Copyright, 1870 and 1889, by

A. S. BARNES & COMPANY

NEW YORK AND CHICAGO

72.1 1.

WOOD'S BOTANIES.

- OBJECT LESSONS IN BOTANY, pp. 340, 12mo. An introduction to the Science, full of lively description and truthful illustrations; with a limited Flora, but a *complete* System of Analysis.
- THE BOTANIST AND FLORIST, pp. 620, 12mo. A thorough text-book, comprehensive and practical; with a Flora, and System of Analysis equally *complete*. "I have been deeply impressed, almost astonished (writes Prof. A. Winchell, of University of Michigan), at the evidence which this work bears of skillful and experienced authorship—nice and constant adaptation to the wants and conveniences of students in Botany," etc.
- REVISED LESSONS IN THE LIFE AND GROWTH OF PLANTS. These Lessons constitute the introductory part of the "Botanist and Florist." The chapters on Structure and Morphology have been revised, and those on Histology and Physiology rewritten. The Lessons will still be the introduction to the "Botanist and Florist;" they will also be published separately in a book of about 200 pp., and present the subject to the student in a clear, concise manner. They will be a suitable companion and introduction to any of the Manuals of the Floras of the several parts of the country.
- THE CLASS-BOOK OF BOTANY, pp. 850, 8vo. The principles of the Science more fully announced and illustrated—the Flora and Analysis complete, with all our plants portrayed in language both scientific and popular. "The whole science (writes Prof. G. H. Perkins, of Vermont University), so far as it can be taught in a college course, is well presented, and rendered unusually easy of comprehension. I regard the work as most admirable."
- THE PLANT RECORD—a beautiful book, for classes and amateurs, showing, in a few pages, how to analyze a plant—any plant, and furnishing tablets for the systematic record of the analysis.
- FLORA ATLANTICA, or WOOD'S DESCRIPTIVE FLORA, pp. 448, 12mo. This work is equivalent to the Part IV of the Botanist and Florist, being a succinct account of all the plants growing East of the Mississippi River, both native and cultivated, with a system of analytical tables well-nigh perfect.
- WOOD'S BOTANICAL APPARATUS—a complete outfit, for the field and the herbarium. It consists of a portable trunk, a Wire Drying Press, a Knife-trowel, a Microscope, and Forceps.

"FOURTEEN WEEKS" IN EACH SCIENCE.

By J. DORMAN STEELE, PH.D., LL.D., F. G. S., Etc.

Now Ready:

PHILOSOPHY. CHEMISTRY.

GAIN

PHYSIOLOGY. GEOLOGY. ZOOLOGY. ASTRONOMY.

A KEY to Practical Questions in Steele's Works.

Seven volumes: each, post-paid, \$1.25.

PREFACE TO FIRST EDITION.

In preparing the present work, it was our purpose to furnish the student in Botany with a complete manual within the compass of an ordinary duodecimo volume. To this end, we have revised the introductory treatise and recorded the principles of the Science in fewer words, occupying but two thirds the space so used in the Class-book. We have thus made room for the introduction of a series of *Synoptical Tables*—a feature entirely new—exhibiting the principles contained in the several chapters at a single glance, and in their combined relations. They are intended for the blackboard, and we are confident that both teacher and pupil will find them an essential aid both to the understanding and memory.

Our new Flora will be found a phenomenon in brevity. Within the space of 426 duodecimo pages, in fair leaded type, we have recorded and defined nearly 4,500 species—all the known Flowering and Fern-like plants, both native and cultivated (not excepting the Sedges and Grasses), growing in the Atlantic half of the country. This has been attained by avoiding repetitions. In the final definition of the species (see, for example, R. bulbosus, the Bulbous Buttercup, p. 20), we give but one, two, three, rarely four lines. This can not, of course, include its full portraiture. It includes only those few features which have not already been given elsewhere, and which here serve to distinguish the R. bulbosus from the two preceding species with which it stands grouped in the table. But the full portraiture of R. bulbosus (and of every species) will nevertheless be found in the Flora. Some of its features are given under its genus, Ranunculus; some under its Order; some under its Cohort; others under its Class and its Sub-kingdom. Moreover, all along the path of its analysis through the tables its characters are announced and recognized; so that if all the statements descriptive of R. bulbosus were collected, we should have nearly a half page of text, and no important character left unnoticed.

Between the cultivated exotics and the wild native or naturalized species constituting our own flora, a distinction is made *in the type*. The names of the latter are expressed in full-face **Roman** for the species, and *Italic* for the varieties. The names of the exotics are in SMALL CAPITALS.

The geographical limits of the present flora are the same as those adopted in the Class-book; viz., all the States of the American Union lying east of the Mississippi River. This will necessarily include so many of the plants of the States bordering on the western shore of the Mississippi, that the book may be regarded as well adapted to those States also.

It gives me great pleasure to acknowledge my obligations to the friends whose names occur below and in many other parts of our work, for their contributions of new and rare plants, and for valuable information concerning them;—first, and especially, to Prof. THOS. C. PORTER, of Lafayette College; to E. L. HANKENSON, Newark, N.Y.; to JOHN WOLF, Canton, Ill.; to CHS. H. PECK, Albany, N.Y.; to WM. R. GIRARD, Esq., Poughkeepsie, N.Y.; to N. COLMAN, Iowa; to Rev. J. H. CARRUTH, Kansas; to Dr. W. MATTHEWS, Dakota; to H. MAPES, Michigan, etc., etc.

EDITOR'S PREFACE.

DR. Wood's "Lessons in the Structure and Growth of Plants" was designed for an introduction to this delightful department of Natural History, and to qualify the student in Botany to make intelligent use of a Flora. The book is well known to educators, and the instructors in our high-schools and colleges have acknowledged its worth and conferred upon it the highest degree of approval by using it as a text-book.

It was written more than twenty years ago; since then improved methods of examination, with the aid of new microscopical appliances, have revealed much in all departments of biology, and especially in the structure and formation of *plant-tissues*.

These discoveries have introduced in some parts new and in others additional names.

To bring the work to the advanced state of the science, the chapters on **Organography** have been *revised*, and the parts on **Histology** and **Physiology** have been entirely rewritten and newly illustrated, and the whole reset in fresh and modern type.

The third chapter of the Introduction has been recast, enlarged, and newly illustrated.

In preparing the parts that are rewritten, the Editor has aimed not to enlarge, but rather to be more concise than the Author was upon the same subjects, believing that in a *text-book* brief and clear statement is more acceptable to the teacher and useful to the learner than lengthy discussion.

The chapters and sections on **Structure**, or **Organography**, have been revised as to nomenclature; but otherwise have not been disturbed, and the sequence of subjects has been preserved.

The Index and Glossary have been altered and enlarged, to suit the additional and revised matter; the words in the Glossary have been divided and accented to correspond with the latest authorities on Pronunciation. It was the intention of the Author that this work should be a *text-book* suited to the needs of students in our Academies, High-schools, and Colleges, intending his "Object Lessons in Botany" to meet the wants of younger pupils; hence, in the changes that have been made this design has been kept in view.

The **work** now, with its revision, new matter, additional illustrations, and fresh type, is substantially a **new book**.

Its original character for educational purposes has been carefully preserved and in several features improved. It is in its new form a suitable introduction and companion to any of the manuals of the *Flora* of North America.

It affords the Editor great pleasure to record the acknowledgment of his obligations to his personal friends among the botanists of New York and vicinity for their sympathy in the work.

He is especially indebted to Dr. Geo. Macloskie, Senior Professor of Botany and Zoology in the John C. Green School of Science, at the College of New Jersey, for efficient aid and judicious criticism, upon the subjects of Histology and Physiology, where the statements are based upon microscopic examination.

His gratitude is due to Dr. John S. Newberry, of Columbia College, for his kind suggestions and encouragement.

Also to Hon. Judge A. Brown and to Mr. W. H. Rudkin, of New York, for their kind and valuable advice.

O. R. WILLIS, EDITOR.

WHITE PLAINS, NEW YORK, March, 1889.

SUGGESTIONS TO TEACHERS.

An enlightened instructor is disappointed, on opening a text-book, if he does not find some hint from the author as to the mode of using it.

Our best teachers of Botany differ as to what should be the subject first presented to the pupil's notice.

One would commence with the SEED; another, with the FLOWER; a third, with HISTOLOGY and PHYSIOLOGY.

These Lessons are so arranged that the learner may commence either with the Flower, which would lead through Organography, or Structural Botany, up to the Seed; or, if the teacher prefer, he can have his class commence with the Second part, which treats of the Cells and Vessels that build up plants and trees.

In either case, we advise that the four chapters which make up the introduction be carefully studied, by using them as reading and talking lessons, with simple illustrations, until they are well understood.

TABLE OF CONTENTS:

TOGETHER WITH A SYLLABUS OF THE MORE PRACTICAL SUB-JECTS, DESIGNED AS EXERCISES ON THE BLACKBOARD, PRELIMINARY TO THE LESSONS.

N. B.—We give the Syllabus of but a few Chapters, and of fewer expupil may exercise his own skill in supplying deficiencies. The this. The abbreviation (etc.) indicates a table unfinished.	
INTRODUCTION	Page 9
CHAPTER I. Aids to the Study of Botany	
CHAPTER II. Departments of Science	11
* Existence, individually; (§ 13.)	
a As an inorganic mass, is	A Mineral.
b As an organic body,	
-Endowed with life	A Plant.
-Endowed with life and perception	An Animal.
* Existence, collectively, Nature. (§ 12), etc.	
* Existence, objectively, Science. (§ 16-18), etc.	
* Department of Botany. (§ 19-23), etc.	
* Classification. (§ 27-30), etc.	
* Nomenclature. (§ 25, 26.)	
a Local appellatives in common use	Trivial Names.
b Universal appellatives adopted in Science	Latin Names.
-The name of the Genus	Generic.
-The name of the Species	Specific.
-The name of the Individual	Proper.
CHAPTER III. Stages of Plant Life	
First Stage; asleep in the Seed	Embryo.
Second Stage; development.	
-a Awakening and beginning to grow	Germination.
-b Developing leaves and branches	Vegetation.

CONTENTS.

Third Stage; leaves transformed to flowers
Fourth Stage; maturity.
-c Flowers maturing into fruitFructification.
-d Fruit ripe and the plant exhausted. HibernationDeath.
CHAPTER IV. Term of Plant Life
§ Plant fruiting but once, and
-a Dying in its first year(1) Annual Herb.
-b Dying after its second year(2) Biennial Herb.
-c Dying after many years
§ Plant fruiting more than once (perennial),
a With annual stems, is a
b With perennial stems becoming woody.
1, If lower than or equaling the human statureUndershrub.
2, If taller, 7 to 20 feet highShrub.
3, If still taller, with a distinct trunkA Tree.
† Trees with annual foliage, shed in AutumnDeciduous.
† Trees with perennial foliageFvergreen.
PART FIRSTSTRUCTURAL BOTANY, OR ORGANOGRAPHY 23
CHAPTER I. The Flower. It may consist of
a The leafy Envelopes, or Perianth, in 2 whorls or sets.
1, The outer circle, of Sepals, usually greenCalyx.
2, The inner circle, of Petals, usually coloredCorolla.
b The Essential Organs, also in 2 whorls or sets.
3, An outer set, of Stamens, within the corollaAndræcium.
4, The inner and central set, of PistilsGynœcium.
c The base, or platform on which these organs stand
CHAPTER II. Plan of the FlowerThe Typical Flower
1, Consisting of 4 whorled sets of organs, isComplete.
2, Each set having the same number of parts
3, The parts composing each set uniform
4, All the parts separate and distinct from each otherFree.
5, Parts of adjacent sets alternating in positionAlternate.
CHAPTERS III. and IV. Anomalous Flowers. Deviations from the Type. 28
1, Variations in the Radical NumberFrom ψ to ψ .
2, Deficiencies, rendering the flower
a Incomplete.
Corolla wantingApetalous.
-Corolla and calyx both wantingNaked.
b Imperfect.
-The stamens wanting Pistillate.
-The pistils`wanting* Staminate.

c Unsymmetrical, from the suppression of a part of some set. d Organs opposite, from the suppression of some entire set. 3, Redundancies. a Organs increased in number, -By multiples......Multiplication. -By clusters.....Chorisis. b Appendages. -Attached to the inside of the petals.....Scales. -Enlarged scales.....Crown. -Glandular bodies......Glands. 4, Union of Parts. a By Cohesion. -Petals united......Gamopetalous, or Monopetalous. -Pistils united.....Compound. b By Adhesion. -Parts blended with the Calyx.....Perigynous. -Parts blended with the Ovary......Epigynous. 5, Irregularities.-Torus lengthened, excavated, etc. -Like organs, becoming unequal in size, etc. CHAPTER VI. Forms of the Perianth...... 41 1, Dialypetalous, or Polypetalous. * Regular. -a Four long-clawed petals spreading at right-angles..Cruciferous. -b Five short-clawed spreading petals.....Rosaceous. -c Five spreading petals on long erect claws...Caryophyllaceous. -d A 6-leaved gradually spreading perianth.....Liliaceous. * Irregular. -e Five petals, 2 pairs and an odd one.... Papilionaceous. -f Six petals, one of them lip-like.....Orchidaceous. 2, Gamopetalous, or Monopetalous. (§ 102.) * Regular. -a Tube very short, border flat, spreading.....Rotate. -b Tube very short, border wide, concave, Cup-form, etc., etc. * Irregular. -c Cylindrical tube split down, etc. (§ 103.) § Transformations of the Perianth. (§ 104-108.) 1, In the Compositæ. A circle of dry scales or bristles..........Pappus. 2. In the Bog-Rushes. A circle of 6 (more or less) bristles......Setæ. 3, In the Sedges (Carices). A bottle-shaped envelope......Perigynium. 4, In the Grasses. Chaff-like coveringsGlunus, and Pales.

CHAPTER VII. Attributes of the Essential Organs.—Parts
1, In respect to Numbera etc. (§ 118, two conditions.)
2, In position.
-a On the torus, free from all other organs
-b Adherent to the calyx, etc. (§ 119, four other conditions.)
3, In cohesions.
-a United into one set, etc. (§ 120, five modes.)
CHAPTER VIII. The Pistils.—Its Parts (§ 125)
1, The simple ovary.
-a Encloses a single cavityIts Cell.
-b Produces little buds becoming seedsOvules.
-c And two fleshy ridges bearing the ovulesPlacentæ.
2, The compound ovary.
-a May contain as many cells as carpels.
-b Must have 2 (or a double) placentæ in each cell.
-c And an equal number of ovules in each cell.
3, The number of carpels in a compound ovary is known-
1, By the number of distinct styles, if any.
2, By the number of distinct stigmas.
3, By the number of the cells; or, if there be but one,
4, By the number of external lobes, angles, or sutures.
CHAPTER IX. The Ovules
CHAPTER IX. The Ovules
CHAPTER X. The Fruit.—Pericarp.—Dehiscence 60
CHAPTER X. The Fruit.—Pericarp.—Dehiscence
 CHAPTER X. The Fruit.—Pericarp.—Dehiscence. CHAPTER XI. Forms of the Pericarp. (See Syllabus, § 150) G4 CHAPTER XII. The Seed. G9 CHAPTER XIII. Germination. 74 CHAPTER XIV. The Root, or Descending Axis.—Forms. 78 * Axial Roots, or Tap-Roots, having the main axis devoloped. 1, The woody tap-root of most trees, branching. Ramous. 2, Tuberous tap-roots. -a Shaped like a spindle (Beet). -b Shaped like a cone (Carrot).
 CHAPTER X. The Fruit.—Pericarp.—Dehiscence

CHAPTER XV. Of the Stem, or Ascending Axis
 CHAPTER XVI. Forms of the Leaf-Stems, aerial, caulescent
CHAPTER XVII. Forms of Scale-Stems, acaulescent
1, Slender, prostrate, rooting, on or in the groundCreeper.
2, Fleshy, thick, rooting, mostly under ground Rhizome.
3, Swollen with starch, under ground, with buds (eyes)Tuber.
4, Bulbous, solid, with thin scales, under groundCorm.
5, Bulbous, consisting mostly of thick scalesBulb.
CHAPTER XVIII. The Leaf-Bud. Vernation (and Æstivation, Chap. XXIV) 97
* Separate; regarding a single leaf (petal or sepal) in bud.
1, Leaf flat, neither folded nor rolled in the budOpen.
2, Bent forward, apex toward the base Reclined.
3, Folded on the axisConduplicate.
4, Folded in plaits like a fanPlicate.
5, Rolled on its axis downwardCircinate.
6, Rolled with its axis.
-a From one edge into a scrollConvolute.
b From both edges inwardInvolute.
-c From both edges backwardRevolute.
* General;-regarding the whole bud.
1, Edges meeting, Valvate.
-With the margins straightValvate.
-With the margins involuteInduplicate,
-With the margins revoluteReduplicate.
2, One edge overlapping, each leaf obliqueTwisted or Contorted.
3, Both edges overlapping, Imbricate.
a Conduplicate leaves, alternately.
-EmbracingEquitant.
-Half embracingObvolute.
b Leaves in threes, one of them exteriorTriquetrous.
c Leaves in fives, two of them exteriorQuincuncial. d Each leaf or petal embracing all those withinConvolute.
e Exterior petal largest (Sweet Pea)Vexillary.
4, Gamopetalous corolla folded in plaits.
-Plaits straightPlicate.
-Plaits obliqueSupervolute.
Supervolute.
CHAPTER XIX. Of the Leaf.—Phyllotaxy 102

CHAPTER XX. Morphology of the Leaf§ Venation 106
1, Veins simple and parallel, as in the EndogensParallel-veined.
2, Veins dividing without uniting again, as in FernsFork-veined.
3, Veins netted, as in the Exogens, viz.:
a Larger veins arranged as in a featherPinni-veined.
b Larger veins 5 to 9, arranged as the fingersPalmi-veined.
c Larger veins only 3, arranged as the fingersTriple-veined.
§ Special Veins.
1, In feather-veined leaves.
-The chief vein forming the axis
-Lateral branches of the mid-veinVeinlets.
-The branches of the veinletsVeinulets.
2, In palmi-veined leaves, or triple-veined.
<i>a</i> The coequal veins running through the blade, areVeins
b The branches of the veins, are (as in feather-veined)Veinlets,
CHAPTER XXI. Forms of Leaves. (Morphology, continued) 112
* Pinni-veined Leaves.
a Lower veinlets longer than the upper.
1, Outline of an eggOvate.
2, Outline of a lance, or narrow-ovateLanceolate.
3, Form of the Greek letter △Deltoid.
b The middle veinlets longest, lower and upper equal.
4, Circular, or nearly soOrbicular.
5, Outline of an elliptic springElliptical.
6, Egg-shaped, with equal rounded endsOval.
7, Narrowly oval, with obtuse endsOblong.
The upper veinlets longest.
8, Inversely ovate, narrower at the baseObovate.
9, Inversely lanceolate, narrower at the baseOblanceolate.
10, Obtuse at apex, narrowed to the baseSpatulate.
11, Shaped like a wedge, the point at baseCuneate.
d Lowest veinlets longest and recurved.
12, A re-entering angle, or sinus, at base. Heart-shapedCordate.
13, Base-lobes ear-shapedAuriculate.
14, Base-lobes arrow-shapedSagittate.
15, Base-lobes turned outwardHastate.
* Dissected Forms.
a Pinnately cut or divided.
1, With regular lateral segmentsPinnatifid.
2, With segments recurved or hookedRuncinate.
3, Terminal segment enlargedLyrate.
4, Segments many and narrowPinnatisect.
5, Segments and sinuses roundedSinuate.
b Palmately cut or lobed.

6, Lobes only 3.....Trilobate. 7, Lobes 5 or more......Palmately-lobed.

8, Lobes deeply divided Palmately parted.9, Side-lobes again 2-lobed Pedate.
CHAPTER XXII. Forms of Compound Leaves
* Pinnately compound.
a Once compounded, consisting of—
1, Two leaflets opposite and equalBinate.
2, Three leaflets, the odd one petiolulatePinnately-trifoliate.
3, Four or more equal leaflets, all in pairsEqually pinnate. 4, Five or more equal leaflets, all but one in pairsOdd-pinnate.
5, Alternate leaflets smallerInterruptedly pinnate.
<i>b</i> Twice compounded, consisting of—
6, Nine leaflets (or 3 trifoliate leaves)Biternate.
7, Fifteen or more leaflets (3 pinnate leaves)Bipinnate.
c Thrice compounded, having 27 leafletsTriternate, etc.
<i>d</i> Irregularly much compounded Decompound.
* Palmately compounded, consisting of—
10, Three equal leaflets all alike sessile (Clover)Palmi-trifoliate.
11, Five or 7 leaflets, all equally sessileDigitate
CHAPTER XXIII. Transformations of the Leaf
CHAPTER XXIV. Metamorphosis of the Flower. (See Chap. XVIII) 129
CHAPTER XXV and XXVI. Inflorescence.—Special Forms 134
§ Evolution.
-a One flower only from a budSolitary.
-b From axillary buds, the lowest first openingCentripetal.
-c From terminal buds, the central firstCentrifugal.
§ Special Forms of Inflorescence.
* Centripetal, or Indefinite.
a Flowers sessile.
-1, Along a slender rachisSpike
-2, Along a thick fleshy rachis
-3, On an extremely short rachis
-4, Spike of imperfect fls. caducous togetherAment.
b Flowers borne on pedicels.
5, Along the sides of a lengthened rachisRaceme.
6, Along a short rachis, the lower pedicels lengthened.Corymb. 7 Clustered on an extremely short rachis
7, Clustered on an extremely short rachisUmbel. c The pedicels themselves branched.
-8, LooselyPanicle.
-9, CompactlyThyrse.

CONTENTS.

* Centrifugal, or Definite.
1, Clusters open, loose, of various formsCyme.
2, Clusters compact, terminalFascicle.
3, Clusters compact, axillary and oppositeVerticils.
4, Cyme unilateral, unrolling as it developsScorpoid Raceme.

PUBLISHERS' NOTE.

In this new edition, the small figures on the inner corners of the pages refer to the pagination of the old editions. Hence, teachers may use the books of both the old and the new editions in their classes without difficulty.

The pronunciation of all difficult words has been carefully indicated in the Glossary, on page 199.

8

INTRODUCTION.

CHAPTER I.

AIDS TO THE STUDY OF BOTANY.

1. The proper season for the commencement of the study of Botany in schools is late in winter, at the opening of the first session after New-Year's. The class will thus be prepared beforehand, by a degree of acquaintance with first principles, for the analysis of the earliest Spring-flowers—the Blood-root, Liverwort, Spring-beauty, Sweet Mayflower, and the Violets. We have arranged the topics of the present treatise with a special view to the convenience of the learner in this respect, beginning with that which is the first requisite in analysis—the Flower.

2. Specimens of leaves, stems, roots, fruit, flowers, etc., in unlimited supply are requisite during the whole course. In the absence of the living, let the dried specimens of the herbarium be consulted. Crayon sketches upon the blackboard, if truthful, are always good for displaying minute or obscure forms. In the city, classes in Botany may employ, at small expense, a collector to supply them daily with fresh specimens from the country. Moreover, the gardens and conservatories will furnish to such an abundant supply of *cultivated* species for study and analysis, with almost equal advantage,—since the present work embraces, together with the native flora, all exotics.

3. An Herbarium (Latin, *hortus siccus*, or *h. s.*) is a collection of botanic specimens, artificially dried, protected in papers, and systematically arranged. *Herba*-

INTRODUCTION.

ria are useful in many ways:—(a) for the preservation of specimens of rare, inaccessible, or lost species; (b) for exchanges, enabling one to possess the flora of other countries; (c) for refreshing one's memory of early scenes and studies; (d) for aiding in more exact researches at leisure; (e) for the comparison of species with species, genus with genus, etc.

4. Apparatus.—For collecting botanic specimens, a strong knife for digging and cutting is needed, and a close tin box, fifteen inches in length, of a portable form. Inclosed in such a box, with a little moisture, specimens will remain fresh a week.

5. Specimens for the herbarium should represent the leaves, flowers, and fruit—and, if herbaceous, the root also. Much care is requisite in so drying them as to preserve the natural appearance, form, and color. The secret of this art consists in extracting the moisture from them before decomposition can take place.

6. The drying-press, to be most efficient and convenient, should consist of a dozen quires of unsized paper, at least 11×16 inches folio; two sheets of wire-gauze (same size) as covers, stiffened by folded edges; and three or four leather straps a yard in length, with buckles. When in use, suspend this press in the wind and sunshine; or, in rainy weather, by the fire. In such circumstances, specimens dry well without once changing. But if boards be used instead of wire-gauze, the papers must be changed and dried daily. Succulent plants may be immersed in boiling water before pressing, to hasten their desiccation.

7. The lens, either single, double, or triple, is very serviceable in analysis. In viewing minute flowers, or parts of flowers, its use is indispensable. Together

with the lens, a needle in a handle, a penknife, and tweezers are required for dissection.

8. The compound microscope is undoubtedly a higher aid in scientific investigation than any other instrument of human invention. It is like the bestowment of a new sense, or the opening of a new world. Through this, almost solely, all our knowledge of the cells, the tissues, growth, fertilization, etc., is derived. The skillful use of this noble instrument is itself an art, which it is no part of our plan to explain.

9. On the preparation of botanical subjects for examination we remark: the field of view is small, and only minute portions of objects can be seen at once; the parts must be brought under inspection successively.

10. The tissues of leaves, etc., are best seen by transmitted light. They are to be divided by the razor or scalpel into extremely thin parings or cuttings. Such cuttings may be made by holding the leaf between the two halves of a split cork. They are then made wet and viewed upon glass. The stomata are best seen in the epidermis stripped off; but in the Sorrel-leaf (Oxalis violacea) they appear beautifully distinct upon the entire leaf.

11. Woody tissues, etc., may be viewed either as opaque or transparent. Sections and cuttings should be made in all directions, and attached to the glass by water, white of egg, or Canada balsam. To obtain the elementary cells separately for inspection, the fragment of wood may be macerated in a few drops of nitric acid added to a grain of chlorate of potassa. Softer structures may be macerated simply in boiling water.

CHAPTER II.

DEPARTMENTS OF SCIENCE.

12. Three great departments in nature are universally recognized: the mineral, vegetable, and animal kingdoms. The first constitutes the *Inorganic*; the other two, the *Organic World*.

13. A mineral is an *inorganic* mass of matter that is, without distinction of parts or organs. A

11

INTRODUCTION.

stone, for example, may be broken into any number of fragments, each of which will retain all the essential characteristics of the original body, so that each fragment will still be a stone.

14. A plant is an *organized* body, endowed with vitality but not with sensation, composed of distinct parts, each of which is essential to the completeness of its being. A Tulip is composed of organs which may be separated and subdivided indefinitely, but no one of the fragments alone will be a complete plant.

15. Animals, like plants, are organized bodies endowed with vitality, and composed of distinct parts, no one of which is complete in itself; but they are elevated above either plants or minerals by their power of perception.

16. Physics is the general name of the science which treats of the mineral or inorganic world.

17. Zoology relates to the animal kingdom.

18. Botany is the science of the vegetable kingdom. It includes the knowledge of the forms, organs, structure, growth, and uses of plants, together with their history and classification. Its several departments correspond to the various subjects to which they relate. Thus,

19. *Morphology* treats of the special organs of plants as compared with each other; it especially relates to the mutual or typical transformations which the organs undergo in the course of development.

20. Vegetable Histology treats of the elementary tissues—the organic units or cells out of which the vegetable fabric is constructed.

21. *Physiological Botany* is that department which relates to the vital action of the several organs and

tissues, including both the vital and chemical phenomena in the germination, growth, and reproduction of plants. It has, therefore, a practical bearing upon the labors of husbandry in the propagation and culture of plants, both in the garden and in the field.

22. Systematic Botany arises from the consideration of plants in relation to each other. It aims to arrange and classify plants into groups and families, according to their mutual affinities, so as to constitute of them all one unbroken series or system.

23. Descriptive Botany, or Phytology, is the art of expressing the distinctive characters of species and groups of plants with accuracy and precision, in order to their complete recognition. A *Flora* is a descriptive work of this kind, embracing the plants of some particular country or district.

24. Finally, in its extended sense, Botany comprehends also the knowledge of the relations of plants to the other departments of nature—particularly to mankind. The ultimate aim of its researches is the development of the boundless resources of the vegetable kingdom, for our sustenance and protection as well as education; for the healing of our diseases and the alleviation of our wants and woes. This branch of botanical science is called *Applied Botany*, including several departments—as Medical Botany, or Pharmacy; Agricultural Botany, or Chemistry; Pomology, etc.

25. The name of a plant or other natural object is twofold,—the trivial or popular name, by which it is generally known in the country; and the Latin name, by which it is accurately designated in science throughout the world. For example, *Strawberry* is the popular name, and *Fragaria vesca* the Latin or scientific name, of the same plant. In elementary treatises, like the present, for the sake of being readily understood, plants are usually called by their popular names. Yet we earnestly recommend the learner to

12, 13.]

[13.

accustom himself early to the use of the more accurate names employed in science.

26. The Latin name of a plant is always double generic and specific. Thus *Fragaria* is generic, or the name of the *genus* of the plant—*vesca* is specific, or the name of the *species*.

27. A Species embraces all such individuals as may have originated from a common stock. Such individuals bear an essential resemblance to each other as well as to their common parent, in all their parts. For example, the White Clover (*Trifolium repens*) is a species embracing thousands of contemporary individuals scattered over our hills and plains, all of common descent, and producing other individuals of their own kind from their seed.

28. To this law of resemblance in plants of one common origin there are some apparent exceptions. Individuals descended from the same parent often bear flowers differing in color, or fruit differing in flavor, or leaves differing in form, etc. Such plants are called *Varieties*. They are rarely permanent, often exhibiting a tendency to revert to their original type. Varieties occur chiefly in species maintained by cultivation, as the Apple, Potato, Rose, Dahlia. They also occur more or less in native plants (as Hepatica triloba), often rendering the limits of the species extremely doubtful. They are due to the different circumstances of climate, soil, and culture to which they are subjected, and continue distinct until left to multiply spontaneously from seed in their own proper soil, or some other change of circumstances.

29. A Genus is an assemblage of species closely related to one another in the structure of their flowers

1

13, 14.]

and fruit, and having more points of resemblance than of difference throughout. Thus, the genus Clover (*Trifolium*) includes many species, as the White Clover (*T. repens*), the Red Clover (*T. pratense*), the Buffalo Clover (*T. reflexum*), etc., agreeing in floral structure and general aspect so obviously that the most hasty observer would notice their relationship. So in the genus Pinus, no one would hesitate to include the White Pine, the Pitch Pine, the Long-leafed Pine (*P. strobus, P. rigida, and P. palustris*), any more than we would fail to observe their differences.

30. Thus individuals are grouped into species, and species are associated into genera. These groups constitute the bases of all the systems of classification in use, whether by artificial or natural methods.

CHAPTER III.

THE STAGES OF PLANT LIFE.

31. In its *earliest stage of life*, the plant is an *embryo* sleeping in the seed. It then consists of two parts, the *radicle* or rootlet, and the *plumule*. Both may be seen in the Pea, Bean, or Acorn. Besides the embryo, the seed contains also its food in some form, provided for its first nourishment.

32. When placed just beneath the surface of the soil, it absorbs moisture, which, with the genial warmth of Spring, awakens the embryo, and it begins to feed and grow. The radicle protrudes (Fig. 2, r), turns downward, seeking the dark damp earth, avoiding the air and light, and forms the root or *descending axis*. The plumule, taking the opposite direction (Fig. 3, p),

15

INTRODUCTION.

ascends, seeking the air and light, and expanding itself to their influence. This constitutes the stem or ascending axis, bearing the leaves. Thus the acorn germinates, and the Oak enters upon the second stage of its existence.

33. At first the ascending axis is merely a bud, that is, a growing point clothed with and protected by little scales, the rudiments of leaves. As the growing point advances and its lower scales gradually expand into leaves, new scales successively appear above. Thus the axis is always terminated by a bud.

34. The terminal bud expands into leaves, and the ascending axis (Fig. 4, p) increases in length and diameter. Besides the terminal bud, one is formed in the axil of each leaf. If none of the buds in the axils of the leaves develop, the plant at the end of the growing season will pre- it; 2, the radicle r, descending; 3 and 4, the radicle, r, desent a young oak, as

Acorn (seed of Quercus) germinating; 1, section showing the radicle (r)which is to become the root, and the two cotyledons (c) which are to nourish

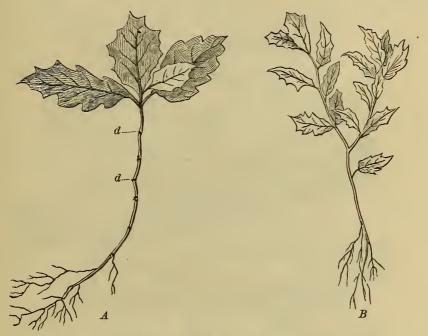

[14.

scending, and the plumule (p) ascending.

Fig. A, but if one should grow, the little tree would appear as in Fig. B.

35. During successive periods of growth the lateral buds develop, forming branches and branchlets, and season after season the main axis lengthens and increases in diameter, the branches multiply and enlarge, until the full-grown oak in all its beauty and majesty stands before us (Fig. C).

The student is struck with wonder and admiration as he watches these stages of growth; how is it, he asks, that the tiny plant which was nestling in the acorn has been changed into this gigantic oak? When he comes to study the cells and tissues of which this

A, A young oak at the end of the first season of growth, the markings on the stem, d, d, are the scars left by the fallen leaves; at each scar there is an undeveloped bud; some of these may grow during the next season, and develop into branches. B, A young oak at the end of the first season, one of the lateral buds having grown and produced a branch.

great tree is made up, his amazement will increase as he realizes the paucity of material and the magnitude of the structure; the insignificance of the beginning and the grandeur of the end. "The economy of causes and the prodigality of effects; the simplicity of laws and the complexity of results."

36. The tree is now complete, possessing the organs necessary to discharge the functions of plant growth. It has root, rootlets, stem, branches, branchlets, and

INTRODUCTION.

leaves. The root fastens it firmly in the ground; the rootlets take up liquids from the soil; the stem, branches, and branchlets are furnished with vessels and passages through which the fluids find their way to the leaves, where, under the influence of air and

C, Quercus alba.

sunlight, they are changed and fitted for plant food.

37. The next stage in the plant's life is the production of the flower. To accomplish this, a change takes place in the mode of development. Some of the buds, instead of extending the axes of the branchlets or forming new branchlets, expand their scales, producing crowded whorls, each succeeding whorl differing from the last; some of the parts possessing great delicacy

H, young branchlet of Q. alba, with aments, etc. D, a staminate (ξ) flower; E, the same; F, a pistillate (ξ) flower with five stigmas; G, vertical section of the same; J, branchlet with full-grown leaves and mature fruit; I, section of the acorn showing the two thick cotyledons and embryo at top.

of organization, and, frequently, marked beauty of color. (See Figures D, E, F, G, H, I, J.)

[16.

38. The next stage is the production of fruit, in which flowering is the first step; the showy parts of the flower soon wither and fall away; the pistil, having been fertilized, is left, and continues to grow and finally matures into the ripe Fruit (Figs. I, J).

We found the plant slumbering in the Seed; we have followed and watched its behavior through all the stages of its Life.

39. We have seen the seed placed in the damp soil, where it absorbed moisture, enlarged, ruptured its shell, sent forth a sprout, which began to increase in two directions, one part enlarged *downwards* into the earth and formed a *root*; the other part grew *upwards* and became a *stem*. The stem clothed itself with leaves, sent forth branches, and adorned itself with flowers. These several achievements were succeeded by the crowning act of vegetable life, the production of mature *seed* in which a new Plant reposes, in embryo.

CHAPTER IV.

TERM OR PERIOD OF PLANT LIFE.

40. Flowering and fruit-bearing is an exhausting process. If it occur within the first or second year of the life of the plant, it generally proves fatal. In all other cases, it is either immediately preceded or followed by a state of repose. Now, if flowering be prevented by nipping the buds, the tender annual may become perennial, as in the florist's Tree-mignonette. We distinguish plants, as to their term of life, into the annual (\mathbf{D}) , the biennial (\mathbf{D}) , and the perennial $(\mathbf{1})$. An annual (\mathbf{D}) herb is a plant whose en-

tire life is limited to a single season. It germinates from the seed in Spring, attains its growth, blossoms, bears fruit, and dies in Autumn; as the Flax, Corn, Morning-glory.

41. A biennial herb (O) is a plant which germinates and vegetates, bearing leaves only the first season, blossoms, bears fruit, and dies the second; as the Beet and Turnip. Wheat, Rye, etc., are annual plants; but when sown in Autumn, the sudden frost prevents flowering, and they become biennials.

42. Monocarpic herbs. — The Century-plant (Agave), the Talipot-palm, etc., are so called. They vegetate, bearing leaves only, for many years, accumulating materials and strength for one mighty effort in fructification, which being accomplished, they die. In some species the term of life depends on *climate* alone. The Castor-bean (*Ricinus*) is an annual herb in the Northern States, a shrub in the Southern, and a tree of large size in its native India. So Petunia, annual in our gardens, is perennial at home (in Brazil).

43. Perennial plants are such as have an indefinite duration of life, usually of many years. They may be either herbaceous or woody. Herbaceous perennials, or *perennial herbs* (24), are plants whose parts are annual above ground and perennial below. In other words, their roots or subterranean stems live from year to year, sending up annually, in Spring, flowering shoots which perish after they have ripened their fruit in Autumn; as the Lily, Dandelion, Hop.

44. Woody perennials usually vegetate several years, and attain well-nigh their ordinary stature before flowering; thenceforward they fructify annually, resting or sleeping in winter. They are known as trees (5), shrubs (5), bushes, and undershrubs (5) — distinctions founded on size alone.

45. A *shrub* (5), is a diminutive tree, limited to eighteen or twenty feet in stature, and generally divid-

ing into branches at or near the surface of the ground (Alder, Quince). If the woody plant be limited to a still lower growth, say about the human stature, it is called a bush (Snowball, Andromeda). If still smaller, it is an undershrub (5) (Whortleberry).

46. A *tree* (5) is understood to attain to a height many times greater than the human stature, with a permanent woody stem, whose lower part, the trunk, is unbranched.

47. As to age, some trees live only a few years, rapidly attaining their growth and rapidly decaying, as the Peach; others have a longevity exceeding the age of man; and some species outlive many generations. Age may be estimated by the number of wood-circles or rings seen in a cross-section of the trunk (§ 408), each ring being (very generally) an annual growth. Instances of great longevity are on record. See Class Book of Botany, §§ 99, 100. The monarch tree of the world is the Californian Cedar-Sequoia gigantéa. One which had fallen measured 26 feet in diameter, and 363 in length! The wood-circles of this specimen are unusually thick, yet count up to 1,330. Among those yet standing, are many of even greater dimensions, as beautiful in form as they are sublime in height - the growth, probably, of more than 2,000 years. One of the Sequoias is estimated at 1,500 years; another of these monsters, felled in 1875, had 2,130 rings; still another was estimated by Dr. Gray to be 3,200 years old. One of these monster trees has recently been discovered, in Tulare County, California, by an engineer of the Comstock mines, that measures more than 56 feet in diameter at a point seven feet from the ground.

48. Trees are again distinguished as *deciduous* (5) and *evergreen* (5) — the former losing their foliage in Autumn, and remaining naked until the following Spring; the latter retaining their leaves and verdure throughout all seasons. The Fir tribe (Coniferæ) includes nearly all the evergreens of the North; those of the South are far more numerous in kind — *e. g.*, the Magnolias, the Live-oaks, Holly, Cherry, Palmetto, etc.

PART FIRST.

STRUCTURAL BOTANY; OR, ORGANOGRAPHY.

+++

CHAPTER I.

THE FLOWER.

49. The flower is the immediate agent in the production of the seed with its embryo, and to this end its whole structure is designed. Moreover, its superior beauty attracts earliest attention, and an intimate knowledge of its organism is the *first* requisite in analysis and classification.

50. The flower may consist of the following members—the floral envelopes and the essential floral organs. The floral envelopes consist of one or more circles or whorls of leaves surrounding the essential organs. The outer of these whorls is called the calyx; and the other, if there be any, the corolla. The calyx may, therefore, exist without the corolla; but the corolla can not exist without the calyx.

51. Calyx is a Greek word signifying a cup. It is applied to the external envelope of the flower, consisting of a whorl of leaves with their edges distinct or united, usually green, but sometimes highly colored. The leaves or pieces composing the calyx are called *sepals*.

[19, 20.

52. Corolla is a Latin word signifying a little crown, applied to the interior envelope of the flower. It consists of one or more circles of leaves, either distinct or united by their edges, usually of some other color than green, and of a more delicate texture than the calyx. Its leaves are called *petals*.

53. Perianth ($\pi\epsilon\rho\iota$, around, $\check{a}\nu\theta\sigma\varsigma$, flower) is a word in common use to designate the floral envelopes as a whole, without distinction of calyx and corolla. It is used in description, especially when these two envelopes are so similar as not to be readily distinguished, as in the Tulip, Lily, and the Endogens generally; also where only one envelope exists, as in Phytolacca, Elm, etc.

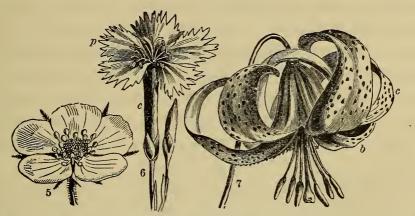

54. The essential floral organs stand within the circles of the perianth, and are so called because they are the immediate instruments in perfecting the seed, and thus accomplishing the final purposes of the flower. These organs are of two kinds, perfectly distinct in position and office—viz., the stamens and the pistils.

55. The stamens are those thread-like organs situated just within the perianth and around the pistils. Their number varies from one to a hundred or more; but the most common number is *five*. Collectively they are called the *andrœceum*.

56. The pistils (called also carpels) occupy the center of the flower at the absolute terminus of the flowering axis. They are sometimes numerous, often apparently but one, always destined to bear the seed. Collectively they are called the *gynæceum*.

57. The torus or receptacle is the axis of the flower, situated at the summit of the flower-stalk. It

commonly appears a flattened or somewhat convex disk, whose center corresponds to the apex of the axis. On this disk, as on a platform, stand the floral organs

5, Flower of the Strawberry. 6, Flower of the Pink. 7, Flower of the Lily (Lilium superbum). The pupil will point out the parts.

above described, in four concentric circles. The gynæceum (pistils) occupies the center; the andrœceum encircles it; the corolla is next without; and the calyx embraces the whole.

CHAPTER II.

PLAN OF THE FLOWER.

58. Such, in general, is the organization of the flower. It is simple enough in theory; and in most of the plants with which he meets, the student will easily recognize these several organs by name. But, in truth, flowers vary in form and fashion to a degree almost infinite. Each organ is subject to transformations, disguises, and even to entire extinction; so that the real nature of the flower may become an intricate and perplexing study.

20, 21.]

59. As we shall soon see, in all these variations there is method. They are never capricious or accidental, however much they may appear so. Unity in diversity is characteristic of Nature in all her departments, and eminently so in the flowers; and the first step in the successful study of them is to discover that unity—that simple idea of the floral structure in which all its diversities harmonize. Before flowers were created, that idea or type was conceived; and to possess it ourselves is a near approach to communion with the Infinite Author of Nature.

60. The typical flower, one that exemplifies the full idea of the floral structure, consists of four different circles of organs, as before described, placed circle within circle on the torus, and all having a common center. Such a flower must possess these five attributes—viz.: It must be

a, Complete; having the four kinds or sets of organs arranged in as many concentric circles. That it is *perfect*, having both kinds of the essential organs, is necessarily included under its completeness.

b, Regular; having the organs of the same name all similar and alike; that is, all the petals of one pattern, all the stamens alike in form, size, position, etc.

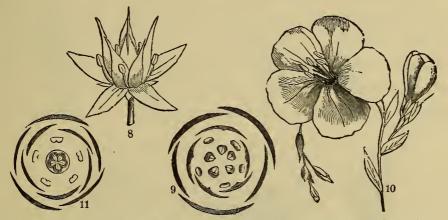

c, Symmetrical; having the same number of organs in each set or circle.

d, Alternating in respect to the position of the organs. This implies that the several organs of each set stand not opposite to, but alternating with the organs of the adjacent set; — the petals alternate with the sepals and stamens; the stamens alternate with the petals and pistils.

e, That the organs be *distinct*, all disconnected and free from each other.

61. This is the TYPE. But it is seldom fully realized in the flowers as they actually grow, although the tendency toward it is universal. Deviations occur in every imaginable mode and degree, causing that endless variety in the floral world which we never cease to admire. For example, in our pattern flowers (5, 6, 7), the pistils seem too few in the Pink and Lily, and the stamens too many in all of them.

62. The flower of the Flax (10) combines very nearly all the conditions above specified. It is complete, regular, symmetrical. Its organs are alternate and all separate; and (disregarding the slight cohesion of the pistils at their base) this flower well realizes our type. Admitting two whorls of stamens instead of one, we have a good example of our type in Stone-crop (Sedum ternatum), a little fleshy herb of our woods. Its flowers are both 4-parted and 5-parted in the same plant. See also the 12-parted flowers of the common Houseleek.

Flower of Crassula lactea, regular, symmetrical, organs distinct.
 Diagram showing its plan.
 Flower of the Scarlet Flax.
 Diagram of its plan.

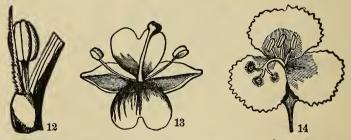

63. The flowers of Crassula (8), an African genus sometimes cultivated, afford unexceptionable examples, the sepals, petals, stamens, and pistils each being five in number, regularly alternating and perfectly separate.

CHAPTER III.

STUDY OF ANOMALOUS FLOWERS.

64. The true method of studying the flower is by comparing it with this type. So shall we be able, and ever delighted, to learn the nature of each organ in all its disguises of form, and to discern the features of the general plan even under its widest deviations. The more important of them are included under the following heads, which will be considered in order: 1, Variations of the radical number of the flower; 2, Deficiencies; 3, Redundancies; 4, Union of parts; 5, Irregularities of development.

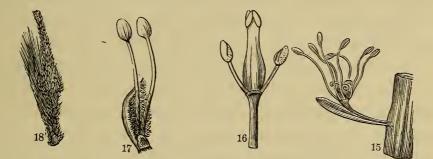

65. The radical number of the flower is that which enumerates the parts composing each whorl. Here nature seems most inclined to the number *five*, as in Grassula, Flax, Rose, and Strawberry. It varies, however, from one to twelve, and is expressed by word or sign as follows: di-merous, or 2-parted $\binom{2}{2}$, tri-merous

12, Flower of Hippuris, one-parted. 13, Flower of Circæa Lutetiana, $\sqrt{2}$. 14, Flower of Xyris, $\sqrt{3}$.

or 3-parted $(\sqrt[3]{})$, penta-merous or 5-parted $(\sqrt[5]{})$, etc. The flowers of Hippuris (12) are 1-parted, having but one stamen and one pistil. Those of Circæa (13) are 2-parted, having 2 sepals, 2 petals, 2 stamens, etc. Those of Xyris (14) are $\sqrt[3]{}$, having all the parts in 3s. Xyris is one of the Endogens. Trimerous flowers are characteristic of this great group of Plants, while pentamerous flowers commonly distinguish the Exogens.

66. **Deficiencies** often occur, rendering the flower *incomplete*. Such flowers lack some one or more entire sets of organs. When only one of the floral envelopes, the calyx, exists, the flower is said to be *apetalous* or monochlamydeous ($\chi\lambda a\mu i\varsigma$, a cloak), as in Elm, Phytolacca. These terms are also loosely applied to such plants as Rhubarb, Anemone, Liverwort, where the pieces of the perianth are all similar, although in two or three whorls. When the perianth is wholly wanting, the flower is said to be achlamydeous, or *naked*, as in Lizard-tail (15).

15, Flower of Saururus (Lizard-tail)—achlamydeous. 16, Flower of Fraxinus (Ash). 17, Flower of Salix (Willow), staminate—18, pistillate.

67. Imperfect flowers are also of frequent occurrence. They are deficient in respect to the essential organs. A sterile or staminate flower (denoted thus δ) has stamens withous pistils. A fertile or pistillate flower (\mathfrak{q}) has pistils without stamens. Such flowers being counterparts of each other, and both necessary to the perfection of the seed, must exist either together upon the same plant or upon separate plants of the same species. In the former case, the species is monæcious (ϑ), as in Oak; in the latter case, diæcious ($\vartheta \varphi$), as in Willow. The term diclinous, denot-

19, Pistillate flower of Balm-of-Gilead. 20, Staminate. 21, Begonia-a, staminate; b, pistillate.

ing either 8 or 3 9 without distinction, is in common use.

68. *A neutral flower* is a perianth or calyx only, having neither stamens nor pistils. Such are the rayflowers of many of the Compositæ, and of the cymes of Hydrangea, High-cranberry, etc., which in cultivation may all become neutral, as in the Snow-ball.

69. Unsymmetrical flowers.—The term symmetry, as used in Botany, refers to number only. A flower becomes unsymmetrical by the partial development of any set or circle in respect to the number of its organs. The Mustard family, called the Crucifers, afford good examples.

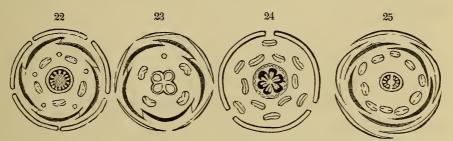

70. The flowers of Mustard, Cress, etc., are understood to be 4-merous (\sqrt{r}). The sepals are four, petals four, but the stamens are six and the styles but two. The stamens are arranged in two circles, having two of those in the outer circle suppressed or reduced to mere glands. Two of the carpels are also suppressed (429). In the Mint family and the Figworts one or three of the stamens are generally abortive. Here, while the flowers are \sqrt{r} , the stamens are four in some species and only two in others. The missing stamens, however, often appear in the guise of slender processes — the rudiments of stamens — proving in an interesting manner the natural tendency to symmetry.

71. In the $\sqrt[4]{}$ flowers of Poppy, the sepals are but two; in $\sqrt[4]{}$ Spring-beauty they are but two; in both cases too few for symmetry. In Larkspur (26) the $\sqrt[4]{}$ flowers have but four petals; and in Monk's-hood (29), also $\sqrt[4]{}$, the petals

are apparently but two, strangely deformed bodies. A careful inspection, however, generally reveals the other three, very minute, in their proper places, as displayed in the cut.

72. "Organs opposite" is a condition much less frequent than "organs alternate," but is highly interesting, as being sometimes characteristic of whole families. Thus in the Primrose, Thrift, and Buckthorn families, the stamens always stand opposite to the petals!

73. How happens this? Among the Primworts this question is solved in the flowers of Lysimachia

Diagrams.-22, Flower of Samolus, showing the rudimentary stamens alternating with the perfect. 23, Flower of a Labiate plant, showing the place of the deficient stamen. 24, Flower of Asarum-three sepals, twelve stamens, etc. 25, Flower of Saxifrage-two pistils, ten stamens, etc.

and Samolus, where we find a circle of five teeth (abortive filaments) between the petals and stamens, alternating with both sets, thus restoring the lost symmetry. Hence we infer that in such cases generally a circle of alternating organs has been either partially or wholly suppressed. In the Buckthorn, however, a different explanation has been given.

74. Redundancy. — The multiplication of organs is exceedingly common, and usually according to a definite plan. The increase takes place, as a rule, by circles, and consequently by multiples. That is, e. g., the stamens of a $\sqrt[3]$ flower, if increased, will be so by 3s; of a $\sqrt[5]$ flower by 5s, etc., — sometimes to the extent of twenty such circles.

[26, 27.

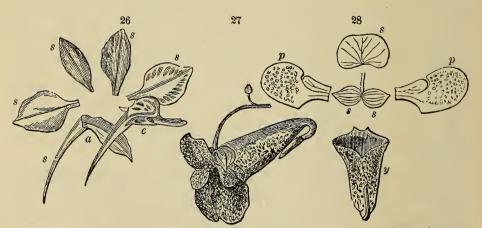

75. In the Crowfoot, Rose, and other families with numerous stamens, the arrangement is in crowded spirals, like the phyllotaxis of the plants with the internodes undeveloped. The carpels of the Crowfoot are also generally multiplied, yet often, on the contrary, diminished, as in the Pæony. In Rosaceæ, also, the stamens are generally multiplied, while the carpels exist in all conditions as to number. Thus in Strawberry they are multiplied, in the Apple they are regularly five, in Agrimony reduced to two, and in the Cherry to one. In Magnolia, the $\sqrt[4]{}$ flowers have three sepals in one circle, six or nine petals in two or three circles, numerous stamens and carpels in many circles of each. In the $\sqrt[4]{}$ flowers or Blood-root there are two sepals, eight petals, twenty-four stamens, and two carpels.

76. Chorisis.—In other cases, the organs seem to be increased in number by clusters, rather than by circles, as when in the same circle several stamens stand in the place of one—e.g., in Squirrel-corn, St. Johnswort, Linden. Such cases afford wide scope for conjecture. Perhaps each cluster originates by division, as the compound from the simple leaf; or as a tuft of axillary leaves; or thirdly, by a partial union of organs.

CHAPTER IV.

ANOMALOUS FLOWERS - CONTINUED.

77. Appendicular organs consist of spurs, scales, crown, glands, etc., and often afford excellent distinctive marks. The old term *nectary* was indiscrim-

23, Flower of Delphinium Consolida (common Larkspur), displaying s, s, s, s, s, the five sepals—a, the upper one spur; c, the corolla of four petals, here united into one and produced into a spur. 27, Flower of Impatiens fulva (Touch-me-not). 28, Displaying s, s, s, y, the four sepals, y being saccate and spurred; p, p, the two petals, both double, preserving the symmetry.

inately applied to all such organs, because some of them produced honey.

78. Spurs are singular processes of the flower, tubular and projecting from behind it. In Columbine each petal is thus spurred;—in Violet, one petal only; in Larkspur, two petals and a sepal, the spur of the latter inclosing that of the former. The curved spur of the Jewel-weed belongs to a sepal (27, 28).

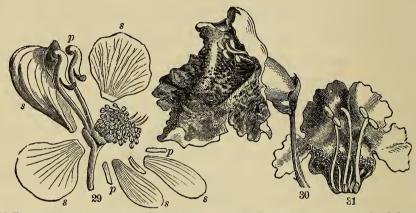

79. Scales are attached to the inner side of the corolla, usually upon the claw of the petals, as in Buttercups, or within the throat of the corolla tube, as in the Borrageworts. Similar appendages, when enlarged and conspicuous, constitute a *crown* in Catchfly, Corn-cockle, Narcissus. See also the *staminal crown* of the Silk-grass (Asclepias).

80. *Glandular bodies* are often found upon the receptacle in the places of missing stamens or carpels, or as abortive organs of some kind. Examples are seen in the Crucifers and Grape. In Grass-Parnassus they are stalked and resemble stamens.

81. The union of organs in some way occurs in almost every flower; and, more perhaps than any other cause, tends to disguise its plan and origin. The separate pieces which stood each as the representative of a leaf, now, by a gradual fusion, lose themselves in the common mass. Nevertheless, marks of this process are always discernible, either in parts yet remaining *free*, or in the *seams* where the edges were conjoined. The floral organs may unite by *cohesion* or *adhesion*.

82. Cohesion, when the parts of the same whorl are joined together; as the sepals of the Pink, the petals of Morning-glory, the stamens of Mallows, the carpels of Poppy. Adhesion, when the parts of different whorls are conjoined; as the stamens with the corolla in

Phlox, with the pistils in Milkweed, Lady's-slipper; or calyx with ovary, in Apple or Wintergreen (Gaultheria). The adjective *free* is used in a sense opposite to adhesion, implying that the organ is inserted on (or grows out of) the receptacle, and otherwise separated from any other kind of organ. The adjective *distinct* is opposed to cohesion, implying that like organs are separate from each other. More of this in another chapter.

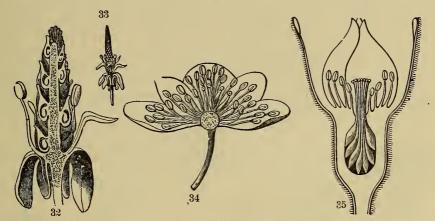

29, Flower of Aconitum Napellus displayed; s, s, s, s, the five sepals, the upper one hooded; <math>p, p, p, the five petals, of which the two upper are nectaries covered by the hood, and the three lower very minute. 30, Flower of Catalpa, 2-lipped, 5-lobed. 31, Corolla laid open, showing the two perfect stamens and the three rudimentary.

