TO
LOUDON'S
HORTUS BRITANNICUS:

INCLUDING

All the Plants introduced into Britain,
ALL THE NEWLY DISCOVERED BRITISH SPECIES, AND ALL THE
KINDS ORIGINATED IN BRITISH GARDENS.

UP TO

MARCH, 1850;

WITH

A NEW GENERAL INDEX TO THE WHOLE WORK,
INCLUDING THE SUPPLEMENT.

PREPARED BY W. H. BAXTER, ASSISTED BY D. WOOSTER, UNDER THE
DIRECTION OF MRS. LOUDON.

PREFACE TO THE SUPPLEMENT.

WHEN Mr. Loudon published the First Edition of the *Hortus Britannicus* in 1830, he added all the plants that had been introduced after the Work had been compiled, and while it was going through the press, in a Supplement ; and he promised his readers that additional Supplements of new plants should be added from time to time as they became necessary. Two additional Supplements, and a Supplementary List, were thus added ; but as it was found extremely troublesome to look through all these when it was wished to know what new plants of any particular genus had been introduced, it has been thought best, now that a new list is required, to amalgamate all the previous ones, together with the new plants, into one single Supplement, only adding a Supplementary List of the new plants introduced while the principal Work was going through the press. The Supplement and List have been prepared by Mr. W. H. Baxter and Mr. David Wooster, under my superintendence ; and the greatest pains have been taken to render both as correct as possible.

The only typographical difference in this Supplement from the body of the Work is, that the synonymes are printed in Italics.

It now only remains to thank all those who have kindly aided in the preparation of this Supplement, and more especially the following :—Mr. Baxter, senior, of Oxford, M. Francis Rauch, Mr. George Gordon, Mr. E. Jenner, Messrs. Knight and Perry, Mr. Robert Fortune, and Mr. Low of Clapton.

 In the Gardener's Magazine, vol. vii. p. 62, we noticed, from the Botanical Register, t. 1366., the hybrid azaleas raised at Highclere from seeds of an autumnal-flowering kind, *A. nudiflora rubescens Hort.*, fertilised by the pollen of that variety of *A. calendulæa* which is known by the name of Lee's Triumphant, and we proposed to give the names of these in our Supplement. As some of these, however, have been subsequently published in the Botanical Register, and apparently not by the precise names which were first applied to them, we omit our tabular details of all that have not been separately published, and merely here register the names as first applied, which will at least show how many hybrids deemed distinguishable have been originated at Highclere:—*Cartonia*, *Govenia*, *polyantha*, *basillia*, *imperatrix*, *habrantha*, *habropis*, *charicssa*, *jasmindora*, *sanguetæ*, *Herbertiana*, *eugenes*, *euprepes*, *eudæmon*, *calocoryphe*, *calostephane*, *calodendron*, *aurotincta*, *æretincta*, *Auroræ*, *pretiosa*, *delicata*, *erythræa*, *calantha*, *ochroleuca*, *inclÿta*, *poikila*, *régia*, *dictatrix*, *pónica versicolor*, *pónica expansa*, and many others.

 Dr. Brown has shown the genus *Balbisia* of Willdenow to be the same as Linnæus's genus *Tridax*; consequently the law of priority, by which *Tridax* L. abrogates *Balbisia* Willd., causes *Balbisia* Cav. to abrogate the genera *Ledocárpon* Desf. and *Cruickshanksia* Hook. Mr. Don referred this genus *Balbisia* to *Ficoideæ*, which he thought connected it with the small group *Reaumuriææ*.
