the various opinions expressed of late on the artificial fertilization of the carnation and I may add, other flowers. There seem to be some who "think" that pollen of several varieties can be gathered and "mixed together," and be used in fructifying the seed-bearing carnation flower to produce new and desirable improved varieties. If this was so, we then would have in nature endless varieties of every conceivable color. But such is not the case. If it was so, the results would be shown on every hand.

We will suppose that a good red carnation is to be taken for the seed-bearing plant, and "mixed pollen" from a white and a pink variety is used to fertilize the red variety for the desired seeds. In this case of "mixed pollen," why may we not expect the seedling plants to produce plants giving white flowers and pink flowers on the same plant? We might also expect parti-colored flowers, of red, white and pink of even colors.

There certainly is a field for the so-called "wizard," Mr. Burbank, to show his cunning. The climate of California is peculiarly suitable and propitious for the purpose. Let Mr. Burbank take "mixed pollen" of the sweet orange and the lemon and cross it on the lime, or some other distinct variety, and from the seeds raise plants that will produce fruits, half orange and half lemon; and if he succeeds in doing so, it will really be "a new creation," as nothing like it has been seen before.

Our friend E. G. Hill might also take a hand in mixing rose pollen, and give us in due time rose bushes producing several colored flowers on the same plant. This then would show that mixed pollen had been effective, and would convert the skeptical into believing it.

A few seem to think that "mixed pollen" from stated colors will produce desired results, as the several colored pigments which are mixed by the painter on his palette give the desired tints wanted. This in the abstract cannot be done by mixing pollen for new carnations, nor any other flowers. One variety of pollen only will be prepotent in the fertilization. Remember, Mr. Editor, "of Brian's birth strange things were told," and some would tell us that desired results had been obtained in the vicious resultless system of using "mixed pollen."

A conscientious hybridizer and crosser for new varieties will not experiment with "mixed pollen," but would use one variety as the male in first cross and would in crossing the seedling use the other color contemplated. I wonder if Victor Lemoine uses "mixed pollen" in his crosses? I doubt it very much. As an earnest of my convictions that it is useless to try it, I stand ready to donate a respectable sum to any hospital in the country, or to the raiser of these "new creations" as indicated above as an incentive to the production of same. Then if produced (?) I think that an advance beyond our present conception has been made, and the "mixed pollen" experimenter will then be in the foreground on a pinnacle of success too high for us at present to contemplate, and will deserve the plaudits of his fellow craftsmen.

Rochester, N. Y. JOHN CHARLTON.

Dianthus Plumarius

Photo by Joho F. Johnston

row. Height from 6 to 10 inches. July-August, Eastern Europe, 1724. Rockery.

Atrorubens, flowers dark red in clusters, freely produced; leaves narrow and persistent; height, 1 foot. Summer, Eastern Europe, 1802.

Barbatus (sweet william) hardly needs describing. It is not nearly as much grown as it deserves, and there has been scarcely any improvement in it the past thirty years, which is to be regretted. One doesn't see Hunts' Improved, with flowers as large as a quarter and with clear and decided colors.

Cesius (Cheddar pink), a little beauty with its cheerful, delicate, rose colored flowers, crinkled petals, and delicious scent. Growth short in tiny tufts covered with glaucous bloom. Height from 3 to 6 inches. Britain. Time of introduction not noted.

Caryophyllus, carnation, clove pink, the parent of many kinds of carnations and picotees. The only really hardy kind. It is known as the old clove. The plants are hardly to be classed as hardy in the Western states. They are beautiful and worthy of any care given them. Other kinds have been previously described.

Chinensis (Indian pink), flowers very variable in color double and single like those of sweet william. It does not receive the attention it merits. All Summer. China, 1817.

Cinnabarinus, a comparatively new species of great merit; flowers large, deep, fiery red; leaves narrow and quite stiff; of fine shrubby habit. Height from 10 to 16 inches. Flowers all Summer. Thessaly, 1888. This should make a valuable plant for the hybridist.

Deltoides (maiden pink), an exquisite little plant for the rockery, dainty, prim and polished; flowers rose with deeper colored centers; leaves small; stems branched. Height from 6 to 9 inches. All Summer. Britain.

A Good Investment.

Referring to a full page advertisement he recently used in The Florists' Exchange, S. S. Skidelsky says: "I am well satisfied with the results and consider the advertisement a good investment."

The Poehlmann Plant at Chicago.

On the occasion of a recent visit to the West one of the most prominent and successful horticulturists which the phenomenal strides of commercial floriculture of the past two or three decades have produced was met one day on his return from the Poehlmann Brothers Company's ranges at Morton Grove, Ill., where he had spent the better part of the day enjoying a thorough inspection of the immense establishment, and he remarked to the writer that that day alone had more than repaid him for traveling one thousand miles from home and leaving his business at a comparatively busy season.

Descriptions of the Poehlmann plant have appeared from time to time, and yet it seems that innumerable visits but tend to increase one's interest in the establishment, as something new is always to be found, "the latest and best" being the maxim of the concern, one, too, which unquestionably accounts for much of the success which here pre-eminently prevails. It matters not what the price of an article or of stock is. If the one is a money-saver and the other a money-getter it is the policy of this house to buy; consequently one may search far and near among places large and small with the positive assurance that a more thoroughly up-to-date and perfectly equipped establishment will be hard to find. No detail is overlooked, however trivial it may appear, that tends to expedite or more perfectly execute the manifold branches connected with the work of so large a business, and the results speak for the care, attention and system which are in constant evidence every minute of the twenty-four hours at this well-managed establishment.

Partial View of Poehlmann Brothers Company Plant, Morton Grove, Ill.

was a large supply, probably 2,000 tons, on hand, so it was estimated that the year's consumption from July to July would be in the neighborhood of ten thousand tons.

This concern, though one of the youngest of the very

grade than most others, as among their products are included not only roses, carnations and chrysanthemums, but lilies, lily of the valley (of which 400,000 pips are ordered for next year), Asparagus plumosus and Sprengeri, smilax, great benches of adiantum, antirrhinum, Holland bulbs in all popular commercial sorts, mignonette and, in fact, practically all commercial staples for which they have a call.

The propagating department is run on a very large scale. On March 1 upwards of 200,000 carnations were already potted off into 2½-inch pots and a second lot was in the sand. Rose cuttings in different stages were seen in proportionately large numbers and hundreds of feet of bench were filled with chrysanthemum stock plants, which it was estimated would produce 800,000 cuttings within the next few months.

The list of commercial varieties of roses, carnations, and chrysanthemums grown is a long and complete one, embracing this season twelve, fifteen and twenty-eight sorts respectively, and a good stock of the new carnations has been ordered, including 12,000 White Perfection, 5,000 each of Aristocrat, Winsor, Beacon and Pink Enchantress, and smaller lots of Mabelle and Welcome. In this manner it may be seen that the carnations are kept thoroughly up to the times, and that no sign of degeneracy is perceptible in many standard varieties which in other places are evidencing symptoms of die-back, attributable doubtless to the great pains taken in preparing the soil in which they are grown, the field plants never occupying the same location twice without the intervention of a grass crop, and the sod for compost for benches being selected from different sections with great care.

Permanent improvements are constantly being executed at Morton Grove, these at present under way or in immediate contemplation being a packing shed 50x150 feet, for which the foundation is already laid, and a complete electric light and cold storage plant.

WILLIAM K. WOOD.

Dwelling House of August Poehlmann, Morton Grove, Ill.

One million square feet of glass, a round million, is now the claim for the area of this noted range, and it will probably measure up more than that, as by exact measurement the addition of last Summer filled out 250,000 square feet to what was generally conceded to be an 800,000-foot plant before.

The business arrangements of the concern are well nigh perfect, August Poehlmann and Adolph Poehlmann having respectively general supervision of plants A and B into which about equal subdivisions the glass area is separated, while the salesroom and shipping department are under the management of John Poehlmann. At plant A Foreman Richard Salm is in charge of the roses, and Foreman Guy W. French of the carnations and chrysanthemums; while at plant B, which is all devoted to roses, the foremen are William Keimel and Robert Hand.

A few facts will give the reader a slight idea of the immense scale on which the flower business is carried on at Morton Grove. The matter of help is, of course, a vital one, as there are constantly employed in connection with the establishments one hundred and fifteen men, the one item of heat requiring one chief and two assistant engineers and fifteen firemen and temperature men, a numerical force in itself which would doubtless have fulfilled all requirements in the largest similar plant in the country not many years ago. Twenty draught horses are continually kept busy in connection with the work, notwithstanding the fact that spur tracks deliver the coal and manure right where they are desired and where they are unloaded by latest improved appliances. But there are 7,000 to 8,000 loads of soil to be hauled each year in addition to which 125 carloads of manure are used annually. The freight-book showed the receipt from the 28th day of July last to March 1, seven months, of 261 carloads of coal, averaging from 38 to 40 tons to the car, but there

large places, is certainly one of the most progressive and probably produces a larger variety of stock of high

SALVIA ZURICH

THE EVERBLOOMING SALVIA

One of the most important novelties in bedding plants introduced for a long time, produces its wealth of flowers while very small and is in its full glory long before any other kind shows even a bud, grows also much dwarfer and more compact. Our stock is raised from cuttings and seed, which was procured in Zurich, Switzerland.

Strong plants from 2½-in. pots, 75c. per doz., \$5.00 per 100, \$45.00 per 1000. For full description send for circular or see American Florists' Carnation Number, page 19, Florists' Exchange, page 185, and Horticulture, pages 140 and 202.

Orchids for Florists' Use.

(Paper read by J. A. Newsham before the Society of Southern Florists at New Orleans, La., February 15, 1907.)

The orchid family comprises many thousand varieties, some of which are both beautiful and curious, but are not available for florists' use many owing to their scarcity and the high price; others from the fact of their shyness to bloom under the treatment the ordinary florist has time and facility to give them; so that at the present time the number grown for cut flowers is limited to a few that are easily managed and not too expensive to buy in quantity. But I am sure the time will come, and that before very long, when there will be many more varieties added to the present list of orchids for florists' use, especially when their requirements become better understood by the general run of florists, without being expert orchid growers.

When we look back a few years in the cultivation of the rose and carnation, we could count the few men who then really made a success of their cultivation while to-day they are being grown in every part of the country, by the thousands, by men who have not spent a lifetime in learning how to grow them successfully. So it will be with orchids, which are plants that will stand rougher treatment without showing the immediate effect of it or ruining the season's crop of flowers, as is often done by a little mismanagement of either the carnation or the rose. At the same time, when once an orchid gets into a very bad condition, it is often better to throw it away than try to bring it around again. This is one reason why so many have failed to make orchid growing pay; one-half of the space is filled with plants which bring no returns and, in most cases, only make a breeding place for all kinds of insects and fungous diseases to ruin the balance. Of course, there may be exceptions in which a plant may be of some special value, and may pay for the time and attention necessary to restore it to a healthy condition.

How to Start.

The first question for the beginner to ask is, "What kinds of orchids shall I start with?" My advice to him is to begin with what are generally termed "semi-established plants;" that is, plants that have been recently imported and have already commenced to grow; and get them from a first-class house making a specialty of this business. By doing so he not only learns how they are potted, but will also stand the chance of securing special varieties among them as they are not all collected while in bloom, and many of the finest and most valuable varieties have turned up among imported plants. For this reason one may often buy old established plants cheaper than newly imported ones, but he may be sure all of the good varieties have been picked out of them.

While I will give a list of varieties to grow especially for cut flowers, I am sure it will pay anyone who runs a store to grow a nice collection of other orchids as an advertisement, using them when in bloom for the decoration of the store window, or for any other purpose, as they always command attention and are talked about wherever rare flowers are mentioned.

Pottings.

Orchids are grown in many ways; in ordinary pots and pans, baskets made of wood and earthenware; and the small growing kinds do well on blocks of wood. I prefer pots or hanging pans, mostly for their lasting quality, for although the plants will grow as well in wooden baskets there is always the drawback that these commence to rot and get full of fungus, and it is not an easy matter to remove the plants as the roots become grown around the baskets. To put the plants in larger baskets without taking the old ones away, is sure, sooner or later, to end badly on account of the fungus from the rotten wood. With pots there is not so much danger; they last much longer and are cheaper as well. For potting material peat is good where it can be easily procured; if not, fern root and live sphagnum moss are all right. The pots ought to be more than half full of broken pots and charcoal, and the plants must be firmly potted and staked until they have become established. This is very important, for if they are loose and shaky they seldom do well. And by all means, use as small pots as possible, especially with newly imported plants or any that have gotten into a bad condition at the roots from over-watering or any other cause.

Watering.

This is one of the most important things in orchid culture. Too much water at certain seasons is the cause of many failures, especially in Winter, during their resting period. In our climate where we do not have to fire very hard, very little water is necessary; perhaps a little twice a week is sufficient, just enough to keep the plants from shriveling. I make it a rule in the Winter when I have any doubts as to a plant wanting water to pass it by until the next time; and in the Summer, under the same conditions, I water it then. I have found this a good plan, not only with orchids but also with other plants. Of course, weather conditions have a great deal to do with the amount of water needed. In the Summer, with outside plants and good drainage, there is not much fear of over-watering; twice a day not being too much for established plants or plants in baskets

or blocks. Of course, newly potted or imported plants would require less heavy watering until they commence to grow freely.

Resting.

This is also important with many orchids, especially cattleyas, bellas and dendrobiums, also some varieties of oncidiums. When a plant has about finished its growth it is time to reduce the watering by degrees until you give just enough to keep the bulbs plump and maintain them in that condition until they commence to show flower, when they require a little more water. But never get them soaked or the buds are liable to turn yellow and fall before opening, especially in a low temperature. After flowering they generally commence to grow, and this is a good time to pot them or change them in any way needed.

List of Vegetables.

Cattleya Trianae from Colombia, is considered one of the best for florists' use, being one of the easiest to grow. It varies very much in color, from pure white to deep rose. It blooms here from November to April and sometimes twice.

Cattleya Mendell, from Colombia, is of about the same color as, is somewhat larger, and blooms a little later than C. Trianae.

Cattleya Mossiae form Venezuela, varies very much in size and color, some varieties being almost double the size of that of others. It blooms after C. Mendell. A good variety of C. Mossiae is hard to beat.

Cattleya gigas, from Colombia, is the largest flowering cattleya and in its native country one of the freest bloomers, having as many as seven flowers

Odontoglossum citrosamm

Club Management.

As we cannot grow any of the cool orchids in this climate we need only to place them in two houses: one for the East Indian and the other for the American. There need be very little difference in the temperature of the two houses, but the one for the East Indian sorts such as the cypripediums phalaenopsis and dendrobiums need to be kept much moister and require less ventilation, as this class, most of them not having bulbs, cannot be allowed to become so dry or they will lose their foliage except dendrobiums which may be wintered in the same house as cattleyas, as they require, about the same treatment while resting. The American orchids do better outside under slat shades, from about the first of April until they have completed their growth, when they must be brought under cover, as a wet season would start them into growth again. I have not given the East Indian kinds a thorough trial outside during the Summer months, but most of these make more growth with us in one year than they do in the North in two, without interfering with their blooming.

on a single spike. Under cultivation it is not often seen in this condition, but by growing it in pans or baskets hung close to the glass, and given a little more heat, it will flower quite freely during July and August.

Cattleya labiata (Brazil) is the best for Fall flowers and a very easy orchid to manage. While not so fine a variety as some, it comes in when flowers are scarce and should be grown on that account.

Cattleya Percivaliana is considered a small variety of C. Mossiae with a shade darker lip, and is the latest of the large flowering cattleyas to bloom.

Cattleya Skinneri (Central America) is the best of the smaller flowering cattleyas; it blooms in the Spring; is of a deep rose color, and bears as many as eighteen flowers on a spike.

Laelia purpurata (Brazil) is a very fine orchid, blooming in the Summer months; it is becoming very scarce.

Laelia anceps (Mexico) and its many varieties are easy to grow. It blooms in the Fall, throwing long spikes of flowers, making it always useful in any kind of work or decorations. In color it runs from pure white to deep rose.

Phalaenopsis amabilis (Philippine Islands) is one

WIETOR BROS., Wholesale Growers '51 **Wabash Ave.,**
 of Cut Flowers **CHICAGO**

of the finest orchids to grow in this section, bearing as it does large spikes of almost pure white flowers in the Spring months when they are always in demand. It is considered rather hard to manage, and as it comes from a hot climate it is grown too close and confined in the attempt to keep up the temperature especially in the Winter time, when much fire heat is required. Here we have plants which only receive fire heat a few times during the Winter, the temperature often going down to below 45 degrees, and still these plants do not seem to suffer in the least. But they are grown in an open house all the time, where everything is left open night and day, except where there is fear of a frost, and they have been growing that way for years.

Phalenopsis Schilleriana, from the same country as the last named, is a stronger grower, bearing a spike with as many as 100 flowers at one time; color from pale to dark pink.

Vanda cerulea (Northern India) is one of the few blue flowering orchids varying from light to dark blue. It is always salable.

Notes from Pittsburg.

Tuesday evening, March 5, was the regular monthly meeting night of the Pittsburg and Allegheny Florists and Gardeners' Club, and although the attendance was somewhat thin we had a lively time and a good show of Easter plants. We wished to get an Eastern man to come to this meeting to talk to us, but so soon before Easter he couldn't reasonably absent himself from his business for a couple of days. After the Spring rush is over, though, we may have better luck.

Between 6 and 7 o'clock the evening of our meeting, there arose over this town a Dakota-like blizzard—terrible wind, blinding snow and piercing frost—and this interfered with the attendance at the club. President Jones declared that with nailing down ventilators, tacking muslin and canvas over holes in the roofs, and chusing after wind-tossed sashes no doubt the poor fellows had enough to do at home for one night and could justly be excused.

same thing in Belle Alliance, and several reported blind bulbs among their Paper White narcissus. The Blind boys used to grow us fine lilies as ever came to Pittsburg, but now they cannot grow them at all; they don't know why. They showed very fine stocky Gertrude hycinthus.

Splendid Mrs. T. W. Lawson and Lady Bouotiful carnations came from a grower at Allison Park. This is a station a few miles out from Pittsburg; it, and Etna, Dehaven and Bakerstown are all within a short distance of one another. The whole neighborhood there is considered an A 1 carnation country.

John Bader sent extra fine potted spiraeas of the Gladstone variety. These plants are worth \$50 to \$75 a hundred wholesale, but the retailers claim that they cannot get more than a dollar a piece for them, and at this price there is very little money in them.

Only a rather limited number of genistas can be sold. A pretty 16-inch specimen in a 9-inch pot was shown. Wm. Leow said, "It would wholesale for 50c. and retail for a dollar. But if a lady came in and bought it, as soon as she'd see that pot, she'd exclaim 'Oh, I can't carry that pot, please send it!' Then where would I be? 50c. for the plant, 25c. to a boy for delivering it and 10c. for his carfare, allowing myself the extravagant sum of 15 cents!" Then you should have seen Henry Blind turn up his nose. "No, no," said Billy, "I don't care how big the plant is if it is good, but for mercy's sake, let the pot be small."

Walter James sent some very pretty cinerarias in bloom in 5 and 6-inch pots. There isn't much demand for them; 35c. to 50c. a piece is a fair price for them in 5-inch pots; more for proportionately large plants. And the growers claim there isn't much profit in them; they take up too much room. But they are invaluable for private conservatory work. Mr. Price sent stellata cinerarias 6 feet high and much branched. While these are not popular commercial plants there is a use for them, and Smith, the Sixth avenue florist, has fine decorations of them. There is much room for improvement in the selection of color among them.

Mr. Jenkinson sent very fine obconica primroses of the grandiflora strain and a dense ball of Gloire de Lorraine begonia. The primroses were raised from seed sown last May and grown on all Summer in a cold frame; they were brought into the greenhouse after the chrysanthemums were over and away. He raises his stock afresh from seed every year; it doesn't pay him to keep over old plants. An exceptionally fine dark variety was named Crimson Queen, of Sutton. The begonia was one of a batch that was in full bloom at chrysanthemum time, then cut over a little, slightly rested and started again to be in greatest glory at Easter. Mr. Price had the biggest plant of a Chinese primrose ever seen at our meetings—big as a bushel basket. Harry Blind said he could get \$2.50 for it. Mr. Price also had some very vigorous red amaryllis in bloom, and an attractive little bulbous iris—I. tuberosa. The Phipps conservatories contributed some fine tall Bermuda lilies and other plants and cut flowers.

A noticeable feature of the exhibition was that every flower pot had been washed clean. This is as it should be. Bringing plants in dirty pots to an exhibition, no matter how fine the plants may be, is reprehensible.

There were a couple of Scotchmen present, one a little man with a bald head, and the other a bashful young chap "wi' a cutty pipe stuck in his cheek." The old man got up and told "of a florist friend of his in another State, a Scotchman, who this week was going to a social gathering where there was to be a band of 16 pipers, three drummers and a drum major 6 feet, 4 inches tall." He tells me—"won't it be heavenly?" and suggests that I too come on and enjoy myself. Now, why should we have to go to foreign parts, when we have the men and the music right here at home?" That struck attention, and a "so say all of us" expression glowed cheerily on every face. But the thought of "A hundred pipers an' a' an' a'" a skirlin' till "the roof and rafters a' did dir!" overset the Dutchmen crazy. The majority of the florists here are German, and they well know that there is a strenuous bagpipe band in the Smoky City and that it is bot' heard and felt, while only tooting horns and fiddles stir the Teuton's heart. The president being a Welshman cared not whether we had pipes or pianos, providing we had good singing, and judging from the nervous twitching of the eyes of Pat, the primrose man, he didn't care a fig should Tubn's "blether" usurp Erin's harp, if he only got loud noise enough and quick enough for a breakdown or a jig.

The upshot of the matter was: As we have worked hard all Winter and times are fair and our spirits light, a little innocent recreation will do us good, and as there is no recreation so fine and enjoyable as that where our wives, our sisters, our daughters, our mothers, our sweethearts and our aunts are present with us, it was resolved that we consider this matter favorably, and some time between Easter and Decoration Day have a happy little social gathering. But as so many of our leading members were absent, the matter was deferred for final action until our next meeting.

WILLIAM FALCONER.

Dendrobium Wardianum

Dendrobium nobile (India) is one of the oldest varieties; easy to grow and flower.

Dendrobium Wardianum (Burmah) is also an old favorite.

Dendrobium Phalenopsis (New Guinea) is one of the best for cut flowers, giving spikes sometimes two feet long, with from twenty to twenty-four flowers of various shades of pink, lasting a long time in bloom.

Dendrobium formosum (Burmah) is a good orchid to grow, bearing white flowers which are much used for bridal bouquets.

Odontoglossum citrosium (Mexico) is about the only one of this class we can manage here. It should be given the same treatment as *Lælia anceps*. It throws long spikes of light pink flowers.

Oncidium erispum, *O. splendidum* and *O. varicosum* are three good kinds to grow, bearing long spikes of yellow or spotted flowers which are very suitable for decorations.

Blind Brothers had magnificent *Coleur de Cardinal* and *Murillo* tulips. They were in large pans, 30 bulbs in a pan and close together. When in bloom as they now are they get \$2.50 to \$3 each pan, retail for them. "No, they wouldn't grow them in smaller pans; when people come in for tulips they want tulips and it is as easy for us to sell these pans at \$3 as it would be smaller ones for \$1, and we have less trouble." They grow only four varieties, namely, *Yellow Prince*, yellow; *La Reine*, white; *Murillo*, double pink, and *Coleur de Cardinal*, crimson-scarlet; and they buy the best bulbs in the market.

John Jones showed *Prince of Austria* tulips and praised it highly for a day-light orange-scarlet variety, but the tradesmen declared it wouldn't stand the night-light test and they had no use for it. Mr. Jones complained that a majority of their *Keizerskroon* tulips have failed to bloom at all. Another grower noticed the

Notes on Dahlias.

Now that the time is fast approaching when growers of dahlias will be making a start in the work of propagating by means of cuttings, a word here again may not be amiss about the importance of correctly labeling the varieties in order that after the plants are sold to customers and by them grown and flowered there will not be the disappointment and certain loss ensuing from plants incorrectly named.

As far as professional gardeners in charge of large private estates are concerned, dahlias have perhaps already reached the top-notch of popularity; and while the importance of that class as buyers is not questioned at all still I think dahlias are destined to spread out to far greater dimensions than the confines of the estates of the very wealthy. They will in years to come be the all popular flower for the million. I mean by that, dahlias will be cultivated by the million.

The cactus-flowered varieties are perhaps, the most beautiful and most interesting of the several types of dahlias, although I am not so sure that now they are on the whole considered the most useful from the florists' point of view. I rather think the florists find the latest developments in singles and decoratives of more utility than the cactus-flowered sorts, and that for several reasons, all of which are evident to any making extensive use of dahlias as cut flowers for decoration, principally because of their general superiority of qualification for effect in decorative work, in that they are also susceptible of a greater variety of arrangement and that they hold together longer than the cactus-flowered varieties. The latter, however, hold by far the greater fascinating power over the amateur and the man who grows for exhibition, as well as those of both classes who are so enthusiastic that they are all impatient from the time a new variety is announced until it is in bloom on their premises.