83. Irregular development. — Our typical flower is regular; and observation proves that all flowers are actually alike regular in the early bud. Those inequalities or "one-sided" forms, therefore, which characterize certain flowers, are occasioned by subsequent irregular growth from a regular type. The irregularity of flowers occurs in a thousand ways and modes; — in the unequal *size* of like organs; in their dissimilar *forms* and *positions*; in their unequal *cohesions*, and in their partial *suppressions*. So in the Violet (50), Monk's-hood (29), Catalpa (30), the Labiates (69), the Pea tribe (59), etc.

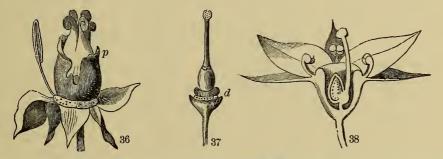

28, 29.] STUDY OF ANOMALOUS FLOWERS.

84. The torus, or receptacle, is sometimes strangely modified. In the little Myosurus (32), in some Buttercups, and in the Tulip-tree we find a lengthened or *spindle-shaped torus* — lengthened according to the

32, Flower (magnified) of Myosurus; a vertical section showing its elongated torus, etc. 33, The same, natural size. 34, Flower of Isopyrum biternatum; vertical section, showing the convex or globular torus, etc. 35, Flower of Rose, showing its excavated torus.

nature of a branch (§ 35), and all covered with the multiplied pistils. On the contrary, we have in the Rose (35) and Lady's-mantle (38), an excavated torus, within which the carpels are held, while the other organs are borne upon its elevated rim.

36, Pæonia Moutan, showing its very large disk (d) sheathing the ovaries (p). 37, Pistil of the Lemon, with its base surrounded by the disk, d. 58, Section of flower of Alchemilla, showing its single simple pistil, large disk, and excavated torus.

85. The disk is a portion of the receptacle raised into a rim somewhere in the midst of the whorls. It is found between the ovary and stamens in Pæony

35

and Buckthorn. It bears the stamens in Maple and Mignonette, and crowns the ovary in the Umbelliferæ.

86. Combined deviations are quite frequent, and sometimes obscure the typical character of the flower to such a degree as to require close observation in tracing it out. The study of such cases is full of both amusement and improvement. For example, the $\sqrt[4]{}$ Poppy has suppression in the calyx, multiplication in the stamens and carpels, and in the latter cohesion also. The $\sqrt[4]{}$ Sage has cohesion and irregularity in the calyx, every kind of irregularity in the corolla, suppression and irregularity in the stamens, suppression and cohesion in the pistils. The $\sqrt[3]{}$ Cypripedium is perfectly symmetrical, yet has irregular cohesion in the calyx, great inequality in the carpels.

(In this way let the pupil analyze the deviations in the flower of Geranium, Hollyhock, Moth-mullein, Larkspur, Sweetbrier, Touch-me-not, Petunia, Snapdragon, Violet, Polygala, Squirrel-corn, Orchis, Henbit, Monk's-hood, Calceolaria, etc.)

CHAPTER V.

THE FLORAL ENVELOPES, OR PERIANTH.

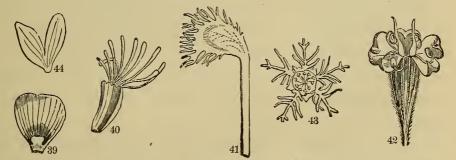

87. In our idea of the typical flower, the perianth consists of two whorls of expanded floral leaves encircling and protecting the more delicate essential organs in their midst. As a rule, the outer circle, calyx, is green and far less conspicuous than the inner circle of highly colored leaves—the corolla. But there are many exceptions to this rule. Strictly speaking, the calyx and corolla are in no way distinguishable except by *position*. The *outer* circle is the calyx, whatever be its form or color; and the *inner*, if there be more than one, is the corolla.

88. Both blade and petiole are distinguishable in the floral leaves, especially in the petals. The blade, or expanded part, is here called limb, or lamina; the petiolar part, when narrowed into a stalk, is called the claw. In form, or outline, there is a general resem-

THE FLORAL ENVELOPES.

blance between the limb and the leaf. It is ovate, oval, lanceolate, obcordate, orbicular, etc. In margin it is generally entire. (See § 308.)

89. Some peculiar forms, however, should be noticed, as the bilobate petal of the Chickweed (44), the pinnatifid petal of Miterwort (43), the inflected petal of the Umbelliferæ (42), the fan-shaped petal of Pink, the fringed (fimbriate) petal of Campion (Silene stellata) (40), the hooded sepal of Napellus (29), the saccate

Forms of petuls.—39, Buttercup, showing the scale at base. 40, Mignonette, fringed at top. 41, Silene stellata, fringed and unguiculate. 42, Flower of Osmorhiza longistylis, petals inflected. 43, Flower of Mitella diphylla, petals pectinate-pinnatifid. 44, Petal of Cerastium nutans, 2-cleft.

petal of Calceolaria, Cypripedium (71). The limb is, moreover, often distorted into a true nectary, spurred (see § 78), or otherwise deformed, as in Napellus, Coptis, etc.

90. We have seen that the floral organs are often in various ways united. A calyx with its sepals united into a tube or cup was formerly said to be *monosepal*ous, and a similar corolla was called *monopetalous*; gamosepalous and gamopetalous are now substituted for those words. Polysepalous is applied to a calyx with distinct sepals, a corolla with separate petals is polypetalous.

Gamosepalous and gamopetalous have in Germany given place to the more appropriate words synsepalous and sympetalous.

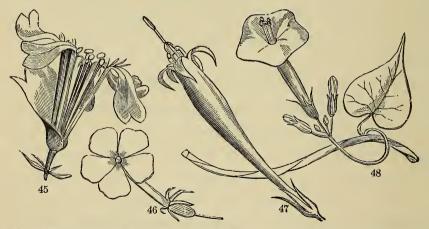

30, 31.]

Polysepalous and *polypetalous* have also been superseded by the more accurate terms *aposepalous* and *apopetalous*.

91. The gamosepalous calyx, or gamopetalous corolla, although thus compounded of several pieces, is usually described as a simple organ, wheel-shaped, cupshaped, tubular, according to the degree of cohesion. The lower part of it, formed by the united claws, whether long or short, is the *tube*; the upper part, composed of the confluent laminæ, is the *border*, or *limb*; the opening of the tube above is the *throat*.

92. The border is either lobed, toothed, crenate, etc., by the distinct ends of the pieces composing it, as in the calyx of Pink, the calyx and corolla of Primula, Phlox, and Bellwort, or it may become, by a complete lateral cohesion, entire, as in the Morningglory. Here the compound nature of the organ is shown by the seams alone.

93. A terminal cohesion, where summit as well as sides are joined, forming a cap rather than cup, rarely occurs, as in the calyx of the garden Eschscholtzia and the corolla of the Grape.

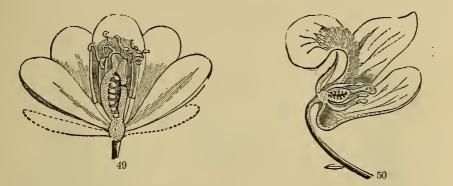

45, Flower of Saponaria (Bouncing Bet); petals and claws quite distinct. 46, Phlox; claws united, with lamina distinct. 47, Spigelia (Pink-root), petals still further united. 48, Quamoclit coccinea; petals united throughout.

94. The modes of adhesion are various and important, furnishing some of the most valuable dis-

tinctive characters. An organ is said to be *adherent* when it is conjoined with some dissimilar organ, as stamen with pistil. All the organs of our typical flower are described as *free*.

95. The term hypogynous ($\delta \pi \omega$, under, $\gamma v \nu \eta$, the pistil) is an adjective in frequent use, denoting that

the organs are inserted into the torus *under*, or at the base of the ovary or pistil. Organs so situated are, of course, in the normal condition and *free*, there being no adhesions. Observe and explain the sections of Jeffersonia and Violet (49, 50).

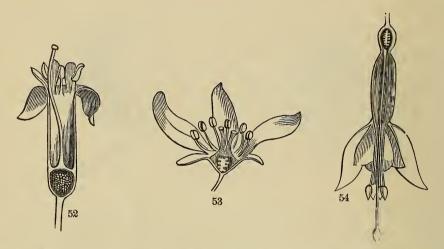

96. Perigynous ($\pi\epsilon\rho i$, around) is a term applicable to the stamens and petals only, and implies that they are (apparently) inserted on the calyx or corolla *around* the free ovary. In Phlox, the stamens are perigynous on the corolla-tube. In Cherry and Plum, the

petals and stamens are perigynous on the calyx-tube. (See 51.)

97. Epigynous ($i\pi i$, upon) denotes that the organs

32, 33.]

are inserted (apparently) *upon* the ovary, as appears in Apple, Pear, Caraway, Sunflower. (See cuts 42, 51.) The common phrases "calyx superior," "ovary inferior," have the same signification as "calyx epigynous," all implying the apparent insertion of the organs upon or above the ovary. In this condition

52, Ribes aureum and (54) Fuchsia gracilis; ovary inferior or adherent, stamens and petals epigynous (above the adherent ovary). 53, Saxifraga Virginiensis; ovary half-superior.

all the organs, or at least the calyx, are blended with the ovary to its top. Hence the phrases "ovary adherent," or "calyx adherent," have also the same meaning, and are preferable, because in accordance with the fact. (Explain the sections of Golden Currant and Ear-drop -52, 54.)

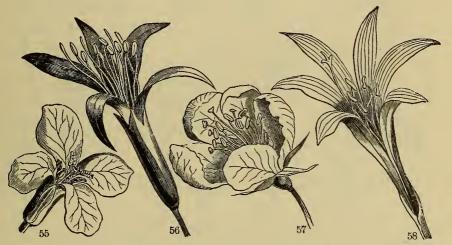

98. Calyx inferior or free, ovary superior or free, are all phrases of the same import as calyx hypogynous. Between the two conditions, calyx superior and calyx inferior, there are numerous gradations, of which one only is defined, to wit, calyx half-superior, as exemplified in the Mock-orange and Saxifrage (53).

40

CHAPTER VI.

FORMS OF THE PERIANTH.

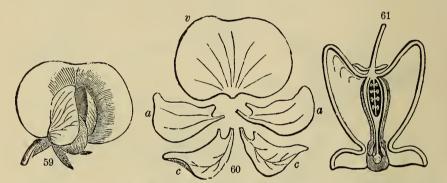

99. The innumerable forms of the perianth, whether calyx or corolla, or both, are first to be distinguished as POLYPETALOUS or GAMOPETALOUS, and secondly, as *regular* or *irregular*. The POLYPETALOUS-*regular* forms are typified by the four figures below, and described in the following paragraphs.

Forms of corollas.-55, Cheiranthus (Stock). 56, Silene regia (Scarlet Catchfly). 57, Pyrus coronata. 58, Amaryllis (Atamasco Lily).

100. First, *Cruciform* (*crucis*, of a cross) or crossshaped corollas consist of four long-clawed petals, placed at right angles to each other, as in Mustard, Wall-flower (55). 2d, *Caryophyllaceous* or pink-like corollas consist of five petals with long, erect claws, and spreading laminæ; as in the Pink (56). 3d, *Rosaceous* or rose-like corollas are composed of five short-clawed open petals; as in the Rose (Fig. 57). 4th, *Liliaceous* flowers, like the Lilies, consist of a six-leaved perianth; each leaf gradually spreading so as to resemble, as a whole, the funnel-form (58).

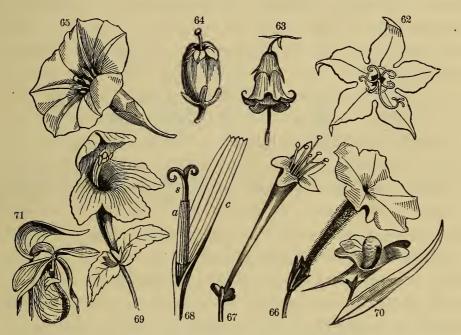

101. Polypetalous-irregular forms (59, 71) may generally be referred to these two types—the papilionaceous and the orchidaceous. The *Papilionaceous* (*papilio*, butterfly) corolla or flower may consist of five dissimilar petals, designated thus: the upper, largest, and exterior petal is the banner (*vexillum*); the two lateral, half-exterior, are the wings (*alæ*); the two lower, interior petals, often united at their lower margin, are the keel (*carina*). The flowers of the Pea,

59, Papilionaceous flower of the Pea. 60, Displayed: v, the vexillum; $a_r a$, the alæ; c, c, the carina. 61, Section of flower of Dicentra Cucullaria.

Locust, Clover, and of the great family of the Leguminosæ in general are examples. The Orchidaceous is a form of the perianth peculiar to the Orchis, and to that large and singular tribe in general. It is a 6-parted double perianth, very irregular, characterized chiefly by its *lip*, which is the upper petal (lower by the twisting of the ovary) enlarged and variously deformed.

102. Gamopetalous-regular perianths (62-67) may include mainly the following forms, although some of them may become irregular. First, *Rotate*, wheelshaped, or star-shaped, is a form with tube very short, if any, and a flat, spreading border; as the calyx of Chickweed, corolla of Trientalis, Elder. It is sometimes a little irregular, as in Mullein. 2d, *Cup-shaped*, with pieces cohering into a concave border, as in the calyx of Mallows, corolla of Kalmia, etc. 3d, *Campanulate*, or bell-shaped; when the tube widens abruptly at base and gradually in the border, as in

Forms of corollas.—62, Campanula Americana; rotate. 63, Campanula divaricata. 64, Andromeda; urceolate. 65, Convolvulus (Morning-glory). 66, Petunia. 67, Lonicera sempervirens (Honeysuckle). 68, Dandelion; ligulate corolla (c), 5-toothed; *a*, five anthers united into a tube around *s*, the style. 69, Synandra grandiflora, ringent, upper lip 2-lobed, lower 3-lobed. 70, Linaria (yellow Snapdragon), personate. 71, Cypripedium acaule, orchidaceous.

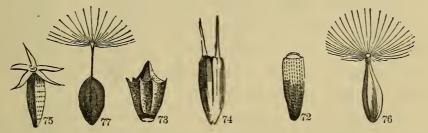

the Harebell, Canterbury-bell. 4th, Urceolate, urnshaped; an oblong or globular corolla with a narrow opening, as the Whortleberry, Heath. 5th, Funnelform (infundibuliform), narrow-tubular below, gradually enlarging to the border, as Morning-glory. 6th, Salver-form (hypocrateriform), the tube ending abruptly in a horizontal border, as in Phlox, Petunia, both of which are slightly irregular. 7th, Tubular, a

35, 36.]

cylindraceous form spreading little or none at the border; as the calyx of the Pink, corolla of the Honeysuckle. It is often a little curved. Tubular flowers are common in the Compositæ, as the Thistle, Sunflower, when they are often associated with the next form, the *ligulate*.

103. Gamopetalous - irregular perianths may be either ligulate or labiate. The ligulate corolla (ligula, tongue) is formed as if by splitting a tubular corolla on one side. The notches at the end plainly indicate the number of united petals composing it, as also do the parallel longitudinal seams. (See Figs. 68, 69.) The *labiate*, bilabiate or lip-shaped, resembling the mouth of some animal, is a very common form, resulting from the unequal union of the parts, accompanied with other irregularities. In the labiate corolla three petals unite more or less to form the lower lip, and two to form the upper. In the calyx, when bilabiate, this rule is reversed, according to the law of alternation of organs; two sepals are united in the lower lip and three in the upper, as seen in the Sage and the Labiate Order generally. Labiate flowers are said to be *galeate* or helmeted when the upper lip is concave, as in Catmint; *ringent* or gaping when the throat or mouth is wide open (69); personate or masked when the throat is closed as with a *palate*, like the Snapdragon (70).

104. Certain reduced forms of the perianth should be noticed in this place. The Pappus ($\pi i \pi \pi \sigma c$, grandfather, alluding to his gray hairs) is the hair-like calyx of the florets of the Compositæ, and other kindred Orders. The florets of this Order are collected into heads so compactly that the calyxes have not room for expansion in the ordinary way. The pappus is commonly persistent, and often increases as the fruit matures, forming a feathery sail to waft away the seed through the air, as in the Dandelion and Thistle. It varies greatly in form and size, as seen in the cuts; sometimes consisting of scales, sometimes of hairs, again of feathers or bristles. Sometimes it is mounted on a stipe, which is the beak of the fruit.

Cypsela (incorrectly called akenium) of the Compositæ, with various forms of pappus. 72, Ecripta procumbens, no pappus. 73, Ambrosia trifida. 74, Helianthus grosse-serratus, pappus 2-awned. 75. Ageratum conizoides, pappus of five scales. 76, Mulgedium, capillary pappus—cypsela slightly rostrate. 77, Lactuca elongata, rostrate cypsela.

105. Again: the calyx, or the limb of the calyx, is reduced to a mere rim, as seen in the Umbelliferæ. In the Amentaceous Orders, the whole perianth diminishes to a shallow cup, as in the Poplar and Willow, or altogether disappears, as in the Birch, Ash, and Lizard-tail (15, 16).

106. Setæ, meaning bristles in general, is a term specifically used to denote the reduced perianth of the sedges. In the Bog-rush (Scirpus) there is, outside the stamens, a circle of six setæ, representing a 6-leaved perianth (78). In the Cotton-grass (Eriophorum) the setæ are multiplied and persistent on the fruit, becoming long and cotton-like.

107. **Perigynium** is the name given to the urceolate perianth of Carex, investing the ovary, but allowing the style to issue at its summit. It is composed

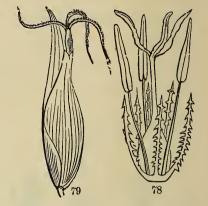

37, 38.]

of two united sepals, as indicated by the two teeth at the top (79).

108. Glumes and pales represent the floral envelopes, or rather the involucre

of the Grasses (436). Their alternating arrangement clearly distinguishes them from a perianth.

109. The duration of the calyx and corolla varies widely, and is marked by certain general terms. It is *caducous* when it falls off immediately, as the calyx of Poppy, corolla of Grape; *deciduous* when it falls with the stamens, as in most plants; and *per*-

78, Flower of Scirpus lacustris, magnified; consisting of six setæ, three stamens, three pistils united, except the stigmas. 79, Flower of Carex rivularis Q, with g, its glume, p, its bottle-shaped perigynium, 2-toothed at top, enveloping the triple ovary; stigmas, three.

sistent, if it remain until the fruit ripens, as the calyx of Apple. If it continue to grow after flowering, it is accrescent; and if it wither without falling off, it is marescent.

CHAPTER VII.

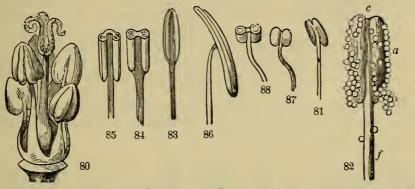

+++

OF THE ESSENTIAL ORGANS. -- THE STAMENS.

110. Within the safe enclosure of the floral envelopes stand the essential organs—the stamens and pistils—clearly distinguishable from the perianth by their more slight and delicate forms, and from each other by various marks. In the complete flower the ANDRŒCEUM next succeeds the corolla in the order of position, being the third set, counting from the calyx.

46

111. A perfect stamen consists of two parts — the *filament*, corresponding with the petiole of the typical leaf; and the *anther*, answering to the blade. Within the cells of the anther the *pollen* is produced, a substance essential to the fertility of the flower. Hence the anther alone is the essential part of the stamen.

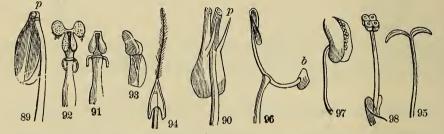

80, Andræcium and gynæcium of Frankenia (after Peyer). 81, Stamen (adnate) of Morning-glory. 82, Same enlarged, with pollen grains discharged; f, filament; a, a, anther, 2-lobed; c, top of the connectile. 83. Ranunculus. 84, Same, cut transversely. 85, Iris, cut transversely (extrorse). 86, Amaryllis, versatile. 87, Larkspur, innate. 88, Same, cut.

112. The filament (*filum*, a thread) is the stalk supporting the anther at or near its top. It is ordinarily slender, yet sustaining itself with the anther in position. Sometimes it is *capillary*, and pendulous with its weight, as in the Grasses.

113. The anther is regularly an oblong body at the summit of the filament, composed of two hollow parallel lobes joined to each other and to the filament by the *connectile*. In front of the connectile, looking toward the pistil, there is usually a furrow; on its back a ridge, and on the face of each lobe a seam, the usual place of *dehiscence* or opening, all running parallel with the filament and connectile.

114. The stamen, as thus described, may be considered regular or typical in form, and is well exemplified in that of the Buttercup (Fig. 83). But the variations of structure are as remarkable here as in other organs, depending on such circumstances as; 1st, The attachment of filament to anther. This

may occur in three ways. The anther is said to be *innate* when it stands centrally erect on the top of the filament; adnate when it seems attached to one side of the filament; *versatile* when connected to the top of the filament by a single point in the back. 2d, The modes of Dehiscence, or opening, are also three - viz., valvular, where the seam opens vertically its whole length, which is the usual way; *porous*, where the cells open by a chink or pore, usually at the top, as in Rhododendron and Potato; opercular, when by a lid opening upward, as in Sassafras, Berberis (92). 3d, The facing of the anther is also an important character. It is *introrse* when the lines of dehiscence look toward the pistil, as in Violet; extrorse when they look outward toward the corolla, as in Iris. 4th, The connectile is usually a mere prolongation of the filament, terminating, not at the base, but at the top of the anther. If it fall short, the anther will be *emarginate*. Sometimes it outruns the anther, and tips it with a terminal appendage of some sort, as in Violet, Oleander, and Paris. Again, its base may be dilated into spurs, as in two of the stamens of Violet. 5th, If the connectile be laterally dilated, as we see gradually done in the various species of the Labiate Order, the lobes of the anther will be separated, forming two dimidiate (halved) anthers on one filament, as in Sage and Brunella. Such are, of course, 1-celled (96).

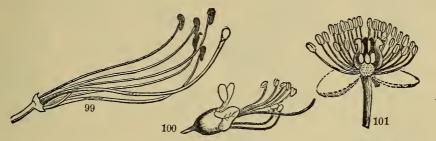

Peculiar forms of stamens.—89, Pyrola rotundifolia; p, dehiscence by pores at top. 90, Vaccinium uliginosum; p, dehiscence. 91, Berberis aquifolium, anthers opening (92) by valves upward. 93, Anther of Violet, introrse, with an appendage at top. 94, Oleander, sagittate, appendaged. 95, Catalpa, lobes of anther separated. 96, Sage, lobes of anther widely separated, on stipes; b, barren lobe without pollen. 97, Malva, anther 1-celled. 98, Ephedra (after Peyer), anther 4-celled.

115. The cells of the anthers are at first commonly four, all parallel, becoming two only at maturity. In some plants the four are retained, as in the anthers of Ephedra (98). In others, as Mallows, all the cells coalesce into one (97).

116. Appendages of many kinds distinguish the stamens of different species. In the Ericaceæ there are horns, spurs, tails, queues, etc. In Onions and Garlic, the filament is 2 or 3 forked, bearing the anther on one of the tips. Sometimes a pair of appendages appear at base, as if stipulate. It is often conspicuously clothed with hairs, as in Tradescantia. (See 89-94.)

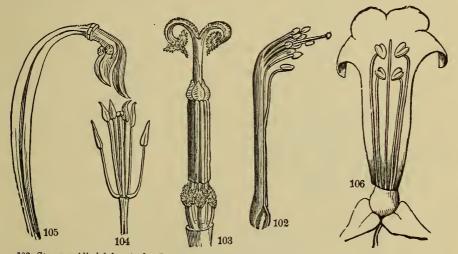

117. *Staminodia*, or sterile filaments with abortive anthers or none, occur singly in many of the Figworts and Labiates, or in entire whorls next within the petals, alternating with them, as in Loose-strife. The curious fringes of the Passion-flower are regarded as composed of staminodia (112).

118. The number of the stamens is said to be *defi*nite when not exceeding twenty, as is sometimes definitely expressed by such terms as follow, compounded of the Greek numerals—viz., monandrous,

Essential organs.—99, Rhododendron, five stamens (s), one pistil (p), oblique or slightly irregular. 100, Flower of Æsculus (Buckeye), regular, 5-toothed calyx (c), very irregular 4-petalled corolla, seven stamens unequal, one style (s). 101, Flower of Hydrastis ; s, sepals deciduous.

having one stamen to each flower; *diandrous*, with two stamens; *petandrous*, with five stamens. If the number exceeds twenty, it is said to be *indefinite* (denoted thus, ∞) or *polyandrous*.

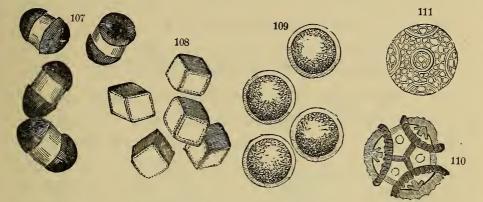

102. Stamens (diadelphous) of a Leguminous plant. 103, Stamens (syngenesious) of a Composite ; f, filaments distinct ; a, anthers united ; s, stigmas revolute, etc. 104, Tetradynamous stamens of a Crucifer. 105, Gynandrous column of Cypripedium ; o, ovary ; r, torus ; s, sterile stamen ; a, two pollinia ; c, stigma. 106, Didynamous stamens of Lophospermum.

119. The position or insertion of the stamens (§ 55) may be more definitely stated here as hypogynous, on

the receptacle below the ovaries; perigynous, on the calyx around the ovary; epipetalous, on the corolla, as in Phlox; epigynous, on the ovary at its summit, and gynandrous ($\gamma \nu \nu \eta$, pistil, $\dot{a}\nu\delta\rho\epsilon\varsigma$, stamens) on the pistil, that is, when the stamens are adherent to the style, as in Orchis. Inequality in length is definitely marked in two cases, as tetradynamous ($\tau\epsilon\tau\rho\dot{a}\varsigma$, four, $\delta\nu\nu a\mu\iota\varsigma$, power) when the stamens are six, whereof four are longer than the other two,' as in all the Crucifers; didynamous, where the stamens are four, two of them longer than the other two, as in all the Labiates (104, 106).

120. Cohesion is as frequent with stamens as with petals. They are monadelphous $(\dot{a}\delta\epsilon\lambda\phi\delta\varsigma)$, a brother) when they are all united, as in Mallow, into one set or brotherhood by the filaments; diadelphous in two sets, whether equal or unequal, as in Pea, Squirrelcorn; polyadelphous, many sets, as in St. Johnswort; and syngenesious, when they are united by their anthers, as in the Compositæ. Finally, the absence of the stamens altogether, whether by abortion, as in the φ flowers of Veratrum, or by suppression, as in Oak, occurs in various modes, rendering the plant monœcious (ϑ), diœcious ($\vartheta \ \varphi$), or polygamous ($\vartheta \ \varphi$), as already explained (§ 67).

121. The pollen is in appearance a small, yellow dust, contained in the cells of the anther. When viewed with the microscope, it appears as grains of various forms, usually spheroidal or oval, sometimes triangular or polyhedral, but always of the same form and appearance in the same species. Externally they are curiously, and often elegantly figured with stripes, bands, dots, checks, etc. Each grain of pollen is a membranous cell or sac containing a fluid. Its coat is double-the outer is more thick and firm, exhibiting

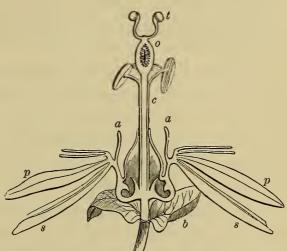

Pollen grains .- 107, Pinus larico. 108, Basella rubra. 109, Ranunculus repens. 110, Scolymus grandiflorus. 111, Passiflora incarnata.

one or more breaks where the inner coat, which is very thin and expansible, is uncovered. In the fluid

are suspended molecules of inconceivable minuteness. said to possess a tremulous motion. When the membrane is exposed to moisture, it swells and bursts, discharging its contents.

122. In the Ortribe, the pollen

112, Section of the Passion-flower (Passiflora coerulea); b, bracts chids and Silkweed of the involucre; s, sepals; p, petals; a, a, staminodia or sterile filaments; c, stipe; o, ovary; d, stamens; t, stigmas.

grains do not separate as into a dust or powder, but all cohere into masses called POLLINIA, accompanied by a viscid fluid.

CHAPTER VIII.

OF THE ESSENTIAL ORGANS. - THE PISTILS.

123. The Gynæceum occupies the center of the flower, at the termination of the axis. It consists regularly of a circle of distinct pistils (§ 60), symmetrical in number with the other circles. It is subject to great variation. The pistil may be distinct and *simple*, as in Columbine, or coherent in various degrees into a *compound* body, as in St. Johnswort. Also instead of being free and superior, as it regularly should be, it may adhere to the other circles, as already explained (§ 97), and become *inferior*; that is, apparently placed below the flower, as in the Currant (52).

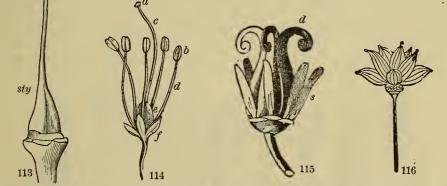

124. The number of the pistils is by no means confined to the radical of the flower. They may be increased by multiples, becoming a *spiral* on a lengthened receptacle, as in Tulip-tree, or still remaining a circle, as in Poppy. On the other hand, they may be reduced in number often to one, as in Cherry and Pea. Certain terms are employed to denote the number of pistils in the flower, such as *monogynous*, with one pistil; *trigynous*, with three; *polygynous*, with many, etc.

125. The simple pistil may usually be known from the compound, by its one-sided forms—having two sides similar and two dissimilar. If the pistils appear distinct, they are all simple, never being united into more than one set, as the stamens often are. The

THE ESSENTIAL ORGANS.

parts of a simple pistil are three — the ovary (o, 113) at base, the stigma (s) at the summit, and the style (sty) intervening. Like the filament, the style is not essential; and when it is wanting, the stigma is sessile upon the ovary, as in Anemone (116). In order to understand the relation of these parts, we must needs first study—

126. The morphology of the pistil. -As

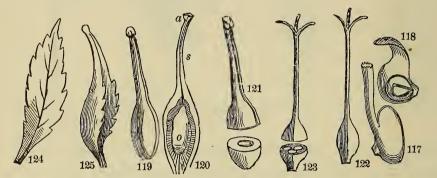

113, Pistil of Tobacco. 114, Pistil, stamens, and calyx of Azalea. 115, Trillium-stigmas (d) and anthers (s) nearly sessile. 116, Pistils of Rue Anemone (A. thalictroides)-stigmas sessile.

before stated, the pistil consists of a modified leaf called a carpel ($\kappa a \rho \pi \delta \varsigma$, fruit), or carpellary leaf. This leaf is folded together toward the axis, so that the upper surface becomes the inner, while the lower becomes the outer surface of the ovary. By this arrangement two sutures or seams will be formed—the dorsal, at the back, by the midvein; the ventral, in front, by the joined margins of the leaf. This view of the pistil is remarkably confirmed and illustrated by the flowers of the Double Cherry (124, 125), where the pistil may be seen in every degree of transition, reverting toward the form of a leaf. This carpellary leaf stands in the place of the pistil, having the edges infolded toward each other, the midvein prolonged and dilated at the apex, as shown in 125.

44, 45.]

127. The placentæ are usually prominent lines or ridges extending along the ventral suture within the cell of the ovary, and bearing the ovules. They are developed at each of the two edges of the carpellary leaf, and are consequently closely parallel when those edges are united, forming one double placenta in the cell of each ovary.

128. The *simple carpel*, with all its parts, is completely exemplified in the Pea-pod. When this is laid open at the ventral suture, the leaf form becomes manifest, with the peas (ovules) arranged in an alternate order along each margin, so as to form but one row when the pod is closed. In the pod of Columbine (127), the ovules form two distinct rows, in the simple Plum carpel, each margin bears a single ovule; and in the one-ovuled Cherry, only one of the margins is fruitful.

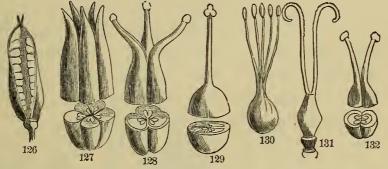

117, Simple pistil of Strawberry, the style lateral. 118, Simple pistil of Crowfoot, cut to show the ovule. 119, Simple pistil of the Cherry. 120, Vertical section showing the ovule (0), style (s), stigma (a). 121, Cross-section of the same. 122, Compound pistil of Spring-beauty. 123, Cross-section of the same, showing the three cells of the ovary. 124, Expanded carpellary leaf of the Double Cherry. 125, The same partly folded, as if to form a pistil.

129. The *stigma* is the glandular orifice of the ovary, communicating with it either directly or through the tubiform style. It is usually globular and terminal, often linear and lateral, but subject to great variations in form. It is sometimes double or halved, or 2-lobed, even when belonging to a single carpel or to a simple style, as in Linden, where these carpels are surmounted by three pairs of stigmas.

130. The *compound pistil* consists of the united circle of pistils, just as the monopetalous corolla con-

sists of the united circle of petals. The union occurs in every degree, commencing at the base of the ovary and proceeding upward. Thus in Columbine, we see the carpels (pistils) distinct; in early Saxifrage, cohering just at base; in Pink, as far as the top of the ovaries, with styles distinct; in Spring-beauty, to the top of the styles, with stigmas distinct; and in Rhododendron, the union is complete throughout.

126, Ovary (follicle) of Larkspur, composed of a single carpellary leaf. 127, Ovaries of the Columbine, five, contiguous but distinct. 128, Compound ovary of Hypericum, of carpels united below with distinct styles. 129, Ovary of another Hypericum of three carpels completely united. 130, Ovary of Flax; carpels five, united below, distinct above. 131, Dianthus (Pink). 132, Saxifraga.

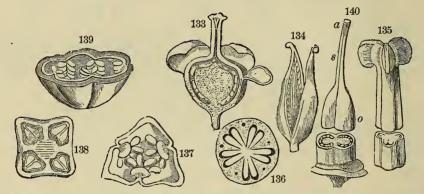

131. To determine the number of carpels in a compound ovary is an important and sometimes difficult matter. It may be known: 1st, By the number of the styles; or, 2d, By the number of the free stigmas (remembering that these organs are liable to be halved -\$ 129); or, 3d, By the lobes, angles, or seams of the ovary; or, 4th, By the cells; or, 5th, By the placentæ. But in Dodecatheon, etc., all these indications fail, so perfect is the union, and we are left to decide from analogy alone.

132. The student will notice two very diverse *modes of cohesion* in the carpels of the compound ovary. First and regularly, the carpels may each be closed, as when simple, and joined by their sides and

[46, 47

fronts; as in St. Johnswort (129) and Lily (171). In this case, he may prove the following propositions. 1st. The compound ovary will have as many cells as carpels. 2d. The partitions between the cells will be double, and alternate with the stigmas. 3d. A partition dividing the cell of a single carpel must be a *false* one; as occurs in Flax (136). 4th. The PLA-CENTÆ, as well as the ventral suture, will be *axial*.

133. Again: the carpels may each be opened and conjoined by their edges, as are the petals of a gamopetalous corolla. So it is in the ovary of Violet (137) and Rock-rose (139). In this case, 1st. There will be no partition (unless a false one, as in the Crucifers), and but one cell; 2d. The *Placentce* will be *parietal*, *i. e.*, on the wall of the cell (*paries*, a wall).

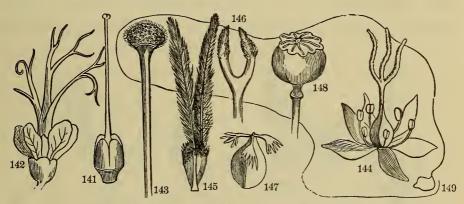

123, Samolus Valerandi, section of flower showing the free axial placenta. 134, Ovary of Scrophulariaceæ. 135, Ovary of Tulip. 136, Cross-section of ovary of Flax, 5-celled, falsely 10-celled. 137, Ovary of Violet, 1-celled. 138, Ovary of Fuchsia, 4-celled. 139, Ovary of Rock-rose, 1-celled, 5-carpelled. 140, Gentianaceæ, 2-valved, 1-celled.

134. Between the two conditions of *axial* (or central) and *parietal placenta*, we find all degrees of transition, as illustrated in the different species of St. Johnswort and in Poppy, where the inflected margins of the carpels carry the placentæ inward, well-nigh to the axis. Moreover, the placentæ are not always mere marginal lines, but often wide spaces covering large portions of the walls of the cell, as in Poppy and Water-lily; in other cases, as Datura (168), they become large and fleshy, nearly filling the cell.

135. A free axial placenta, without partitions, occurs in some compound one-celled ovaries, as in the Pink and Primrose orders (133). This anomaly is explained in two ways—first, by the obliteration of the earlyformed partitions, as is actually seen to occur in the Pinks; secondly, by supposing the placenta to be, at least in some cases, an *axial* rather than a marginal growth—that is, to grow from the point of the axis rather than from the margin of the carpellary leaf, for in Primrose no partitions ever appear.

136. A few peculiar forms of the style and stigma are worthy of note in our narrow limits, as the *lateral* style of Strawberry; the *basilar* style of the Labiatæ and Borrageworts; the branching style of Phyllanthus, one of the Euphorbiaceæ; also the globular stigma of Mirabilis; the linear stigma of Mediola; the feathery stigma of Grasses; the filiform stigma of Indian corn; the lateral stigma of Aster; the petaloid stigmas of Iris; the capitate and perforated stigma of Violet (141-149).

Pistils.—141, Symphytum, basilar style, ovary 4-parted. 142, 9 Flower of Phyllanthus (Euphorbiaceæ), branching styles. 143, Mirabilis Jalapa, globular stigma. 144, Flower of Luzula, stigmas linear. 145, Feathery stigmas of a Grass. 146, Stigmas of Aster. 147, Rumex. 148, Poppy. 149, Filiform stigma of Zea Mays (Corn).

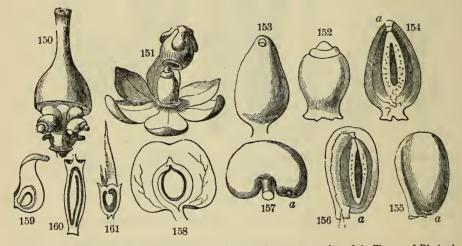

137. In the Pine, Cedar, and the Coniferæ generally, both the style and stigma are wanting; and the ovary is represented only by a flat, open, carpellary scale, bearing the naked ovules at its base.

CHAPTER IX.

THE OVULES.

138. The ovules are understood to be *transformed* buds, destined to become seeds in the fruit. Their development from the margins and inner surface of the carpel favors this view; for the ordinary leaves of Bryophyllum and some other plants do habitually produce buds at their margin or on their upper surface; and in the Mignonette, ovules themselves have been seen transformed into leaves.

139. The number of ovules in the ovary varies from one to hundreds. Thus, in Buttercups, Compositæ, and Grasses, the ovule is *solitary*; in Umbelliferæ it is also

150, Pistil of Celosia; the pericarp detached, showing the young ovules. 151, Flower of Rhubarb, pericarp removed, showing the young ovule. 152, A similar ovule (orthotropous) of Polygonum. 153, The same, full grown; foramen at top. 154, Section showing its two coats, nucleus, and sac. 155, Anatropous ovule, as of Columbine; a, foramen. 156, Section of same. 157, Campylotropous ovule, as of Bean; a, foramen. 158, Section of a Cherry; ovule anatropous, suspended. 159, Section of carpel of Ranunculus; ovule ascending. 160, Senecio; ovule erect. 161, Hippuris; ovule pendulous.

solitary in each of the two carpels; in the Pea order they are *definite*, being but few; in Mullein and Poppy, *indefinite* (∞) , too many to be readily counted. As to

position, the ovule is *erect* when it grows upward from the base of the cell, as in Compositæ; *ascending*, when it turns upward from the side of the cell; *horizontal*, when neither turning upward nor downward; *pendulous*, when turned downward; and *suspended*, when growing directly downward from the top of the cell, as in Birch (158-161).

140. The ovule at the time of flowering is soft and pulpy, consisting of a nucellus within two coats, supported on a stalk. The stalk is called *funiculus*; the point of its juncture with the base of the nucellus is the *chalaza*. The *nucellus* was first formed; then the *tegmen*, or inner coat, grew up from the chalaza and covered it; and lastly the outer coat, the *testa*, invested the whole. Both coats remain open at the top by a small orifice, the *foramen*.

141. In most cases the ovule, in the course of its growth, changes position—curving over in various degrees upon its lengthening funiculus or upon itself. When no such curvature exists, and it stands straight, as in the Buckwheat order, it is orthótropous. It is anátropous when completely inverted. In this state a portion of the funiculus adheres to the testa, forming a ridge called raphe, reaching from the chalaza to the hilum. It is campylótropous when curved upon itself. In this state the foramen is brought near to the chalaza, and both are next the placenta, as in the Pinks and Cruciferæ; and amphítropous when half inverted, so that its axis becomes parallel with the placenta, as in Mallow: Here the raphe exists, but is short. In campylotropous ovules there is no raphe.

142. The ovule contains no young plant (embryo) yet; but a cavity, the *embryo sac*, is already provided

to receive it just within the upper end of the nucellus.

The relations of the ovule to the pollen grain will be more suitably discussed hereafter under the head of fertilization. We briefly remark here that the immediate contact of the two is brought about, at the time of flowering, by special arrangements; and that, as the undoubted result of their combined action, the embryo soon after originates in the embryo sac.

CHAPTER X.

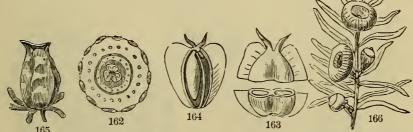

THE FRUIT. --- PERICARP.

143. After having received the pollen which the anthers have discharged, the pistil or its ovary continues its growth and enlargement, and is finally matured in the form of the peculiar fruit of the plant. The fruit is, therefore, *the mature ovary*.

144. As to the other organs of the flower, having accomplished their work — the fertilization of the ovary — they soon wither and fall away. Some of them, however, often persist, to protect or become blended with the ripening fruit. Thus the tube of the *superior* calyx (§ 97) always blends with the ovary in fruit; as in Currant, Cucumber, etc. In Compositæ, the persistent limb enlarges into the pappus of the fruit. In Buttercups, the fruit is beaked with the short, persistent *style*. In Clematis and Geum, it is *caudate* (tailed) with the long, feathery *style*. In the Potato tribe, Labiatæ, and many others, the *inferior calyx* continues to vegetate like leaves until the fruit ripens. In some cases the fruit, so called, consists of the receptacle and ovaries blended; as in Apple and Strawberry. Again—in Mulberry, Fig, and Pineapple, the whole inflorescence is consolidated into the matured fruit.

145. As a rule, the structure of the fruit agrees essentially with that of the ovary. In many cases, however, the fruit undergoes such changes in the course of its growth from the ovary as to disguise its real structure. An early examination, therefore, is always more reliable in its results than a late one. For example, the acorn is a fruit with but one cell and one seed, although its ovary had three cells and six ovules! This singular change is due to the nondevelopment of five of its ovules, while the sixth grew the more rapidly, obliterated the partitions by pressing them to the wall, and filled the whole space itself. Similar changes characterize the Chestnut, Hazelnut, and that whole Order. The ovary of the Birch is 2-celled, 2-ovuled; but by the sup-

pression of one cell with its ovule, the fruit becomes 1-celled and 1-seeded.

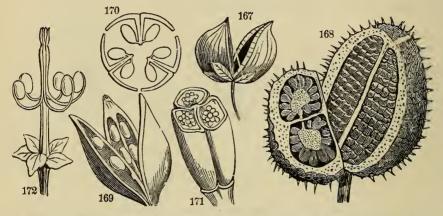

162, Section of the ovary of an acorn, 3-celled, 6-ovuled. 163, Section of ovary of Birch, 2-celled, 2-ovuled. 164, Vertical section of the same in fruit. 165, Pericarp of Mignonette open soon after flowering. 166, Naked seed of Taxus Canadensis, surrounded, not covered, by the fleshy pericarp.

On the other hand, the cells are sometimes multiplied in the fruit by the formation of false partitions. Thus the pod of Thornapple (Datura) becomes 4-celled from a 2-celled ovary; and the longer pods of some Leguminous plants have cross-partitions formed between the seeds, and the 5-celled ovary of the Flax comes by false partitions to be 10-celled (Fig. 136).

146. The Pericarp.— The fruit consists of the pericarp and the seed. The pericarp ($\pi \epsilon \rho i$, around) is the envelope of the seeds, consisting of the carpels and whatever other parts they may be combined with. It varies greatly in texture and substance when mature, being then either dry, as the Pea-pod, or *succulent*, as the Currant. Dry pericarps are *membranous*, or *coriaceous* (leathery), or *woody*. Succulent pericarps may be either wholly so, as the Grape, or partly so, as the Peach and other stone fruits.

147. With very few exceptions the pericarp incloses

the seed while maturing. In Mignonette (165), however, it opens, exposing the seed, immediately after flowering. The membranous pericarp of Cohosh (Caulophyllum) falls away early, leaving the seed to ripen naked. In Yew (Taxus) the seed is never inclosed wholly by its fleshy pericarp; but in most of the other Coniferæ, the close-pressed, carpellary scales cover the seeds. One-seeded fruits, like those of Buttercups, etc., are liable to be mistaken for naked seeds.

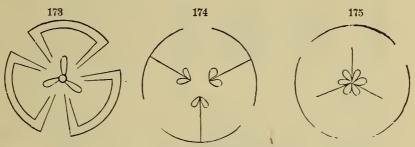

Capsule, 167, of Scrophularia, 2-celled; 168, of Datura Stramonium; 169, of Iris; 170, showing its mode of dehiscence (loculicidal). 171, of Colchicum, 3-celled. 172, Regma, ripe fruit of Geranium, the carpels (cocci) separating from the axis and bending upward on the elastic styles.

148. Dehiscence. — The fleshy pericarp is always indehiscent. Its seeds are liberated only by its decay, or bursting in germination. So also in many cases the dry pericarp, as the acorn. But more commonly the dry fruit, when arrived at maturity, opens in some way, discharging its seeds. Such fruits are dehiscent. Dehiscence is either valvular, porous, or circumscissile; valvular, when the pericarp opens vertically along the sutures, forming regular parts called valves. These valves may separate quite to the base, or only at the top, forming teeth, as in Chickweed. We notice four modes of valvular dehiscence, viz.: 1. *Sutural*, when it takes place at the sutures of any 1-celled pericarp, as Columbine, Pea, Violet.

2. Septicidal (septum, partition, cædo, to cut), when it takes place through the dissepiments (which are double, § 132). The carpels thus separated may open severally by sutures (Mallows), or remain indehiscent, as in Vervain.

3. Loculicidal (loculus, a cell, cædo, to cut), when each carpel opens at its dorsal suture directly into the cell (Evening Primrose, Lily). Here the dissepiments come away attached to the middle of the valves.

4. Septifragal (septum, and frango, to break), when the valves separate from the dissepiments which remain still united in the axis (Convolvulus).

Dehiscence: 173, septicidal; 174, loculicidal; 175, septifragal.

149. Porous dehiscence is exemplified in the Poppy, where the seeds escape by orifices near the top of the fruit. It is not common. *Circumscissile* (*circumscindo*, to cut around), when the top of the ovary opens or falls off like a lid, as in Plantain. Some fruits, as the Gerania and Umbelliferæ, are furnished with a *carpophore*, that is, a slender column from the receptacle—a *fusiform torus*, prolonged through the axis of the fruit, supporting the carpels.

CHAPTER XI.

FORMS OF THE PERICARP.

150. The morphology of the pericarp is exceedingly diversified; but it will suffice the learner at first to acquaint himself with the leading forms only, such as are indicated in the following synopsis and more definitely described afterward.

The following is a synopsis of the principal forms of Pericarps, for the blackboard.

§ 1. Free Fruits (formed by a single Flower).

* Pericarps indehiscent.

- † With usually but one seed, and
 - [‡] Uniform, or 1-coated.
 - 1. Separated from the seed.
 - 2. Inflated, often breaking away.
 - 3. Inseparable from the seed.
 - 4. Invested with a cupule (involucre).
 - 5. Having winged appendages.
 - [‡] Double or triple-coated, fleshy or fibrous.
 - 6. Three-coated. Stone cell entire.
 - 7. Two-coated. Stone cell 2-parted.
 - 8. Drupes aggregated.
- † With two or more seeds,
 - ‡ Immersed in a fleshy or pulpy mass.
 - 9. Rind membranous.
 - 10. Rind leathery, separable.
 - 11. Rind hard, crustaceous.
 - ‡ 12. Inclosed in distinct cells.

* Pericarps dehiscent.

† 13. Dehiscence circumscissile, seeds ∞ .

- † Dehiscence valvular or porous;
 - *‡* Simple, or 1-carpelled,
 - 14. Opening by the ventral suture.
 - 15. Opening by both sutures.
 - 16. Legume jointed.
 - *‡* Compound pericarps;
 - 17. Placentæ parietal with two cells. Silique short.
 - 18. Placentæ parietal only when 1-celled.
 - 19. Capsule with carpophore and elastic styles.
 - § 2. Confluent Fruits (formed of an Inflorescence).
- * 20. With open carpels aggregated into a cone.
- * 21. With closed carpels aggregated into a mass.

Akene (Buttercups). Utricle (Pigweed). Caryopsis (Grasses). Glans, Acorn (Oak). Samara, Key (Ash).

Drupe (Cherry). Tryma (Walnut). Etærio (Raspberry).

Berry (Gooseberry). Hesperidium (Orange). Pepo (Squash). Pome (Apple).

Pyxis (Henbane).

Follicle (Columbine). Legume (Pea). Loment (Desmodium).

Silique (Mustard). Silicle (Shepherd's Purse). Capsule (Flax).

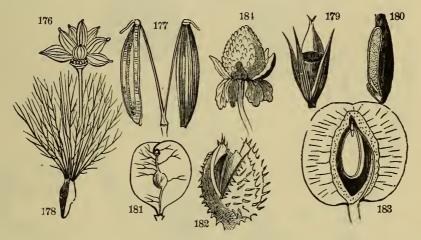

Regma (Geranium).

Strobile (Pine). Sorosis (Pineapple). 151. The *akene* is a small, dry, indehiscent pericarp, free from the one seed which it contains, and tipped with the remains of the style (Buttercups, Lithospermum).

The double akene of the Umbelliferæ, supported on a *carpophore*, is called cremocarp (177). The akenes of the Compositæ, usually crowned with a pappus, are called *cypsela* (178).

The akenes are often mistaken for seeds. In the Labiatæ and Borrageworts they are associated in fours (141). In Geum, Anemone, etc., they are collected in heads. The rich pulp of the Strawberry consists wholly of the overgrown receptacle, which bears the dry akenes on its surface (184).

152. The *utricle* is a small, thin pericarp, fitting loosely upon its one seed, and often opening transversely to discharge it (Pigweed, Prince's Feather).

176, Akenes of Anemone thalictroides. 177, Cremocarp of Archangelica officinalis, its halves (monocarps) separated and suspended on the carpophore. 178, Cypsela of Thistle with its plumous pappus. 179, Utricle of Chenopodium (Pigweed). 180, Caryopsis of Wheat. 181, Samara of Elm. 182, Glans of Beech. 183, Drupe of Prunus. 184, Fruit of Fragaria Indica, a fleshy torus like the Strawberry.

153. *Caryopsis*, the grain or fruit of the Grasses, is a thin, dry, 1-seeded pericarp, inseparable from the seed.

154. Samara; dry, 1-seeded, indehiscent, furnished with a membranous wing or wings (Ash, Elm, Maple).

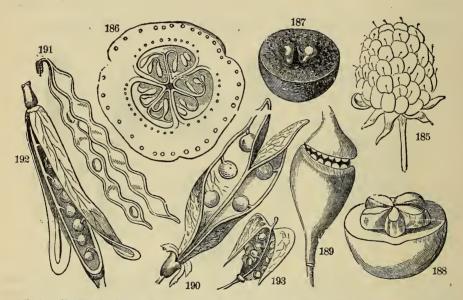

155. *Glans*, or *nut*; hard, dry, indehiscent, commonly 1-seeded by suppression (§ 145), and invested

[55, 56.

with a persistent involucre called a cupule, either solitary (Acorn, Hazelnut) or several together (Chestnut).

156. Drupe, stone-fruit; a 3-coated, 1-celled, indehiscent pericarp, as the Cherry and Peach. The outer coat (epidermis) is called the epicarp; the inner is the nucellus or endocarp, hard and stony; the intervening pulp or fleshy coat is the sarcocarp ($\sigma d\rho \xi$, flesh). These coats are not distinguishable in the ovary.

157. *Tryma*, a 2-coated drupe; the epicarp fibrofleshy (Butternut) or woody (Hickory); the nucellus bony, with its cell often deeply 2-parted (Cocoanut).

Fruits.—185, Etærio of Rubus strigosus (Blackberry). 186, Pepo; section of Cucumber. 187, Berry Grape. 188, Pome; Cratægus (Haw). 189, Pyxis of Jeffersonia. 190, Legume of Pea. 191, Loment of Desmodium. 192, Silique of Mustard. 193, Silicle of Capsella.

158. *Etcerio*, an aggregate fruit consisting of numerous little drupes united to each other (Raspberry) or to the fleshy receptacle (Blackberry).

159. *Berry*, a succulent, thin-skinned pericarp, holding the seeds loosely imbedded in the pulp (Currant, Grape).

6.6

160. *Hesperidium*, a succulent, many-carpelled fruit; the rind thick, leathery, separable from the pulpy mass within (Orange, Lemon).

161. *Pepo*, an indehiscent, compound, fleshy fruit, with a hardened rind and parietal placentæ (Melon).

162. The *pome* is an indehiscent pericarp, formed of the permanent calyx and fleshy receptacle, containing several cartilaginous (Apple) or bony (Haw) cells.

163. The *pyxis* is a many-seeded, dry fruit, opening like a lid by a circumscissile dehiscence (Plantain, Henbane, Jeffersonia).

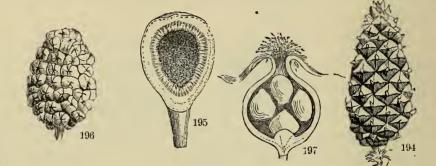

164. The *follicle* is a single carpel, 1-celled, manyseeded, opening at the ventral suture (Columbine, Larkspur, Silk-grass).

165. The *legume*, or pod, is a single carpel, 1-celled, usually splitting into two valves, but bearing its $1-\infty$ seeds along the ventral suture only, in one row, as in the Bean and all the Leguminosæ. It is sometimes curved or coiled like a snail-shell (Medicago). The *loment* is a jointed pod, separating across into 1-seeded portions (Desmodium).

166. Silique. A pod, linear, 2-carpelled, 2-valved, 2-celled by a false dissepiment extended between the two parietal placentæ. To this false dissepiment on both sides of both edges the seeds are attached (Mustard). The *silicle* is a short silique, nearly as wide as long (Shepherd's Purse). The silique and silicle are the peculiar fruit of all the Cruciferæ.

167. *Capsule* (casket). This term includes all other forms of dry, dehiscent fruits, compound, opening by as many valves as there are carpels (Iris), or by twice as many (Chickweed), or by pores (Poppy). 168. The *Regma* is a kind of capsule like that of the Geranium, whose dehiscent carpels separate elastically, but still remain attached to the carpophore.

169. Strobile, or Cone; an aggregate fruit consisting of a conical or oval mass of imbricated scales, each an open carpel (\mathfrak{P} flower), bearing seeds on its inner side at base, *i. e.*, axillary seeds (Pine and the Gymnosperms generally). The Cone (syncarpium, $\sigma \dot{\nu} \nu$, together) of the Magnolia tribe is a mass of confluent, closed pericarps on a lengthened torus (Cucumber Tree).

194, Strobile of Pinus. 195, The Fig (syconus). 196, Sorosis of Mulberry. 197, Hip of Rosa, achenia nearly inclosed in the leathery calyx tube

170. The *Fig* (syconium) is an aggregate fruit, consisting of numerous seed-like akenes inclosed within a hollow, fleshy receptacle, where the flowers were attached.

171. Other confluent fruits (*Sorosis*) consist of the entire inflorescence developed into a mass of united pericarps, as in the Mulberry, Osage-orange, Pineapple.

THE SEED.

