#### PREFACE.

The volume of "Physical Observations" of the National Antarctic Expedition, 1901–1904, under Captain R. F. Scott, R.N., which was published in the summer of 1908, included a report on one portion of the Magnetic work. This Report consisted mainly of a reduction of the absolute and relative observations by Commander L. W. P. Chetwynd, R.N. It contained, also, an account by Mr. Bernacchi of the Observatory site in McMurdo Sound, of the geological features of the district, of the instruments employed, and of other matters, likewise Tables of the Hourly Values of Declination, Horizontal Force and Vertical Force on term-days at different observatories during 1902–1903, and a report by Mr. R. C. Mossman and Dr. Chree on the Magnetic Observations of the "Scotia," under Dr. W. S. Bruce.

The present volume, with its detailed Tables of Hourly Values and its exhanstive discussion of the Observations, completes the presentation of the Magnetic work of the "Discovery." The Royal Society, in arranging for this investigation, was fortunate, with the sanction and co-operation of Dr. Glazebrook, F.R.S., Director of the National Physical Laboratory, in obtaining the invaluable services of Dr. Charles Chree, F.R.S., of the Kew Observatory. His pre-eminent qualifications for the onerous task imposed upon him, and the unwearied zeal with which he has prosecuted it to the end, give to this portion of the Reports of the Expedition a special scientific interest and importance.

Dr. Chree has mentioned in his Historical Note (p. 5) the various Institutions and individuals who have contributed their services towards the preparation of the materials of this volume. To all of them the thanks of the Royal Society are due. Special allusion, however, should here be made to the assistance generously given by Mr. Bernacchi, who was in charge of the Magnetographs of the Expedition. Not only has he taken a large share in the tabulation of the magnetic curves, but he has been always ready to help during the preparation of this Report. A reference is also called for to the great zeal with which, as Dr. Chree has heartily acknowledged, the successive Directors of the Christchurch Observatory, New Zealand, Dr. Coleridge Farr and Mr. H. F. Skey, entered into the co-operative scheme of observations suggested by the Royal Society, and to the interest and importance of the information which they were so good as to transmit. Magnetic Stations in the Southern Hemisphere are so few in number that it was particularly useful to obtain so ample a record of observations from Christchurch, which is the nearest observatory to the Antarctic Winter Quarters of the "Discovery."

From the map, which forms the frontispiece, it will be seen how closely the positions agree which have been assigned by three successive recent expeditions to the South Magnetic Pole. The position found by the "Southern Cross" was about Lat. 72° 40′ S., Long. 152° 30′ E. That obtained from the observations of the "Discovery" was Lat. 72° 51′ S., Long. 156° 25′ E. ("Physical Observations" of National Antarctic Expedition, 1908, p. 156). Lieutenant Shackleton has been so good as to furnish the exact position found by him, which is Lat. 72° 25′ S., Long. 155° 16′ E.

ARCH. GEIKIE.

Royal Society, Burlington House, 27th September, 1909.

#### INTRODUCTORY NOTE.

BY

#### L. C. BERNACCHI, F.R.G.S.

The self-recording Magnetographs supplied to the National Antarctic Expedition were of the delicate transportable type devised by the late Professor von Eschenhagen and made by the firm of O. Toepfer, of Potsdam, Germany. They were received at the National Physical Laboratory, Surrey, England, in August, 1901, after the departure of the "Discovery."

The set consisted of three instruments, viz., a Declinometer, a Horizontal Force Magnetometer, and a Vertical-Force Magnetometer, with a self-recording photographic apparatus. No instructions were supplied by the makers, and as they were of a type absolutely strange in this country, some little difficulty was at first experienced in erecting and adjusting the instruments.

Dr. HARKER and Mr. F. E. SMITH, of the National Physical Laboratory, succeeded in adjusting them satisfactorily, and had them recording for a few days before my departure from England by mail boat to join the "Discovery" in New Zealand.

The Horizontal-Force instrument proved to be considerably more sensitive than the Kew form of differential magnetometers—a difference which was due to the fineness of the quartz suspension fibre employed. Unfortunately, it was not discovered until too late that the boxes of spare quartz-fibres supplied contained even finer threads than that already in the instrument.

On arriving at Melbourne, at the end of October, 1901, the instruments were taken to the Government Observatory and erected on a wood bench in a cellar. From November 1st to November 10th they worked in a satisfactory manner. They were subsequently conveyed to the "Discovery" at Lyttelton, New Zealand, carefully secured in my cabin, and were not again removed until the ship reached her Winter Quarters in McMurdo Sound in February of 1902.