The standard varieties of all the types are already so well known that it seems useless again naming them. Herewith I list some of the best of recent introduction of the various types as well as a few others not so new because I think they may not be generally known.

Cactus Dahlias, Introduction of 1907.

- Aphrodite, a beautiful ivory-white with a tinge of pink; very narrow petals.
- Briantilla, clear brilliant lilac without shading.
- Daisy, yellow at the base and rosy pink at the extremity.
- Else, delicate yellow passing to amber, edged deep rose.
- Faunus, yellow shaded and tipped with salmon.
- Hazer Kind, lavender pink, one of the most profuse bloomers.
- Helene, cream yellow, center shading to a delicate pink.
- Ivanhoe, bright straw color, very long petals; good for exhibition.
- Mikado, blood red shaded scarlet, very narrow, pointed petals.
- Mrs. F. Grinstead, rich crimson with a tinge of crimson; very good.
- Mrs. H. Shoesmith, white; the best of the lot for exhibition.
- Mrs. Gaskill, pink, delicate and beautiful; good form and large size.
- Primrose, primrose yellow; large, very good.
- Roland von Berlin, scarlet; good stem color of foliage.
- Star von Berlin, orange, yellow, good stems.
- Stern, the finest yellow in cultivation.
- The Pilot, the tips are bright terra cotta, base yellow; excellent.
- Venus, deep apricot; fine exhibition variety.
- Victorian, pinkish white speckled with crimson and purple.
- William Marshall, orange with yellow center; very large.

Standard Varieties of Cactus Dahlias.

Aurora, the finest dahlia in cultivation, cream colored center shading to amber pink to white tips; Standardbearer, scarlet; Ella Kraemer, clear rosy pink; Walker, yellow; Fairy, white, very good; Winsome, white; Harbor Light, orange red; Lord Roberts, white; Schneewitchen, one of the best whites offered; Charm, yellow base white tips and edges; Gaillard, crimson; Thunelda, rose-pink; Dainty, lemon yellow; Florence M. Stredwick, pure white, very good; Alpha, white striped purple and lilac; Amos Perry, bright scarlet, very free; Britannic, salmon; Clara G. Stredwick, bright salmon, very good; Keynes, white; Countess of Lonsdale, salmon red; Etna, lilac shaded violet; Alfred Vasey, pink; Jealousy, deep yellow; Romeo, maroon; Kriemhilde, pink white center; Rosine, crimson with purple shading; Lovely Eynsford, deep amber; Floradora, blood red; Magnificent, rose salmon; Capstan, orange scarlet, shaded apricot; Phineas, bright scarlet, large and fine; Flamingo, bright red; Spatters Queen, pure white; Victor von Scheffel, somewhat like Kriemhilde but better.

Decorative Dahlias.

Catherine Duer, brilliant scarlet, one of the best for florists and gardeners; C. W. Bruton, bright yellow; Delice, light pink, excellent for cutting; Dolly, pink and white; Mrs. Winters, pure white; Mrs. Charles Turner, yellow very fine; Jeanne Charmet, white splashed with deep violet red and

edged with lilac; Oban, lavender, good; Lyndhurst, bright scarlet; Maid of Kent, cardinal red; Nymphæa, clear pink, one of the best dahlias for florists; Henry Patrick, pure white.

Single Dahlias.

Blush Century, white and blush; Gorgeous, scarlet tipped with white; Iris, light ground blotched with white, very large; Pink Century, one of the best; Twentieth Century, rosy crimson shading to white; The Fairy, rosy pink, good for cutting; Wild-fire, orange scarlet; White Century, pure white; Imperialino, the best single dahlia in cultivation, a distinct improvement on Twentieth Century, very fine for cutting.

D. M.

Nephrolepis Todeaoides.

Editor Florists' Exchange:

Under separate cover I send you a photograph of the new Nephrolepis todeaoides, which has originated with Thomas Rochford & Sons, of Broxbourne, England, and received a first-class certificate last year from the Royal Horticultural Society. Although you already have a number of variations from the type, this one is quite distinct from any nephrolepis shown on this side. It was exhibited with several of the latest American varieties. There is, however, an American sport named

Nephrolepis Todeaoides

Originators, T. Rochford & Sons

N. Amerpohlii which I have not seen, but I hear it is an improvement on all existing varieties.

I have seen N. todeaoides growing, and it shows its true dense character in small plants, which is compact, robust, and makes it valuable as a commercial variety. I hear that Messrs. H. A. Dreer of Philadelphia will carry quite a stock of this plant for distribution your side.

A. DIMMOCK.

London, Eng.

Express Rates on Nursery Stock.

When in New York recently attending the meeting of the Association of Economic Entomologists, says the National Nurseryman, President Harrison, of the American Association of Nurserymen with E. Albertson called upon the traffic manager of the American Express Company to discuss the general subject of express rates in reference to nursery stock. They were courteously received by H. Bradley who expressed himself as being most anxious to meet the nurserymen on satisfactory terms and to do what he could in the way of removing real or fancied difficulties. At the request of Messrs. Harrison and Albertson, Mr. Bradley presents the following on the matter of express rates:

What these gentlemen wanted particularly, says Mr. Bradley, was the correct express classification of shipments of nursery stock, which information I gave them, and for the benefit of nursery stock shippers I will repeat the information to you.

On small packages, charges prepaid, value declared not to exceed \$10, our rate is one cent for each two ounces, or fraction thereof, with a min-

imum charge of ten cents for each company carrying, on the following named articles:

- Bulbs, Plants, not growing, completely enclosed,
- Cuttings, Roots, for planting,
- Decorative Greens, Scions,
- Grain Samples, Seeds,
- Holly, Smilax,
- Mistletoe, Tubers,
- Onion Sets,

On heavier shipments, we charge what is known as our "General Special" rate, on the following named nursery stock items:

- *Branches of Pepper Trees, *Holly,
- *Bulbs and Cuttings, *Mistletoe,
- Cape Jessamines, *Moss,
- Celery or Celery Plants, *Roots,
- Cactus, *Scions,
- *Cuttings, *Smilax,
- *Decorative Greens, *Tubers,
- *Ferns, cut, Vegetables,
- Fertilizer, Water Cress,
- Fruit,

Note—Articles indicated thus (*) are not subject to general special rates unless "completely boxed and packed so that they may be handled without extra care, prepaid or guaranteed."

When completely enclosed in baskets and so packed that they may be stowed with other freight, merchandise, pound rates, minimum 35 cents, unless the graduate charge is less.

PLANTS—Our Classification of plants is as follows:

PLANTS, N. O. S., prepaid or guaranteed, . . . D. Mds. Sec. D.

Growing in pots or other receptacles, crated, and so packed that they may be stowed with other freight and may be handled without extra care, and without injury to the plants. . . . G. S.

Growing in pots or other receptacles, completely boxed or enclosed in baskets must be Refused.

Not growing in pots or other receptacles, completely boxed or crated, and so packed that they may be stowed with other freight and may be handled without extra care and without injury to the plants. . . . G. S., Sec. D.

Not growing in pots or other receptacles, completely enclosed in baskets, and so packed that they may be stowed with other freight, and may be handled without extra care and without injury to the plants, pound rates, minimum 35 cents. . . . Mds., Sec. D.

SEEDS—In boxes or cloth bags, or otherwise securely packed for transportation, prepaid or guaranteed, G. S.

SHRUBS AND TREES—For setting, when boxed or baled and strawed, prepaid or guaranteed, . . . G. S.

Now, in explanation of our general special rate. This is what is known as "Scale 'N'" of the classification and is a little more than 20 per cent. reduction from merchandise rates. For example:

Where M'dise	Gen'l Spec'l	Where M'dise	Gen'l Spec'l
Rate is	Rate is	Rate is	Rate is
\$.50	.40	\$3.00	\$2.25
.60	.50	3.50	2.50

1.50	1.20	6.00	4.00
2.00	1.50	7.00	4.75
2.50	1.90	8.00	5.50

It will be seen from the above that the reduction ranges, for short distance rates, from 20 per cent. up to 33-1-3 per cent., for long distance rates.

From what the gentlemen named stated to me, and also from your letter, it would appear that nurserymen have gleaned the impression that we have increased or changed our rates or classification in filing them with the Interstate Commerce Commission. In reply, I beg to say that we have not made any change. The rates and classification as above referred to have been in effect for a number of years, except that we recently added smilax and decorative green to the list of articles enumerated under the head of general specials in classification.

J. H. BRADLEY,

Gen'l Traffic Manager, American Express Co. New York.

Residue from Acetylene Gas.

Inquiries are frequently made as to the commercial value of the lime compounds left behind in the generators in which acetylene gas is prepared by acting upon calcium carbide with water. Analysis of a sample of such residue has been made by Messrs. F. B. Guthrie and A. A. Ramsay, who give the following results in a recent number of the Agricultural Gazette of New South Wales:—

	Per cent.
Moisture	41.36
Combined water, carbonic acid and organic matter	15.37
Insoluble matter	1.03
Oxides of iron and alumina	5.41
Lime	35.19
Magnesia	0.24

There are small quantities of sulphur-compounds (sulphides) present. With the exception of these, which are present in quantities too small to be harmful, there are no deleterious substances present.

The value of this product is due entirely to the lime it contains, other plant-foods, such as nitrogen, potash, and phosphates, being absent. The lime is present either as slaked lime (in fresh samples) or carbonate of lime (mild lime), in samples which have been exposed to the air. It should prove an effective and cheap dressing for all purposes for which liming is recommended, and should be of special value on soils which are sour and deficient in lime or inclined to be stiff, and as a top dressing for pastures.

FOR THE RETAILER

EASTER SUGGESTIONS.

Only one more week is left in which to prepare for the Easter rush. The opinion is general that flowering plants, especially lilies, will be scarce; but as this rumor is repeated each season there is no great alarm expressed by the buyers, as there are usually enough lilies and to spare.

Pot Covers.

The covering of pots has become a necessity and bare pots are no longer tolerated. Much thought is expended in getting up new ideas for this purpose. Crepe paper has had its day, but the improved product, waterproof crepe paper, is still used extensively, and makes a cheap and effective covering. Wood ribbon mats are also very handy, and have the advantage of being more durable. Those made of the wider material are preferable, and have a handsomer appearance. Very little is being offered that is really new. Among the materials shown is raffia, which is light and cheap, and in its natural coloring does not detract from the plant—something that should always be the first consideration. Light colors, or dark green are safest, although white is the favorite for the Easter season. And you can never make any mistake in using it.

A distinct breakaway from the conventional pot cover is shown in the accompanying photographs. The square idea is entirely new. The material used is birch bark, which seems to adapt itself perfectly to any combination of colors. These boxes, or pot covers, are substantially made and can be used to plant in, the same as metal linings, without the additional cost. They are practically waterproof, but a good-sized saucer can be placed within, if occasion requires.

The chief endeavor of the basket makers has always been to conform the shape of their wares to the lines of the pot. This may or may not have been necessary, but I believe the square pot covers in all materials have a future, and they certainly have a style and dignity worth considering.

Made-Up Holiday Baskets.

There is always a good demand for made-up baskets, and with the great variety of material on hand at this season, some very attractive combinations are to be obtained. Lilies, of course, are most eagerly bought by our customers, and should be introduced whenever practicable. They look well with anything, but good bright combinations sell best. Mixtures, however, should be avoided and great care taken as to the shade of ribbon employed.

The Crimson Rambler roses or the Baby Rambler go particularly well with lilies and form a striking contrast. The bottom should be filled in with Adiantum Farleyense or mixed ferns. Azalea mollis also makes a handsome basket and looks especially well with lilac.

The demand for very large pieces seems to have fallen off, but good prices are obtained for the smaller and neater combinations. Lily of the valley, and the pretty little Firefly azalea, with two or three plants of A. Farleyense, look well together. A basket of imansophyllum, with its unique orange-colored flowers, makes a splendid showing. The ribbon used should be "burnt orange."

Orchids also have a prominent place in the better stores, and are highly appreciated as Easter gifts, giving tone to an Easter display. Oncidium sarcodes, with its pretty yellow sprays, can be had at this season, and Dendrobium Wardianum, Cattleya Schrederae, C. Trianae, and several others. They are best sold as individual plants, and are most attractive on their own blocks, or in cribs. Customers are attracted by their unique appearance.

Gardenia plants are also offered for Easter and some of them are very well flowered.

Some very fine plants of Princess of Wales violets are seen this Easter, which, I believe, is a novelty. Violet plants, nicely done up, make excellent small gifts, and sell at a good profit.

Church Decorations.

Church decorations have a prominent place in the Easter trade and comprise a goodly portion of the business. White is most generally used, and exclusively so in most churches. Lilies in pots, white azaleas, lilac, deutzia and spiraea are all useful. Pot plants are preferable for church decorations at this season, as they usually have to stay two or three days and can be watered in place.

A good solid background of palms is necessary where white is employed, otherwise the flowers will be lost. A much better effect is obtained by grouping the flowering plants than by scattering them here and there; and it is well to remember that anything lower than six feet is usually lost, as it cannot be seen from the body of the church. Advantage should be taken of the more prominent features of the chancel. The pulpit and lectern should be especially well done. A

New Hybrid Rhododendron
Courtesy The "Rosary" Flower Co., New York.

handsome feature for the altar would be a large standing cross of lilies. Little is done with the body of the church for Easter; but wild smilax can be used to advantage, on the pillars, and in front of the choir stalls.

A Handsome Casket Cover.

A casket cover made of violets, constructed by a prominent florist this week, attracted much attention. The top was covered entirely with violets, and a large cross of lily of the valley, the full length of the casket. The side pieces were made solid with violets, but the manner of their construction was entirely new.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words: each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Avenue. My facilities for delivering flowers for any and all occasions are unexcelled. I can give prompt service to steamer and theatre trade. Telegraphic orders solicited.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Washington, D. C.

OUDE BROS., 1214 F Street, N. W. We excel in high-class flowers and design work of every description; quick service, reasonable charges and liberal treatment have placed us on top. Try us.

Milwaukee, Wis.

THE C. C. FOLLWORTH CO., Wholesale Florists, will take care of all your Retail orders for the delivery of flowers anywhere in Wisconsin.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLORAL CO., 1706 Broadway. J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Cincinnati, O.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dallas, Texas.

LANG, THE FLORIST, the largest flower store in the South. Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Texas, Louisiana. Mail and telegraphic orders solicited.

They measured twelve inches at their greatest depth and tapered toward each end of the casket. Attached to this was a fringe of violets encircling the entire cover. The effect of the fringe of violets was particularly graceful, doing away with the set appearance of the old style casket cover. D. RAYBUN.

ELBERON (N. J.) HORTICULTURAL SOCIETY.—The regular meeting of the society was held on March 4, Vice-President Henry Wood in the chair. Three new members were elected. The schedule of the Second Annual Summer show, which will be held on July 24 and 25, was drawn up and adopted.

Some fine exhibits were staged, notable among which were a vase of stock, Queen Alexandra, shown by A. Bauer; vases of tulips, Belle Alliance and Proserpine, shown by J. Kennedy; vase of violets, Marie Louise, by A. Greile; vase of violet, La France, by F. Dettlinger; cauliflower and lettuce, by P. Murray, and carnations, by W. Swain.

A delegation of the society visited the establishment of F. R. Pierson Company, Tarrytown, the other week. W. F. Ross, representing Mr. Pierson, met the company in New York. Arriving in Tarrytown, they were conducted to the Florence Hotel, where an excellent repast was waiting for them. After satisfying the inner man, the party was conducted through the Tarrytown establishment, after which they enjoyed a sleigh ride to Scarborough. The carnation houses were a sight worth seeing. Carnations were seen in every stage of growth, from the cuttings in the benches, to the flowering plants. The house of Winsor was certainly very fine. This variety, I believe, is the best carnation introduced in recent years. White Enchantress was also good, and Beacon as a scarlet will be hard to beat. A very enjoyable and profitable day was spent by all.

GEORGE MASSON.

Notes on the Iris.

By J. Woodward Manning before the Massachusetts Horticultural Society.

While the genera of Iris are confined almost exclusively to the Northern Hemisphere, ranging from the Atlas Mountains in Northern Africa to a latitude of about 40 degrees north, the Iris family is closely represented in the tropics by the moreas and maricas similar in effect, but botanically distinct; while crocuses, gladioli, freesias, tigridias and ixia are familiar genera and serve to represent the family in all parts of the temperate and tropic world.

The iris, or as popularly known the fleur-de-lis, rainbow-flower or poor man's orchid, etc., has more than 170 described pure species, of which about 100 have been cultivated at times by American horticulturists while somewhat more than 150 species are grown by English iris fanciers among which, however, a portion fail to combine sufficient distinction, beauty or ease of cultivation to warrant their extended use. While, however, perhaps less than a hundred species are to be recommended for cultivation in American or particularly New England gardens, this is but a fraction of the number of varieties which by selection or cross-fertilization have been produced and contribute most advantageously to garden ornamentation.

The question of the best species, their peculiar requirements, if any, their ornamental and color effect, their better varieties and season of bloom are matters of interest to the New England flower lover, because there is much of neglected beauty in the class from lack of this knowledge and danger of disappointment from a misunderstanding of the limitations in color range. It is possible, too, to very materially extend the period of bloom as compared with the usual results attained.

Such irises as figure in horticultural uses are divided into two classes, those of bulbous nature and those with rhizomes, the latter varying in this character from the conspicuous surface rhizomes of the very familiar Ger-

man iris to very narrow, inconspicuous, subterranean types of rhizomes in which the roots are the more conspicuous.

Both English and Spanish iris are of easy garden culture, planted in Autumn, the English Iris requiring the greater moisture of the two, the bulbs being planted at a depth of from three to five inches while a mulch is an advantage. There are a few other species of tall growing bulbous irises, such as Iris Juncea and the rare Boissieri, but they probably are seldom imported and do not compare horticulturally with the selected varieties of the last two species.

The dwarf bulbous species are most familiarly represented by the Iris reticulata, a native of Palestine, varying somewhat in type but gorgeous in coloring with its brilliant shadowings of purple and gold and a delicious violet fragrance. Flowering as it does naturally in March our climatic conditions require its cultivation in frames to protect the flowers from staining by dampness, though it is hardy and can be used very advantageously in rockeries or in protected, sunny situations within easy access to the house. The Armenian Iris Bakeriana is even earlier, but less showy, though of rich markings of purple and orange in connection with its general blue tone. I. Vartiana is another species from Asia Minor, but more difficult to manage than the others and more tender.

Another class of bulbous species are known under the name of Juno irises, natives of the Caucasus, Afghanistan and Northern India. They are comparatively large bulbs and require well drained situations and a thorough sun baking in Summer to insure their continuance and future flowering. They have generally leafy stems with several flowers closely set to the stalk and combine all the ranges of colorings in the family. They closely follow the last group in their flowering period, but their inadaptability for cutting and the peculiar cultural conditions they demand without particular increase in their color range fails to promise much

ably more easily cultivated, but of even greater importance is the fact that they hybridize freely with the Onocycylus group and the progeny are comparatively easily cultivated, increase rapidly and are of prolific blooming quality. Mr. C. G. van Tubergen, Jr., of Haarlem, Holland, has been largely responsible for this group of so-called Regelio-Cyclus irises, obtaining them by crossing Iris Korolkowii and its varieties; I. Leichdini, I. Sara and I. Suwarowi with various species of the Onocycylus group. Such resulting progeny as Psyche, lavender beautifully striped with rich purple with darker toned falls, Charon, rich coppery purple with deep purple markings and Iphigenia, intermediate in its color range, show something of the result, while the shape of the flowers is a happy medium between the two groups.

Probably this group has not been extensively cultivated in this country as yet and we will look forward with deep interest to the results.

We now arrive at a point where it is impossible to make a distinct horticultural line between classes based on botanical classification, but by dividing the remaining classes and groups into those with and without surface rhizomes it is possible to make a form of subdivision.

The German Irises

The surface rhizome forms are more popularly known as German irises, though the true Iris germanica is but one of many species. The dwarf forms are greatly neglected, being but seldom seen in American gardens, yet possessing great merit in their range of bloom and the earliness of flowering period. Iris pumila is better known than the other species and growing about nine inches high bears in April showy flowers of deep purple in profusion. As an edging plant it has much merit and there are various selected varieties ranging from pearly white, through clear blues to the deeper colored typical form. Iris pumila is certainly worthy of far greater use than has been the case in the past. I. verna, another dwarf species from the Carolinas, is equally dwarf, quite prolific in bloom with purple shades and blooms about the same time. This does not show the improvement and fixed forms, however, that is true with the last species. The gem among dwarf irises, however, is the crested Iris cristata, only growing about six inches high with light green foliage. It forms a carpet of verdure and bears freely of light blue flowers beautifully blotched with golden yellow. I know no form of dwarf iris with as great adaptability of uses as this either for naturalizing or for varied garden usage.

Commonly confounded with Iris pumila is a form with flowers borne singly on the stalk, somewhat broader leaves. This is Iris chamæiris, or its variety obiensis or talaca. The type bears yellow flowers with the falls veined with purple.

Another small and showy dwarf species known as Iris flavissima or Bloudovii, a native of Siberia, bears showy pure yellow flowers. While there are a number of other dwarf species they have no particular horticultural merit over these.

The Alpine Group.

Intermediate between these dwarf iris and the taller growing German iris has appeared a new race within a few years under the name of Alpine iris, these being produced by W. J. Caparne of Rohais, Guernsey. These are the result of crossing many of the dwarf species with taller growing kinds; the progeny vary in stature and are claimed to give flowers over a period of six to nine months. Probably, however, this refers to a collection of the hybrids rather than any single variety. Undoubtedly they have much interest, and trial will eventually prove such merit and distinction as they may possess.

For perfect hardihood, freedom of bloom and range of color we can with the dwarf and taller growing German irises feel quite independent of the more difficult forms, however. The German iris, as popularly known, varies in growth in the varied forms from fifteen to forty inches. The earlier varieties commence blooming in early May, and by a careful selection of kinds it is possible to keep up a succession of flowers until late June.

Many species are responsible for the beauty of the class, and their crossing and selection have confused their origin. Iris variegata shows its influence in the prevailing yellow color of the standards of the following varieties with the rather remarkable exception of Innocenza, a very fine form, pure white throughout. Other popular and good named kinds are Beaconsfield, standards yellow, falls crimson, edged with primrose; Græculus, standards yellow, falls crimson reticulated with white, Maori King, standards yellow; falls rich velvety crimson margined with gold. Sans Souci, standards yellow, falls yellow, reticulated with crimson brown; and Regina, standards yellow, falls white, conspicuously veined lilac and edged with primrose yellow.

Iris sambucina crossed with I. pallida has given us the very beautiful variety Madame Chereau, while the cross between variegata and sambucina produces Iris neglecta by selection from which we have Clarissima with lavender standards and falls reticulated with crimson purple on a white ground; Cythere, standards lavender blue, fall clear blue; Florence Barr, with both falls and standards bluish, with rosy lilac tinge, and Mons de Sible, with lilac standards and deep crimson purple falls.

Some beautiful forms are embraced under the doubtful species hybrida, all with white standards, of which Due de Nemours, with purple edged white falls; George Thorbeck, falls rich violet purple veined with white at base; Mrs. George Darwin, falls white, the upper part veined with gold and violet, are among the best.

The species Iris germanica is undoubtedly more common than any other type, particularly in the older gardens. In this purple is the predominant color,

From Painting by W. J. Caparne, Guernsey, C. I.

man iris to very narrow, inconspicuous, subterranean types of rhizomes in which the roots are the more conspicuous.

Bulbous Irises.

The bulbous irises are most familiarly known by the English and Spanish types, both of which have been very greatly improved by selection. The English iris (Iris xiphoides,) growing to a height of a foot and a half to two feet, bears two or three flowers to a stalk and varies in color from the purest white form of Mont Blanc through shades of lavender, blue and purple, of which Lord Palmerston with deep rich crimson purple falls and purple-claret standards, is perhaps the best of the darker colored varieties. Many too are showily striped, flaked and blotched with shades of richer colors than the general tone of the flowers. The Spanish iris (Iris xiphium) has taller and more conspicuous standards than the last and the markings are more clearly defined on the falls than is the case with the English iris; possibly the improvement by selection has covered a longer period with the Spanish iris. In any event such a variety as the Thunderbolt is very noteworthy in its large comparative size of flower and grows two feet or more high. The flowers are richly colored in bronze with a remarkably broad signal patch of yellow on each of the falls. The better varieties

for their culture in American gardens except to the fancier. Of them I. Rosenbachiana, Sindjarensis and Assyrica are perhaps the best.

Rhizomatous Irises.