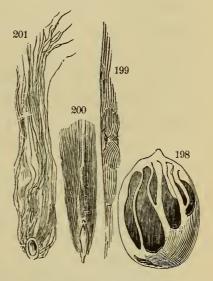

CHAPTER XII.

THE SEED.

172. The seed is the perfected ovule, having an embryo formed within, which is the rudiment of a new plant, similar in all respects to the original. The seed consists of a *nucellus* or kernel, invested with the integuments or coverings. The outer covering is the

testa, the inner the *tegmen*, as in the ovule. The latter is thin and delicate, often indistinguishable from the testa.

173. The testa is either membranous (papery), coriaceous (leathery), crustaceous (horny), bony, woody, or fleshy. Its surface is generally smooth, sometimes beautifully polished, as in Columbine, Indian-shot (Canna), and often highly colored, as in the Bean; or it may be dull and rough. It is sometimes winged, as in Catalpa, and sometimes clothed

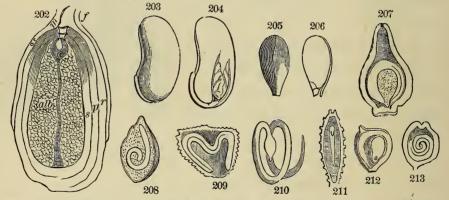

198, Aril of Nutmeg (mace). 199, Seed of Catalpa. 200, Seed of Willow. 201, Seed of Cotton.

talpa, and sometimes clothed with long hairs, as in Silk-grass (Asclepias). Such a vesture is called the *Coma*. Cotton is the coma of the Cotton-seed.

174. The coma must not be confounded with the pappus (§ 104), which is a modification of the calyx, appended to the pericarp, and not to the seed, as in the akenes of the Thistle, Dandelion, and other Compositæ. Its intention in the economy of the plant can not be mistaken; serving like the pappus to secure the dispersion of the seed, while incidentally, in the case of the Cottonseed, it furnishes clothing and employment to a large portion of the human race. 175. The aril is an occasional appendage, partially or wholly investing the seed. It originates after fertilization, at or near the hilum, where the seed is attached to its stalk (funiculus). Fine examples are seen in the gashed covering of the Nutmeg, called mace, and in the scarlet coat of the seed of Staff-tree. In the seed of Polygala, etc., it is but a small scale, entire or 2-cleft, called *caruncle*.

176. The position of the seed in the pericarp is, like that of the ovule, *erect, ascending, pendulous, etc.* (§ 149). Likewise, in respect to its inversions, it is *orthótropous, anátropous, amphítropous, and campylótropous* (§ 141), terms already defined. The anatropous is by far the most common condition.

177. The hilum is the scar or mark left in the testa of the seed by its separation from the funiculus. It is commonly called the *eye*, as in the Bean. In orthotropous and campylotropous seeds, the hilum corresponds with the chalaza (§ 140). In other conditions it does not; and the raphe (§ 141) extends between the two points, as in the ovules. The foramen of the ovule is closed up in the seed, leaving a slight mark—the *micropyle*.

202, Seed of Water Lily (Nymphæa), enlarged section; ab, albumen: a, the embryo contained in the embryo-sac; s, tegmen: p, testa; r, raphe; a° , aril; m, orifice; f, funiculus. 203, Seed of Bean. 204, Same, one cotyledon with the leafy embryo. 205, Seed of Apple. 206, One cotyledon showing the raphe and embryo. 207, Fruit of Mirabilis; embryo coiled into a ring. 208, Onion; embryo coiled. 209, Convolvulus; leafy embryo folded. 210, Embryo of Cuscuta. 211, Typha. 212, Ranunculus. 213, Hop.

178. The seed-kernel may consist of two parts, the embryo and albumen, or of the embryo only. In the former case the seeds are *albuminous*; in the latter, *exalbuminous*; a distinction of great importance in systematic botany.

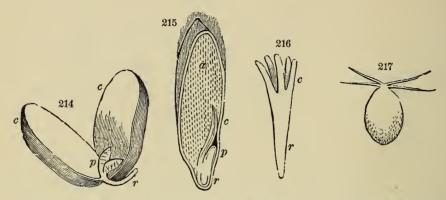

179. The albumen or endosperm is a starchy or farinaceous substance accompanying the embryo and serving as its first nourishment in germination. Its qualities are wholesome and nutritious, even in poisonous plants. Its quantity, when compared with the embryo, varies in every possible degree; being excessive (Ranunculaceæ), or about equal (Violaceæ), or scanty (Convolvulaceæ), or none at all (Leguminosæ). In texture it is mealy in Wheat, mucilaginous in Mallows, oily in Ricinus, horny in Coffee, ruminated in Nutmeg and Papaw, ivory-like in the Ivory-palm, fibrous in Cocoanut, where it is also hollow, inclosing the milk.

180. The embryo is an organized body, the rudiment of the future plant, consisting of root (radicle), stem-bud (plumule), and leaves (cotyledons). But these parts are sometimes quite indistinguishable until germination, as in the Orchis tribe. The Radicle is the descending part of the embryo, always pointing toward the micropyle, the true vertex of the seed. The Plumule is the germ of the ascending axis, the terminal bud, located between or at the base of the Cotyledons. These are the seed-lobes, the bulky farinaceous part of the embryo, destined to become the first or seminal leaves of the young plant. The nutritive matter deposited in the seed for the early sustenance of the germinating embryo, is found more abundant in the cotyledons in proportion as there is less of it in the albumen-often wholly in the albumen (Wheat), again all absorbed in the bulky cotyledons (Squash).

181. The number of the cotyledons is variable; and upon this circumstance is founded the most important subdivision of the *Flowering Plants*, THE

59, 60.]

MONOCOTYLEDONS are plants bearing seeds with one cotyledon; or if two are present, one is minute or abortive. Such plants are also called ENDOGENS, because their stems do not grow exogenously (§ 421). Such are the Grasses, the Palms and Lilies, whose leaves are mostly constructed with parallel veins.

214, Dicotyledonous (Bean). 215, Monocotyledonous (Wheat). 216, Polycotyledonous (Pine). 217, Acotyledonous (zôospore of one of the Confervæ). (r, r, r, radicle; p, p, p, plumule; c, c, c, cotyledon; a, albumen.)

182. THE DICOTYLEDONS are plants bearing seeds with two cotyledons. These are also called ExoGENS, because their stems grow by external accretions; including the Bean tribe, Melon tribe, all our forest trees, etc. These are also distinguished at a glance by the structure of their leaves, which are net-veined (§ 280). More than two cotyledons are found in the seeds of Pine and Fir; while the Dodder is almost the only known example of an embryo with no cotyledon.

183. The position of the embryo, whether with or without albumen, is singularly varied and interesting to study. It may be *straight*, as in Cat-tail and Violet, or *curved* in various degrees (Moonseed and Pink), or *coiled* (Hop), or *rolled* (Spicebush), or *bent* angularly (Buckwheat), or *folded* (Cruciferæ). In the last case

THE SEED.

two modes are to be specially noticed. 1. Incumbent, when the cotyledons fold over so as to bring the back of one against the radicle (Shepherd's Purse); 2. Accumbent, when the edges touch the radicle (Arabis).

184. A few plants, as the Onion, Orange, and Coniferæ, occasionally have two or even several embryos in a seed; while all the Cryptogamia or flowerless plants have no embryo at all, nor even seeds, but are reproduced from *spores*—bodies analogous to the pollen-grains of flowering plants (217).

185. Vitality of the seed.—After the embryo has reached its growth in the ripened seed, it becomes suddenly inactive, yet still alive. In this condition it is, in fact, a living plant, safely packed and sealed up for transportation. This suspended vitality of the seed may endure for years, or even, in some species, for ages. The seeds of Maize and Rye have been known to grow when 40 years old; Kidney-beans when 100; the Raspberry after 1700 years (Lindley). Seeds of Mountain Potentilla were known to us to germinate after a slumber of 60 years. On the other hand, the seeds of some species are short-lived, retaining vitality hardly a year (Coffee, Magnolia).

186. The dispersion of seeds over wide, and often to distant regions, is effected by special agencies, in which the highest Intelligence and Wisdom are clearly seen. Some seeds made buoyant by means of the coma or pappus, already mentioned, are wafted afar by the winds, beyond rivers, lakes, and seas; as the Thistle and Dandelion. Other seeds have wings for the same purpose. Others are provided with hooks or barbs, by which they lay hold of men and animals, and are thus, by unwilling agents, scattered far and wide (Burr-seed, Tick-seed). Again: some seeds, destitute of all such appendages, are thrown to a distance by the sudden coiling of the elastic carpels (Touchme-not). The Squirting-cucumber becomes distended with water by absorption, and at length, when ripe, bursts an aperture at the base by separating from the stem, and projects the mingled seeds and water with amazing force.

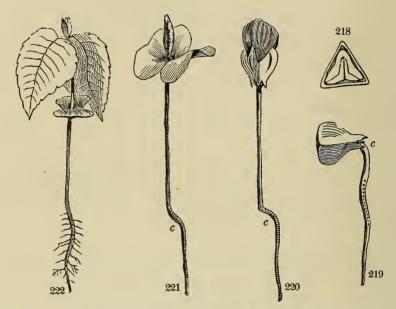

187. Rivers, streams, and ocean currents, are agents for transporting seeds from country to country. Thus the Cocoa, and the Cashew-nut, and the seeds of Mahogany, have been known to perform long voyages without injury to their vitality. Squirrels laying up their winter stores in the earth; birds migrating from clime to clime and from island to island, in like manner conspire to effect the same important end.

61, 62.]

CHAPTER XIII.

GERMINATION.

188. The recommencement of growth in the seed is called *germination*. It is the awakening of the embryo from its torpor, and the beginning of development in its parts already formed, so as to become a plant like its parent.

Germination of the Beechnut.—218, Cross-section, showing the folded cotyledons. 219, The radicle only. 220, The ascending axis, above c, appears, 221, The cotyledons expand into the primordial leaves. 222, The first true leaves.

189. All the stages of this interesting process may be conveniently observed, at any season, by an experiment. Let a few seeds, as of flax, cotton, or wheat, be enveloped in a lock of cotton resting upon water in a bulbglass, and kept constantly at a proper temperature. Or, in Spring, the gardensoil will give us examples of all kinds everywhere.

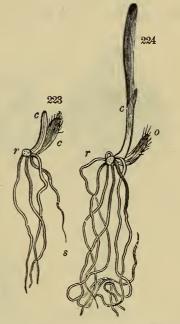

190. That the seed may begin to grow, or germinate, it is first *planted*; or, at least, placed in contact with warm, moist soil. Concerning the proper depth

GERMINATION.

of the planted seed, agriculturists are not agreed; but nature seems to indicate that no covering is needed beyond what will secure the requisite moisture and shade. Thus situated, the integuments gradually absorb water, soften, and expand. The insoluble, starchy matter deposited in the cotyledons, or in the albumen, or in both, undergoes a certain chemical change, be-

coming sweet and soluble, capable of affording nourishment to the embryo now beginning to dilate and develop its parts. First (in the winged seed of the Maple, scattered everywhere) the radicle is seen protruding from the micropyle, or the bursting coverings. A section of this seed would now show the folded embryo, impatient of confinement (225).

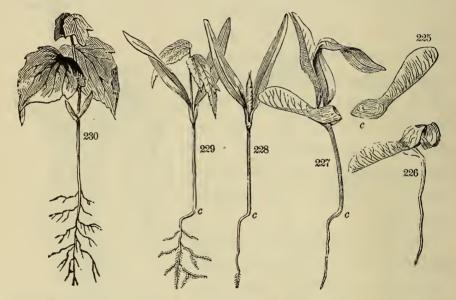

191. Soon after, the radicle has extended; and, pale in color, has hidden itself in the dark, dampearth. Now the cotyledons, unfolding and gradually freed

Germination of Wheat.—o, the grain, containing the cotyledon; c, plumule; r, radicle; s, rootlets (adventitious).

from the seed-coats, display themselves at length as a pair of green leaves. Lastly, the plumule appears in open air, a green bud, already showing a lengthening base, its first internode, and soon a pair of regular leaves, lobed as all Maple-leaves. The embryo is now an embryo no longer, but a growing plant, descending by its lower axis, ascending and expanding by its upper.

192. With equal advantage we may watch the germination of the Beech, represented in the figures above; or of the Oak, as displayed in figures 1, 2, 3, 4; or the Pea, or Squash, and other Dicotyledons; and the chief difference observed among them will be in the disposal of the cotyledons. In general, these arise with the ascending axis, as in Maple and Bean, and act as the first pair of leaves. But sometimes, when they are very thick, as in Pea, Buckeye, and Oak, they never escape the seed-coats, but remain and perish at the collum (§ 199), neither ascending nor descending.

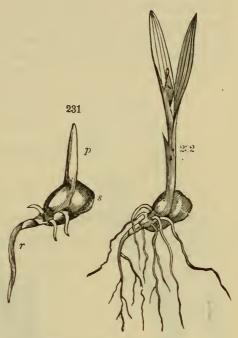

Germination of the Maple.-225, Samara; section showing the folded cotyledons at c. 226-230, Progressive stages.

193. The germination of MONOCOTYLEDONS, as seen in Indian Corn, Wheat, and Tulip, is in this wise. The cotyledon is not disengaged from the seed, but remains stationary with it. The radicle (r) protrudes slightly, and one or more rootlets (s) break out from it and descend. The plumule (c) shoots at first parallel with the cotyledon along the face of the seed, but soon ascends, pushing out leaf from within leaf.

194. The conditions requisite for germination are

moisture, air, and warmth. Moisture is necessary for softening the integuments, dissolving the nutritive matter, and facilitating its circulation. This is supplied in the rain and dew. Air, or rather its oxygen, is required for the conversion of the starch into sugar—a process always depending upon oxidation. The oxygen absorbed unites with a portion of the carbon of the starch, producing heat, evolving carbon dioxide, and thus converting the remainder into grape-sugar, soluble and nutritive.

195. Warmth is a requisite condition of all vital action. as well in the sprouting of a seed as in the *hatching* of an egg.

131, 232, Germination of Indian Corn.

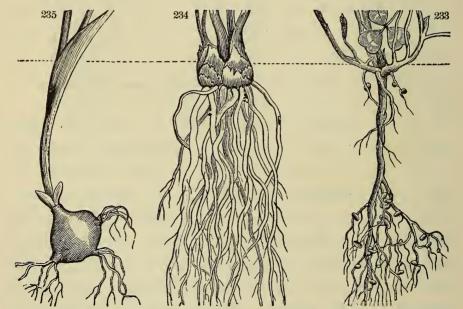

The proper degree of temperature for our own climate may be stated at 60° to 90°. Extremes of heat and of cold are not, however, fatal to all germination. In one of the Geysers of Iceland, which was hot enough to boil an egg in four minutes, a species of Chara was found in a growing and fruitful state. The hot springs and pools of San Bernardino, California, at the constant heat of 190°, have several species of plants growing within their waters. Many species also arise and flower in the snows of Mt. Hood, along their lower borders. *Darkness* is favorable to germination, as proved by experiment, but not an indispensable condition. Hence, while the seed should be covered, for the sake of the moisture and shade, the covering should be thin and light, for the sake of a free access to air.

196. The cause of the downward tendency of the root is a theme of much discussion. Some have referred it to the principle of gravitation; others to its supposed aversion to light. But it is a simple and satisfactory explanation that its growth or cell-development takes place most readily on the moist side of its growing-point, and consequently in a downward direction, so long as the soil in contact with its lower surface is more moist than that above. Hence, also, the well-known tendency of roots toward springs and water-courses.

CHAPTER XIV.

THE ROOT, OR DESCENDING AXIS.

197. The Root is the basis of the plant, and the principal organ of nutrition. It originates with the

233, White Clover—an axial root (with minute tubers). 234, Buttercups—fibrous roots, inaxial. 235, Erigenia—root tuberous.

radicle of the seed, the tendency of its growth is downward, and it is generally immersed in the soil. Its

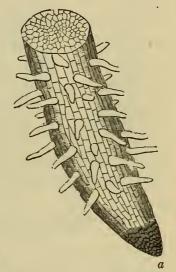

[65, 66.

office is twofold; viz., to support the plant in its position, and to imbibe from the soil the food necessary to the growth of the plant.

198. The leading propensity of the root is to divide itself; and its only normal appendages are branches, branchlets, fibers, and fibrillæ, which are multiplied to an indefinite extent, corresponding with the multipli-

cation of the leaves, twigs, etc., above. This at once insures a firm hold upon the earth, and brings a large absorbing surface in contact with the moist soil.

199. The summit of the root, or that place where the root meets the stem, is called the *collum*; the remote, opposite extremities of the fine rootlets, or, fibers, are covered by dry, protective cells, forming a root-cap; the sides of these fibers are chiefly active in absorbing liquid nourishment, and are mostly ple, with its hairs and root -cap (a) magnified 50 diameters. covered by root-hairs, which in-

236, Extremity of a rootlet of Ma-

crease their absorbing surface. The hairs arise from the tender epidermis or skin, and perish when that thickens into bark. They are developed and perish annually with the leaves, whose servants they are. Few of them remain after the fall of the leaf. This fact plainly indicates that the proper time for transplanting trees or shrubs is the late Autumn, Winter, or early Spring, when there are but few tender fibrillæ to be injured.

200. Two modes of root-development are definitely distinguished. First, the AXIAL MODE is that where

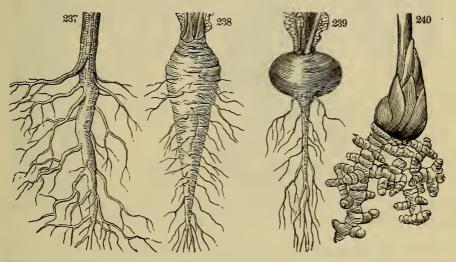

[67, 68.

the primary, simple radicle, in growing, extends itself downward in a main body more or less branched, continuous with the stem, and forms the permanent root of the plant. Such is the case with the Maple, Mustard, Beet, and most of the Dicotyledonous Plants (§ 183).

201. Secondly, the DIFFUSE development is that where the primary radicle proves abortive, never developing into an axial root; but, growing laterally only, it sends out little shoots from its sides, which grow into long, slender roots, nearly equal in value, none of them continuous with the stem. Of this nature are the roots of all the Grasses, the Lilies, and the Monocotyledons generally, and of the Cryptogamia. Plants raised from layers, cuttings, tubers, and slips are necessarily destitute of the axial root.

202. The various forms of the root are naturally and conveniently referred to these two modes of development. The principal axial forms are the ramous, fusiform, napiform, and conical. To all these forms the general name *tap-root* is applied. The *ramous* is the woody tap-root of most trees and shrubs, where the main root branches extensively, and is finally dissolved and lost in multiplied ramifications.

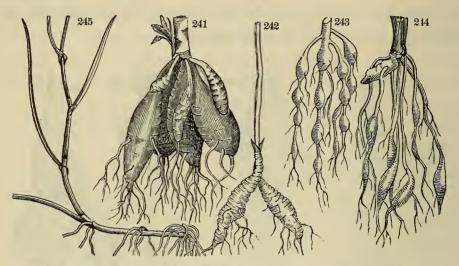

203. Tuberous tap-roots. — In herbaceous plants the tap-root often becomes thick and fleshy, with comparatively few branches. This tendency is peculiarly marked in biennials (§ 41), where the root serves as a reservoir of the superabundant food which the plant accumulates during its first year's growth, and keeps in store against the exhausting process of fruit-bearing in its second year. Such is the *Fusiform* (spindleshaped) root—thick, succulent, tapering downward, and also for a short space upward. Beet, Radish, and Ginseng are examples. The *Conical* root tapers all the way from the collum downward (Carrot). The *Napiform* (turnip-shaped) swells out in its upper part so that its breadth equals or exceeds its length, as in Erigenia (233) and Turnip (239).

237, Maple—an axial, ramous root. 238, Parsnip—a fusiform root. 239, Turnip—a napiform root. 240, Corallorhiza—a coralline root.

204. The forms of diffuse roots are fibrous, fibrotuberous, tubercular, coralline, nodulous, and moniliform. The *fibrous* root consists of numerous threadlike divisions, sent off directly from the base of the stem, with no main or tap-root. Such are the roots of most Grasses, which multiply their fibers excessively in light sandy soils. *Fibro-tuberous* roots (or fasciculate) are so called when some of the fibers are thick and fleshy, as in the Asphodel, Crowfoot, Pæony, Orchis, and Dahlia. When the fiber is enlarged in certain parts only, it is *nodulous*; and when the enlargements occur at regular intervals, it is *moniliform* (necklace-like). When it bears little tubers here and there, as in Squirrel-corn, it is *tubercular*.

205. Deposits of starch, or farinaceous matter, in all these cases, constitute the thickening substance of the root, stored up for the future use of the plant.

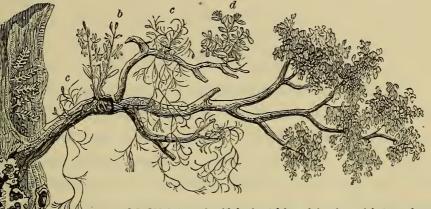

241, Pæony — fibro-tuberous roots. 242, Ginseng — fusiform root. 243, Pelargonium triste — moniliform root. 244, Spirea filipendula—nodulous root. 245, A creeping stem, with adventitious roots.

206. Adventitious roots are such as originate in some part of the ascending axis—stem or branches—whether above or below the ground. They are so called because their origin is indeterminate, both in place and time. Several special forms should be noticed; as the *cirrhous roots* of certain climbing vines (European Ivy, Poison Ivy, Trumpet-creeper) put forth in great numbers from the stem, serving for its mechanical support and no other known use. Again: the *Fulcra* of certain Monocotyledonous plants originate high up the stem, and descending obliquely enter the ground. The Indian Corn frequently puts forth such roots from its lower joints, and thereby becomes strongly braced. The Screw Pine (Pandanus) of the conservatories puts forth fulcra often several feet in length.

207. **The Banian Tree** (Ficus Indicus) drops "adventitious" roots from its extended branches, which, reaching and entering the ground, grow to supporting columns, like secondary trunks. Thus a single tree becomes at length a grove capable of sheltering an army.

208. Epiphytes ($\epsilon \pi i$, upon, $\phi v \tau \delta v$, a plant), a class of plants, called also air-plants, have roots which are merely mechanical, serving to fix such plants firmly upon other plants or trees, while they derive their

nourishment wholly from the air. The Long-moss (Tillandsia) and Conopseum are examples.

247, Old Oak trunk with horizontal branch bearing epiphytes and parasites. a, A fern (Polypodium incanum). b, Epidendrum conopseum. cc, Long-moss (Tillandsia). d, Mistletoe (Viscum). e, Lichen.

209. **Parasites** — Three classes. Very different in nature are the roots of those plants called parasites, which feed upon the juices of other plants or trees.

Such roots penetrate the bark of the nurse-plant to the cambium layer beneath, and appropriate the stolen juices to their own growth; as the Dodder and Mistletoe. Other parasites, although standing in the soil, are fixed upon foreign roots, and thence derive either their *entire* sustenance, as the Beech-drops and other leafless, colorless plants, or a *part* of their sustenance, as the Cow-wheat (Melampyrum) and Gerardia.

210. Subterranean stems. — As there are aerial roots, so there are subterranean stems. These are frequently mistaken for roots, but may be known by their habitually and regularly producing buds. Of this nature are the tubers of the Irish Potato, the rootstock of the Sweet-flag, the bulb of the Tulip. But even the true root may sometimes develop buds — accidentally as it were — in consequence of some injury to the upper axis, or some other unnatural condition.

CHAPTER XV.

THE STEM, OR ASCENDING AXIS.

211. The general idea of the AxIS is this: the central substantial portion of the plant, bearing the appendages, viz., roots below, and the leaf-organs above. The Ascending Axis is that which originates with the plumule, tends upward in its growth, and expands itself to the influence of the air and the light.

^{248,} Procumbent stem-Chiogenes hispidula.

212. Although the first direction of the stem's growth is vertical in all plants, there are many in which this direction does not continue, but changes into the oblique or horizontal, either just above the

249, Decumbent stem-Anagallis arvensis.

surface of the ground, or just beneath it. If the stem continues to arise in the original direction, as it most commonly does, it is said to be *erect*. If it grow along the ground without rooting, it is said to be *pro*-

THE STEM.

cumbent, prostrate, trailing. If it recline upon the ground after having at the base arisen somewhat above it, it is *decumbent*. If it arise obliquely from a prostrate base, it is said to be *assurgent*; and if it continue buried beneath the soil, it is *subterranean*. Such stems, although buried like roots, may readily be known by their buds, as already explained (§ 210).

213. Stems are either simple or branched. The simple stem is produced by the unfolding of the primary bud (the plumule) in the direction of its point alone. As this bud is developed below into the lengthening stem, it is continually reproduced at its summit, and so is always borne at the termination of the stem. Hence the axis is always terminated by a bud.

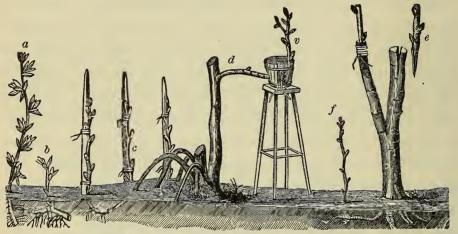

214. The Branching Stem, which is by far the most common, is produced by the development of both terminal and axillary buds. The axis produces a bud in the axil of its every leaf; that is, at a point just above the origin of the leaf-stalk. These buds remain inactive in the case of the simple stem, as the Mullein; but more generally are developed into leafy subdivisions of the axis, and the stem thus becomes branched. A *Branch* is, therefore, a division of the axis produced by the development of an axillary bud. It repeats the internal structure of the stem, but is sometimes peculiar in being bilaterally symmetrical or having its upper and under surfaces unlike.

215. The Arrangement of the Branches upon the stem, depends, therefore, upon the arrangement of the leaves; which will be more particularly noticed hereafter. This arrangement is beautifully regular, according to established laws. In this place we briefly notice three general modes. The *Alternate* arrangement is

71, 72.]

where but one branch arises from each joint (node) on different sides of the stem, as in the Elm. The *Opposite* is where two branches stand on opposite sides of the same node, as in Maple. The *Verticillate* is where three or more branches, equidistant, encircle the stem at each node, as in the Pine. Dichotomous branching is where a main or secondary axis forks into two equal divisions, as often occurs in Flowerless Plants.

216. Some plants produce adventitious roots which may become independent. Nurserymen in this way propagate scions, suckers, stolons, offsets, slips, layers, cuttings, and runners. *The Sucker* is a branch issuing from some underground portion of the plant, leafbearing above and sending out roots from its own base, becoming finally a separate, independent plant. The Rose and Raspberry are thus multiplied.

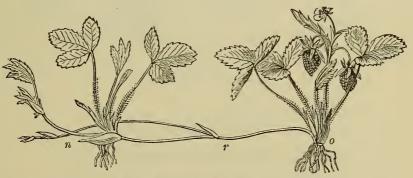

250, a, Slip (Gooseberry) taking root. b, Cutting (Grape) taking root. c, Stolons or layers artificially arranged for propagation. d, A mode of dwarfing; the vessel, v, is filled with soil. e, Scions; process of grafting. f, A sucker.

217. The Stolon, or Layer, is a branch issuing from some above-ground portion of the stem, and afterward declining to the ground, taking root at or near its extremity, sending up new shoots, and becoming a new THE STEM.

plant. The Hobble-bush and Black-raspberry do this naturally, and gardeners imitate the process in many plants.

218. The Scion is any healthy twig or branchlet bearing one or more buds, used by the gardeners in the common process of grafting. Slips and cuttings are fragments of ordinary branches or stems, consisting of young wood bearing one or more buds. These strike root when planted in the ground. So the Grapevine and Hop. The *Offset* is merely a scion severed from the parent and set in the ground to strike root.

219. The Runner is a prostrate, filiform branch, issuing from certain short-stemmed herbs, extending itself along the surface of the ground, striking root at its end without being buried. Thence leaves arise, and a new plant, which in turn sends out new runners, as in the Strawberry.

251, A Strawberry plant (Fragaria vesca) sending out a runner.

220. The Node, or joint of the stem, marks a definite point of a peculiar organization, where the leaf with its axillary bud arises. The nodes occur at regular intervals, and the spaces between them are termed INTERNODES. They provide for the symmetrical arrangement of the leaves and branches of the stem. In the

73, 74.]

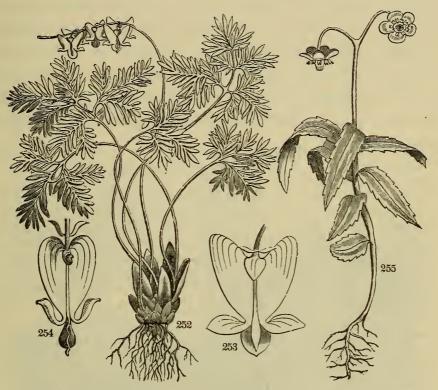

root no such provision is made, and the branches have a less definite arrangement. Now the growth of the stem consists in the development of the internodes. In the bud, the nodes are closely crowded together, with no perceptible internodes; thus bringing the rudimentary leaves in close contact with each other. But in the stem, which is afterward evolved from that bud, we see full-grown leaves separated by considerable spaces. That is, while leaves are developed from the rudiments, internodes are pushed out from the growing point.

221. There are, however, many species of plants, especially of herbs, in which the axis of the primary bud does not develop into internodes at all, or but partially in various degrees. See the axis of Trillium, Onion, and Bloodroot. Such stems seldom appear above-ground. They are *subterranean*. This fact makes a wide difference in the forms of stems, and naturally separates them into two great divisions—viz., the Leaf-bearing Stems and the Scale-bearing Stems.

CHAPTER XVI.

FORMS OF THE LEAF-BEARING STEMS.

222. The leaf-bearing stems are those forms which, with internodes fully developed, rise into the air crowned with leaves. The principal forms are the caulis, culm, trunk, caudex, and vine. They are either herbaceous or woody. Herbaceous stems bear fruit but one season and then perish, at least down to the root, scarcely becoming woody; as seen in Mustard, Radish, and Grasses. But woody stems survive the Winter, and often become firm and solid in substance in after years; as do all the forest trees.

252, Scale-stem (Dicentra cucullaria). 253, A flower of the same. 254, A flower of D. Canadensis. 255, Leaf-stem (Chimaphila maculata).

223. CAULIS is a term generally applied to the annual leafy stems of herbaceous plants. "Haulm" is a term used in England with the same signification. *Caulescent* and *acaulescent* are convenient terms, the former denoting the presence, and the latter the absence of the caulis or aerial stem.

224. THE CULM is the stem of the Grasses and the Sedges, generally jointed, often hollow, rarely becoming woody; as in Cane and Bamboo.

225. THE TRUNK is the name of the peculiar stems of arborescent plants. It is the central column or axis which supports their branching tops and withstands the assaults of the wind by means of the great firmness and strength of the woody or ligneous tissue with which it abounds. The trunk is usually seen simple and columnar below, for a certain space, then variously dividing itself into branches. Here it is cylindrical, straight, and erect, as in the Forest Pine; prismatic often, as in the Gum-tree; gnarled and curved, as in the Oak; or inclined far over its base, as in the Sycamore.

256, S, Spruce. B, Beech. E, Elm ; to illustrate excurrent and deliquescent axis.

226. In dividing itself into branches, we observe two general modes, with their numerous variations, strikingly characterizing the tree forms. In the one, named by Lindley the EXCURRENT, the trunk, from the superior vigor of its terminal bud, takes precedence of

 $9\dot{0}$

the branches, and runs through to the summit, as in the Beech, Birch, Oak, and especially in the Spruce trees with oval or pyramidal forms. But in the other, the DELIQUESCENT AXIS, as seen in the Elm and Appletree, the trunk suddenly divides into several subequal branches, which thence depart with different degrees of divergency, giving the urn form to the Elm, the rounded form to the Apple-tree, the depressed form to the Sloe-tree (Viburnum) and Dogwood.

227. CAUDEX is a term now applied to the peculiar trunk of the Palms and Tree-ferns, simple, branchless columns, or rarely dividing in advanced age. It is produced by the growth of the terminal bud alone, and its sides are marked by the scars of the fallen leaf-stalks of former years, or are yet covered by their persistent bases. The *stock* or *caudex* of the cactus tribe is extraordinary in form and substance. It is often jointed, prismatic, branched, always greenish, fleshy, and full of a watery juice. Instead of leaves, its lateral buds develop spines only, the stem itself performing the functions of leaves. These plants abound in the warm regions of tropical America, and afford a cooling acid beverage to the thirsty traveler when springs dry up under the torrid sun.

228. The VINE is either herbaceous or woody. It is a stem too slender and weak to stand erect, but trails along the ground, or any convenient support. Sometimes, by means of special organs for this purpose, called *tendrils*, it ascends trees and other objects to a great height; as the Grape, Gourd, and other climbing vines.

229. The twining vine having also a length greatly disproportioned to its diameter, supports itself on other plants or objects by entwining itself around them, being destitute of tendrils. Thus the Hop ascends into the air by foreign aid, and it is a curious fact that the direction of its winding is always the same, viz., with the sun, from left to right; nor can any artificial training induce it to reverse its course. This is a general law among twining stems. Every individual plant of the same species revolves in the same direction, although opposite directions may characterize different species. Thus the Morning-Glory revolves always against the sun.

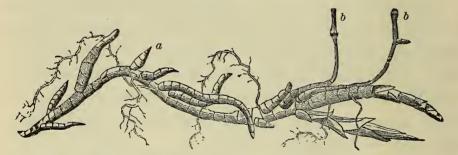

77.]

10 --- 11

CHAPTER XVII.

FORMS OF SCALE-BEARING STEMS.

230. The Scale-bearing stems are those forms which, with internodes partially or not at all developed, and generally clothed with scales for leaves, scarcely emerge from the soil. They are the *creeper* and *rhizoma* (developed), the *crown*, *tuber*, *corm*, and *bulb* (undeveloped). Their forms are singular, often distorted in consequence of their underground growth and the unequal development of the internodes. They commonly belong to perennial herbs, and the principal forms are described as follows; but intermediate connecting forms are very numerous, and often perplexing.

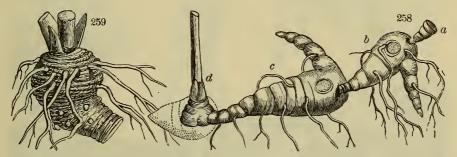

257, Creeper of "Nimble Will" or Witch-grass; a, Bud; bb, bases of culms.

231. THE CREEPER is either subaerial or subterranean. In the former case, it is prostrate, running and rooting at every joint, and hardly distinguishable otherwise from leafy stems; as the Twin-flower, the Partridge-berry. In the latter case, it is more commonly clothed with scales, often branching extensively, rooting at the nodes, exceedingly tenacious of life, extend-

78, 79.] FORMS OF SCALE-BEARING STEMS.

ing horizontally in all directions beneath the soil, annually sending up from its terminal buds erect stems into the air. The Witch-grass is an example. Such plants are a sore evil to the garden. They can have no better cultivation than to be torn and cut to pieces by the spade of the angry gardener, since they are thus multiplied as many times as there are fragments.

232. Repent stems of this kind are not, however, without their use. They frequently abound in loose, sandy soil, which they serve to bind and secure against the inroads of the water and even the sea itself. Holland is said to owe its very existence to the repent stems of such plants as the Mat-grass (Arundo arenaria), Carex arenaria, and Elymus arenarius, which overrun the artificial dykes upon its shores, and by their innumerable roots and creepers apparently bind the loose sand into a firm barrier against the washing of the waves. So the *turf*, chiefly composed of repent Grass-stems, forms the only security of our own sandy or clayey hills against the washing rains.

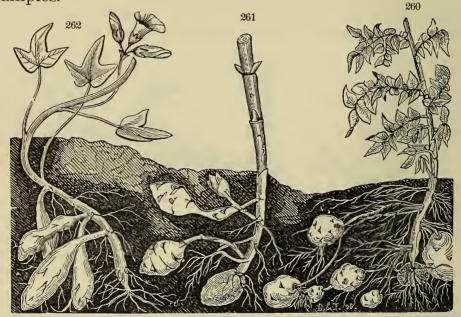

258, Rhizoma of Solomon's Seal (Polygonatum multiflorum). a, Fragment of the first year's growth; b, the second year's growth; c, growth of the third year; d, growth of the present (fourth) year, bearing the stem, which, on decaying, will leave a scar (seal) like the rest. 259, Premorse root of Trillium erectum.

233. THE RHIZOME, OF ROOT-STOCK, differs from the creeper only in being shorter and thicker, having its internodes but partially developed. It is a prostrate, fleshy, rooting stem, either wholly or partially subterranean, often scaly with the bases of undeveloped leaves, or marked with the scars of former leaves, and yearly producing new shoots and roots. Such is the fleshy, horizontal portion of the Blood-root, Sweet-flag, Water-lily, and Bramble (the latter hardly different from the creeper).

234. The growth of the rhizome is instructive, marking its peculiar character. Each joint marks the growth of a year. In Spring, the terminal bud unfolds into leaves and flowers, to perish in Autumn — a new bud to open the following Spring, and a new internode, with its roots, to abide several years. The number of joints indicates, not the age of the plant, but the destined age of each internode. Thus if there are three joints, we infer that they are triennial, perishing after the third season, while the plant still grows on.

235. THE PRÆMORSE ROOT, OF ROOT-STOCK, is short, erect, ending abruptly below, as if bitten square off (præmorsus). This is mostly owing to the death of the earlier and lower internodes in succession, as in the horizontal rhizome. The root of Scabious and the rhizomes of Viola pedata and Benjamin-root are examples.

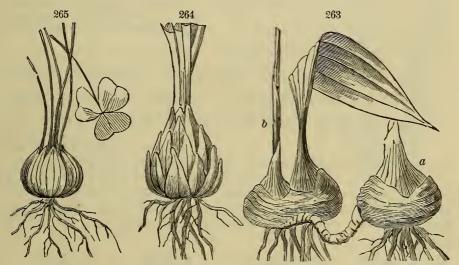

Tubers as they grow.—260, The common Potato (Solanum). 261, Artichoke (Helianthus). 262, Sweet Potato (Convolvulus).

236. CROWN OF THE ROOT designates a short stem with condensed internodes, remaining upon some perennial roots, at or beneath the surface-soil, after the leaves and annual stems have perished.

237. THE TUBER is an annual thickened portion of a subterranean stem or branch, provided with latent buds called eyes, from which new plants ensue the succeeding year. It is the fact of its origin with the ascending axis, and the production of buds, that places the tuber among stems instead of roots. The Potato and Artichoke are examples.

238. The stem of the Potato-plant sends out roots from its base, and branches above, like other plants; but we observe that its branches have two distinct modes of development. Those branches which rise into the air, whether issuing from the above-ground or the under-ground portion of the stem, expand regularly into leaves, etc.; while those lower branches which continue to grope in the dark, damp ground, cease at length to elongate, swell up at the ends into tubers with developed buds and abundance of nutritious matter in reserve for renewed growth the following year.

263, Corms of Putty-root (Aplectrum); a, of last year—b, of the present year. 264, Scale-bulb of White Lily. 265, Scale-bulb of Oxalis violacea.

239. THE CORM is an under-ground, solid, fleshy stem, with condensed internodes, never extending, but remaining of a rounded form covered with thin scales. It is distinguished from roots by its leaf-bud, which is either borne at the summit, as in the Crocus, or at the side, as in the Colchicum and Putty-root (Aplectrum).

240. THE BULB partakes largely of the nature of the bud. It consists of a short, dilated axis, bearing an oval mass of thick, fleshy scales, closely packed

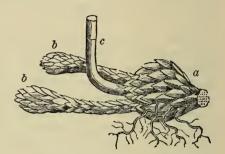

95

above, a circle of adventitious roots around its base, and a flowering stem from the terminal or a lateral bud.

241. How multiplied.—Bulbs are renewed or multiplied annually at the approach of Winter by the development of bulbs from the axils of the scales,

which increase at the expense of the old, and ultimately become detached. Bulbs which flower from the terminal bud are necessarily either annual or biennial; those flowering from an axillary bud may be perennial, as the terminal bud may in this case continue to develop new scales indefinitely.

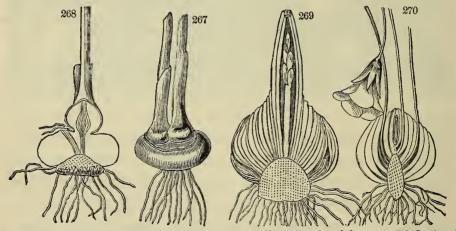

242. Bulbs are said to be *tunicated* when they consist of concentric layers, each entire and inclosing all within

206, Bulb of Lilium superbum, with habit of a rhizome : a, full grown bulb sending up a terminal stem c, and two offsets bb, for the bulbs of next year.

it, as in the Onion. But the more common variety is the *scaly* bulb—consisting of fleshy, concave scales, arranged spirally upon the axis, as in the Lily

243. The tuber, corm, and bulb are analogous forms approaching by degrees to the character of the bud, which consists of a little axis bearing a covering of scales. In the tuber, the axis is excessively developed, while the scales are reduced to mere linear points. In the corm the analogy is far more evident, for the axis is less excessive and the scales more manifest; and lastly, in the bulb the analogy is complete, or overdone, the scales often becoming excessive.

267, Corm of Crocus, with new ones forming above. 268, Vertical section of the same. 269, Section of bulb of Hyacinth, with terminal scape and axillary bulblet. 270, Section of bulb of Oxalis violacea, with axillary scapes.

THE LEAF-BUD.

CHAPTER XVIII.

THE LEAF-BUD.

244. It is but a step from the study of the bulb to that of the leaf-bud. Buds are of two kinds in respect to their contents-the leaf-bud contain-

ing the rudiments of a leafy stem or branch, the *flower-bud* containing the same elements transformed into the nascent organs of a flower for the purpose of reproduction.

245. The leaf-bud consists of a brief, cone-shaped axis with a tender growing point, bearing a protecting covering of imbricated scales and incipient leaves.

246. The leafy nature of the scales is evident from a careful inspection of such buds as those of the Rose. Currant, Tulip-tree, when they are swollen or bursting in Spring. The student will notice a gradual change from the outer scales to the evident leaves or stipules within, as seen in Fig. 273. As a further protection against frost and rain, we find the scales sometimes tree. The terminan out a, having been destroyed, and clothed with hairs, sometimes var- place, and formed the axis nished with resin. This is abundant with flower-buds; d, branch and very aromatic in the buds of the tion of terminal bud; 1, of Balm-of-Gilead and other Poplars.

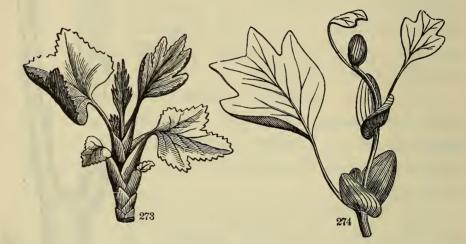

tree. The terminal bud a, axillary bud supplied its b. c, Thickened branch with leaf-buds. 272, t, secaxillary bud.

247. In regard to position, buds are either terminal or axillary, a distinction already noticed. Axillary

STRUCTURAL BOTANY.

buds are especially noted as being either active or latent. In the former case they are unfolded into branches at once, or in the Spring following their formation. But latent buds suspend their activities from year to year, or perhaps are never quickened into growth. Axillary buds become terminal so soon as their development fairly commences; therefore each branch also has a terminal bud, and, like the

273, Bud of Currant unfolding,—the scales gradually becoming leaves. 274, Bud of Tulip-tree,—the scales unfolding into stipules.

main axis, is capable of extending its growth as long as that bud remains unharmed. If it be destroyed by violence or frost, or should it be transformed into a flower-bud, the growth in that direction forever ceases.

248. The suppression of axillary buds tends to simplify the form of the plant. Their total suppression during the first year's growth of the terminal bud is common, as in the annual stem of Mullein and in most perennial stems. When axillary buds remain permanently latent, and only the terminal bud unfolds year after year, a simple, branchless trunk, crowned

[83, 84,

with a solitary tuft of leaves, is the result, as in the Palmetto of our southern borders.

249. A partial suppression of buds occurs in almost all species, and generally in some definite order. In plants with opposite leaves, sometimes one bud of the pair at each node is developed and the other is suppressed, as in the Pink tribe. When both buds are developed, the branches, appearing in pairs like arms, are said to be brachiate, as in the Labiates. In many trees

the terminal buds are arrested by inflorescence each season, and the growth is continued by axillary buds alone, as in the Catalpa and Horse-chestnut. In all trees, indeed, buds are suppressed more or less, from various causes, disguising at length the intended symmetry of the branches, to the utter confusion of twigs and spray.

250. Accessory buds, one or more, are sometimes found just above the true axillary bud, or clustered with it, and only distinguished from it by their smaller size; as in the Cherry and Honeysuckle.

251. Adventitious or accidental buds are such as are neither terminal nor branches. 276, Pink (Dianthus)-axillary buds axillary. They occasionally

275

275, Hypericum Sarothra, with brachiate alternately suppressed.

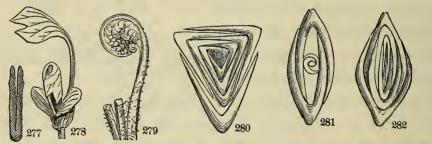

appear on any part of the plant in the internodes of the stem or branches, on the root or even the leaves. Such buds generally result from some abnormal condition of the plant, from pruning or other destruction of branches or stem above, while the roots remain in full vigor; thus destroying the equilibrium of vital force between the upper and lower axis. The leaf of the Walking-fern emits rootlets and buds at its apex; the leaf of Bryophyllum from its margin, each bud

83-85.]

here also preceded by a rootlet. Some plants are thus artificially propagated in conservatories from the influence of heat and moisture on a leaf or the fragment of a leaf, as Begonia.

252. Vernation or præfoliation are terms denoting the mode of arrangement and folding of the leaf organs composing the bud. This arrangement is definitely varied in different orders of plants, furnishing useful distinctions in systematic botany. It may be studied to excellent advantage by making with a keen instrument a cross-section of the bud in its swollen state, just before expansion; or it may be well observed by removing one by one the scales. The Forms of Vernation are entirely analogous to those of Æstivation, and denoted by similar terms.

253. Vernation is considered in two different aspects—first, the manner in which the leaf itself is folded; second, the arrangement of the leaves in respect to each other. This depends much upon the Phyllotaxy. (§ 261.)

Vernation, 277, of Oak leaf; 278, of Liriodendron (Tulip-tree). 279, of Fern; 280, of Carex; 281, Sage; 282, Iris.

254. Each leaf considered alone is either *flat* and *open*, as in the Mistletoe, or it is *folded* or *rolled*, as follows : viz., *Reclined*, when folded crosswise, with apex bent over forward toward the base, as in the Tulip-tree; *Conduplicate*, when folded perpendicularly,

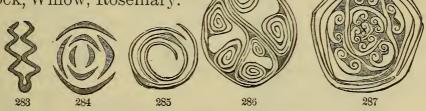

THE LEAF-BUD.

with the lateral halves brought together face to face, as in the Oak; *Plaited*, or Plicate, each leaf folded like a fan, as in Birch.

255. *Circinate* implies that each leaf is rolled or coiled downward from the apex, as in Sundew and the Ferns.

256. The *Convolute* leaf is wholly rolled up from one of its sides, as in the Cherry; while the Involute has both its edges rolled inward, as in Apple, Violet; and the *Revolute* has both margins rolled outward and

backward, as in the Dock, Willow, Rosemary.

Vernation, 283, of Birch leaf; 284, of Lilac (imbricate); 285, Cherry leaves (convolute); 286, Dock bud (revolute); 287, Balm of Gilead (involute).

257. The general vernation is loosely distinguished in descriptive botany as *valvate* (edges meeting), and *imbricate* (edges overlapping), terms to be noticed hereafter. The valvate more often occurs in plants with opposite leaves; as in the St. John's-wort family, Hypericum Sarothra (275).

258. Imbricate vernation is Equitant (riding astraddle), when conduplicate leaves alternately embrace the outer one the next inner by its unfolded margins, as in the Privet and Iris (282). It is Obvolute when it is half-equitant; that is, the outer leaf embraces only one of the margins of the inner, as in the Sage (281). Again, it is Triquetrous where the bud is triangular in section and the leaves equitant at each angle, as in the Sedges (280).

85, 86.]

288, Vernatum of Sycamore bud.

may be regarded as a distinct individual, capable of vegetating either in its native position, or when removed to another, as is extensively practiced in the important operation of budding.

260. Bulblets. — In the Tiger-lily, also in Cicuta bulbifera, and Aspidium bulbiferum, the axillary buds sponta- 289, 290, Showing the process neously detach themselves, fall to the

ground, and become new plants. These remarkable little bodies are called *bulblets*.

CHAPTER XIX.

PHYLLOTAXY, OR LEAF-ARRANGEMENT.

261. As the position of the leaf upon the stem marks the position of the axillary bud, it follows that the order of the leaf-arrangement will be the order of the branches also. Phyllotaxis, or leaf-arrangement (from $\phi i \lambda \lambda o \nu$, leaf, $\tau i \xi \iota \varsigma$, order), depends chiefly on the mode of origin of the leaves at the apex of growth, and on the subsequent elongation and twisting of the axis on which they grow.

262. In regard to position, leaves are radical when they grow out of the stem at or beneath the surface of the ground, so as to appear to grow from the roots; cauline, when they grow from the stem; and ramal

of "budding."

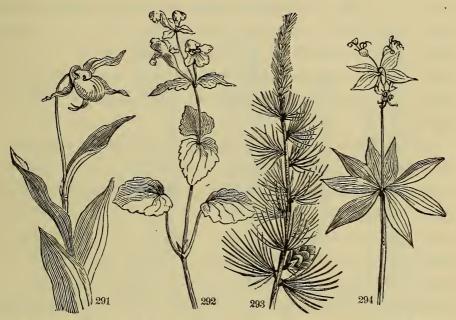

[86, 87.

(*ramus*, a branch), when from the branches. Their arrangement on the axis is according to the following general modes:

Alternate, one above another on opposite sides, as in the Elm.

Scattered, irregularly spiral, as in the Potato vine.

Rosulate, clustered regularly, like the petals of a Rose, as in the Plantain and Shepherd's-purse.

291, Lady's-slipper (leaves alternate); 292, Synandra grandiflora (leaves opposite); 294, Medeola Virginica (leaves verticillate); 293, Larix Americana (leaves fasciculate).

Fasciculate, tufted, clustered many together in the axil, as seen in the Pine, Larch, Berberry.

Opposite, two, against each other, at the same node. Ex., Maple. When successive pairs of opposite leaves cross each other at right angles, they are said to be decussate.

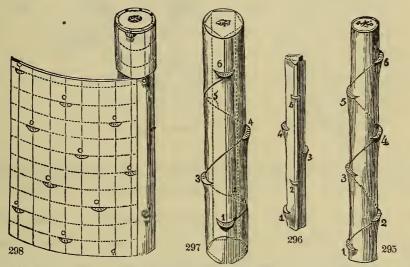

Verticillate, or whorled, more than two in a circle at each node, as in the Meadow-lily, Trumpet-weed. We may reduce all these modes to TWO GENERAL TYPES, - the *alternate*, including all cases with one leaf at each node; the *opposite*, including cases with two or more leaves at each node.

263. The character of the alternate type of leafarrangement is sometimes represented by a spiral, which was at one time supposed to be invariable. This generating spiral, as it was called, is illustrated by Figures 295-300. Take a straight leafy shoot or stem of the Elm or Flax, or any other plant with seemingly scattered leaves, and beginning with the lowest leaf, pass a thread to the next above, thence to the next in the same direction, and so on by all the leaves to the top; the thread will form a regular *spiral*.

264. The Elm cycle. — In the strictly alternate arrangement (Elm, Linden, Grasses) the spiral thread makes one complete circuit and commences a new one at the third leaf. The third leaf stands over the first, the fourth over the second, and so on, forming two vertical rows of leaves. Here (calling each complete circuit a *cycle*) we observe, first, that this cycle is composed of two leaves; second, that the angular distance between its leaves is $\frac{1}{2}$ a circle (180°); third, if we express this cycle mathematically by $\frac{1}{2}$, the numerator (1) will denote the turns or revolutions, the denominator (2) its leaves, and the fraction itself the angular distance between the leaves ($\frac{1}{2}$ of 360°).

265. The Alder cycle.—In the Alder, Birch, Sedges, etc., the cycle is not complete until the fourth leaf is reached. The fourth leaf stands over the first, the fifth over the second, etc., forming three vertical rows. Here call the cycle $\frac{1}{3}$; 1 denotes the turns, 3 the leaves, and the fraction itself the angular distance $(\frac{1}{3} \text{ of } 360^\circ)$.

266. The Cherry cycle.—In the Cherry, Apple, Peach, Oak, Willow, etc., neither the third nor the fourth leaf, but the *sixth*, stands over the first; and in order to reach it the thread makes two turns around the stem. This arrangement is very frequent; but more or less disguised by the torsions which the axis experiences in process of growth.

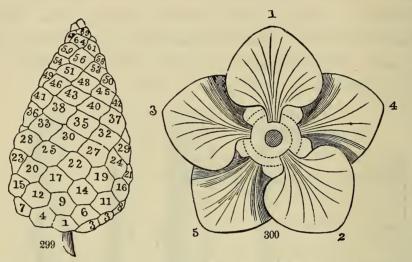

295, 296, 297, Showing the course of the spiral thread and the order of the leaf-succession in the axes of Elm, Alder, and Cherry. 298, Axis of Osage-orange with a section of the bark peeled, displaying the order of the leaf-scars (cycle 3%).

267. In the Osage-orange, the Holly, and some other plants, the attempt has been made to find spirals of a higher order.

268. In the leaves of House-leek and the cones of Pine-trees the number of members is very large.

269. The common arrangement is represented by a series of fractions, each fraction indicating the proportion borne by the angular divergence to the entire circumference. Thus $\frac{2}{5}$, for the Cherry, indicates that the angular divergence between successive leaves is two fifths of a circle, or 144°. It also shows that in following the spiral from any particular leaf to one directly above it, you must go round the stem twice and pass to the fifth leaf above, and that there are five orthostichies or vertical rows of leaves (Fig. 297).

299, Phyllotaxy of the cone (cycle $\frac{6}{21}$) of Pinus serotina. The scales are numbered (1, 2, 3, etc.) in order as they occur in the formative cycle. Between 1 and 22 are 8 turns and 21 scales, etc. 300, Cherry cycle (2) as viewed from above, forming necessarily that kind of æstivation called quincuncial.

270. It is now known that the angle of divergence varies in different regions of the same shoot; and that frequently a shoot beginning with a simple arrangement, afterward passes on to a more complicated pattern.

CHAPTER XX.

MORPHOLOGY OF THE LEAF.

271. The leaf constitutes the verdure of plants, and is by far the most conspicuous and beautiful object in the scenery of nature. It is also of the highest importance in the vegetable economy, being the organ of *digestion* and *respiration*. It is characterized by a thin and expanded form, presenting the largest possible surface to the action of the air and light, which agents are indispensable to the life and increase of the plant.

The leaf may be regarded as an expansion of the substance of the stem, extended into a broad thin plate by means of a woody frame-work or skeleton, connected with the inner part of the axis. The expanded portion is called the lamina or blade of the leaf, and it is either *sessile*, that is, attached to the stem by its base, or it is *petiolate*, attached to the stem by a footstalk called the petiole.

272. The regular petiole very often bears at its base a pair of leaf-like appendages, more or less apparent, called *stipules*. Leaves so appendaged are said to be *stipulate*; otherwise they are *exstipulate*.

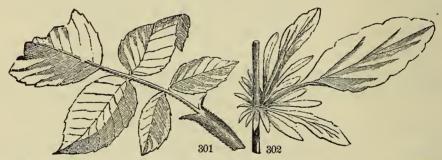

273. Therefore a complete leaf consists of three distinct parts—the lamina or blade, the petiole, and the stipules. These parts are subject to endless transformations. Either of them may exist without the others, or they may all be transformed into other organs, as pitchers, spines, tendrils, and even into the organs of the flower, as will hereafter appear.

274. The Petiole in form is rarely cylindrical, but more generally flattened or *channeled* on the upper side. When it is flattened in a vertical direction, it is said to be *compressed*, as in the Aspen or Poplar. In this case, the blade is very unstable, and agitated by the least breath of wind. The *winged petiole* is flattened or expanded into a margin, but laterally instead of vertically, as in the Orange. Sometimes the margins outrun the petioles, and extend down the stem, making that winged, or *alate*, also. Such leaves are said to be *decurrent* (*decurro*, run down). Ex., Mullein.