Winter Quarters.—The Winter Quarters were situated in latitude 77° 50′ 50′ S., longitude 166° 44′ 45″ E. of Greenwich, and to the south of a narrow peninsula extending in a south-west direction from the base of an island formed by Mounts Erebus and Terror. The "Discovery" remained frozen-up in her Winter Quarters from February, 1902, until February, 1904.

Observatory Site.—The spot selected for the Observatory, although the best available, was hardly an ideal one for magnetic observations. From a magnetic point of view, an observatory of this kind should be placed in a position undisturbed by the presence of magnetic rocks; but it would be difficult to find such an undisturbed locality in Vietoria Land, unless it were on the surface and near the seaward edge of one of the extensive ice-floes, far from the actual coast line, such as the Great Ice Barrier.

Geological Formation.—A description of the Geological Formation in the neighbourhood of the station will be found in "Physical Observations," pp. 129-130.

Observations for Local Attraction.—A comparison of the results of absolute observations made in the Magnetic Hut with some taken on the ice in McMurdo Sound at a considerable distance from land will be found in "Physical Observations," p. 134.

The site selected for the houses was a low and fairly level piece of rocky ground close to the extremity of the peninsula, and at a distance of about 300 yards from the ship (see Frontispiece). The peninsula is about 10 miles long by a mile broad, and has an average height of 600 to 700 feet, although the extremity where the Observatories were placed was only 30 feet above the mean sea level.

Observation Houses.—The Observation Houses were constructed of large asbestos slates, screwed on to the outside and inside of a wood framework. The larger of the two used for the Variation House was 11 feet 6 inches by 11 feet 6 inches, and 6 feet 8 inches high.

Although, perhaps, small log houses would have been more suitable, they certainly would not have

been so light, compact, and easily portable. The asbestos houses were fairly satisfactory, but had some disadvantages.

Installation.—The instruments were erected on a strong firm wood beuch (see p. 3), 8 feet 5 inches in length and 1 foot 6 inches in breadth, and supported at one end by a drain pipe, 1.6 feet in diameter, sunk into the frozen ground, and at the other end by a thick pillar of wood sunk in the same manner. The thickness of the wood slab forming the bench was 3 inches, and it was 2.6 feet above the floor of the house. The bench was earefully erected in the magnetic Meridian, the magnetometer and Declination magnet being used for finding the Meridian, and the instruments fixed upon it in the following order:—

Magnetie North (S.S.E. true) extremity the recording eylinder and clock apparatus, nearest the eylinder the declinometer, then the Horizontal-Force instrument, and at the magnetic South extremity the Vertical-Force instrument.

The suspension fibre of the declinometer was the original one employed at Kew; it was used throughout the two years and returned to England with the instrument.

On examining the Horizontal-Force fibre originally supplied with the instrument it was found to be broken; this unfortunately happened to be the stoutest fibre supplied, and it became necessary to replace it by a succession of fibres which gave the magnet an unnecessary and rather troublesome degree of sensitiveness.

The magnets for the declinometer and Horizontal-Force instrument consist of well-hardened laminar pieces of watch-spring steel, 25 mm. in length and weighing about 1.5 gramme. A light aluminium frame supports the mirror and the magnet, and this is hung by means of a double hook on a small cross-piece attached to the bottom of the quartz-fibre suspension.

The Vertical-Force instrument is a modification of the Lloyd balance, and as it was only completed shortly before leaving England, very little was known of its behaviour even at Potsdam. This instrument was a source of constant trouble. The needle was balanced for a dip of about 70° N. The magnetic dip at Winter Quarters being nearly 85° S., the pull on the S. end of the needle could not be overcome by the small weights and auxiliary magnets supplied for the purpose, and therefore additional weights had to be added to the N. end, which increased the temperature coefficient of the balance.

The chief feature of the recording apparatus is that all three elements, base lines, and a temperature curve are on the same photogram for the day. On disturbed days—and they were frequent—and in the Summer when the movements of the magnets are large the result was a considerable confusion of the curves.