Of rhizomatous irises the hugar bear class is that of the Onocycylus group, generally known as cushion irises. The most familiar species is the Mourning iris or Iris Susiana. All have very broad petals, and among them are the most remarkable forms in coloring. Many of the flowers are most delicately veined and reticulated generally with a darker color on a light background, and were they of easier growth they could not fail to be popular in every garden. They are from Persia, Armenia and Afghanistan and naturally require hard sun baking after their short blooming season. They can hardly be called hardy, and in any event require such special cultural attention that they cannot be recommended. The wonderfully full flowers with their peculiar markings such as shown in I. paradoxa, Iberica and the so-called (Prince of Irises), I. Gatesi makes them particularly interesting and tantalizing.

The Regelia Section.

Closely allied to the Onocycylus group is another popularly known as the Regelia section in which the petals are narrower and the plants are hardier and consider-

St. Paul.

News Items.

Considerable activity is shown by some of the Minneapolis florists in the Chicago flower show for 1908. Already a number of our dealers have signified their willingness to make liberal contributions, and from the report of the solicitors, the Twin Cities will be well to the front in boosting the show not only in cash contributions but also in attendance.

Ralph Latham and Osear Carlson of Minneapolis were in town Friday last, visiting all of the trade.

The Seegar greenhouses, according to report, have been sold to two young florists of this city, but it has proved impossible to get the names of the buyers. The plant has been allowed to run down considerably, and a great many repairs will be necessary before the houses can be used. Mrs. Seegar is now employed by a Chicago concern.

L. L. May & Company's Easter stock looks indeed promising; they estimate having between four and five thousand lilies in bloom. They also have large assortment of some of the finest azaleas they have ever put on the market.

Otto Hieserkorn has placed the large florists refrigerator of the Seegar Floral Company in his store and it will be sold at auction by the receiver within the next two weeks.

Mrs. Colberg, wife of Gus Colberg of the firm of Colberg & Lemke, has been in the hospital for the past two weeks, having undergone an operation which turned out successful and she is now rapidly improving. PAUL.

Rochester, N. Y.

Trade Notes.

Business the past two weeks has been very good. This, no doubt, is due to the increased demand made for products by the Spring openings in the different stores, also the formal opening of the new department store, the event calling for the decoration of the entire seven story building, by J. B. Keller's Sons, the firm using palms, ferns, araucarias, etc., also thousands of bulbous flowers, and 500 American Beauty roses.

Reports from the local growers are very satisfactory, except perhaps in the matter of Easter lilies. In going through the different greenhouses, visitors do not have to look long to find out that in this town at least, a decided shortage will occur, especially among those upon whom the retail men depend for a regular supply. Salesmen, too, traveling for outside firms, and who perhaps are in a position to know, report similar conditions existing in a great many towns. The scarcity of this useful flower will have a tendency to advance the price to 15c. and 20c. per bud or flower for well grown stock, and this, considering the quantity of diseased bulbs thrown away, and the extra amount of heat and attention owing to such a small amount of available sunlight this year, growers feel to be none too high. Carnations and roses have held their own, in spite of the increased supply, George Hart having wholesaled more the past week than at any period to his knowledge, season considered.

Prices have now taken somewhat of a drop, \$1.50 to \$2.50 for standard grades of carnations, while for roses, quality and stem determine the price. Pans of daffodils have found a ready sale; an 8-inch pan of bulbs in full flower, being most desirable, retailing at from \$1 to \$2 each, especially if fixed up tastily with ribbons and paper, etc.

In spite of the approach of Easter, violets are holding their own, at fairly good figures, and in this line the Greeks are a factor, as they usually clean up what is left on Saturday.

The mail order trade of the various seed houses has commenced in good earnest, although operations in the open are still out of the question owing to much frost being still in the ground.

Jas. Vick's Sons have closed the deal, thereby leasing property for a number of years consisting of 90 acres. Preparation is now going on for the planting of 30 acres to asters, for which this firm is noted, also for the erection of some greenhouses, to be able to meet its increasing business in mail order trade. and of which Purple King and Black Prince are the best representatives.

Iris Florentina, the orris root of commerce, is one of the most popular, and very deservedly so, for over a hundred years it has occupied a conspicuous position in every large New England garden and during the period has lost none of its popularity. Free blooming, with flowers of pearly whiteness, it annually leads the way to the charms of the early Summer garden flowers. There are three forms, the common type just described, the variety albicans, of a purer white, and Princess of Wales, even more floriferous, with slightly longer flowers and the most deliciously fragrant of any German iris.

The crowning beauty of all German irises is traceable to the blood of *Iris pallida*, the broadest leaved of all, with sword-like foliage often attaining a height of two and one-half feet and an inch and a half across the blade; the flowers borne on long stems bearing these flowers well above the foliage, altogether producing a most charming effect. The variety Dalmatica, or sometimes known as Princess Beatrice and occasionally in this country as Madam Almyra, is the finest, with immense flowers of a rich lavender blue and with a charming though subtle fragrance. Delicata is of weaker growth, with falls lavender, shading to white and French gray standards. Hybridizing has not improved this species, as seen in the variety Queen of May, which, while beautiful, with its soft, rosy lilac, almost pink flowers, is a comparatively weak grower, though floriferous. The beautiful cross of the species with *Iris sambucina* shown in the variety Madame Chereau is an exception, however, and this is a most delightful flower, with its pure white petals richly feathered with lilac.

The varieties of German iris mentioned are but a fraction of those that can be purchased from horticultural sources; they represent, however, the best, and among them are varieties far advanced in horticultural merit over many of the more common varieties seen. Of clear yellow German irises we have two species, flavescens and aurea; both are good, the former attaining a height of three feet, with lemon yellow flowers, and the latter of dwarfer growth, with rich golden yellow flowers.

All of these irises with surface rhizomes are of the easiest cultivation, thriving in ordinary garden soils, requiring subdivision and replanting in re-enriched soils as their clumps become large or the soil becomes exhausted. This replanting should be done as soon as the foliage shows signs of ripening and must not be delayed so long that they may not become thoroughly re-established in the soil before Winter. In planting it is better not to sink the rhizomes over an inch below the surface unless the situation is naturally a very dry one. As the plants become established, the rhizome soon assumes its proper elevation. Until of late few diseases troubled this class. Unfortunately, however, a seemingly microbe rot is found to affect the roots so that the foliage becomes detached from the rhizome. The disease is little understood and no remedy has been proved effective, though it is quite possible that over richness of soil may serve to foster the disease.

Jacob's Sword.

The Jacob's sword (*Iris pseudacorus*) occupies an intermediate position. Never being classed as a German iris it is a beautiful plant to associate along water courses and yet will thrive admirably in ordinary garden soils; with ample dark green foliage, it makes a vigorous and healthy clump and bears abundantly of rich golden yellow flowers with a conspicuous orange zone on the base of the falls. Two types are common, one with narrower petals than the other. The Gladwin, or Roast-Beef plant (*Iris foetidissima*), while pale blue in its typical form, in its variety citrina is of a clear yellow, but the main interest in this centers in the ornamental effect of the bursting seedpods within which fleshy bright orange-colored seed show to advantage.

Siberian and Japanese Classes.

Those irises with so-called tufted roots are represented familiarly by the Siberian and Japanese classes. The Siberian has a number of distinct forms of which the type forms a tall leafy plant four to five feet high with many flowering stems bearing from three to five flowers to a stem, and with dark blue coloring marked with white pencillings. The two most useful forms, however, are the pure white variety which grows about two feet high, bearing purest white flowers in small clusters, an admirable plant for any flower border, and the variety orientalis, with broad, short foliage, growing to a height of eighteen inches and bearing with wonderful profusion flowers of the richest blue with faint white throat markings. There is no better true blue in the iris family than this. It, too, is one of the few irises which will bloom a second time, though sparingly it is true, by cutting down after the flowering period. This can hardly be recommended, however. No iris reproduces itself any faster than this. It quickly forms broad colonies and necessarily requires frequent division and transplanting.

Japanese irises comprise perhaps the par excellence of the family; they are much misunderstood and require more judgment in their cultivation than do German irises. If planted in situations where water will not collect about the crowns in Winter, they are perfectly hardy. To flood them at the flowering period is an advantage, not a necessity. This need is nearly as fully met by thorough mulching to retain all possible soil moisture during the flowering period and with artificial watering is far safer than to plant in a moist situation. It is a false impression that the Japanese plant them where they are subject to excesses of moisture in Winter. During this period the Japanese iris fields are drained. All Japanese irises are seemingly improved and selected varieties, rather than hybrids. Their range of color is a very ample one, but has decided limita-

Spanish Iris (*I. Xiphium*)

Photo by John F. Johnston

tions. Aside from the variety of self colors and their combinations in flaking and veining, together with the single and semi-double forms, nothing can be expected. A dozen distinct sorts represent the class far better than a large collection of varieties whose distinction is more dependent on their labels than on any visual evidence of variety. Probably no class of plants have been more cruelly foisted on the public as new than these, by means of fanciful names in which Japanese terms have been used as indicative of new sorts.

It is highly improbable that any distinctive improvement of the class has resulted in comparison with the first sets of varieties shown in our halls twenty years ago. The following list is probably no better than others that could be named, but possesses distinction in the sorts quoted. Arthur Silbard, double, white,

shaded with violet; Blue Jay, single, clear blue, spotted with white; Calypso, double, lilac, richly veined with purple; Dagmar Georgeson, rich royal purple, single; Goliath, double, white, marked with violet; Emperor of Japan, double, velvety maroon; Goldbound, double, white, margined with gold; Painted Lady, single, white, veined with claret.

The wonderful size of the flowers of the Japanese iris, their late period of bloom, carrying on the flower effect to early August, renders the class indispensable to every flower garden. Their massing in groups of a single variety, rather than in promiscuous clashing of colors is, however, essential for the most artistic effects.

Our London Letter.

BY A. HEMSLEY.

The question I am most frequently asked both by growers and retail florists is, What is there fresh or new in the way of flowers? And in answer to this, after attending all the meetings of the Royal Horticultural Society during the past year, and many other shows, besides visiting the leading nurseries, I am unable to pick out any one very striking novelty that I could recommend for the ordinary florist's trade, except the carnations Britannia and Mrs. H. Burnett, to which I have previously referred.

IN DAHLIAS we have had a good many new varieties submitted during the season, but I would not like to be responsible for saying that any very great advance has been made. The introduction of what are now termed the "pæony-flowered" varieties has been the greatest feature. Other sections have received some good additions, but to say that there were any startling novelties would be wrong.

FERNS.—Messrs. T. Rochford's *Nephrolepis to-dæoides* will bear further recommendation. I have seen many plants of it and they all sustain the character of being the best of any variety of the Pteris type that I have witnessed, but I find much depends upon how this as well as all the other *nephrolepis* are treated. Grown in hangers (or wire suspenders) close up to the glass, they make short, sturdy fronds. I was told by one grower that Pteris was of no use; yet at another nursery I found beautiful plants with short sturdy fronds. I took a plant home where it lasted well for fully four months in a room where there was gas, etc. But the plants grown in a moist and high temperature would not last many days.

I am rather disappointed to find that the true form of *Nephrolepis davallioides furcans* is being neglected. Properly grown, it is one of the best ferns we have. One year when I had a grand lot, every plant I could spare was sold to go to America. Here in England fashions change; setting them rests a good deal with the florists, and I find that most of these are now inclined to go in for the light, graceful plants, rather than the dense, bushy stock that has

had a long run. I have always condemned the practice of growing a number of ferns in the same pot to get a mass of foliage, and I find now that there are many who accept my ideas in regard to real beauty. It takes longer to make a really well-finished fern when growing from a single plant, but it is much prettier if properly grown. There may be some exceptions. Take the *davallias* when propagated from the rhizomes; it requires three or four to make a good pot. But with seedlings they branch out more freely and soon make well-furnished plants from single seedlings. I find here in England that the growers who do a limited number and finish them well do much better than those who over-crowd, and have very large quantities of second quality plants to send to market.

When I get on to ferns I don't know where to stop, but I have to be brief, and to finish I will refer to the *platyceriums*. I was given a plant of *P. alcicornne majus* some months ago and looking at it now it is in perfect health. I may add that everyone who has seen it has remarked on its novelty and beauty, for it is a really handsome plant. I have previously strongly recommended the staghorn ferns, but they have not yet made a start; yet I feel certain they will, and when their value is once known there will be nothing in the market that will sell better. Since ferns have been so extensively grown it has become difficult to say which may prove the most profitable, but we want those which are bold and effective without being too dense. At one time it was only dwarf, compact plants that were appreciated; now things are quite reversed—we must have those that are bold or imposing.

New Intermediate Iris, Having the Character of the Tall Summer Flowering Irises, but Blooming With the Early Dwarf Sorts

American Rose Society

CONTINUATION OF PROCEEDINGS

President Simpson's Address Concluded.

At the 1906 meeting you will remember that much time was taken up discussing the desirability and practicability of establishing a permanent fund of considerable size for the uses of the Society; all agreed that it was desirable, but the meeting could not determine on any particular plan of action. We have to-day in America many men so enriched with this world's goods that their chief concern in life is to find the best way to spend their vast accumulation of wealth, that it may accomplish the greatest amount of good for the largest number of people.

Art, education, science, religion, humanitarianism, have each received their millions to aid in prosecuting the work of blessing mankind along their particular lines. It is a good thing to pay out \$100,000 for a fine painting and present it to a museum of art where it can be seen and admired, and furnish inspiration to thousands of people. It is noble to endow our institutions of learning so that our youth may have the privileges of higher education. It is still better to provide the means for caring for the sick, the suffering, the aged and the homeless, but it is a question if in establishing a fund of ample proportions out of which this Society might disseminate information and furnish the inspiration which would result in the beautifying of hundreds of thousands of homes all over our land, and bringing joy and brightness into the hearts and lives of still larger numbers of our people, the man of means would not be choosing the very best way, from an artistic, educational, humanitarian or sociological point of view investing the wealth which a kind Providence has placed in his hands and made him the steward and custodian. I am sufficiently optimistic to think that if a committee composed of the right men should take hold of this matter and present it properly to men of large means and philanthropic tendencies, that a fund could be established, permanent in character, the income of which only could be used by the Society.

Gentlemen, it rests with you to take such action on this and other matters as your combined wisdom may consider best.

I trust your stay in the City of Washington may be both pleasant and profitable.

Reception by President Roosevelt.

On Thursday afternoon, March 14, 1907, the delegates attending the Rose Society's meeting and exhibition, along with their ladies, visited the White House, and were there introduced to President Roosevelt. The party, which assembled in the East Room of the Executive Mansion, was in charge of George H. Brown, superintendent of the gardens and grounds of the Department of Agriculture, who introduced President Bisset of the Washington Florists' Club to Mr. Roosevelt, Mr. Bisset in turn introducing Robert Simpson, president of the American Rose Society, and Robert Craig, the first president of that organization. The society presented President Roosevelt with a vase of fifty Richmond roses, grown by Mr. Simpson, and winning the Hill Company's prize.

Mr. Craig in a few words explained to the President the objects of the society, stating that previous to its inauguration twelve years ago our new roses were mostly obtained from England, Ireland, Germany and France. He thought the President would be interested to know that the flowers now presented to him were of American origin and second to none. Mr. Roosevelt expressed himself charmed with the roses, and asked if any one from Richmond was present. E. G. Hill, the originator of the Richmond rose, was then introduced to Mr. Roosevelt, who commended him on his work as a rose hybridizer.

The President then made a short speech, expressing his appreciation of the work of the American florists. He believed in everything American, in science, art, sculpture, architecture, horticulture and agriculture. He was glad to meet the rose growers of America, especially the ladies. Each of the visitors then received a warm handshake from the Chief Executive

of the nation, thus bringing to a termination an epoch-making event in the history of horticultural organizations.

Second Session.

The second session of the society, held on Thursday afternoon, was opened by the reading of a paper by E. G. Hill on the subject of "Having an Ideal in the Hybridization of Roses." (See last week's issue, page 354.)

In the discussion Mr. Farenwald asked Mr. Hill how he got American Beauty to produce seed. He had tried it often but without success.

Mr. Hill: I think it is a very unsatisfactory method of procedure to take plants of American Beauty that are grown in benches for cross-fertilization purposes. The trouble is you cannot control the moisture in the bench. I do not think there is any particular difficulty in getting the American Beauty to seed, but it would be better to pollinize the plants grown in pots so that you can have perfect control of the water and the moisture in the pot. I find it is quite easy to get American Beauty and other roses to set seed when grown in pots. The trouble is to get them to ripen the seed. I think you would overcome the difficulty if you were to grow your mother plants of American Beauty in pots and keep them rather on the dry side.

Bloom of Rose Rhea Reid
Originators, E. G. Hill Company.

A. H. Langjahr stated that there was a plant of American Beauty now in seed in the Agricultural Department greenhouses.

Mr. Farenwald: Do you grow all your roses in pots for seed?

Mr. Hill: No, not all. I cross-fertilize a great many when they are growing in the bed, but after they have developed to a certain size—that is, the heps—I take them up and pot them, or else put them in a bench by themselves where we can control the water given.

Mr. Farenwald: I suppose it is better not to feed them too much?

Mr. Hill: I think it would be a mistake to feed them in any way. A rather poor soil is conducive to best results.

Mr. Craig complimented Mr. Hill on the work he was doing in the raising of new roses, and hoped that the results he was obtaining would stimulate younger men to experiment along this line. He eulogized the nature of the matter contained in Mr. Hill's paper, and believed it would be certain to take root somewhere. He then asked John Cook of Baltimore to say a few words regarding his experience in the line of securing new varieties of roses.

Mr. Cook stated that his experience agreed with that of Mr. Hill. In regard to American Beauty, it might be possible to get one out of a hundred to seed, for the simple reason that the pollen cannot get down to

the ovules. The cross-fertilization of the rose was a great study, and the mountain gets higher all the time as one ascends it.

Mr. Hill explained that crosses made from American Beauty almost always reproduce that variety entirely. He had obtained some very good seedlings from such crosses. He spoke of an instance where he had taken pollen from American Beauty that had been cut back. The results from these cut-back flowers were almost all red roses. He now had about 1100 seedlings made from that cross. Some one had told him that Hugh Dickson could only get about three seedlings out of every 1000 that were worth putting on the market, and that was about the percentage generally.

Mr. Farenwald stated that he had used pollen from a red variety on the American Beauty, which had seeded, but it had scarcely more than one or two seeds to the hep. Mr. Hill stated that this was on account of the imperfect organs of that variety.

Mr. O'Mara: What would be the average number of seeds obtained in one hep?

Mr. Hill: It would vary very greatly with the variety. For instance, in General Jacqueminot crosses you can get all the way from 28 perfect seeds; with other varieties it would run about 9. You take the varieties of the type raised by Pernet, and they rarely ever produce more than two or three seeds.

Mr. O'Mara: Supposing you crossed two red roses and obtained 10 plants raised from that cross, is there any stated percentage of different colors? We know that in crossing carnations and obtaining six or eight seedlings, no two may be alike, and yet the original cross may be of the same color. Is there the same variation in crossing roses?

Mr. Hill: My experience with roses is that they follow the color line more than either carnations or chrysanthemums. I have several thousands of crosses of red roses, and have never got a radical variation from the color; but, of course, the likelihood is that there are no two seedlings just alike in color. This statement was corroborated by Alex. Montgomery, Jr. He stated that there were certain sorts that seem to produce new varieties more readily than others, but the difficulty was to get a rose that was better than any that was now on the market. The scarcity of new varieties of roses was not at all due to the lack of enthusiasm on the part of hybridizers.

Wm. C. Barry, who had just entered the room, stated that he was interested more in hardy roses, and would particularly direct the American Rose Society's attention to that class. He would suggest that rose growers endeavor to get something hardier than the rososa family. He spoke of the good qualities of Conrad Myer, a rose that had become very popular, as also of the New Century and Mercedes; and referred at length to the progress that had been made with the Wichuriana type of rose in America.

Robert Craig: I am glad Mr. Barry has called attention to the work to be done in the line of obtaining hardy roses. Most of the members of the American Rose Society are identified with forcing roses under glass. We are very apt to forget the aspect of the matter that Mr. Barry has brought out. I think the American Rose Society will never reach its full purpose until it does a work that will interest the most of the people—those who have no greenhouses, but who like to grow roses in the garden, on porches, fences and verandas. Mr. Craig then spoke of the work of Mr. Walsh of Woods Hole, Mass., who has brought out roses that have electrified the people on the other side of the water, especially mentioning Lady Gay, which had received the gold medal of the National Rose Society of England, whereas in America that particular variety had received no award at all. The matter was not overlooked intentionally, but, of course, such things are apt to happen. He believed it would be better for the American Rose Society to take more interest in new varieties that have possible merit. No plant or flower having merit should be exhibited before the Rose Society without having due consideration and a report made upon it. This was necessary in order to stimulate the men who are engaged in that line of work, for if no notice is taken of their endeavor they are apt to become discouraged, and the society loses enthusiastic members.

Mr. O'Mara: One of the points brought out by Mr. Hill's paper was with reference to what the Carnegie Institute might have done had it offered prizes for new roses. My information is that the Carnegie Institute only gives a subvention for scientific purposes. One gentleman is receiving a very large subvention for scientific purposes. It is well-known that there are men in this room who think we have many in our own membership who are quite as scientific as that gentleman—at least judging by results. I know that an application was made by one man who has quite a reputation in the growing of new roses and other new plants, but his application for a subvention has been hung up three or four years in succession, al-

Notes from New Hampshire.

LACONIA.—The leading florist of this city is going out of business. Since the death of S. P. Don about two years ago, Mrs. Don has carried on the business assisted by her daughter, Mrs. F. A. Clough. It is Mrs. Don's intention at the close of the Spring trade to tear down the houses and close up her florist's business entirely.

DOVER.—A very peculiarly constructed plant is that of C. L. Howe, built on a very steep hill side. There are ten houses covering about 40,000 feet of glass. Among outside florists Mr. Howe has a reputation for producing fine stock and a visit to his houses only strengthens this record. Everything is kept up in a first-class manner. Mr. Howe grows general stock, hence no special mention of any one thing can be made, excepting his callas and roses. In one rose house nearly one mile of piping was used. There are five boilers using about 600 tons of coal each season. In the Spring Mr. Howe contemplates building another house. Mr. Howe claims The Florists' Exchange is the best paper of the kind published.

MANCHESTER.—To be a first-class florist one ought to have more or less mechanical ingenuity. Such a man is F. J. Bixby of this city. He has about 15,000 feet of glass and expects to extend one of his houses 120 feet the coming season. This is a carnation house with solid beds. Mr. Bixby has one curious fixture—a 50-foot chimney made of cobble

stones and cement, with a smooth outer surface. He is replacing his 1-inch steam pipes with 1 1/4-inch in all his houses, and is using the discarded pipe as framework for new benches. The bed of the benches consists of cement slabs, made of five parts ashes to one of cement. Carnations are chiefly grown. Mr. Bixby has a fine lot of lilies coming along for Easter.

The Bay Brook Garden Company, of which Dr. G. A. Campbell is treasurer and general manager, is doing the largest business in the city. There are 14 houses with 30,000 feet of glass. Dr. Campbell was formerly a practicing physician but now devotes his entire time to his floral business and a rapidly growing coal business. Mrs. Campbell is general designer and makes up most of the funeral work. The store is in charge of Miss Marion Campbell and Mrs. Elba Dow.

Herman C. Stache, though a smaller grower than some, has six houses of 10,000 feet of glass. Mr. Stache's lilies (longiflorum) stand second to none in the State for quality and general appearance. His carnations and violets are also in fine condition.

MADBURY.—William H. Elliott of Brighton, Mass., who has in this town the largest single rose house in the county, viz, about 812 feet x 55 feet with an extension for propagating, is planning to build one even larger the coming season.

Nashua, N. H.

One of the best appearing lot of greenhouses in Southern New Hampshire is that of August Gaedeke & Company of this city. The houses are built in the best residential portion of the city, and add to the general attractiveness of the pleasant surroundings. A very handsome office building is the approach to about 20,000 feet of glass, compactly arranged. The heating system is perfect, the Furman boiler being used. Mr. Gaedeke grows many carnations and roses, but cannot begin to cut stock enough to supply their rapidly growing trade. Balls, private parties, and a large amount of funeral work have taxed their capacity to the utmost. The violet house, 50 x 20 feet, was a sight on the morning of February 8.

Easter coming so early and so little sunshine, finds Mr. Gaedeke short of lilies, but he has made up his deficiency through the open market.

President William J. Stewart of the Society of American Florists has just appointed Mr. Gaedeke vice-president for New Hampshire.

One of the old-timers in Nashua is C. H. Blake, who has been a florist here for about 36 years. Mr. Blake does not remember when they have had such a cold Winter as the present season. He reports that for the month of December there was only 38 hours of sunshine. Mr. Blake has had some trouble with his lily bulbs, and will not be able to show his usual good stock.

For a city of its size there is an unusually fine series of greenhouses in Nashua. Your correspondent had the pleasure of visiting the four well kept houses of George C. Buxton in the outskirts of the city. Mr. Buxton has about 25,000 feet of glass, and a first-class propagating house 75 feet long. Carnations are grown largely; among them we saw some fine benches of White Enchantress, Helen Goddard, Mrs. M. A. Patten and Queen. Mr. Buxton last Summer enlarged one of his houses, and the coming season will see more of the same kind of work going on.

