To Whom It May Concern:

This is to Certify that I have this Nineteenth day of July completed the inspection of the nursery stock of R. & J. Farquhar & Co., grown at Roslindale, Dedham and Sharon Heights, State of Massachusetts, and find it to be apparently free from all injurious insects and disease which might be transferred on nursery stock from the nursery to the orchard or garden.

This Certificate is good until July 1, 1911.

(Signed) H. T. FERNALD, Inspector.

FARQUHAR'S GOLD MEDAL NOVELTIES FROM CHINA.

Raised from Seeds Collected in China for the Arnold Arboretum.

Gold Medal Awarded by the Massachusetts Horticultural Society 1910.

(Ready for delivery in April.)

CLEMATIS MONTANA RUBENS. See illustration on front page of cover. This beautiful hardy, new Clematis begins to bloom early in June when a profusion of soft rosy-red blooms resembling those of the Japanese Anemone are produced. As the flowers are borne on the young wood, they appear more or less freely until frost. A First Class Certificate was awarded to this plant by the Royal Horticultural Society of London. First size plants, each, \$1.00; per dozen, \$10.00; second size plants, each, .50; per dozen, \$5.00.

AMPELOPSIS HENRYANA. *Vitis Henryana.* See illustration on front page of cover. In habit, this new climber resembles our native woodbine. The ground color of the leaves is dark velvety green, with the mid-rib and principal veins silvery white. The foliage has a very striking appearance in autumn when the ground color changes to vivid red, the mid-rib and veins remaining white. In Massachusetts, this vine requires protection during winter, but would probably prove quite hardy south of New York, or even farther north where the influence of the ocean moderates the temperature. Award of Merit by the Royal Horticultural Society of London. Each, .75; dozen, \$7.50.

AMPELOPSIS THOMSONII. *Vitis Thomsonii.* See illustration on last page of cover. This charming new climber has proved hardy out-of-doors in Massachusetts during the past two winters. The leaves are greenish purple above, and bright claret color beneath; changing in the autumn to rich red. Award of Merit by the Royal Horticultural Society of London. Each, .75; dozen, \$7.50.

LILIUM LEUCANTHEMUM. See illustration on last page of cover. Mr. E. H. Wilson, the famous collector who found this new species in Northwestern China, describes it as—"a strong growing lily, 5 to 6 ft, or more tall, well clothed with moderately broad leaves having bulbils in their axils. The flowers vary in number from five to ten, and usually rise from a common level, but occasionally the floral axis elongates; in shape and size they resemble the well known *Lilium Harrisii*, are greenish white with a suspicion of purple without and the purest white within. Occasionally the purple tinge reflects through on the inner surface of tube giving a charming and delicate effect."—Flowering bulbs, each, \$2.00; per dozen, \$20.00.

POLYGONIUM MULTIFLORUM. A rapid growing vine frequently reaching 15 feet or more in height, the first season. It produces thick bright green heart-shaped leaves and a profusion of delicate white flowers resembling the finer *Spiraeas*. Each, 25; dozen, \$2.50.

SORBARIA SORBIFOLIA. (*Spiraea*.) This variety attains a height of six to eight feet, and, would be well worthy of a prominent place among garden shrubs for its rich green feathery foliage alone, which has a ferny appearance. Its further charm, is that it produces enormous panicles of white feathery flowers in September, when few shrubs bloom. Each 50 cents; dozen \$5.00.

Clematis montana rubens.

CLEMATIS ARMANDI. A new, hardy species from the mountains of Western China of strong rampant growth and covered with a wealth of glossy, deep green, luxuriant foliage, which is evergreen. During the past two winters, it has stood in our nurseries with only a slight covering to keep off the sun. The individual flowers, of which there are from a dozen to thirty in a cluster, are about two inches across, white, often rosy pink on the back and fragrant. It begins to flower in May. This species is a rapid grower, and should prove very valuable for covering pergolas and trellises. Large plants 6 to 8 feet in length; each, \$2.50; dozen, \$25.00.

CLEMATIS BUCHANANIANA. A strong growing species with pinnate leaves and erect, axillary panicles, eight or nine inches tall, of nodding, tubular, pale yellow flowers, which are borne in great profusion. Each, 50 cents; dozen, \$5.00.

OTHER PLANT NOVELTIES.

Ready for Delivery in April.

Clematis Armandi. See Page 1.

Hydrangea Petiolaris. This splendid hardy climber hitherto has been but little known, although it was introduced from Japan a generation ago. Once established it climbs rapidly, clinging by its little rootlets like English Ivy. The foliage is bright green, quite massive, and numerous flat flower cymes are produced which average eight to ten inches in diameter. The flowers are white, coming in the early summer. Each, 50 cents; dozen, \$5.00.

Viola Cornuta Purpurea. A popular English Viola which is used for bunching like violets. The flowers have the appearance of large, dark blue Single Violets. In cool, moist situations where it will receive partial shade it will bloom throughout the summer. Each, 25 cents; dozen, \$2.00.