91, 92.]

275. The amplexicaul petiole is dilated at the base into a margin which surrounds or clasps the stem, as in the Umbellifers. Frequently we find the stemclasping margins largely developed, constituting a *sheath*—with free edges in the Grasses, or closed into a tube in the Sedges.

276. The petiole is simple in the simple leaf, but compound or branched in the compound leaf, with as many branches (*petiolules*) as there are divisions of the lamina. A leaf is *simple* when its blade consists of a single piece, however cut, cleft, or divided; and *compound* when it consists of several distinct blades, supported by as many branches of a compound petiole.

301, Rose leaf, odd-pinnate, with adnate stipules. 302, Violet (V. tricolor), with simple leaf (1), and free compound stipules.

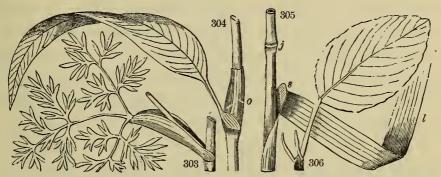

277. Stipules are certain leaf-like expansions, always in pairs, situated one on each side of the petiole near the base. They do not occur in every plant, but are pretty uniformly present in each species of the same natural order. In substance and color they usually resemble the leaf; sometimes they are colored like the stem, often they are membranous and colorless. In the Palmetto the leaf-base is a coarse net-work resembling canvas.

278. Stipules are often *adnate*, or adherent to the petiole, as in the Rose; more generally they are free,

92, 93.]

as in the Pea and Pansy. In these cases and others they act the part of leaves; again they are often very small and inconspicuous.

279. An *Ochrea* is a membranous sheath inclosing the stem from the node upward, as in the Knot-grass family (Polygonaceæ). It is formed of the two stipules

303, Leaf of Selinum, tripinnate, with sheathing petiole. 304, Leaf of Polygonum Pennsylvanicum, with its (o) ochrea. 305, Culm of Grass, with joint (j), leaf (l), ligule (s). 306, Leaf of Pear-tree, with slender stipules.

cohering by their two margins. In case the two stipules cohere by their outer margin only, a double stipule is formed opposite to the leaf, as in the Buttonwood. If they cohere by their inner margin, the double stipule appears in the leaf axil, as in the Pondweed (Potamogèton). The *Ligule* of the Grasses is generally regarded as a double axillary stipule. The leaflets of compound leaves are sometimes furnished with little stipules, called *stipels*.

280. Inter-petiolar stipules occur in a few oppositeleaved tribes, as the Galium tribe. Here we find them as mere bristles in Diodia, while in Galium they look like the leaves, forming whorls. Such whorls, if complete, will be apparently 6-leaved, consisting of two true leaves and four stipules. But the adjacent stipules are often united, and the whorl becomes 4-leaved, and in some the whorl is 8-leaved.

109

STRUCTURAL BOTANY.

281. Stipules are often *fugacious*, existing as scales in the bud, and falling when the leaves expand, or soon after, as in the Magnolia and Tulip-tree.

282. Nature of veins. — The blade of the leaf consists of, (1) the *frame-work*, and (2) the tissue commonly called the *parenchyma*. The frame-work is made up of the branching vessels of the footstalk, which are woody tubes pervading the parenchyma, and conveying nourishment to every part. Collectively, these vessels are called *veins*, from the analogy of their functions. VENATION is the division and distribution of the veins. The several organs of venation, differing from each other only in size and position, may be termed the midvein, veins, veinlets, and veinulets. (The old terms, *midrib* and *nerves*, being anatomically absurd, are here discarded.)

283. The *Midvein* is the principal axis of the venation, or prolongation of the petiole, running directly through the lamina, from base to apex, as seen in the leaf of the Oak or Birch. If there be several similar divisions of the petiole, radiating from the base of the leaf, they are appropriately termed *Veins*; and the leaf is said to be three-veined, five-veined, as in Maple. The primary branches sent off from the midvein or the veins we may term the *Veinlets*, and the secondary branches, or those sent off from the veinlets, are the *Veinulets*. These also branch and subdivide until they become too small to be seen.

284. Botanists distinguish three modes of venation, which are in general characteristic of *three Grand Divisions* of the Vegetable Kingdom — viz.:

Reticulate or Net-veined, as in the DICOTYLEDONS (called also Exogens). This kind of venation is char-

acterized by the frequent reunion or inosculation of its numerously branching veins, so as to form a kind of irregular net-work.

Varieties of venation.-307, Feather-veined,-leaf of Betula populifolia (White Birch), lying upon a leaf of Plum-tree: same venation with different outlines. 308, Palmate-veined,-leaf of White Maple, contrasted with leaf of Cercis Canadensis. 309, Parallel venation,-plant of "three-leaved Solomon's seal" (Smilacina trifoliata). 310, Forked venation,-Climbing Fern (Lygodium).

Parallel-veined, as in the MONOCOTYLEDONS (called also ENDOGENS). The veins, whether straight or curved, run parallel, or side by side, to the apex of the leaf or to the margin, and are connected by simple transverse veinlets hardly seen.

Fork-veined, as in the Ferns (and other CRYPTOGAMS where veins are present at all). Here the veins divide and subdivide in a forked manner, and do not reunite.

285. Of the Reticulate venation the student should carefully note three leading forms: viz., The *Featherveined* (pinni-veined) leaf is that in which the venation consists of a midvein giving off at intervals lateral veinlets and branching veinulets, as in the leaf of

vy. [95, 96. eined (palmi-veined)

Beech, Chestnut. In the *Radiate-veined* (palmi-veined) leaf, the venation consists of several veins of nearly equal size radiating from the base toward the circumference, each with its own system of veinlets. Ex., Maple, Crowfoot. Lastly, the *Tripli-veined* seems to be a form intermediate between the two former, where the lowest pair of veinlets are conspicuously stronger than the others, and extend with the midvein toward the summit (see Fig. 319).

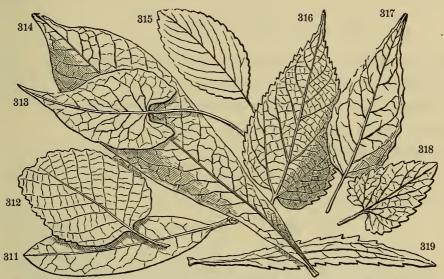

286. In parallel-veined venation the veins are either *straight*, as in the linear leaf of the Grasses; *curved*, as in the oval leaf of the Orchis; or *transverse*, from a midvein, as in the Canna, Calla, etc.

CHAPTER XXI.

MORPHOLOGY OF THE LEAF --- CONTINUED.

287. That infinite variety of beautiful and graceful forms for which the leaf is distinguished becomes intelligible to the student only when viewed in connection with its venation. Since it is through the veins alone that nutriment is conveyed for the development and extension of the parenchyma, it follows that there will be the greatest extension of outline where the veins are largest and most numerous. Consequently the *form* of the leaf will depend upon the direction of the veins and the vigor of their action in developing the intervening tissue. In accordance with this theory, leaf-forms will be classed in respect to their venation.

288. Feather-veined leaves.—Of these, the following forms depend upon the length of the veinlets in relation to each other and to the midvein. When the lower veinlets are longer than the others, the form of the blade will be (1) ovate, with the outline of an egg, the broad end at the base; (2) lanceolate, or lanceshaped, narrower than ovate, tapering gradually upward; (3) deltoid, or triangular-shaped, like the Greek letter Δ .

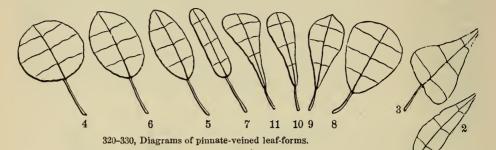

Forms of leaves.—311, Rhododendron maximum. 312, Alnus glutinosa (cult.). 313, Polygonum dumetorum. 314, Papaw. 315, Impátiens fulva. 316, Celtis Americana. 317, Circæa Lutetiana. 318, Catmint. 319, Solidago Canadensis—a tripli-veined leaf.

289. If the middle veinlets exceed the others in length, the leaf will be (4) *orbicular*, roundish, or quite circular; (5) *elliptical*, with the outline of an ellipse, nearly twice longer than broad; (6) *oval*, broadly elliptical; (7) *oblong*, narrowly elliptical.

290. When the veinlets are more largely developed in the upper region of the leaf, its form becomes (8) obovate, inversely ovate, the narrow end at base; (9) oblanceolate, that is, lanceolate with the narrow end at base; (10) spatulate, like a spatula, with a narrow base and a broader, rounded apex; (11) cuneate or cuneiform, shaped like a wedge with the point backward.

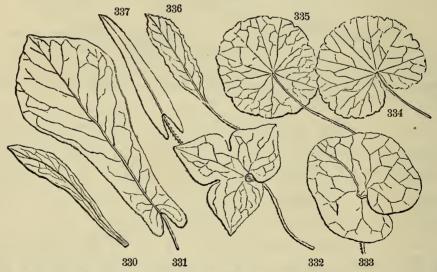

96, 97.]

291. Again: if the lowest pair of veinlets are lengthened and more or less recurved, the leaf will be vari-

ously modified in respect to its base, becoming (334) cordate, or heart-shaped, an ovate outline with a sinus or re-entering angle at base; (331) auriculate, with ear-shaped lobes

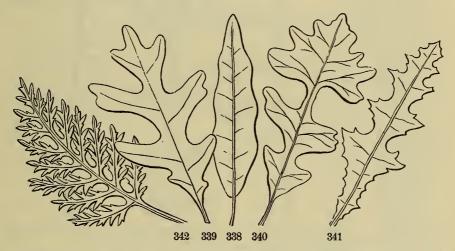

at base; (337) *sagittate*, arrow-shaped, with the lobes pointed, and directed backward; (332) *hastate*, halbert-shaped, the lobes directed outward.

Forms of leaves.—330, Silene Virginica. 331, Magnolia Fraseri. 336, Arabis dentata. 337, Polygonum sagittatum. 332, Hepatica acutiloba. 333, Asarum Virginicum. 334, Hydrocotyle Americana. 335, H. umbellata.

292. Pinnatifid forms.— The following pinnateveined forms, approaching the compound leaf, depend less upon the proportion of the veinlets than upon the relative development of the intervening tissue. The prefix *pinnate* is obviously used in contrast with *palmate* among palmate-veined forms.

293. Pinnatifid (pinna, feather, findo, to cleave), feather-cleft, the tissue somewhat sharply cleft between the veinlets about half-way to the midvein, forming oblong segments. When the segments of a pinnatifid leaf are pointed and curved backward, it becomes runcinate, *i.e.*, re-uncinate (346). When the terminal segment of a pinnatifid leaf is orbicular in figure and larger than any other, presenting the form of the ancient lyre, the form is termed *lyrate* (340).

Feather-veined leaves, approaching the compound. --338, Quercus imbricaria--undulate. 339, Q. alba (White Oak)--lobate-sinuate. 340, Q. macrocarpa--lyrate. 341, Mulgedium (Milkweed). 342, Bipinnatifid leaf of Ambrosia artemisifolia (Hogweed).

294. *Pinnately parted* implies that the incisions are deeper than pinnatifid, nearly reaching the midvein. In either case the leaf is said to be *sinuate* when the incisions (sinuses) as well as the segments are rounded and flowing in outline. Such segments are *lobes*. and the leaves *lobate* or lobed, a very generic term.

295. Palmate forms. — The palmate venation presents us with a set of forms which are, in general,

115

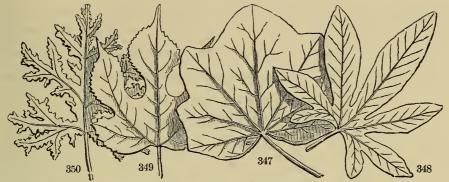

broader in proportion than the pinnate, having the breadth about equal to the length. Such a leaf may be rarely *broadly ovate*, or *broadly cordate*, terms which require no further explanation. Or it may be *Reniform*, kidney-shaped, having a flowing outline broader than long, concave at base; or *Peltate*, shield-form, the petiole not inserted at the margin, but in the midst

Feather-veined leaves approaching the compound.—343, Nigella (pinnatisect). 344, Cheledonium majus. 345, Thistle (Cirsium lanceolatum). 346, Dandelion (runcinate-lyrate).

of the lower surface of the blade. This singular form evidently results from the blending of the base lobes of a deeply cordate leaf, as seen in Hydrocotyle. It may be orbicular, oval, etc.

296. The following result from deficiency of tissue, causing deep divisions between the veins. Leaves thus dissected are said to be *palmately-lobed* when either the segments or the sinuses are somewhat rounded and continuous. The number of lobes is denoted by such terms as *bilobate*, *trilobate*, *five-lobed*, etc. Leaves are 99, 100.]

Palmate-veined leaves.—347, Menispermum Canadense. 348, Passiflora cerulea. 349, Broussonetia papyrifera. 350, Oak Geranium.

palmately cleft and palmately parted, according to the depth of the incisions as above described. But the

most peculiar modification is the *Pedate*, like a bird's foot, having the lowest pair of veins enlarged, recurved, and bearing each several of the segments (348).

297. The forms of the parallel-veined leaves are remarkable for their even, flowing outlines, diversified solely by the direction and curvature of the veins. When the veins are straight, the most common form is the *Linear*, long and narrow, with parallel margins, like the leaves of the Grasses — a form which may also occur in the pinnate-veined leaf, when the veinlets are all equally shortened. The ensiform, or sword-shaped, is also linear, but has its edges vertical, that is, directed upward and downward.

351, Ensiform leaves of Iris. 352, Acerose leaves of Pinus. 353, Subulate leaves of Juniperus communis.

298. If the veins curve, we may have the lanceolate,

elliptical, or even orbicular forms; and if the lower curve downward, the cordate, sagittate, etc. Palmate forms there also are, splendidly developed in the Palmetto and other Palms, whose large leaves are appropriately called *flabelliform* (fan-shaped).

299. The leaves of the Pine and the Fir tribe (Coniferæ) generally are parallel-veined also, and remarkable for their contracted forms, in which there is no distinction of petiole or blade. Such are the *Acerose* (needle-shaped) leaves of the Pine, the *Subulate* (awlshaped) and scale-form leaves of the Cedars, etc.

CHAPTER XXII.

+++

THE COMPOUND LEAF, ETC.

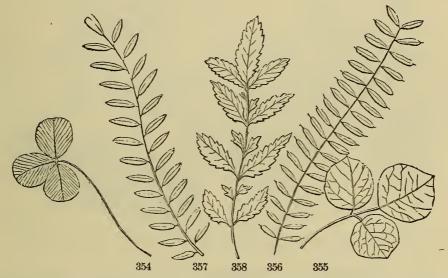

300. If we conceive of a *simple* leaf becoming a *compound* one, on the principle of "deficiency of tissue between the veins," it will be evident that the same forms of venation are represented by the branching petioles of the latter as by the veins of the former. The number and arrangement of the parts will therefore in like manner correspond with the mode of venation.

301. The divisions of a compound leaf are called *leaflets*; and the same distinction of outline, margin, etc., occur in them as in simple leaves. The *petiolules* of the leaflets may or may not be articulated to the main petiole, or *rachis*, as it is called.

302. Pinnately compound.—From the pinnate-veined arrangement we may have the *pinnate* leaf, where the petiole (midvein) bears a row of leaflets on each side, either sessile or petiolulate, generally equal in number

and opposite. It is *unequally pinnate* (357) when the rachis bears an odd terminal leaflet, and *equally pinnate* (356) when there is no terminal leaflet, and *interruptedly pinnate* when the leaflets are alternately large and small (358).

303. The number of leaflets in the pinnate leaf varies from thirty pairs and upward (as in some Acacias), down to three, when the leaf is said to be *ternate* or *trifoliate*; or two, becoming *binate*; or finally

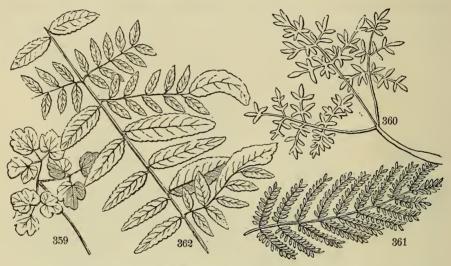

Compound leaves -354, Trifolium repens. 355, Desmodium rotundifolium. 356, Sesbania. 357, Cassia. 358, Agrimonia.

even to *one* leaflet in the Lemon. Such a leaf is theoretically compound, on account of the leaflet (blade) being articulated to the petiole.

304. A *bipinnate leaf* (twice pinnate) is formed when the rachis bears pinnæ or secondary pinnate leaves, instead of leaflets (361), and *tripinnate* (thrice pinnate) when pinnæ take the places of the leaflets of a bipinnate leaf (360). When the division is still more complicated, the leaf is *decompound*. Different degrees of division often exist in different parts of the same leaf, illustrating the gradual transition of leaves from simple to compound in all stages. The leaves of the Honey-locust and Coffee-tree (Gymnocladus) often afford curious and instructive examples (362).

305. A *biternate leaf* is formed when the leaflets of a ternate leaf give place themselves to ternate leaves (359), and *triternate* when the leaflets of a biternate leaf again give place to ternate leaves.

Compound leaves.-359, Clematis. 360, Erigenia bulbosa. 361, Acacia. 362, Honey-locust.

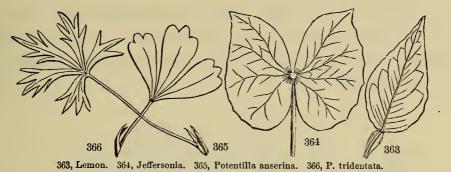

306. Palmately compound. — The palmate venation has also its peculiar forms of compound leaves, as ternate, quinate, septenate, etc., according to the number of leaflets which arise together from the summit of the petiole. Ternate leaves of this venation are to be carefully distinguished from those of the pinnate plan. The palmately ternate leaf consists of three leaflets, which are either all sessile or stalked alike; the pinnately ternate has the terminal leaflet raised above the other two on the prolonged rachis (354, 355).

307. Apex. — In regard to the termination of a leaf or leaflet at its apex, it may be *acuminate*, ending

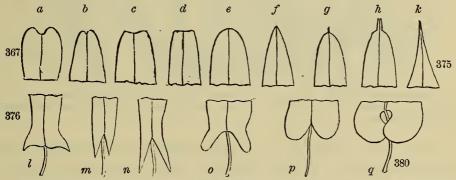

[102, 103.

103, 104.]

with a long, tapering point; *cuspidate*, abruptly contracted to a sharp, slender point; *mucronate*, tipped with a spiny point; *acute*, simply ending with an angle; *obtuse*, rounded at the point. Or the leaf may

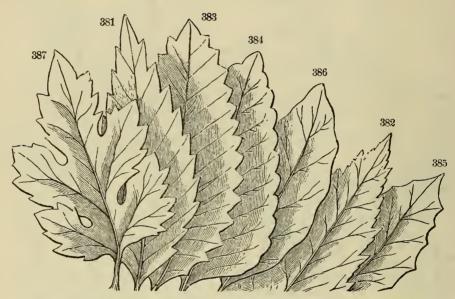

end without a point, being *truncate*, as if cut square off; *retuse*, with a rounded end slightly depressed where the point should be; *emarginate*, having a small notch at the end; *obcordate*, inversely heart-shaped, having a deep indentation at the end.

367-375, Apex of teaves.—a, obcordate; b, emarginate; c, retuse; d, truncate; e, obtuse; f, acute; g, mucronate; h, cuspidate; k, acuminate. 376-380, Bases of leaves.—l, hastate; m, n, sagittate; o, auriculate; p, cordate; q, reniform.

308. Margin. — The following terms are used to define the margin of the leaf or leaflet, with no reference to the general form. If the leaf be even-edged, having the tissue completely filled out, the appropriate term is *entire*. Sometimes a vein runs along such a margin as if a *hem*,

309. But when the marginal tissue is deficient, the leaf becomes *dentate*, having sharp teeth pointing outward from the center; *serrate*, with sharp teeth pointing forward, like the teeth of a saw; *crenate*, with rounded or blunt teeth. The terms *denticulate*, *serrulate*, *crenulate* denote finer indentations of the several kinds; *doubly dentate*, etc., denote that the teeth are themselves toothed.

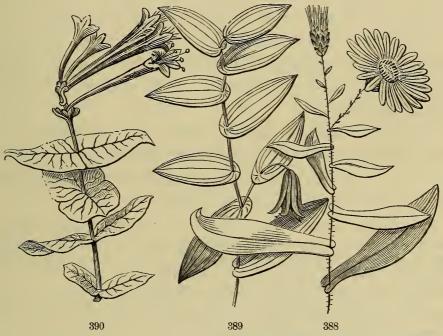

381, Serrate leaf of Chestnut. 382, Doubly serrate leaf of Elm. 383, Dentate leaf of Arrow-wood. 384, Crenate leaf of Catmint. 385, Repand leaf of Circæa. 386, Undulate leaf of Shingle Oak. 387, Lobed leaf of Chrysanthemum.

310. The *undulate*, or wavy edge, is somewhat different from the *repand*, which bends like the margin of an umbrella. If the veins project, and are tipped with spines, the leaf becomes *spinous*. Irregularly divided margins are said to be *erose* or jagged, *laciniate* or torn, *incised* or cut. Often, instead of a deficiency, there is a superabundance of marginal tissue, denoted by the term *crispate* or crisped.

311. Insertion. — Several important terms descriptive of the various modes of leaf-insertion must here

104, 105.]

be noticed. A sessile leaf is said to be *amplexicaul* when its base-lobes adhere to and clasp the stem. Should these lobes extend quite around the stem and on the other side become blended together, a *perfoliate* leaf will be formed (*per*, through, *folium*, leaf), the stem seeming to pass through the leaves. When the bases of two opposite sessile leaves are so united as to form one piece of the two, they are said to be *connate*.

Insertion of leaves.—388, Aster lævis (amplexicaul). 389, Uvularia perfoliata. 390. Lonicera sempervirens (connate).

312. Surface. — The following terms are applicable to any other organs as well as leaves. In the quality of surface the leaf may be *glabrous* (smooth), destitute of all hairs, bristles, etc., or *scabrous* (rough), with minute, hard points, hardly visible. A dense coat of hairs will render the leaf *pubescent* when the hairs are soft and short; *villous* when they are rather long and weak; *sericeous*, or silky, when close and satin-like; such a coat may also be *lanuginose*, woolly; *tomentose*, matted like felt; or *floccose*, in soft, fleecy tufts.

313. Thinly scattered hairs render the surface *hir*sute when they are long; *pilose* when short and soft; *hispid* when short and stiff. The surface will be setose when beset with bristly hairs called setce; and spinose when beset with spines, as in the Thistle and Horsenettle. Leaves may also be armed with stinging hairs which are sharp and tubular, containing a poisonous fluid, as in Nettles and Jatropha stimulans (503).

314. A *pruinose* surface is covered with a bluishwhite waxy powder, called *bloom*, as in the Cabbage; and a punctate leaf is dotted with colored points or pellucid glands.

315. In texture leaves may be *membranous*, or *coriaceous* (leathery), or *succulent* (fleshy), or *scarious* (dry), *rugose* (wrinkled), etc., which terms need only to be mentioned.

316. Double terms. — The modifications of leaves are almost endless. Many other terms are defined in the glossary, yet it will often be found necessary in the exact description of a plant to combine two or more of the terms defined in order to express some intermediate figure or quality; thus ovatelanceolate, signifying a form between ovate and lanceolate, etc.

317. The Latin preposition *sub* (under) prefixed to a descriptive term denotes the quality which the term expresses, in a lower degree, as *subsessile*, nearly sessile, *subserrate*, somewhat serrate.

CHAPTER XXIII.

TRANSFORMATIONS OF THE LEAF.

318. Hitherto we have considered the leaf as foliage merely—constituted the fit organ of aeration by its large expansion of surface. This is indeed the chief, but not the only aspect in which it is to be viewed. The leaf is a typical form; that is, a type, or

106, 107.] TRANSFORMATIONS OF THE LEAF.

an IDEA of the Divine Architect, whence is derived the form of every other appendage of the plant. To trace out this idea in all the disguises under which it lurks, is one of the first aims of the botanist. Several of these forms of disguise have already been noticed — for example:

319. The scales which clothe the various forms of scale-bearing stems are leaves, or more usually *petioles*, reduced and distorted, perhaps by the straitened circumstances of their underground growth. The scales of corms and rhizomes are mostly mere membranes, while those of the bulb are fleshy, serving as depositories of food for the future use of the plant. That these scales are leaves is evident—1st, from their position at the nodes of the stem; 2d, from their occasional development into true leaves. Of the same nature are the brown scales of Winter buds.

320. The cotyledons of seeds or seed-lobes are readily recognized as leaves, especially when they arise above-ground in germination, and form the first pair upon the young plant; as in the Beechnut and Squash seed. Their deformity is due to the starchy deposits with which they are crammed for the nourishment of the embryo when germinating, and also to the way in which they are packed in the seed.

321. Phyllodia are certain leaf-forms, consisting of petioles excessively compressed, or expanded vertically into margins, while the true lamina is partly or entirely suppressed. Fine examples are seen in our greenhouse Acacias from Australia. Their vertical or edgewise position readily distinguishes them from true leaves.

322. Ascidia, or *pitchers*, are surprising forms of

leaves, expressly contrived, as if by art, for holding water. The pitchers of Sarracenia, whose several species are common in bogs North and South, are evidently formed by the blending of the involute margins of the broadly winged petioles, so as to form a complete vase. The broad expansion which appears at the top may be regarded as the lamina. These pitchers contain water, in which insects are drowned, being

Ascidia.—391, Nepenthes. 392, Sarracenia psittacina. 393, S. purpurea. 394, S. Gronovii, β . Drummondii. 395, Acacia heterophylla—its phyllodia.

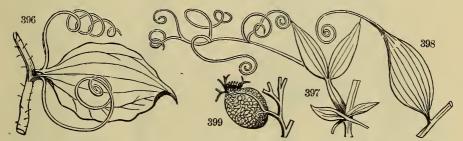

prevented from escaping by the deflexed hairs at the mouth. Other pitcher-bearing plants are equally curious; as Darlingtonia of California, Nepenthes and Dischidia of the East Indies. In Dionæa of North Carolina, the leaves are transformed to spiny, snapping fly-traps!

323. Many weak-stemmed water-plants are furnished with *Air-bladders*, or little sacks filled with air to buoy them up near to the surface. Such are the bladders of the common Bladderwort, formed from the leaf-lobes. In the Horned-bladderwort, the floats are

108, 109.] TRANSFORMATIONS OF THE LEAF.

made of the six upper inflated petioles lying upon the surface of the water like a wheel-shaped raft and sustaining the flower upon its own elevated stalk.

324. The Tendril is a thread-like, coiling appendage, furnished to certain weak-stemmed plants as their means of support in place. Its first growth is straight, and it remains so until it reaches some object, when it immediately coils itself about it, and thus acquires a firm though elastic hold. This beautiful appendage is finely exemplified in the Cucurbitaceæ and Grape,

396, Leaf of Greenbrier, with tendrils in place of stipules. 397, Leaf of Everlasting Pea-tendrils at end of rachis. 398, Leaf of Gloriosa-apex ends in a tendril. 399, Air-bladder of Horn Pondweed.

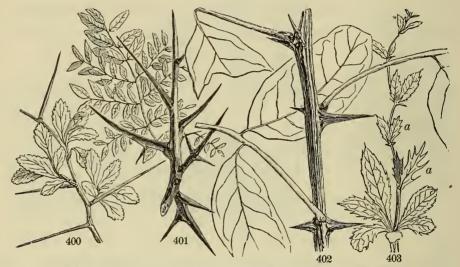

above cited; also in many species of the Pea tribe (Leguminosæ), where it is appended to the leaves. It is not a new organ, but some old one transformed and adapted to a new purpose. In Gloriosa superba, the midvein of the leaf is prolonged beyond the blade into a coiling tendril. In the Pea, Vetch, etc., the tendrils represent the attenuated leaf-blades themselves. Again, the entire leaf sometimes becomes a tendril in Lathyrus, while the stipules act as leaves.

325. The petiole of the leaf of Clematis, otherwise unchanged, coils like a tendril for the support of the vine. In the Greenbrier, the stipules are changed to tendrils, which thus arise in pairs from the base of the petioles. So probably in the Gourd.

127

326. But the tendrils of the Grape vine are of a different nature. From their position opposite the leaves, and the tubercles occasionally seen upon them, representing flower-buds, they are inferred to be abortive, or transformed flower-stalks.

327. Many plants are armed, as if for self-defense with hard, sharp-pointed, woody processes, called *spines* or *thorns*. Those which are properly called spines originate from leaves. In Berberis the spines are evidently transformed leaves, as the same plant exhibits

Thorns-400, Cratægus parvifolia (thorns axillary). 401, Honey-locust. 402, Common Locust. 403, Berberis-a, a, its thorns.

leaves in every stage of the metamorphosis. In Goat'sthorn (Astragalus tragacanthus) of S. Europe, the petioles change to spines after the leaflets fall off. In the Locust (Robinia), there is a pair of spines at the base of the petiole, in place of stipules.

328. Thorns originate from axillary buds, and are abortive branches. This is evident from their position in the Hawthorn and Osage-orange. The Apple and Pear tree in their wild state produce thorns, but by cultivation become thornless; that is, the axillary buds, through better tillage, develop branches instead of thorns. The terrible branching thorns of the Honey-locust originate just above the axil, from accessory buds. Prickles differ from either spines or thorns, growing from the epidermis upon stems of leaves, at no determinate point, and consisting of hardened cellular tissues, as in the Rose, Bramble.

329. By a more gentle transformation, leaves pass into *Bracts*, which are those smaller, reduced leafforms situated near and among the flowers. So gradual is the transition from leaves to bracts—in the Peony, *e.g.*—that no absolute limits can be assigned. Equally gradual is the transition from bracts to sepals of the flower—affording a beautiful illustration of the doctrine of metamorphosis (§ 330, etc.). Bracts will be further considered under the head of Inflorescence.

CHAPTER XXIV.

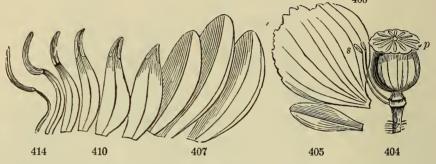

METAMORPHOSIS OF THE FLOWER.

330. It has already been announced (§ 37) that a flower is a metamorphosed, that is, a transformed branch. No *new* principle or element was devised to meet this new necessity in the life of the plant, viz., the perpetuation of its kind; but *the leaf*, that same protean form which we have already detected in shapes so numerous and diverse, THE LEAF, is yet once more in nature's hand molded into a series of forms of superior elegance, touched with colors more brilliant, and adapted to a higher sphere as *the organs of reproduction*.

331. Proofs of this doctrine appear on every hand, both in the *natural* and in the *artificial* development of plants. We mention a few instances. The thoughtful student will observe many more.

332. In most flowers, as in the Poppy, very little evidence of the *metamorphosis* appears, simply because it has been so complete. Its sepals, petals, stamens, and pistils—how unlike! Can these be of one and the same element? Look again. Here is a double flower, a Poppy of the gardens, *artificially* developed; its slender white stamens have indeed expanded into broad red petals!

333. The argument begins with the sepals. In the Rose and Pæony, and in most flowers, the sepals have all the characteristics of leaves — color, form, venation, etc. The transition from leaves to bracts and from bracts to sepals is so gradual as to place their identity

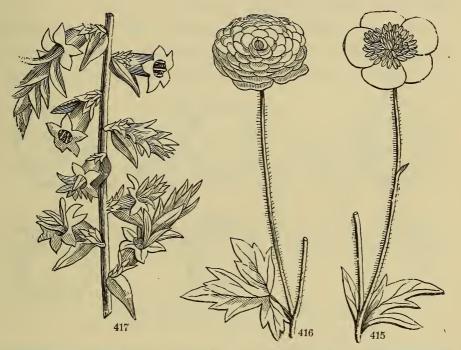

404, Papaver (poppy)—s, stamens ; p, stigmas. 405, sepal. 406, Petal—all very different. 407 to 414, Petals of the Water-lily (Nymphæa) gradually passing into stamens.

beyond doubt. Again, in Calicanthus, the sepals pass by insensible gradations into petals; and in the Lilies these two organs are almost identical. Hence, if the sepals are leaves, the petals are leaves also. In respect to the nature of the stamens, the Water-lily is particularly instructive. Here we see a perfect gradation of forms from stamens to petals, and thence to sepals, where, half-way between the two former, we find a narrow petal tipped with the semblance of an anther (410). Finally, cases of close resemblance between stamen and pistil, so unlike in the Poppy, are not wanting. For example, the Tulip-tree.

^{334.} Teratology. — Cases in ARTIFICIAL DEVELOPMENT where organs of one kind are converted into those of another kind by cultivation, afford undeniable evidence of the doctrine in question — the homology of all the floral organs with each other and with the leaf. Such cases are frequent in the garden, and,

111, 112.] METAMORPHOSIS OF THE FLOWER.

however much admired, they are *monstrous*, because unnatural. In all double flowers, as Rose, Pæony, Camellia, the stamens have been reconverted into petals, either wholly or partially, some yet remaining in every conceivable stage of the transition. In the double Buttercup (416) the pistils as well as stamens revert to petals, and in the garden Cherry, Flowering Almond, a pair of green leaves occupy the place of the pistils. By still further changes all parts of the flower manifest their foliage affinities, and the entire flower-bud, after having given clear indications of its floral character, is at last developed into a leafy branch (417). Further evidence of this view will appear in the —

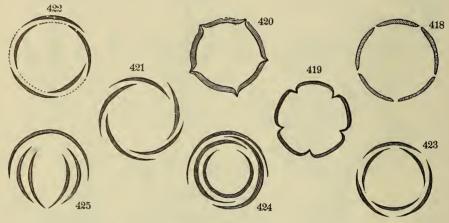

415, Ranunculus acris; a single flower. 416, R. acris, β. plena, a double flower. 417, Epacris impressa, the flowers changing to leafy branches (Lindley).

335. Æstivation of the flower-bud. — This term (from *cestivus*, of summer) refers to the arrangement of the floral envelopes while yet in the bud. It is an important subject, since in general the same mode of æstivation regularly characterizes whole tribes or orders. It is to the flower-bud what vernation (*vernus*, spring) is to the leaf-bud. The various modes of æstivation are best observed in sections of the bud made by cutting it through horizontally when just ready to open. From such sections our diagrams are copied.

131

336. Separately considered, we find each organ here folded in ways similar to those of the leaf-bud; that is, the sepal or the petal may be *convolute*, *involute*, *revolute*, etc., terms already defined. Collectively considered, the æstivation of the flower occurs in four general modes with their variations—the valvate, the contorted, imbricate, and plicate.

337. In valvate æstivation the pieces meet by their margins without any overlapping; as in the sepals of the Mallow, petals of Hydrangea, valves of a capsule.

418-425, Modes of æstivation. 424, Petals of the Wall-flower.

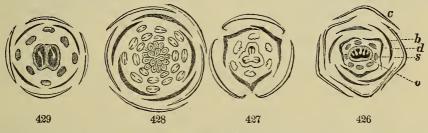

The following varieties of the valvate occur: Induplicate, where each piece is involute — i. e., has its two margins bent or rolled inward, as in Clematis; or reduplicate, when each piece is revolute — having its margins bent or rolled outward, as in the sepals of Althea.

338. Contorted æstivation is where each piece overlaps its neighbor, all in the same direction, appearing as if twisted together, as in Phlox, Flax, Oleander (421).

339. Imbricated æstivation (*imbrex*, a tile) is a term restricted to those modes in which one or more of the petals or sepals is wholly outside, overlapping two others by both its margins. This kind of æstivation

113, 114.] METAMORPHOSIS OF THE FLOWER.

naturally results from the spiral arrangements so common in phyllotaxy, while the valvate and contorted seem identified with the opposite or whorled arrangement. The principal varieties are the following: The *Quincuncial*, consisting of five leaves, two of which are wholly without, two wholly within, and one partly both, or one margin out, the other in, as in the Rose family (422). This accompanies the *two fifths cycle* in phyllotaxy, and corresponds precisely with it, each quincunx being in fact a cycle with its internodes

Diagrams of flowers (as seen by cross-sections).—426, Jeffersonia diphylla—o, ovary; s, stamens; d, inner row of petals, æstivation triquetrous; b, outer row of petals, æstivation contorted; c, sepals, æstivation quincuncial. 427, Lily. 428, Strawberry. 429, Mustard. The pupil will designate modes of æstivation.

suppressed. (Fig. 300, § 266.) The *Triquetrous*, consisting of three leaves in each set, one of which is outside, one inside, and the third partly both, as in Tulip, Erythronium, agreeing with the *two thirds*, or Alder Cycle (§ 265). The *Convolute*, when each leaf wholly involves all that are within it, as do the petals of Magnolia; and lastly, the *Vexillary*, when one piece larger than the rest is folded over them, as in Pea (425).

340. Plicate or folded æstivation occurs in tubular or monopetalous flowers, and has many varieties, of which the most remarkable is the *supervolute*, where the projecting folds all turn obliquely in the same direction, as in the Morning-glory, Thorn-apple.

Different modes of æstivation may occur in the different whorls of the same flower.

CHAPTER XXV.

INFLORESCENCE.

341. Inflorescence is a term denoting the arrangement of the flowers and their position upon the plant.

All the buds of a plant are supposed to be *originally* of one and the same nature, looking to the production of vegetative organs only. But at a certain period, a portion of the buds of the living plant, by an unerring instinct little understood, are converted from their ordinary intention into *flower-buds*, as stated and illustrated in the foregoing Chapter. The flower-bud is incapable of extension. While the leaf-bud may unfold leaf after leaf, and node after node, to an indefinite extent, the flower-bud blooms, dies, and arrests forever the extension of the axis which bore it.

342. In position and arrangement, flower-buds can not differ from leaf-buds, and both are settled by the same unerring law which determines the arrangement of the leaves. Accordingly, the flower-bud is always found either *terminal* or *axillary*. In either case, a single bud may develop either a *compound* inflorescence, consisting of several flowers with their stalks and bracts, or a *solitary* inflorescence, consisting of a single flower.

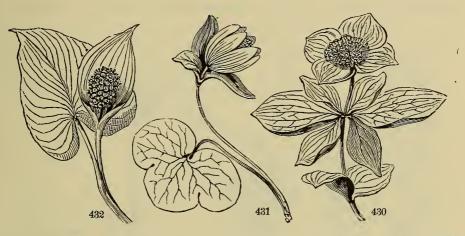

343. The *Peduncle* is the flower-stalk. It bears no leaves, or at least only such as are reduced in size and changed in form, called *bracts*. If the peduncle is wanting, the flower is said to be *sessile*. The simple peduncle bears a single flower; but if the peduncle be divided into branches, it bears several flowers, and the final divisions, bearing each a single flower, are called *pedicels*. The main stem or axis of a compound peduncle is called the *rachis*.

344. The *Scape* is a flower-stalk which springs from a subterranean stem, in such plants as are called

115, 116.]

INFLORESCENCE.

stemless, or acaulescent; as the Primrose, Tulip, Bloodroot. Like the peduncle, it is leafless or with bracts only, and may be either simple or branched. The flower-stalk, whether peduncle, scape, or pedicel, always terminates in the *torus* (§ 57).

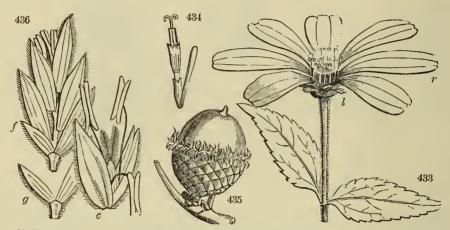

Bracts (b, b, b).—430, Cornus Canadensis, with an involuce of four colored bracts. 431, Hepatica triloba, with an involuce of three green bracts. 432, Calla palustris, with a colored spathe of one bract.

345. **Bracts.**—The branches of the inflorescence arise from the axils of reduced leaves, called *bracts*. Those leaves, still smaller, growing upon the pedicels, are called *bractlets*. Bracts are usually simple in outline and smaller than the leaf, often gradually diminishing to mere points, as in Aster, or even totally suppressed, as in the Cruciferæ. Often they are colored, sometimes brilliantly, as in Painted-cup. Sometimes they are scale-like, and again they are evanescent membranes.

346. The *Spathe* is a large bract formed in some of the Monocotyledons, enveloping the inflorescence, and often colored, as in Arum, Calla; or membranous, as in Onion and Daffodil.

347. Bracts also constitute an *Involucre* when they are collected into a whorl or spiral group. In the

Phlox, Dodecatheon, and generally, the involucre is green, but sometimes colored and petaloid, as in Dogwood and Euphorbia. Situated at the base of a compound umbel, it is called a *general* involucre; at the base of a partial umbel it is a *partial* involucre or *involucel*, both of which are seen in the Umbelliferæ.

433, Helianthus grosse-serratus—l, involucre ; r, rays, or ligulate flowers. 434, One of the disk-flowers with its chaff-scale (bract). 435, A corn of Moss-cup Oak (Q. macrophylla). 436, Poa pratensis—f, spikelet entire ; g, glumes separated ; c, a flower separated, displaying the two pales, three stamens, and two styles.

348. In the Compositæ, where the flowers are crowded upon a common torus, forming what is called a *compound flower*, an involucre composed of many imbricated scales (bracts) surrounds them as a calyx surrounds a simple flower. The chaff also upon the torus are bracts to which each floret is axillary (434).

349. In the Grasses, the bracts subsist under the general name of *chaff*. At the base of each *spikelet* (436) of flowers we find two bracts—the *Glumes*. At the base of each separate flower in the spikelet are also two bractlets—the *Pales*—enveloping as a calyx the three stamens and two styles (c).

350. The cup of the Acorn is another example of involucre, composed of many scale-like bractlets. So, also, perhaps the burr of the Chestnut, etc.

INFLORESCENCE.

351. The forms of inflorescence are exceedingly various, but may all be referred to two classes, as already indicated—the *axillary*, in which all the flowers arise from axillary buds; the *terminal*, in which all the flower-buds are terminal.

352. Axillary inflorescence is called indefinite, because the axis, being terminated by a leaf-bud, continues to grow on indefinitely, developing bracts with their axillary flowers as it grows. It is also called *centripetal*, because in the order of time the blossoming commences with the circumference (or base) of the inflorescence, and proceeds toward the central or terminal bud, as in Hawthorn or Mustard.

353. Terminal inflorescence is definite, implying that the growth of the axis as well as of each branch is definitely arrested by a flower. It is also centrifugal, because the blossoming commences with the central flower and proceeds in order to the circumference, as in the Sweet-William, Elder, Hydrangea.

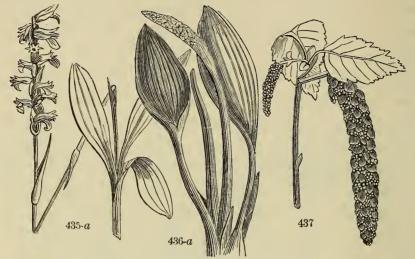

354. Both kinds of inflorescence are occasionally combined in the same plant, where the *general* system may be distinguished from the *partial* clusters which compose it. Thus in the Compositæ, while the florets of each head open centripetally, the general inflorescence is centrifugal, that is, the terminal head is developed before the lateral ones. But in the Labiatæ the partial clusters (verticillasters) open centrifugally, while the general inflorescence is indefinite, proceeding from the base upward.

CHAPTER XXVI.

SPECIAL FORMS OF INFLORESCENCE.

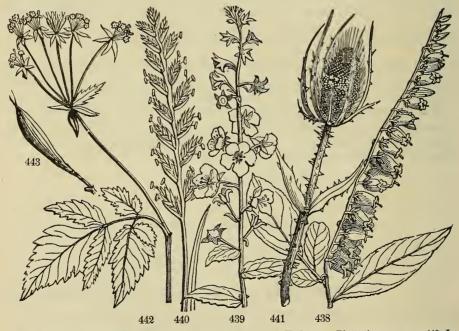

355. Of centripetal or axillary inflorescence the principal varieties are: the spike, spadix, catkin, raceme, corymb, umbel, panicle, thyrse, and head. The *spike* is a long rachis with sessile flowers either scattered,

clustered, or crowded upon it, as Plantain, Mullein, Vervain. The so-called spikes of the Grasses are *com*-

435-a, Spiranthes cernua-flowers in a twisted spike. 436-a, Orontium aquaticum-flowers on a naked spadix. 437, Betula lenta-flowers in aments.

pound spikes or spike-like panicles, bearing little spikes or *spikelets* in place of single flowers (440).

438, Andromeda racemosa—flowers in a secund raceme. 439, Verbascum Blattaria—raceme. 440, Lolium perenne—a compound spike or a spike of spikelets. 441, Dipsacus sylvestris—head with an involucre of leaves. 442, Osmorhiza longistylis—a compound umbel. 443, Its fruit.

[118.

119.] SPECIAL FORMS OF INFLORESCENCE.

356. The *spadix* is a thick, fleshy rachis, with flowers closely sessile or imbedded on it, and usually with a spathe, as in Calla (432), or without it, as in Golden-club (436).

357. The *catkin* or *ament* is a slender, pendent spike with scaly bracts subtending the naked, sessile flowers, all caducous (falling) together, as in Birch, Beech, Oak, Willow.

358. The *raceme* is a rachis bearing its flowers on distinct, simple pedicels. It may be erect, as in Hyacinth, Pyrola; or pendulous, as in Currant, Blackberry. The *corymb* differs from the raceme in having the lower pedicels lengthened so as to elevate all the flowers to about the same level. The corymb often becomes compound by the branching of its lower pedicels, as in Yarrow.

444. Staphylea trifolia-a pendulous, paniculate cyme. 445, Catalpa-a panicle.

359. An *umbel* consists of several pedicels of about equal length radiating from the same point—the top of the common peduncle, as Milk-weed, Onion. When

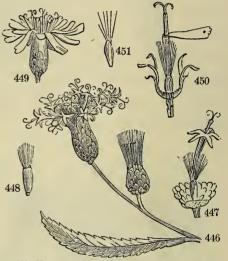

the pedicels of an umbel become themselves umbels, as in Caraway and most of the Umbelliferæ, a compound umbel is produced. Such secondary umbels are called *umbellets*, and the primary pedicels, rays.

360. The panicle is a compound inflorescence formed by the irregular branching of the pedicels of the raceme, as in Oats, Spear-grass, Catalpa. A thyrse is a sort of compact, oblong, or pyramidal panicle, as in Lilac, Grape.

361. A head or capitulum is a sort of reduced

umbel, having the flowers all sessile upon the top of the peduncle, as in the Button-bush. Clover. But the more common examples of the capitulum are seen in the Compositæ, where the summit of the peduncle, that is, the receptacle, is dilated, bearing the sessile flowers above, and scale-like bracts around, as an involucre.

the Compositæ is often

446, Vernonia fasciculata-flowers in a discoid head with an imbricated involucre. 447, A single flower remaining on the receptacle. 448, A fruit 362. The capitulum of 450, A single flower remaining on the receptacle. 451, A fruit with pappus.

called a compound flower from its resemblance, the involucre answering to a calyx, the rays to the corolla. The flowers are called florets — those of the outer circle, florets of the ray, generally differing in form from those of the central portions, the florets of the disk.

363. Of terminal inflorescence the following varieties are described: cyme, fascicle (verticillaster), and glomerule.

120, 121.] SPECIAL FORMS OF INFLORESCENCE.

364. *Cyme* is a general term denoting any inflorescence with centrifugal evolutions, but is properly applied to that level-topped or fastigiate form which

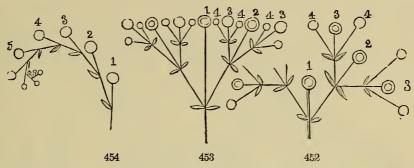

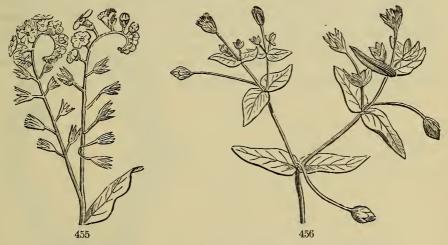

Diagram (452) of cyme flowers numbered in the order of their development.—453, Cyme fastigiate. 454, Cyme half developed—a scorpoid raceme.

resembles the corymb, as in the Elder. If it is loosely spreading, not fastigiate, it is called a *cymous panicle*, as in the Chickweed, Spergula, etc. If it be rounded, as in the Snowball, it is a *globose cyme*.

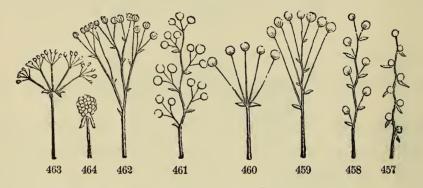

455, Myosotis palustris-scorpioid racemes. 456, Stellaria media-a regular cyme.

365. A scorpioid cyme, as seen in the Sundew, Sedum, and Borrage family, is a kind of coiled raceme, unrolling as it blossoms. It is understood to be a halfdeveloped cyme, as illustrated in the cut (454). The *fascicle* is a modification of the cyme, with crowded

and nearly sessile flowers, as in Sweet-William (Dianthus).

366. *Glomerule*, an axillary tufted cluster, with a centrifugal evolution, frequent in the Labiatæ, etc. When such occur in the axils of opposite leaves and meet around the stem, each pair constitutes a verticillaster or verticil, as in Catmint, Hoarhound.

367. The above diagrams show the mutual relations of the several forms of centripetal inflorescence — how they are graduated from the spike (457) to the head (464). Thus the spike (457) + the pedicels = raceme (458); the raceme with the lower pedicels lengthened = corymb (459); the corymb – the rachis = umbel (460); the umbel – pedicels = head (464), etc.

(For the phenomena of Flowering, Coloring, the Floral Calendar, the Floral Clock, see the Class Book of Botany, pp. 75-77.)

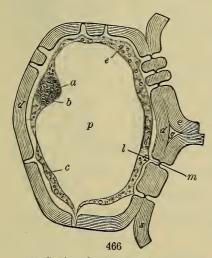

PART SECOND. PHYSIOLOGICAL BOTANY.

CHAPTER I.

VEGETABLE HISTOLOGY AND PHYSIOLOGY.

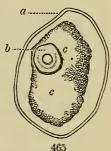

368. The vegetable cell is the foundation of all plant structure, and when complete is a sac or bag-like

body containing a semi-fluid substance called Protoplasm. The cell-wall increases by expansion. Spaces (vacuoles) b

466, Section of pith-cell of Taxodium; a, nucleus; b, nucleolus; c, e, protoplasm sac contracted toward the wall, from which it has been separated by reagents; p, cell-sap in a large vacuole ; l, m, channel between adjacent cells; d, cell-wall; e, s, adjacent cell-walls; g, intercellular space.

appear among the particles of protoplasm, which are occupied by a watery substance called Orchis; a, nucleus, with nucleolus; b, cell-wall; cell-sap. In some c, c, protoplasm mass sep-arated from the cell-wall part of the cell

465, Mature cell of by alcohol.

a spot appears where the granules of Protoplasm are crowded together, forming a The cell is now nucleus. complete, and thus furnished is an organism capable of exercising vital functions, and

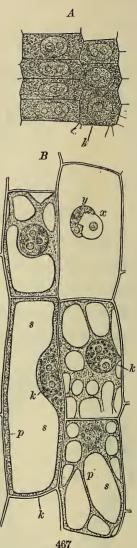

possesses the ability to multiply itself or produce new

cells. In the early stages of the plant's life, the Protoplasm is a naked mass, but it very soon surrounds

itself with a wall, as in Figs. 465 and 466. Inside the cell-wall it arranges itself into a great variety of forms.

In Fig. 467, A shows new cells, with the protoplasm evenly distributed, and nuclei forming, k, k. Fig. 467, B, great changes have taken place, cell-sap has been introduced, and the protoplasm is much vacuolated, and appears either floating freely in the cell-sap, spread along the cell-wall, or otherwise aggregated. In Fig. 468, A, the protoplasm seems to be aggregating, and spots or vacuoles are appearing in its midst. Fig. 467, B, the protoplasm is forming in globular masses around portions of sap. These little vesicles are frequently furnished with the green coloring matter of the plant. Fig. 468, C, highly magnified cell, in which the protoplasm has retreated from the cell-wall under the action of weak sulphuric acid near the tip of the root of Fritillaand iodine.

369. Protoplasm is complex and ing; p, protoplasm. constantly changing in its constitution. It yields to chemical analysis materials similar to egg albumen, and is the living substance of the cell; its appearance under the microscope is shown in Figs. 465-468.

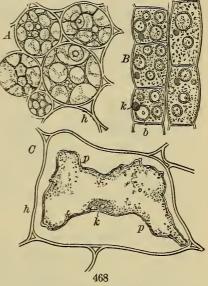

467, A, Very young cells from ria; B, cells from a part a little higher up in the root; s, s, s, sap; k, x, y, nuclei and nucleoli form-

The chemical substances that have been detected in Protoplasm are Oxygen, Hydrogen, Carbon, Nitrogen, Sulphur, Potassium, Calcium, Magnesium, Iron, Phosphorus, Chlorine, and frequently Silicon and Sodium.

The relative proportions of these substances differ in different orders, and are not constant in the same plant.

370. The wall of the cell (Fig. 466) is produced by some action of the protoplasm. When first formed it is very thin, soft, and uniform in thickness; but as it grows older, it is thickened by additional coatings, or strata, upon the inner surface; sometimes of uniform thickness, but more frequently in veins, rings, spots, or ridges, forming the foun- of Jerusalem Artichoke after action of iodine and dation for the tissues and cleolus; p, protoplasm.

468, Forms of Protoplasm; A and B, cells from the stalk of Indian Corn : C, from a tuber sulphuric acid; h, cell-wall; k, nucleus; b, nu-

vessels of plants hereafter to be considered.

371. Cellulose is the substance of which the cellwall is formed. It yields to the chemist the same elements that are found in starch, whose formula is $C_6 H_{10} O_5$; besides these, several other mineral substances are present in minute quantities.

372. Woody material, called *lignin*, is deposited or formed upon the walls of some cells, by which they are hardened and strengthened. The component parts of this substance are not accurately known; there is reason to believe they vary in different plants, and even in different parts of the same plant. Mineral substances, principally silica and lime compounds, also thicken the cell-walls and increase their induration and strength.

373. Chlorophyl. — In the living cells of those parts of plants exposed to sunlight, granules appear, resembling protoplasm grains in all respects except color. These minute bodies are green, and furnish the green color to leaves and all other green parts of plants; the name applied to these granules is due to their color, and as the leaf is the most conspicuous green part of the plant, the term Chlorophyl (Leaf Green) has been applied to this green color. Some authors have called chlorophyl grains stained protoplasm, viewing chlorophyl as the stain, and the chlorophyl granule as colored protoplasm (Figs. 466, 467).

374. Starch is a most important plant product, and is formed by the action of protoplasm and chlorophyl under sunlight; it is found sparingly in the leaf, and when more than enough to supply the plant's daily wants is produced, the surplus is stored up in some other part of the plant, as the tuber of the Potato, the grains of Wheat, and other cereals, in which form it is utilized for animal food. Its component parts are identical with those of cellulose.

> Forms of starch-grains are shown in Figs. 469–473. The form of starchgrains is very various, differing in dif-

ferent plants, and even in the same parts of the same plant. Fig. 473, *A*, *a*, *b*, *c*, to *g*, are starch-grains from

469, Cells of Potato containing starch-grains. 470, Starch-grains from the Potato. 471, from the E. Indian Arrowroot. 472, Starch granules from W. Indian Arrowroot.

a grain of Indian Corn. Fig. 473, *B*, shows starchgrains from a grain of Wheat; these are more nearly

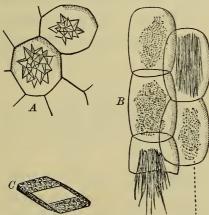

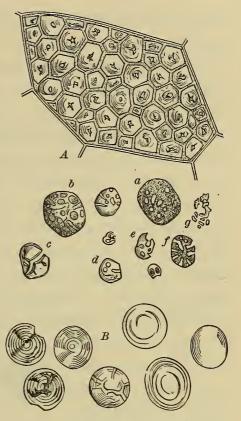

uniform in shape and size and somewhat lens-shaped.

375. Crystals of a great variety of shape are found in some of the cells of most plants of the higher orders; the most simple of these forms are cubical or prismatic; but they occur in almost every variety of polyhedral form. In some orders they appear in slender needle-shaped bodies called Raphides. They usually occur, solitary or in masses, in the cell cavity, but are not unfrequently found in the *cell-wall* (Figs. 474, 475).