CAROLUS.

WEST CHESTER, PA.—West Chester will soon be entirely surrounded by nurseries, as the extensive nursery firms of this place are gradually acquiring leases on all the available farm land in and around the place, on which to plant trees and shrubbery for cultivation for the increasing trade.

ways with the answer that the money is only given for scientific purposes.

Another point in Mr. Hill's paper was that the work be taken up by young men. It is almost an invariable rule that all the great work that is accomplished in hybridization has been done by elderly men.

Mr. Hill: I was greatly pleased with what Mr. Barry said, and I must confess I feel a little ashamed that I have not given greater attention to this particular line of work. There is a wonderful field here, whether scientific or not. A fund entrusted to this society by Mr. Carnegie ought to be valuable to some one, or more than one, to stimulate work along this line. See what a blessing it would be if we could have ever-blooming hardy roses blossoming all over this country!

I visited Peter Lambert of Germany a year ago, and he showed me an ever-blooming climbing rose. I do not know whether or not he has put it on the market, but he assured me that it bloomed almost continuously throughout the Summer months. Whether it would do this under our climatic conditions, I do not know. I would like to see the young, or old, men take up this line of work. I feel that the nurserymen are a little slow about coming forward in this respect. They are the men who ought to help in this particular line. I do not want to find fault with them, but I do think they have not given this subject proper attention. They do not seem interested enough, and it seems to me to be more in their line than in that of the florist.

Mr. Barry again referred to the great need of hardy roses for America. He thought it was the province of the Rose Society to promote interest in every class of roses cultivated. He agreed with Mr. Hill that the nurserymen were much to blame for the lack of progress along this line. It should not be the aim of any rose grower to disseminate varieties that would pass out of existence in a few years. The nurseryman is careful to send out trees and flowering shrubs that last for a long time and which are suitable to American conditions. He was anxious to get a rose hardy enough to stand out in all parts of the country.

William Fraser of Baltimore thought that the American Rose Society had been a one-sided affair up to this time. Very much of its work had been directed to roses under glass. Continuing, he said, "We do not know what creations they have thrown away, which might have been in the class Mr. Barry is looking for. If a new variety does not come up to the standard of the rose grown under glass, out it goes. Probably there might be some useless for that purpose which would be valuable as outdoor garden roses."

Mr. O'Mara referred to the matter of the limit of hardiness of a rose, particularly the hybrid perpetual class, and spoke of a bulletin issued by the South Dakota Experiment Station, dealing with the subject of hardiness of h.p. roses in the Northwest. He believed the matter had never previously been taken up, with the exception of some systematic work in crossing with the *Rosa rugosa*, but on account of the spiny character of the seedlings they were useless for garden purposes. He referred to an inquiry which had been received from Alberta, Canada, concerning a list of varieties that would be hardy there. He had answered the question to the best of his ability, mentioning the kinds given in the bulletin referred to, also other varieties known to possess hardiness, but was surprised to receive a reply to the effect that such sorts as *La France* and *American Beauty*, and others of that kind, were already being grown there. He believed that under some conditions of culture many of our roses that are supposed to be tender might be found hardy, much depending upon the cultivator.

Mr. Farenwald said that there was a number of roses that would prove hardy if taken good care of before the Winter starts in. He was hurt to hear the Rose Society characterized as one-sided. The society had been formed and maintained chiefly by the men who cultivate roses under glass. The cultivation of hardy roses belongs more particularly to the nurserymen, very few of whom are members of the American Rose Society. This statement brought Mr. Fraser to his feet with the remark that the Rose Society should cover both the cultivation of roses indoors, as well as those outdoors.

Mr. Barry here explained that the nurserymen were wanted in the society, as well as the men engaged in forcing roses. He could not see why the men who were making money in growing roses under glass should not have their gardens of roses outside, and unless they are imbued with that kind of spirit, the Rose Society is not going to do for the rose what it could do, or attain the success that it should. If its work is to be limited, the society will not succeed to the extent that is desired. A broad view should be taken of the matter. He wanted all the best people in the land to be interested in the rose question, and hoped soon to see the day when the Rose Society would make an exhibition of hardy roses. When that

Climbing Rose Paradise
Exhibited by M. H. Walsh, Woods Hole, Mass.

day comes, then the nurserymen "will show you what they can do."

W. A. Manda stated that if they wanted to make a success of the Rose Society it would be necessary to give a general rose exhibition, where every lady who had a rose bush could make an exhibit. He thought there was too much commercialism in the society, as it existed, and stated that if the members wished others to be enthusiastic, they, first of all, must be enthusiastic themselves. He urged the holding of a June show. The public ought to be advised as to the proper kinds of roses to grow and receive proper directions as to how to cultivate them. The Carnation Society is devoting its attention only to commercial flowers. An effort should be made to get a race of hardy carnations as well as hardy roses. Show the public something and they will follow you.

Mr. Craig referred to the work of the National Rose Society of England in the issuance at certain intervals of bulletins on the rose which give proper information as to the varieties suitable for certain purposes. "If we could so arrange matters that we could

Myers & Samtman's New Rose
American Beauty × *Safrano*

send out, say four times a year, a little bulletin stating what roses are good for the North and the South, and what is being done from time to time in the way of raising new varieties, we might get thousands of new members."

Mr. Craig likewise touched upon the necessity of publicity being given to the exhibitions of the Rose Society, a difficulty that disclosed itself in most of the florists' undertakings along that line.

Supplementary Report of the Judges.

Mr. Craig here read the following supplemental report: Your committee desires to make the following report. Recognizing the value of the extensive exhibit of *Wichuraiana* and other climbing roses in large pots and tubs, made by M. H. Walsh, of Woods Hole, Mass., which formed the most attractive feature of the show, we desire to recommend, if it can be done without violating any rule of the society, that a certificate of merit be given to each of the following four varieties, which we deem worthy of the honor: *Paradise*, *La Flamme*, *Delight*, and *Juanita*.

Mr. Elliott in endorsing the supplementary report, stated that the object of the society should be to encourage rosarians to produce new varieties and exhibit them at the Rose Society's meetings. It was necessary, according to the rules, to judge novelties under the point system, something that did not impress the judges of these new kinds as doing all for the exhibitors that ought to be done. If the new varieties did not score sufficient points entitling them to any of the society's medals, and if the flowers showed merit, some recognition should be given them. He therefore moved that the four varieties of roses named be awarded a preliminary certificate. He considered all of them promising; some are good, and in another year may be worthy of a higher award.

Mr. O'Mara endorsed the views of the previous speaker. The only official recognition that can at present be given a new variety, under the rules, is a gold or a silver medal, to obtain which a score of 95 and 85 points respectively was necessary. He thought some official recognition should be taken of promising new varieties failing to win medals.

The judges' supplementary report was then adopted.

Mr. O'Mara moved that the society recommend to the executive committee the advisability of extending the list of prizes to be given to novelties; that, provided a new variety scored 80 points, it should be awarded a preliminary certificate of merit. Carried.

Mr. Elliott said the point system as laid down did not apply well to novelties. In the case of new varieties the originators had not the means or the opportunity of growing them to perfection that was possible with standard sorts, so as to get the length of stem and the full development of the blooms. But if the new varieties have prospective merit rose growers in general will judge them on these grounds. He suggested that it might be well to recommend to the executive committee for consideration the judging of novelties on their merit rather than by points. Mr. Elliott added: "We have our point system of judging roses which is excellent when applied to full grown and perfectly developed flowers, but to novelties it does not apply well."

Mr. O'Mara: Another matter in connection with novelties is whether or not some stipulation can be made as to the specific number of blooms to be exhibited. I move that we recommend to the executive committee, in drawing up the schedule for next year's show, the advisability of specifying a particular number of blooms to be exhibited for a preliminary certificate of the society, with the suggestion that twelve be the number adopted.

Mr. Elliott thought any person having a new rose should not exhibit it before the society until he had quite a large number of plants to cut from; Mr. Heacock adding that to do otherwise would cheapen the certificate.

Climbing and Trailing Roses.

M. H. Walsh, Woods Hole, Mass., then read his paper on "Climbing and Trailing Roses in the Hardy Rose Garden." (See page 356 of last week's issue.)

On motion of Mr. O'Mara a vote of thanks was extended to Mr. Walsh for his able essay.

Mr. Barry praised the work done by Mr. Walsh, and spoke of the climbing roses produced in Europe, mentioning as worthy of cultivation such sorts as *Leuchstern*, *Rubin*, *Blush*, *Waltham Rambler*, and *Queen Alexandra*, the latter one of the most floriferous of the multiflora type.

Mr. Hill told of the work of Barbier, Orleans, France, who showed him a number of varieties with *Wichuraiana* blood in them, and having blooms larger than any of the *Wichuraiana* type yet produced here. He was shown a plant 15 feet high which had been grafted on the top of a standard; many of the blooms on it were as large as those of tea roses. Mr. Hill

also told of the display of Queen Alexandra seen at Veitch's nursery, as an effective method, of creating custom for roses. Mr. Hill also referred to the collection of M. Graveran of the Bon Marche in Paris, France, which embraced every known named variety of rose. That gentleman has experimented with the rugosa, using on it the ever-blooming varieties, and had obtained several good seedlings. These show a remarkable absence of spines. Mr. Hill believed it would only be a question of a few years before the objectionable part of the rugosa family could be bred out of its progeny. "I believe," said he, "we have got to have an infusion of rugosa blood if we want to get hardy roses in this country. I believe roses can be obtained that will resist the rigors of our Winters and prove, in a measure, free from the dreaded disease which strips the roses of their foliage in the Summer months in our hot climate. I believe this will come about by painstaking, persistent work."

Mr. Farenwald spoke enthusiastically of the rose garden in Keney Park, Hartford, Conn., adding that private gardeners and park superintendents could do far more to educate the masses in the matter of roses than any man in the business.

President Simpson also alluded to the wonderful Hartford display, which, he said, had stimulated him to have a rose garden of his own. Some varieties intended for last year's show had missed that date, and were planted in his garden. He treated them as recommended by Mr. Wirth in his paper, and the results had surprised him. Frau Karl Druschki was wonderful in the extreme, and Cardinal had given great satisfaction. He could not recall the names of all the varieties he had employed.

Mr. Barry suggested that florists should plant climbing roses to the outside walls of their greenhouses; Mr. Walsh explained he had already done so, and the roses make a beautiful covering during the Summer months.

Mr. O'Mara eulogized Mr. Walsh's rose garden at Woods Hole, which occupied about two acres of ground. To look over it when the plants were in bloom was an inspiring sight indeed.

Mr. Elliott stated there had been a good deal said about getting the rose to bloom continuously throughout the Summer. Take the Crimson Rambler rose—none better and none more appreciated. If that rose which produces all the flowers that any rose can be expected to produce, divided its blooming over the whole year, it would never be the rose it is to-day, when it gives out all the gorgeousness of bloom at one time. You cannot get out of a rose plant but only so much; and if it gives its flowers all at once, it makes a gorgeous showing more so than if it distributed its blossoms over the whole season.

Mr. Manda spoke of his experience in growing the Wichuraiana varieties. The main object was to obtain foliage. Multiflora was a good blood to introduce, giving profusion of bloom but with poor foliage. It was a question which to use. He had made a cross of Perle des Jardins with the Wichuraiana type and obtained seeds. From these he had secured the varieties Gardenia and Jersey Beauty. With other crosses, in which he had raised 8,000 seedlings, it was necessary to throw all of them out.

How to Increase the Membership and Usefulness of the Rose Society.

In the discussion of this matter Mr. O'Mara advocated the establishment of a periodical devoted to matters pertaining to the rose, which could be named "The Rose." He thought such a publication could be made profitable, and it might be possible to get some of the present publishers to take up its publication. He thought a subscription price of one dollar per year would largely increase the membership of the Rose Society. Mr. O'Mara pointed out the necessity of supplying information regarding soils and varieties to the general public, which could be accomplished through the medium of such a periodical. He believed that if all the work that had been outlined and discussed at the present meeting is brought to a culmination, the Rose Society would be much further advanced a year from now than it is to-day. He had great hopefulness for the future of the organization.

Mr. Hill spoke of the attitude shown by most of the men in the business to the Rose Society, which viewed in the light of the extent of the business and the money that had been made in rose growing, was somewhat incomprehensible. He thought the suggestion of publishing a periodical devoted to the rose was timely, and referred to the success of the "Rosen-Zeitung," printed in Germany.

Mr. Elliott urged the necessity of getting rose literature before the public, and suggested that the society might secure the services of the National Council of Horticulture for that purpose. He was not in favor of the subject of outdoor roses being continuously thrashed out before the society. The rose growers under glass would look for some literature on their specialty. The speaker was also of the opinion that the Rose Society, in its present state, was not in a position to invite the amateur rose growers into its ranks, and until it had obtained some stability, the commercial men should continue to be prominent in its operations.

Mr. Hill suggested that it might be well to appoint a committee to go before the American Association of Nurserymen and make an appeal to them in behalf of the American Rose Society looking to the holding of a combined June show, at which outdoor roses could be exhibited. On motion of Mr. Heacock, the president and Mr. Hill were appointed such a committee. The meeting here adjourned at 7 o'clock.

The Banquet.

On Thursday evening a banquet was tendered the visiting delegates by the Washington Florists' Club in the dining room of the Arlington Hotel. The decorations, under the superintendence of George Schafer, were magnificent. The carnation Winsor entered largely into the mirror decoration at one end of the dining hall. While the dinner was in progress, songs were rendered by Messrs. Stanley and Lynch, which were much appreciated, as was the elocutionary entertainment provided by a local professor. Peter Bisset occupied the chair and briefly welcomed the guests, introducing J. R. Freeman as toastmaster.

The first toast was "Our Country," responded to by the Hon. Simon Wolf in a patriotic address. The toast of "The American Rose Society" was replied to by President Robert Simpson, who expressed his appreciation of the hospitality extended by the Washington fraternity. He regretted that weather conditions were against a more favorable showing of roses especially of American Beauty. He spoke of the American Rose Society as an educator, and hoped that some of the money now being given for educational purposes would be devoted to the development of rose culture in the United States.

At this point the toastmaster introduced John Brady, who he said was the first man to discover the American Beauty rose in America. It seems that Mr. Brady was gardener to Hon. George Bancroft, in whose garden at Washington the American Beauty was first grown. A plant was sold to Field Brothers, and at the instigation of William R. Smith of the Botanic Gardens, the opinion of the late Peter Henderson on the merits of the rose was asked and obtained, and acting on Mr. Henderson's advice, the rose was introduced into commerce by Field Brothers of Washington.

The next toast on the list was "Washington, the City Beautiful," responded to by District Commissioner H. B. F. Macfarland. He told of what was doing in the way of city adornment and what they hoped to accomplish. Every intelligent American feels a pride in the national capital and wants to see it made beautiful in every possible way.

George H. Brown, superintendent of Gardens and Grounds of the Department of Agriculture, gave a very interesting talk on the subject of "Washington Parks." He traced the history of the park development from its inauguration at the instigation of the late A. J. Downing in 1851 up to the present time, until there are now about 3,500 acres in parks, and about half of that acreage had been partially improved.

William S. Clark's New Rose
Liberty X Mme. Abel Chatenay

Dr. B. T. Galloway, chief of the Bureau of Plant Industry, next spoke on the subject of "The Department of Agriculture and its Work for the Horticulturist." Dr. Galloway told interestingly of the development of the florist business, and incidentally remarked that if the glass of the standard size, 12 x 12, now comprising all of the establishments in the United States, was placed end to end it would reach to a distance of 12,000 miles. The Department of Agriculture during the past fifteen years has given a great deal of attention to the study of diseases of plants and insects which affect them. A conservative statement of saving effected by the work of the Department along this line would be between nine and ten million dollars. Dr. Galloway told of his first experiment with hydrocyanic acid gas in an ordinary washtub and of the experiments now being conducted with Easter lilies, hardy oranges and lettuce, as well as the interest of the Department in the teachers' work concerning school gardens.

The next speaker was Patrick O'Mara, his theme being "The Gardener and His Work for the Rose." Mr. O'Mara was in fine form, and characterized the gardener as the Atlas who is bearing the horticulture of the United States upon his shoulders. He eulogized the gardener and his work, the title being one which any man might be proud of. He also paid a high tribute to the influence exerted by women on floriculture. He mentioned among gardeners who had done good service for the rose, M. H. Walsh, James Comely, Peter Bisset and others, and said that we in this country ought to be proud that we have a man who had produced the Richmond rose in so short a time, a rose which surpasses the best in the whole wide world.

The next toast was "Horticulture, Past, Present and Future," replied to by Superintendent Wm. R. Smith of the National Botanic Garden at Washington. Mr. Smith said he gloried in the name of gardener, and under that name he had had the opportunity to associate with the greatest intellects in this country. The rose, he said, had been queen of flowers for the past 2,500 years.

President William J. Stewart responded to the toast of "Our Parent Society," and commended the Washingtonians in having the good sense to bring the ladies to the banquet, thus emulating Boston; he hoped that other societies would follow that good example. He spoke of the efforts making by the society in the matter of express rates; they were endeavoring to find out whether the florists were made for the express companies or the express companies for the florists. The executive committee's work done at Philadelphia was next touched upon by Mr. Stewart, who said he hoped to present a program at the August convention that would show strongly how this society is leading; how it is showing the way for other horticultural organizations in the country. An endeavor is making to secure closer affiliation with other societies and clubs, and he referred to the strength that would result from

John Cook's New Seedling Red Rose

such affiliation. The Rose Society, he said, was one of the parent society's brightest children.

Other toasts were, "Our Guests," by Wm. F. Gude, and "The Ladies," by Robert Craig. Mr. Craig paid a neat compliment to the fair sex, quoting from the Bible, Emerson, Shakespeare and others. His remarks were witty and much enjoyed.

He was followed by E. G. Hill, who made a humorous speech, stating that two of the most remarkable things at the present banquet were to hear Patrick O'Mara, a confirmed bachelor, giving sop to the ladies, and Bob Craig quoting Scripture. (Laughter.)

Robert Kiff of Philadelphia then sang an original song, after which W. H. Elliott and Benjamin Hammond, secretary of the Rose Society, each made a few remarks.

It is to be hoped the June rose show will materialize, if for no other purpose than to "see what the nurserymen will then do."

Chicago in 1908 should mean a record-breaking exhibition, and a largely increased Western membership. The "silk stocking" element is no longer a bugbear to affiliation with the Rose Society.

The re-election of President Simpson was a well-merited tribute. And there are no more enthusiastic members in the Rose Society than Treasurer Harry May and Secretary Hammond.

The addition of Phil. Breitmeyer to the list of officers means lots of unselfish, hard work injected into the society's operations.

Additional Awards.

Twenty-five Uncle John—First, Robert Simpson, Clifton, N. J.; second, John N. May.

Best exhibit of Rambler roses—M. H. Walsh, Woods Hole, Mass., the Simpson cup. Most artistic arrangement of roses in a vase—Robert Simpson, the Welch Brothers' cup.

Best Collection of Hybrid Wichuaniana roses—M. H. Walsh, the F. R. Pierson cup.

Special growers' prizes given to the actual workman growing the roses—First, Wm. H. Elliott; second, Robert Simpson, the Moore, Hentz & Nash premiums.

General display of roses in pots or tubs—M. H. Walsh, the American Rose Society's prize of \$100.

Six pots of Baby Rambler rose—First, F. H. Kramer, Washington, D. C.

Six climbers, distinct varieties—First and second, M. H. Walsh.

Rose Rhea Reid.

Editor Florists' Exchange:

The photograph (herewith reproduced) shows the character of the flower very nicely, the stem being stiff, the canes heavy and the bloom of a splendid red color. It is as large as American Beauty, is absolutely continuous in bloom and so full that it is equally good in warm or cold weather. The variety is a seedling of American Beauty x an unnamed red seedling of our own. It shows all the characteristics of a profitable commercial red rose for the American grower.

THE E. G. HILL CO.

[This novelty was awarded the May cup at the Washington exhibition of the American Rose Society last week for best American seedling rose not yet introduced.—Ed. F. E.]

Carnation May

Originators Baur & Smith, Indianapolis.

Carnation May.

Editor Florists' Exchange:

We send you under separate cover photograph (herewith reproduced) of our new light pink carnation May.

It is a strictly commercial variety and will be offered to the trade as such. It is not a giant exhibition prize winner and it will not displace Enchantress in the fancy class, but it will be grown for its revenue-producing qualities, and to grade with Lady Bountiful, Victory, Winsor, Mrs. Lawson, etc. It comes into bloom early and is extremely free, covering the whole season from end to end. The color is deeper, more even and more pleasing than that of Enchantress. The bloom is round and high built and not too crowded in the center, thus allowing it to open up perfectly and quickly. The calyx never bursts and the stem is always strong. The plant is strong and healthy and of very easy culture and grows in height about the same as Lady Bountiful. It has only two parents. Both parents were seedlings of ours.

We have a nice stock and expect to put it on the market next season.

Indianapolis, Ind. BAUR & SMITH.

The group photograph of the American Rose Society delegates, taken on the steps of the Treasury Building, after the reception by President Roosevelt, has not reached us in time for reproduction in this week's number. We hope to publish it in a later issue.

The F. R. Pierson Cup

Awarded by the American Rose Society at Washington Show to M. H. Walsh, Woods Hole, Mass., for Best Six Climbing Roses

On motion of President Simpson a rising vote of thanks was tendered to the Washingtonians for the many courtesies extended the Rose Society and visitors during their stay in the Capital City. This closed the proceedings which throughout were greatly enjoyed.

Notes.

The name of the worthy president of the American Rose Society was inadvertently given in last week's issue in several instances, as William instead of Robert Simpson. We regret the blunder.

The parentage of the new rose of Myers & Samtman is American Beauty and Safrano not La France as the types had it last week.

It was Robert Craig and not William P., who acted as one of the judges at the rose show.

There are some who are of the opinion that the fire-proof liquid used in the exhibition hall militated against the keeping qualities of the carnations, some varieties noted for their lasting powers going to sleep long before their wonted time.

A combined rose and carnation show would certainly prove a great attraction. Hopes were expressed that such a combination might be possible in the near future.

The "Wars of the Roses" were brought to a peaceful termination by the patriotic address of the Hon. Macfarland.

The Asparagoides myrtifolia was shown by the Washington Florist Company. Its gracefulness was much admired.

A more suitable exhibition hall for the carnation show next January will be sought by the Washington craftsmen.

Richmond rose was the talk of the show. President Roosevelt was de-lighted with the bunch of it presented to him.

A paper on Mendel's theory as applied to rose crossing would prove an interesting feature at next year's meeting.

Rose Crimson Rambler, grown for Eater

Photo by J. W. Duncao.

CONFIDENCE in the business bringing qualities of The Florists' Exchange is well exemplified by the large volume of advertising appearing in this Spring Number. The best firms are represented here; the stock which they handle is always satisfactory.

You make no mistake when you deal with them. And you should place your orders Early.

MISCELLANEOUS WANTS

WANTED—Will exchange Grotf's Gladioli for Peonies, Iris, Phlox or Dahlias. E. R. Macomber, Woodford, Me.

WANTED TO BUY—Greenhouses to be taken down. State full particulars of same when writing. Address, F. W., care The Florists' Exchange.

WANTED—A florist's refrigerator, 6 to 8 ft. long, of modern construction, complete and in good condition. Address Northampton Nurseries, Northampton, Mass. Thos. Foulds, Supt.

RARE OPPORTUNITY—For a florist to establish a good paying business; 10,000 inhabitants; one of the fastest growing towns in the State. The grounds are especially adapted for the business. Make application by filling out a form, five minutes from station. White Plains, N. Y. For full particulars apply to Elmo Brown, 3 Court street, White Plains, N. Y.

WANTED—A corporation on the Pacific coast doing a growing and shipping business, can arrange for a profitable position for a wide-awake, competent young man; he must be a worker in every sense of the word, have a fair education and more than just ordinary intelligence. The position carries with it the necessity of buying from the man whose place he will take with the company about one thousand dollars' worth of the capital stock of said corporation. Applications must be accompanied by full particulars concerning applicant, just what line of work competent in, what concerns engaged with during past five years, age, married or single, nationality. Address, Pacific Coast, care The Florists' Exchange.

FOR SALE OR RENT

FOR SALE—Cheap, greenhouses on ground leased for as long a term as you like, 5,000 sq. ft. glass. Address, A. Akers & Company, Johnstown, Pa.

TO LEASE—On account of ill health, three greenhouses, each 150 ft., in good condition. Stocked with roses. Thomas Rhedican, Prospect Street, Madison, N. J.

FOR SALE—4 greenhouses, each 20 x 150 ft., fully stocked and in good repair; situated on corner property; also dwelling, windmill, sheds, etc. Address, C. T. Hiner, Flemington, N. J.

FOR SALE—Greenhouse property, 5,000 sq. ft. glass, 7 acres of land. Dwelling house and barn. All stocked. One mile from station; ninety miles from New York. Price reasonable. Address, E. D., care The Florists' Exchange.