New English Semi-Double Chrysanthemums. For autumn-flowering out-of-doors the following six varieties are among the most exquisite we have seen. Plants ready in April. Each, 25 cents; dozen, \$2.50.

Mrs. Peary. Pure white.

Mrs. Jordan. Deep pink, shaded maroon.

Radiant. Pink.

Roupel Beauty. Deep pink, long petals.

Kitty Bourne. Clear canary yellow.

Flamingo. Orange, shaded bronze.

Alternanthera Turvel. This is perhaps the most gorgeous of all Alternantheras. It is in the style of *A. paronychioides* major, but the foliage is larger and the plant of much freer growth, same dwarf habit but more spreading. In summer the foliage becomes brilliant scarlet-red. It is unrivalled for carpet-bedding and for edgings. Dozen, \$1.50; per 100, \$10.00.

Begonia Pink Beauty. A new hybrid sort, valuable both for summer bedding purposes and for winter blooming under glass. As a bedding plant it has the appearance of *Begonia Gloire de Lorraine* in color and habit although more compact. As a pot plant, it blooms continuously and is very interesting. Each, 30 cents; dozen, \$2.00; per 100, \$12.00.

Geranium, Mrs. Charles Pfaff. This is one of the best geraniums in cultivation. It produces enormous trusses of large, single flowers of a charming shade of light pink. It is desirable for both bedding and pot culture. Each, 30 cents; dozen, \$2.00.

Pelargonium Dawn. This appearance of novelty marks a great advance in the *Pelargonium* family. It is the first one to bloom continuously throughout the summer like a bedding geranium, and as a bedding plant has already created a sensation in Europe. It grows to a height of 12 to 15 inches and produces fine trusses of large flowers of a dark bronzy cerise with the characteristic dark velvety blotch of the

Begonia Pink Beauty.

true *Pelargonium* on each petal.

Culture. Sow seeds in April or May, and when large enough, transplant in rows 4 feet apart and 2 feet in the rows. They yield the second year, and require protection during winter by earthing up and mulching. In the Northern States it is better to treat this plant as an annual, sowing seeds under glass and keeping the seedlings growing vigorously until May, when they should be set out in rich soil, when they will produce fine heads the first season.

ASPARAGUS. *Spargel*, (GER.) *Esparago*, (SP.)

Culture. Sow the seeds thinly in drills one foot apart and one inch deep. The permanent bed should be trenched very deeply, and well manured with rich, thoroughly decayed manure. Wide drills should then be made, 3 feet apart, and deep enough to admit of the top of the plants being covered 6 inches. Set the plants, one or two years old, 12 inches apart in the rows, carefully spreading out and separating the roots. For the sake of convenience one drill should be made at a time, and the planting and covering completed before another is commenced. In November the plants should have their annual top dressing of manure after the stalks have been cleared away. The dressing should be forked in as soon as the ground can be worked in spring, and the bed neatly raked. *One ounce of seed sows 60 feet of drill; 5 pounds sow one acre.*

CAULIFLOWER

Blumen Kohl, (GER.)
Coliflor, (SP.)

Cauliflower succeeds well in any soil where Cabbages will grow. It delights in a rich soil and abundance of water. By sowing the early varieties in a hot-bed in February or March, fine heads can be obtained in May or June. For a later supply sow seed in a prepared bed in May, choosing a cool, moist place. When large enough, transplant, making the rows about 2½ feet apart and 18 inches between the plants. Transplanting should be done in moist weather. *One ounce of seed produces about 3,000 plants.*

Mr. A. H. Wingett, gardener for Charles Lanier, Esq., Allen Winden Farm, Lenox, Mass., Feb. 17th, 1910, writes: "I enclose herewith my Seed order for 1910. In doing so I desire to express my appreciation and satisfaction for your courteous treatment in the past and for the high quality of the goods you have invariably furnished."

Crosby's Original Boston Market Celery.

CELERY. *Selleri*, (GER.) *Apios*, (SP.)

Sow the seeds in March or April in a hot-bed or cold frame. As soon as the plants are 3 inches high, transplant into a prepared border, setting them 4 inches apart. When grown 6 inches, and fine stocky plants, set in richly manured, deep soil, in rows 3 feet apart, and about 9 inches from plant to plant. Water, if dry weather follows transplanting. During the next two months all the attention required is to keep down weeds. Afterwards earth up a little, and continue doing so at intervals until only the tops of the leaves are visible late in autumn. Never hoe or earth up when the plants are wet. To keep celery in winter they may be replanted into a cool cellar, allowing fully 3 inches of soil on the floor. Stand the plants in rows not more than 9 inches apart and partition off with boards equal to the height of the plants. They will be ready for use in January. 1 ounce of seed produces about 4,000 plants.

Farquhar's Perfection Forcing Cucumber.

CUCUMBER. *Gurken*, (GER.) *Pepino*, (SP.)