Plant crystals are the residua of the materials used in the chemical con

474, A, Beet cells with Rstellate masses of crystals; B, R, inner cells, with raphides escaping; C, aleurone crystal.

473, A, is a cell from the endosperm of a grain of Indian Corn, crowded with starch-grains; the grains marked a, b, c, etc., to g are also from the interior of a grain of corn. The grains marked B are from the interior of a grain of Wheat.

used in the chemical combinations that have taken

place in the cell under the action of sunlight, and are usually composed of *lime* carbonate or *lime oxalate*. Other calcic combinations are, however, frequently present. The difficulties attending the separating of plant crystals from their surroundings have thus far rendered it impossible in some cases to determine with accuracy their chemical constituents.

376. Cell-sap is the watery fluid in the cell which suspends the food and working material taken into

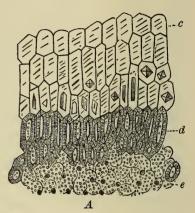

the cell from the air and the soil and the soluble substances which the plant produces, and is the medium by which food is conveyed throughout the plant's structure. All parts of the active cell are filled with water; it constitutes a large part of the cellulose, and forms the greater part of the bulk of protoplasm. Sugar

is a prominent substance in the cellsap, both cane and grape. Cane-sugar abounds in the cells of Sugar Cane, Sugar

Maple, Beet, Sorghum, Indian Corn, and most of the higher plants; while grape-sugar gives sweetness to grapes, cherries, figs, and gooseberries. In the pomaceous and drupe fruits both kinds are present. For cell-sap in both large and small vacuoles, see Fig. 466, p; Fig. 467, B, s, s, s.

377. New cells, to which the enlargement or growth of the plant is due, are formed in one of the three following typical modes:

378. 1, Rejuvenescence. — In this method of producing new cells, the entire mass of the protoplasm is expelled from the old cell, and, when set free, surrounds itself with a wall, thus becoming a new cell.

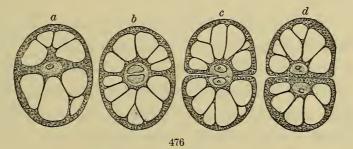

475, A, cross-section of oak-gall : d, sclerenchymatous cells ; c, outside tissue, with oxalate crystals , e, inner tissue containing starch and resin. B, forms of calcium oxalate crystals.

379. 2, Conjugation. — New cells are also produced by the union of the protoplasm of two or more cells; the contents of which having commingled, the combined mass incloses itself with a cellulose covering, and becomes a new cell.

380. 3, Fission is the name applied to the mode of cell production by which two or more new cells are formed out of one. This is the usual mode, and may be treated under three heads.

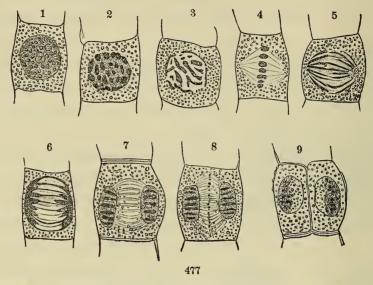

381. *a, Fission Proper.*—A young complete cell (Figs. 465, 466) possesses the power to multiply. The most simple case of this process is the division of the cell into two equal, or nearly equal, parts. The protoplasm forms two nucleus-like spots; a stricture then commences in the wall between the spots, and the cell seems to pinch itself into two. This process is shown in the fission of Bacterium cells (Figs. 511, 512).

In most cases the process is accompanied by a stricture more or less prominent; at the same time an equatorial septum appears between the nuclear spots, and divides the old cell into two nearly equal new cells (Fig. 476). In this case the stricture in the cell-wall is barely visible. The new cells round up and soon become sub-globular in form.

476, Phases of a cell undergoing the process of fission; a, complete cell with drops of cell-sap among the protoplasm, nucleus, and nucleolus; b, same, with nucleus and nucleolus divided; c, with stricture and wall forming across between the nuclei; d, same, with the septum completed, and the fission accomplished; two separate cells have been formed by dividing the old cell into two.

The process of cell division depends first upon the nucleus which forms a spindle of radiating fibrils with an equatorial disk. A middle wall, or partition, is formed at the disk, whereby two distinct cells are produced (477).-Macloskie's Elementary Botany.

477, No. 1, mature cell; 2, 3, 4, 5, 6, 7, 8 show the changes through which No. 1 passes preparatory to the final act of fission ; seen completed in No. 9.

382. b, Budding is another form of plant multiplication. In this mode the plant cell puts forth a pro-

trusion which enlarges until it is about the size of the old cell, when a partition wall is thrown across at the juncture, making the new cell complete and independent. In Fig. 478 the process of budding is shown in its several forms.

383. c, Intra-cell Formation. - Under under undergoing the process this head are treated those cases in which

several aggregations appear within the cell and the entire mass of protoplasm separates into two, three, or more parts, each of which, either at the time the division is going on or soon after, becomes inclosed in a cellulose envelope, and speedily assumes a globular form, as an independent complete cell.

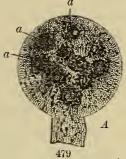

478, Yeast plant, Saccharomyces cerivesiæ, of budding.

In the preparation for cell division nucleus-like formations usually appear in the mother cell. The whole protoplasmic body breaks up into two, three, four, or more parts, and each quickly takes on a spherical form (Fig. 479). - Sachs' Text-book of Botany.

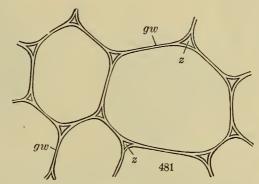

All these modes of cell multiplication and formation are subject to great variation; each has a tendency to run into one of the others; the last is especially liable to vary as to number of daughter cells.

384. The form of cells varies to tion in Achlya-mother cell, suit the use for which they are in- in the mass of protoplasm tended and the amount and direction of the pressure to which they are sub-

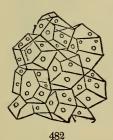

479, Showing cell formashowing a number of nuclei which is preparing to break up into a number of independent or daughter cells; a, a, a, etc., nuclei.

jected. The normal shape is globular or spheroidal when free from pressure (Fig. 480); when pressure

480

482, Form of cells under greater pressure from all directions.

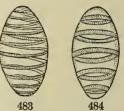

from surrounding cells is exerted, they become ellipsoidal, egg-shaped, prismatic, or polyhedral (Figs. 481, 482). In the trunks and branches of trees and stems of herbaceous plants the cells become elongated in the direction of growth (Fig. 467).

385. The size of the cells in the soft tissue varies; the largest is about $\frac{1}{50}$ of

an inch in diameter. From this cells occur whose diameters range all the way down to $\frac{1}{5000}$ of an inch in diameter. In the more solid tissues they range from $\frac{1}{4}$ to $\frac{1}{40}$ of an inch in length, and from $\frac{1}{1500}$ to $\frac{1}{3000}$ in their cross-sections. Cells of the long staple cotton wool are from one to two inches in length.

386. Spiral and annular cells are formed when

rings, bands, or hoop-like processes appear on the inner surfaces of the walls; in the spiral cell an uninterrupted fibrous process extends the whole length of the cell in a spiral coil (Fig. 483). The annular cell has bands or hoop-like markings as though Mistletoe.

483, Spiral cell from Orchid. 484, Annular cell from

the spiral fiber had been interrupted at several points (Fig. 484).

pitted cells from Elder pith.

387. Dotted or pitted cells are produced when the coatings on the inner surface of the cell wall are not uniform in thickness, leaving thin spots, or pits, which

^{485, Dotted} or are more nearly transparent when viewed under the glass, than the more thickened

parts of the wall; hence the name (Fig. 485).

388. Reticulated cells are produced by coatings which are deposited or formed upon the inner surface of the cell-wall, where they at first appear in spots and lines, of different sizes and lengths (Fig. 486). As the cell grows older, the markings tletoe.

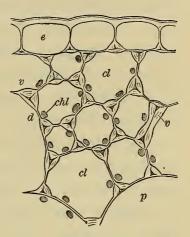

486, Reticulated cell from the Mis-

increase in length, and touching each other, form an irregular net-work.

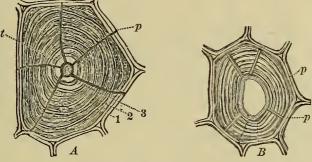

389. Collenchyma cells are cubical, cylindrical, or irregular in form, whose walls are much thickened

at the angles, while they are of ordinary thickness in other parts. These cells occur in most plants of the higher orders and in some ferns, and are found in the tissues just beneath the epidermis.

390. Sclerenchyma cells, sometimes called grit or stony cells, have hardened walls produced by deposition upon them of the horny substance found in the pits of the Cherry, Peach, and Plum and the shells of nuts; of Begonia; e, epidermal cells; d, collensometimes found in the fleshy parts of the Pear.

487, Collenchyma cells from leaf stalk chyma cells; chl, chlorophyll grains; v, thickened angles where these cells meet; p, part of parenchyma cell.

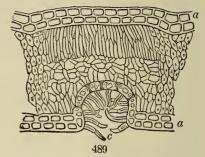

488, Sclerenchyma cells; PP, canals connecting the cavity t with the outer surface or adjacent cells; 1, 2, 3, thickened layers; p, in B, cell walls.

391. Epidermal cells appear in plate-like expansions forming the outer coverings of leaves and young bark; their edges are in contact; their boundaries are either straight or sinuous; and they are elongated in the direction of growth. The edges are so firmly knit together that the entire covering of one side of a leaf may be removed intact. The epidermis at first is usually formed of a single layer, but later it is sometimes made up of two or more layers (Fig. 489).

392. Hairs are outgrowths of epidermal cells, and are composed usually of greatly elongated single cells

(Figs. 490–497), which frequently branch; others are made up of a number of cells. Hairs take on a number of forms by branching.

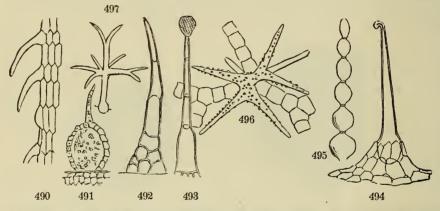

Scales are another form of epidermal outgrowth, and appear in the form of disks.

489, Is a vertical section of a leaf of Banksia; a, a, show two layers of cells in the epidermis; c, hairs found in little cavities on the under side of the leaf.

393. Glands are processes consisting of a single cell or an aggregation of cells, situated a little above, at, or just beneath the surface, the function of which is to secrete and discharge peculiar substances, as oils, nectar, etc. Glands sometimes terminate in a hair-like process (Fig. 493).

Stinging hairs are usually setaceous and sufficiently rigid to perforate animal tissue; having entered, the

VEGETABLE HISTOLOGY AND PHYSIOLOGY. 155

apex breaks off and the contained irritating liquid is discharged into the wound, producing the sting.

Stoma-cells are epidermal. Stomata 394.are mouths or openings into the intercellular spaces of the leaves and young bark, sometimes called breathing-They are guarded each by two half-moonpores. shaped cells whose concave sides lie next each other; when filled with liquids, their concavity increases, leaving an orifice between the guard cells. For the passage of air and moisture when the atmosphere is dry and the plant can not afford to part with its fluids, the guard cells lose their concavity, the sides become straight, the orifice closes, and evaporation is arrested. The number of these openings is very great, many thousands appearing in a square inch of surface (Figs. 498-500, 522-524).

498, Cells of epidermis with a stoma from leaf of Helleborus fœtidus. 499, Vertical section of a stoma of Narcissus; a, cuticle. 500, Epidermis cells with stomata of Tradescantia Virginica—a, a, guard cells.

395. Cork cells are cubical or tabular, and fit closely together; in the outer layers they are dead and empty, and constitute the outer bark layers of old trees, prominent in the Quercus suber (Cork Oak).

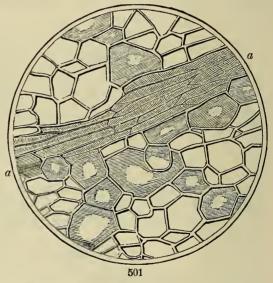

CHAPTER II.

TISSUES.

396. Parenchyma is a tissue composed of short cells, usually with intercellular spaces among them, and is the foundation of vegetable structure. All cells may be regarded as modifications of parenchyma; the various markings and forms being due to alterations which go on by degrees to fit them for the functions they are to exercise in the tissues of the plant.

397. In the lower plants the entire individual consists of parenchyma, and it is found throughout the

structure of the higher plants, mingled and interlaced with other tissue, especially in their green parts. Fig. 501 is a microscopic view of a thin slice of the rhizome of *Sanguinaria Canadensis*, magnified to 100 diameters; the cells are under pressure, and vary greatly in size and shape, and have a bun-

and 501, Section of the rhizome of Bloodroot; a, a, a bundle of wood-cells.

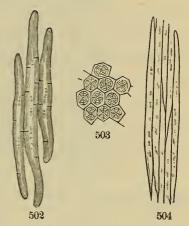

dle of wood-cells imbedded among them. For forms and size of cells see No. 385; also see Figs. 480-482.

398. **Prosenchyma** is the generic name of the *elongated*, painted cells or fibers without intercellular spaces that form plant tissues.

399. Woody tissue is made up of slender, lengthened,

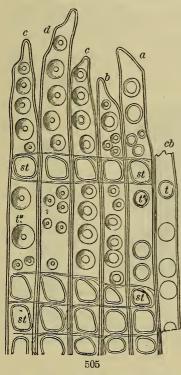

lignified cells, which taper at the ends, and are found in woody plants overlapping each other, and packed in bundles (Figs. 502-504).

400. Bast tissue is composed of elongated cells, with thickened walls, not sufficiently lignified to be hard; they are flexible and tough, and abound in the inner bark of dicotyledonous trees and shrubs.

502, Wood-cells. 503, Cross-section of same. 504, Wood-cells in combination forming a fibro-vascular bundle.

401. Disk-bearing tissue is constituted of length-

505, Lengthwise section of (Scotch Pine) Pinus Sylvestris, showing diskbearing tissue; cb, Cambium wood-cells; a, b, c, etc., older cells; t, t', t'', bordered pits; st, large pits (×225).—Sachs.

tissue is constituted of lengthened cells, which have pits or lens-shaped markings, found in the Pine and other gymnosperms (Fig. 505).

402. Vessels or ducts are tubes or passages through which the fluids pass from one part of the plant's structure to another. In the formation of these passages elongated cells arrange themselves end to end, become anastomosed; the walls in the ends of the cells are ruptured or disappear, and uninterrupted passages are produced.

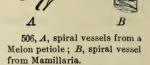

403. Spiral vessels are constructed by the union of spiral cells, in the manner described in the last article (Fig. 506). 404. Annular or ringed ducts are produced by the union end to end of annular cells, the walls of which

are held apart by rings or hoop-like thickenings on the inner surface (Fig. 507, A, B, C).

405. Scalariform ducts, characteristic of ferns, are formed when the annular vessels are compressed into prismatic forms whose sides present the appearance of ladders (Fig. 507, D).

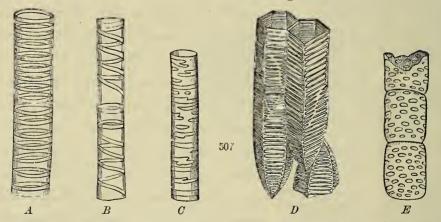

406. Dotted or pitted ducts are formed of dotted or pitted cells, as in the case of annular cells (Fig. 507, E).

407. Sieve ducts or tubes are formed of colorless elongated cells, of large diameter; the walls are soft and

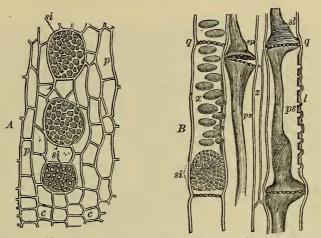

506

very much enlarged and thickened at the joints; at the junctions finely perforated plates appear (Fig.

507, A, annular vessel from leaf-stalk of Melon; B, duct, part spiral and part annular, from Melon; C, part annular and part reticulated duct from Melon; D, annular and reticulated ducts pressed into prismatic shape, forming scalariform vessels, from Tree-fern; E, pitted or dotted duct, formed by the union of pitted cells from melon-stalk.

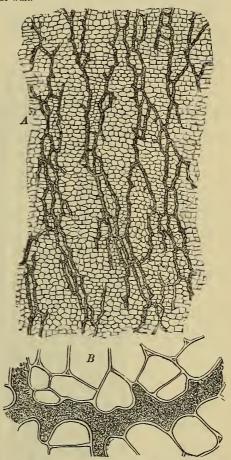

508, A); also on the internodes are spots of fine perforations and slits (Fig. 508, B). These spots of perforations are like a strainer or sieve; hence the name.

408. Latex vessels are produced by the union end to end of latex cells; by anastomosing and branching a reticulated tissue is formed which conveys the milky juices of the plant through its structure. In the tissues of the Ficus elastica, Euphorbia and the milk weeds, besides the Latex tubes. numerous closed cells are present, charged with the same milky fluids as the ducts (Fig. 509). The free cells frequently elongate, and sometimes branch.

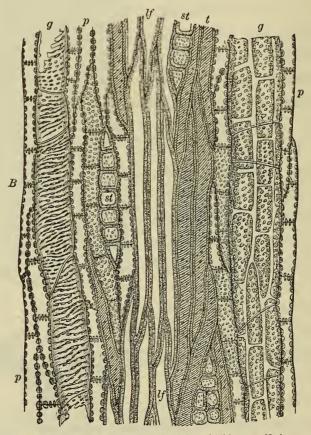

These vessels are arranged in the stem as represented in Fig. 510.

CHAPTER III.

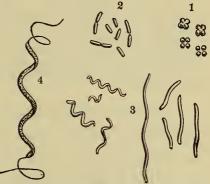

SYSTEMS OF TISSUES AND PLANT GROWTH.

409. The brief account of the cell and its modifications into tissues and ducts, prepares for the consideration of the manner in which these *organs* are arranged in the structure of plants.

In the lowest groups of plant life the individual is either a *single cell* or an assemblage of soft cells, without special order of arrangement.

410. Unicellular plants.—The most simple forms of plant life are single minute cells, called Bacteria,

the smallest objects that are known to exercise vital functions; they are so small that 50,000 laid on a line side by side would occupy a space less than an inch in length. The typical form is globular, appearing under the microscope as a minute granule or dot, as No. 1 in

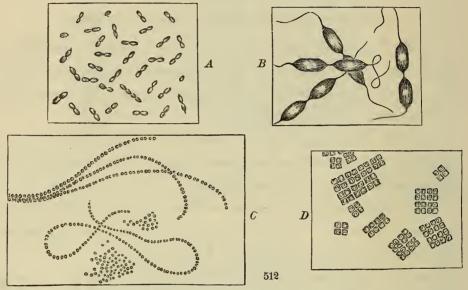

511, 1, Sarcine; 2, Bacterium; 3, Vibro; 4, Spirillum.

Fig. 511; they are, however, frequently elongated, and appear in an oval form, as in No. 2; again, they take on the form of a fine line, straight, curved, or crooked, as in No. 3; another time they are spiral, as in No. 4. These minute cells are stored with protoplasm, and swim in fluids from which they obtain nourishment. They increase by fission, and multiply with marvelous rapidity. They are found in the watery fluids of both animals and plants.

PHYSIOLOGICAL BOTANY.

Some Bacteria separate into spores; and diseases in men as well as plants are believed to be due to the presence of Bacteria. They are parasitical or saprophytic, feeding on living or decaying matter; they are the agents of decay and revel upon the ruins they produce. As they multiply by fission, they are called Schizomycetes ($\sigma_X \zeta_{\omega}$, to divide, and $\mu \dot{\nu} \kappa \eta_5$, a fungue). (Fig. 512.)

512, A, Bacterium Termo, magnified to 1,000 diameters, undergoing the process of fission. B, Same, magnified to 3,000 diameters, in which the process of fission is nearly completed. C, Micrococci (×1,000) undergoing fission, the new cells arranging themselves in curved and crooked lines or in irregular groups. D, Sarcina Ventriculi (\times 1,000) undergoing fission in two directions, the new cells arranging themselves in square groups.

411. The Yeast Plant (Fig. 513) is one of the most interesting of the unicellular organisms; it is the agent of fermentation, and plays an important

part in bread-making, where it disintegrates the starch-grains in the flour, and thereby liberates carbon dioxide; the gas set free struggles to find its way through the dough, becomes entangled, forms cav- charomyces cerevisiæ.

513 513, Yeast Plant, Sac

ities in the mass, and makes it sponge-like or light.

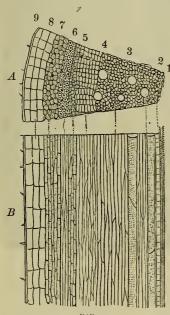

412. The next grade above the plant which is a single cell is one composed of a mass of cells without a special axis of growth; as some of the Sea-weeds, which are mere masses of flat cells arranged in two layers, forming irregular leaf-like expansions.

413. This book is intended to consider the higher plants only; we shall therefore now proceed to describe

the manner in which the modified cells and vessels are arranged in the higher organized plant structures.

414. Exogenous or Dicotyledonous structure.-Growth in the most highly organized plants is best illustrated by the examination of a tree or shoot of Oak,

Maple, Apple, or Cherry at the end of the first year of

515

515, A, cross-section of the stem of a Maple at the end of the first season's growth; 1, edge of the pith; 2, spiral vessels : 3, wood region made up of woody fiber and dotted ducts and other vessels; 4, cambium layer made up of new cells; 5, liber: 6, larger cells and vessels of the liber or bast region; 7, cellular envelope or green bark; 8, corky envelope or outer bark ; 9, the skin, or epidermis. B, shows corresponding vessels and tissues in a vertical section of the same plant.

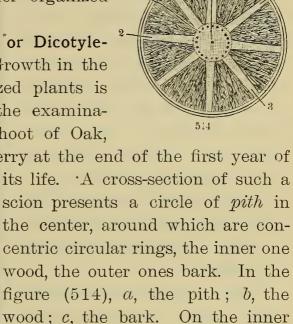

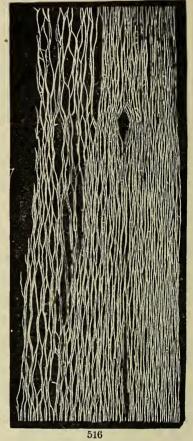

figure (514), a, the pith; b, the wood; c, the bark. On the inner edge of the wood is a ring of spiral vessels, d, which is called the medullary or pith sheath. The pith is made up of parenchyma and extends between the wedges of wood in flat cells connecting the pith with the bark (1, 2, 3, Fig. 514), forming the silver grain seen in Oak and Maple planks, or in a longitudinal section of those and other cabinet woods when split.

415. The wood is made up of woody fiber interspersed with tissues composed of the cells, vessels, and ducts which have already been described.

416. The bark at the end of the first year's growth is made up of three *layers*: the one next the wood,

called bast, is composed of parenchyma, *sieve* vessels, and liber-cells; on account of the predominance of the *bast ducts* in this layer, it has been called the *bast region* (Figs. 508, 516). The liber-cells are long, strong fibers, and in some plants are very tenacious and flexible, forming the material in *Hemp*, *Flax*, and other textile substances utilized in manufacture of cordage and fabrics.

Next to the bast is the green cellular layer, called phellogen, because by its dividing, it produces outside of it cork, which increases by the addition of new material to the inner surface. The cork is usually of a brown or ashy color, sometimes white or striped; in old trees it is cracked and broken by the growth of the wood, and falls off in scales or strips, as in the shag-bark Hickory; in the Paper

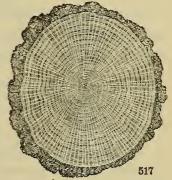

516, Is a photograph from nature of a layer of bast-fibrous bundles found in the secondary bark of the stem of an old Carica papaya. These bundles, originating in the cambium, are arranged in ten to twenty layers one over another like the leaves in a book. These fibers by anastamosing have formed an irregular net-work with elongated sinuous meshes. These meshes during their life were filled with soft secondary cortical tissue which has been removed by maceration.

Birch it peels off in sheets resembling paper. Upon some trees it develops into thick porous layers, and upon the Cork Oak furnishes the cork of commerce.

417. During the season of activity the young stem continues to increase both in height and diameter by the multiplication of cells and the formation of the various tissues required by the conditions of growth (Chap. III., Introduction); hence a mass of infant cells is constantly present between the wood and the bark, and in the buds of the stem and branches.

On the approach of winter the leaves fall, the terminal buds refuse to expand, and the entire process of growth is arrested, until the revivifying warmth of the succeeding spring unlocks the imprisoned forces that have slept during the frosty season, when the fluids from the earth begin to flow upward and outward through the vessels and ducts of the last year's wood to the bark and the leaves; the young cambium cells which have slumbered through the winter are filled with sap and commence another season of growth; the buds burst into leaves or flowers, and the greatest activity succeeds the late period of rest. The young cells multiply and increase in size, most of them being changed into woody fiber and ducts, com-

mencing a new layer of wood on the outside of the last layer, and a new layer of bast on the inside of the old one; also a new layer on the inside of the cortex layer. In this way the work goes on, and layer after layer is added for each period of activity, which in regions of severe frost occurs yearly (Fig. 517). Within the tropics and all years old, showing the annual circular regions of no frost, periods of rest rough bark.

517, Is a photograph of a cross-

and activity may occur more frequently than once a

year, and therefore the number of rings on a crosssection does not always indicate the number of years in the age of a tree. But in the higher latitudes a new tube of wood and one of the inner bark is formed yearly.

That more than one ring of wood may, and sometimes does, form in one season of growth, even in regions of severe frost, has been established by observation.

418. Sap wood is a name applied to the *new wood*, and usually includes several of the last formed layers; it is so called because the fluids in moving upward from the ground pass through its vessels. In most trees it is of a lighter color than the older layers, and on that account was called by early botanists *Lignum album*, white wood; now called **Alburnum**, or white wood.

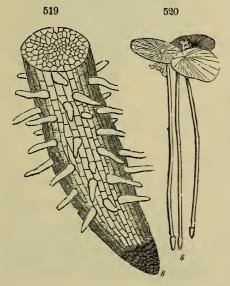

419. Heart wood is that part of the trunk or stem near the *center* or *heart*, and for that reason called *Heart wood*. It is usually more dense, and therefore called **Duramen**, hard wood. In some species it is much darker than the sap wood, hence former botanists called it **Lignum nigrum**, *Black wood*. In some plants, as the *Black Walnut*, the Duramen is very dark, while the *Heart wood* of the Maple is not much darker than the sap wood, though they may grow side by side and draw from the earth the same materials. It would seem, therefore, that chemical changes take place either in the plant's structure or upon the materials taken in to suit the necessities of each case.

On account of the mode of growth in Dicotyledonous stems, the name Exogens, or outside growers, was formerly applied to plants of this structure. They are characterized by two or more seed leaves in their embryo, and produce netted-veined leaves. See Dicotyledons, pages 163–166.

Nearly all the trees and shrubs of the temperate zones are Exogens or Dicotyledonous plants, well

represented by the Oak, Pine, Elm, Maple, Apple, Pear, Peach, Cherry, and other fruit and timber trees.

420. The root is that part of the plant that grows downward into the ground and holds the whole firmly in the soil. Its tissues correspond with those of the stem to which it belongs, and it increases in diameter by additional layers, one for each period of activity, succeeded by a rest. The extremity of the root and that of each

518, a, Shrub; b, Fir; c, Oak-tree.

of its branches is encased by a layer of older cells, called the root cap, a contrivance which seems to be intended to protect the tender infant cells just behind it, which during the growing season are increasing and multiplying, to extend the root and rootlets in all directions in the soil. The parts of the root and rootlets near the growing points absorb the fluids which are presented to them in the soil, but this

absorption is largely helped by root hairs, which clothe the root and rootlets, as seen in Figs. 519, 520. Fig. 519, root of a Maple sprinkled with hair-like processes or minute fibrillæ; these are usually each a single elongated cell, and appear on the newer parts of the root, a little distance from the growing point, dying or becoming useless on the older parts. The Root, as to use, form, etc., is treated in another place (see Chapter XIII., Structural Botany).

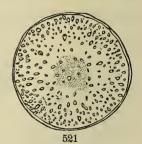

CHAPTER IV.

MONOCOTYLEDONOUS STRUCTURE.

421. The woody fibers and vessels that make up the stems of Palms, Indian Corn, Bamboo, Sugar Cane, and all grass-like plants, are not arranged as they are in the Oak, Maple, and Apple, already described. A

cross-section of a Palm stem presents a mass of pith, dotted all over with sections of woody fiber and vessels without any apparent order of arrangement (521); the whole inclosed in a circular ring or rind, in which the fibro-vascular bundles are smaller 521, Cross-section of the trunk

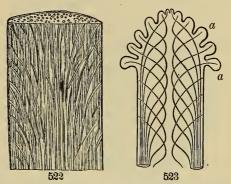

than in the body of the stem. In a

of a Palm.

longitudinal section the threads of woody fiber may be traced from the bases of the leaves in a curve out toward the center, and in a recurve back again to the side whence they started (Figs. 522, 523). In stems like the Indian Corn and the Grasses, with long spaces between the leaves and closed nodes, the fibro-vascular threads extend in straight lines from node to node, where they unite with those of the next internode.

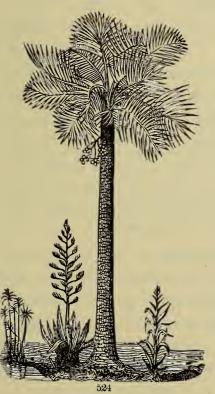

The rind of the Corn stalk, Bamboo, Reed, etc., is smooth and flinty, due to the deposition of silica on the walls of the cells that compose it. This mode of growth is well shown in the Palms of tropical and sub-tropical regions, as the Palmetto of the Carolinas, plan of the direction of fibers in a vertical section of the Cocoanut Palm, many tion of fiber growth

522, Vertical section of a Palm stem, showing course and direction of fibers. 523, Theoretical a Palm stem; a, a, bases of leaves, showing direc-

thousands of which have been planted on the coast of Florida.

422. The Palm, which is the type of the mono-

524, Palm, Agave, etc.

cotyledonous division of the vegetable kingdom, reaches perfection only in tropical or sub-tropical regions. There some of the members of this great division tower to the height of one hundred and fifty feet, straight, unbranched cylindrical colums, crowned with a mass of green foliage, presenting to the eye magnificent objects of the picturesque and beautiful. The Palm is one of the most important ornaments in planted grounds in tropical countries, occupying a belt all around the

globe of about thirty-five degrees both sides of the Equator. It flourishes in the bare sands of the seacoast, skirts arid plains, beautifies the oasis of the desert, and inhabits the murky bottoms of southern swamps and low islands of Southern Asia and tropical America. These plants are of vast utility, producing food and many domestic and economic products.

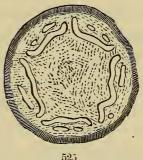

There are certain noticeable things in the mode of monocotyledonous growth. The stem has no proper bark, does not increase in diameter after it is perfectly formed, and, with few exceptions, consists of an unbranched cylindrical column, made up of pith intermingled with fibro-vascular threads, generally without any order of arrangement, the whole inclosed in a rind or false bark (521–524), well illustrated in a cross-section of a stalk of Indian Corn. There are a few plants that seem to be connecting links between these two modes of growth; a notable example of which is Dracæna draco, or Dragon-tree, which has a cambium region, and continues to increase in diameter.

Formerly these plants were called Endogens, meaning Inside growers, in contradistinction to Exogens, or Outside growers, because the new material of growth was then supposed to be deposited *always inside* of the last deposit of woody bundles; but as it is now known that the additions are interspersed among the former ones, in most cases without special order, the name is not expressive. Plants of this mode of growth have but one cotyledon, or seed leaf; their flowers are mostly three-parted, and their leaves generally parallel-veined. See Monocotyledons, pages 168–170.

423. Tissues of the Pteridophyta.—The Ferns and their allies have a complicated and well-marked organization; the outer bark is similar to that of the flowering plants, and vascular-woody fiber extends throughout the stem, and leaf stalks ramifying in the fronds, to which the great beauty of this division of the vegetable world is due. A cross-section of a Fern stem shows a mass of parenchyma, supported by an outer sheath or tube of vascular-woody bundles, the whole inclosed by a cortex of dense sclerenchyma, the leaf stems presenting the

same structure (Fig. 525).

424. Tissues of Bryophyta, mosslike plants.—The higher types of this division, while largely made up of cellular masses, have a semi-vascular-fibro arrangement, and in some mosses the fibers are so strong as to approach a woody character.

525, Section of an Acrogenous stem of Tree-Fern (Cyathea), showing the vascular bundles imbedded near the circumference of the cellular mass.

CHAPTER V.

LEAF STRUCTURE.

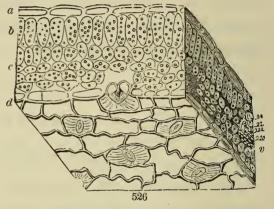

425. Leaves are composed of the same general structure as the stems and branches which they clothe and adorn, and are made up of vessels and tissues already described: 1, woody fiber, which constitutes the frame-work; 2, cellular tissue, which fills up the spaces between the ribs or frame-work formed by the woody part. The leaf of a Maple, Elm, or Apple is composed of: 1, the leaf-stalk, by which it is attached to the stem or branch; 2, the blade, the expanded part. The leaf-stalk or petiole is a column of bundles of woody fiber and green tissue, covered by the epidermal tissue. These bundles extend in length to suit the size of the blade, throwing off branches and branchlets to construct the frame, making an irregular net-work, the meshes of which are filled up by the

green tissue. (See Structural Botany, Chapters XX.-XXIII. inclusive.)

426. An important function of the leaf is to expose a large surface; consequently, the blade is thin and so formed as to present the largest number of cells to the air and sunlight.

The layer on the upper side of the blade is made up of oblong cells, closely packed with their ends next to the surface. The lower layers are made up of smaller, more irregular and more loosely arranged

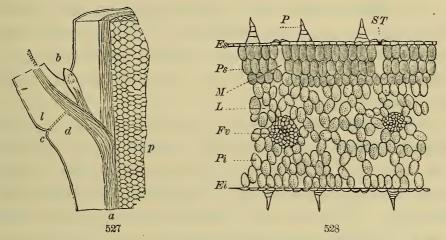

cells, and have their longer diameters in the direction of the surface of the blade. The deep green color of the upper surface of leaves is largely due to the compactness of the green cells in the upper layer, while the paler color of the under side is the consequence of the loose arrangement of

526. Magnified portion of the leaf of Viola tricolor in perspective; a, cells of the epidermis, sometimes called plate cells; b, compact layer of green cells next to the upper surface; c, loose cells below; d, epidermal cells of the lower surface, with stomata, one of which is cut to show its opening into the intercellular passages.

those in the lower strata. The epidermal covering of the leaf, as before described, is a thin membrane made up of one, two, or three layers of empty thick-walled cells (Figs. 489-524 inclusive).

427. Respiration is the act of drawing air into the lungs and casting it out again. (From the Latin *re*, again, and *spirare*, to blow or breathe.) The air while in the lungs is known to part with some of its oxygen, and what is breathed out is charged with substances which it did not possess when taken in; therefore the taking in of oxygen and its combination with other substances while in the lungs and the liberation of substances thus formed constitute *respiration* in animals. So with plants; they suck or draw in air through openings in the epidermis already described, and when it is discharged it is found to be changed in character, having been robbed of its oxygen or of its carbon dioxide. The oxygen of the air while among

527, Is the section of a young stem or branch showing, at p, the pith; a, vascular-fibro bundle, passing off from the stem to form the leaf-stalk and frame-work of the blade; d, the swelling just below the foot of the stalk; l, the base of the foot stalk; b, the axillary bud; c, the articulation or point where the leaf-stalk is attached to the branch or stem. 528, Magnified section of a leaf perpendicular to its surface; P, hair on the upper surface; ST, stoma; Es, epidermis of the upper surface made up of plate cells (§ 391); Ps, oval cells closely packed with longer ones perpendicular to the epidermis; M, interspace beneath the stoma; L, interspaces among the irregular shaped, loosely packed cells of the lower stratum Pi; Fv, cross-section of fibro-vascular bundle; Ei, lower cpidermis with hairs. (See Figs. 489 to 500.)

the tissues unites with substances found there, and new material for plant growth is thus formed; in the night carbon dioxide is breathed out. It has been shown by experiment that air is not only required for the health of plants, but that they can not exist without it; for when placed in a vacuum, they invariably perish. *Respiration* is therefore necessary to the life of plants as well as to animal life.

428. Breathing goes on in all parts of plants exposed to the air, at night as well as in the daytime;

and at night especially oxygen is consumed and carbon dioxide is set free. This fact has led to the inference that

Potted plants in a living room render the air unfit to breathe; but carefully conducted experiments have shown that one hundred ordinary stove plants would not injure the air of a moderate sized sitting or living room to an extent that could be in any way injurious.

429. Metabolism is the name applied to the process which goes on in the structure of living plants that alters one kind of material of plant growth into another; an example of which is the change of starch into cellulose.

430. Assimilation is the process of taking into the plant's structure surrounding substances and converting them into materials for plant growth, and consists mainly in changing inorganic substances into vegetable structure. The bulk of all woody plants is largely composed of carbon, hence assimilation in such plants consists mainly in disintegrating carbon dioxide, and appropriating the carbon. Assimilation is carried on in the cells of the green tissue and in sunlight.

Some of the substances suspended in the watery fluids of plants and the constituents of water itself are used directly by the protoplasm in the preparation of food; carbon dioxide, however, must first be decomposed, in which process its oxygen is set free, and the carbon enters into the ligneous structure, or both oxygen and carbon enter into new combinations which the protoplasm can use. For example, water and carbon dioxide contain all the materials found in starch. These compounds having been separated into their constituents, the elements reunite in quantities that

produce *starch* and other carbohydrates, as oils, sugars, gums, etc. These are either used to supply the plant's immediate wants or stored in some of its organs for future use.

The decomposition of water and carbon dioxide liberates oxygen, which may be seen in bubbles on the submerged parts of water plants; this gas escaping into the air, helps to keep it pure.

431. Movements of fluids.—The root takes up from the earth the watery substances which are presented to it; the cells at the extremities of the root and rootlets are first gorged; these impart to the cells and vessels next in contact, which take up the fluids by infiltration, and so they are passed on up the stem largely through the cells and vessels of the last season's wood, and outward through the same class of cells and ducts, along the branches to the leaves and new twigs. Having reached these green parts, much of the water passes off by evaporation; what remains becomes changed by the action of sunlight and fitted for building up the plant's structure. It then by some mode of transfusion finds its way back to all the growing parts of the plant where new material is needed.

432. Circulation. — Careful observation and experiment have demonstrated that there is an upward current of water or watery fluids through the stem, by way principally of the fibro-vascular tissues; but no downward movement has been detected answering to a current. Hence there is not a circulation which corresponds to what takes place in the higher animals. Yet the prepared sap reaches parts of the plant's structure lower than the points where it was prepared; hence it must go downward. How the elaborated sap passes back and even downward through the cells and vessels that are at the same time employed conveying the crude watery fluids up from the root is not understood. We are not acquainted with any physical or chemical force which causes the crude sap to creep through the cells and ducts of the trunks and branches of great trees, hundreds of feet in height; nor is the transfusion of the prepared fluids and cell materials to every part of the plant's structure where food is required less difficult to explain.

In fact, observation and experiment have thus far failed to account for these mysterious movements.

CHAPTER VI.

FERTILIZATION.

433. The higher plants produce seeds, each of which contains an embryo of a new plant. The seed has already been defined as the ripened ovule or as the fertilized and mature ovule. The *fertilization* of the ovule is accomplished by the mingling of the protoplasm of the pollen cell with the protoplasm of the ovule, which is brought about in the following manner:

434. Process of Fertilization. — The ripened anther opens and discharges its pollen grains, some of which, by the action of the wind or the aid of insects, reach the stigma; when one has secured a lodgment, influenced by the moist surface of the stigma, it germinates, sends down through the tube of the style a tube as the radicle of the seed penetrates the earth

(Chapter III., Introduction). This delicate tube prolongs itself downward till it reaches the ovary, enter-

ing it; comes in contact with the ovule, which it penetrates, and discharges the protoplasm of the pollen grain upon the protoplasm of the germ cell, or ovule, and thus fertilizes it. The protoplasm of the two cells having mingled, the ovule ripens into a seed, in which resides the embryo of a new plant.

The quantity of protoplasm in the ovule or germ cell is greater than that contained in the pollen grain.

435. Gamogenesis (Greek yáµoç, marriage, γένεσις, production).—Formation by marriage is the name applied to this mode of fertilization.

436. Conjugation is the sylvanicum, in process of fertilization. (Magniname of another mode, which stamens, having discharged its pollen; t, a grain is accomplished by the union ovary, ovule, embryo sac containing the embryof two similar cells side by seen in contact with the embryo sac. side, the combination resulting in a germinating cell.

437. The ovule fertilized becomes a new center of growth. First it expands to a proper cell, attached to the wall of the sac near the micropyle. It then, by division and subdivision, multiplies itself, and begins to take form according to the species, showing cotyledon, plumule, etc., until fully developed into the embryo.

In the case of the CONIFERS (Pines, Cedars, Firs), where no styles or stigmas exist, the pollen falls directly into the microphyle of the naked ovule, and its tubes settle into the tissue of the nucleus.

438. Germination. — The ovule matures with the completion of the embryo, and passes into the fixed state of the seed in which the embryo sleeps. A store of nutritive matter, starch, gluten, etc., is thoughtfully provided in the seed for the use of the young plant in germination, until its root has gained fast r

439. The changes which occur in the seed at the recommencement of growth are simply such as are requisite to reduce its dry deposits to a solution which shall contain the proper materials for cell-formation or growth. Gluten

tion which shall contain the proper materials for cell-formation or super the Cllerton

and other nitrogenous matters, oil, starch, etc., are to be changed to *diastase* and *dextrine*. To accomplish this, water is taken up, oxygen absorbed, plant-food dissolved and moved to points where it is needed, and used in constructing new cells and tissues.

440. **Ripening of Fruits.** — After the fruit has attained its full growth the process of ripening commences, during which the pulp becomes gradually sweetened and softened, chiefly by the change of the starch into more or less of soluble sugar. Thus ripening is to the pericarp what germination is to the seed. In its earliest stage the pericarp consists of structure similar to that of green leaves, composed of cellular, vascular, and woody tissues, and epidermis and stomata. Its distended growth afterward results from the accumulation of the flowing sap, which here finds an axis incapable of extension. Thus arrested in its progress, it gorges the pistil and adjacent parts, is condensed by exhalation, assimilated by their green tissues, which still perform the office of leaves. Cell-formation goes on rapidly within, and the excess of cellulose is deposited in the cells as starch. Oxygen is usually absorbed in excess, acidifying the juices.

441. In the same way we account for the production of *honey* in the flower. Copious deposits of starch are provided in the receptacle and disk (§ 85). At the opening of the flower, this is changed to sugar, to aid in the rapid development of those delicate organs which have no chlorophyl wherewith to assimilate their own food. The excess of sugar flows over in the form of honey. The wise economy of the honey is seen in fertilization. For, attracted by it, the insect enters the flower, rudely brushes the pollen from the now open anthers, and inevitably lodges some of its thousand grains upon the stigma!

442. Experiment has proved that in all these cases of the formation of sugar from starch, a molecule of water is absorbed—a process which we might expect, since starch (C_{12} H_{20} O_{10}), or n (C_6 $H_{10}O_5$) contains proportionably two less hydrogen and one less oxygen than sugar (C_{12} H_{22} O_{11}) contains.

443. Pollination, cross-fertilization, etc. — Pollen is essential to the fertilization of the flower. It must not only be produced, but must also in some way be conveyed to the stigma, and lodged on its surface. Another requisite is that the pollen and pistil shall either be: 1st, parts of the same flower; or, 2d, of other flowers of the same plant; or, 3d, of the same species; or, 4th, of closely related species. In the first and second cases the process may be called *self-fertilization;* in the third case, *cross-fertilization;* in the fourth case, *hybridization*.

444. Whether the first, second, or third process shall prevail in any given species will depend on the

structure, number, or arrangement of the floral organs. In the few flowers which never open, - the Cleistogamous, such as the late apetalous flowers of the Blue Violet, and also probably those of Gentiana Andrewsii, only self-fertilization is possible. But in the multitude of open flowers with both stamens and pistils exposed. as in the Lily, Rose, Morning Glory, either self or cross fertilization is possible unless determined by some other special circumstance. The stigma may receive pollen directly from its own stamens, or indirectly from other flowers near or remote, through the agency of winged insects, humming-birds, or of the wind. Again there are flowers in which the organs are so situated that self-fertilization is very difficult, or even impossible. Of this class are the Asclepiads and Orchids, whose pollen, cohering in masses (pollinia), is, inclosed in cavities, and only dragged forth by insects to be carried to other flowers. So in Iris, where the extrorse anthers and petaloid stigmas are averted from each other, the former beneath, and shedding its pollen downward.

445. Dichogamous Plants. — In some species the stamens and pistils are not cotemporary in the same plant, but the stamens of one plant mature at the same time with the pistils of another plant, and *vice versa*. This necessitates cross-fertilization, and the agency of the wind or of insects. We have examples in the Grasses, the common Plantain, in Scrophularia, etc.

446. Dimorphous Plants are such as the Mints (Mentha), the Yellow Jessamine (Gelsemium), Houstonia cærulea, etc. In these the flowers assume two forms, with the stamens and pistils cotemporary in

both. In some the stamens are exserted and pistil included, while in others the stamens are included and style exserted. This arrangement also favors crossfertilization through insect agency.

447. The service thus performed by insects in behalf of vegetation is very important. Numerous species are wholly dependent on bees, moths, flies, for the dissemination of their pollen, and consequently for their very existence. Many other species, although capable of self-fertilization, are still greatly benefited by the intercrossings of pollen which the visits of insects occasion. Of course the bees have no idea of these benefactions. They visit the flowers solely for their own good. The nectar which they seek is always so situated as to oblige them to disturb the pollen or pollinia as they pass and repass, get besprinkled with it, and so encounter the stigmas from flower to flower.

448. It would seem important that the bee or moth should confine its visits during any one excursion to plants of the same species. And this it often does, as shown by observation, avoiding the mingling of its nectars as well as the confusion of its pollens. In accomplishing this, the insect may be led by habit, becoming accustomed, for the hour, to one form of nectary; or it may be drawn by uniform odor of the flowers, or by their gay and special colors. For we observe that the flowers of grasses and of forest trees whose pollen is wafted by the wind, requiring no aid from insects, are destitute both of bright colors and of fragrance, and of honey.

449. From these observations and many others of similar import, it is inferred that Nature insists on the fertilization of the stigma in every plant by all means,

at least when growing in its native home; also, that of the two general modes, *self*, or *cross*, she greatly prefers the latter.

450. What are the reasons for this preference? The solution of this inquiry has engaged the attention of many skillful investigators, until it seems to be proved that the offspring of cross-fertilization are as a rule decidedly superior in size, vigor, and variety.

PART THIRD.

SYSTEMATIC BOTANY.

***·····

CHAPTER I.

GENERAL PRINCIPLES OF CLASSIFICATION.

451. Systematic Botany has for its object the arrangement of Plants into Groups and Families according to their characters, for the purpose of facilitating the study of their names, affinities, habits, history, properties, and uses. In this department the principles of Organic and Physiological Botany are applied and brought into practical use.

452. But there is another and higher import in the study of Systematic Botany. It shows us Plants as related to each other and constituting one magnificent system. It reveals the Almighty Creator at once employed in the minutest details and upon the boundless whole; equally attentive to the perfection of the individual in itself, and to the completeness of the System of which that individual forms a necessary part.

453. The necessity for such an arrangement of the Species will appear when we consider their immense number. They meet us in ever-varying forms at every step, clothing the hills, mountains, valleys, and plains. They spring up in hedges and by the way-side. They border the streams and lakes, and sprinkle over their surface. They stand assembled in forests, and cover with verdure even the depths of the Ocean. Not less than 150,000 kinds are already distinguished, and the catalogue is still growing. 454. Into this vast kingdom of Nature the student is introduced, and proposes to acquaint himself with each and every object. How shall he begin? Evidently he must *begin* with the individual — a single individual plant. But (thanks to Him who created both the plant and the mind — the object and the subject), he is not left to *continue* the study in a method so endless and so hopeless. As if in special regard to the measure of the human intellect and the means of its culture, the Great Author of Nature has grouped these myriads of individuals into the following divisions:

455. Species are individuals of a common origin or parentage capable of producing their kind, though frequently differing from each other in size, form, and other unimportant characters. A species has been defined as a "succession of individuals which reproduces and perpetuates itself."

456. Variety, or Race, is a sub-species. This term is applied to individual plants that possess marked variations from specific characters, but not of sufficient constancy to entitle them to the rank of *species*. These differences are frequently brought about by the quality of the soil or locality, but especially by cultivation.

Race characters are perpetuated and become constant by grafting, budding, and carefully selecting well-marked individuals from which to obtain seed.

The desirable characters of most of our fruits and table vegetables are made constant in this way.

457. Genus is the name for a *Group* of individual plants which resemble each other in the form and structure of their organs of *Fructification* and *Reproduction*.

Illustration.—The individuals of the *Crowfoot Kind* differ in the size and color of their flowers, some of which are yellow, others white; in the size and form of their stems, some of which grow erect, others prostrate and in the shape of their leaves. Their organs of Fructification, however, are all constructed upon the same plan, and the function of polination is performed in

the same manner; hence they are grouped together and constitute the Genus Ranunculus.

458. Orders. — But natural affinities do not end here. The genera are yet too numerous for the ready and systematic study of the naturalist. He, therefore, would generalize still further, and reduce the genera to still fewer and broader groups. On comparing the genera with each other, he finds that they also possess in common certain important characters which are of a more general nature than those which distinguish them from each other. By these general characters the genera are associated into Orders.

459. For example: comparing such genera as the Mustard, Radish, Cabbage, Cress, Wallflower, etc., it is seen that, while they differ sufficiently in their generic characters, yet they all have certain marked resemblances in their didynamous stamens, siliquous fruit, whereby they are obviously associated in the same Order—the Cruciferæ. So, also, the Pines, the Spruces, the Cedars, the Larches, and the Cypress, while as genera they are obviously distinct, yet all bear cones of some form, with naked seeds; hence they are naturally grouped into one Order—the Coniferæ.

460. Classes. — In like manner the Orders, by traits of resemblance still more general, are associated in a few groups, each of great extent, called Classes.

461. Intermediate Groups, formed on the same principles, are recognized as Subgenera, Suborders or Tribes, and Subclasses or Cohorts, which will be particularly noticed in another place. Of the same nature, also, are Varieties, which are groups subordinate to species, already described in § 28.

462. Systems. — Two independent and widely different methods of classifying the genera have been generally approved — the Artificial Method of Linnæus, and the Natural System of Jussieu. The former is founded solely on characters relating to the organs of fructification, leaving all other natural affinities out of view. It is simply an arrangement devised by Linnæus for convenience in the analysis of plants — as words in a dictionary, for convenience of reference, are arranged *alphabetically*, without regard to their nature. It is now superseded by —

463. The Natural System.—This method or system of classification, on the contrary, makes use of every natural character and takes for its basis all those natural affinities and resemblances of plants whereby Nature herself has distinguished them into groups and families. It seizes upon every character wherein plants agree or disagree, and forms its associations only upon the principle of natural affinity. Hence, each member of any natural group resembles the other members; and a fair description of one will serve, to a certain extent, for all the rest.

464. The species and genera are formed on this principle of classification, as above stated, and are truly natural associations. Individuals altogether similar—cast, as it were, in the same mold—constitute a species. Species agreeing in nearly all respects, and differing but in few, constitute a genus. Thence the genera, associated by their remaining affinities in groups of few or many, by this same method are organized into Natural Orders and other departments of the System.

CHAPTER II.

NATURAL SYSTEM.

465. Botanists during the last two hundred years have labored to group and arrange the individuals of the vegetable kingdom so that the natural characters of each group shall be most like those of the next preceding group.

466. In 1694, Tournefort, a French physician and botanist, published a method of arrangement in which he defined and established the term genus as we now understand it.

467. Early in 1700, John Ray, an English naturalist, separated the vegetable kingdom into the following general groups: I. Phanerogamia. — Plants that bear Flowers.

II. Cryptogamia.—Plants that do not produce Flowers.

Sub-divisions of Flowering Plants.

- 1. Dicotyledones—Plants whose embryo has two seed leaves, or more than two.
- 2. Monocotyledones—Plants whose embryo has one seed leaf.

468. Linnæus, a Swedish botanist, in 1736, while only twenty years of age, published the outlines of his celebrated sexual system, based upon the number, situation, and relative length of the pistils and stamens, which, though artificial and misleading, earned for its author a deathless fame.

469. In 1789, A. L. de Jussieu, embodying the grand features of Ray with those of Tournefort, laid the foundation of the natural system which, under various modifications, has come down to us.

470. August P. de Candolle greatly modified the arrangement of Jussieu, especially by reversing the sequence, placing the most highly organized plants first in order.

The following is a brief sketch of the latest arrangement, and is substantially the one mapped out by Sachs; the order of sequence, however, is changed:

471. Phanerogamia. — Flowering plants, or plants whose flowers or organs of fructification are exposed to view.

Plants of this class have roots, stems, and leaves through which bundles of woody fiber extend; they bear *flowers*, in special parts of which reproductive organs are produced that form embryonic bodies called *seeds*; these *seeds* germinating, become new plants.

472. Cryptogamia. — Flowerless plants or plants that do not produce seeds; their reproductive apparatus forms cell-like bodies, without cotyledons, called spores, which germinate indifferently from any part of the cell; these spore-like seeds of the Cryptogams germinating, produce new plants.

These plants are called flowerless, because their organs of reproduction are concealed or obscure; hence the name Cryptogamia, or concealed nuptials.

KINGDOM.

VEGETABLE SUB-KINGDOM I.

473. Phanerogamia. — Plants that bear proper flowers and produce seeds, derived from the Greek words $\phi_{a\nu\epsilon\rho\delta\varsigma}$, open, and $\gamma_{d\mu\rho\varsigma}$, marriage, signifying open marriage.

474. CLASS I. Dicotyledones. — Plants with two seed leaves or *cotyledons*. From the Greek words $\delta i\varsigma$, two, and $\kappa o \tau v \lambda \eta \delta \omega v$, a hollow disk, alluding to the shape of the coatings or walls of the seed leaves.

475. Angiosperms. — Plants whose seeds are inclosed in a pericarp or vessel. From the Greek $\dot{a}\gamma\gamma\epsilon\tilde{i}\sigma\nu$, a vessel, and $\sigma\pi\epsilon\rho\mu a$, a seed, signifying plants whose seeds are inclosed by a covering; as, the Apple, Maple, Oak, etc.

476. COHORT 1, A. Polypetalæ. — Dicotyledonous plants whose flowers have both calyx and corolla; corolla composed of separate petals, which are sometimes slightly coherent at their bases; as, the flowers of the Buttercup, Apple, Strawberry, etc.

477. Соновт 2, В. Gamopetalæ. — Dicotyledonous

plants whose flowers have both calyx and corolla, with petals more or less united; as, Elder, Arrow-wood, etc.

478. COHORT 3, C. Apetalæ. — Dicotyledonous plants, whose flowers have a calyx but no corolla, and sometimes neither; as, Ragweed, Goosefoot, etc.

479. CLASS II. Gymnosperms, Dicotyledones or Polycotyledones. — Plants whose seed is not inclosed by a vessel or pericarp, derived from the Greek words $\gamma\nu\mu\nu\delta\varsigma$, naked, and $\sigma\pi\epsilon\rho\mu a$, seed, naked seed. Stem elongated, solid; leaves nearly parallel-veined; flowers not perfect; pistil scale-like; no stigma; ovules not inclosed in a vessel; embryo with two or more opposite or whorled cotyledons.

480. COHORT 4, D. Coniferæ. — Pines, Spruces, and other cone-bearing trees and shrubs.

481. CLASS III. Monocotyledones.—Plants whose embryo has one cotyledon, or one seed leaf. Greek $\mu \delta \nu \sigma \varsigma$, alone or one, and $\kappa \sigma \tau \nu \lambda \eta \delta \delta \nu$. Blade of the leaf usually divided into two parts by a prominent midrib, with veins extending from the base to the apex parallel to the midrib; flowers usually three-parted; root not axial.

This class is separated into three cohorts.