FOR SALE—A Chicago range, new greenhouses, 70,000 ft. glass, complete, full running condition. Now in fine crops. Don't answer unless prepared to deal. Good dwelling and out buildings. Address, A. Reeves, 420 Aspland Block, Chicago, Ill.

FOR SALE—Greenhouse property, 5,000 sq. ft. glass, 7 acres of land. Dwelling house and barn. All stocked. One mile from station; thirty miles from New York. Price reasonable. Address R. D., care The Florists' Exchange.

FOR SALE—On account of my health, I am compelled to offer my greenhouse specialty business, which includes the Standard Duplex Gutter, which is fast coming into use by the growers. This season many thousands feet were erected, and at present am shipping a large range to California, also the Standard Steam Trap and the Ventilating Machine. My business is thoroughly established; none better; and is doing a large business all through the season. Address, E. Hppard, Youngstown, O.

FOR SALE

Three Greenhouses, 150x30 feet, potting shed, 90x22 ft., boiler room, 30x22 feet, built about three years ago, practically new. Everything in complete working order and stocked. One acre of land; 3/4 of a mile from railroad station; 13 miles from New York City. Price, \$3,000.00. Terms reasonable. Apply to A. V. D. Snyder, Ridgewood, N. J.

FOR SALE

FOR SALE—Greenhouse material and hot bed sash, milled from Gulf Cypress to any detail furnished. Oxford putty, specially made for greenhouse and hotbed sash. W. E. Reich, 1429 Metropolitan Avenue, Brooklyn, N. Y.

BOILERS. BOILERS. BOILERS.
SEVERAL good, second-hand boilers of standard make on hand; thoroughly tested, complete in every detail. William H. Lotton, West Side Avenue Station, C. R. R. of N. J. Jersey City, N. J.

FOR SALE GREENHOUSE PIPE

4-inch boiler tubes, second hand, in fine condition, absolutely free from scale and with ends cut square. Sample and prices on application. **KROESCHELL BROS. CO., 33 Erie St. Chicago.**

Boston.

News Items.
William J. Haverty, for fourteen years shipper in Galvins, who has been sick for the past few weeks, died on Sunday.

Welch Brothers will make a specialty of lily plants in cases of twenty-five for Easter, direct from the grower, and their new market, with its abundance of room, will greatly facilitate the quick handling of goods and getting orders out on time, which has always been one of the chief aims of this reliable firm. Sweet peas were never seen better than they are at present in this market, and several growers seem to have reached the height of perfection in cultivating this favorite flower.

E. Sutermeister of Hyde Park has been confined to his home with sickness the past week.

Henry M. Robinson & Company have a rapidly increasing business in the cut flower trade, a department which they recently started, and already talk of increasing their cold storage facilities.

Easter outlook is very bright in this locality. The growers of lilies have good showings and many thousands of plants will be in fine shape. Azaleas, too, will be fine as several growers will have an exceptionally nice lot of well-flowered plants. Violets have recently been among the most popular flowers at this time and there is no question this year that there will be an excellent supply of this stock.

Conger & Gormley have taken the vacant store next to their State street stand for an Easter annex.

Club Notes.

The regular meeting of the Gardeners and Florists' Club was held on Tuesday evening. President Westwood in the chair and an attendance of 125, notwithstanding it was one of the stormiest nights of the season. Eight new members were elected and the name of Jackson Dawson presented for honorary membership. It was decided to hold a club banquet during April. It was voted to appropriate \$25 for a special prize to be awarded at the chrysanthemum show of the Massachusetts Horticultural Society next Fall.

It was carnation night and there were many fine exhibits on the tables. Some of the most striking were a vase of new variegated carnation Bay State, from Albert Roper, Tewksbury, which was awarded a report of merit; a vase of Afterglow from William Nicholson which received a report of merit; and a vase of Alma Ward from Peter Fisher, which also received a report of merit. Honorable mention was awarded to H. A. Stevens for seedling carnations; to F. R. Pierson Company for White Enchantress; to Elijah A. Wood for seedling scarlet number 405; to A. Roper for seedling number 21; to W. W. Rawson for lettuce and radishes grown with the aid of electricity; and to Daniel Iliffe for an adjustable plant stand. Votes of thanks were awarded to W. N. Craig for vase of larkspurs; to E. B. Beals for seedling carnations; to F. R. Pierson Company for Winsor carnation and to Peter Fisher for Beacon and Evangeline carnations, these latter three varieties having had former awards

"Horticultural Advertiser"

This is THE British Trade Paper, being read freely by all Horticultural traders. It is also taken by over 100 of the best Continental houses. Annual subscription to cover cost of postage, 75 cents. Money orders payable at Lowtham, Notts. Address

EDITORS OF THE "H. A."
Chilwell Nurseries, Lowtham, Notts
European Agents for THE AMERICAN CARNATION

of the club. Not the least important among the exhibits was a collection of sweet peas in some sixteen separate varieties, all Winter-blooming, from Wm. Sim; an award of report of superior merit was made for the same.

There was a lengthy discussion on carnation growing introduced by F. J. Palmer and Peter Fisher, M. A. Patten, F. R. Pierson and others freely expressed their experiences with the different modes of cultivation. Indoor Summer culture was much discussed and was favored by the three gentlemen named as the best method for producing high grade blooms with long stems for early Winter purposes when the prices were highest.

The co-operation of florist clubs with the National Society was talked on by President W. J. Stewart of the S. A. F. and O. H. and by J. K. M. L. Farquhar, but the hour was late and discussion had to be deferred till some future time. Gentlemen present from a distance were F. R. Pierson Tarrytown, N. Y., Geo. Baldwin, Secaucus, N. J., and E. B. Beals Springfield, Mass. J. W. D.

St. Louis, Mo.

Spring Flower Show.

The St. Louis Horticultural Society held its Spring flower show last week. The show opened Tuesday afternoon at 2 o'clock. The exhibition was a good one and created much favorable comment from all the visitors. The displays were mostly made up of bulbous stock, also carnations, roses and violets in cut flowers, and made-up work. The officers of the society are to be congratulated in getting together such a splendid exhibition in so short a time. Many new features were displayed in made-up designs and floral booths—like those at Chicago last year. One of the most handsome booths was that by F. C. Weber, on which a great deal of good taste was displayed. C. Young & Sons' booth was also well gotten up. That of the Koenig Floral Company was in the form of a greenhouse covered with smilax. The St. Louis Seed Company had a seed and bulb exhibit in their booth, also live birds and all kinds of implements pertaining to the garden. This attracted a great deal of attention from the visitors. The booth was in charge of Walter Retzer.

In the made-up work class a fine dinner table was set up by Thomas Miller, the only display of its kind. Mr. Miller's basket and vase of flowers were much commented upon. The basket taking first and the vase second prize. F. C. Weber and R. J. Windler were the others to show baskets and vases. In groups, Schray, Young, and Sanders made good displays, and Weber, Windler and Schray made handsome exhibits of bulbous stock in bloom.

S. S. Skidelsky staged for the E. G. Hill Company of Richmond, Ind., the new and beautiful red rose, Rhea Reid, which was the center of attraction. George Kuhl of Pekin, Ill., displayed well-grown ferns. Vaughan's Seed Store also made a display of plants.

In the afternoon of the opening day the prizes were awarded, the judges being R. F. Basson, Andrew Meyer, Sr., and Albert Walhart. The awards were as follows:

Collection of plants in bloom—Wm. Schray & Sons, first; G. B. Windler, second; and Koenig Floral Company, third.

Collection of bulbous plants in bloom, accessories admissible—F. C. Weber, first; Wm. Schray & Sons, second; R. J. Windler, third.

Fifty foliage and blooming plants—C. Young & Sons Company, first; Wm. Schray & Sons, second; C. C. Sanders, third.

Specimen plants, Schray & Sons, first with a fine kentia; Koenig, second; and Sanders, third.

Specimen blooming plant—A. Jablonsky, first, with a fine acacia; F. C. Weber, second.

Six blooming lily plants—C. Young & Sons, first with longiflorus; A. Jablonsky, second; and F. H. Meinhardt, third.

Display of pansies—R. J. Windler, first; Sanders, second.

Display of violets—Schray, first; Weber, second; and Wm. Winter third, all California.

Display of bulbous cut flowers—No first; F. C. Weber, second.

Five vases of carnation blooms, five varieties, twenty-five in each vase—Chicago Carnation Company, first, with White Perfection, Red Riding Hood, J. A. Valentine, Aristocrat and Enchantress; J. D. Thompson Carnation Company, second.

Fifty white carnations—Chicago Carnation Company, first with White Perfection; John Steidle, second with Lady Bountiful.

Fifty light pink carnations—Chicago Carnation Company, first with Enchantress; J. D. Thompson Carnation Company, second with Evangeline.

Fifty dark pink carnations—Chicago Carnation Company, first with Aristocrat; J. D. Thompson Carnation Company, second with Mrs. E. W. Lawson.

Fifty red carnations—J. D. Thompson Carnation Company, first with Robert Craig; A. Jablonsky second, with Cardinal.

Fifty variegated carnations—J. D. Thompson Carnation Company, first, A. Jablonsky, second, both with Mrs. M. A. Patten.

Fifty carnations any other color—A. Jablonsky, first with Harlowarden; John Steidle, second with Enchantress.

Four vases of roses, in four varieties—Peter Reinberg, Chicago, first with Richmond, Mme. Abel Chatenay, Ivory and Bridesmaid; W. J. & M. S. Vesey, second.

Twenty-five American Beauty—W. J. & M. S. Vesey, first; F. C. Weber, second.

Twenty-five pink—Peter Reinberg, first; W. J. & M. S. Vesey, second, both showing Bridesmaid.

Twenty-five white roses—P. Reinberg, first; W. J. & M. S. Vesey, second, both with Bride.

Twenty-five red roses—P. Reinberg, first; W. J. & M. S. Vesey, second with Richmond.

Twenty-five roses, any other color—Peter Reinberg, first with Uncle John. Best floral basket—Theodore Miller, first; F. C. Weber, second; R. J. Windler, third.

Best vase of flowers arranged for effect—Fred C. Weber, first; Theodore Miller, second.

Among visitors attending were S. S. Skidelsky, Philadelphia; Mr. Knoll, Bloomington, Ill.; M. Barker, Chicago; J. S. Wilson, Vaughan's Greenhouses, Western Springs, Ill.; Leonard Kill, Chicago; G. Kuhl, Pekin, Ill.; G. Washburn, Chicago; A. C. Brown and A. C. Canfield of Springfield, Ill.; A. F. Longren of The Chicago Carnation Company and J. D. Thompson of Joliet, Ill. The visitors were tendered a complimentary dinner by the members of the society on Wednesday afternoon at the Colonial Cafe. The attendance throughout the three days of the exhibition was large.

On Wednesday night the society held its annual meeting with a good attendance. The election of officers resulted as follows: Edward Mallinckrodt, president; Leonard Mathews, vice-president; F. C. Weber, treasurer; and O. G. Koenig, secretary.

On Tuesday and Thursday evenings Dillwynn M. Hazlett illustrated with stereopticon views things the society aims to accomplish.

The St. Louis Florists' Club held a very interesting meeting last Thursday afternoon, which was only fairly well attended, owing to the fact that most of our growers were kept busy at home. The meeting was promptly opened by President Irish at 2 o'clock. The committee on the flower show made its final report, in which it was stated that in view of the fact of the great opposition placed in its way by certain members of the club the committee was unable to raise the guarantee fund of \$10,000. The committee was discharged with thanks for their great efforts.

President Irish made a request on behalf of the Engelmann Botanical Club for the loan of the club's tables and vases, to be used at their annual Spring flower show, to be held next month. The request was granted. On motion, the club decided to hold its annual rose show meeting next month, and \$50 in prizes will be offered for local growers only in competition. Growers of new roses are requested to send a few blooms of novelties for the inspection of our growers. The trustees were given instructions to make arrangements for some kind of entertainment for the members and their families, to celebrate the club's twentieth anniversary on June 28. They were allowed \$100 for expenses. Thomas G. Brown made application for membership. Mr. Brown is a local grower. Treasurer Bentzen's report showed that the club was in good standing.

The question box brought out a big discussion on Easter-blooming plants, especially lilies, in which J. F. Annano, E. W. Guy, F. J. Fillmore, A. J. Ammann and others took part.

The next meeting of the club will take place Thursday, April 11, at 2 o'clock. **ST. PATRICK.**

Philadelphia.

The Easter Outlook.

Present indications point to a good Easter business; it looks as if all the growers are to sell out clean without any special effort. The only scarcity noted is in the case of hydrangeas; several growers could not get these in. There are plenty of lilies for local trade, but on Monday demands increased from outside cities and prices have stiffened considerably. It looks now as if prices on cut stock will be 15c. and 18c. per flower next week.

The Wm. Graham Company had on Saturday last passed their last year's Easter sales and have a lot of stock yet to dispose of. They expect to clean out everything. All stock is in good shape. They grew 15,000 azaleas and 20,000 pots of lilies besides quantities of hyacinths, tulips, spiraeas, etc.

The Robert Craig Company have a fine lot of stock; in addition to azaleas, lilies and general stock they have a grand house of Magna Charta roses and a nice lot of gardenias in 5-inch pots 4 to 6 buds just ready to open.

Local Items.

The firm of Dunn & Walsh, retail florists and decorators at 618 Chestnut street, has been dissolved. J. Dunn will continue to carry on the retail store at that address, while James Walsh has accepted a position with the Wm. Graham Company as a decorator, he having done quite an extensive business in the hunting and flag decoration line.

The Floral Exchange, Inc., 335 N. 6th street have given up the decorating end of the business, which has been turned over to the Wm. Graham Company together with the stock of hunting, draperies and other effects used in that work.

C. S. Ford of this city formerly of 1417 Columbia avenue, manufacturer of floral novelties and representing A. Herrmann of New York on the road, was called home suddenly last week from Cincinnati on account of the death of his eldest daughter, Charlotte, aged 20 years. Miss Ford was a stenographer and had just accepted a position with Henry A. Michel Company, seedsmen, at 1018 Market street, when stricken with appendicitis, the cause of death. Miss Ford was an earnest church worker, and very popular. She was buried Saturday, March 9 in a bower of flowers with 30 floral offerings from friends and relatives. Mrs.

Ford is prostrated and Mr. Ford sees no chance to continue his trip in time for Easter business.

S. A. F. O. H. Executive Session.

The officers and directors of the S. A. F. O. H. were here last Monday and Tuesday holding their annual executive session, the only absentee being Treasurer Beatty who is now in the South. Those present were President Wm. J. Stewart, Ex-president Wm. F. Kasting, Secretary P. J. Hauswirth, Directors E. V. Hallock, Theo. Wirth, F. H. Traendly, W. H. Elliott, Samuel Murray, J. K. M. L. Farquhar, P. Welch, of Boston, being present, was appointed to act on the board in the absence of Treasurer Beatty. The recommendations of the local club to hold the meetings of the S. A. F. in the Broad Street Theatre and the exhibition in Horticultural Hall were approved, upon the recommendation of the local club. David Rust was appointed superintendent of exhibition.

Alex. Scott has returned from a two months' sojourn at Summerville, S. C. He intends to devote most of his time from now on to the propagation of the new rose Mrs. Jardine, one of the introductions of Dickson of Belfast. It is of a flesh color, good growth, large flower and bids well to make a good record.

F. Le Gierse has sold his seven greenhouses, each 25 x 75 feet, at Swarthmore, Pa., to Emil Wohler of Bala, Pa. The latter will take possession at once as the lease on his present place expires in June.

Visitors this week were E. G. Hill, Richmond, Ind.; P. J. Hauswirth, Chicago; F. Smith of Smith & Fetters, Cleveland, O.; L. McBean, Lakewood, N. J.

The steamer Menominee which was reported in collision in the English Channel two weeks ago and which has 140 cases of goods for Bayersdorfer & Company has proceeded and is due here on March 19.

The Pennsylvania Horticultural Society meeting on Tuesday evening was well attended. H. L. Frost of Boston gave a very interesting talk on "Tree Surgery," illustrating his remarks with specimens of injured limbs of trees. Wm. Kleinheinz read a paper on his trip to Europe.

The Spring flower show takes place next week—Tuesday, Wednesday and Thursday. **DAVID RUST.**

New Orleans, La.

News Notes.

Chris Holst and Eugene Boudenay, who for many years have been the proprietors of "The Half Way House" Nurseries, located right in the midst of the most fashionable cemeteries of New Orleans, have decided to retire from business, having amassed a competency. They will travel for a year, taking in most of the places of interest in Europe and Asia, with a trip to the Holy Land, after which they will reside permanently in Europe. James A. Newsham, the proprietor of the Nashville Avenue Rose Gardens, purchased the stock and good will of their business and, having taken a five years' lease of the grounds, will carry on business at both places until his present lease expires, when he will devote his entire attention to the Half Way House Nurseries.

C. W. Diehling is cutting fine Harrisii lilies daily for which he finds a good demand. He also has a nice lot that will be just right for Easter. Abele Brothers report theirs will be just in time. At the Wm. Rehm establishment it is to be seen a fine lot with practically no disease. The Metairie Ridge Nurseries are also cutting fine lilies, but Mr. Papworth reports that unfortunately at least 50 per cent. of their crop is diseased.

CRESCENT CITY.

AMHERST, MASS.—G. A. Bishop of Waltham has been appointed instructor pro tem. in floriculture at the Agricultural College to fill out the current semester in place of Francis Canning, who has left to take charge of an estate in Altoona, Pa. Mr. Bishop has had a thorough training in various lines of agriculture, horticulture and gardening in the English way. In 1898 he was appointed head of the department of experimental agriculture in the Bermudas, which position he held until the Spring of 1905. During 1905 and 1906 he was engaged in commercial horticultural enterprises on his own account in the Bermudas, coming to Massachusetts to make his home in the Fall of 1906.

Users of Boilers Should Be Interested

This Speaks for Itself

Lincoln Avenue, Jamaica, L. I.

Mr. John A. Scollay,
 74-76 Myrtle Avenue,

Brooklyn, N. Y.

My Dear Sir:—

I take great pleasure in writing you that your No. 5 boiler, which has only now given out, has been in use in my greenhouses thirty-two years. This I consider a long time for a boiler to last. The original grate were the only ones used during the thirty-two years. I have also at present twelve boilers of your make, which are giving perfect satisfaction.

Yours very truly,

ABRAHAM VAN SICKLAN.

several years. It is not likely, however, that there will be any dearth of cut flowers, either of lilies or any other kinds, and out-of-town buyers may rest assured that anything they need in this line can be had in this market. For those who have to buy for the Easter trade, we would refer them to the advertisements of New York's most prominent wholesalers which will be found in this issue, and we would also say, get your orders in as early as possible.

S. Groot, representing the firm of Sluis & Groot, seed growers of Enkhuizen, Holland, arrived on Thursday, the 14th inst, on the steamer New Amsterdam for a tour of the United States in the interests of his house.

The delegation from this city to the Rose Society's show at Washington included: President Robert Simpson, Treasurer Harry O. May, Secretary Hammond, and Patrick O'Mara, Paul and Henry Dalledouze, Walter F. Sheridan, F. H. Traendly, A. H. Langjahr, Alex. J. Guttman, George Struck, James Ivera Donlan, L. M. Noe, Robert Schultz, L. B. Coddington, W. A. Manda, Alex. Wallace and others.

Among the visitors this week were P. J. Hauswirth and son, E. J., Chicago; Peter Crowe, Utica, N. Y.; B. F. Meyers, foreman for W. J. Palmer & Son, Lancaster, N. Y.; W. W. Edgar, Waverly, Mass.; Philip Breitmeyer, Detroit, Mich.; A. J. Loveless, Fred Heeremans and A. H. Winget, all of Lenox, Mass.; E. G. Hill, Richmond, Ind.

T. Mellstrom, representing Sander & Sons, St. Albans, England, arrived in this city last Saturday on the steamer Campania on his semi-annual visit to the trade. His address is 235 Broadway, Room 1.

J. McHutchison left on the 21st inst. for a business trip to Europe on board the steamship Amerika.

Newport, R. I.

News Notes. The program for the conference on Rural Progress to be held in Newport, March 26, includes an address by Dean L. H. Bailey of Cornell University. The list of speakers includes also President Butterfield of Amherst, President Edwards of the Rhode Island Agricultural College and Dr. Wheeler of the same college.

An extensive range of glass is in course of erection at Oakland farm, Portsmouth, for Mr. Alfred G. Vanderbilt.

Carl Jurgens has leased a large tract of land which he will utilize in connection with his greenhouse operations.

A local paper announces the rental of the "Fadden" store on Bellevue avenue to a New York party. If that means the retirement of the Faddens from active business, a name well known in retail florist circles for more than forty years will disappear. The business of Thomas Galvin is much older than that of the Faddens, with the still further gratifying and interesting feature of the founder still in harness.

Alexander Nicol, part owner of the Copeland street greenhouses, Brockton, Mass., who is a resident of Newport, visited the greenhouses last week and reports the stock in good condition and prospects bright in Brockton for Easter business. D. M.

Detroit, Mich.

News Notes. The Detroit Florists' Club meeting was well attended in anticipation of a paper prepared by A. J. Stahelin on "Carnation Growing." Murray G. Patterson was unanimously elected a member.

Kroeschell Brothers kindly submitted a souvenir carnation measure, and the secretary very graciously took up the matter of getting one for each member. Samples of calyx fasteners were also pleased to all present. Fred Pantke showed some seedling carnations, one of which was of mammoth size.

J. F. Sullivan will prepare a paper for April 3, on the subject "Florist Clubs and the Importance of Attending their Meetings." E. A. Scribner talked in favor of the ladies auxiliary of the S. A. F. O. H.

The Club indorsed Geo. A. Rackham as a candidate for school inspector in the seventeenth ward. The secretary was authorized to correspond with Mr. Thomas, Dayton, Ohio, in regard to a stereopticon lecture in Detroit. HARRY.

trial. We send our "Florist" hose on 60 days trial; if not satisfactory return and we pay charges both ways. Wrought iron pipe lasts longer than steel. Get our prices on guaranteed wrought iron pipe. Send for Free catalogue "Ray" Boilers, Ventilating apparatus, Tools, Velvas and Fittings.

WILLIAM H. KAY COMPANY,
 244 Fulton Street, - - New York City

New York.

The Week's News.

The flower and plant section of the large department store of Abraham & Straus, Brooklyn, is now in the hands of the firm of James Weir's Sons, the prominent Fulton street florists. It goes without saying that the flower stock at this mart will be second to none, and Abraham & Straus are to be congratulated upon this acquisition to their establishment.

Hicks & Crawbuck, wholesale florists and supply dealers at 76 Court street, Brooklyn, have discontinued their cut flower business and will hereafter devote all their energies to the supply department. Most of the growers who have been shipping to this firm will hereafter be found with Bonnet & Blake, wholesale florists at 106 Livingston street, Brooklyn.

Charles Meisinger, a West Hoboken, N. J., florist, had a narrow escape from being injured one day last week. He was carrying a large floral design, and, in crossing a street, was suddenly run down by a horse from behind, the horse having got beyond control of the driver. Fortunately, Meisinger was not injured, he having fallen in the slushy snow, but the floral design was a total wreck, and Meisinger had to go back to his home and make another one. The driver of the horse reimbursed Meisinger for the loss of his flowers.

The Department of Parks is advertising for sealed bids or estimates for furnishing all the labor and materials for erecting and completing a greenhouse, a boiler house and steam trench in the Botanical Garden at Bronx Park. Bids will be received until 3 o'clock p. m. Thursday, March 28.

L. W. Wheeler of Vaughan's Seed Store has gone to Bermuda to look over the firm's contract crops of lily bulbs.

Those from this city who attended the annual show and meeting of the American Rose Society at Washington last week report having had a very enjoyable time while in the capitol city.

An illustration showing a truck load of seed catalogues going up Barclay street toward the post-office was shown in one of the Sunday papers last week as being a sure indication that Spring was here.

A. Moltz, wholesale florist at Twenty-sixth street and Sixth avenue, is mourning the loss, by death, of his mother, whose funeral was held on Thursday, March 14, the interment being in Washington cemetery.

To-morrow is Palm Sunday and lilies are in fairly good demand. Present indications point to a shortage of plants of lilies for Easter, and prices are expected to be somewhat higher than has been the rule for

REVIEW OF THE MARKET

NEW YORK.—Tuesday brought us another snow storm which lasted all day, and the effect it had on the flower business can better be imagined than described. Flowers of all kinds are coming in rather more plentifully than they were; especially is this noticeable in American Beauty, Bride and Bridesmaid roses. The values of the first mentioned rose have been more than cut in half and still the stock cannot be moved satisfactorily. With Bride and Bridesmaid there seem to be no fixed prices, as boxes containing all grades of them have been sold at \$2 per 100 to effect clearances.

Carnations, through some reason or other, seemed to sell fairly well on Monday, but since then there has not been much call for them. Prices are ruling no better than they were a week ago. Cut lilies, perhaps, are not quite so plentiful as they were; presumably they are being held for next week with the supposition that better prices will prevail at that time.