For very early use, seed may be started in heat and the plants set out in May. Pieces of inverted sod are an excellent medium for starting and growing early Cucumber plants, as they can be readily lifted from the hot-bed to the garden without disturbing the young plants growing upon them. For main crop, plant in hills 4 feet apart, in the end of May. Leave 4 strong plants to each hill. The Cucumbers should be gathered when fit for use, as if left to ripen it destroys their productiveness. For pickles, plant during June and July. *One ounce to 50 hills; 2 to 3 pounds to an acre.*

Farquhar's Perfection Forcing. The finest type of White Spine Cucumber in cultivation, and one of the most prolific varieties. The fruits are large and symmetrical in shape, and of a rich dark green color, which is permanent. CULTURE.

Mushrooms are more easily cultivated than many people imagine, and may be grown in any room or cellar where the temperature can be maintained at from fifty to sixty-five degrees. For the bed, use fresh stable manure, which should consist of half droppings and half short litter; this must be thoroughly turned and mixed; many growers prefer a mixture of three parts horse droppings and one part good fresh loam. Before being placed in the bed, let the manure be put in some dry place to sweeten, mixing it thoroughly and turning it three or four times, when, if preferred, the loam may be added. Upon a dry, firm bottom or shelf, proceed to make the bed by spreading a thin layer of the prepared mixture, pounding it firm, and continue thus till the bed is 12 inches thick. Leave it thus for about a week, or until the temperature has subsided to eighty-five degrees. Then make holes about 10 inches apart, and put in each a piece of spawn about the size of an egg. Press the spawn firmly into the com-

post about 2 inches, leaving the top uncovered to allow the excess of heat and moisture to pass off without injury to the germs. After ten days fill the holes and cover the whole bed with 2 inches of fresh loam, and over this place a few inches of straw. If the temperature is right, mushrooms will appear in six to eight weeks from time of spawning. The bed will continue bearing from four to six weeks. If the surface of the bed becomes dry at any time, it should be moistened freely with water at a temperature of eighty to eighty-five degrees. To stimulate the bed when it seems exhausted, the following treatment will sometimes give wonderful results: Soak the whole bed thoroughly with water at a temperature of one hundred and ten degrees, adding one pound of sheep manure to every five gallons. *One pound of Farquhar's English Milltrack Mushroom spawn is sufficient for six square feet of bed.*

ONION.

Zwiebel, (GER.) *Cebolla*, (SP.)

The Onion has been cultivated as an article of food from the earliest times, and is perhaps at the present day more universally grown than any other vegetable. A good crop is impossible unless the soil is very rich and kept clean. Use well-rotted manure freely, and get the crop in as early as possible in spring, even should the weather be cold and unpleasant. Sow in drills one foot apart and cover about one-third of an inch, treading or rolling after sowing so that the hot, dry atmosphere may not destroy the sprouting seed. When three inches high, thin to two inches apart. Stir the ground freely without disturbing the young plants and keep free from weeds. *One ounce of seed to 100 feet of drill; 4 to 5 pounds an acre.*

POTATOES.

Prices Subject to Variations of the Market.

A good, sandy loam produces the best potatoes, but they can be grown on all kinds of soil. New or pasture land, with the turf freshly turned, produces the finest crop. Make furrows of good depth, 3 feet apart. Scatter a liberal dressing of phosphate or decayed stable manure along the drill, and set the seed about 10 inches apart in the rows. Cover with about 2 inches of soil, and begin to cultivate when the plants are well up. At each successive hoeing, bring additional soil about the plants. A change of seed is the best antidote for disease. *Four barrels are sufficient to plant one acre in drills.*

R. & J. Farquhar & Co., Boston, Mass.

Wald Garden, Brookline.

Gentlemen:—It gives me great pleasure to inform you of the good results I have had with your Lawn Grass Seeds.

I have used them extensively, not only in Massachusetts, but in Washington, D. C., and in St. Louis, Mo., at both of which places there is difficulty in getting good Lawns, and where the successful results from your seeds have been remarkable.

The Wald Garden in Brookline which has been so frequently described and illustrated in the leading periodicals of the country affords the very best evidence of the high quality, purity and permanence of your Lawn Grasses.

Your Mixtures for various situations and for different parts of the country, I consider especially valuable.

Yours truly,

Duncan Finlayson

NEW BOSTON PARKS LAWN SEED.

We received from Messrs. Olmsted, Olmsted & Eliot their formula used in seeding the beautiful lawns of Boston's new parks. Franklin Park and the Metropolitan parks were planned by this firm of eminent landscape architects, and their formula may be accepted as the best which experience can suggest for park lawns.

Sow at the rate of 64 lbs. per acre. Price, 35 cents per lb.; by mail, 45 cents;

10 lbs. \$3.25; 100 lbs., \$30.00; 25 lbs. and upwards at the 100 lb. rate.

Mr. Alexander Main, Farmington School, Conn., writes:—"Without doubt the New Boston Parks Grass Seed is the seed to make a nice green lawn. I recommend it to any one who desires to get a satisfactory lawn."