482. COHORT 5, E. Spadicifloræ. — Monocotyledonous plants, with flowers on a spadix, frequently enveloped by a spathe; Palms, Calla, and pond weeds.

483. Сонокт 6, F. Petaloideæ.—*Monocotyledonous* plants whose flowers are usually perfect and complete; floral envelope three-parted and double; outer whorl colored green; as, Lily, Lily of the Valley, etc.

484. COHORT 7, G. Glumiferæ. — Monocotyledonous plants whose floral envelope is chaff-like; ovary single, with one ovule; as, grass-like plants, Wheat, Rye, the Sedges, etc.

SYSTEMATIC BOTANY.

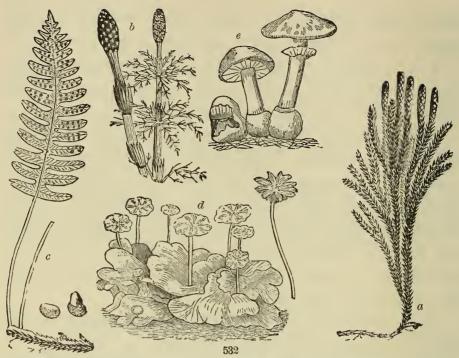

Fig. 532, c, A Fern; Polypodium vulgare. a, Club-moss; Lycopodium dendroideum. b, Equisetum (Scouring Rush or Horse Tail). d, a Liverwort Moss; Marchantia. e, a Fungus or Mushroom; Agaricus, in three stages of growth.

SUB-KINGDOM II.

485. Cryptogamia. — Plants that do not produce proper flowers. From the Greek $\kappa\rho\nu\pi\tau\delta\varsigma$, hidden, and $\gamma\delta\mu\delta\varsigma$, marriage.

486. CLASS I. Pteridophyta.—Vascular cryptogams— Ferns and their allies. From Greek words $\pi \tau \epsilon \rho \iota \varsigma$, a fern, and $\phi \upsilon \tau \delta \upsilon$, a plant, signifying a fern-like plant.

This class is divided into three cohorts.

487. COHORT 1, H. Lycopodinæ (Club Mosses).— Stem herbaceous, rooting at the nodes and creeping, simple or branched, sometimes tree-shaped; foliage small; leaf one-nerved; fructification at the base of the leaf or in terminal catkins on the branches. Name from Greek words $\lambda i \kappa o \varsigma$, a wolf, and $\pi o \tilde{v} \varsigma$, a foot, due to the fancied resemblance of the roots to the foot of a wolf.

488. Сонокт 2, I. Equisetacæ (Horse Tails).—Stem straight, simple or branched, cylindrical, channeled; stiff-jointed; sheathed at the joints; tops of the sheaths toothed. From Latin *equus*, a horse, and *seta*, a bristle or hair; Equisetum, scouring rush.

489. Соновт 3, J. Filicinæ. — Ferns proper. Stem a horizontal creeping rhizome, sometimes erect; foliage pinnate or variously divided; veins forked; fructification on the back or edge of the frond. Name from Latin *filix*, a fern; Osmunda, Flowering Fern.

THE FOLLOWING FIVE CLASSES

are not treated in this book, and therefore will be briefly noticed only.

490. CLASS II. Bryophyta. — Mosses and their allies (Greek $\beta\rho\dot{\nu}\sigma\nu$, a moss, $\phi\nu\tau\dot{\sigma}\nu$, a plant).

Sub-class 1. Hepaticæ, Liverworts.

Sub-class 2. Musci, Mosses.

491. CLASS III. Carpophyta. — Spore-fruited plants (Greek $\kappa a \rho \pi \delta \varsigma$, fruit, $\phi v \tau \delta v$).

Sub-class 1. Coleochæteæ, Green fresh-water plants with few spores.

Sub-class 2. Florideæ, Red or purple marine plants. Sub-class 3. Ascomycetes, Parasites, spores in sacs. Sub-class 4. Basidiomycetes, Spores on stalks.

Sub-class 5. Characeæ, Green fresh-water plants.

492. CLASS IV. Oöphyta. — Plants with egg-shaped spores (Greek $\dot{\omega} \delta v$, an egg, and $\phi v \tau \delta v$).

Sub-class 1. Zoösporæ, Spore cells locomotive.

Sub-class 2. Œdogonieæ, Thread-like cellular body.Sub-class 3. Cœloblasteæ, Thread-like tubular body.Sub-class 4. Fucaceæ, Large, color olive green.

493. CLASS V. Zygophyta.—Unisexual plants (Greek

 $\zeta v \gamma \delta v$, a pair, and $\phi v \tau \delta v$), plants in which the sexes are united.

Sub-class 1. Zoosporeæ, Cells capable of motion.

Sub-class 2. Conjugatæ, Cells fixed.

494. CLASS VI. **Protophyta**.—First or most simple class of plants (Greek $\pi\rho\tilde{\omega}\tau\sigma\varsigma$, first, and $\phi\nu\tau\delta\nu$). These plants are the lowest vegetable organisms, and consist of single cells, or strings of cells.

Sub-class 1. Myxomycetes, Slime molds, naked protoplasm, without regular form.

Sub-class 2. Schizomycetes, Bacteria minute cells.

Sub-class 3. Cyanophyceæ, Green Slimes.

495. Orders or Families succeed to the Cohorts. The *Natural Order* is perhaps the most important of all the associations. On the accuracy and distinctness of the characters of these groups botanists have bestowed the highest degree of attention, and the student's progress will largely depend upon his acquaintance with them.

496. Orders are formed by associating together those genera which have the most intimate relations to each other, or to some one genus previously assumed as the type. As species form genera, so genera form Orders. In regard to extent, they differ widely; some consisting of a single genus, as, Platanaceæ, while others comprehend hundreds of genera, as, Compositæ. For convenience in analysis, the larger Orders are broken up into Sub-orders or Tribes.

The Flowering plants of the whole world, known to botanists, have been grouped under 200 Orders, 7,500 Genera, and 100,000 species. About 80,000 of these species are Dicotyledons, and the remaining 20,000 are Monocotyledons.

It is a high accomplishment in a botanist to possess an extensive acquaintance with individual plants. The ability to determine readily the genus and species to which a plant belongs depends largely upon an accurate knowledge of the characters of the orders and tribes.

RULES IN NOMENCLATURE.

497. The Natural System, then, with all its divisions, groups, and subordinations, may be exhibited at one view, as follows:

> Kingdom, Sub-kingdoms, Classes, Cohorts, Orders, Sub-orders, or Tribes, Genera, Sub-genera, Species, or Races.

CHAPTER III.

RULES IN NOMENCLATURE.

498. The Names of the Orders are Latin adjectives, feminine, plural (to agree with *plantæ*, plants, understood), usually derived from the name of the most prominent, or leading genus, by changing or prolonging the termination into *acece*, as *Rosacece*, the Rose tribe, *Papaveracece*, the Poppy tribe, from Rosa and Papaver. Earlier names, however, derived from some leading character in the Order, and with various terminations, are still retained. Thus, *Compositce*, with compound flowers; *Labiatce*, with labiate flowers.

499. Generic Names are Latin substantives, arbitrarily formed, often from some medicinal virtue, either supposed or real, or from some obvious character of the genus; sometimes from some peculiar form of the flower, or from the name of some distinguished bot-

anist, or patron of botany, to whom the genus is thus said to be dedicated. Also the ancient classic names, either Latin or Greek, are often retained. Examples of all these modes of construction will be seen hereafter.

500. Specific Names are usually Latin adjectives, singular, and agreeing in gender with the name of the genus to which they belong. They are mostly founded upon some distinctive character of the species; as, Viola *blanda*, Sweet-scented Violet; V. *cucullata*, Hood-leaved Violet. Frequently the species is named after some other genus, which, in some respect, it resembles; as, Viola *delphinifolia*, Larkspur Violet.

501. Commemorative Specific Names.—Species, like genera, are also sometimes named in commemoration of distinguished persons. The rules given by Lindley, for the construction of such names, are: 1st. If the person is the discoverer, the specific name is a substantive in the genitive case, singular number; as, Viola *Selkirkii*, Selkirk's Violet; Lobelia *Kalmii*, Kalm's Lobelia. 2d. If the name is merely conferred in honor of the person to whom it is dedicated, it is an adjective ending in *nus*, *na*, or *num* (according to the gender of the generic name); as, Tulipa *Gesneriana*, Gesnerian Tulip, or Gesner's Tulip; Erica *Linneana*, Linnæus' Heath.

502. Rules for the use of Capitals.—The names of the order, the sub-order or tribe, and of the genus, should always commence with a capital letter. The name of the species should never commence with a capital except in the following cases: (1), when it is derived from the name of a person or of a country, as Phlox *Drummondii*, Aquilegia *Canadensis*; (2), when it is a substantive, as Delphinium *Consolida*.

503. Synonyms.—Very frequently, the same species has been described by different (or even by the same) authors, under different names. In such cases it becomes a question, often of difficult solution, which name is to be adopted. Obviously, the *prior* name, that is, the original one, if it can be ascertained, is entitled to the most respect; and it is a rule with botanists to adopt this name, unless it- has been previously occupied, or be strongly objectionable on some other account. All other names are *synonyms*.

504. Authorities.—In the *flora* which accompanies this work, immediately after the Genus we insert the abbreviated name of the author by whom it was originally published, with a comma between, thus: **Trifolium**, Tourn. After a *species* the authority is inserted *without a comma*, as **T. repens** L.,—that is to say, Trifolium repens (of) Linnæus. In changing the *generic* relations of a species (as subsequent writers often deem necessary), it is a custom for the author of the change to annex his own name, or a blank, instead of the original authority. The custom is often unjust, and always liable to abuse. It offers a bribe for innovations in the Genera, and recent works abound in changes which otherwise could scarcely be accounted for. When such changes become *necessary*, the just and proper rule (actually adopted in *Conchology*) is the following. Let the original specific name and authority both be retained, the latter in parenthesis, thus, Lychnis Githago (Linn.)—originally Agrostemma Githago Linn. This method is often but not always used in the present work.

Authorities for our species of exotic cultivated plants, for want of space, have all been here omitted.

CHAPTER IV.

BOTANICAL ANALYSIS.

505. Botanical Analysis is the application of the rules and principles of botany to the study of the natural plant, in order to determine its place in the system, its names, history, uses—all that is on record concerning it. In the flowering months, the learner will constantly meet with new forms of bloom; and if he is duly interested in the science, he will not fail to seize and analyze each new flower while the short hour of its beauty may last. Thus in a few seasons, or even in one, he may become well acquainted with the *flora* of the vicinity where he dwells.

506. Suppose, now, the pupil to be in possession of an unknown plant in flower and fruit. The first

requisite is, its Natural Order, and the first step in *analysis* is an examination of the several organs, one by one, until the general structure is well understood. This done, the *experienced* botanist, who has in memory the characters of all the Orders, might determine at once to which of them the plant in question belongs. But the *beginner* must be content with a longer course of inquiry and comparison,—a course which might be indefinitely long and vague without the use of—

507. Analytical Tables.—These are designed to shorten and define to exactness the processes of analysis. Those which appear in the present work are peculiar in form, and more copious and complete than the tables of any other similar work. These tables, with proper use in connection with the specimen, will very rarely fail to conduct the inquirer almost immediately to the right Order, Genus, and Species.

We subjoin a few examples of the analysis of particular species by the aid of these tables. If the exercise be conducted in the class-room, the successive steps in the process (indicated by the numbers 1, 2, 3, etc., below) may be assigned, in order, to each pupil in the class.

ANALYSIS OF A POLYPETALOUS HERB.

508. To determine the Cohort.—A good specimen of a little yellowflowered herbaceous plant, common in the grassy fields of cool regions, is supposed to be now in the hands of each pupil of the class. (1.) The first pupil, reading (if necessary) the characteristic of each sub-kingdom, pronounces the plant one of the Phænogamia, and refers the next pupil to the Classes I., II., or III.

(2.) The next reads the characters of those Classes, and comparing the specimen (which has *net-veined leaves* and 5-*merous flowers*), concludes that it is an Exogen. Refer next to the Class I.

(3.) "Stigmas present. Seeds inclosed in vessels."

"Stigmas none. Seeds naked. (Pines, Spruces, etc.)" Our plant has stigmas, etc., and, moreover, is not a Pine, Spruce, etc. It is, therefore, an Angiosperm. Refer next to Cohorts 1, 2, or 3.

(4.) "Corolla with the petals distinct." This characterizes our plant, and it is pronounced one of the Polypetalæ. Refer them to A.

509. To determine the Order, the (5th) pupil reads the first alternative, or triplet, noted by a star (*), and comparing his plant, finds it to correspond with the first line, for it is an "herb with alternate leaves." Pass now to (12).

(6.) "Flowers regular or nearly so. Fruit never a legume."

"Flowers irregular," etc. The flower is regular. Pass to (14).

Again, a (7th) pupil reads, "Stamens 3-10 times as many as the petals." "Stamens few and definite." The stamens are many. Pass to (15).

(8.) The next pupil reads, compares, and determines that the stamens are "perigynous on the base of the calyx," and announces the letter (d) as the reference to the next alternative. (9.) Next, the pupil reads and compares his specimen with the triplet (d), and concludes that the sepals are 5, and imbricated in the bud. Consequently, it is announced that the plant in hand belongs to the Order ROSACEÆ.

510. To determine the Genus. — After a careful comparison of their specimen with the diagnosis of the Roseworts (Order 44), in order to verify the analysis thus far, the learner or the *class* will then consult the table of the Genera. (10.) A pupil reads the couplet marked \mathbf{A} , and determines that the "Ovary is superior, fruit not inclosed," etc. Pass to (a).

(11.) "Carpels ∞ . Calyx persistent, with 5 bractlets added," characterizes our plant. Pass to (f), which is Tribe V. Pass on to (g). (12.) The next pupil determines that the "style is deciduous." Pass to (k). (13.) "Torus spongy or dry," is true of our specimens. Pass to (l). (14.) "Bractlets 5" reads the next, and announces the plant to be a Potentilla. Now all turn to Genus 13, and together verify this result by reading and comparing the stated character of the genus.

511. To determine the Species. -(15.) As our plant has "stamens ∞ and flowers yellow" it must be a *true* Potentilla. Pass to (a). (16.) "Leaves palmately 3-foliate" suits our plant. It is, therefore, either species No. 3, 4, or 5. Lastly (17), after a due comparison of their plant with each of these three species, it is determined that it is P. Norvegica.

ANALYSIS OF A MONOCOTYLEDON.

512. A grass-like, blue-flowered herb is now supposed to have been discovered and distributed to the Class for analysis. Having (1) determined that it is a Monocotyledon (for it has "parallel-veined leaves and 3-parted flowers"), they would now (2) determine its Class, which is III.

"Flowers without glumes, and colored," etc.

"Flowers with green alternate glumes, and no perianth." The first line is adopted, and the plant agrees with Petaloideæ. Pass next to (†) Cohorts 5th or 6th, and read,

(3.) "Cohort 5. Flowers on a spadix, apetalous or incomplete."

"Cohort 6. Flowers complete, with a double perianth"—which answers to the specimens in hand, and it is seen to belong to the Petaloideæ. Pass to \mathbf{F} .

(4.) The next pupil having read and compared the first couplet under "**F**, Cohort 6, Petaloideæ," chooses the second line. Pass to No. 2. (5.) "Perianth tube adherent to the ovary" is adopted. Pass to (4). (6.) "Flow-

ers perfect." The second line of this couplet is true of our plant. Next pass to (b). The (7.) pupil reads "Anthers 3 or 6," which is true of the plant. Pass to (c). (8.) "Perianth glabrous outside" is true. Next read (d). (9.) "Anthers 3, opening lengthwise, outward," is also true, and our plant is thus traced to the order IRIDACE E.

513. To determine the Genus and Species under the Irids, Order 146, is the next and the last step. Having carefully compared their specimens with the characters ascribed to the Irids, the pupils next apply to the Table of the Genera. (10.) "Flowers regular and equilateral," in the first dilemma, is chosen. Read the (*) couplet next. (11.) "Sepals similar to the petals in form, size, and position" is true. Next to (a). (12.) "Stamens monadelphous. Flowers small, blue. Plants grass-like," describes the plant truly, and it must be a Sisyrhinchium. They turn to Genus 7, and verify by reading its characters. Lastly, the brief diagnoses of the two species are compared, and the plant is found to be S. Bermudiana.

INDEX AND GLOSSARY.

a (a, privative), prefixed to a Greek word, signifies without; as aphyllous, without leaves ăb brē ví ā'tions, page 3, Part IV. a bôr'tion, non-development of a part. ab sôrp tion, 199. ăs'au les'çent, or ā sau les'çent, apparently stemless, 223. ac çës'so ry, something superadded. ac erës'çent, growing after flowering, 109. ac etim'bent, lying against a thing, 183. ăç'er öse or ăç'er ous, needle-shaped, 299. a chë'ni ŭm, plural, a chë ni å, 151. ach'lă mỹd'e ous, without floral envelopes. a çĭc'ū lar, finely needle-shaped. a cot y lĕd'o nous, without cotyledons. ăc'ro gens, summit growers ac ro gens, summi growers. a eff le fate, arnued with prickles. a eff le fate, arnued with prickles. a eff min ste, drawn out into a point, 307. a eff eff, growing in a sharp angle, 307. ad her ent, growing to, 82, 94. dd'nste, growing fast to, 114. ad ven ti tions, growing out of the usual or normal position, as roots, 206. B er 5 (ton sume as respiration, 483 ā er ā'tion, same as respiration, 483. æs ti vā'tion, 335 af fĭn'i ty, resemblance in essential organs. age of trees. 47. ăg gre găte, assembled close together. a glu mā'ceoŭs, without glumes, the same as pět'al oid, 483. air-bladders, 323. air-plants, 208. air-plants, 208. a'la, wing; a'læ, wings, 101. a'lāte, winged, 274. al bū'men, 179. al bū'mi noūs, 178. al bûr'num, sap-wood, 418. al bûr'num, såp-wood, 418. äl'gæ, seaweeds. al'ter nate, 215, 262. äl've o late, with pits like the honey-comb. äm'ent, a deciduous spike, 357. a mör'phoŭs, without definite form. am plěx'i caul, stem-clasping, 275, 311. a nä'y sis, botanical, 510. a năst to mö'sis, reunion of vessels cr veins. a năt'ro poŭs, 141. an cip'i tal, two-edged. an dre'cium, 110. an dre's'y noŭs, stamens and vistils on t an dræ cum, 110. an dræ cum, 110. same peduncle. ăn'ġi o spërms, 475. ăn'i mal, 15. ăn'nu al, yearly (sc. plants), 40. ăn'nu lar cells, 378. su të'ri or narts (of a flower) adjacent to the an te'ri or, parts (of a flower) adjacent to the bract. ăn'thel mĭn'tic, expelling or killing worms. ăn'ther, 111, 113.

an the'sis, the opening of the flower; flower. ing. a pět'a læ, 478. a pět'al ous, without petals. aph'yl lous or a phyl lous, without leaves. apophy sis, a swelling, e.g., under the thece of some mosses. ap parā'tus, 4. ap pen die'ū lar organs, 77. ap pressed', closely applied but not adhering to; the same as adpressed. to; the same us appresent. ăp ter oŭs, without wings. a quăt'ic, living in water. ă răch'noid, resembling cobwebs. är'or oŭs, arborescent, tree-like. äre'û ate, arched or curred like a bow. a re'o late, having the surface divided into little spaces or areas. ăr'il, an extra seed-covering, 175. ar ii, an extra seed-covering, 142. a ris'tate, with an arista or awn (barley). armed, bearing prickles, spines, etc. är tie'ū lat ed. jointed, as the culm of wheat. ăs cid' i a, leaves holding water, 322. ăs sim'i lā'tion, 430. at tên'ū āte, becoming siender or thin. an ric'i lāte, aucherging, 201 au rie'ū lāte, ear-bearing, 291. awn, the beard of barley and the like. ax'i al root, 200. ăx'il (arm-pit), the angle between the petiole and the branch, on the upper side. ăx îl la ry, growing out of the axils. ăx'is, ascending, 211, 212; erect, procumbent, prostrate, trailing, decumbent, 212; excur-rent, solvent, 220; descending, 197. băe'eate. berry-like; covered with pulp. băn'ner, same as vexillum, 101. băn'yan tree, 207. bark, 416. bark, 416. barji lar, basal, attached to the base, 133. bast-cells, wood-cells of bark, 416. beaked, ending in an extended tip beard'ed, with tufts of long, weak hairs. ber'ry, 159. bi, bis, twice (in compound words). bī'eol or. two colored. bi eoi or, two curren. bi eŭs'pid ate, with two points or cusps. bi den'ni al, of two years, 41. bi fid, cleft into two parts. bi fo'li ate, with two leaflets. bī fūr'eate, *twice forked, or merely forked.* bī lā'bi ate, *two-lipped.* bī'nate, 303. bī pin'nate, 804. bī pin năt i fid, *twice pinnatifid*. (Fig. 342.) bī těr'nate, *twice ternate*, 305. bī välved, *two-ralved*. bī välved, *two-ralved*.

blāde. See lamina, 271.

blanched plants, whitened for the want of light. bloom, a fine white powder, on some plants. border, 91, 92. botany defined, 18. botany defined, 18. botany, elementary, 20, 368, etc. botany, physiological, 21, 368. botany, systematic, 22, 153. brăch'i ate, with opposite, spreading branches (arms). (Fig. 275.) brăct, 329, 345. brăe'te ate, having bracts. briae te ale, hutting bracks. briae te oles or bractlets, 345. branches, 34, 214. bristles, *stiff, sharp hairs*. bry ŏph'y tå, 490. bud, 33. budding, 259. buds, axillary, 247; accessory, 250. buds, adventitious, 251. buds, suppression of, 248. bud-scales, 246, 319. bulb, 240; tunicated, 242; scaly, 242. bulb lets, 260. ca dū'coŭs, dropping off early, 107. çæs pi tose, forming tufts or turf. căl'çe o late, slipper-shaped. căl'y cĭne, calyx-like. ca lýc'ū late, having an outer calyx or calyxca iye a late, having an outer cally or cally like involuce.
ca iyp'trà, the hood of the sporange (spore-care) of a moss.
cā lyx, the outer floral envelope, 51.
căm'bi ăm. 417.
cam păn'ū late, bell-shaped, 102. căm'py löt ro poŭs, 141. căn'a lic'ū late. channeled. ca nes cent, grayish white. căp'il la ry, capillaceous, hair-shaped. căp i tâte, head-shaped, growing în close clusters or heads. ca pit ū lum. a little head, 3°1. căp're o late, bearing tendrils. capsule, 167. eär bon dī ŏx'ĭde, 411. ca rī'nā, 101. căr'i nate, boat-shaped, having a sharp ridge beneath. cïr'pel. carpellary, 126. cïr'po phöre, 149, 151. (Fig. 177.) cär ti läg i nous, firm and tough in texture, like cartilage. căr'un cle, 175 căr y o phyl lā'ceoŭs, 100. căr y ŏp'sis, 153. căt'kin, 357. (See ament.) (See ament.) cau'dex, 227. cau les' cent, 223. cau'lis, 223. cau'line, relating to the stem, 262. çël'lu lar tissue, 396. cell, 368. cell-growth, 377-384. çĕl'lu lar bark, 416. çĕl'lu löse, 371 cen trif'ū gal inflorescence, 35. cen trĭp'e tal inflorescence, 352. çĕph'a loŭs, same as capitate. cere al, relating to grains, corn, etc. çer nu ous, nodding (less inclined than pendulous). chaff, chaffy, 349. (See paleaceous.) eha lā'za, 140. channeled, hollowed out like a gutter.

ehar tā'ceous, with the texture of paper. chlo'ro phyl, 373, 381, 435. chor' isis, 76, cil i ate, fringed with marginal hairs. cil on or sion, 218. ci në're oŭs, ashy gray, ash color. cir ci nate, rolled inward from the top, 255. cir cu lā'tion of sap, 43.2. cir'cum scīs' sīle, 149. cir'rhose, furnished with a tendril. cirrhose roots, 203 classes, natural, 501 elas si fi cā'tion, artificial, 503. clā'vāte, *club-shaped*. co ärct'ate or co ârc'tāte, contracted, drawn together. eŏe'eus, a berry; eoe'çī (plural), the 1-seeded carpels of separable fruits. eŏeh'le ate, spiral, like the snail-shell. co hē sion, 82. co'horts, 401. col lăt'er al, *placed side by side*. cŏl'lum, 199. col'ored, of any color except green, which in botany is not a color, while white is.
col'umn, the combined stamens and styles. eō'må, 173 com'mis sure, the joined faces of the carpels of the cremocarp, 151. com'mon, belonging alike to several. complete flower, 60. com pli cate, folded up upon itself. compound leaf, 300. compound flower, 348. com pressed', flattened on the sides, 274. con dū'pli cate, folded on itself lengthwise. cone, 169. con'flu ent, uniting; same as coherent. con glom'er ate, ciustered or crowded. con'ju gate, coupled, joined by pairs. con'nate, 311. con něc 'tile, connective, 113, 114. con nīv'ent, converging, coming together. con tīu'u oŭs, the reverse of jointed. con tôrt'ed, *twisted*, 338. con'vo lūte, 256, 339. côr'date, heart-shaped, 291. cō'ri ā'ceous, leather-like, 315. côrm, 23). côr ne ous, horn-like in texture. cor nic'ū late, with a small hern or spur. co rol'la, 52, etc. cor'ol line, pertaining to the corolla. côr tô na, crown. côr ti cal bark, 416. côr ymb, co rým bose, 358. côs tate, ribbed, with rib-like ridges. côt y lê dons, 180, 330. cräs sö la, a genus of plants, (3. cra těr'i form, of the form of a goblet. creep'er, creeping stems, 231. erěm ō eârp', 151. crē'nate, bordered with rounded teeth. créaré late, 209. créaré late, 209. crist dor cristitate, with an elevated ridge. cristpate or crisped, 310. crown of the root, 236. cru'çi fôrm (*corolla*), 100. crude sap, 368. crus tā'ceous, hard, thin, and brittle. cryp to gā'mia, 472. cu cul late, rolled up into a hood shape. culm, the straw of grasses, 224. eu'ne ate, cu'në i form, wedge-shaped, 200. cup-shaped, 102.

eū'pūle, a little cup (sc. acorn), 155. eŭs'pi date, with a sharp, stiff point, 307. eū'ti ele, outer lamina of wall of epidermis, 399. cỹ an'ie, blue, or any color except yellow cỹ ăth'i fôrm, cup-shaped. cỹ 'cle (in Phyllotaxy), 263, 264. cỹ clo'sis, same as Rotation, currents in the cell. çyme, cymous, 363. çym'bi fôrm, boat-shaped. çğp'sel a, 151. děe'ă (in Greek composition), ten. de cid ū ous, falling at the end of the season. děe'li nate, bent downward. de'eom pound', much compounded or divided, 304. de cum'bent, 212. (Fig. 249.) de cur'rent, 274. de cus'sate (leaves), opposite, and the pairs at right angles. děf'i nite, 118. dě flex'ed, bent downward. de fo li ā'tion, the casting off of leaves. de his'çençe, 113, 148. del i quès cent (axis), same as solvent), 226. del toid, form of the Greek letter Δ , 283. den'droid, tree-like in form. děn'dron (*in Greek compounds*), a tree. děn'tate, 309. den tře'ů late, 309. de nū'ded, become naked. de pau'per āte, less developed than usual. ĕp'i cärp, 156. de pau'per ate, less developed than usual. de pend'ent, hanging down. de pressed', flattened from above; low. dex'trine, a gummy substance produced by the action of diastase upon starch. dex'trorse (twining), turning to the right. di (in Greek numerals), two. di'a del'phoùs, 120. dī ag no'sis, a brief statement of the distincdi aph'a noŭs, transparent or group. di ăph'a noŭs, transparent or translucent. di ăn' droŭs, with two stamens, 118. dī'as tāse, a peculiar ferment in malt, alter-ing starch into dextrine. dī chŏg'a moŭs, 445. dī chŏg'a moŭs, forked or two-forked. dī chŏt'o moŭs, forked or two-forked. a) enot o mous, forked or two-forked.
die'li noŭs, 67.
di eŏt'y lë dons, dicotyledonous, 182, 284.
did'ỹ moŭs, double.
di dyn'a moŭs, 119.
dig'i tāte, with several distinct leaflets palmately arranged (as in the leaf of the Horse-chestnut).
di mid'i ate (anther) halved 114 di mid'i ate (anther). halved, 114. di mor phoùs plants, 446. di mor phoùs plants, 446. di œ'çioùs (*flowers*), 67. dip'ter oùs, *having two wings*. disk, 85, 362. dis'eoid, no rays. (Fig. 446.) disk-bearing tissue, 401. dis set'ed, cut into deep lobes. dis sep i ment, same as partition, 132. dis'tich ous, arranged in two rows. dis tinet, separate, not united, 82. dī văr'i cate, wide-spread, straggling. di võr'gent, spreading with a less angle. dor's al, on or relating to the back. dotted cells, 384. dotted ducts, 406. double terms, 301.

downy, clothed with short, weak hairs.

drupe, 156. dru pā'ceŭs. (See tryma.) drying-press, 6. ducts, 402. dū'pli eate, *in pairs*, *double*. du rā'men, heart-wood, 418. dwarf'ing. (Fig. 250, d.) E, ex (in composition), without ; as. e brăc'te ate, without bracts. ěeh'ī nāte, prickly with rigid hairs. ef fēte, sterile, exhausted. el'a ters, spiral, elastic threads accompanying certain spores. el lip'tic, elliptical (leaf), 289. e lon ga ted, lengthened, extended. e mär gi nate, 307. em/bry o, 31, 180. embryo sac, 142. ĕn′do cärp, 156. ěn'do chrome, the coloring matter of plants. *See* chlorophyl. en dög e nous structure, 421. ěn do gěns, 180, 421, 422, 424. en'do pleu'rá, same as tegmen, 172. en dos' möse, a thrusting, which causes liquids of different densities to pass through thin membranes, and mingle. ěn'si fôrm, sword-shaped, 297. entire, even-edged, 308. e phém'e ral, enduring for one day. ěp'i (in Greek composition), upon; as. ěp'i derm is, *outside layer of cells*, 391. ě pig'v noŭs, *upon the ovary*, 97, 119. ě pig'y noŭs, upon the ovary, 97, 119. ěp'i pět' al oŭs, on the petals, 119. ěp'i phytes, plants on other plants, 208. ěp'i spěrm, the skin of the seed. ěq'ii tant (astraddle), 258. e rōse', eroded, as if gnawed, 310. e tæ'rĭ ŏ, 158. ē'ti o lā ted, colorless for want of light. ĕx'al bū'mi noŭs, without albumen, 178. ex cur'rent, 226. ex ŏġ'e næ, exogens. 182. ex ŏġ'e noŭs structure, 416-418. ex og e hous sunctine, 410-413. ex som ose, flowing out. ex sett'ed, projecting out of, or beyond. ex stip'ū late. without stipules, 272. ex 'tri (in composition), beyond ; as. extra axillary, same as supra axillary. ex trôrse', turned outward, 114. făl'eāte, scythe-shaped, curved. făr'i nā'caoŭs, flour-like in texture. făr'i nous, mealy on the surface. făs'çi ele, a bundle, 365. fas cie'ū late (leaves), 262. fasticre reined, 285. fer ru'gi noŭs, of the color of iron-rust. fêr'tile (flower), seed-producing, 67. fêr'til læ, fibris, 199, 428. fil rui læ, fibris, 199, 428. fil'a ment, the stalk of a stamen, 111, 112. fil i $c\bar{1}$ (næ. fil' i förm, slender like a thread. fil' i förm, slender like a thread. fil' i förm, slender processes. fis'sion, a splitting into parts. fist'ū lar, hollow, as the leaf of onion. fla běl'li förm, fan-shaped, 298. fla gël'li förm, whip-shaped; long, taper, and sumle supple. fla vés'çent, yellowish, turning yellow.

floe cose', with hairs in soft fleecy tufts.
flo'rå, (a) the spontaneous vegetation of a country; (b) a written description of the same, 23. flo'ral, relating to flowers. floral envelopes, 50, 87. flo'rets, the flowers of a compound flower, 362. flow'er, 49, etc.; origin of, 37. flower-bud, 244, 335, etc. fo li ā'ceous, leaf-like in texture or form. fö'li ä'tion, the act of leafing. föl'li ele, 164. fo rā'men, same as micropyle, 140. fo've o late, having shallow pits. free, not adherent nor adnate, 81, 94. fringed. (See fimbriate.) frond. an organ which is both stem and leaf, as in duckmeat, fern. fron děs'cent, bursting into leaf. frue'ti fi cā'tion, flower and fruit as a whole. fruit, 38, 143. fru tös'çent, shrubby, becoming shrubby. fu gā'ceous, soon falling off. ful'erâ (roots), accessary, 206. fu līg'i nous, smoky brown, blackish. fu līvous, dul yellowish brown. fu nīe'ā lus (a little rope), 140. fun'nel-form. (See infundibuliform), 102. fur'ente torked fork-zeined 281. für eate, forked, fork-veined, 281. für fur ä ceous, scurfy. für-röwed', marked with channels lengthwise. fűs'€oŭs, grayish or blackish brown. fű'si fôrm, spindle-shaped, 203. gā'le å, galeate, 103. găm'o pēt'ā læ, 477. gam'o pet a læ, 477. gam'o pet alæ, 477. ga möph'yl lous, of united perianth leaves. gam'o sép'al lous, with the sepals united. gém'i nate, twin, two together. gem mā/tion, state of budding (Latin, gemma, bud), 382. ge nĭɛ'ū late, bent as the knee (genu). ģē'nŭs, 29, 457. gen'e ra, plural of genus, 457. germ, the ovary. (The term is obsolete.) germ, the ovary. (The term is obsolete.) ger mi nā'tiou, 188, 438. glb'boŭs, more tumid in a certain place. gla'broūs, smooth, not hairy, 312. glad'i ate, sword-shaped, ensiform. gland, glandular, 80, 393. glans, 155. glau cous, with a bloom, or whitish, waxy powder, seen on the under side of cabbage powder, seen on the under side of cabbage leaves, and on fresh plums, etc. glo böse', in form nearly spherical. glom'er ate, collected into close heads. glom'er ule, 363. gloss öl'ö gy, the explaining of technical terms. glumes, 108, 349. glum if'e ræ, 484. graft'ing. (Fig. 250, e.) grand divisions, 65. grand i visions, 65. grand divisions, 55.
grand divisions, 55.
grand lar, composed of grains.
gym'nös (a Greek prefix), naked; as.
gym'nö sper'mæ, gymnosperms, 479.
gym'nö sperm'oùs, with naked seeds.
gy năn'droŭs, 119.
gy năn'droŭs, 119.
gyn'ö bāse, a process of the torus on and around which the carpels are suspended (sc. Geranium, Fig. 172).
dy ng'i d'm 123 ty nœ'çi ŭm, 123.

gyn'o phore, a produced torus, bearing the ovary on its summit. (Fig. 112.)

ġy rāte', same as circinate, 255. ġy rōse', strongly bent to and fro. hăb'it, the general aspect of a plant. hăb'i tăt, the natural locality or place of growth of a wild plant. hairs, 302. Hairy, hirsute. hal berd shaped, hastate. (Fig. 31f.) halved, one-half apparently deficient. has tate, with the base-lobes abruptly spreading, as in a halbert, 291. heart-shaped, 291. heart-wood, 419. herb, herbaceous, 40, 41. her bā'ceous, green and cellular in texture. her bā'ri um. 3. hes'per id'i um, 160. her maph'ro dite (flower), with both stamens and pistils. and pistus. het'er ō çeph'ä loňs, heads af two sorts in the same plant, some s and some o. het er og'a moūs, two sorts of flowers in the same head, some s and some g. hex'ä (Greek numeral), six; as in, hex ăg'o nal, 6-sided or 6-angled. hex ăm'er ous, 6-parted. hex ăm'er ous, 6-parted. hex an'drous, having 6 stamens. hī lum, the eye or scar of the seed, 177. hir sūte', hairy, with rather long hairs, 319. hīs'pid, bristly with stiff hairs, 313. his tol'o gy, description of cells and tissues, 368. hoar'y, frost-colored, grayish-white. ho mog'a mous, head with all the flowers no mog'a mous, head with all the plowers alike, as to the stamens and pistils. hō'mo gē'ne ous, of the same kind. hon'ey, honey-bee, 458. hooded. (See calyptra, 518.) hooded. (See caluptra, 518.) hôrn'y, of the texture of horn. hôr'tus siccus, the herbarium, dry garden, 3. hū'mi fuse, spreading on the ground. hū'a line transparent or nearly so. hu in Thee, spreading on the ground. bỹ a line, transparent, or nearly so. bỹ brid, a cross-breed between two species. bỹ per bö rean, inhabiting northern regions. bỹ po (in Greek compounds), under; as, bỹ po era ter'i fôrm, salver-form, 102. bỹ po ge'an, growing under ground. bỹ pog'y nous, 95, 119. ĭm'bri cate, imbricated, 257, 339. im mär'gin ate, having no rim or border. im mërsed'. (See submersed.) in ăx'i al root. 201. in cised, divided deeply as if cut, 310. in clied, arvive deepty as of cat, 510. in clied, enclosed within, or shorter than, as the stamens in the corolla. in crassifiers, thickened. in cim'bent (sc. embryo), 183. in'de his' cent', not opening, 148. in défi nite, 118. in dig'e nous, native of a country. in du'pli cate, 337. in dū'si um, the shield of the fruit-dot (sorus) In du'si um, the shield of the fruit-dot (sorus) of a fern. in fe'ri or, lower in position. in fiéte'éd, bent inward, inflexed. in'fio rés'cence. 341, etc. in'fun dib'ū li form, funnel-shaped, 102. in'näte (sc. anther), 114. in sert'ed, insertion, refer to the point of junc-tion or apparent origin. in tée'ü ment. a coat or covering. in těg'ū ment, a coat or covering. ĭn'ter nõde, 220.

in'ter pět'i o lar, between the petioles.

INDEX AND GLOSSARY.

in'ter rňpt'ed ly pinnate, 302. (Fig. 358.) in trôrse' (anthers), turned inward, 114. in'vo lū'ere, involucel. 347. in'vo lūte, rolled inward, 256. (Fig. 287.) min'er al, 13. ir rěg'ū lar flowers, 83, 101. joint'ed, having joints, separable pieces. jū'gum, a pair; as, bijugous, with two pairs of leaflets; trijugous, three pairs. keel, keeled. (See carinate.) kidney-shaped. (See renifor kidney-shaped. (See reniform, 295.) kingdoms of Nature, 12-14. la běl'lum, the odd petal of an orchid, 101.
li'bi ate, lip-shaped, 103.
läç'er ate, torn irregularly by deep incisions.
la çin'i ate, slashed, with deep incisions.
la čis'erine, containing lac, or milk.
lå ti nöse', having lacunæ or holes.
la eŭs'trine, growing in lakes.
lăm'i nà, the blade of a leaf, a thin plate, 271.
lăn'çe o late, lance-shaped. (Fig. 317.)
la nů'gi nöse, woolly, 312.
lā'tex, (1) the turbid or milky juice of plants; (2) vessels. (2) vessels. lac tif'er ous tissue, 408. late ther ous ussue, 408. latin names of plants, 25, 26. layer. (See stolon, 217.) leaf, 271, etc.; structure of, 431, etc. leaf-bud, 244, etc. leaf'let, the piece of a compound leaf, 301. leaf-stems, 222. Leaf'let. lěg'ūme, 165. native lens, 7 len tie'ū lar, shaped like a convex lens. If'ber, the inner bark, 412. If'chens, II kens', 519. lig'ne oùs system, 399. lig'u late, strap-shaped, 103. lig üles, the stipules of grasses, 279. lif i à ceoùs flower, 100. limb, the border, 91. lĭn'e ar, long and narrow, 297. lin næ'ŭs, 468. In the US, 400. Iiv'id, clouded with bluish, brown, and gray. Io'bate. lobed, 294. Io'i Ii çi'dal, opening into the cell, 148. Io eŭs'ta, a spikelet of the grasses. Io'ment, a jointed legume, 165. Io rate', thong-shaped. Iŭ'nate cressent shaped. Iū nate, crescent-shaped.
Iỹ 'eo po'di ā'çe æ, 487.
Iỹ 'rate, pinnatifid, with the upper lobes much larger than the lower, 298. măe ros (in Greek compounds), long. măe'ū late, spotted or blotched. male (flowers), same as staminate. mar çës'çent, withering, but persistent, 109. mär'ĝin al, belonging to the border. mär'ĝin ate, having the border different. me dul'la, pith. me dul'la pre razs. 414 měď ul la ry rays, 414. měď ul la ry sheath, 414. měm/bra nā/ceoŭs, membranous, thin and men of a factor of the carpels of a cremocarp of an umbellifer. (Fig. 177.) mer ous, consisting of parts. me tab'o lism, 429. mi'ero scope, 8. mid/rib, the central vein of a leaf, 282. mid'vein (used in this work), 283,

mit'ri fôrm, formed like a conical cap. monos (in Greek compounds), one only; as, mon'a dělph'oŭs, 120. mo năn' droùs, 1.5. mo năn' droùs, 1.*stamened*, 118. mo nil'i fôrm (roots), 204. mon'o cär'pic herbs, 42. mon'o chla myd'e ois (flowers), 66. mŏn'o cŏt'y lē'dons, 180, 284. mo nœ-cioùs, 67. mo nög'y noùs, with one style, 124. mon'o pět'a læ. (See gamopetalæ, 513.) mon'o pet'a loùs, 90, 91. mo nöph'yl loùs, 1-leaved. mön'o sép'al lous, 1-22222. mön'strous flowers, 334. mor phöl'o gy, 19; of the leaf, 271. movements of fluids, 431. movements of numes, 431. mű'ero, a sharp, small, abrupt point. mű'ero nate, 307. műl'ti (*in composition*), many. műl'ti för, *cut half-way into many segments*. mű'ri eate, *bearing short*, *hard points*. mű'ri förm, *like a wall of mason-work*. mű'ti cose nointless not mointed mū'ti cose, pointless, not pointed.
 mỹ çē'li ŭm, the thallus of the fungi, usually concealed, 519. nā'ked seeds, 147. (J nā'pi fôrm (root), 203. (Fig. 166.) nā'tant, swimming; under water. năt'ū ral Ized, growing spontaneously, but not năt'ū ral orders, 458, 463, 465, 497. natural system, 504, 506, etc. něe'tar, honey. nectary, 77. ne pěn'thěs, 322. (Fig. 391.) nerves, the veins (282) are sometimes so called. nět'ted or net-veined. (See reticulate, 284.) neŭ tral flower, 68. nod'ding, nutant, the summit bent over, as in snowdrop. node. a joint of the stem, 220. no dose', knotted, large-jointed. nod'ū lose (root), 204. no'men clāt'ūre, 25, 498, etc. nôr'mal, according to rule, regular. nū/ci fôrm, nut-like. nū çel'lūs, kernel (sc. of ovule), 140, 172, cen-tral body in cell. nu elē'o lūs, dense body within a nucleus. nu'ele us, dense spherical mass of protopiasm in a cell. nut. (See glans, 155.) ob (in composition) denotes inversion ; as, ŏb'€om pressed', *flattened back and front.* ob eôr'date, 307. ob län'çe o late, 290. ob lique', unequal-sided, as the leaves of elm. ob'long, 289. ob ō'vate, 290. ob tūse', 307. ŏb'vo lūte (in æstivation), 258 oct rea, sheathing stipules, 279. Och rea, sheathing stipules, 279. Och ro leä' cose, cream color, pale yellow. octo (in Greek composition), eight. oct an'drose, having 8 stamens. oe tog'y nose, having 8 stamens. off set, a short lateral shoot, 218. oligos (in Greek composition). few; as, ol'i gan dria, with few stamens. ol'i va'ceous, olive-green, brownish-green.

INDEX AND GLOSSARY.

o pāque', dull, not shining. o pēr'eu lar, with a lid, 114. op po site, two at a node, 215, 262. or bie'ū lar, orbiculate, circular, 289. or gán í cons, 101. or gán í cons, 101. or gán í consta a structural botany. or fan og ra phy, 19. See structural botany. or thot ro pous (ovule), erect, 141. ŏs'se oŭs, bony, as the peach-stone. ō'val, 289. ovate, 288. O'va ry, 125. O'void, egg-shaped, as in fruits. O'vile, the young seed, 138. pā'lē æ or pales, 108, 349. pā'le ā'ceous, chaffy, having pales. pälm. 422. păl mi-veined, 285. păl'mate, 295. pan dū'ri form, fiddle-shaped. păn'i ele, 360. pa nie'ŭ late, panicled. pa pil'io nā ceoŭs, 101. păp pus. the calyx of composites, 104. păr al lel-veined, 254. păr a sītes, 209. pa rěn'€hy må, 396. par fa' ehy mi, 396. par fa' ehy mi, 396. par fa' ehy mi, 396. par fe tal, on the wall (paries), 133. prt ed, deeply divided into parts. păt' îl loŭs, hulf open. pear-shaped, obovoid, larger above. pec'ti nate, combed, finely pinnatifid. ped'ate, shaped like a bard's foot, 246. ped'i tel, peduncle, 343. pel'tate, shield-form, 295. pend'ent, pendulous, hanging, drooping. pen'i çil'late, with a tuft of hairs, as if a camel's-hair pencil. pen tăm'er ous, 5-parted. pen tăm'er ous, 5-parted. pen tăm'er ous, 5-parted. pen tăm'drous, with 5 stamens, 118. pen'te (in Greek composition), five. pe o, a fruit like a melon. 161. per en ni al, living several years, 43. per en mi al, living several years, 43. perfect flower, (3) with both stamen and pistil per fo'li ate, through the leaf, 311. peri (in Greek composition), around ; as, peri (anth, 53, 87; forms of, 92. peri éärp, 146; forms of, 150. peri éÿn i ŭm, 107. pe ríg y noŭs, 96, 119. per is perm, same as albumen, 179. per sistent, remaining long in place, 109. per son āte, 103 pet al or pē tal, from πεταλον, one of the foli-accous expansions of the corolla, 52; forms of, 89. pět'al oid, *resembling petals*. pět'al oi'de æ, 483. pět'i ōle, 274. pět'i o late, 271. pět'i o lūle, 276. pět'i o lūle, 276. phăn'e ro gă'miả, 467, 471, 472. phyl lo'di um (*plural* phyllodia), 321. phyl lo tăx'y, *leaf-arrangement*, 261. phys i öl'o gy, 21, 368. phy tôl'o gy (*Greek, phytos, a plant*), 23. pi lôse', with erect, thin hairs, 313. pin'nate, 302. pin năt'i fid, 293. pin năt'i sect. See pinnatifid. pis'til. 56, 123. pis'til, 56, 123.

pitch'ers (leaves). (See ascidia, 322.) pith, 414. pitted cells, 387. pitted cells, 387. pitted, with depressions or excavations. pla çĕn/tå. 127; free axile, 155. plant of the flower, 58. plant defined, 14. plant growth, 409. platt glowin, 45. plr eate, plaited lengthwise as a fan, 254, 340. plu möse', feathery. plū'mūle, a little plume, 31, 180. põl'len, 111, 121. pollen-tube, 450. pollen-tube, 450. pollin i ă, masses of pollen, 434. pollin i ă, masses of pollen, 434. polli (in Greek compounds), many; as, poly a děl'phous, 120. poly an'drous, having many stamens. poly g an drous, *naving many stamens*. poly g a mous, with some imperfect flowers. poly pět'al æ. 476. poly pět'al ous, poly sěp'al ous, 90. pome. a fruit like an appie, 162. pos të ri or, next the axis. potted plants, 428. po tā'to, manner of its growth, 238. pre cō'cious, *flowering before the leaves.* prē fo li ā'tion, *vernation*, 252. pre môrse', *ending abruptly*, 235. press for drying plants, 6. press for drying plants, 6. prick'les, 302. pri'mine, same as testa, 173. pris măt ic, prism-shaped, having several par-allel, longitudinal angles. pro cúm'bent (stem), 212. (Fig. 248.) pro düced', extended more than usual. pro lif (cr oùs, reproducing; as cymes from the midst of a cyme, flowers from the midst of a flower. of a flower. pros ěn'chỹ må, 398. prō tǒph'ỹ tǎ, 494. prō to plǎşm, 868, 869. pru'i nose, powdered, as if frosted, 314. pru'i ens, causing an itching sensation. pseū'do (in Greek composition), spurious, false. jude: cent, downy, with short, soft hairs.
pu bër u lent, minutely downy.
pū'mi lose (pumilus), dwarfed in size.
pŭne tate, seeming as if perforate, or marked with minute dots. pŭn'gent, piercing, sharp-pointed. pū ti men, the bony nucleus of a drupe. py răm i dal, form of a cone or pyramid. pўr'i fôrm, of the form of a pear. pўx'is, a pericarp with a lid, 163. quad'ri (in composition), four ; as, quad răn'gu lar, four-angled. quăd ri fo'li ate, four-leaved. quăd'ri jū'gate, with four pairs of leaflets. quăd'ri lăt'er al, four-sided. quin'que (in composition), five. quin'nate, growing in fives, E06. quin eun'cial, 339. (Fig. 300.) quin'tu ple, five-fold. rāçe (Latin, stirps), a permanent variety, as red-cabbage, 456. ra çēme', 358 ra cente, 335. ra'ehis, axis of the inflorescence, 301, 343. ra'di ate, diverging from a common center. radiate (in the composites), the outer row of florets ligulate. (Fig. 388.) ra'di ant, outer flowers enlarged (and often neutral, Fig. 271).

răd'i eal, from the root, 262. radical (of the flower), 65. răd'i ele, rootlet (of the embryo), 31, 180. ră'măl (of a branch), 262. rā'phe (of the ovule or seed), 141. răph'i dēs, 375. rays, 359, 362. rays, 359, 362. re çép'ta ele, 57. (See torus.) re efirved', bent (not rolled) backward. re fléxed', curved backward excessively. re fräct'ed, bent back suddenly, as if broken. rég'må, fruit as of geranium, 168. rég'il lar, like parts similar, corresponding. rén'i fôrm, kidney-shaped, 295. re pand (margin), 310. ré nont, creening (sc. stems, 232). rē pěnt, creeping (sc. stems, 232). rěs pi rā tion, 427. re sū'pi nate, reversed, upside down. re tū tī late, netted, 388. re trôrse, backward, downward. re tūse' (apex), 307. (Fig. 367, c.) rev'o lute, rolled backward, 256. rhã chis, same as rachis. rhĩ zô má, rhizome, 230, 233. rhǒm bie, rhomboidal, in the figure of a rhomb, or approaching it. ribs, the chief veins of a leaf, ridges. rin'gent (corolla), 103. rings of wood, 414. root, 197. root-cap, 419. root-stock, 233. ro sā'ccoŭs (corolla), 100. rös'trate, beaked, with a beak.
rö şu lāte (leaves), arranged around the base of the stem, as the petals of a rose, 262.
rö'täte, wheel-shaped, 102. ru tat, un, circulation of fluids in the cell. ru bi eund, blushing, rosy red. ru di ment, a minute part. ru gose, wrinkled, 315. ru with ted (albuman) full of chicks ru'mi nā'ted (albumen), full of chinks, as if composed of numerous folds. rŭn çi'nate, hooked backward, 293. rŭn'ner, 219. săc chă rŏm'ў çes, 410. săg'it tate, arrow-shaped, 291. săl'ver-shaped. (See hypocrateriform, 102.) sa mā'rå, 154. sap, the watery fluid taken up by the root and moved through the vessels up to the leaves, 431. sap-wood. sär'eo cärp (of the drupe), 156. sea brous, rough, 312. sea lăr'i fôrm (cells), ladder-shaped, 378. scales, 319. scale-stems, 79, 230. seăn'dent, climbing. scape, 344. scarious, 315. scatt/tered, sometimes used for alternate. scī'on or cī'on, 218. selēr en' ehÿ'mă, 390. sele rose, hard, bony. sele rose, hard, bony. seor pi oid (inflorescence), 365. sero bie'ū late, pitted, with little depressions. sea-green, light-bluish green, glaucescent. see green, infit outsit green, guadescent. se'eund, all on one side, or turned one way. see'un dIne, same as tegmen, 172. seed, 172; vitality of, 185; dispersion of, 186. seed-coverings, 173. sēm'i (in composition), half ; as, sēm'i côr'dāte, half of cordate. sēm'i lū'nar, half-moon shaped.

sĕm'ĭ sāg'it tate, partly sagittate. sē'pāl or sĕp al, one of the foliaceous parts of the calyx, 51. sěp'a loid, sepal-like. sep it cid.'separate. sep it cid'al (dehiscence), 148. sep it ra gal (dehiscence), 148. sep itum, a partition between two spaces. se ri'ceous, silky, 312. se rot'i nous, occurring late in the season. serrate, serrulate, 309. ses'sile, sitting, not stalked, 125, 271. sē'tæ, 106. sē tā'ceous, bristle-form. se tous, setigirous, bearing bristles, 313. sheath, sheathing, as the leaves of the grasses, 275. shrub, 45. sil'ique, silicle, 166. sil'iquos, bearing siliques (as the crucifers). silver-grain (of wood), 414. simple, of one piece, not compound. sin'is trôrse', *twining from right to left*. sin'ū ate, 294. slips, 218. söl'i tå ry, growing alone, or singly. sölv'ent axis, 47. sō'rī, patches of fruit in ferns. sō rō'sīs, 171. spā'dix, 356. späthe, spathaceous, 346. späthe, spathaceous, 346. spērciēs, 27, 455. spērciēs, 27, 455. spec'i mens (of plants), 2, 5. spike, spicate, 355. spike, a little spike, as in a grass. spine, a woody thorn, 327. spin'dle-shaped (root), 208. (Fig. 23 (Fig. 238.) spīral arrangement (of leaves), 263. spiral cells or vessels, 386. sponge'let, spongiole, 199. spores, 184. spur, a projecting, slender appendage, 78. squar rose', spreading widely, as the involu-cral scales of some composites. stages of plant life, 31. stā'mens, 55, 110. stăm'i nate flower, 67. stăm'i no di a, 117. starch, 374. stem, or ascending axis, 211. stër'ile, not bearing seeds, 67. stig'må, stigmatic, 125, 129. stings, 393. stipe, the stalk of the ovary or ovaries; also, the stem of a mushroom. stī'pels. stipellate, 279. stip'i tâte, *on a stipe*. stip'ūles, stipulate, 272, 277. stō'lon, 217. stol'o nif'er ous, producing stolons. stol'ma, 394, etc. strap-shaped, flat, narrow, and straight. strict, erect and very straight. strict, erect and very straight. strigose', with sharp, close, rigid hairs. strob'ile (fruit), 169. stro'phi o late, having an appendage (stro-phiole or caruncle) about the hilum. struc'tur ăl botany or organography, treats of the organs or parts of plants, of their forms and uses. $st\bar{y}le, 125.$ stý loid, style-like. sub (in composition), slightly, 317. sub'e rose, corky in texture.