Violets are extremely plentiful, and the prices they are bringing are anything but satisfactory. Tulips and narcissus continue to move at some figure or other, but there are a good many of them that are not bringing much money. Freesia and sweet peas are in plentiful supply, as also are daisies, gardenias, orchids and lilac.

A shipment of cut flowers of narcissus arrived from the South on Wednesday morning. This is the first consignment of the season, and with our market already over-stocked with these flowers, the effect on prices can easily be imagined.

CHICAGO.—The sensation of the week preceding the 17th of March in this market was certainly the green carnation. The dye producers were rushed with orders for the fluid, which in addition to local consumption was shipped in considerable quantity to near by and more remote points. White carnations began to shorten up and increase in price at least a week in advance of the occasion, and an unusually large amount of sentiment and commercialism, even the Florists' Club devoting a large part of the evening to the question. From the middle to the last of the week white carnations were so much in demand for this purpose that the bulk of the stock increased in value \$2 per 100, and so strong was the market on this line that other staples strengthened to some extent.

With the opening of this week an ample supply of everything except long-stemmed American Beauty roses was offered at prices varying very little from those of a week ago. There seems every reason to believe that the optimistic expectations, which are very generally expressed as to supply, demand and quality of stock for the coming flower festival, will be fulfilled at prices pretty much the same as last year.

W. K. W.

ST. LOUIS.—The mild and pleasant weather last week made trade fairly good. Funeral work was plentiful, and a number of good-sized weddings were attended to by the up-town florists. The bright weather also brought out an abundance of cut stock; the commission houses were all loaded down. The flowers were mostly all disposed of in 1,000 lots at cheap prices, especially carnations. St. Patrick's Day a big lot of green carnations were disposed of. White carnations went up in price \$3 and even \$4 per 100 was asked for them, while colored stock went begging at two cents. Extra quality in Enchantress brought \$3, Mrs. T. W. Lawson, Robert Craig and Nelson Fisher \$2 per 100. Violets are becoming scarce; some of the growers are trying to hold them back in order to have a big cut for Easter. At present these flowers are bringing 25c. per 100.

Roses are much more plentiful and are down in price. Extra quality in Bride, Richmond, Ivory, Killarney and Bridesmaid bring \$3 per 100; firsts, \$6, and seconds, \$4. American Beauty in fancy grades seem scarce; medium and shorts are quite plentiful.

Callas are coming in heavily. Harrisli are scarce as yet. Dutch hyacinths are fine, and sell well at \$5 per 100. Roman hyacinths and Paper White narcissus are scarce at \$3; Von Sion plentiful. Lily of the valley sells slowly; there is still plenty on the market. Sweet peas are fine at \$1 per 100 for extra fancy; 50c. for shorts.

Smilax has had a good call. Common ferns are up to 30c. per 100. Galax leaves are selling well.

The Easter plants at some of our large establishments are looking well; should this warm spell keep up, growers will have their troubles in holding them back for Easter. Lilies are to be scarce, they say, as most of them are all sold out this early.

ST. PATRICK.

BOSTON.—Trade has been fairly good all the week and prices have rallied somewhat. While stock seems plentiful enough there does not appear to be the marked surplus that there has been during the past month. American Beauty roses are still the scarcest of any flowers and there is a good demand for medium long stemmed blooms of this variety. Richmond are selling well and good prices are realized for some of the fine long stemmed flowers. Killarney and Wellesley are in brisk demand as are Mrs. Abel Chataway, although only limited quantities of these varieties are to be had. Bride and Bridesmaid are both of good quality and prices are advanced over those of last week for the better grades.

Carnations have advanced in price. Some very fine blooms are now to be had. Sweet peas are plentiful but are of grand quality. Mignonette is good, and some fine snapdragons are being brought in. Violets have advanced in price a little; they have been plentiful enough recently, in fact, so much so that they have been the principal flower of the street vendor. J. W. D.

PHILADELPHIA.—Flower market conditions are rather poor this week. Lots of stock on hand and not many buyers in quantity. American Beauty are becoming very plentiful and the best stock is offered at \$3 and \$2 per dozen. Tea roses are very plentiful; it is difficult to get over \$12 per 100 for any of the stock and lots are to be had for \$8 and good flowers, too.

Carnations are also very plentiful; \$4 is the top price for any fancy flowers, general stock brings \$2 and \$3 per 100 with but few buyers in large lots. Violets are dragging this week; the best flowers are sold at 50c. to 75c. per 100. Daffodils realize \$1 and \$2 per 100; tulips, \$2 and \$3 with Couronne d'Or at \$4 and \$5 per 100. Gardenias bring \$1.50 and \$3 per dozen and very plentiful. Lily of the valley is abundant; and \$2 and \$3 per 100 is all that can be obtained for the best.

Quite a lot of A. Sprengon has come in from the South the past week. Adiantum cuneatum fetches \$1 and A. Croweanum, \$1.50 per 100.

Lilies are selling at from 10c. to 15c. per flower; growers holding any not sold much firmer the past two days.

DAVID RUST.

INDIANAPOLIS, IND.—A steady trade has been maintained throughout the week. It is possible to fill the many orders in a most satisfactory manner, as all kinds of stock were of good quality. Funeral work and counter trade have kept the retailers on the alert for all the salable flowers in the market. The automobile show and the various openings have caused the decorators to put forth unusual efforts. St. Patrick's Day occurring on Sunday caused the green carnations to disappear with astonishing rapidity; \$1.50 a dozen was usually obtained for them. Violets, sweet peas, lilacs and other Spring flowers have received the most attention from patrons. The unlimited amount of carnations at so early a date gives the writer an insight into an over supply after Easter; \$2 to \$3 a hundred wholesale and 75c. to \$1 a dozen retail are the prices for them.

Roses make a brave struggle against the masses of bulbous stock brought to market; prices vary but little from those of the preceding week.

Callas and Harrisli lilies invariably find buyers, the first mentioned at \$1 a dozen, the last at \$1.50 to \$2 a dozen.

I. B.

WASHINGTON, D. C.—The past week, with Lenten season and attendant convention, did not prove a stimulus to trade. There is still an over supply and this condition by reason of warmer weather is added to daily. The general consensus of opinion is that little relief will come until Easter sales consume the mass; in many cases close out some, and make room for what is left. On St. Patrick's Day unusually fine

9 Chapman Place

BOSTON, MASS.

weather prevailed, and this helped the sale of green carnations, shamrock, and minor novelties. Azaleas, lilac, and bulbs are still abundant, but not in much demand. Some of the retailers are going to Philadelphia this week to look up Easter stock. Growers here are experiencing some inconvenience in retarding Easter azaleas, etc., owing to the warm weather.

NEW BEDFORD, MASS.—There is no let-up to the demand for cut flowers. We are now having plenty of good bright weather, which has helped to bring out the blooms more freely. Prices remain the same as usual, the only change being in violets. Some of the growers have got violets down as low as 35c. per dozen retail which hardly pays to pick them. There is plenty of bulbous stock in the market. Funeral work is quite plentiful using up plenty of inferior flowers.

The dahlia growers around here are commencing to send out catalogues.

Wm. P. Peirce on Union street had a nice run on carnations St. Patrick's Day. These were dyed green and sold readily at 10c. each. From present indications there will be a good supply of violets for Easter.

HORTICO.

SUMNER, WASH.—The Woodland Park Floral Company of Seattle has purchased twenty-five acres of land in Sumner for the purpose of building greenhouses and growing plants to supply its wholesale and retail trade. The company, which is probably the largest in Seattle, owns a large range of greenhouses at Woodland Park, Green Lake; also a wholesale and retail store on Sec-

ond avenue. The land in question lies between the town of Sumner and the farm of W. H. Paulman. The price was \$6,000. Work on both grounds and buildings will be begun at once.

CHANGES IN BUSINESS.

DES MOINES, IA.—The Rush Floral Company has opened a flower store here.

AURORA, ILL.—Charles Stolp is building a greenhouse, and will embark in the florist business.

WHITEHALL, N. Y.—Walter L. Mead, Fort Edward, N. Y., has established a branch store here.

ALBIA, IA.—Mr. Richey will establish a greenhouse plant here and embark in the florist business.

SPRINGFIELD, MASS.—Hans Madsen has sold his greenhouse business here and has returned to his home in Denmark.

PORTERVILLE, CAL.—George D. Avery will start a nursery here to be devoted to the growing of ornamental shade trees and shrubbery.

NORWALK, O.—The Laible Floral Company has opened a flower store at 43 Benedict avenue. It will be under the direct management of F. G. Laible.

BUFFALO, N. Y.—The William E. Kasting Company, has been incorporated; capital, \$30,000. Directors—W. E. Kasting, 700 Eliott street; Laura A. Kasting, E. C. Brucher, Buffalo.

As usual, I offer Elegant Stock of all Leading Cut Flowers for **EASTER**.

RETAIL FLORISTS

If you are in need of choice cut flowers for **EASTER**
TRADE send your orders to us and get the best * * *

BONNET & BLAKE

106 Livingston Street, BROOKLYN, N. Y.

Telephone 4638 Main

We are filling out-of-town orders to the entire satisfaction of our many customers, and we can do the same for you.

We handle the output of **Carnations** from the establishment of John N. May, Summit, N. J. Also the entire output from Alfred Demeusy, the famous carnation grower of Flatbush, Brooklyn, including his new seedling, No. 333, which is beyond a doubt the coming dark red carnation.

Our **Roses** are from the establishments of the foremost experts in rose culture, and we are in daily receipt of the choicest **Violets** obtainable.

Through the discontinuance of the cut flower business of Hicks & Crawbuck, we have added materially to our list of growers, and are better prepared than ever before to fill all orders.

We have at all times a full line of all **seasonable flowers**, and can fill your orders just as you desire, and ship them promptly.

In addition to our cut flower department, we carry at all times a heavy supply of **galax leaves**, both green and bronze, also **hardy ferns** and other green material.

Place your **Easter** orders with us and be assured of generous treatment.

TO GROWERS

We would say that we are at all times anxious to secure consignments of well grown flowers, and can guarantee the highest market values. Give us a trial.

NO GUESS WORK IN OUR METHODS

All goods are placed on show at the same time. Having ample space we are enabled to do this to great advantage

Each Grower's Goods are sold separately and entirely on their own merit; they are never bulked together to help the sale of another shipper's stock.

Every Sale, Large or Small, is recorded on a TRIPPLICATING MACHINE; one copy goes with the goods to the buyer, one to the Cashier, and the third is

FILED FOR INSPECTION at any time by the *Grower*, to whom the stock belongs that is thereon recorded, thus showing the name of the buyer, the quantity sold, and at what price. At the end of each day's trading, the slips are dissected, and the prices of the different grades figured out and placed where they belong, thus ensuring a faithful return and positively doing away with averaging, by which means the good prices go where they rightfully should; that is, to the *Shipper* of the Best Stock. Nothing can be *taken from* or *added to* any grower's returns; each and everyone gets *no less nor any more* than his goods are sold for. If as it will sometimes happen that the stock is not sold, the slip for same is marked *destroyed*.

Advice of Sale Note is sent out the day following the arrival of the goods showing if all or only part of the shipment has been sold. Anything left unsold is carried forward as *old stock*, and is sold and returned for as such, separately, and never included with any other shipment.

Cheques Weekly. All goods received up to and including Saturday in any week are paid for on the Saturday following.

Commission is Fifteen per cent. on the amount of sales, and any express charges that we pay at this end for goods, or return of empties are deducted.

Shipping Cards. Small box slips and *Con-ignment Notes* are also supplied.

MOORE, HENTZ & NASH.

Louisville, Ky.
News of the Week.

The Kentucky Society of Florists held their March meeting at the store of our president, C. B. Thompson and a goodly number were in attendance. A committee composed of Anders Rasmussen, chairman, Fred Schulz, Jacob Schulz, Joseph Wettle and August R. Baumer, were appointed to revise the constitution and by-laws and bring them up to date.

Louisville is just now in the throes of a motorman and conductors' strike of the City Railway employees and in line with all other business enterprises, the florists are feeling the effects. Steussy & Son have opened a store on Market street above Preston. This is far outside of the boundary of all florists' stores and their venture is watched with interest.

Henry Huth, superintendent of St. Stephen's Cemetery, in connection with which he owned a greenhouse establishment for the growing of a general stock, died last week. Of a retiring disposition, he was not as well known as he should have been, for he was a true lover of plant life and an interesting conversationalist when he could be induced to talk. A. R. B.

NORFOLK, VA.—The contract for the landscape gardening around the Illinois State Building at the Jamestown Exposition has been awarded to the Newton Floral Company, of this city.

BOONE, IA.—Last week a fire in the Loehrer greenhouses was extinguished before much damage was done.

 and FLORISTS' SUPPLIES
C. C. Pollworth Co.
MILWAUKEE, WIS.

DAYTON, O.—J. B. Heiss, well known florist and president of the Dayton Florists' Club, and H. Haerlin, chief gardener at the Soldiers' Home, have tendered their services to the city in the formulation of plans for parks, drive-ways, boulevards, etc., in the general beautification of the city. Their offer will be submitted to Council at its next meeting. Both are men of long experience in landscape gardening, and their services will be invaluable to the city.

Chicago.
 Club News.
 The regular monthly meeting of the Florists' Club was held in Handel Hall on Thursday evening, March 14, with the officers of the association in their chairs and a fair representation of the membership in attendance. The routine business of the evening was executed, including the admission of four new members—T. E. Waters, J. T. Helbok, Van Zimmerman and A. C. Benson.
 The change in the by-laws, section 5, changing the annual election and installation of officers from the November and December meetings respectively to the months of December and January, was read and according to the rules laid over to the next meeting for action.
 In the absence of the speaker announced for the evening, and in justice to whom it may be said he accepted the invitation at the previous meeting conditionally owing to the exceedingly busy season just prior to Easter, the subject of "Easter Plants" was taken up for discussion by members from the floor, and for an hour or more quite a wide range was given to the discussion which covered plants and cut flowers and the prices which will rule for the coming festival. The discussion was participated in by Messrs Amling, McAdams, Schupp, Klimmer, Rudd, Euders, and President Bruns.
 Mr. Degnan introduced the subject of the green carnation and much merit and sound sense were evolved by the arguments which followed upon the commercial and the æsthetic and sentimental sides of the question.
 The members of the club were invited to participate in the ball to be given by the C. A. Samuelson employes on Saturday evening, April 6.

News of the Week.
 John Munro is intending to give up carnation culture and return a part of his range to growing vegetables after this season.
 E. Assa is having a serious time at the Columbus hospital with one of his eyes. After being confined to a dark room for the past three weeks there remains a probability of a continued stay there of four or more weeks with the dreaded possibility of losing the sight of the affected member.
 John Becker will continue to grow carnations and roses at the recently purchased Winandy houses and not devote himself entirely to vegetables as contemplated.
 Schroeder & Meyer of the Flower Growers' market are one of the few concerns growing the large white marguerite of recent introduction.
 B. Eschner, representing M. Rice & Company, of Philadelphia, passed through Chicago last week on his way home from a trip covering half the States of the Union.
 The explanation is out of the extraordinary breadth which for the past few days has pervaded the customary smile of Alex. Newett. It's a little girl.
 William Hartshorne was in from Joliet last week. His connection with the Chicago Carnation Company will be severed on the 31st inst.
 John Dekema of Jensen & Dekema, who went to the Pacific Coast last Fall in search of a more favorable climate, is engaged in landscape work, with which he is perfectly familiar, in Los Angeles, Cal., and it is stated by friends who have met him that he is in a wonderfully improved physical condition.
 A manufacturer reports that the sale of hot bed sash this Spring exceeds the entire output for the past three years.
 The many friends and former associates of L. W. Wheeler in this city, where he was formerly located, sympathize with him in his recent bereavement.
 Stollery Brothers report an unusually busy Spring, design work for different occasions having been a leading feature in their work.
 The man about town for the Record-Herald has been interviewing a Madison street florist and elicited the information that "Please omit flowers," is printed in one death notice in ten and with 30,000 deaths in Chicago last year caused an estimated loss to florists of not less than \$100,000.
 J. A. Budlong, in addition to his general fine line of stock, will offer next week a fine lot of well hardened lilies.
 Recent visitors included Lyman B. Crow of the Lord & Burnham Company and President Charles Armitage of Hitchings & Company; also George Sykes of the former concern, all of whom are interested in the quarter million greenhouse authorized for the parks of the West Side.
 The rapid progress of the cut flower, plant, supply, and kindred branches of business in this city is probably best evidenced, not by the unsubstantiated "say so" of the enthusiast, but by the never ceasing increase of glass area, the constantly elongated list of city establishments and the frequent acquisition of additional floor space and facilities by existing concerns. The latest move in the latter direction is of importance to the trade as it involves a departure somewhat from existing local conditions. E. F. Winterston having taken the lease of the street floor store above his present quarters, which with the existing balconies will considerably more than double his present available room, possession having been given on March 20, and, though subject to change in many directions, the present plans involve the incorporation of a stock company to be operated separately from the present cut flower and supply business and making specialties of plants, bulbs, and every requisite of the florist and gardener, amateur or professional, except the lines now handled by the E. F. Winterston Company, with the probability of absorbing the supply department of the latter. Plants of all descriptions and at all seasons will be one of the strong points in the new venture, which it is expected will be in full running order before Easter. The new department will be operated under the name of the Winterston's Seed Store.

VAUGHAN & SPERRY, 58-60 WABASH AVENUE, Chicago

J. A. BUDLONG

Lilies (Cool Grown), Roses and Carnations
WRITE OR WIRE
37-39 Randolph Street, CHICAGO

The management of the Peter Reinberg salesroom take justifiable pride in the rose cut which arrives twice a day from their greenhouses, quality and quantity being combined this year for their Easter offerings to the trade.

The rose growers of this section are much pleased by the decision of the American Rose Society to hold its next annual meeting in this city, and a grand exhibition and generous increase in membership to the society are prophesied.

The E. F. Winterison Company had a large sale last week in St. Patrick's Day novelties leading off with the Ajax Emerald Dye which they manufacture. With an ample stock in sight Easter prospects are reported bright.

The Chicago lily growers have been hard at work the past few weeks and

though a number of plantmen will have but a partial crop for Easter others appear to have reason to expect nearly a full crop though high grade flowers and long stems will be comparatively scarce, so much so that advance orders for these lines are being booked at 13c. while 15c. is the general price asked for average stock. Other lines, with the probable exception of long stemmed American Beauty, will apparently be in sufficient supply to fill the demand, though it is evident that carnations will not be over abundant, as the heavy crop which has been deluging this market for the past few weeks is now on the decline.

Vaughan & Sperry have protected their trade by making large purchases of lilies, and their violet stock is guaranteed as to quality and quantity.

Sinner Brothers report that their

stock is coming on now in excellent shape with favorable prospects for Easter.

The A. L. Randall Company look sanguinely ahead at the Easter conflict as they have a good stock in sight, and if their recent orders on supplies are a criterion by which to gauge the demands on the cut flower department, busy days are coming.

W. P. Kyle, who was on the sick list last week, is on deck again at the old stand.

Wietor Brothers are confident of a representative first class crop in their specialties for next week.

Zech & Mann are looking forward with hopeful expectations to the results of next week's business.

E. H. Hunt is acting the good Samaritan in furnishing on application full particulars regarding Tobakine products.

As a product of 5,000 Japanese longiflorum bulbs potted and housed the last week in November, Ernst Weber, at his Lincoln avenue houses, can now show 4,000 pots in a very encouraging condition for Easter, the foliage being bright and clean, and the plants very even in height which though rather short for cutting are just right for potted stock, averaging about four to five flowers to the pot.

Anton Then returned last week from his extended visit to Alabama, much improved in health and generally delighted with his trip. It must have given him additional pleasure on his arrival to see the work "the boys" had accomplished in the lily houses, it now appearing that about 7,000 pots will be ready for Easter, a vast improvement having been made in the past two or three weeks.

BERGER BROS.

WHOLESALE FLORISTS
No. 1305 Fibert St., Philadelphia
Bell and Keystone Phones

Sixty thousand square feet of glass and a capable working force under the direction of Otto Wittbold, the youngest of the five sons, who with the father constitute the Geo. Wittbold Company, latticed sheds for Summer use, several acres of available nursery stock and a long row of frames, constitute the foundation of the productive department of this well known and long established concern. Decorative plants have always been a leading specialty and though large quantities of salable and stock plants are always kept as well as produced at the Buckingham Place range it is at the Edgebrook houses that the propagating, maturing to commercial size, as well as the resuscitating of large decorative plants that have suffered to a greater or less extent from the effects of a season's campaign, are all carried on. Feeling the necessity of larger accommodations than it was possible to obtain in the now thickly settled section where the older establishment is located, about thirty acres of land were purchased in Edgebrook just outside the city limits, and though six years ago, when the improvements were commenced, the whole area was a dense, interwoven, virgin growth, a large part of it is today, as mentioned above, in a highly improved productive state and every season adds in some form to the good showing already made. Palms in variety, ferns in many sorts, Asparagus plumosus and Sprenger, each in numerous sizes, dracenas and rubbers are just at present much in evidence, and it is here too that many of the carnations and roses for the retail department are grown as well as large quantities of bedding plants.

An Annual Banquet.
 The first annual banquet of the Tri-City Florists' Association was held March 11 at Turner Hall. Nearly every member of the society was present and the affair was a success in every way. The table decorations were among the most elaborate ever seen in the city.

Theodore Ewoldt acted as toastmaster for the evening and a wide variety of topics were discussed in the toasts. Among them were the propositions of organizing a tri-city horticultural society and giving an annual flower show. No action was taken on any of the matters talked of, however. Mr. Ewoldt gave the opening talk on the subject, "Should the Club hold an Annual Flower Show?"

The other talks were as follows:
 "The Organization of a Tri-City Horticultural Society"—J. T. Temple.
 "Funeral Work"—William Knees.
 "Efficient Florists' Help"—Henry Meyer.

"Store Decoration"—Harry Bills.
 "Greenhouse Construction"—John Staack.
 "General Plant Trade"—Henry Gaethje, Sr.

"Cemetery Trade"—H. G. Panli.
 "Carnation Growing"—Ludwig Stapp.
 "Influence of Parks on the Florists' Trade"—C. O. E. Boehm.

"Has Our Club Furthered a Feeling of Friendship and Goodfellowship among Its Members?"—George Farber.
 "Delivering Florists' Stock"—Henry Gaethje, Jr.

"Nursery Stock"—H. G. Bryant.
 "Private Grounds"—Elmer Ekstam and Peter Becker.

"Decorative Plants"—Frank Waelz.
 "Landscape Architecture, Its Effect on the Florists' Trade"—A. Arp.

The next meeting of the club will be held March 21 instead of March 14, at Fejervary Park. At the April meeting the wives of the members will be present.

BRIDGEWATER, MASS.—Mrs. John J. Johnson of Main street, wife of the well known florist, died March 10, 1907, after a short illness, aged about 45 years. She was a prominent member of Trinity Church, and was an earnest worker in the Woman's Guild.

194 BOYLSTON ST., BOSTON, MASS.

A Bowling Contest.

On Thursday evening, March 14, the first game of a series of three, in a tri-city contest for a loving cup donated by the Baltimore Bowling Club, was played on the Rathskeller alleys in Washington, the local club being the victors. The scores were as under:

WASHINGTON

Cooke	169	161	155
Shafer	161	158	188
Simmonds	157	168	151
McLennan	150	155	194
Ernest	122	201	166

BALTIMORE

Richmond	144	157	173
Lehr	172	183	137
Boone	136	166	154
Moss	115	125	201
Seybold	178	169	163

PHILADELPHIA

Graham	169	147	155
Dodds	147	161	176
Schocks	144	131	159
Kift	138	155	133
Connor	159	204	174

After the game a social hour was spent with song, speech and story. The next game will be played in Philadelphia on March 21; and the final in Baltimore, date to be selected.

Red Bank, N. J.

The regular meeting of the Monmouth County Horticultural Society was held on Friday evening, March 15, President Kennedy in the chair. Two new members were elected. On March 13 a return bowling match was played between the Monmouth County Gardeners, and the Elberon Society. The contest proved a close one, Monmouth County winning.

SPRINGFIELD, ILL.—A florists' club has been organized here, and the following officers elected: President, A. C. Brown; vice-president, G. M. Brinkerhoff; secretary, G. W. Jack; treasurer, George Van Horn. A committee was appointed to draft by-laws, and to secure a suitable meeting place for the State Florists' Association, which meets here next February.

- Brass Valves of any Description
- Full Line of Engineers' Supplies, Tools, etc.

Lincoln Ave., Jamaica, L. I.
Mr. John A. Scollay,
72-76 Myrtle Ave.,
Brooklyn, N. Y.

My dear Sir:—

I take great pleasure in writing you that your No. 5 Boiler, which has only now given out, has been in use in my greenhouses thirty-two years. This I consider a long time for a boiler to last. The original grates were the only ones used during the thirty-two years. I have also at present twelve boilers of your make, which are giving perfect satisfaction.