FARQUHAR'S SPECIAL GRASS SEED MIXTURES.

FARQUHAR'S FAIR GREENS MIXTURE.

This is composed mainly of perennial native grasses and two very important European grasses which have proven of great value for Fair-Green use. They are all of dwarf, spreading growth, forming a close velvety surface which improves from year to year if given proper care. It contains no clover, which is objectionable on account of making the surface slippery. If white clover is desired the quantity sown should not exceed one-half pound per bushel of grass seed. Per lb., 25; per 100 lbs., at 20 cents per lb.: per 1000 lbs. at 18 cents per lb. Sow 50 lbs. per acre.

Bretton Woods Golf Club, Bretton Woods, N. H.

Messrs. R. & J. Farquhar & Co., Boston, Mass.

Gentlemen:— I have used your Lawn Grasses for the past eight years and have found them of extra fine quality and entirely free from foul seeds. Your Putting-Green Mixture is the finest I have ever seen—the greens of Bretton Woods produced from it are unrivalled.

Yours truly,

G. S. MERRITT, Prof. Golfer.

FARQUHAR'S GRASS SEED MIXTURE FOR TERRACES.

FARQUHAR'S GRASS SEED MIXTURE FOR SHADY PLACES.

This is a mixture of extra fine grasses adapted for growing in the shade and under trees. We recommend the use of this mixture wherever other grasses on account of shade have failed to make a close sward. Quart, 35; by mail .45; peck, \$2.00; per bushel of 20 lbs., \$7.00.

FARQUHAR'S GRASS SEED MIXTURE FOR SEASHORE.

The grass is of a beautiful color, very thick, and is now ready to be clipped off for the third time. It attracts notice and is spoken of and complimented by the casual observer."

GRASSES FOR PERMANENT HAY CROPS AND PASTURES.

These contain only the most suitable Grasses, the proportionate quantity of each being regulated by soil, situation and purpose for which desired. The object to be attained is a constant, successive growth of rich pasturage from spring until fall. It is a well-established fact that soil sown with a variety of different grasses which are adapted to the soil, and which attain perfection at alternate months from April to September, *produce very much larger and more satisfactory crops, both for hay and pasturage*, than when only one or two kinds of grasses or clovers are sown. The good results obtained from our Special Grass Seed mixtures are demonstrated by the constantly increasing demand for them. Fall seeding is preferable, but spring sowing will be successful if done early, while the land is cool and moist. In addition to the Grasses, we advise sowing 10 lbs. of Mixed Clover Seed per acre. Clover seed should be sown separately as it is heavier than Grass seeds and settles at the bottom when mixed with them, and in consequence is likely to be sown unevenly. Clovers in their young state are tender in our climate, and should therefore be sown in spring.

ALFALFA, TURKESTAN. <i>Medicago sativa</i> . The chief merit of Alfalfa is the fact that it can be cut three or four times in a season. The soil should be deep, rich, and well prepared. It does not succeed on compact clay, nor on land with impervious subsoil. The roots shoot downwards, reaching ten to fifteen feet below the surface, and will therefore resist the driest weather.	60	17.00	.30	28.00
ALSIKE or SWEDISH. <i>Trifolium hybridum</i> . This Clover will thrive where the soil is quite wet, and will even stand flooding without being killed. Productive and sweet and extremely valuable for both pasturage or soiling.	60	15.00	.30	25.00
MAMMOTH or LARGE RED NORTHERN. <i>Trifolium pratense</i> . On rich loamy soils this variety grows nearly twice as large as the Medium Red Clover; and is earlier in starting growth.	60	15.00	.30	25.00

SCARLET or CRIMSON CLOVER. <i>Trifolium incarnatum</i> . This annual Clover thrives best on warm, loose, sandy soil. Its chief value is as a winter or early spring pasture crop and as a green manure. A rapid growing, nitrogen-storing plant, and as such is invaluable for growth in orchards and wherever it can occupy the land from July to December. Sow twenty pounds per acre. May be sown at any time from May to October.	60	12.00	.25	20.00

Japanese Millet.

