CHAPTER I

THE EARLY HISTORY OF THE UNITED STATES

THE first discovery of the continent of North America was made by Christopher Columbus in 1492. He sailed from Spain in search of a westward route to the Indies, and on October 12, 1492, he landed on the island of San Salvador in the West Indies. This event marked the beginning of European exploration and settlement in North America.

Following Columbus's discovery, other explorers such as Amerigo Vesputi, John Cabot, and Vasco da Gama continued to explore the continent. The first permanent European settlement in North America was established by the Pilgrims in 1620 at Plymouth, Massachusetts. The Pilgrims were a group of English Puritans who sought religious freedom and a better life in the New World.

The early history of the United States is characterized by exploration, settlement, and the struggle for independence. The American Revolution, which began in 1775, led to the formation of the United States as an independent nation. The Declaration of Independence, signed on July 4, 1776, declared the United States to be a free and sovereign state.

The early years of the United States were marked by westward expansion and the discovery of gold in California in 1848. The gold rush led to a massive influx of people to California and the establishment of new settlements. The westward expansion also led to the Mexican-American War (1846-1848), which resulted in the United States acquiring a large portion of Mexico's territory.

The early history of the United States is a story of exploration, settlement, and the struggle for independence. It is a story of a young nation that grew from a small group of settlers to a powerful and influential world power.

TEA, COFFEE, CINCHONA, COCOA, AND CARDAMOM SALES.

No. 35.

COLOMBO, SEPTEMBER 16, 1901.

{ PRICE:—12½ cents each, 3 copies

The first part of the book is devoted to a general history of the United States from its discovery to the present time. It is divided into three volumes, the first of which contains the history of the discovery and settlement of the continent, the second the history of the colonies, and the third the history of the United States from its independence to the present time.

The second part of the book is devoted to a general history of the world from its discovery to the present time. It is divided into three volumes, the first of which contains the history of the discovery and settlement of the world, the second the history of the world from its discovery to the present time, and the third the history of the world from its discovery to the present time.

The first part of the paper is devoted to a general discussion of the problem. It is shown that the problem is equivalent to a problem in the theory of differential equations. The second part of the paper is devoted to a detailed study of the problem. It is shown that the problem is solvable in closed form. The third part of the paper is devoted to a study of the properties of the solutions. It is shown that the solutions are unique and stable. The fourth part of the paper is devoted to a study of the asymptotic behavior of the solutions. It is shown that the solutions approach a certain limit as the independent variable goes to infinity.

TEA COFFEE, CINCHONA, COCOA, AND CARDAMOM SALES.

No. 17.

COLOMBO, APRIL 5, 1902.

PRICE:—12½ cents each, 3 copies 30 cents; 6 copies ½ rupee.

COLOMBO SALES OF TEA

LARGE LOTS.

Messrs. E. Benham & Co.