Yours very truly,
Abraham Van Sicklan.
Feb. 21, 1906.

We Argue That You

can't afford to own an All Cypress House—it costs too much—the repairs eat too deeply into your profits. There's nothing new in our argument, but it's surprising why a man owning houses with end bar rot and half gone eave plates will keep on putting up another and another such constructed house, when our Half Iron Frame Houses are so good, so practical, so much cheaper in the end. We want you to know exactly what is included in our Half Iron Frame House—to-morrow you'll be busy, so write to-day and we'll tell you all about it.

HITCHINGS AND CO.

GREENHOUSE DESIGNERS AND BUILDERS.
Manufacturers of Heating and Ventilating Apparatus.

1170 Broadway, NEW YORK.

FROST-PROOF ECONOMY

Ideal Hollow Concrete Block construction will protect your greenhouse from frost and secure greatest economy in fuel. The illustration of hollow block explains its resistance to frost. With the Ideal Concrete Machine you can yourself make these blocks from sand, gravel and cement at little cost—far below the cost of brick, stone or lumber. Ideal Blocks not only give frost protection, but are absolutely frost-proof, and effect a perpetual saving in insurance.

IDEAL Concrete Machines

May be operated by any man without previous experience. The process of making blocks is simple as making mortar. Blocks for every building purpose, with plain, tooled, ornamental face or natural stone effect made with the same machine. Simple, durable and adaptable to any size block within capacity. Our catalogue will show you how to secure frost protection and fuel economy, as well as initial saving over cost of other materials. Write for it and it is freely yours.

Columbus, O.

News Notes.

William Graff of Graff Brothers has returned from a three weeks' pleasure and business trip to Chicago; and brings with him as his guest N. J. Wieter of Wieter Brothers.

The peddlers have been, during the past three weeks, more numerous than ever before, selling carnations down to 25c. a dozen.

Another competitor for the cut flower trade has entered the field here. The Columbus Drug Company has opened a floral department, and is already advertising and pushing hard for the Easter orders.

C. V. Heikes and L. M. Gregg, of C. V. Heikes & Company, Troy, Ohio, are in the city taking orders for ornamental nursery stock planting.

At a recent meeting of the Pleasant Ridge Improvement Association, it was voted that this society recommend Norway maples for street planting in this city.

James McKellar and wife are both confined to the house, and quite sick with the prevailing grip. Mr. McKellar is much missed at Graff Brothers, and it is hoped that he will be out in time for the firm's Easter trade.

The appropriation of the Government for the support of our state agricultural college will be increased by an additional \$5,000, each year, until the present income of \$25,000 reaches \$50,000 yearly.

Easter lilies will be a very short item here: Harris' look the best, but I should say on the average that half the plantings were diseased.

The incorporation of the American Mutual Pottery Company of Columbus, with a capital of \$100,000 means that within a short time the plant of the Columbus Pottery Company, which was partly destroyed by fire some time ago and which then went into the hands of a trustee in a bankruptcy litigation, will be rebuilt and operated.

More than ever before did "green carnations" sell in large quantities here for St. Patrick's Day, at 10c. each; in fact, both Graff Brothers and The Livingston Seed Co. advertised them freely, as well as others in the trade.

Preparations are all made for a great Easter. All we need is good weather. F. W.

COLUMBUS, O.—The Washtenaw Garden Company, which is controlled by Columbus men and managed by Herb Kelley, will build two large storage houses this Summer on its property in Michigan. Mr. Kelley will leave next week to arrange for the construction work. The houses will have a capacity of 200 cars, and when complete the company will be in a position to make shipments throughout the Winter months. The company cultivates all kinds of vegetables and several varieties of fruits.

PEORIA, ILL.—The stork recently visited the homes of Edgar Miller and Charles Loveridge, florists, bringing a boy in each case.

Are You Contemplating Building ?

IF so, now is the time to take up this important question. It is only to your own interests to let me figure on your requirements.

YOUR work will be designed and erected by practical mechanics.

YOU will be satisfied in figures as well as results. **Y**OU can have testimonials of hundreds of satisfied patrons, in all parts of the country, by writing us.

The Standard Pump & Engine Co.
CLEVELAND, O.

YOU SHOULD TEST YOUR MATERIAL TOO

No matter how much it was tested by the firm you bought it of. You want a house that's going to stay with you and not eat up all the profits for repairs in the first few years. You can easily tell whether the house has been properly tested or not by the way the material lasts. You don't care about preliminary tests before shipping if you find that your house is full of shade and that the one you bought last year of the other party produces more and better plants. Your test as to the amount of stock you can get from the house is all right and every-body should know just how much they get out of every house. This is a test that our houses meet in compar-ison with any other construction you put against them—it's a matter of **dollars** and **sense** all the way through. You want a common sensed house that will produce profits. Send for one of our little booklets of a "1000 IDEAS," enclosing ten cents in stamps it is merely one of the details showing the thorough way in which we handle this matter.

Then there's a new catalog coming soon—send for one now so you will get it at once when issued.

THE ECONOMY OF SETTING BOILERS IN BATTERY.

BY THE BOILER MAN

THIS method of securing additional boiler economy is appreciated by many growers to-day. They plan their heating plant as carefully as the wide-awake manufacturer in building a factory. His first attention is given to placing the boilers in the most central position for economy of power distribution and saving of labor. He connects his boilers so one or all can be run according to the factory's demands. He runs no more grate surface than required to generate desired power—he always has full power at command when wanted. For many years we have been inducing the up-to-date florists to follow exactly the same principle with their plant factories. The building of houses each with its separate boiler and cellar is a thing of the past. Here and there you will still find a man with a moderate sized range of houses, running one big boiler with its big grate to constantly keep fire on—no matter what the weather is. He starts up that immense thing in the early Fall and has to keep it going in the late Spring; about two-thirds of the time he is using twice as much grate surface as he needs. The ideal way is to set "Burnham" boilers

Get it out of your mind that setting boilers in battery requires complicated piping. This battery of two replaced one large tubular boiler in a greenhouse at Allegheny, Pa.

Boilers with these socket connections are intended for shallow cellars requiring low flow pipe connections

in one cellar and connect them in batteries of two, three or four, as the case may require. In the early Fall or Spring, *one* boiler will be enough to take off the chill from all your houses; during moderate weather, *two* can be run; in the coldest, *three or more*. You are saved all that time in going the rounds to fire the numerous boilers; neither do you fire an immense grate for mild, moderate and severe weather alike. Boilers in Batteries mean not only just the amount of heat you need and no more—but a tremendous saving in coal and labor. It has been shown that this "Burnham" Battery System of ours has saved about 25% over other methods.

So much for Batteries—now a word concerning the "Burnham" itself. It's made especially for greenhouse work and it works as no other boiler works—not only a matter of coal economy, but time economy. It's quickly fired, quickly cleaned and harnesses up more heat from less coal than any greenhouse boiler made. We stand ready to prove that statement up, and can show you that it gives equal returns with hard coal, soft coal or coke. *Get to know the "Burnham" and do it now.*

Lord & Burnham Co., Greenhouse Designers and Manufacturers, 1133 Broadway, corner 26th St., New York. Boston Branch, 819 Tremont Building. Philadelphia Branch, 1235 Filbert St.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XXIII. No. 13

NEW YORK AND CHICAGO, MARCH 30, 1907

One Dollar Per Year

CARNATION WINSOR

The most talked about carnation at the Toronto Convention.
Won first prize for best 100 pink

Winsor is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders, and have a fine lot of stock in the cutting bench, so that we can promise, for the present, late March delivery on orders received within a short time at least.

If you have not already purchased a stock of this, you should lose no time do-

ing so. We are going to sell more Winsor than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market where our flowers are sold.

There is nothing on the market that approaches Winsor today in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities, in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high quality flowers. It practically does not split at all, notwithstanding the fact that we have had the darkest, duldest winter we have ever had, when the Enchantress and Lawson types are splitting badly all over the country with everyone, we have not had one-half of one per cent. of split calyxes on the Winsor. In fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement extravagant as it may appear.

Anyone who fails to plant Winsor this year will regret it. Rose pink Enchantress is good, and a good many other varieties are good, but IF YOU WANT THE WINNER, PLANT WINSOR. We not only have a good thing in Winsor, but we are delivering good stock. As a sample of the testimonials that we are receiving, see this space in last issue. We are trying to give 110 cents on the dollar, and guarantee to please everybody with the stock sent out or we will not ask you to pay for it. We have still to receive our first complaint, and we have shipped between one and two hundred thousand cuttings to date.

Strong Rooted Cuttings. \$12.00 per 100, \$100.00 per 1000.

RAWSON'S ASTERS

are just a little superior to anybody else's

The product of our seeds can always demand a better price than those grown from seeds obtained elsewhere. The following is an extract from a letter received last fall from a most critical grower:

"Your Midsummer Aster has been a great money-maker for me. For every flower that I have brought into the Boston Market I have received from \$1.00 to \$1.50 per hundred more than for any other variety raised from seeds purchased elsewhere." J. W. Simpson.

Delicate Shell Pink and Bright Rose at \$2.00 per oz.; 60c. per 1/4 oz.

RAWSON'S LATE BRANCHING: in White, Shell Pink, Rose Pink, Light Blue, Dark Blue, Scarlet and Crimson at \$1.00 per oz.; 30c. per 1/4 oz.

No Florist knows what *fresh* Aster seed means unless he has tried "RAWSON'S SEED." The crop of Aster seed has been extremely short last season and it is advisable to buy at once.

RAWSON'S TWO GREAT QUALITY ASTERS

RAWSON'S NEW MIDSUMMER: in White, Delicate Lavender,

Gladiolus America

is becoming more popular every day. The flowers being delicate pink with lavender tinge, are BEAUTIFUL and USEFUL.

Strong bulbs, \$10.00 per 100, \$75.00 per 1000.

Other "Top Notch" Varieties

ATTRACTION. Deep, dark, rich crimson with a very conspicuous large white center and throat. At once a most beautiful and attractive sort. \$15.00 per 100.

CARDINAL. Perfect flower and spike, very large and the brightest, cleanest and most intense cardinal scarlet yet seen. Very rich and showy. \$10.00 per 100.

CONTRAST. Flowers of great substance and a beautiful compact spike of perfect form. Color intense scarlet with a large, distinct white center which is neither tinted nor mottled. One of the most striking and beautiful Gladiolus ever introduced. \$12.00 per 100.

IRENE. Fine large flower and spike. Color a fine shade of pink freely flaked bright crimson. \$10.00 per 100.

MELROSE. White flaked pink, bright crimson center. Very large and fine. \$15.00 per 100.

OCTOORON. A beautiful salmon-pink; very distinct. A gem of its color. You will not be disappointed in Octooron. \$4.00 per 100.

Special offer: 25 bulbs each of above seven varieties for \$18.00.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION Henry W. Wood, Richmond, Va., president; C. S. Burge, Toledo, O., first vice-president; G. B. McVay, Birmingham, Ala., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; J. H. Ford, Ravenna, O., assistant secretary.

IMPORTS OF SEED, ETC.—March 16 and 17—James E. Ward & Company, 54 bags of seed; A. Olsen, 198 bags clover seed; John Scheepers & Company, 18 cases lily of the valley pips; Stallman & Fulton Company, 47 bushels roots; McHutchison & Company, five cases live trees; E. Hoenecke, eight bushels roots.

TOMATO INVESTIGATIONS is the subject of Bulletin Number 113, just issued by the Maryland Agricultural Station, College Park, Md. It treats upon testing varieties, culture, training and spraying. DALLAS, TEX.—The movement of field and garden seeds is the heaviest ever known, in the month in February, in the history of the city.

March 20—Maltus & Ware, seven bushels live plants; C. L. Hirsch & Company, 40 bushels roots; Stallman & Fulton Company, 47 bushels seed; Hensel, Burckmann & Lorbacher, one case live plants.

CHICAGO—Notwithstanding strong intimations of short lines which have been more or less prevalent for some months, the season is now in full blast with a full supply of everything on hand, and no scarcity of anything in sight or anticipated.

March 23 and 24—Brown Brothers & Company, 300 bushels bamboo seed; J. L. Hopkins & Company, 16 bushels seed; Murray & Nickell Manufacturing Company, eight casks roots, 183 casks seed; A. Olsen, 73 bags clover seed.

SEED INSPECTION.—The Maine Agricultural Experiment Station is now mailing bulletin 138, containing analyses of samples of grass and other seeds collected by the inspector and analyzed by the Station in 1906.

EXPORTS OF SEEDS, ETC.—March 16—Shipped from New York to Hamburg, 282 bags clover seed, valued at \$3,381; 553 bags grass seed, valued at \$853; nine packages seed, valued at \$359.

This is the second bulletin that has been issued since the law providing for the inspection of seeds was enacted. The bulletin states that no prosecutions were made on the two-fold ground that in most instances the dealers were ignorant of the requirements of the law, and that they themselves were imposed upon when they made their purchases.

European Notes. The clerk of the weather sandwiched one of the most severe frosts of the year between the prevailing mugginess of the present week as a gentle reminder that we are not yet out of the woods.

cially the Scotch or Aberdeen varieties, are moving off freely and parcels of high germinating quality easily command very high prices. Coming events cast their shadows before and in face of the very short acreage now standing for seed it is evident that much of the seed now being sold is bought to hold over and that there is every probability of high prices being obtained next year.

It has been pointed out in this column on a previous occasion that the demand for flower seeds is a fair index to the condition of trade; it is therefore not surprising to find the record year followed by an extraordinary demand for seeds of the choicest and best strains of florists' flowers, while the demand for cheaper and more popular kinds easily beats the record. As the board of trade returns for the present year up to date show a still further increase the prospects for next season are equally good.

The Laxton firm has a new pea for next season's distribution and if the size of the seed is any criterion as to its merits it will easily beat the Daisy class out of the field. And for this a sincere tribute of gratitude will be rendered by
EUROPEAN SEEDS.

It would be an easy matter to kill these fungi in the grounds by the application of a good dose of Carbolineum or similar disinfectant, but experience has shown that the cure is worse than the disease, because it will make it impossible to grow any crops whatever on grounds thus disinfected for many years afterwards. The only practical plan therefore is to lift out any of the affected bulbs at the earliest possible date in the Spring, together with the surrounding soil, taking great care that nothing is being spilled and have it all carefully destroyed by burning. If this process is however not done with very great care, it had better not be done at all, as the slightest spilling of any of the infected ground will cause more spreading and more infection.

The foregoing suggestions are based upon the results of our own trials so far, but may be improved upon in the future as experience will teach us. The fact that there are two distinct forms of fungi, which however cause almost similar results, may as well be left alone for the present, especially as sometimes the two diseases are mixed up together and thus make distinction difficult.—POLMAN-MOOY in Horticultural Advertiser.

FLORISTS' SPRING WANTS
Cannas, Phlox, etc.

CANNAS
Burbank, Mlle. Berat, Robusta, large 2-ye. pieces, \$1.75 per 100; \$15.00 per 1000.
Pennsylvania, the best tall, scarlet bedder, \$2.00 per 100; \$17.50 per 1000.
Muscelolia, the grandest of all ornamental, bronze-leaved bedders, growing 8 ft. high and has large, light bronze, Banana-like foliage. Extra strong pieces, \$3.00 per 100; \$25.00 per 1000.
The Express, strong, started pieces of this best, dwarf, crimson bedder; fine for immediate potting, \$5.00 per 100; \$40.00 per 1000.
ELADY PHLOX, The Queen, the best florists' phlox, growing 3 ft. high and producing large, full heads of pure white flowers. Will net a large profit from first crop. Large field divisions, 75c. per doz.; \$5.00 per 100.
TRITOMA, Uvaria Grandiflora, Large 1 yr., field pieces, \$5.00 per 100.

Send for Catalogue quoting numerous other desirable Phlox, Cannas, Chrysanthemums and other florists' stock.

CARLMAN RIBSAM, TRENTON, N. J

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.
Orlando Harrison, Berlin, Md., president; J. W. Hill, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

NEW NURSERY LAW FOR MINNESOTA.—A new bill regulating the production and sale of nursery stock in Minnesota has been introduced into the State Legislature by E. T. White of Elk River, Minn. It provides among other things for two inspections by the State Entomologist during the year.

All companies or corporations engaged in the nursery business in the state shall annually apply to the Secretary of State, the fee to be fifty dollars for each annual license, together with an additional fee of one dollar for recording the application, and the said license must be secured before said nursery or nurseries dispose of trees, shrubbery, vines, etc., of said nursery, and before the Secretary of State shall issue such license the State Entomologist must first issue his certificate that said nursery or nurseries is free from the said San Jose scale or other plant insectious diseases.

Trees, etc., imported into Minnesota from another State shall, before offered for sale, bear a tag or tags announcing where the stock was first grown; and the advertising of nursery stock grown in a foreign State as "home grown," is declared a misdemeanor. Transplanted stock must be so marked. The inspection of railroad cars is provided for, and it is stipulated that

Whoever wilfully misrepresents nursery stock, such as plants, trees, shrubbery, etc., when disposing of the same, shall be deemed guilty of a misdemeanor, and each nursery shall keep on hand file in their office an exact copy of all orders delivered, and furnish to each buyer a duplicate of the same at the time the nursery stock is delivered to said buyer, and the Statute of Limitation is hereby extended to the period of five years in its application of this act.

All owners of nurseries for the growing and sale of plants, trees, shrubbery, etc., shall be held responsible for the representation of their agents, and for all debts contracted by them as such agents.

All foreign corporations, persons or companies, doing nursery business in this State, are hereby required to comply with the provisions of Section 2888, 2889 and 2890 of the Revised Laws of Minnesota for 1905, and in addition to file a list of all agents, solicitors, etc., with the Secretary of State and to secure a license for each for which the Secretary of State may charge a fee of One Dollar.

This act shall take effect and be in force from and after its passage.

Horticultural Notes.

Desmodium penduliflorum was long ago decided by Dr. Hooker to be *Lespedeza bicolor*. But it obtained such wide popularity under the name *desmodium* that even to this day it is catalogued as such in many lists. Although herbaceous, its strong growth admits of its being planted as a shrub.

Among roses with handsome berries in Autumn and early Winter *Rosa villosa* should not be overlooked. It sets fruit freely, and the pods are large and handsome. But few collections have it aside from botanical ones.

Our scrub oak, *Quercus ilicifolia*, found in many parts of our country, is used in France as a game cover, its dwarf, bushy growth fitting it well for such a purpose. As it is usually found in Southern New Jersey it is a bush of from 4 to 6 feet in height.

The Doyenne Boussock pear is noted in Europe for its handsome Fall foliage. With us the Kieffer is famous in the same way, as is its parent, the Chinese sand pear.

Bald cypress, *Taxodium distichum*, furnishes the greater number of the shingles with us, but in the Pacific States the redwood, *Sequoia sempervirens*, takes its place. The tree grows so large that thousands of shingles are made from one tree.

Standard gooseberries have been tried several times here, but they do not thrive well. The sun strikes them too strongly, even when in bush shape, for our native sorts prefer a little shade in Summer, as the European varieties are known to do.

Fuchsias planted in a shady place, such as the eastern side of a house would be, do well in Summer, flowering the whole season through. They but need plenty of room to root and to be well supplied with moisture, then bloom is continuous, as they keep on growing. They can be stored in any cold cellar for the Winter.

In treeless regions where some fast-growing tree is required for fire wood, the plane could be better planted than the Carolina poplar or the ashleaved maple. It grows fast, and its hard wood is better for firing than that of either of the others. It is of no use for any other purpose, soon decaying when exposed to the weather.

Shrubs with Bright-Colored Wood.

Though the Winter season, particularly near its close, there are several shrubs the shoots of which are so pretty that they are now sometimes met out in masses for display, and they could be used still more to great advantage. Particular reference is made to the two willows, *Salix vitellina* and *S. Britzensis* and to the red-tipped dogwood, *Cornus alba*. Wherever a mass of color is wanted in the Winter season these shrubs will give it. All are different in color. The *Salix vitellina* has yellow-colored wood, the *S. Britzensis* flame-colored, and the *Cornus alba*, blood red. Wherever Winters can be enjoyed outdoors the use of these colored twigged shrubs would add to the interest of a place. They are seen now often as single specimens on lawns, and as such they are pretty; but when in groups of a dozen or a hundred each, as some use them, the bright colored ones make a dazzling display. The three sorts, with their orange, red and yellow colors, could be used as a combination group.

It is the shoots of the same season's growth that produce the best color effect, and to get an abundance of these new growths a good pruning in Winter or early Spring should be done.

Meehan's Mallow Marvels

Nurserymen find these subjects propagate freely from hard wood cuttings. The pruned back shrubs afford a good lot of shoots for the purpose. Kept in damp sand until planting time and then set out in nursery rows, they root freely, making nice plants by Fall.

Almost everyone is acquainted with the mallow of our marshes and other damp situations, the *Hibiscus moscheutos*, for although a lover of damp ground it thrives so well in any ordinary situation that it can be found in almost all collections of herbaceous perennials.

Swamp-Loving Trees.

It is a mistake to think that trees usually found in swamps or low ground will not grow in a higher position. Planters do not often make this mistake, but others do. On the other hand, writers have declared that such trees grow better on drier ground, and this seems as much a mistake on the other side. The writer's own experience is, that such trees are entirely satisfactory in ordinary situations, but that the best growth is made when the ground is very damp, such as low ground along a creek is, usually. Where they grow wild, say in Delaware, the *Acer rubrum*, *Chionanthus virginica* and *Magnolia glauca* may be found wild side by side in swampy woods, so wet in fact that care to pick one's way has to be exercised even in Summer, so much water would be there. These trees were all flourishing, but no more than they would be were they on ground a few feet elevated. Some writers contend that the trees are only found in such locations from chances having favored their vegetation there; but be this as it may, they are better suited there than when in a situation the very opposite of it—a very dry one.

Landscape gardeners generally plant these and other

trees wherever the kind seems to fit in well, which is wise; nevertheless it is well to remember that swamp trees and shrubs are better suited where moisture at the roots is abundant than where opposite conditions prevail.

There is no doubt, however, that there is much truth in the saying that they are found in swampy ground because such situations favor the germination of seeds. Seeds of red maple, red birch, elm and others blowing from trees to damp ground will vegetate, while had they blown to dry ground they would not. The nurseryman may succeed with them on dry ground because he covers them with soil, to give them the required moisture.

The fact is, that with a fair supply of moisture and fair soil a tree will grow well whether in its natural state it is found in low ground or not. Even the bald cypress, a swamp tree, will do this.

Pigmy Oaks.

Pigmy trees are of such interest that it would seem worth while for some nurseryman to secure and propagate the pigmy form of the Black Jack oak, *Quercus nigra*, which botanists tell us exists in the woods near Millville, N. J. The usual height of the oak is 30 to 40 feet, but the pigmy ones referred to have been observed of no more than from 2 to 6 feet, the very dwarfest of them bearing acorns. The *Quercus nigra* is a beautiful tree at all times, especially in Summer when clothed with its large shining green leaves.

A note in the Botanical Gazette describes a forest of dwarf trees found upon the west coast of Vancouver Island, British Columbia. The little trees are of three kinds—*Thuja gigantea*, *Tsuga Mertensiana* and *Picea sitchensis* and range in height from less than one foot up to two feet or a little more.

No doubt soil and situation have had to do with the dwarfing of these trees, still the character would be so fixed that even in favorable situations for growth great variation from old forms would not be looked for some time.

Meehan's Mallow Marvels.

In Meehan's nurseries, Germantown, Philadelphia, experiments have been going on for some years looking to the production of this hibiscus in various colors other than its natural one, which is a rose color, the chief idea in mind being to obtain a hardy crimson-flowered one by hybridizing it with the crimson one of a tropical clime. This idea of thus improving this flower was first suggested by the late Thomas Meehan, and his suggestion interested one of his employees, Ernest Hemming, and to him is due the credit for obtaining the beautiful hybrids which have resulted from the crossing, the firm giving him a free hand to produce and grow the thousands of seedlings from which the plants now selected as the best were taken.

It has been a task of several years to reach what seems like a wellnigh perfection of results at the present day. Year after year, when the beds of plants would be in flower, they attracted great attention. There would be all colors from pink to crimson; but all the time but a very few of the best were saved, with which to continue further crossing. At the present time four sorts have been selected as eminently worthy of dissemination; they have been named Crimson Marvel, White Marvel, Red Marvel and Pink Marvel, and the firm is confident it has in them a great surprise for the horticultural world.

Although the *Hibiscus moscheutos* is one of the parents, the sorts selected do not have the same style of growth. There is not a rank, coarse, open growth, but rather a taller, more branching habit, of much more pleasing appearance than that of *H. moscheutos*; and although a height of from 6 to 9 feet is made in good soil the growth is always well able to take care of itself in stems.

The extreme hardiness of these lovely mallows cannot be too clearly emphasized. They are absolutely hardy wherever *H. moscheutos* is hardy, and this is equivalent to saying practically all over the Northern States. Being entirely of a herbaceous perennial nature they, like other plants of a like character, exist farther north than might be the case were they of a shrubby perennial nature.