	Weight per Bush.	Per Bush.	Per lb.	Per 100 lbs.
Cow Peas. <i>For fodder or soiling.</i> A valuable and nutritious green forage or hay crop. Enriches poor land; improves good land. One of the best and cheapest ways of improving soil is the plowing under of leguminous crops. Cow Peas have been found superior for this purpose, especially on medium or light soils. Like Clover they absorb nitrogen from the atmosphere, the roots reach deep into the soil and bring up the necessary potash, thus making a complete and natural fertilizer. For fertilizing purposes, Cow Peas are superior to Clover from the fact that the foliage is greater, besides making full growth in from 3 to 4 months. Sow as early May 10 or as late as July, one (1) bushel to the acre in drills, 2½ bushels to the acre broadcast.	56	3.50		
Oats, Welcome. This is now a well-known and extensively grown variety, and is one of the heaviest, handsomest, and most productive white varieties grown. They stool heavily with extra strong, straight straw, standing well. Succeeds well in a wide range of climate, and under a great variety of soils and methods of culture. 10 bushels, 12.50.	32	1.50		
Oats, Abundance. <i>Imported.</i> A handsome English white Oat. Very early, extra heavy and an enormous cropper.	45	2.50		
Peas for Field Culture Only. This variety and the Blue Field are the best two Peas for general cultivation, and they afford most profitable crops for fattening stock. They have been grown by dairymen with very satisfactory results, following winter Rye, which was cut green in June for dairy cows, then stubble turned under and sown to mixed Peas and Oats, furnishing a large amount of forage in August, when Grass pastures are usually short. Sow 2 bushels to the acre; if with Oats, one bushel.	60	3.50		
Canada White. Per peck, 1.00.	60	3.50		
Canada Blue. Per peck, 1.00.	60	3.50		
Rape, Dwarf Essex. A forage plant of great merit, easily grown in any part of the United States, and of great value for sheep and lambs. One acre of Rape is sufficient to pasture 10 to 15 lambs for two to two and one-half months. It is often sown broadcast, about 5 lbs. to the acre, but will yield much better if drilled about 2 lbs. to the acre, in rows 22 inches apart, and cultivated until the plants are too large. Seed may be sown in May, but preferably in June or July.	56	4.50	.12	8.00
Rye, Spring. Sow as a "catch" crop, where winter grain has failed. The straw is shorter and stiffer than the winter variety, and is always easily secured, while the grain is of equal value.	56	2.00		
Rye, Fall or Winter. Sow in August and September. Prepare the ground as for Wheat and sow at the rate of 1½ bushels per acre. This has no equal as a crop to be used for late fall and early spring pasture, and is one of the best to turn under for green manure.	56	1.75		
Sand Vetch, or Hairy Vetch. <i>Vicia villosa.</i> An annual, a native of western Asia, has been cultivated in this country and Europe for about 50 years. It should be sown at the rate of from 4 to 6 pecks per acre, broadcast or in drills, from August 15 to October 1, and with it as a supporting crop to raise the vines up off the ground there should be planted from 2 to 4 pecks of winter Wheat, Oats, or Rye. It should be cut while the Vetch is in full bloom. It may be planted in spring in order to supply an early green crop for soiling purposes, or in midsummer for late autumn forage.	60	7.20	.15	12.00
Spring Vetches or Tares. <i>Vicia sativa.</i> A valuable plant grown extensively for stock and sometimes mixed with Oats for soiling. Culture the same as field Peas.	60	3.50		
Sunflower, Mammoth Russian. This is highly prized by poultry raisers and farmers as a cheap food for fowls, stock, and also for fuel. It is immensely productive, and can be raised cheaper than corn, as any waste piece of ground will suffice. It is the best egg-producing food known.	28	1.70	.10	6.00
Wheat, Spring Saskatchewan. A favorite variety for spring; vigorous and productive.	60	2.50		
Wheat, Winter. A very hardy variety for fall sowing; produces heavy crops.	60	2.50		
Wheat, Blue Stem. A popular spring sort with large well-filled heads; heavy and prolific.	60	2.50

MILLET, HUNGARIAN. <i>Panicum Hungariensis.</i> An annual forage plant, which germinates readily and withstands drought. If cut early, makes an excellent hay, often yielding two or three tons per acre. Sow from June to August, using about one and one-half bushels to the acre.	48	2.25		
MILLET, COMMON. <i>Panicum Miliaceum.</i> Excellent for forage. Requires a dry, light, rich soil. Height, 2½ to 4 ft.	50	2.00		
MILLET, GERMAN or GOLDEN. <i>Panicum Germanicum.</i> An improved variety, growing from three to five feet high. Under some circumstances it will yield more per acre than the preceding.	50	2.50		
MILLET, JAPANESE. <i>Panicum Crus Gali.</i> Imported from Japan by Professor Brooks, of the Massachusetts Agricultural College. Has yielded in America about 7 tons dry straw and 90 bushels of seed per acre. Height, 6 ft. Has numerous side leaves and heads a foot in length. The fodder is relished by cattle and horses, and the ground seed makes an excellent feed for poultry and cattle. Sow one to two pecks per acre.	32	2.90	.12	9.00

MANGEL WURZEL.

An invaluable crop for stock feeding. Highly relished by cattle, resulting in improved health and condition, increasing the yield of milch cows. Sow from April to June on well cultivated, deep, rich soil, in drills 24 to 30 inches apart. Six to 8 lbs. of seed are required per acre. Price of all varieties, .10 per oz.; .15 per ¼ lb.; .40 per lb.; 10 lbs. and upwards at .35 per lb. If by mail, add .10 per lb. extra for postage.

MAMMOTH LONG RED. The largest and heaviest cropper of all the long red sorts. It grows well out of the ground, and is easily harvested. Color blood red; a most valuable and distinct variety, and very popular on account of its nutritious and milk-producing qualities. Our seed is produced from the largest selected roots and is a most superior strain.