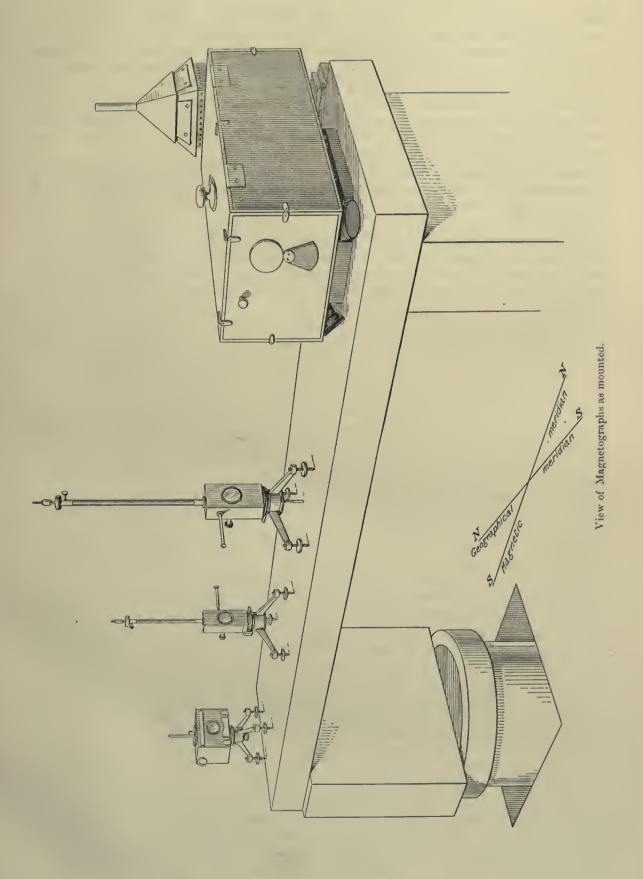

From May, 1902, until January, 1904, the declinometer was never interfered with, to the knowledge of the observer, nor its zero mirror altered.

During the first year the Horizontal-Force instrument was two or three times found to be out of adjustment and altered, but remained untouched after April 1, 1903, while the Vertical-Force instrument was altered from time to time during both years. The method of determining sensitiveness was by deflecting the suspended magnets with one of the unifilar collimating magnets at certain known distances, and then earefully finding the moment of the deflecting magnet by a set of absolute observations.

Routine.—The general routine was usually as follows:—The Observatory was entered at between 11 a.m. and noon each day, the light-shutter of the magnetograph closed, and the time of doing so noted by means of a chronometer watch. The thermometer inserted in the Vertical-Force instrument was then read.

After changing the paper on the recording cylinder, filling and trimming the lamps, the thermometer was again read, the light-shutter dropped, and the time of doing so noted as before by means of the chronometer. The whole operation occupied about 30 minutes, and times of stopping, starting, temperatures, and error of watch on mean time were entered in a note book.

Temperature of House.—During the first year the walls only of the Variation House were banked with snow, and a large brass heating lamp was kept burning within, so as to maintain as uniform a temperature as possible. This lamp was frequently a source of danger and inconvenience of an aggravating nature, and required constant watching. Unless there was a draught underneath the lamp it emitted dense smoke which on calm days filled the room and extinguished the small oil lamp which provided the beam of

light for the sensitive paper on the recording drum. This accounts for the loss of a few days' records during the first year. Nor was the lamp successful in keeping a uniform temperature and giving out a fair proportion of heat for the amount of oil burned. During the second year the lamp was dispensed with, and the house was entirely buried under snow, and although at times the temperature within was low, viz.: -30° F., its diurnal variation was seldom large throughout the 24 hours.

General.—During the first year the curves are finer and sharper than during the second, on account of a more sensitive bromide paper being employed, and, consequently, a smaller light-slit. The magnetograms were usually developed once a week by means of ortol-soda developer, which has the advantage of being exceptionally clean to use and gives rich dark tones to the curves.

Towards the end of the second year the supply of recording paper became very short, and from the end of September, 1903, had to be distributed equally over the subsequent months, amounting to about 4 days in each month. This is the only serious break in the two years' record. In all there are records for about 600 days.

My thanks are due to the New Zealand Government for the courtesy in placing the Christchurch Observatory at our disposal, to Dr. Coleridge Farr and Mr. H. F. Skey, of that Observatory, for their valuable assistance, to Mr. P. Baracchi, Government Astronomer of Victoria, and to Dr. Charles Chree, F.R.S., who has been so closely associated with the "Discovery" magnetic work from the beginning.