These mallows, like their parents, are tenacious of life. In Spring, after severe Winters, some of the seedlings have been thrown to the top of the ground by frost, yet have not failed to grow when reset; and in this respect they surprise those not aware that the hibiscuses are known to transplant well.

Hibiscus plants start into growth very late, always, often not before the close of April.

The best situation for hibiscus is an open sunny one, where the ground is deep and moist. Planted in such a place there will be a display of their large handsome flowers—some of them 7 to 8 inches in diameter—through August and September.

Those intending to visit the Jamestown exposition will have an opportunity of seeing the plants, it being the intention of the firm to make an exhibit of them there. To others the illustration accompanying these notes will convey an idea of the appearance of the flowers and foliage.

Los Angeles, Cal.

The directors of The Southern California Horticultural Society have decided on the first week in May as the time when we shall have a Spring flower show, and have secured a skating rink on Grand avenue between Ninth and Tenth streets.

(67) Fumigating for San Jose Scale—Can you tell me what I can fumigate a tree with in order to kill San Jose scale? The tree is about 15 feet high and 6 or 7 feet in diameter, and is covered with scale.

(68) One-Year-Old Mushroom Spawu—I have a lot of one-year-old mushroom spawu. Is it safe to use it or shall I throw it away?

(69) The Camphor Tree—Kindly advise me whether the ornamental camphor tree is hardy here in Central Illinois or not.

(70) Asters—I have an order for several hundred Comet and late branching aster plants. About when should the seed of each kind be sown to get best flowers?

(71) Sweet Peas—We notice in your March 16 issue, an article copied from a foreign paper on "Sweet Peas for Forcing."

—Christmas pink, and Mont Blanc, white, are the most desirable. There are a number of other colors, but I would advise anyone to go slow with these, as the people are not quite ready to buy them in large quantities.

INDEX TO STOCK ADVERTISED

Table listing various plant species and their corresponding page numbers, including Ageratum, Alternantheras, Adiantum, Araucarias, Asparagus, Asters, Azaleas, Begonias, Bubbles, Caladiums, Canas, Carnations, etc.

Contents

Table of contents listing sections such as A Hasty Conclusion, American Rose Society, American Rose Society Medals, Azalea Culture in Belgium, etc., with corresponding page numbers.

A special feature of this show will be a collection of the flora native of the State, properly labeled. Exotics, which are grown in almost countless numbers in this favored land, have in the past been the only class of vegetation receiving any attention, but from this time on the beautiful things found growing wild over our hills and in the valleys will be brought to the notice of the flower-loving public, and introduced into our gardens.

—Mushroom spawu that is one year old is too risky to use in a newly made bed, and we would certainly advise throwing it away and procuring new spawu.

—The camphor tree (Cinnomomum camphora) is only supposed to be hardy as far north as the lower Gulf States, consequently it would be an unsuitable tree to plant in Illinois.

—The aster seed should be sown at once, and we would advise growing the plants in flats, as to grow them in pots would be a too expensive proposition.

—To give an idea of some of the prizes on the premium list, it might be mentioned that \$40 in cash is offered for the best group of decorative plants, while the second prize for the same exhibit is \$25. For the best 100 American Beauty, arranged for effect, \$75 in cash is offered as a first prize and \$50 in cash as second.

—One of the features of the show will be a children's day, when special prizes will be offered for the youngsters who make exhibits.

It is not what you pay for your advertising space, or the quantity you fill because you get it cheap, that counts, but the actual returns you receive from your disbursement. Cheap advertising is like every other cheap commodity, dear at any price, and many are misled by its inducement.

Hardy Roses for Decoration Day

HARDY H. P. ROSES

We offer exceptionally strong two-year-old dormant, low-budded stock (on Manetti), in the following varieties:
 Alfred Colomb, crimson.
 Anna de Diesbach, bright crimson.
 Ball of Snow, pure white.
 Baron de Rothschild, dark crimson shaded.
 Baroness Rothschild, satiny pink, extra.
 Captain Christy, delicate flesh color.
 Duke of Edinburgh, bright vermilion; very fine.
 Fisher Holmes, dark rich scarlet.
 Frau Karl Druschki, the finest white in existence, \$12.00 per 100.
 General Jacqueminot, rich velvety crimson.
 General Washington, beautiful red, shaded crimson.
 John Hopper, beautiful rose pink.
 La France, the finest light pink.
 Margaret Dickson, white, pale flesh center.
 Magnus Charta, clear rose pink.
 Mma. Gabriel Luitzel, light, satiny pink.
 Mms. Plantier, white.
 Mrs. John Laing, soft pink; most desirable variety.
 Paul Neyron, beautiful dark pink.
 Prince Camille de Rohan, velvety crimson.
 Ulrich Brunner, cherry red.
 Prices on H. P. Roses \$1.25 per 10; \$11.00 per 100; \$100.00 per 1000.
HYBRID TEA ROSES
 Maman Cochet, pink. Maman Cochet, white. Unequaled as bedders for Summer bloom-

ing, producing buds of large size and of ideal form. The buds are of the color and form of Bridesmaid and Bride, but larger, and outside will yield more blooms than the latter will under glass. The two finest outdoor Roses yet introduced. Strong 2-year-old plants, 10 for \$15.00; \$12.00 per 100.
 American Beauty, Clothilde Soupert, Kaiserin Augusta Victoria, Caroline Testout, Hermosa. Strong, 2-year-old, \$1.50 per 10; \$12.00 per 100.

THE KILLARNEY ROSE
Irish Grown from the Kaiser.
 Good strong two-year-old plants, \$3.00 per 10; \$27.50 per 100.

HARDY ROSE SOLEIL D'OR
(Golden Sun).
 Like Persian Yellow, this variety is perfectly hardy, with large, full, globular flowers, varying in color from gold and orange to reddish gold, edged with nasturtium-red. Two-year-old budded plants, per 10, \$2.00; per 100, \$15.00.

The Grand New Rose
ETOILE DE FRANCE
 Superb crimson red velvet, the center of the bloom vivid cerise red. The flowers are very fragrant and last long. This new variety is the result of a cross between Madame Abel Chatenay and Fisher Holmes. Field-grown, strong two-year-old plants, \$2.75 per 10; \$25.00 per 100.

ARTHUR T. BODDINGTON, 342 WEST 14th ST. NEW YORK CITY

SPORT OF CHATENAY

As free as CHATENAY, color of BON SILENE; 2 1/2 in. pots, \$25.00 per 100; \$150.00 per 1000.

EMIL GLAUBER, - - Montclair, Colo.

Grafted Roses

We offer this year the following assortment: **Bride, Bridesmaid, Bon Silene, Etiole de France, Franz Desgen, Golden Gate, Ivory, Gen. McArthur, Kate Moulton, Kaiserin Augusta Victoria, Killarney, La Detroit, Mms. Abel Chatenay, Mms. Caroline Testout, Mms. Host, Mrs. Pierpont Morgan, Maman Cochet, Marcehal Niel, Perle des Jardins, Papa Gontier, Richmond, Rosalind Orr English, Souv. Du President Carnot, Souvenir de Wootton, Tom Field, Uncle John, Wellesley.**
 The above grafted from 2 1/4 inch pots \$15.00 per 100; \$120.00 per 1,000 for a No. 1 stock; otherwise will be sent out. On their own roots, from 2 1/2 inch pots, repotted from 2 inch, \$6.00 per 100; \$50.00 per 1,000.
 The Baby Rambler, \$2.50 per doz.; \$15.00 per 100.

AMERICAN BEAUTY

On own roots, from 2 1/2 inch pots, \$3.00 per 100; \$75.00 per 1,000; 3 inch pots, \$12.00 per 100; \$100.00 per 1,000; April, May and June delivery.

OUR GUARANTEE GOES WITH EVERY PLANT.

A. N. PIERSON, Cromwell, Conn.

2 YEAR OLD ROSES

4 in. pots; Climbers, in assortment, at \$8.00 per 100. 2 1/2 in. Roses, 40 varieties, all colors, at \$2.00 per 100; \$16.00 per 1000.
 2 1/2 in. stock **GERANIUMS, AGEATUM, FEEIWKINKLES, VIOLETS, HIBISCUS, E. BEGONIA, FUCHSIAS, HELIOTROPE, HONEY-SUCKLE, AS-FARAGUS**, \$2.50 per 100. **COLEUS, ALBERTA TREBES,** at \$2.00 per 100. **PENS.** 2 1/2 in., Boston, Pierson, Scottish, at \$3.00 per 100. Tarrytown, Barrows, at \$5.00 per 100.

THE NATIONAL PLANT CO., Dayton, O'

THE WEEK'S WORK. Timme's Timely Teachings.

Cannas.
 It is now time to start cannas. Of the many ways in which this may be done the one involving the least labor and resulting in the greatest number of good 4-inch plants at selling time should be adopted. For wholesaling and long distance shipment 2 1-2 or 3-inch stock, with a new growth of about five inches in height, is the best, but for a good retail trade it is the 4-inch canna with a firmly held ball of new roots and sturdy top growth, that sells fastest and brings best prices. Sound roots, divisions of last year's clumps, not started in pots, can be sold cheaper than the pot-grown plants and still leave a fair margin of profit. These when sold and planted out in May give as good results as those started earlier under glass, and there will always be some people wanting no others at planting time. But I think it is not to the interests of the plant growing retailer to encourage a trade in dry bulbs and roots at his place of business, since a by-traffic of this kind is likely to diminish the sale of the more profitable stock in trade.

Sound clumps of cannas taken from their Winter quarters are cut up into as many pieces as there are eyes, the pieces to be right in size for the pots to be used. At this time most of the latent eyes have started and in such a case the divisions could at once be potted up and the pots placed over some bottom heat to accelerate root formation. If, on the other hand, the old clumps are still entirely dormant, they may first be started into growth in a warm place and be then cut up and the division potted up with the new shoots well showing. Or the dormant clumps, if at all doubtful as to their soundness or showing signs of decay or sponginess, may first be cut up, cleaned and freed of mold and decay spots, and the sound pieces planted in a bench or in trays and when started potted up and grown on. While a healthy, fast growing canna is a moisture-loving plant, one emerging from uncongential Winter quarters, soft of flesh and slow in starting, resents any excess in humidity and soon yields to utter decay if watered too much or too often. Care in this particular, therefore, is necessary until the new growth in shoots and roots is well under way.

Pansies.

About the first plants to be called for in early Spring are pansies. Those sown in August, transplanted at proper distances in frames before real Winter sets in and given some protection during the few months of hard freezing, should now be good stock, ready to come into bloom at the least encouragement and worthy of all the extra care connected with the management of frames at this time of the year. Such stock, never having been subjected to fire heat, may safely be considered quite hardy. Pansies in frames should have been uncovered, given light and air some time ago; the sashes being all sufficient as a protection in the early part of the season. From now on there will be but little need even for these, and the plants, whenever chances offer, should be fully exposed to such spells of weather as usually indicate the presence of Spring. Pansies sown in Midwinter for a later trade are now nice little plants rapidly striving for size. These should not remain in the houses any longer than can be helped. Though not so hardy as the others they will now stand a removal to frames.

Geraniums.

It is no unusual thing to let geraniums attain almost full size before giving them the last shift into their selling size pots. The reason for this delay in repotting is found in the overwhelming volume of all sorts of work falling to the lot of the hard-driven plantsman at just about the time when the general run of plants needs somewhat more than ordinary attention. Spare moments, available bench space, suitable help, any one or all of these are exceedingly scarce at times, and

something, however pressing, has to abide its time. Geraniums, most willing to do a lot of waiting, are supposed to be least injured thereby, while as a matter of fact, few kinds of stock tell the tale of neglect, subjected to at just this time, more plainly at their selling season than do geraniums. It is to be hoped that the earliness of this year's Easter rush will leave us with sufficient time and room for the regular work and timely duties among the stock now nearing its finish.

Geraniums from now until May do a great deal of growing and plants of most varieties, seemingly small and puny, may yet be grown into acceptable size and vigor by proper treatment. The best marketable grade of bedding geraniums should now be ready for the last thrift. They should show bright foliage, a well-branched crown on a short, sturdy stem and a reasonable intertwining of live roots when coming out of the smaller pots, not a felt like shell of hardened or dead roots. A fairly good soil, not over-rich in manure, should be used in potting and this should be as firm as has ever been advised for the potting of any kind of plants under pot culture. To be first-class plants necessitates the allowance of sufficient room for spread of foliage and crown and ample moisture for the roots, while overhead sprinkling is of little value.

Petunias

Of petunias none but the best strains are worthy of being handled by florists. There is an astonishing difference between the old-time garden petunias and the kinds offered as giant-flowered mixtures, ruffled, striped and fringed. A well-grown plant of these, compact and sturdy, with flowers of uncommon size, peculiar shape and pleasing blend of colors, is good enough to be seen by the most critical of patrons, and, although nothing in the pot plant line, to be especially proud of, the grower's place loses none of its attractiveness by its presence.

The seeds of these superior varieties or types of petunias are high-priced and they are none too fast in starting. The scanty pinch of minute grains in a package, hardly ever being enough for a small seed pan, makes any warning against their being sown too thickly unnecessary. Still in time they grow into a goodly number of vigorous little plants which should then be potted up in 2-inch pots, and when rooted through in these should go into fours, in which they will soon attain flowering size. Petunias, so treated, should and easily do bring the higher price of good 4-inch greenhouse stock, while for the regular bedding trade petunias coming out of 2-inch pots are the right size.

There are several strains of single petunias, not high in price yet of the improved newer forms, some of them coming in separate colors and usually quite true, which are far superior to any of the fancy sorts for bedding, especially for effective massing in solid color. For extensive contract work in planting florists will find them to be excellent material. Double petunias are good for pot culture, but rarely do well in outdoor plantings. Good doubles obtained from seeds should be held for future propagation by cuttings.

Verbenas.

I often see and hear it stated that verbenas have forfeited their prestige as the most satisfactory of low-growing bedding plants, being now but sparingly employed in any sort of bedding layout and looked upon with disfavor by all buyers of border plants. This is true to some extent; one hardly ever sees a faultless verberna bed nowadays. In this particular we have decidedly gone backward. But as to the trade in verberna plants by the retail florist a remarkably large falling off in the sales is not noticeable. They are regularly called for and sold out clean at most places. The improvement in verbenas, if there has been any at all, is not so marked as in that of most other bedders, but the seeds, where these are listed in separate colors, can now more be relied upon as coming true to shade than in years gone by. This fact alone does much toward lessening the cost of plant production, enabling the grower to work up in less than two months a good supply superior in every way to plants raised from cuttings.

The seeds of verbenas may yet be sown if late cuttings for delayed plantings are figured upon. Some provision should always be made for the tail end of the regular bedding season, not by offering the worthless leavings, but instead young, vigorous stock of doubtless value.

Verbenas raised from seeds to be right for the main flow of trade, should now be about ready for their pots, the 2 1/2-inch pots being the proper selling size. Good, well-enriched potting soil makes the thriftest of plants, but its richness is apt to delay their flowering—a thing to be desired at selling time, but not insisted upon by the best kind of regular customers. Plants grown from cuttings, if rusty, will now gradually grow out of it, if given plenty of air and watered with a due amount of caution.

Salvias.

All the newer types of *Salvia splendens* are good material for outdoor plantings and as such highly prized and extensively made use of by all classes of people. Few other plants mainly used in the brightening of home grounds, put forth a stronger claim for public favor in late years than the newer salvias. That in many instances they are made use of without due discretion or regard to refinement or taste in arrangement cannot be denied, but the too lavish use of salvias is less apt to create unpleasant impressions than any excess in the use of one color or variety found in most other Summer bedders.

Salvias are easily and rapidly propagated by cuttings taken from last year's plants. It is not yet too late for the striking of another batch if good cuttings can be had. I have given up carrying over old stock plants and the raising of salvias from cuttings, believing it to be more profitable and altogether more satisfactory to raise them from seeds. The first seedlings are now in 2-inch pots, almost ready for the 4-inch. Those sown later, some only sown a few weeks ago, will all, as every Spring, be readily disposed of either as 2, 3 or 4-inch stock, most of the larger sizes being in bloom when sold. Ordinary good soil is used in potting. Any sudden change in temperature, cold drafts of air or constant overdoes in watering hurt salvias, when yet soft and growing rapidly, more than they would other kinds of common bedding plants. A stunted salvia, or one with yellow or drooping leaves, shabby flower spike and of hungry, puny appearance, is a sorry sight to put before customers, but what is worse, it will never recover from its plight after being planted out, while a finely grown salvia goes right ahead and never feels the change. FRED. W. TIMME.

SEED PANSY PLANTS

THE JENNINGS STRAIN

25,000 plants now ready. From finest selected stock, large flowering, fancy colors, in great variety. Stock is all transplanted and first-class in every respect. First size, large plants, \$1.00 per 100; by express only. Second size, strong plants, 100 by mail, 60c; 1000 by express, \$4.00; 2000 \$7.00. Seeds, \$1.00 per pkt. of 5000; 1 oz., \$4.00. Cash with order.

SALVIA ZURICH

THE EVERBLOOMING SALVIA

One of the most important novelties in bedding plants introduced for a long time, produces its wealth of flowers while very small and is in its full glory long before any other kind shows even a bud, grows also much dwarfed and more compact. Our stock is raised from cuttings and seed, which was procured in Zurich, Switzerland.

Strong plants from 2 1/2-in. pots, 75c. per doz., \$5.00 per 100, \$45.00 per 1000. For full description send for circular or see American Florists' Carnation Number, page 19, Florists' Exchange, page 185, and Horticulture, pages 140 and 202.

Chrysanthemum Society of America.

At the executive meeting of the Chrysanthemum Society of America, held in New York City on Thursday, March 14, it was unanimously voted to hold the next meeting of the society in New York, thereby accepting the kind invitation extended by the American Institute, through Dr. Hexamer. The enthusiasm with which the committee enters upon its duties augurs well for a successful meeting in November. The date is left open for the present, but all possible care will be taken to prevent it conflicting with any dates already arranged, so that a majority will be able to avail themselves of the opportunity afforded to exhibit at and visit, what promises to be the best chrysanthemum show ever held in New York. Many valuable premiums will be offered for commercial and exhibition varieties, particulars of which will be published on completion of arrangements.

The constantly increasing membership is very gratifying, proving an awakened interest in the important work of the society, but there are still many who by their skill in producing such wonderful examples of the highest culture should fall in line and lend their influence to the advancement of public interest in the Queen of Autumn, and thereby become links in the chain of recognized professionals in the culture of the chrysanthemum.

Do not underestimate the value of your accomplishments, identify yourself with the best growers, and share in the mutual exchange of advanced ideas, and so keep pace with the increasing popularity of the flower we all love.
DAVID FRASER, Secretary.

We have received from Secretary David Fraser, copy of the proceedings of the fourth and fifth annual meetings of the Chrysanthemum Society of America, held at Philadelphia in 1905 and Chicago in 1906. In addition to the reports of officers and essays read at the meetings the document contains lists of the new chrysanthemums exhibited before the society's committees for the years named, with the points awarded; also lists of American and foreign introduction for 1906.

The Florists' Exchange will be pleased to publish a brief report of your Easter trade: What stock was in greatest demand, novelties, if any, and a comparison of prices obtained with those of other years. Send in your manuscript early, please.

A Hasty Conclusion, and a Feeble Falsehood.

There was once, according to a ballad, now out of print, a country doctor who took his young assistant along with him on morning visits. He glared severely at the first patient and said, "You've been eating oysters!" Astonished by the physician's diagnosis of antecedent facts, the patient made a full confession. Outside, the assistant asked, "How did you know he had been eating oysters?" "Hush," said the veteran; "I saw the shells under the bed." A few days later the assistant went out by himself and gravely informed a new patient, "You have been eating a horse." He was laughed at, and went away. His explanation was: "I saw a saddle and a bridle under the bed."

This story of hasty conclusions is recalled by the accusation made by our self-important, but highly esteemed Boston contemporary that we have been guilty of having "cribbed word for word" from its columns a news item which it cites. We humbly deny our friend's hasty impeachment. The item quoted was forwarded to this office by Fred'k W. Kelsey, nurseryman, New York, as a matter of news, and we published it as sent by him.

Our "simple faith in the value of that New York column as an exclusive source of information" to some scribes remains unimpaired. We have proof of this value every week. But as the fact that others purloin from our columns news and inspiration for editorial preachments, only demonstrates the worth of these columns to representatives and editors who are themselves barren of effort and originality, we rejoice we are thus helpful in aiding their subscribers to get good information, although at second hand.

We ask our readers to be charitable, as we ourselves are, at our contemporary's present discomfiture. One should always make allowance for the impetuosity of youth and inexperience; and have pity for the petulance and peevishness that disappointment brings. It is, however, absurd to accuse us of "cribbing" from a source that never, so far as we are concerned, furnishes anything that tempts us to commit that offence, even were we so inclined.

Our esteemed contemporary also accuses us of being "bumptious." Listen to the following: "Our way * * * is to provide such reading matter as will secure the attention and consideration of the thinking, progressive men, who are buyers of first-class material and able to pay for such."—Horticulture, Boston.

* * * Those firms that seek to do business with the intelligent and progressive people to whom Horticulture distinctly appeals."

Did you ever read anything more "bumptious" than that?

To make slurring insinuations, such as the foregoing quoted paragraphs from our esteemed contemporary does, displays, to say the least, an ignorance of the caliber of those whom the insulting language used unquestionably maligns. We believe, and have during our whole career as publishers of a trade paper believed, that no kind of horticultural literature provided, no matter the supposed ultra-quality of it, fails to appeal to everyone connected with the industries whose interests we seek to advance. Without intelligence and progressiveness, no man or woman can remain long in any business, the florist's included. We also believe, with Dr. Johnson that "to think highly of one's self in comparison with others, to assume by our own authority that precedence which none is willing to grant, must be always invidious and offensive."

Strength in Numbers.

In our last week's issue we gave a fairly complete summary of the proceedings connected with the complaint of the S. A. F. O. H., made before the Interstate Commerce Commission at Washington regarding advanced express rates charged by the United States Express Company between certain specified Pennsylvania and New Jersey points and New York City.

We are not aware by what authority the S. A. F. O. H. makes this fight for a few of its members in a restricted locality against an evil that is only local in its application; nor is that phase of the question one that need be considered here. But as we listened to the proceedings at Washington last week, we were more than ever impressed with the need of strong support being accorded the S. A. F. O. H., when it combats adverse legislation affecting its membership or seeks to remedy existing unjust transportation rates.

"What is this Society of American Florists; what are its objects; how large a membership has it?" were queries that suggested themselves to the Chairman of the Commission and regarding which he sought to be enlightened. And when it was explained to him that the S. A. F. O. H. was an organization chartered by Congress, educational in its character, yet

always safeguarding its members, which numbered "about 1,000," in matters of transportation and otherwise, it was certainly humiliating to hear one of the witnesses, who then sought the society's aid to benefit himself, confess to the fact that he was not a member of the association. And there are numbers of others in a similar position—willing to use the society to further their own ends, but refusing or neglecting to contribute to its support.

We are more firmly convinced than ever that every man and woman engaged in this business should be members of the S. A. F. This is only its right, the duty of every one of its beneficiaries. When the S. A. F. goes before a Governmental body like the Interstate Commerce Commission seeking redress, it adds nothing to the society's prestige or standing to state that, though representing the florist trade of America, its membership is constituted of but one-tenth of those available.

We think every fair minded reader will see the force of our remarks, and conclude, as we do, how necessary it is that the S. A. F. should be as strong numerically as possible. And to bring about this end the present agitation for closer affiliation of florists' clubs and special societies with the national organization meets with our heartiest approval even though that affiliation should assume no other form than the mere open acknowledgment that the S. A. F. is in very fact, as it often is described nominally, the "parent society," and that all other organizations of the class mentioned are subsidiary to it, owing to its allegiance, and engaged in the self-same work which the S. A. F. was created to undertake and perform. There is strength in numbers. Let us then make the S. A. F. as formidable as it possibly can be made. In no other way can the national society do its best work for all concerned.

American Rose Society.

The annual convention of the American Rose Society, held at Washington, D. C., March 13 to 15 inclusive, was a most interesting one, and must be regarded as having been a success.

There seems to be a diversity of opinion as to the work that should be undertaken by the society, as to who should constitute its membership, and by whom its executive affairs should be arranged and carried out.

Some of the commercial men, the original promoters of the organization, and through whose endeavors chiefly the exhibitions have been given and programs of papers read at the meetings arranged, appear to feel that it is still theirs to lead in all matters connected with the society, that the time is not yet ripe for the amateur element to be called in, and that present conditions should persist. There are several others of the members who assert that the society will not measure up to its highest standard of effective work connected with the rose until it can in some way enlist the sympathy and support of the very class to whom the members first referred to see no necessity of at present catering.

Personally we favor the broader policy being pursued. The constitution of the society aims to carry out such a policy, and just so far as the society fails to recognize the need of conforming to its constitution, just to that extent will it frustrate the objects for which it was created.