GOLDEN TANKARD. A greater weight per acre may be obtained from this variety than from any other large growing sort. It is of excellent shape and of very neat habit. Flesh bright golden yellow, differing in this respect from all other varieties which cut white. Rich in saccharine matter and feeding properties.

YELLOW GLOBE. This variety has a very fine top and single tap root, adapted for growing in shallow soils. Skin smooth, good size, and of excellent quality.

RED GLOBE. Very similar to Yellow Globe, but differing in color.

SUGAR BEET.

One of the best paying crops for stock feeding. When fed to milch cows will increase the flow and quality of the milk. They keep well throughout the winter. They are not such heavy yielders as Mangel Wurzel, but are of superior quality and rich in saccharine matter. Oz., .10; ¼ lb., .15; lb., .40. If by mail, add .10 per lb. extra for postage. 10 lbs. and upwards, .35 per lb.

KLEIN WANZELEBEN. The most popular variety; root conical, straight, and even; large shoulder, rapidly tapering to a point. Heavy yielder, remarkably rich in sugar.

LANE'S IMPROVED. An old standard sort, one of the most valuable for stock feeding. Hardy and productive.

CARROT.

IMPROVED LONG ORANGE. Roots large and long; enormous yielder. Splendid for stock. Pkt., .05; oz., .10; ¼ lb., .30; lb., 1.00

WHITE BELGIAN. Large, long-rooted variety; valuable for stock, Pkt., .05; oz., .10; ¼ lb., .25; lb., .60

FARQUHAR'S FLOWER SEEDS, ANNUALS

The plants in the following list all bloom the first season from seeds. Many plants not annuals botanically, are included because they bloom the first season, and for cultural purposes may be treated as annuals.

THE ANNUAL FLOWERS are equally valuable to professional and amateur gardeners. Few cultivators realize the vast possibilities they afford at a minimum of cost. For cut flowers, garden beds, either in masses of color or for foliage effects, they furnish ample material. A few of them like the Asters, Poppies, Sweet Peas, and Nasturtiums are well known and largely used; there are, however, many beautiful species which we enumerate in the following list, which are seldom seen, and which would be appreciated were they once grown.

Culture of Pansies:—Pansies thrive best in a cool, moist, but well drained soil, enriched with well rotted barnyard manure or fine ground bone. Seeds sown in spring in a partially shaded situation will produce fine plants for autumn flowering. The finest blooms are to be obtained, however, by sowing in July or August, giving the plants protection during winter, when they will bloom profusely in the spring and summer.

Bed of Farquhar's Tuberous-Rooted Begonias.

FARQUHAR'S TUBEROUS-ROOTED BEGONIAS.

The great value of Tuberous-Rooted Begonias for *Lawn Beds and Borders* is now appreciated. They bloom continuously from early summer until frost, producing a profusion of large and gorgeous flowers. Throughout Europe they are used very extensively, particularly in the beautiful parks of Paris.

They are of easiest cultivation, rarely attacked by insects or blight, and succeed in any good soil which is kept moderately moist. The tubers we offer have been specially grown for us by celebrated European cultivators, and we feel assured that they are not surpassed by any strain in commerce. *Mailed free at dozen rates.*

CULTURAL DIRECTIONS. The tubers may be started in February or March, either singly in small pots, or set two inches apart in flat boxes. The soil should be light, containing plenty of leaf mould and sand. In planting, care should be taken to set the crown of the tuber, which is usually somewhat depressed, upwards. The tubers should be covered half an inch with light soil and watered sparingly until they start, after which more water may be given. The temperature should be 60 to 70 degrees. The started plants, when intended for bedding purposes, may be transferred to the beds in the open ground early in June, by which time they should be in bloom. The plants should be set ten or twelve inches apart.

Although there is much to be gained by starting the tubers early as just described, they may be planted unstarted in the open ground beds in the last week of May, or later, with excellent results.

They will thrive either in full sunshine or partial shade, but when fully exposed to the sun the beds must be kept moist. A wind-swept situation should be avoided.

MRS. C. E. CHAPMAN, Freeville, N. Y., Mar. 9, writes: "The Tuberous Begonias purchased from you last year were the wonder and admiration of all who saw them. They are especially fine for growing in window boxes in partial shade. Also they are economical, as they may be dried off at the approach of frost and carried over in a warm, dry cupboard. Mine are already starting."

HARDY LILIES.

The increased production of many varieties of these in Japan has greatly reduced their cost, and in consequence their use has become very general. It is our opinion that we should plant the bulbs much deeper than we have done heretofore. While traveling in Japan, we found that the bulbs of the wild Lilies were usually twelve to eighteen inches below the surface, and we gathered the finest flowers from specimens growing on mountains of decaying lava where they had abundant rainfall and ample drainage. We believe that varieties like *Auratum* and *Speciosum* would be favored by being set ten or twelve inches deep and would be less affected by frost and drought. The beds should be thoroughly covered with leaves or litter during the winter.