#### HISTORICAL NOTE.

BY

#### DR. CHARLES CHREE, F.R.S.

The tabulation of the Magnetic Curves registered at the Winter Quarters of the National Antarctic Expedition between March, 1902, and January, 1904, was commenced in the Observatory Department of the National Physical Laboratory in December, 1904. The material consisted of photographic records of Magnetic Declination, Horizontal Force and Vertical Force for some 600 days. For the first six months the work was carried out by Mr. L. C. Bernacchi, who had been in charge of the magnetographs of the Antarctic Expedition. He went carefully through the curves, and decided the exact times of starting and stopping registration on each day by reference to the daily notes he had made in the observation books and the register of watch- and chronometer-rates. He also tabulated, with the assistance of Mr. B. Johnson, a large portion of the records of Magnetic Declination. On Mr. Bernacchi's relinquishing the work it was entrusted to Mr. H. A. Maudling, who carried it on, with Mr. Johnson's assistance, until he left for another post in the summer of 1906. He was succeeded by Mr. A. E. Gendle, who continued the work until his appointment, early in 1908, to Eskdalemuir Observatory. The completion of the work was then entrusted to Mr. B. Francis, Librarian in the Observatory Department, who, with the assistance of Mr. F. Levin, brought it to a conclusion.

In addition to the tabulating work, the assistants mentioned earried out a great deal of arithmetical work, in connection more especially with the tables of Diurnal Inequalities and the calculation of Fourier Coefficients. Whilst the repeated changes in the personnel tended to delay the work, and interfered, possibly, to some extent with its continuity, there was the compensating advantage that the checking of the measurements almost invariably fell to a new and unprejudiced observer. The fact that under these circumstances few serious mistakes were discovered encourages the belief that a high standard of accuracy was maintained. During 1908 a good deal of photographic work in connection with the reproduction of the Antarctic curves was done by Mr. W. J. BOXALL, a senior assistant in the Observatory Department, and a good many other curves were copied with the Schmidt tracer at Bushy House, by Mr. W. H. BROOKES, under the supervision of Mr. F. J. Selby.

My work has been much facilitated by the eare exercised by all these gentlemen. To Mr. Bernacchi I am particularly indebted for the trouble which he has taken throughout the whole course of the work in assisting in the removal of sources of uncertainty on which he alone could throw any direct light.

Thanks are also due to Dr. Coleridge Farr and Mr. H. F. Skey, successive Directors of Christchurch Observatory, New Zealand, to Mr. C. T. F. CLAXTON, Director of the Royal Alfred Observatory, Mauritius, to Mr. N. A. F. Moos, Director of the Colaba Observatory, Bombay, and to Mr. E. KITTO, Superintendent of Falmouth Observatory. In response to an appeal issued by the Royal Society's Antaretic Magnetic Committee, these gentlemen put at my disposal, in the most generous way, eopies or originals of the records of a number of magnetic disturbances, synchronous with disturbances recorded at the Antarctic Winter Quarters. The extent to which the work has benefited by the co-operation of these gentlemen will be appreciated only after a study of Chapters VIII and IX. Valuable as was the contribution of copies of disturbed curves from Christehurch Observatory—the nearest observatory in existence to Winter Quarters—it represents but a small part of what has been done by Dr. FARR and Mr. Skey. In his anxiety to utilise to the full the opportunities presented by the Antaretic Expedition, Dr. FARR extended the scheme of co-operation arranged with the German Antaretie Expedition and co-operating Observatories, to the extent of running the Christchurch magnetographs at high speed during the whole 24 hours of the two monthly "term" days, so as to secure a very open time scale. Mr. Skey had all these quick-run eurves tabulated at 1-minute intervals and part at 20-second intervals, and the results of all these measurements were sent to this country, along with photographic copies of the

original curves. The measurements were received by the Hydrographic Department of the Admiralty—who had undertaken the "term" day observations along with the absolute observations—only a short time before the printing of the volume of "Physical Observations" was completed. Under these circumstances the Hydrographer and Captain Chetwand agreed that the material had better be handed over to me, to be discussed in the present volume. The discussion will be found in Appendix A.

In view of the absence of reference in the text to the recently published 'The Norwegian Aurora Polaris Expedition, 1902–1903,' vol. 1, of Professor Kr. Birkeland, I should explain that Professor Birkeland's volume did not appear until the present work had been practically completed. The disturbed curves had been selected and copies had been made and sent to the engraver, and all the mathematical calculations of Chapters IX and X had been carried out and the discussion written. The preparation of the present volume had already taken much longer time than was originally anticipated, and to have deferred the printing, pending an examination of Professor Birkeland's large volume, did not appear advisable.

The text has thus been left unaltered, and any conclusions or theoretical views which it may contain are absolutely independent of any similar or conflicting results which Professor BIRKELAND has reached.