INDEX AND GLOSSARY.

sub-kingdoms, 473. sū'bū late, awl-shaped, 299. sú e'eu lent, very juicy and cellular, 315. sück'er, 216. suf fru tes'çent, woody at the base only. sŭl'€āte, *furrowed*. su pē ri or, 97, 98. superior calyx, calyx adherent to ovary. superior ovary, ovary free from calyx. sū per vo lūte', 340. sū pra, above. sū pra-āx il la ry, situated above the axil. sū pra de com pound, very much divided. sus pěnd ed (ovule), 139. (Fig. 1.8.) sūt'ūr al (dehiscence), 148. sut'ur al (deniscence), 148. sword-shaped, as the vertical leaves of iris. sỹ cõ nũs, fruit, such as the Fig., 170. symmetry (of the flower), 60, c, 69. sỹm pêt'âl oùs, with petals united. sỹm phyl loùs, with petals united. syn (in Greek compounds), together, union. sỹn ăn'ther oùs, with anthers united. syn căr pl um, 169. syn căr ploùs with carnels united. syn ear pous, with carpels united. sýn'ge nē'şi oŭs, 120. sýs'tem at ic botany, 451, etc. taper-pointed. (See acuminate, 307.) tap-root, 203. taw ny, fulvous, dull yellowish-brown. tax ŏn'o my, the science of classification. tax ŏn'o my, the science of classification. těg'men, the inner seed-coat, 140, 172. těn'dril, 223, 324. těr'a tŏl o gy, 334. te rēte', cylindrical, or nearly so. term of plant life, 39, etc. těr mi nal, situated at the end or apex. těr'mi nŏl'o gy. See nomenclature, 498. těr'nate (leaves), in threes, 303. těs'sel lýted, checkered as a narement ter face (feaves), in threes, 305. tes'sel la'ted, checkered, as a pavement. tes tà, the outer seed-coat, 140, 172, 173. tet'ra (in Greek composition), four. tet'ra dy'n'a moŭs, 119. te trag o nal, with four corners. te trag y noŭs, with four pistils. the ca, thecæ, sporangia or spore-cases. thorn 827. thorn, 327. throat, orifice of a monopetalous corolla. thyrse (thirs), 360. tis sues, 409. to'men tose', with short, dense, woolly hairs, 312 top-shaped, inversely conical. tō'rus, same as receptacle, 57, 84. tŏr'ū lōse, swollen at intervals. tree, 46. trī (in Greek compounds), three; as, trī 'a dělph'oŭs, the stamens in three sets. trī ăn'droŭs, having three stamens. tri eŏe'eoŭs (fruit), with three 1-seeded cartri coc' cous (fruit), with three 1-seede pels. tri'col ored (tricolor), with three colors. tri ěn'ni al, lasting three years. tri fid, split half-way into three parts. tri fo li ate, with three leaflets, 303. trig y nous, having three styles, 124. tri lo bate, having three lobes, 206. tri mě rous, 3-parted, 65. tri me rous, 3-partea, 65. tri pärt a ble, sepa able into three parts. tri pärt ite, more deeply splt than trifid. trip le-veined, 235. (Fig. 319.) tri pin'nate, thrice pinnate, 304. tri quê'trous, three angled, 258, 339. tri tér'nate, thrice ternate, 305. trune'ate, 307. (Fig. 367, d.)

trunk (of a tree), 225. try ma, fruit, as the hickory-nut, 157. tube, 91. tū ber, 237. tu bēr'€u lar, £04. tu ber eu late, covered with warts (tubercles). tū bū lar corolla, 102. tū'mid. swollen or inflated. tū ni tate, coated, as the bulb, 242. tûr'bi nāte, shaped like a top. tū'ri on, young shoot, as of asparagus. typ ic al flower, 60. (Figs. 8-11.) ŭm bel, 359. ŭm bel late, bearing umbels. ŭm'bel let, a partial umbcl. um bl/i tate. with a sharp depression at end. un ärmed', with no stings, thorns, etc. un ci nate, hooked. ŭn der shrub, a low shrub, 45. un der snrub, a low shrub, 45. ŭn dŭ late, wavy, 310. un ë qual ly pinnate, 302. un guie'ū late (petal). having a claw, 88. uni (in compounds), one; as, ū ni çĕl'lu lar plants. ŭ ni to'li ate, with one leaf or leaflet. ŭ/ni form of one form. ū'ni fôrm, of one form. u ni lăt er al, 1-sided. ū ni lõe'ū lar, 1-celled. ū'ni vălved, with but one valve. ûr'çe o lāte, urn-shaped, 102. ū'tri €le (fruit), 152. văğ'i nāte, sheathing; the flattened petiole involving the stem. vălv'ate, 257, 337. valves, valvular, 114, 148. va rī e ties, 28. vās'eu lar tissue, 396. vault'ed, arched. veg'e tā tion, or physiology of plant life, 368. veins, 282. vein lets, vein'u lets, 283. ve nā tion (of the leaf). 282, ven tral, belonging to the front side. ver nal, appearing in the Spring-time. ver nal tion (of the leaf bud), 252. věr'ru cose, covered with warts (verruca). ver'sa tile (anther), 114. ver tex, the summit, same as apex. ver tiç il late, whorled, 215, 262. ver tiç il late, whorled, 215, 262. ver tiç il late, whorled, 215, 262. ves per tine, appearing in the evening. ves'sels, 402. ves'sels, 402. ves'il la ry (æstivation). (Fig. 425.) ves il lum, banner, 101. (Figs. 59, 60.) vil löse', with long, weak hairs, 312. vī mīn'e ous, with long, flexible shoots, osierlike. vir gate, twiggy, long, slender. vire, 228. vis cid, viscous, sticky or glutinous. vis cid, viscous, sticky or glutinous. vi tal ity of seeds, 185. vit'ta, vittæ, the minute oil-tubes in the fruit-coat of the unbelliferæ. volvä, membrane inclosing the young fungus. wedge-shaped, tapering to the base. whorl, a circle of similar organs. witch-grass, 231. wood, 372, 415. wood cells, 399. woody plants, 44.

206

- xăn thie, yellowish.
 xĕn og a my, the fertilization of a flower, by pollen from a flower of another plant, of the same species; cross-fertilization.
 xĕr ö philes, plants that require great heat and little moisture, or plants especially adapted to arid regions. ξερος, dry, φιλεω, I love; hence, plants that delight in dry places.
 xỹ'lẽm, wood. From ξυλον.
 xỹ'lõ eârp, ξυλον, wood, καρπος, fruit; hence, hard and woody fruit.

yeast plant, 411. (Fig. 513.)

zo δl'o ġy, 17.
zo δf' Il ús, from the Greek ζώον, animal, and φυτο. plant; pertaining to plants whose pollination is accomplished by the agency of insects or other animals.
zö'o phyte, 493.
zö'o spöre, 493.
zýg'o spöre, spore formed by the union of two cells. ξύμον, a yoke, σπορα, a seed ; hence, a yoked or united seed.

ABBREVIATIONS AND SIGNS

§ TIMES OF FLOWERING, AND LOCALITIES.

1. Names of the Months and Seasons are abbreviated in the usual manner, as, *Jan* January; *Apr.* April; *Spr.* Spring; *Aut.* Autumn; *Sum.* Summer; &c.

2. The names of States and Territories of the U. S. are abbreviated precisely as in other works, thus:-Ala. Alabama; Ark. Arkansas; Conn. Connecticut, &c.

3. Sections of States are thus designated: -N. N. Y. Northern New York; W. Pa Western Pennsylvania; E. Fla. East Florida; S. Ill. Southern Illinois, &c.

4. Names of foreign Countries:-Eur. Europe; Afr. Africa; S. Afr. South Africa, Aust. Australia; Can. Canada; Mex. Mexico; S. Am. South America &c.

5. E. East, Eastward, indicates the States of the Atlantic seaboard from Maine to V'rginia inclusive; N-E. or N. Eng. denotes the New England States.

6. M. is used to denote the Middle States; viz., N. Y., Penn., N. J., and Del.

1. N. North, Northward, indicates generally the territory north of 42° N. latitude.

8. N-W. Northwest, indicates Wis., Minn., and parts of Ill. and Mich.

9. S. South, Southward, is used to indicate the Southern States in general,—all lying south of Virginia and Kentucky.

10. S-W. Southwest, viz., Miss., La., Ark., and perhaps Tennessee and Texas

11. W. West, denotes the States lying due north of Tennessee and Arkansas.

ABBREVIATIONS AND SIGNS.

 Ar annual Herb. A biennial Herb. A perennial Herb. A perennial Herb. An undershrub, deciduous. An undershrub, evergreen. A Shrub, deciduous. A Shrub, evergreen. A Tree, deciduous. A Tree, evergreen. An herbaceous Vine, ① or ②. A perennial Vine, 2. Woody Vine, deciduous. 	 Woody Vine, evergreen. Trailing Herb, ① or ②. Trailing Herb, 2. Trailing Herb, 2. An aquatic Plant. Flowers perfect. Flowers perfect. Flowers pistillate. Monœcious. Piœcious. Piœcious. Piœcious. Polygamous. Wanting, or none. Numerous or indefinite. 		
2 A perennial vine, 2. 5 Woody Vine, deciduous. 5 A Plant introduced and naturalized; 4 Plant cultivated for ornament; 5 Plant cultivated for use; 6 Cotyledons accumbent; 6 Cotyledons accumbent; 9 Used only in the Cruciferze. (Page 34.) 9) Cotyledons conduplicate; 1 (Note of exclamation), used technically, denotes certainty. 9 (Note of interrogation), implies doubt or uncertainty. 1 (with or without a period), a foot

AUTHORS' NAMES-(CONTINUED).

ANALYSIS OF THE NATURAL ORDERS.

Founded on the most obvious or artificial characters: designed as a key for the determination of the Order of any plant, native, or naturalized, or cultivated, growing within the limits of this Flora.

KINGDOM.

.....

Sub-kingdom I. Flowering PlantsPHANEROGAMIA.
Class 1. Leaves net-veined. Flowers never completely 3-parted
(mostly $\sqrt[4]{}$ and $\sqrt[5]{}$). Embryo with 2 cotyledons. Wood (if
any) in annual circles. Seed in a vessel. Stigmas pres-
entANGIOSPERMS, DICOTYLEDONES.
Cohort 1. (A) Calyx and corolla present, petals separate Polypetalæ.
Cohort 2. (B) Calyx and corolla present, petals more or less unitedGamopetalæ.
Cohort 3. (C) Calyx present, but no corolla, or both wantingApetalæ.
Class 2. Stigma wanting. Seed naked. Embryo with two or more
cotyledonsGYMNOSPERMS.
Cohort 4. (D) Cone-bearing plants (Pines, etc.) Coniferæ.
Class 3. Leaves parallel-veined (rarely netted). Flowers 3-parted.
Bark, wood, and pith commingled. Embryo with but one
cotyledon. Root not axial MONOCOTYLEDONES.
Cohort 5. (E) Flowers on a spadixSpadicifloræ.
Cohort 6. (F) Floral envelope in two 3-parted whorls, outer
one green (Lillies, etc.)Petaloidæ.
Cohort 7. (G) Floral envelope, chaff-like (Grasses and Grains) Glumiferæ.
Sub-kingdom II. Flowerless PlantsCRYPTOGAMIA.
Class 1. Vascular Cryptogams (Ferns, and their allies)PTERIDOPHYTA.
Cohort 1. (H) Stem, herbaceous, rooting, or tree-likeLicopodinæ.
Cohort 2. (I) Stem, stiff, channeled (Rushes)Equisetaceæ.
Cohort 3. (J) Stem a creeping Rhizome or erect leaves pin-
ni-veined, veins forked (Ferns proper)Filicinæ.

A. COHORT I. POLYPETALOUS DICOTYLEDONES.

1

- * Herbs with the leaves alternate or all radical..(12)
- * Herbs with the leaves opposite on the stem .. (9)
- * Shrubs, trees, or undershrubs..(2)
 - 2 Flowers regular or nearly so..(3)
 - 2 Flowers irregular (or the fruit a legume) (§ 165)..(r)
 - 3 Polyandrous,-stamens 3-10 times as many as the petals.. (4)
 - 3 Oligandrous,-stamens 1-2 times as many as the petals or fewer..(6)

4 Leaves opposite. (s)

4 Leaves alternate...(5)

5 Stamens on the torus or the hypogynous corolla. (t)

5 Stamens and petals on the calyx tube..(v)

6 Ovaries simple, distinct, or one only. Vines or erect shrubs..(w)

6 Ovary compound, and wholly adherent to the calyx (x)

- 6 Ovary compound and free from the calyx or nearly so...(7)
 - 7 Stamens opposite to the petals and of the same number..(y)
 - 7 Stamens alternate with the petals or of a different number..(8)

8 Leaves opposite on the stems..(z)

- 8 Leaves alternate, and compound..(yy)
- 8 Leaves alternate and simple. (zz)

9 Polyandrous-stamens 3-10 times as many as the petals. (m)

9 Oligandrous,-stamens 1-2 times as many as the petals or fewer. (10)

10 Pistils separate and distinct, few or solitary, simple. (n)

10 Pistils united into a compound ovary free from the calyx. (11)

- 10 Pistils united into a compound ovary adherent to the calyx...(o)11 Stamens opposite to the petals and of the same number..(p)
 - 11 Stamens alternate with the petals or of a greater number. (q)
- 12 Flowers regular or nearly so. Fruit never a legume. (14)
- 12 Flowers irregular (rarely regular and the fruit a legume)...(13)

13 Stamens numerous, 3 or more times as many as the petals..(k)

13 Stamens few and definite, 4-12..(l)

14 Stamens (or anthers) 3-10 times as many as the petals..(15)

- 14 Stamens few and definite. Ovary free from the calyx..(17)
- 14 Stamens few and definite. Ovary adherent to the calyx..(j)

15 Stamens hypogynous-inserted on the torus..(16)

15 Stamens perigynous—inserted on the corolla at the base..(c)

- 15 Stamens perigynous—inserted on the calyx at the base..(d)
 - 16 Pistils few or many, distinct (at least as to the styles)..(a)
- 16 Pistils (and styles if any) completely united..(b)

17 Pistils one, or indefinite and distinct, simple .. (e)

17 Pistils definitely -* 2 united, the short styles combined into one..(f)

-* 2, 3 or 4 united, styles or stigmas, 2, 3, 4 or 6..(g)

-* 5, distinct or united, with 5 distinct styles..(\hbar)

-* 5, united and the styles also combined into one..(i)

a Petals 3 or numerous. Water plants with peltate leaves....}NYMPHÆACEÆ.

b Sepals 2, with-bb 5 petals imbricated in the bud PORTULACCACE #. 20

d Sepals 2, persistent, capping the lid of the pyxisPORTULACCACEÆ. 20

- d Sepals 3-5, valvate in the bud. Pod long, 2-carpelled......TILIACEÆ. 25
- d Sepals 3-5.-dd Petals imbricate in bud. Fruits simple......Rosacez. 44 -dd Petals convolute in bud. Fruit compound....Lossacez. 55

e Stamens opposite to the petals and of the same number. Pistil 1 only. BERBERIDACEÆ. 6

- f Stamens 6, tetradynamous. Pod 2-celled. Flowers cruciform.....CRUCIFERÆ. 11 f Stamens 4-32, not tetradynamous. Pod 1-celled......CAPPARIDACEÆ. 12 g Sepals 5, unequal. Flowers perfect, numerous, minute.....CISTACE #. 15
 - g Sepals 5, equal. Flowers monœcious. Herbs woolly or scurfy......ORDER 113

g Sepals 5, or 3, equal, and the stamens twice as many......GERANIACEÆ. 30 g Sepals 5, and the stamens (anthers) of the same number. (gg)gg Sterile filam. numerous, in several whorls. Climbing... PASSIFLORACEÆ. 57 gg Sterile filaments numerous, in 5 clusters. Herb erect SAXIFRAGACE #. 45 gg Sterile filaments 0..(*) * Flowers white, racemed. Climbing.....ORDER 106 * Flowers yellow. Plants erect TURNERACE #. 56 * Flowers cyanic. Herbs stemless......DROSERACEÆ. 17 h Stamens 5, alternate with the 5 petals. Styles 5 or 3. Seeds O LINACEE. 28 h Stamens 5, opposite to the 5 petals. Styles 5, but the seed 1.....ORDER 83 h Stamens twice as many as the petals..(hh)hh Stamens 6. Leaves peltate..... NYMPHÆACEÆ. 7 kh Stamens 6-24, distinct..... CRASSULACEÆ. 46 hh Stamens 10, united at base......GERANIACEÆ. 30 i Ovary 1-celled. Leaves all radical, spinescent, irritable......DROSERACEÆ. 17 i Ovary 3-5 celled. Leaves mostly radical, not dotted......ORDER 73 j Style 1, but the carpels as many as the petals (2-6).....ONAGRACE 54 j Styles 3-5, ovary 3-5-celled, 3-5-seeded, wholly adherent.....ARALIACEÆ. 64 j Styles 3-8, ovary 1-celled, half adherent. Sepals 2..... PORTULACACEÆ. 20 j Styles 2, carpels 2, fewer than the (5) petals.—* Seeds several.....SAXIFRAGACEÆ. 45 -* Seeds 2..... UMBELLIFERÆ. 63 k Ovaries many, or few, rarely 1, always simple..... RANUNCULACEÆ. 1 k Ovary compound, 3-carpelled, open before ripe......RESEDACEÆ. 13 *l* Sepals (4 or 5) produced into 1 slender spur behind, petals 2 or 5.....GERANIACEÆ. 30 *l* Sepals 2 (or vanished), petals 4 (2 pairs) with 1 or 2 blunt spurs......FUMARIACE #. 10 l Sepals 5, very unequal; petals 3. Stamens 6 or 8. No spur......Polygalaceze. 42 l Sepals and petals each of the same number, viz..(l)2 4, the flowers slightly irregular. Stamens 6-32. No spur.... CAPPARIDACE Æ. 12 U 4, the flowers moderately irregular. Stamens 8. A vine.......SAPINDACEÆ. 37 2 5, with 10 or more stamens. No spur. Fruit a legume.....Leguminosæ. 43 m Pistils 5–10, united, with sessile stigmas and many petals......FICOIDEÆ. 61 n Pistil solitary, simple. Petals 6-9. Stamens 12-18..... BERBERIDACEÆ. 6 n Pistil 3 or more, distinct, simple. Flowers all symmetrical.... CRASSULACEÆ. 46 n Pistils 2, consolidated with the 5 stamens. Juice milky.....ORDER 100 o Carpels as many as the sepals. (nn) o Carpels fewer in number than the sepals..(00) nn Anthers opening at the top. Flowers 4-parted......MELASTOMACEÆ. 52 nn Anthers opening laterally. Styles united into 1......ONAGRACE E. 54 nn Anthers opening laterally. Styles or stigmas distinct...HALORAGEÆ. 48 00 Each carpel Oc-seeded. Styles 2......SAXIFRAGACEÆ. 45 00 Each carpel 1-seeded. Styles 2 or 3.....ARALIACEE. 64 00 Each carpel 1-seeded. Style 1 (double)..... CORNACE #. 65 p Style 3-cleft at the summit. Flowers 5-parted.......PORTULACACEÆ. 20 p Style and stigma 1, undivided. Flowers 7-parted......ORDER 81 q Leaves pinnate, with interpetiolar stipules ZYGOPHYLLACE #. 29 q Leaves simple, toothed or lobed. Flowers cruciform. Stamens 6.... CRUCIFERÆ. 17 q Leaves simple, toothed or lobed. Flowers 5-merous. Stamens 10...GERANIACEÆ. 30 q Leaves simple, entire...(qq)qq Petals and stamens on the throat of the calyx.....LYTHRACE #. 123 qq Petals on the torus..(*)

PART FOURTH.

DESCRIPTIVE BOTANY, OR PHYTOLOGY

COMPRISING A TABULAR FLORA OF

THE UNITED STATES AND CANADA

(WITHIN THE LIMITS STATED IN THE PREFACE).

SUB-KINGDOM, PHÆNOGAMIA, the Flowering Plants, having stamens and pistils, producing seeds with an embryo. (For sub-kingdom Cryptogamia, see page 412.)

- PROVINCE, EXOGENÆ, the Dicotyledonous Plants. Stems composed of bark, wood, and pith, exogenous (§ 405) in growth. Leaves mostly net-veined. Flowers 5-parted or 4parted, rarely in 3s. Embryo with 2 or more opposite cotyledons. (Province Endogenæ, p. 316.)
 - CLASS I, ANGIOSPERMÆ. Pistils complete, with stigma and ovary, the latter enclosing the ovules, and in fruit enclosing the seeds. Cotyledons only 2. (Class II, Gymnospermæ, p. 311.)
 - COHORT 1, DIALYPETALÆ, the Polypetalous Exogens. Flowers having a double perianth, both calyx and corolla, the latter composed of distinct petals. (Cohort 2, p. 144.)

ORDER I. RANUNCULACEÆ. CROWFOOTS.

Herbs (or woody climbers) with a colorless, acrid juice. Leaves mostly divided, exstipulate, with half-clasping petioles. Sepals 3-15, green or petaloid. Petals 3-15, distinct, sometimes irregular or none. Stamens hypogynous, indefinite. Ovaries many or few, distinct, $1 - \infty$ -ovuled. Fruit either

dry achenia, or follicles, or baccate, $1 - \infty$ -seeded. Seeds anatropous, em bryo straight in horny albumen.—Abounding in cool regions

Illustrated in figs. 33, 39, 83, 84, 109, 127, 132, 159, 155, 156, 212 234, ctc.

TRIBES AND GENERA.

Sceals valvate in the bud. Achenia tailed. (Tribe I.)		
Separation of the bud. Achieved the second		
$-a$ Ovaries 2- ∞ -sceded (3)		
2 Corolla 0 or undis inguishable from the colored calyx. (Tribe II., b)		
2 Corolla and caiyx distinct either in color or form. (Tribe III., c)		
3 Sepals as permaneut as the stameus. Fruit follicular. (Tribe IV., d)		
3 Separs as permanent as the statients. Full folicitian. (Tribe IV., a) 3 Separs caducous sooner than the statients. (Tribe V., g)		
3 Separs calleous solver that the statients. (Tribe VI.)		
1. CLEMATIDEE.—Petals 0, or stamen-like. Leaves all opposite.	CLEMATIS.	,
II. ANEMONE <i>E</i> . <i>b</i> Sepals deciduous with the stamens. Stem-leaves opposite.	ANEMONE.	2
b Sepals deciduous with the stamens. Leaves all radical.	HEPATICA.	3
b Sepais caducous.—Leaves ternately compound.	THALICTRUM.	4
-Leaves palmate, simple. Flowers §.	TRAUTVETTERIA	
II. RANUNCULEÆ. c Sepals not appendaged. Petals red or yellow, no scale.	ADON18.	6
c Sepals not appendaged. Petals xanthic, a scale at base.	RANUNCULUS.	7
c Sepals appeudaged. Plant small. Leaves radical.	MYOSURUS.	8
IV. HELLEBORE Æ d Perianth regular. (e)	-	
e Petals 0. Sepals white.	ISOPYRUM.	9
e Petals 0. Sepals 6-9, yellow.	CALTHA.	10
e Petals sleuder, tubular at apex. Roots yellow.	Coptis.	11
e Petals minute, tubular at base, 1-lipped.	TROLLIUS.	12
e Petals small, tubukar, 2-lipped. Sepals persistent.	HELLEBORUS	13
e Petals small, concave, 2-lobed. Fls. racemed. Rt. yel.	ZANTHORUIZA.	14
e Petals larger than the colored sepals, 2-lobed.	NIGELLA.	15
e Petals larger than the colored sepals, spur-like, equal.	AQUILEGIA.	16
-d Perianth irregular. (f)	_	
f Upper sepal spurred, containing two spurred petals.	DELPHINIUM.	17
f Upper sepal hooded, covering two deformed petals.	ACONITUM.	18
V. CIMICIFUGE Æ. g Flowers numerous, in long, spicate racemes.	CIMICIFUGA.	19
g Flowers many, in short racemes. Fruit baccate.	ACTÆA.	20
g Flower 1 only. Plant 2-leaved. Berry compound.	HYDRASTIS.	21
VI. PÆONIÆPetals plane, large, showy. Disk sheathing the follicles.	PÆONIA.	22

1. CLEMATIS, L. VIRGIN'S BOWER. Calyx of 4 (4–9 in the exotics) colored sepals, in æstivation valvate-induplicate. Petals 0, or if present, more like sterile filaments. Stamens shorter than the sepals, the outer or all sometimes sterile. Ovaries ∞ in a head. Achenia caudate with the lengthened plumous or pubescent styles 24. 5 Somewhat woody, climbing by the clasping petioles. Leaves opposite. Fig. 359.

- 1 C. verticillàris DC. Lvs. in whorls of 4, each ternate, and 2 large purple fls. at each node. Highland woods, Me. to Ga., W. to Rky. Mts. 15f. May, June. Rare
- 2 C. Virginiana L. Glabrous; lvs. ternate, lfts. lobed and cut-dentate; achenia long, plumed, in feathery tufts. Thickets, Can. to Ga., W. to Mo. 15f. Aug. +
- 3 C. Catesbyana Ph. Pubescent; lvs. biternate, lfts. ovate, mostly 3-lobed, lobes entire; ach. short-plumed; sep. small, linear-oblong. Coast, S. Car. to Fla. 12f. July
- 4 C. holoserícea Ph. Silky-pubescent; lvs. ternate, lfts. ance-oblong, entire; fis. ir small corymbous clusters; sep. linear; ach. long-plumed. Carolina. Diœcious.
- 5 C. crispa L. Lvs. ternate, pinnate, or decompound, lfts. varying from ovate to lanceolate, and linear, acute, thin, smooth; ach. tails short, pubescent. Va. to Ga. and La. Lfts. 3-15. Fls. elegant, 15" long. (C. Walteri Ph., C. cylindrica Sims, &c.)
- 8 C. reticulàta Walt. Lvs. ternate or pinnate, lfts. 3-7, obtuse at each end, at length rigid and prominently veined, often lobed; tails silky. Fla. Sep. 12-15" long.
- 7 C. Viórna L. Leather-flower. Lvs. pinnate, lfts. ovate, acute, smooth; sep. lanceovate, the cuspidate points reflexed; ach. tails long, plumous. Woods, O. to Ga. 10-15f. Peduncles with a pair of simple leaves. Summer. Rare.
- 8 C. Pitcheri T. & G. Leaves pinnate, leaflets coriaceous, roughened with the netted veins; sepals lance-ovate; ech. tails short, glabrous. Ill., Iowa, to Ark.
- 9 C. ochroleùca Ait. Lvs. silky-pubescent beneath, ovate, entire; sep. silky, yeilowish within; ach. plumes long, straw-color. 24 Woods, L. I. to Ga. Rare. 1f.
- 10 C. ovàta Ph. Leaves glabrous, glaucous beneath, broad-ovate; flower on a short peduncle, purple; sepals ovate, pointed. 24 N. Car. to Fla. 1-2f. Leaves entire.
- 11 C. Baldwinii T. & G. Lvs. oblong to lance-linear, the lower 3-lobed or cleft; flower on a long peduncle, purplish. 24 Fla. 1-2f. Plumous tails 2' long.
- 12 C. ERÉCTA. Stem 3f, weak, inclining; lfts. lance-ovate. 24 Europe. August.
- 13 C. FLÁMMULA. Climbing 12-20f; leaflets oval to oblong-linear, often lobed, acute, smooth; clusters terminal, fragrant. From France. August, September.
- 14 C. INTEGRIFÒLIA. Upright; lvs. lance., entire, smooth; fls. nodding, blue. Eur. 2f.
- 15 C. CIRRHÒSA. Climbing; lvs. ovate, subcordate, toothed; fls. fragrant, white. Eur. 16 C. VITICELLA. Lfts. 3-15, ovate or oval, entire; sep. obovate, purp., 15". Eur. Sum.
- 17 C. GRAVÈOLENS. Lfts. 3-5, lanceolate, acute; sep. oblanceolate, ylw., 9". Thibet
- 18 C. FLÓRIDA. Lvs. ternate and bitern.; sep. ovate, pointed, wh. or purplish. Japan 3. SIEBÓLDTH. Fls. 4' broad, creamy-white and purple, double. Splendid.
- 19 C. CERÙLEA. Lvs. ternate, hairy; fls. very large; sep. lance-ovate, blue, &c. Japan β. AZUREA-GRANDIFLORA. Flowers 5-7' broad, azure, or lilac-blue. July.

2. ANEMONE, L. WIND-FLOWER. Involuce remote from the flower, of 3 divided leaves, calyx regular, of 3-15 colored sepals. Corolla 0. Ovaries ∞ , free, collected into a roundish or oblong head. Achenia with a short, rarely a lengthened beak. Seeds suspended. 24 Lvs. radical. Stem leaves 2 or 3, opposite, forming the involucre. Figs. 116, 176. § PULSATÍLLA. Carpele many (50-75), with long plumous tails. One large flower. No. 1 § ANEMONÁNTHEA. Carpels hairy, but neither tailed nor grooved...(a)

a Pistils many (50-70) in a head, densely matted with wool in fruit...(b)

a Pistils fe	wer (15-20) in a head, merely pubescent in fruit	Nos. 2, 3
b Stem	leaves (involucre) sessile, with a single flower	Nos. 4-8
ð Stem	leaves (involucre) petiolate, with 2 or 3 flowers	Nos. 7-9
	Carpels few, not caudate, glabrous and grooved	
	Exotic, cultivated species	Nos. 11-13

1 A. patens L. B. Nuttalliana. Pasque-flower. Clothed with long silky hairs; lvs. many-cleft, with linear segments, developed after the large spreading pale-purple flower. Dry hills, Ill., Wisc. to Dak. (Matthews). 1'-1f. Sepals 5 or 6, 1'. April. 2 A. nemoròsa L. Smooth, 1-flowered; leaves of the invol. 3. petiolate, 3-5-parted.

segm. cleft and lobed. Copses, com., 6-9'. Fl. white, purple outside April, May.

- 8 A. Pennsylvánica L. Hairy, 1-, finally 2- or 3-flowered; leaves of the invol. sessile, large, veiny, 3-parted, acuminate-lobed and toothed. Prairies, Can. to Penn., W. to the Miss. 12-20'. Flowers pure white. June-August.
- 4 A. Caroliniàna Walt. Lvs. 3-parted into cuneate, linear, twice trifid segm.; in volucre similarly cleft half-way; sepals obtuse, 15-20; carpels in an oblong head Car. to Ill., and Nebr. 6-10'. Flower white-purple, pretty, fragrant. April, May.
- 5 A. heterophýlla Nutt. Lvs. of roundish-oval, crenate segments, invol. linear-cleft to the base; sepals acute, 5-13; carpels in a cylindrical head. Ga. to La. and Ark S--16'. Flower white-green, scentless. March, April.-Varies toward No. 4.
- 6 A. parviflòra Mx. Leaves of involucre 2, 3-cleft, segments cuneiform, 3-cleft, cronate-lobed; sepals 5 or 6; carpels in a globular head. L. Sup., and N. 3-12'. White
- 7 A. multífida DC. Red Anémone. Involucre short-petioled; lateral peduncles involucellate; head of carpels oval. N. Vt. to J., Sup. Rare. Red-white. 1f. June.
- 8 A. Virginiàna L. Invol. long-petioled; lateral ped. involucellate; head of carp. oblong. Can. to Car. 2-3f. Fls. white-green, on long stalks. Sepals 5. Ju.-Aug.
- 9 A. cylindrica Gray. Invol. long-petioled; peduncles all naked, long; head of carpels cylindrical. N. H., Mass., to Iowa. Silky pubescent. 2f. White-green. May.

10 A. thalictroides L. Rue Anémone. Glabrous, slender; invol. of 2 sessile biternate (apparently of 6-petioled ternate) lvs., lfts. 3-lobed; fls. umbelled; sep. 5-10. Woods, Can. to Ga., W. to Iowa. 6-10'. Root tuberous. Fls. white-purp., 1'. Apr., May.

11 A. CORONÀRIA. LVS. multifid, segm. linear; sep. 6, roundish, close. Levant. May.

- 12 A. HORTÉNSIS. LVS. 3-parted, with cuneate cut-dentate lobes; invol. sessile; sep. 10-12, oblong. Italy. Varieties are double, semidouble, red, white, blue, &c. May.
- 13 A. JAPÓNICA. Lvs. of the involucer and involucels broadly 3-5-lobed; fls. many, 18" broad, white and red; sepals in 2 rows, roundish, widely spreading. Autumn.

3. HEPATICA, Dill. LIVERLEAF. LIVERWORT. Invol. of 3 entire, ovate, obtuse bracts, resembling a calyx, situated a little below the flower. Calyx of 5—9 petaloid sepals, disposed in 2 or 3 rows. Cor. 0. Achenia awnless. 24 Lvs. all radical, cordate, 3-lobed, thick, evergreen. Flowers single, on hairy scapes, appearing in early Spring before the new leaves Figs. 332, 431. Cultivated as a border flower.

- 1 H. tríloba Chaix. Round-lobed L. Lvs. with 3 round-obtuse lobes; bracts of the invol. obtuse. Woods, N. Eng. Scapes and leaf-stalks 3-4'. Fls. blue, varying to white, neat and elegant, becoming double in cultivation.
- 2 H. acutíloba DC. Acute-leaved L. Lvs. with 3 acute lobes, bracts of the invol. acute. Borders of woods, Vt. to Wis. 4-5'. Flowers violet-blue to rose-purple.

4. THALICTRUM, Tourn. MEADOW RUE. Calyx colored, of 4-5 concave, caducous sepals. Petals 0. Filam. dilated upward, longer than the sepals. Ov. 4-15. Ach. stiped or sessile, ribbed or inflated, shortbeaked. 24 Lvs. ternately compounded, with stalked leaflets. Lfts. 3-7 lobed. Flowers paniculate, often diclinous, of no beauty.

- * Flowers directions, in loose panicles. Styles slender. Achenia sessile or nearly so, ovoid, conspicuously angled and grooved......Nos. 1-3
 * Fls. perfect, few in the corymbed clusters. Sty. short. Ach. long-stipitate....No. 4
- 1 T. dioicum L. Slender, glaucous, glabrous (1-2f); leaves all petiolate (with the general petiole); fis. in slender panicles, purplish or greenish; fil. capillary, droop-

ing, achenia about 8. Hilly woods: common. Leaflets thin, 5-7-lobed. April, May. **3 T. cornùti** L. Stouter, tall (3-4f), smoothish; stem leaves sessile (no commor

petiole); lfts. thickish, veiny, with acutish lobes; anthers on white erect filaments achenia about 12, substipitate. Meadows. Leaflets 3-lobed. July, August.

- 8 T. purpuráscens L. Stem tall (3-6f!), purple; stem leaves sessile, or nearly so, lfts. thick and firm, with rolled edges, pale and often glandular-downy beneath; anth. linear, drooping; achenia sessile, as long as their stigmas. Hilly woods. June, July. 4 T. clavatum DC. Slender (1-2f); lvs vetiolate, biternate. lfts. obtusely lobed;
- ach. curved, 5-10, short-pointed, long-stipe Mts., N. Car. to Ala. White. July.

5. TRAUTVETTÈRIA, Fisch. & Meyer. Sep. 4 or 5, colored, cadu cons. Pet. 0. Filam. petaloid. Ach. 15-20 in a head, membranous, inflated, angular, tipped with the short hooked style. 24 Leaves palmately lebed, alternate. Flowers corymbous, white.

T. palmata F. & M .- Prairies and woods. Can. to Va., W. to the Cascade Mts. ! 3-5f. Radical lvs. large, 5-9-lobed; stem lvs. few; corymb terminal. July, August.

6. ADONIS, L. PHEASANT'S-EYE. Sepals 5. Petals 5-15, the claw naked (no scale). Achenia spiked on the torus, ovate, pointed with the persistent style. Herbs with dissected leaves, and bright, showy flowers.

1 A. VERNÀLIS. Fls. cup-shaped, yellow, of 10-12 oblong petals. 24 Eur. 6-10'. May. 2 A. AUTUMNÀLIS. Fls. globular, red, of 5-8 concave petals. (1) Eur. 1f. Aug., Sept.

7. RANUNCULUS, L. CROWFOOT. BUTTERCUPS. Sepals 5, ovate. Pet. 5-10, roundish, shining, each with a honey-scale (Fig. 39) or pore at the base inside. Ach. flattened, pointed, crowded in a head. 24 (1) Leaves alternate. Flowers generally yellow. Figs. 39, 83, 84, 109, 118, 159, 212, 234, 415, 416.

§ BATRACHIUM. Petals white, with a yellow, naked honey-pore on the claw. Seeds (achenia) transversely wrinkled. Leaves multifid, in water... No. 1

- § RANÚNCULUS. Petals (yellow) with a honey-scale on the claw of each...(*) * Achenia rough with points or prickles. Leaves palmate-parted. (1)..... Nos. 18, 19
 - * Achenia smooth,-x numerous, in an oblong head. Wet places......Nos. 7-9

-x many, in a rounded head...(a)

- a Lys., at least the lowest ones, undivided, merely lobed or crenate... Nos. 10-12
- a Leaves all deeply divided, the zwer-y pinnately with stalked lfts.. Nos. 13-15 -y palmately with sessile lfts...Nos. 16, 17

Exotic, cultivated..... Nos. 20, 21

- I R. aquátilis L. β. trichophýllus Chaix. White Water-C. Leaves all filiformly dissected and submersed. 24 In slow streams. July, Aug. (R. divaricatus Schrank.) y. heterophýllus DC. Upper leaves floating, 3-5-lobed. Near Boston (Bigelow, now lost). In Idaho (Walker). Submersed leaves as in β .
- 2 R. multifidus Ph. Yellow Water-C. Floating or creeping: some of the leaves emersed, reniform, 3-5-parted, and cleft. Sepals reflexed; carpels with a straight beak, heads globous. Ponds and muddy shores, 1-2-3f. Petals 5-8. May, June.
- 3 R. Flámmula L. Spearwort. Stem erect from an ascending base; lvs. all lance shaped, on sheathing petioles; ach. roundish, twice longer than its beak. Can. to Car., W. to Oreg. 8-16'. Lvs. 3-6'. Fls. showy. Sum. (R. alismæfolius Geyer.)
- 4 R. reptans L. Stem creeping, geniculate, rooting, filiform; nodes 1-flowered; lvs linear or oblong; pet. 5-10, bright. N. Eng. to Oreg. Delicate. Fls. 4". Lvs. 1'. JL
- 5 R. pusillus Poir. Erect; lvs. all petiolate, lower ovate, upper lance-linear; pet 3 (1-5) short; stam. 8-10; carp. scarcely pointed. N. Y. to Ga., and La. 6-12'. May
- 6 R. oblongifolius Ell. Erect, diffuse; lvs. lance-ovate and lanceolate, all stalked pet. 5, stam. 20; carp. pointless. Ill. to Tex. June 2f. (R. Texensis Eng.)

- 7 R. Cymbalària Ph. St. filiform, creeping, rooting; lvs. reniform-cordate, crensto dentate above; scapes 1-5-flowered (2-6'); petals 5-8, oval; carpels striate, beak short, uncinate. Brackish shores, N. J. to Dak. (Matthews). June.
- **5 R. sceleratus** Ph. Erect, smooth: root lvs. 3-lobed, lower stem lvs. 3-parted and cut-crenate; fis. small; carp. point' ss. Wet. Can. to Ga. 1f. Head 3". Jn.—Aug.
- 9 R.Pennsylvánicus L. Very .rsute; leaves ternate, lfts. subpetiolate, deeply 3lobed and cut; sep. reflexed, longer than the 5 pet.; carp. beaked. Wet. 2f. Jn.-Aug.
- 10 R. abortivus L. Very smooth; root lvs. roundish cordate, crenate, petiolate; upper leaves in 3 linear segments; sepals reflexed, longer than the very short petals. Woods: common. 8-16'. Flowers very small. Pretty. May, June.
- 11 R. recurvatus Poir. Hirsute with thin spreading hairs; leaves all similarly 3parted, lobes incised; sepals recurved, longer than the petals; carpels with a hooked beak. Woods. 1f. Pale green. Flowers small. May-July.
- 12 R. rhomboideus Goldie. Hairy, much branched; root lvs. rhomboid-ovate, crenate-dentate, long-stalked; sep. spreading, shorter than the petals; achenia smooth, with a very short beak. Prairies, Ill., Mich., Wis., Can. 6-10'. May.
- 13 R. fasciculàris Muhl. Early C. Erect; root a fascicle of fleshy fibres; root leaves appearing pinnate; peduncles terete; carpels scarcely margined, beak slender. Rocky hills. 5-10'. Hairs silky. Flowers 1' broad. April, May.
- 14 R. repens L. Root fibrous; later stems creeping, long; root leaves ternate, with stalked leaflets; pedicels furrowed; carpels broadly margined and stout-beaked. Moist shades. 1-3f. Flowers showy. Hairy or smooth. Very variable.
- 15 R. bulbòsus L. Hairy; stem erect, bulbous at the base; root leaves ternate, segments petiolate, incised; ped. furrowed; sepals reflexed. Fields, N. Eng., to Pa. 1f. May, Jn. The cup-shaped flower, golden-yellow, is larger and handsomer than No. 17.
- 16 R. palmàtus Ell. Erect; leaves 3-5-cleft, with the sinus at the base closed, seg ments all sessile, cut-dentate, or lobed; carpels margined and straight-beaked. Pine woods, Car. to Fla. 1f-18'. Pubescent. Flowers small (7"). April, May.
- 17 R. acris L. Buttercups. Erect; leaves deeply trifid, the base segments divaricate, all laciniate and sessile; pedicels terete; carpels with a short recurved beak. Common in N. Eng. and Can. Hairy. 2f. Flowers large, 1' broad. June-Sept.
- 18 R. muricàtus L. Glabrous; carpels aculeate, strongly margined, ending in a stout recurved beak. Va. to La., also in Cal. 1f. Leaves lobed and toothed.
- 19 R. parviflorus L. Villous; carpels rounded, granulated, tipped with a very short beak. Va. to La. 6-12'. Flowers small. March. April.
- 20 R. ASIÁTICUS. Garden Ranunculus. Erect; leaves ternate or biternate, segments incised or lobed; head of carpels cylindric. Levant. 1f. Flowers variegated end lessly, of every form and hue. Not hardy.
- 21 R. ACONITIFÒLIUS. Branching and many-flowered; leaves palmately 3-7-parted and cut-toothed, the upper sessile, with lance-linear lobes; calyx appressed; petals pure white From Europe. A fine old border flower, deep green, the flowers often double.

6. MYOSÙRUS, Dill. MOUSE-TAIL. Sep. 5, produced downward at base below their insertion. Petals 5, with slender, tubular claws. Stanens 5-20. Achenia spicate on the spindle-shaped torus. I Leaves linear, entire, radical. Scapes 1-flowered. Fig. 132.

M. minimus L. Low grounds, Ill. to La., W. to Oreg.! A curious little plant, remarkable for its tall torus, covered with numerous blunt carpels. Pet. yellow. Apr.

9 ISOPYRUM, L. FALSE RUE ANEMONE. Sep. 4, petaloid, deciduous. Pet. 5, small, tubular, sometimes 0. Follicles 3 or more, subsessile, pointed with the style, with 2 or more seeds. Delicate herbs. Leaves ter nately compound, lfts. 2–3-lobed. Flowers pedunculate, white. Fig. 33. I. biternàtum T. & G. Glabrous, erect; stems clustered; pet. 0; follicies 3-6, strongly veined, 2-seeded. 21 Damp shades, O. to Ark. 4-10'. May. Very pretty.

10. CALTHA, L. COWSLIP. MARSH MARIGOLD. Sepals 5–9, petaloid. Petals 0. Follicles 5–10, oblong, pointless, spreading, ∞ -seeded. \mathcal{U} Very glabrous, aquatic.

C. palústris L. Stem hollow, thick; leaves thickish, large, orbicular or reniform, crenate or entire; flowers yellow. Wet meadows. 1f. Flowers 18" broad. May.

11. COPTIS, Salisb. GOLD-THREAD. Sepals 5-7, oblong, concave, colored, deciduous. Petals 5-7, clavate, tubular at apex. Follicles 5-10, stipitate, rostrate, divergent, 4-6-seeded. 24 Low, smooth, with radical leaves and flowers on a scape.

C. trifòlia Salisb. Leaves 3-foliate, leaflets sessile; scapes 1-flowered; pet. small and stamen-like; rhizome thread-like, of a golden yellow. Penn. to Can. 3-4'. Flowers white, the small yellow petals inconspicuous. Root bitter, tonic.

12. TROLLIUS, L. GLOBE-FLOWER. Sep. 5-15, petaloid. Pet. 5-25, small and inconspicuous, linear, tubular at base. Stam. and pistils ∞ ; follicles ∞ -seeded. 24 Smooth, with palmately-parted leaves.

- 1 T. laxus Salisb. Sepals 5, rounded, spreading; petals shorter than the stamens, orange-colored. Swamps, Can. to Penn. and Del. Rare. 1f. Flowers 18" broad; sepals yellow, greenish outside. Pods about 10. June.
- 2 T. EUROPÆUS. Sepals 15, incurved, concave; petals 5-10, as long as the stamens From Europe. 2f. Yellow. June, July. Hardy, and very ornamental.
- 3 T. ASIÁTICUS. Sepals 10, partly open; petals 10, longer than the stamens. From Asia. 2f, with ample foliage and orange-red flowers, varying to yellow. June, July.

13. HELLEBORUS, L. HELLEBORE. Sepals 5, mostly greenish, persistent. Petals 8—10, very short, tubular, 2-lipped. Stigmas 3—10, orbicular. Follicles ∞ -seeded. 24 Leaves coriaceous, palmately or pedately divided. Flowers large, nodding. Fig. 494.

1 **H.** víridis L. Glabrous; rt. lvs. pedate, cauline palmate, sessile; fis. often in pairs; sepals round-ovate, acute, pale yellowish-green, spreading 1'. From Eur. 1f. § Apr.

2 H. NIGER. Christmas Rose. Root lvs. pedate; scape naked, bracted, 1- or 2 flowered; fls. 2' broad, white, pink, and finally green. In England, it flowers about Christmas 1f. Leaves thick, evergreen, and shining. March, April.

14. ZANTHORHIZA, L. YELLOW-ROOT. Sep. 5. Pet. 5, of 2 roundish lobes raised on a claw. Stam. and pistils 5—10. Ova. 2- or 3-ovuled, follicles mostly 1-seeded, seed suspended 5 Roots and bark yellow and bitter. Leaves pinnate. Racemes axillary. Flowers dark purple.

Z. apiifòlia L'Her.—River banks, N. Y. to Ga. Lvs. clustered at top of the short, thick stem; leaflets 5, sessile, incised; racemes compound. Fls. 3" broad. Apr.

b. NIGELLA, L. FENNEL-FLOWER. Sep. 5, petaloid. Pet. 5, 2-cleft. Pistils 5, becoming as many follicles which are distinct or united. (1) Lvs 1-2-pinnately divided into linear-subulate segments. Fig. 343.

- 1 N. DAMASCÈNA. Ragged Lady. Flowers in a leafy involucre; carpels united into a roundish, tumid capsule. From Spain. 2f. Flowers light blue. June-Aug.
- 2 N. SATÌVA. Nutmeg-flower. Hairy; flowers not involucrate; carpels distinct. Egypt

16. AQUILÈGIA, L. COLUMBINE. Sepals 5, equal, ovate, spreading. colored. Petals 5, all alike, horn-shaped, attached by the margin of the dilated mouth, produced to a honey spur behind. Pistils 5, follicles 5, many-seeded. 24 Leaves bi-triternate, leaflets lobed. Flowers large and handsome, nodding. April—June. Figs. 127, 155, 156.

- * Flowers scarlet, red, and orange-colored. Spurs of the petals straight....Nos. 1-3
- * Flowers blue and white. Spurs straight in No. 4,....incurved in...... Nos. 5-7
- 1 A. Canadénsis L. Very smooth, 1-2f; lfts. 3-9, round-wedge-form; fls. nodding, yellow within; stamens and styles yellow, exserted. Rocky woods, and cultivated.
- 2 A. SKÍNNERI. Like No. 1, but with larger fls., the spurs and sep. greenish. Mexico. 3 A. FORMÒSA. Sepals and spurs much longer than the petals; sta. included. Kamt.
- 4 A. CERÙLEA. Like No. 3, but the fis. all larger, blue and white, 2½ long. R. Mts.
- 5 A. VULGÀRIS. Common C. Spurs little longer than the limb; stam. scarcely exserted.
- Europe.—Varies to purple, and white; also with double flowers,—spur within spur.
- 6 A. SIBÍRICA. Stem smooth, nearly naked, few-fiwd., 11f; spur some longer than the white-tipped limb; sepals very obtuse, violet. Very fine and choice like the next.
- 7 A. GLANDULÒSA. Glandular-hairy above; stems bracted, 1-2-flwd., 1f; spurs half as long as the snow-white limb; sepals sky-blue, acute, 1' long. From Siberia.

17. DELPHINIUM, L. LARKSPUR. Flowers irregular. Sepals 5, colored, the upper one spurred behind. Petals 4, very unequal, the two upper spurred and enclosed in the spurred sepal. Styles and follicles 1—5. Handsome herbs, with palmately-divided leaves. Flowers of the cyanic series, never yellow. Figs. 26, 87, 88, 126.

§ CONSÓLIDA. Petals united into one piece. Style and follicle 1. (1......Nos. 4, 5

§ DELPHINÁSTRUM. Pet. 4, distinct. Pistils and follicles 2-5, mostly 3. 2...(a) a Species indigenous, Penn., South and West, often cultivated......Nos. 1-3

- 1 D. tricórne Mx. Low (6-12'); leaf-lobes linear; raceme few-fiwd., loose; spur ascending, straight; pods recurved. Uplands. Fls. 6-12, blue, white. April, May.
- 2 D. azùreum Mx. Erect (1-2f); leaf-lobes all narrow-linear; raceme strict; spur ascending; pods erect. Wis. to Ark. Flowers ∞ , azure, or light blue. May, Jane.
- **3 D. exaltàtum** L. Tall (2-4f); leaf-lobes wedge-lanceolate; rac. strict, ∞ -flowered; spur straight; pods erect. Mich. to Car. Rac. panicled; fls. purp.-blue. July.
- 4 D. Consólida L. Field L. Branching; lvs. finely cut; fis. loosely racemed, scattered; pod smooth. Fields, gardens. 3-4f. Fls. blue, variable. Aug., Sept. § Eur.
- 5 D. AJACIS. Rocket L. Subsimple; leaves finely cut; flowers many, in crowded racemes; pod pubescent. Alps. 1-2f. Flowers pink, rose, white, often double.
- 6 D. ELÀTUM. Bee L. Pubescent, tall (5-6f); leaf-segments 5, cuneate, cut-trifid; rac. long; spur curved downward; petals hairy, resembling a bee inside the flower. Blue.
- 7 D. GRANDIFLÖRUM. Lvs. 5-7-parted, segm. 3-cleft, linear, distant; petals shorter than the calyx. Stem 2f. Flowers large, dark or purplish blue, often double.
- **S D.** CHILÁNTHUM. Leaf-lobes 3 or 5, oblong, acuminate; pods pubescent; sep. shorter than the calyx; spur decurved. Siberia. 2f. Dark blue.—Var. FORMÒSUM is VERY beautiful, blooming from July to Nov., the large flowers light blue, white at centre.
- 9 D. CARDINÀLE. Glabrous; lvs. 3-parted, segm. cleft into long acute lobes; fis. scarlet, large; spur longer than the sepals. California. 1-2f. Splendid, but not hardy.

18. ACONITUM, Tourn. WOLFBANE. MONK'S-HOOD. Sep. 5, irregular, colored, upper one (helmet) vaulted. Petals 2 (the 3 lower minute or 0), spurred at apex, on long claws, concealed beneath the helmet. Sty. and pods 3-5. 4 Lvs. palmate. Fls. racemed or panicled. Poisonous. Fig. 29.

- **1 A. uncinàtum** L. Erect, weak (2f); leaf-divisions rhomb-lanceolate, cut dentate; helmet obtusely conical, erect, short-beaked in front; flowers blue. Mts., N.Y. to Ga Leaves thick, 4-5' wide. Branches divergent. Panicle loose. June, July
- 2 A. reclinatum Gray. Trailing (2-77); leaf-divisions wedge-shaped, cut or lobed; helmet elongated-conical, with a straight beak; flowers white. Mountains, Va.
- **3 A.** NAPÉLLUS. Common Monk's-hood, or Aconite. Smooth and rigidly erect, 3f; ive 5-parted, and cut into broad-linear segm. channelled above; fls. densely raccmed, dark blue (or white in β . ALBUM), the hood broader than high. From Europe. Summer.
- **1 A.** ANTHÒRA. Erect (1-2f); lvs. multifid with narrowly linear segm.; fis. panicled large (as in the others), purple with yellow; hood rather high-crowned. Europe.
- **5** A. JAPÓNICUM. Smoothish, veiny, 3-5f; fls. deep blue, in panicled spikes; hood or helmet very high-crowred and inflated, with a thickened inflexed spur. Japan.
- 6 A. VARIEGÀTUM. Erect (3-4f), very smooth; leaves with rhomb-ovate divisions; fls. loosely panicled, blue, edged with white; helmet crown high, curved forward. Jn. +

19. CIMICIFUGA, L. BUGBANE. Sepals 4 or 5, caducous. Petals stamen-like, 1—8, clawed, 2-horned at apex; follicles 1—8, dry, dehiscent. Leaves ternately decompound. Flowers white, in long racemes.

§ MACRÒTIS. Pistil 1, with a broad stigma and seeds in two rows......No. 1

§ CIMICIFUGA. Pistils 3-8, with a minute stigma, seeds in one row......Nos. 2, 3 I C. racemòsa Ell. *Black Snakeroot*. Tall (5-8f); rac. very long (1-3f), plume-like

- with its innumerable white stamens. Woods, Can. to Ga. Fetid. July.
- 2 C. Americàna Mx. Leaves triternate, thin; racemes slender, panicled; ovaries mostly 5, pods obovate, stiped. Mountains, Penn. to N. Car. 3-4f. Aug., Sept.
- 3 C. cordifòlia Ph. Leaves biternate, thick; racemes panicled, slender; ovaries 2 or 3; pods oblong, sessile. Mountains, N. Car. 3-4f. Sept.

20. ACTÈA, L. BANEBEREY. Sep. 4 or 5, caducous. Pet. 4–8, spatulate, long-clawed. Fil. slender. Ov. 1, with a sessile, 2-lobed stigma. Berry globous, with a lateral furrow, 1-celled, ∞ -seeded. \mathcal{L} Lvs. ternately divided. Lfts. ovate, cut-lobed and toothed. Fls. white, in a short raceme.

- **A. spicàta** L. β . *rubra* Mx. Raceme hemispherical; petals acute; pedicels slender; berries red, ovoid-oblong. Woods, Can. to Penn., and W. 11-21. Lvs. ample. Raceme as broad as long. May. These plants are often described as species.
 - γ . *alba* Mx. Raceme oblong; petals truncate; berries white, on thick stalks. Can. to Ga. Common. White berries sometimes occur with slender pedicels, and *vice versa*. Foliage exactly as in β . *Var. a.* is European.

21. HYDRÁSTIS, L. TURMERIC-ROOT. Sepals 3, petaloid, caducous. Pet. 0. Ovaries 12 or more, becoming a baccate fruit, resembling a raspberry; acines 1- or 2-seeded. Roots yellow, a tangled mass, sending up a single radical leaf and a stem which is 2-leaved and 1-flowered. Fig. 101. H. Canadénsis L.—In damp woods, Can. to Car. and Ky. If. Leaves palmately

H. Canadénsis L.—In damp woods, Can. to Car. and Ky. 1f. Leaves palmately 3-5-lobed. Flower terminal, reddish-white. Fruit crimson. June.

22. **P**ÆÒNIA, L. PÆONY. Sepals 5, unequal, leafy, persistent. Petals 5. Ovaries 3—5, surrounded by an annular disk. Follicles ∞ -seeded. 24 Root fasciculate. Leaves ternately or pinnately compound. Flowers large, terminal, solitary. Figs. 36, 241.

1 P. MOUTAN. Tree Pacony. Ovaries distinct, half enveloped in the disk. 3-4f, widely branching. Flowers large, double, purple varying to white. June.

- 2 P. PAPAVERÁCEA. Ovaries closely united into a globous capsule. 3f. Fls. white, with a purple centre, 8-10' broad, single or double, varying to rose. May, June.
- 3 P. OFFICINÀLIS. Common Red P. Lfts. lance-ovate, incised : carpels 2, pubescent. suberect. Alps. Fls. double, red, rose, pink, flesh-colored, and white. June.
- 4 P. ALBIFLÒRA. Chinese P. Lfts. lance-elliptic, entire; carpels 2 or 3, recurved, smooth; calyx bracteate. Tartary. Fls. smaller, white, rose, carmine, &c.
- 5 P. ANÓMALA. Leaf-segments lance-linear; carp. depressed, smooth; cal. bracted. Siberia. Fls. concave, rose-colored, pink, &c. May, June.
- 9 P. TENUIFÒLIA. Fennel P. Segments many linear lobes, very smooth; carpels àowny, spreading. Siberia. 2-3f. Fls. red, concave, open the first of May.

ORDER II. MAGNOLIACEÆ. MAGNOLIADS.

Trees or shrubs, often aromatic, with alternate, undivided leaves, and regular, polygynous, hypogynous, trimerous, imbricated flowers. *Sepuls* and *petals* in several circles, often similar. *Anthers* adnate. *Ovaries* imbricated or verticillate on the enlarged torus, 1 or 2-ovuled. *Fruit* dry or baccate, distinct or coherent into a cone-like head (sorosis) *Embryo* minute, at the base of fleshy albumen. Illust. figs. 274, 278, 331.