Our Autumn Catalogue contains a complete list of hardy lilies, most of which can be supplied in spring if desired. We recommend fall planting for all the early flowering sorts.

If Lilies are wanted by mail, add 5 cents each.

HARDY PERENNIAL PLANTS.

THE OLD-FASHIONED HARDY FLOWERS. The favorites of old-time gardens are again popular, and deservedly so. No feature of the garden can be more satisfactory than a well-arranged Hardy Plant border, producing from April to November a continuous succession of charming flowers much more interesting than the usual greenhouse assortment, and equally valuable for garden embellishment and cutting purposes. The Hardy Plants have the advantage of greater permanency, requiring only eultivation, enriching, a slight mulch during winter, and an occasional checking of the more robust growers to keep the plantation in good condition for years.

Where early flowers are desired we advocate the introduction of groups of Narcissi, Seillas, which bloom in April and May and should be planted in October, as well as Montbretias, the hardier species of Gladioli and Lilies for summer blooming, and which may be planted in spring.

We limit our list to varieties which have been found generally hardy and most desirable for the severe climate of New England.

Single plants of hardy perennials will be furnished at the following rates: Plants at \$1.00, \$1.25 and \$1.50 per dozen, 15 cents each; plants at \$1.75 and \$2.00 per dozen, 20 cents each; plants at \$2.50 per dozen, 25 cents each; plants at \$3.00 per dozen, 30 cents each.

STRAWBERRY PLANTS.

Fruiting Plant.

Our strong pot-grown plants give a full crop of fruit ten or eleven months after they are set out. Plant in July and August. We have the best 26 varieties for market and home use adapted to our climate. These, if planted in July and August, produce a large crop the next summer. Being grown in pots they may be shipped to a distance and planted with almost no interruption to their growth. The plants may be set in beds of three rows one foot apart and one foot distant in the rows, with a space of two and one-half feet between the outside rows of adjoining beds left for a pathway. They may also be planted in single rows three feet apart and one foot apart in the rows.

All the varieties offered are perfect-flowering (bisexual) except where marked P. The latter are pistillate and require a row of a perfect-flowering sort planted every 8 or 10 feet to pollinize their blossoms.

LAYER PLANTS. For Spring planting; delivery April and May. Per 100, \$1.00; 1000, \$7.00 (except where otherwise priced).

FRUITING PLANTS. We can supply the following varieties from 2½-inch pots, well rooted, for April delivery only. Per 100, \$2.00, per 1000, \$18.00, except where otherwise priced. **Fairfield, St. Louis, Minute Man, Sharpless, Barrymore, Abington, Bubach, Marshall, New York, Pride of Cumberland, Commonwealth, New Home, Wm. Belt, Stevens' Late Champion.**

POT-GROWN PLANTS for delivery in July and August. See our Mid-Summer Catalogue ready June 1, 1911, for list of varieties.

FIRST EARLY.

Excelsior. This is decidedly the best early Strawberry and the earliest good strawberry. The fruit is of round conical form, glossy, dark red color, and of mildly acid flavor.

Fairfield. Mr. Johnson, the introducer, says he has never seen any berry nearly its equal for earliness, large size, attractive color, quality and firmness.

Success. Large, round, bright scarlet, flavor always fine.

Climax. This is an extremely popular new variety, immensely productive, the berries being slightly over medium size. Plant vigorous, healthy grower, of a peculiar shade of green that can be distinguished from other varieties. Our stock is from plants procured of the originator and is exceptionally fine.

Glen Mary. Large, conical, bright red berries; firm and of fine flavor.

SECOND EARLY.

Texas. An extra early variety producing immense crops of large, glossy, crimson berries, which are rich and juicy. The plants appear to thrive in all soils.

Virginia. P. A medium-sized berry of recent introduction; flavor excellent; enormous yielder. Made a record of 12,000 quarts per acre at its home in the State of Virginia.

Sample. P. Excellent for either market or home use; prolific, large, firm and delicious.

Senator Dunlap. Mr. Crawford, at the time of its introduction by him, said that he doubted if he had ever sent out a berry better than Senator Dunlap. It will keep in fair condition for several days on the vines after being ripe enough to pick. The fruit is large, rich and dark red clear to the centre, with a very rich flavor.

MEDIUM.

Abington. A strong growing native variety of recent introduction. The fruit is of large size, bright red in color, very solid and of excellent flavor.

Bubach. P. A well-known popular variety with large berries of a rich, bright red color; very prolific.

Big Ben. A new seedling variety of merit which in some sections of this state has become the favorite fancy market sort. The plants are of vigorous growth and very productive, with large fruit of rich crimson color. Per 100, \$4.00; \$35.00 per 1000.

Brandywine. A large heart-shaped berry, perfect in form, bright red in color, firm flesh, red to the centre and of rich spicy flavor. A great cropper, especially on heavy soils, holds its fruit well up from the ground and generally succeeds everywhere.