On studying Professor Birkeland's volume, however, I found that almost all the disturbances which he had selected for discussion were represented in the Antarctic. The opportunity for comparing Arctic and Antarctic results appeared so unique that it was decided that a special Appendix, B, should be written dealing with the subject. It is hoped that the interest attaching to the results will be deemed sufficient justification for the three or four months' delay which the preparation of the Appendix has entailed in the appearance of the present volume.

My part of the work has had to be carried out with due regard to the claims of official duties, which at times leave very little unoccupied leisure.

A great many difficulties had to be dealt with, some of them calling for very delicate discrimination. Under these circumstances the ordinary tendency of humanity to err is pretty certain to have asserted itself, but, at all events, no pains have been spared to aim at that measure of accuracy which it is given to erring mortals to secure.

Observatory Department of the National Physical Laboratory, Richmond, Surrey, July, 1909.

#### EXPLANATION OF TABLES OF HOURLY VALUES.

Pages 8 to 70 contain tables giving the hourly values of Declination, Horizontal Force and Vertical Force at Winter Quarters (lat. 77° 50′ 50″ S., long. 166° 44′ 45″ E.). The way in which these values were arrived at is explained later (see Chap. III., § 20).

As a rule, each page contains data for a single month for one of the elements, but November and December, 1903, and January, 1904, contained so few days of registration that a single page sufficed for these three months. The time shown in these tables is local mean time, which was 11h. 7m. fast on Greenwich. As is usual in magnetic tables, there appears at the top of the Declination tables a value in degrees common to all the hourly values, and at the top of the Horizontal- and Vertical-Force tables the commencing figures or figure of the values expressed in C.G.S. units. For instance, the March, 1902, Declination table is headed  $D = 151^{\circ} + 118^{\circ} + 11$ 

The last four columns give the absolutely highest and lowest values of the element shown on the day's trace, and the time or times of their occurrence. Thus on March 2, 1902, the absolutely largest or maximum reading on the Declination trace was 151° + 179′·6, i.e. 153° 59′·6, and its hour of occurrence was 6h. 7m. in the morning, local time.

In the case of the Vertical Force, information as to maxima and minima is confined to days when the photographic record was complete except for the interval occupied in changing the papers.

In general the cause of absence of hourly readings is indicated in the tables, the letters a, a', b, c, d, being employed for brevity with the following meanings:—

- a no trace of the element, usually from no paper being on the drum;
- a' (in ease of Vertical Force) no temperature trace;
- b (special case of a) a gap between successive sheets which could not be filled in satisfactorily;
- c trace existent, but either too faint or too confused to tabulate;
- d instrument recording, but not working satisfactorily.

When the magnetograph in question was working, but the trace was beyond the limits of registration, the fact is indicated by inserting the value answering to the extreme limit of registration, followed by a plus or a minus sign according to circumstances. For instance, in December, 1902, the Declination is given in the table as  $(150^{\circ}+)$   $326'\cdot0+$  at 6.5 a.m. on the 2nd, and as  $(150^{\circ}+)$   $30'\cdot5-$  at 8.10 a.m. on the 10th. This means that on the former occasion the Declination was beyond the limit  $(150^{\circ}+)$   $326'\cdot0$  of possible registration in the direction of high Declination, while on the latter occasion it was beyond the limit  $(150^{\circ}+)$   $30'\cdot5$  of possible registration in the direction of low Declination. This explanation applies both to maxima and minima and to hourly values.

In the case of Declination and Vertical Force the trace was registered right up to either edge of the sheet. In the case, however, of Horizontal Force the light from the lamp began to be eclipsed whilst the trace was still considerably short of that edge of the sheet which answered to low values of the force, and the trace became fainter and fainter, eventually vanishing at a distance from the edge which varied sensibly with the brightness of the lamp and the development of the photographic paper.

The most usual time to change papers was within an hour or two of noon, so that a day's trace appeared usually on two different sheets (sometimes on more, when there were quick runs).

In the case of the Vertical Force there was the complication that the edge of the sheet had a constantly varying value unless temperature were absolutely steady. When Declination or Horizontal Force was highly disturbed, the trace might be repeatedly off and on in the course of an hour. The most appropriate entry in these cases was only decided after investigation of the special features. That absolute eonsistency prevailed in the treatment is hardly likely, but uniformity was aimed at, so far as possible (see Chap. III).

DECLINATION, MARCH, 1902.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 80                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 1553                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 156 1                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 156                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 156                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 155                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 156 

                                                                                                                                                                         | ಡ                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 152                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 155                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 155                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 155                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 145                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 156                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 158                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 156
