List of Intercepted Plant Pests, 1978

Plant Importation and Technical Support Staff Technical Information Unit

INTRODUCTION

This, the 61st annual report of pests and pathogens found in agricultural quarantine inspections, is the 6th such publication to be assembled and printed from computerized interception records. It summarizes records of significant living plant pests and pathogens found in, on, or with plants, plant products, carriers and container vans, imported or entering into the continental United States and Hawaii or the offshore possessions, or moving between these areas.

Accumulated totals for organisms are listed under headings indicating either that the intended use of the contaminated host is consumption or propagation, or that the item is not intended for importation and is designated as nonentry.

Incompletely identified organisms belonging to economic pest groups are included in the listings when they are not taxonomically separable to the degree required for a comprehensive pest risk assessment.

The list was made from identification records received during fiscal year 1978. Insect and mite identifications are made by personnel of the Plant Protection and Quarantine Programs (PPQ), Animal and Plant Health Inspection Service (APHIS), the Insect Identification and Beneficial Insect Introduction Institute (IIBIII), Federal Research, Science and Education Administration (FR, SEA), and the U.S. National Museum.

Scientific names of listed organisms were reviewed by scientists of PPQ and IIBIII. Scientific and common names of host plants were verified using Hortus III, Standardized Plant Names, and other botanical resources.

PEST ORIGINS

Countries of origin shown for pest interceptions are obtained from the best available sources at the time of interception. Though not meant to be definitive, every effort is made to insure the accuracy of this information.

Changes in Nomenclature

Insect

Asterobemisia carpini (Koch) (Aleyrodidae) ----- (=Asterobemisia avellanea (Signoret)
(Aleyrodidae))

Nematodes

Bidra avenae (Woll.) Krall & Krall ----- (=Heterodera avenae (Woll.))
Merlinius brevidens (Allen) Siddiqi ----- (=Tylenchorhynchus brevicens Allen)

Corrections

Disease

Puccinia tillandsiae Cumm. & Pollack----- (=Uredo tillandsiae Cumm.)) not
Uromyces tillandsiae Cumm.
APHIS-82-5 p. vi

The Woodboring insect section in APHIS 82-5 on pages 179 to 223 and 226 to 270 was duplicated.