Golden Gate. A strong growing variety bearing rich crimson fruit without green tips and with quality similar to the *Marshall*. It blooms early and late, making it a good variety to pollinize the pistillate sorts.

Mark Hanna. P. An exceedingly prolific variety ripening in mid-season. The berries are of enormous size, attractive in color and of splendid quality.

Marshall. The fruit of this remarkable sort is of enormous size, of handsome, glossy, dark crimson color, and of delicious flavor. It is one of the best mid-season berries, either for private use or market. It is a vigorous grower and requires good soil and high cultivation. As it does not thrive in all soils, it should not be planted extensively until its adaptability is ascertained.

Minute Man. P. Very productive, and free growing sort with large solid berries. A fine market variety.

New York. One of the best sorts for private or market gardens. The berries are large, of long conical form; dark red color, firm texture and of remarkably sweet flavor. In the market they sell at sight.

Pride of Cumberland. The plant is a vigorous grower and free from rust, and ripening about one week earlier than Gandy. It is nearly as large, equally firm, as good a color, thriving in either high or low land, but owing to the immense crops it sets, the ground should be well fertilized to ensure best results.

LATE TO VERY LATE.

Belmont. This old favorite is still considered by many to be the finest late berry. The fruit is of handsome appearance and keeps well.

Chesapeake. The plants of the Chesapeake are large and vigorous with rich dark green foliage. The fruit is of large size, deep red in color and of a rich aromatic flavor.

Commonwealth. This is the latest of all Strawberries; bearing large, conical, deep crimson fruit, sweet and of quality equal to the well known Bubach. Not only an extra large berry, but also very productive, of deep rich color and solid. It is smooth and quite juicy. The plants are strong, not quite so rank in growth as the *Marshall*, and free from rust. One of the best introductions of recent years.

Gandy. This popular old variety is probably known by most berry growers. It is more largely grown than any other late variety. It is at home on black swamp land, if well drained, upon medium stiff or red clay land. On sandy soils it is unproductive. All late varieties are compared by Gandy, which is the highest praise

that could be given it. Large size, fine appearance and remarkable keeping and carrying qualities.

New Home. As late and large as Gandy, fruit a bright red color that does not lose its lustre and turn dark for a long time after being picked. It is a vigorous grower, and, unlike Gandy, will produce a large crop on either high or low land. The fruit is so firm and keeps so well, it does not need to be picked oftener than three times a week. Its great productiveness, uniform large size, and unsurpassed carrying and keeping qualities make it one of the most desirable on the list.

Stevens' Late Champion. A new variety of the Gandy type, yielding large crops of beautiful berries very late in the season. In New Jersey it is considered one of the finest sorts for late crop.

William Belt. As exceptionally fine berry. In quality it heads the list. The berries are as large, with some specimens larger than the Bubach. It is about as productive as the Bubach, and of nearly the same shape. Its color is a bright, glossy, deep red; its season as late as Gandy.

PURE CANADA UNLEACHED HARDWOOD ASHES.

Ashes lack ammonia and phosphoric acid, but contain potash and lime, which are essential, not only as plant food, but also as sweeteners of the soil and solvents of other plant food ingredients. So far as they supply potash and lime, they are "nature's plant food." These things have been extracted from the soil by the trees, and now we return them in the shape of ashes. Pure wood ashes is one of the best fertilizers for top-dressing lawns, grass lands, and seeding down, imparting a rich, dark shade of green, destroying insects and weeds, particularly moss; also for fruit of all kinds, especially strawberries, peaches and apples. 100-lb. bag, \$1.25; 200 lbs., \$2.50; ton, \$20.00. In car load lots, minimum 20 tons, at \$16.00 per ton in bulk or \$18.00 per ton in 100-lb. bags delivered at any freight station in Massachusetts, Vermont, New Hampshire, Rhode Island, Connecticut, and to any station in Maine except points on the Maine Central R.R.

FARQUHAR'S PURE GROUND BONE.

BRADLEY'S COMPLETE MANURES FOR ALL CROPS.

Specially Adapted to Intensive Farming and Market Gardening.

These manures have been abundantly proved by results in the field. They are manufactured from the very best plant-food materials obtainable. In mechanical condition they are unequalled. They drill perfectly in any machine. They are divided into classes, based upon exhaustive field tests, and not upon theoretical experiments of the laboratory, the fault of "special crop fertilizers" in which common sense and practical experience are sacrificed for the sake of theoretical hobbies.

Bradley's Complete Manures are, in the fullest sense, "complete" fertilizers, and the several grades furnish complete plant food in the best forms for all crops grown.

Boss Lawn Roller.

ABOUT ROLLING LAWN

The benefit derived from the use of a roller on the lawn, especially in the spring, is not fully understood. The action of freezing and thawing causes the ground to heave, and if the sod is not firmly pressed back with a roller before hot weather begins the grass is apt to be killed or injured, leaving the lawn full of bare spots.