	WINTEREÆ. Stipules 0. Fls. ø. Carpels arranged in a circle	Illicium. 1

Ę	SCHIZANDRE.E. Stip. 0. Fls. & Q. Carpels in many rows, baccate	

1. ILLICIUM, L. STAR ANISE. (Lat. *illicio*, to attract; alluding to its fragrance.) Sep. 3—6, colored. Pet. 6—30. Carpels capsular, dry, arranged circularly, each with 1 smooth, shining seed. 5 The smooth lvs., when bruised, exhale the odor of Anise. In wet grounds. May.

1 1.Floridànum Ellis. Lvs. acuminate; petals 21-30, purple. Fla. to La. 4-8f. 2 1. parvifièrum Mx. Lvs. acute; petals 6-12, yellow. Ga. Fla. Fls. smaller.

2. MAGNOLIA, L. (Named for *Prof. Magnol*, a French botanist of the 17th century.) Sep. 3. Pet. 6--9. Anth. longer than the filaments, introrse. Ov. imbricated, 1-celled, 2-ovuled, becoming in fruit a fleshy, cone-like *sorosis*. Seeds berry-like, suspended from the opening follicles by a slender funiculus. 5 and 5, with large fragrant flowers. Lvs. concluplicate in bud, with membranous deciduous stipules. Fig. 331.

- * Leaves acute at the base, --rusty or glaucous beneath, coriaceous..........Nos. 1, 2
 - -green (not shining) both sides, thin Nos. 3, 4

Exotic species, cultivated....Nos. 8-10

- 1 M. grandiflora L. Big Laurel. Trees; lvs. evergreen, rusty-downy beneath; pet. obovate, white. Swampy woods, S. States. 80f. Fls. 9' broad, lvs. 7×4'. May.
- 2 M. glauca L. White Bay. Shrub or small tree; lvs. obtuse, glaucous-white beneath; pet. ovate-noundish, erect. Coast, Ms. to La. 5-20f. Fls. 2, cup-shaped. strongly fragrant, with white concave petals. Lvs. nearly evergreen. South. May-July.
- **3 M. acuminàta** L. *Cucumber Tree.* Lvs. oval, acuminate, scattered; fis. small (3-4' broad), petals obovate. S. States, rare in N. Y. 70f. The cones of fruit beau some resemblance to a small cucumber. May.

- **M. umbrélla** Lam. Umbrella Tree. Lvs. cuneate-lanceolate, whorled at the endit of the branches (like an umbrella); sep. reflexed; pet. lanceolate, acute. S. States. rare in N. Y. and O. 25f. Lvs. and fls. very large. White. May.
- 5 M. cordàta Mx. Lvs. broadly ovate, subcordate, pubescent beneath; petals 6-9, oblong, yeilow, with reddish lines. Ga. Car. 40f. Lvs. downy beneath.
- 6 M. Fràseri Walt. Lvs. obovate-spatulate, auricled at the narrow base; pet. 6, pare white. Va. Ky. to Fla. 30f. Fls. 6'. Lvs. 1f A slender tree.
- 7 M. macrophýlla Mx. Lvs. obovate-spatulate, cordate; pet. 6, rhomb-ovato, white, with a purple base inside. S. States, 20-30f. A small tree, with immense lvs. (2-3f) and fis. (petals 8' long). June.
- 8 M. conspicua. Yulan. Sep. 0 or very small; pet. 6-9, erect, of a creamy white, appearing before the leaves in early Spring. Lvs. acuminate. 15f.
- 9 M. FURPÙREA. Sep. 3; pet. 6, erect, lilac-purple outside, preceding the obovate lvs., which are pointed at both ends. China. 10-15f.

3. LIRIODÉNDRON, L. TULIP TREE. WHITEWOOD. ($\Delta \epsilon \iota \rho i o \nu$, a Lily, $\delta \dot{\epsilon} \nu \delta \rho o \nu$, a tree.) Sep. 3. Pet. 6, in 2 rows, erect. Anth. opening outward. Carpels 1 or 2-seeded, imbricated into a cone, indehiscent, separating from each other at maturity. \mathcal{F} Large, with showy, bell-shaped, upright flowers. Lvs. 4-lobed, retuse-truncate at apex, induplicate in bud, with large, caducous stipules. Figs. 274, 278.

L. tulipífera L.—A noble tree, beautiful in foliage and flowers; trunk 5—8f diameter; 100f or more high; lvs. very smooth; fls. greenish-yellow, orange within, abounding in honey. May, June.

4. SCHIZÁNDRA, Mx. $(\Sigma \chi i \zeta \omega)$, to cut, $\check{\alpha} \nu \delta \rho \alpha$, stamens.) Sep. and pet. 9—12, gradually larger inward. \sharp Stam. 5—15, monadelphous, anth. cells distinct. \Im Carp. ∞ , at first imbricated in a head, in fruit baccate, and loosely spicate on the lengthened torus. \flat Lvs. pellucid-punctate, deciduous. Fls. solitary.

S. coccínea Mx. Lvs. ovate or oval, pointed; fis. on slender peduncles, small, red; stam. 5, in the upper fis. chiefly. Berries and torus red. Vine 12f. South

ORDER III. CALYCANTHACEÆ. CALYCANTHS.

Shrubs with opposite, simple, exstipulate leaves, and axillary, solitary, often aromatic flowers. Sepals and petals ∞ -rowed, imbricated on a tubular torus, the outer bract-like. Filaments ∞ , inserted on the top of the torus, short. Anthers adnate, extrorse. Carpels ∞ , 1-seeded, distinct, included in the green fleshy torus. Seed erect, without albumen.

CALYCÁNTHUS, L. SWEET-SCENTED SHRUB. $(K\alpha\lambda \upsilon\xi, \text{calyx}, \alpha\nu\vartheta o 5,$ flower.) Sep. and pet. cblong, undistinguishable, the inner gradually shorter. Stam. apiculate, the outer longer, inner sterile. Fruit, the enlarged green torus loosely enclosing few or many achenia. 5 Fls. lurid purple, with the fragrance of strawberries.

C. flóridus L. Lvs. oval or elliptical, acute or acuminate, scabrous, downy be neath; fis. on very short axillary branches; sep. and pet. about 20, near 1' in length S. States: common in gardens. Lvs. 2-5'. Shrub 4-8f. Apr. May.

- 2 C. lævigatus Willd. Lvs. thin, oval, obtuse or merely acute, nearly glabrous both sides; fls. smaller, sometimes inodorous. Pa., & S. to Fla. Mar. Apr.
- **3 C. glaucus** Willd. Lvs. ovate, acuminate, large (4-7'), glaucous beneath; sep. and pet. lance-oblong, 1' in length. Mt. woods, Ga. to N. Car. 6-Sf. May, June. †

ORDER IV. ANONACEÆ. ANONADS.

Trees or shrubs with naked buds, entire, alternate lvs. destitute of stipules. Flowers usually green or brown, axillary, hypogynous, valvate in æstivation. Sepals 3. Petals 6, in two circles, sometimes coherent Stamens ∞ , with an enlarged connectile, short filament, on a large torus. Ovaries severa. or ∞ , separate or coherent, fleshy or not, in fruit. Embryo minute in the end of the ruminated albumen. Illust. fig. 314.

ASÍMINA, Adans. PAPAW. Sep. 3. Pet. 6, the outer row larger than the inner. Stam. densely packed in a spherical mass. Pistils several, distinct, ripening but few, which become large, oblong, pulpy fruits, with many flat seeds. Shrubs or small trees, with brownish, axillary, solitary, flowers.

- * Flowers appearing before the leaves. Petals purple......Nos. 1. 2
- * Flowers appearing with the leaves. Outer petals yellowish......Nos. 3, 4
- A. tríloba Dunal. Lvs. obovate-oblong, acuminate; pet. dark purple, the outer orbicular, 3 or 4 times as long as the sepals; fruit ovoid-oblong. N. Y.. S. and W. 15-20f. Lvs. 10', smooth. Fls. 1', Mar. Apr. Fr. 3', eatable in Oct.
- 2 A. parviflora Dunal. Lvs. obovate-oval; pet. oval, green-purple, twice longer than sep. Woods, coastward, Car. to Fla. 2-3f. Lvs. 5'. Fls. 6". Fr. 1', roundish.
- 3 A. grandiflòra Dunal. Lvs. obov.-obl. obtuse, grayish-tomentous; outer pet. very large (2' long), yellowish white. Ga. Fla. 2-3f. Fr. small, obovate. Mar. Apr.
- 4 A. pygmæa Dunal. Lvs. coriaceous, evergreen, narrowly oblong or oblanceolate, smooth; pet. obov.-obl., yellowish and brownish. Ga. Fla. 6-12'. Carp. 1'. May.

ORDER V. MENISPERMACE Æ. MENISPERMADS.

Shrubs twining or climbing, with alternate, palmate-veined, exstipulate leaves. Flowers directions, rarely \notin or $\notin \notin å$, hypogynous, 3-6-gynous. Sepals and petals similar, in 3 or more circles, imbricated in the bud. Stamens equal in number to the petals, and opposite to them, or 3 or 4 times as many. Fruit a 1-seeded drupe, with a large or long curved embryo in scanty albumen. Illust. 347.

1. MENISPÉRMUM L. MOON-SEED. $(M\dot{\eta}\nu\eta)$, the moon, $\delta\pi\epsilon\rho\mu\alpha$, seed; from the crescent form of the seed.) Fls. \Im 5. Sep. 4–8. Pet. 4–8, minute, retuse. \Im Anth. 12–20, 4-celled. \Im Ovaries and styles 2–4. \Im Drupes 1–3-seeded. Seeds lunate and compressed. Fls. white, in axi lary clusters. Fig. 347 M. Canadénse L. St. climbing; lvs. 5-7-angled or lobed, peltate, the petiole in serted near the base; rac. compound; petals 6-7, small. > Thickets: common 8-12f. Drupes black, resembling grapes, ripe in Sept. Fls. in July.

2. CÓCCULUS, DC. (Diminutive, from Lat. coccum, a berry.) Fls. § 5. Sep., pet., and stam. 6. Anth. 4-celled. § Ov. 3 to 6. Drupe globular-compressed, nut curved as in Menispermum. 5 Fls. in axillary panicles, small, greenish.

C. Caroliniànus DC.—S. Ill. to Fla. 10—15f. Lvs. ovate or cordate, entire or lobed. Drupes red, 1—3 together, as large as a pea. June, July.

3. CALYCOCÁRPUM, Nutt. CUP-SEED. $(K\alpha\lambda\nu\zeta)$, a cup, $\varkappa\alpha\rho\pi\delta\beta$, fruit.) Sep. 6. Pet. 0. β Stam. 12. Anth. 2-celled. \Im Stam. 6, abortive. Ov. 3. Stig. fimbriate-radiate. Drupe oval, with the putamen deeply excavated in front and cup-shaped. \Im Fls. greenish-white, in long axillary panicles.

C. Lyòni Nutt.—Ga. to Ky. Vine 20—30f. Lvs. 6—8' diam., lobes acuminate; drupc 1', oval, greenish. Fls. small, 2" diameter. June.

ORDER VI. BERBERIDACEÆ. BERBERIDS.

Herbs or shrubs with alternate leaves and with perfect, hypogynous, regular flowers. Sepals and petals imbricated in bud, each in one or several rows. Stamens as many as the petals, and opposite to them, rarely more. Anthers opening mostly by valves, hinged at top. Pistil 1. Style short or none. Fruit a berry or capsule. Seeds several, albuminous Illust. 49, 91, 92, 189, 364, 403, 426.

1. BÉRBERIS, L. BERBERRY. (Name from the Arabic.) Calyx of 6 obovate, spreading, colored sepals, with the 3 outer ones smaller. Corolla of 6 suborbicular petals, with 2 glands at the base of each. Fil. 6, flattened. Anth. opening by uplifted valves. Style 0. Berry oblong, 1celled. Seeds 2 or 3. 5 with yellow wood and yellow fis. Figs. 91, 92, 403

- 1 B. vulgàris L. Spines (reduced lvs.) 3-forked; lvs. simple, serratures torminated by soft bristles; raceme pendulous, many-flowered; pet. entire; berries oblong. N. States. 6-9f. Rac. 12-flowered. Berries red, very tart. May, June.
- 2 B. Canadénsis Ph. Lvs. repandly-toothed, teeth with short, soft bristles; rac few (6-8)-flowered; pet. notched; berries oval. Mts. Va. to Ga. 2-3f. May, June.
- 3 B. AQUIFÒLIUM Ph. Lvs. pinnate; lfts. 7-11, coriaceous, polished, evergreen, spinulous-toothed; clusters erect, crowded. Oregon. 3-5f. Berries globular. April.

2. CAULOPHÝLLUM, Mx. Cohosh. ($K\alpha v\lambda \delta 5$, stem, $\varphi v \lambda \lambda \delta v$, leaf; the stem appearing as the stalk of the compound leaf.) Cal. of 6 green sepals, 3-bracted at base. Cor. of 6 short, gland-like thickened petals, opposite the sepals. Stam. 6. Ov. 2-ovuled, becoming a thin pericarp, which soon breaks away after flowering, and the 2 round drupe-like seeds riper naked. 24 Glabrous and glaucous, arising from a knotted rhizome. Lvs 2 only, 2 and 3-ternate.

C. thalictroides Mx. Pappoose Root.—Can. to Car. and Ky. 1—24. Lifts. lobed 2—3'. Fls. greenish, in a simple terminal panicle. Seeds on thick stipes, blue, as large as peas. May.

3. DIPHYLLEIA, Mx. UMBRELLA-LEAF. ($\delta i5$, twice, $\varphi i \lambda \delta \sigma i$, leaf.) Calyx of 5 sepals, caducous. Cor. of 6 oval petals larger than the sepals. Stam. 6. Ov. eccentric. Stigma subsessile. Berry few-seeded, seeds attached laterally below the middle. 24 Glabrous, arising from a thick, horizontal root-stock. Lvs. simple, peltate, 1 or 2 only.

D. cymòsa Mx.-Mts. Va. to Ga. and Tenn. 1-2f. Leaf centrally peltate, or if 2, alternately reniform-peltate, ample, lobed. Fls. white. June. Berries blue.

4. JEFFERSONIA, Bart. TWIN-LEAF. (In honor of *President Jefferson*, a patron of science.) Sep. 4. Pet. 8, spreading. Anth. 8, linear. Stig. peltate. Caps. obliquely obovate, stiped, circumscissile, opening by a lid. 24 Rhizome and matted fibres blackish. Scape bearing a single flower, as tall as the 2-parted or binate leaves. Figs. 49, 189, 364, 426.

J. diphýlla Bart.-N. Y., W. and S. 1f. Fl. handsome, white. April. A singular plant, called *Rheumatism Root*. The pod has a persistent lid.

5. PODOPHYLLUM, L. MAY APPLE. ($\Pi o \check{v} \check{s}, \pi o \delta \check{o} \check{s}$, foot, $\varphi \check{v} \lambda \lambda o \nu$, leaf.) Sep. 3, concave, caducous. Pet. 6—9, obovate, concave. Anth. 9—18, linear. Berry large, ovoid, 1-celled, crowned with the solitary stigma. 24 Barren stems with 1 centrally peltate leaf, flowering stems with 2 equal, opposite broad cordate-peltate leaves, and a large white flower between.

P. peltàtum L.—In rich shady soils. 1f. Fl. nodding, 2'. May. Fruit the size of a plum, with flavor of strawberry. July. Lvs. and roots poisonous.

ORDER VII. NYMPHÆACEÆ. NYMPHIADS.

Herbs perennial, aquatic (in deep water), with rhizomes submersed, scapes one-flowered (rarely a leafy stem), and leaves peltate or deep-cordate. Flowers regular, showy, hypogynous (rarely epigynous), with imbricated petals and sepals. Carpels $3-\infty$, distinct or united. Ovules parietal, never on the ventral suture. Seeds with the embryo enclosed in a sac at the end of copious albumen, or (in Nelumbium) exalbuminous. Illust. 202, 407-414, 505, &c.

§ CABOMBEÆ. Sepals 3. Petals 3. Carpels distinct, few-ovuled. Flowers small. (a)

b Pet. (stamen-like) and stam. hypogynous. Fls. yellowNUPHAR	4
b Pet. petaloid. Stamens epigynous (on the torus raised into a disk)	A. 5
b Pet. (petaloid), sep. and stamons epigynous. Lvs. peltate	s. 6

1. BRASENIA, Schreb. WATER TARGET. Sep. 3 or 4, colored within, persistent. Stam. 12—24. Pet. 3 or 4. Carp. 6—18, oblong, 2 (or by abortion 1)-seeded. 24 The stems and under surface of the leaves are covered with a viscid jelly. Lvs. all floating, entire, elliptical.

B. peltata Ph. Pools and muddy shores. The slender ped. and petioles long as the depth of the water. Lvs. 21×1'. Fls. purple, 6" broad. July.

2. CABÓMBA, Aublet. Sep. 3, petaloid. Pet. 3. Stam. 6. Pistils 3 (rarely 2 or 4), nearly the length of stamens, and half as long as the petals and sepals. Carp. few-seeded. \mathcal{U} Lvs. opposite, mostly submersed and filiformly dissected. Fls. in the axils of the floating lys.

C. Caroliniàna Gray. Floating lvs. few and small $(6'' \times 1'')$, immersed lvs. many. Stems branched. Fls. white, 6'', strictly trimerous. July, Aug.

3. NELUMBIUM, Juss. (*Nelumbo* is the name of the species in Ceylon.) Pet. and stam. ∞ , hypogynous, in many rows. Carp. ∞ , separate, becoming 1-seeded nuts, imbedded in as many cavities on the large, obconic, fleshy torus. Seed with large cotyledons, very short radicle and no albumen. Rhizome horizontal. Lvs. peltate, emersed. Scape 1-flowered. There are only 2 species, N. speciosum of E. India, and

N. lùteum L. Petals yellowish; anth. lengthened beyond the cells to a clavate appendage. A magnificent aquatic, frequent S. and W. In Sodus Bay, N. Y. (Hankenson), Lyme, Ct., near Philadelphia (Parish). Lvs. erect, round, centrally peltate, 10-18'. Fls. several times larger than those of Nymphæa odorata, fragrant. Nuts as large as acorns. June-Aug.

4. NUPHAR, Smith. YELLOW POND-LILY. (*Neufar* is the Arabic name.) Sep. 5 or 6, concave. Pet. ∞ , small, linear, inserted with the ∞ stamens on the torus Stig. discoid, with prominent rays. Caps. ∞ -celled, ∞ -seeded. \mathcal{U} Lvs. sagittate-cordate at the base, entire at the margin, on stout stalks.

- 1 N. ádvena Ait. Lvs. floating or erect, oval; lobes rounded, petioles half terete; stig. 12-24-rayed; sep. 6, unequal. Slow streams and muddy pools. Lvs. thick and large. Fls. deep yellow (save the 3 outer sep.), 2' diam., globular. June, July.
- 2 N. Kalmiàna Ait. Lvs. floating and submersed, the latter membranous, reniformcordate; stig. 8-14-rayed, crenate; sepals 5, equal. Plant small and delicate. Float ing leaves oval, 1-3' long, the lobes nearly meeting. Flowers about 1' diam. Sum.
- 8 N. sagittifòlia Ph. Leaves oblong, sagittate-cordate, obtuse; sep. 6; pet. 0; anth subsessile. Slow waters, N. Car. to Ga. Lvs. 10-15'. Fls. 2', globular. June, July

5. NYMPHÈA, L. WATER-LILY. Sepals 4 or 5. Pet. ∞ , gradually passing into stamens, adherent to the ovary. Stamens ∞ , the outer with broad filaments. Stigma surrounded with rays. Seeds ∞ , arillate. 24 m Flowers white, roseate, or blue, very lovely. Figs. 202, 407-414.

1 N. CERÙLEA. LVS. crenate, lobes partly united, becoming peltate ; pet. sky-blue. Egypt

- 2 N. odoràta L. Lvs. orbicular, entire. cleft at base to the insertion of the petiole fis. very fragrant, open from 6 A. M. to 3 P. M. upon the water's surface, white, vary ing to rose-color: seeds oblong. June—Aug.
- 3 N. tuberòsa Paine. Lvs. reniform-orbicular, cordate-cleft, 1f wide; rhizome bearing tubers, which separate spontaneously; fls. nearly scentless; seeds globular. N. Y (Oneida Lake; Sodus Bay (Hankenson), and westward. Aug. (See Addenda.)

6. VICTORIA, Lindl. (Name in honor of *Queen Victoria.*) Carp Immersed in the cup-form torus, united. Sep. 4. Pet. ∞ , graduated interstamens, as in Nymphæa. Lvs. spiny, floating, strongly veined.

V. RÈGIA is the only species, native of the rivers of Trop. Am.; rarely cultivated. The lvs. are several feet in diam. Fls. like immense Water Lilies.

ORDER VIII. SARRACENIACEÆ. WATER PITCHERS.

Herbs, aquatic, in bogs, with fibrous roots, perennial, and with the *leaves* all radical, urn-shaped, or trumpet-shaped, and large flowers on scapes. Floral envelopes 4—10, imbricated, the outer greenish, sepaloid. Stamens ∞ , hypogynous. Carpels united into a several-celled capsule. A curious family, remarkable for its leaves, which are of that class called ascidia (§ 322), holding water. Figs. 392, 393, 394.

1. SARRACENIA, Tourn. PITCHER PLANT. (In honor of *Dr. Sarrazen*, of Quebec.) Sep. 5, colored, persistent, subtended by 3 bractlets. Pet. 5, incurved, deciduous. Stig. 5, united into a large peltate, persistent membrane, covering the ovary and stamens. Caps. 5-celled, 5-valved. Seeds very numerous. 24 Lvs. all radical, urn-shape⁻¹ \leftrightarrow trumpet-shaped, with a wing on the front side and a hood (the lamina) at 10p. Fl. large, nodding.

- § Lamina inflected over the throat of the tube......Nos. 1, 2
- § Lamina erect or nearly so, the throat open. (*)
 - * Leaf-tube pitcher-shaped, with a broad wing No. 3
 - * Leaf-tube trumpet-shaped, with a narrow wing......No. 4
- t S. psittacina Mx. Lvs. short, reclined, with a broad semi-ovate wing; fis. deep purple. Bogs, Fla. Ga. La. 1f. Tube nearly closed. The leaf resembles a *parrot* in form hence the specific name. March.
- 2 S. variolàris Mx. Lvs. elongated, suberect, mottled with white on the back; fls. yellow. Bogs, S. Car. to Fla. Lvs. 12-18', scape shorter.
- 3 S. purpùrea L. Side-saudle Flower. Lvs. short, recumbent, inflated most near the middle; lamina broad-cordate. Bogs: common. Scapes 14-20', each bearing large handsome deep-purple flower, in June.
 - β. heterophýlla Torr. Fls. greenish yellow. No purple veins in the lvs. Ms

, alata. Fls. large, yellow. Lvs. slender, erect, wing but 6" broad. La. 1--2f

- **4 S. Gronòvii** Wood. *Trumpet-leaf.* Lvs. tall, erect, tube gradually enlarged to the open throat, wing narrowly linear, lamina roundish, contracted at base. Swampy pine-woods, S. States. 2-3f. Fls. very large, 4-5' broad.
 - a. flava. Foliage yellowish green, fls. yellow. Plant large.
 - β. rubra. Foliage with purple veins, fls. red-purple. Plant smaller.
 - Drummóndii. Lvs. mottled above, with purple veins and white diaphanous interstices. Plant very large. Fla.

ORDER IX. PAPAVERACEÆ. POPPY-WORTS.

Herbs with alternate, exstipulate leaves, and generally a milky or colored juice. Flowers solitary, on long peduncles, never blue, hypogynous, regular, $\sqrt[2]{}$ or $\sqrt[4]{}$. Sepals 2, rarely 3, caducous, and petals 4, rarely 6, all imbricated. Stamens indefinite, but some multiple of 4. Anthers 2-celled, innate. Ovaries compound. Style short or 0. Stigmas 2, or if more, stellate upon the flat apex of ovary. Fruit either pod-shaped, with 2 parietal placentæ, or capsular, with several. Seeds ∞ , minute. Embryo minute, at the base of oily albumen. Illust. 148, 344, 404, 405, 406, 463, 493.

¶ Plants with a white juice.	Petals 4, crumpled in bud	
¶ Plants with a watery juice.	Calyx a mitre, falling off whole	
¶ Plants with a red juice. P	etals 8, plane in the bud	
¶ Plants with a yellow juice.	Petals crumpled in the bud. (*)

† No petals.	Juice reddish	BOCCONIA. E

1. SANGUINÀRIA, L. BLOOD-ROOT. (Latin *sanguis*, blood; all its parts abound in a red juice.) Sep. 2, caducous. Pet. 8—12, in 2 or 3 rows, the outer longer. Stam. about 24. Stig. sessile, 1 or 2-lobed. Capsule silique-form, oblong, 1-celled, 2-valved, acute at each end, many-seeded. 24 A low, acaulescent plant, with a white flower, and a glaucous, palmate-veined leaf. Fig. 463.

S. Canadénsis L. An interesting flower, appearing in early Spring: common in the woods. 6'. From each bud of the root-stalk there springs a single large, glaucous leaf, and a scape with a single flower. Leaf kidney-shaped, with roundish lobes separated by rounded sinuses. Fl. of a quadrangular outline, white, scentless, and of short duration. The juice is emetic and purgative.

 β , Leaf not lobed, margin undulate. Bainbridge, Ga., and elsewhere.

2. CHELIDONIUM, L. CELANDINE. $(X \epsilon \lambda \iota \delta \dot{\omega} \nu)$, the swallow, being supposed to flower with the arrival of that bird, and to perish with its departure.) Sep. 2. Pet. 4, roundish, contracted at base. Stam. 24—32, shorter than the petals. Stig. small, sessile, bifd. Capsule silique-form, linear, 2-valved, 1-celled. Seeds crested. 24 Fragile, pale green, with safiron-yellow juice. Figs. 344, 493.

C. màjus L. Lvs. pinnate; lfts. lobed, segments rounded; fls. in umbels. By fences, roadsides, &c. 1-2f. Fls. in loose umbels, yellow, very fugacious. May-Oct

3. GLAUCIUM, Tourn. HORN POPPY. ($\Gamma\lambda\alpha\nu\mu\delta\nu$, glaucous, the hue of the foliage.) Sep. 2. Pet. 4. Style none. Stig. 2-lobed. Pod 2-celled, linear, very long, rough. (1) or (2) sea-green herbs, with clasping leaves, yellow juice, and solitary, yellow flowers.

G. lùteum Scop. Sparingly naturalized near the coast, from the Potomac southward
 2f. Lvs. 5-7-lobed. Fls. 2', of short duration. Pods 6-9'. June-Aug

4. MECONÓPSIS, Viguier. YELLOW POPPY. $(M\eta' \pi \omega \nu)$, a poppy $i\psi_{15}$, resemblance.) Sep. 2, hirsute. Pet. 4. Style conspicuous. Stig 4-6, radiating, convex, free. Capsule ovoid, 1-celled, opening by 4 valves 24 Herbs with a yellow juice, pinnately-divided leaves, and stems 2-leaved, bearing an umbel.

M. diphýlla DC. Lvs. sinnately 5-7-lobed, the cauline but 2, opposite; fls. few. large (2'), yellow; pod bristly, oval. Woods, W. States. 12-18'. Pet. orbicular; style surpassing the stamens; pod 3'. May.

5. ARGEMONE, L. PRICKLY POPPY. (" $A\rho\gamma\epsilon\mu\sigma_5$, a disease of the eye, which this plant was supposed to cure.) Sep. 2 or 3, caducous smaller than the 4 or 6 roundish petals. Stig. sessile, capitate, 4 or 6-rayed. Capsule ovoid, prickly, opening at the top by valves. (1) Herbs with yellow juice, spinous-pinnatifid leaves, and showy flowers.

A. Mexicàna L. Calyx prickly; caps. prickly, 6-valved; fls. axillary and terminai, 2-3' diam., yellow, varying to white. Waste grounds, South.

6. PAPÀVER, L. POPPY. (Celtic, *papa*, pap, a soporific food for children, composed of poppy seeds, &c.) Sep. 2, caducous. Pet. 4. Caps. 1-celled, opening by pores under the broad, persistent 4–20-rayed stigma. Exotic herbs, with white juice, abounding in opium. Fl. buds nodding, erect in flower and fruit. Figs. 148, 404–6.

- 1 P. somniferum L. Opium Poppy. Glabrous and glaucous; lvs. clasping, cutdentate; caps. globous. (1) with large white or purplish flowers, often double. 13-3f. Extensively cultivated for opium. June, July. §.
- 2 P. DÙBIUM L. St. hispid with spreading hairs; lvs. piunately-parted; segm. incised; sep. hairy; caps. club-shaped. (1) Fields. 2f. Slender. Fis. light red or scarlet. June, July. §.
- 3 P. RHEAS L. St. many-flowered, hairy; lvs. incisely pinnatifid; caps. globous. () Fls. very large, deep scarlet, more or less double. June, July.
- **1 P.** ORIENTÀLE L. St. 1-flowered, rough; lvs. scabrous, pinnate, serrate; caps. smooth. 24 Levant. 3f. Fls. very large, scarlet, too brilliant to be looked upon in the sun. June.

7. ESCHSCHOLTZIA, Cham. (Named for *Eschscholtz*, a Germar botanist well known for his researches in California.) Sep. 2, cohering, caducous. Pet. 4. Stam. ∞ , adhering to the claws of the petals. Stig. sessile. Caps. pod-shaped, cylindric, 10-striate, many-seeded. (1) Lvs. finely pinnatifid, glaucous. The juice, which is colorless, exhales the odor of hydrochloric acid.

- 1 E. DOUGLÁSH Hook. St. branching, leafy; torus obconic; cal. ovoid, with a very short, abrupt acumination; pet. bright yellow, with an orange spot at base. Cal. Oreg. Foliage smooth, abundant, and rich. Fls. 2'-3' broad.
- 2 E. CALIFÓRNICA Hook. St. branching, leafy; torus funnel-form, with a much-dilated limb: cal. conic. with a long acumination; flowers orange-yellow. Cal.

8. BOCCÒNIA, Plum. Sep. 2, colored. Pet. 0. Sty. bifid. Caps. 2valved, 1-3-seeded. 24 Cult. for the handsome glaucous lvs. Fls. in panicles

- **1 B.** CORDÀTA. Lvs. roundish, cordate, many-lobed, veiny; flowers white or yellowish numerous in the ample pyramidal panicle, in Summer. From China. Hardy.
- 2 B. FRUTÉSCENS LVS. oblong, large, sinuate-lobed, splendid ; fls. in Spr wh. W. Ind

ORDER X. FUMARIACEÆ. FUMEWORTS.

Herbs smooth and delicate, with a watery juice. *Leaves* exstipulate, alternate, many-cleft. *Flowers* irregular. *Sepals* 2, very small. *Petals* 4, parallel, one or both of the outer saccate, 2 inner cohering at apex. *Stamens* 6, diadelphous. *Anthers*, 2 outer 1-celled, middle 2-celled. *Ovaries* superior, 1-celled. *Frwit* a nut 1-2-seeded, or a capsule ∞ -seeded. *Seeds* shining, arilled. *Albumen* fleshy. Illust. 61, 252-4.

- * Corolla equally 2 spr red or 2-saccate at base. (a)
- Cotolla unequal, ouly 1 of the petals spurred. (b)

a	Petals slightly united or distinct, mostly deciduous. Not climbing	DICENTRA.	1
a	Petals firmly unued, persistent. Plants climbing	ADLUMIA.	2
	b Ovary with several seeds, forming a slender pod	CORYDALIS.	3
	b Ovary with ' seed, forming a globular nut	FUMARIA.	4

1 DICÉNTRA, Borkh. EAR-DROP. Sep. 2, very small, sometimes disappearing. The 2 outer petals alike, saccate at base, with spreading tips; the 2 inner alike, spoon-shaped, crested, meeting face to face over the stam. and pistil. Fil. flat, in 2 sets, united at top. Stig. 2-crested. Pod many-seeded. 24 I.vs. ternately divided or cleft. Fls. racemed, nodding. Delicate and beautiful plants. Figs. 61, 252–4.

- * Herbs native, acaulescent, the sepals small but manifest......Nos. 1, 2, a
- * Herbs exotic, caulescent, the sepals obsolete or wanting......No. 4
- 1 D. cucullària DC. White Ear-drop. Root bulb-like; spurs of the fis. divergent, acute, straight; flower nearly as broad as long. Woods, Can. to Ky. 6-10'. Lvs. all radical of numerous oblong linear segm. The bulb consists of reddish, scale-like tubers. Apr. May.
- 2 D. Canadénsis DC. Squirrel-corn. Root bearing yellow tubers as large as peas; rac. simple; fis. white, cordate-ovate; spurs rounded, incurved. Rocky woods, Cau. to Ky. 6-8'. Lvs. as in No. 1. Fls. fragrant. May, June.
- **3 D. exímia** DC. *Purple E.* Rhizome scaly; rac. paniculate; fis. cordate-oblong, rose-purple, spurs blunt, incurved; sep. ovate, acute; lvs. triternate, segm. cut into oblong, acute lobes N. Y. to Oreg. 1 10–15'. Fls. all summer. †
- **4 D.** SPECTÁBILIS. *Bteeding Heart.* Stems recurved, branched; lvs. biternate, segm. 2 or 3-lobed; fls. in spreading racemes, bright purple; cor. broad, heart-shaped; sep. obsolete. China. Very fine and showy.

2. ADLÙMIA, Raf. MOUNTAIN FRINGE. Sepals 2, minute. Petals 4, united into a cellular, monopetalous corolla, persistent, bi-gibbous at base, 4-lobed at apex. Stam. united in 2 equal sets. Pod 2-valved, many-seeded (2) b Delicate, with tripinnate leaves, and ample pendulous cymes.

A. cirrhòsa Raf.—Rocky hills, Can. to N. Car. 20f. The leaf-stalks serve for tendrils. Leaflets 3-lobed. Flowers pinkish white. June—Aug.

3. CORÝDALIS, DC. Sepals 2, small. Petals 4. Corolla with a single spur at base on the upper side. Capsule silique-form, many-seeded. Seeds crested or arilled. Herbs caulescent, with multifid leaves. Racemes bracted, with ebracteolate pedicels.

1 C. glauca Ph. Glaucous, erect; fis. red, yellow at the tip; pods erect; lobes of the leaflets obtuse, bracts minute. (2) Rocky woods, Can. to N. Car. 1-4f. Raceme ter minal. Flowers horizontal, spur short, blunt. May, June.

- 2 C. aùrea Willd. Low, diffuse, finally ascending; leaf-lobes acute; rac. opposite the lvs. and terminal; fls. secund, bright yellow, spur deflected; pods pendulous, torulous; seeds turgid, polished. (1) Rocky shades. 8-12'. Cor. 6". Bracts lance ovate. Apr.-July.
 - β. macrántha. Fls. 10", spur nearly as long as limb; bracts and leaf-lobes linear. Dakota; sent by Dr. W. Matthews.
 - y. flávula. Fls. 3-4", pale yellow, spur very short, petals pointed. Common.
- 3 C. montàna Engelm.? Ascending; rac. terminal; leaf-lobes obtuse, bracts lance olate; cor. yellow, spur ascending, nearly as long as limb, lower petal at length pendent; pods erect; seeds lenticular. La. Tex. !

4 FUMÀRIA, L. FUMITORY (Lat *fumus*, smoke; from its disagreeable odor.) Sep. 2, caducous. Pet. 4, unequal, 1 of them spurred at the base. Nut ovoid or globous, 1-seeded, and indehiscent. Lvs. caulinc, finely dissected.

F. officinalis L. Diffusely branched, erect; lvs. bipinnate; rac. loose; fis. minute, purple at the tip; calyx serrated; ped. erect, twice longer than bract; nut roundretuse.
(2) Waste grounds, §. 1f. July, Aug.

ORDER XI. CRUCIFERÆ. CRUCIFERS.

Herbs with a pungent, watery juice, and alternate, exstipulate leaves, with *flowers* cruciform, tetradynamous, generally in racemes, and bractless. Sepals 4, deciduous. Petals 4, hypogynous, with long claws and spreading limbs. Stamens 6, the 2 outer opposite ones shorter than the 4 interior. Ovary 2-carpeled, 2-celled by a false partition, with parietal placentæ. Fruit a silique, or silicle, usually 2-celled. Stigmas 2, sessile. Seeds 2-rowed m each cell, but often so intercalated as to form but 1 row. Embryo with the 2 cotyledons variously folded on the radicle. Albumen 0. Illust. 55, 104, 192, 193, 239, 336, 429, 506.

A large and important Order, difficult of analysis. The Genera cannot be well distinguished by their flowers, so nearly alike are they in all. Their characters are taken from the fruit and seeds. Hence

. is indispensable that specimens for analysis should be *in fruit* as well as in flower. DeCandolle arranged the Genera into Tribes according to the folding of the cotyledons upon the radicle. This occurs in three different modes, as follows.

Cotyledons incumbent, when they are so pent or folded as to apply the bark of one of them to the radicle, as in the seed of Capsella, fig. 1.

Cotyledons accumbent when they are so turned as to apply their edges to the radicle, as seen in the seed of Arabis Canadensis, fig. 2.

Cotyledons conduplicate, when they are not only *incumbent*, as in the first case, but also folded on and partly embracing the radicle, as in Mustard, fig. 3

In the following table we endeavor to combine with the systematic arrangement of DeCandolle a more practical artificial method:

 Crucifers native, or cultivated for food. (§) Crucifers exotic, cultivated for ornament or art. (§ §) Fruit a long pod, silique (§ 166), opening by 2 valves. (a) Fruit a short pod, silicle (§ 166), opening by 2 valves. (e) 	
§ Fruit a jointed pod, loment, partitioned acrossNos. 28, 23	
a Flowers cyanic.—b Seeds arranged in a double row in each cellNos. 1, 2	
-b Seeds in 1 rowc Pods sessile on the torusNos. 3, 4, 5	
-c Pods on a slender stipeNo. 12 a Flowers yellowd Seeds flat, wing-marginedNo. 6	
-d Seeds ovate or oblong	
-d Seeds globularNo. 15	
e Flowers bright yellow. Silicle turgid, or slightly flattened Nos. 1, 20, 21	
e Flowers cyanic/ Silicle turgid, with a broad partitionNos. 19, 22	
-f Silicle flattened parallel with a broad partitionNos. 16, 18	
-f Silicle flattened contrary to the narrow partitionNos. 24, 26	
 \$ Fruit a silique or long pod, opening by 2 valves	
-g with 2 or more seeds.— h Petals all equalNos. 16, 17	
-h Petals unequalNo. 23	
TREE I. ARABIDEÆ.—Pods mostly elongated. Seed oval or orbicular, more ar less flattened. Co vyledons accumbent (= \circ).	
1 Seeds small, turgid, in a turgid, oblong or oval podNASTURTIUM.	
2 Seeds flattened, in a long, linear pod. Plants very erect TURRITIS.	
3 Silique linear, seeds in 1 row, not bordered. Purple IODANTHUS.	
4 Silique linear, each valve with 1 central vein, not opening elastically ARABIS.	
5 Silique linear or lanceolate, valves veinless, opening elasticallyCARDAMINE.	
6 Silique oblong, flattened, seeds wing-margined. Leaves radicalLeavesworthia 7 Silique long, CO-seeded. Stigmas distinct, 2-hornedMatthiola.	
8 Silique long, ∞ -seeded. Stigmas capitate. Leaves entire Flowers yellowCHEIRANTHUS.	
9 Silique 4-angled, 2-edged, rigid. Leaves lyrate-pinnåtifidBARBAREA.	
TRIBE II. SISYMBRIE Pod elongated. Seeds oblong. Cotyledons incumbent ([]o), oblong.	
10 Calyx erect. Pods 4-sided, valves strongly 1-veined Leaves lanceolateERYSIMUM.	
11 Calyx half spreading. Pods subterete. Leaves dissected or incised	
12 Very smooth herbs, with the white flowers in corymbs. South	
13 Stigma of 2 converging lobes. Petals entire, oblique. Leaves lanceolateHESPERIS.	
14 Stigma lobes connate. Petals pinnatifid, involute in æstivationSCHIZOPETALOM	
TRIFE III. BRASSICE Æ. – Pods elongated. Seeds globular, ((o.	
15 Pod terete or 4-sidedBRASSICA.	
TRIBE IV. ALYSSINE Æ Fruit short, septum broad. Seeds in 2 rows. Cotyledons = 0.	
16 Silicle mostly orbicular, flattened. Cells 1-4-seeded	
17 Silicle very large, orbicular-oval, very flat, stipitate. CultivatedLUNARIA. 18 Silicle oblong or elliptical. Seeds ∞ , not margined. Pet. entire or 2-cleftDRABA.	
19 Silicle globular or ellipsoid. Seeds few. Flowers whiteARMORACIA.	
26 Silicle globular, inflated, thin, veinless. Flowers yellow	
FRIBE V. CAMELINE EPods mostly short. Septum broad. Cotyledons 10.	
21 Silicle obovoid, with ventricous valves, many seeds. Flowers yellowCAMELINA.	
22 Silicle oval, turgid, few-seeded. Leaves linear, radical. Flowers white SUBULARIA.	
TRIBE VI. THLASPIDL & Pods snort, septum narrow. C styledons accumbent. (23) IBERIS.	
TRIBE VII. LEPIDINEÆ.—Pods short. septum narrow. Cotyledons incumbent.	
24 Silicle triangular, many-seeded. Flowers whiteCAPSELLA.	
25 Silicle oval-orbicular, 2-seeded. Flowers white, often incompleteLEPIDIUM.	
26 Silicle didymous, each half 1-seeded. Flowers minute SENEBIERA.	
TRIBE VIII. ISATIDE ÆSilicle short, 1-celled, 1-seeded, indehiscent. (27) Cult ISATIS.	
TRIBE IX. CAKALINE EPod 2-jointed. Cotyls o. (28) Fleshy sea-side herbsCARILE.	
TRIBE X. RAPHANE Pod moniliform. Cotyledons ((o. (29) Leaves lyrate RAPHANUS.	

1. NASTÚRTIUM, R. Br. WATER-CRESS. (Lat. *nasus tortus*, nos tortured; alluding to the pungent qualities.) Sep. spreading. Siliques subterete, turgid, generally curved upward, often shortened to a silicle, valves veinless. Seeds small, ∞ , turgid. generally arranged in a double row in each cell ($= \circ$). \Longrightarrow with pinnate or pinnatifid leaves.

- * Petals yellow, minute. Siliques shortened (4-8''), but longer than the pedicels. (a)
- **I N. officinalc** R. Br. English W. Lvs. pinnate, lfts. ovate, subcordate, repand;

petals white, longer than the calyx. 24 Springs, &c. May, June. § ‡

 N. tanacetifòlium Hook. Upper leaf-segm. confluent, lower distinct, oblong, or roundish, sinuate-toothed, teeth obtuse; pods 4-5', ped. 4 as long. (2) South.
 β. obtúsum. Lfts. mostly distinct, obtuse, oval. Pods shorter (3-5'). Miss. R.

- 3 N. Wálteri Wood. Segments of the leaves all distinct, narrow, with a few linear, acute lobes or teeth; pods linear (5"), ped. 2-3". 24 South. 3-5'. March, April.
- 4 N. limòsum N. Lvs. lanceolate, toothed, the lower lyrate; pods elliptic-oblong, 3-4", ped. much shorter. (2) Rivers, La. 10-15'. Fls. minute. Too near the next.
- 5 N. sessiliflorum N. Lvs. wedge-obovate, repandly-toothed or subentire; pods linear-oblong, 5-6", subsessile. (2) Miss. Riv. Stem erect. Fls. minute. Apr.-June.
- 6 N. palústre DC. Marsh Cress. Glabrous; lvs. pinnately lobed, amplexicaul. lobes confluent, dentate; rt. fusiform; pet. as long as the sepals; silicle spreading, turgid, twice longer than wide. 24 Wet places. 1-2f. Pod 3". June-Aug.
- 7 N. híspidum DC. Villous; lvs. runcinate-pinnatifid, lobes obtusely dentate; silicles tumid, ovoid, or globular, the pedicels longer, ascending; pet. scarcely as long as the calyx. (2) Streams, 1-3f. Pod 1". Ped. 2-3". June-Aug.
- 8 N. sylvéstre R. Br. Wood Cress. Lvs. pinnately divided, segm. serrate or incised; pods linear, style very short. 24 Meadows, Ms. to Pa. Rare. June, July. §
- 9 N. sinuàtum Nutt. Lvs. pinnatifid, segm. lance-oblong, nearly entire; pode oblong, acute, with a slender style. 24 Rivers, St. Louis to Oreg. June.

2. TURRITIS, Dill. TOWER MUSTARD. (Lat. turris, a tower; from the strict form of the plants.) Sep. erect, converging. Seeds flattened, minute, in 2 rows in each cell of the long, narrowly-linear 2-edged silique; valves plane, 1-veined. Embryo = o. Glabrous and strictly erect, stemleaves sagittate-clasping. (Runs into Arabis.)

- 1 T. glàbra L. Fls cream-white, erect; silique long (3'), strictly erect; stem lvs ovate-lanceolate. (1) Can., to Pa.(Porter.) 2-3f. Glaucous. Lvs. entire. July.
- 2 T. stricta Graham. Fls. rose-white, erect; silique long (3'), erect, finally ascending or spreading; stem lvs. linear-lanceolate. (2) Rocks, N. Y. (rare) to Oreg. 1-2t. May β. brachycarpa. Fls. and siliques spreading, the latter shorter (1'). Westward.

3. IODÁNTHUS, T. & G. FALSE ROCKET. ($I\omega\delta\eta$ 5, violet-colored $\check{\alpha}\nu$ 305, flower.) Calyx closed, shorter than the claws of the petals. Silique linear, terete, veinless. Seeds arranged in a single row in each cel (= \circ). \mathcal{U} Glabrous, with violet-purple flowers in panicled racemes Leaves lanceolate.

I. hesperioides Torr & Gr. Penn. to Ill. and Ark. 2-3f. Lvs. serrate or the lower pinnatifid-lyrate. Pods 15-20", spreading. May, June. (Arabis, Gr.)

4. ÁRABIS, L. ROCK-CRESS. Sepals mostly erect, silique linear, com pressed; valves plane, each with 1 or 3 longitudinal veins, seeds in a single row in each cell, mostly margined, cotyledons accumbent or oblique. Flowers white. Figs. 336, 506.

- Leaves all undivided, toothed or entire, often clasping...(a) (Exotic. No. 10.)
 a Singues short (6-12') and straight. Sds. not winged. Stems clustered..Nos. 4, 5
 a Siliques longer (1-2'), straight or curved. Sds. not winged. St. simple..Nos. 6, 7
 g Siliques long (3'), curved, pendent. Seeds winged.......Nos. 8, 9
- **I A Ludoviciàna** Meyer. All the leaves pinnatifid or pinnate, smoothish; steme branched at base; siliques ascending; seeds bordered. (1) South. 6-10'. March.
- 2 A. lyràta L. Upper leaves smooth, linear, entire; radical leaves lyrately pinnatifid. often pilous; st. branched at base; pedicels spreading; siliques erect, seeds not bordered, obliquely = 0. (2) Hills, Can. to Va. 6-12'. Pods 11-2'. Pet. 3'' long. Apr., May.
- S A. petrie Lam. Upper leaves linear, entire, minute, radical pinnatifid, very small; stems clustered; pods ascending (1-11/2); seeds bordered, =0. 24 Rocks (Greenwich), Ct., Vt., O., Mich. 6-12'. Flowers white or roseate. June.
- 4 A. Thaliàna L. St. clustered, erect; lvs. pilous, oblong, nearly entire; pet. twice longer than calyx; peds erect, squarish (9"); seeds obliquely ∥o. ③ Fields, Vt. to Ill. and Car. (Wayne Co., N. Y. Hankenson.) 4-12'. Fls. small. May. (Sisymbrium, Gay.) §
- 5 A. dentàta T. & G. Stems clustered, diffuse; lvs. oblong, sharply toothed; petals hardly longer than the calyx; pods spreading. (1) N. Y. to Mo. 1f. Fls. small. May
- 6 A. patens Sull. Erect, pubescent; cauline leaves coarsely toothed; siliques spread ing and curved upward, beaked with a distinct style. (2) O. to Tenn. 1-2f. May.
- 7 A. hirsùta Scop. Erect, hirsute; radical leaves oblong-ovate, cauline lanceolate.
 sagittate-clasping, entire or toothed; siliques straight, erect; style none. (2) Can. to
 Va., and W. 1-2f. June.
- A. lievigàta DC. Tall, glaucous, smooth; stem leaves linear-lanceolate and linear, sagittate-clasping, the upper entire: siliques very long, linear, at length spreading and pendulous. (2) Can. to Tenn., and W. 2f. Pod 3'. May.
- β. minor (Porter). Plant smaller, 10-15', with the lvs. sessile-not clasping. Penn
 9 A. Canadénsis L. Sickle-pod. Tall, pubescent; stem leaves lanceolate, pointed both ways, sessile; silique subfalcate, veined, pendulous. (2) Rocky hills. 2-3f. Petals small, but twice longer than sepals. Pods 3'. May, June.
- 10 A. ALPÌNA. Erect, 8—12', hoary with stellate hairs; lvs. oblong, with slender teeth, clasping; fls. showy, pure wh., in many little long-stalked corymbs. Alps. Mar.—May.

5. CARDAMINE, L. BITTER CRESS. Calyx a little spreading. Silique linear or lanceolate, with flat, veinless valves narrower than the dissepiment, and often opening elastically from the base. Stigma entire. Seeds not margined, $= \circ$. Flowers white or purple.

- § DENTÀRIA. Pod lance-linear. Rhizome thickish, knotted. Stem with 2 or 3 palmated leaves near the middle. Flowers large, corymbed...(*)

 - * Leaves of the stem alternate.....Nos. 4, 5
- § CARDAMINE. Pod linear. Root tuberous or fibrous. Leaves alternate...(†)
- C. diphýlla. Stem 2-leaved; leaflets subovate; rhizome continuous, toothed.
 2 Damp woods, Can. to Car. 1f. Leaves 3-parted, nearly opposite. Root-stock pungent, aromatic. May

- 2 C. laciniàta. Cauline lvs. 3, 3-parted, the divisions lanceolate or linear-oblong obtuse. lobed, toothed or entire; rhizome moniliform. 24 Woods. 1f. Apr. May.
- 3 C. multífida. Cauline lvs. mostly 3, and verticillate, rarely 2, multifid with numerous linear lobes; rhizome tuberous. 24 Woods, N. Car. to Ala. Rare. 9'.
- 4 C. máxima. Stem about 3-leaved (2 to 7); lfts. 3, ovate, toothed or cleft; rhizome moniliform, the tubers toothed. 24 N. Y. and Penn. Rare. 1-2f. May.
- 5 C. heterophylla. Stem about 2-leaved (2 or 3), leaflets 3, lanceolate and nearly entire; root-lvs. of 3 ovate-oblong, toothed, and cut-lobed leaflets; rhizome monili form, scarcely toothed. 24 Penn. Va. Ky. 6'. Flowers purple. June.
- 6 C. hirsùta L. Stem (hirsute in Europe) glabrous, erect; leaves pinnately 5-11foliate, terminal leaflet largest; flowers (white) small, silique erect, linear or filiform; stigma minute, sessile. (2) Wet. Variable. Stem 3-12', slender or thick. Leaflets obtuse. Pod 1'. March-June.

β. sylvatica. Slender and delicate; leaflets 1 or 2-toothed; pods filiform, incurved. Grows in dryer places. 6'. (C. Virginica Mx.)

- 7 C. pratémsis L. Cuckoo Flower. Stem ascending, simple; leaves pinnately 7-15. foliate; leaflets petiolate, subentire, lower ones suborbicular, upper linear-lanceolate: style distinct. 24 Swamps, N. Y. to Arc. Am. 10-16'. Flowers large. Apr. May.
- 8 C. rhomboidea DC. Stems simple, erect or ascending, tuberiferous at base; siliques linear-lanceolate; rt. lvs. roundish, entire, st. lvs. rhomboidal. 24 May. 8-14'.
 β. purpurea. Slender, erect, few-leaved and purple-flowered. N. Y., O., Wisc.
- 9 C. rotundifòlia Mx. Stems decumbent, branching, finally stoloniferous; leaves all petiolate; pod linear-subulate; rt. fibrous. 24 Cool springs, Pa. to Car. 1-2f. May, Jn.
- 10 C. bellidifòlia L. Leaves smooth, orbicular-ovate, nearly entire, petiolate; cau line entire or 3-lobed; siliques erect. 24 White Mts. &c. 11-3'. July.
- 11 C. spatulàta Mx. Lvs. hirsute, the radical spatulate, petiolate; cauline sessile, siliques spreading. (1) Mts. of Car. and Ga. Trailing. 6-8'. April.

6. LEAVENWÓRTHIA, Torr. (Named for *Dr. Leavenworth*, the discoverer.) Petals cuneate, retuse, or truncate. Silique flat, oblong, valves indistinctly veined. Seeds in a single row, flattened, wing-margined. Embryo nearly straight, curving toward an accumbent form. (2) Low, smooth herbs with lyrate-pinnatifid leaves. Pet. yellow at base. L. Michaùxii (and aurea) Torr.—Rocks,Ky.toTex. 2-6'. Lvs. mostly radical. Fls.1-4.

7. MATTHIOLA, R. Br. STOCK. (In honor of *P. A. Matthioli*, phy sician to Ferdinand of Austria, and botanic author.) Calyx closed, 2 of the sepals gibbous at base. Siliques terete; stigmas connivant, thickened or cornute at the back. Herbaceous or shrubby, oriental plants, clothed with a hoary, stellate pubescence.

- 1 M. INCÀNA. Common Stock. Brompton S. July-flower. Erect, branching from the woody base; lvs. lanceolate, entire. (2) 24 Eur. 2f. Fls. often double, white, purple.
- 2 MI. ÁNNUA. Ten-weeks Stock. Erect, branched; lvs. lanceolate, obtuse, toothed. (1)
 S. Eur. 2f. Flowers infinitely various, mostly double. June-Nov.

8. CHEIRANTHUS, L. WALL-FLOWER. ($X \varepsilon \iota \rho$, the hand, $\tilde{\alpha} \nu \Im \circ \varsigma$, flower.) Calyx closed, 2 of the sepals gibbous at base. Silique terete or compressed. Stigma 2-lobed or capitate. Seeds flat, in a single series, often margined. ($= \circ$). Garden perennials, mostly European. Leaves undivided. Fig. 55.

C. CHEÌRI. St. somewhat shrubby and decumbent at base; lvs. lanceolate, giabrous pet. obovate, long-clawed, yellow; stig. capitate. 24 S. Eur. 2f. June.

9. BARBARÉA, R. Br. WINTER-CRESS. (Dedicated to *Sta. Burbara.*) Sepals erect. Siliques columnar, 2 or 4-angled, valves carinate with a midvein. Seeds in a single row ($= \circ$). Leaves lyrate-pinnatifid. Fls. yellow.

- 1 B. vulgàris R. Br. Upper lvs. toothed or pinnatifid at base; siliques obtusely 4 angled, pointed with the style. (2) Brooksides: common. 1-2f. Racemes dense, showy-panicled. Pod 9". May, June.
- 2 B. prècox R. Br. Scurvy-grass. Upper lvs. pinnatifid, with the lobes all linear oblong; silique 2-edged. 24 § ‡ South. Pod 2-3'. May, June.

10. ERYSIMUM, L. FALSE WALL-FLOWER. ($E\rho\dot{\upsilon}\omega$, to cure; from its salutary medicinal properties.) Calyx closed. Siliques columnar, 4-sided, valves with a strong mid-vein. Stigma capitate. Seeds in a single series. Cotyledons oblong, $\|\circ$. Lvs. narrow, undivided. Fls. yellow.

- 1 E. cheiranthoides L. Pubescence minute, appressed, branched : lvs. lanceolate, denticulate, or entire; fis. small; siliques short (8-10'), on slender, spreading pedicels; stig. small, nearly sessile. (1) Wet grounds. 1-2f. Rac. long. July.
- 2 E. Arkansànum N. Yellow Phlox. Simple, scabrous; lvs. linear-lanceolate, remotely dentate; rac. corymbed at top; pod long (3'), erect; stig. capitate. (2) Bluffs, O. to Ark. 2-3f. Flowers large, orange-yellow. June, July.
- 3 E. orientàle R. Br. Glabrous and glaucous; radical lvs. obovate, stem lvs. cordate-clasping, obtuse, entire; fls. white. (1) Near Phila (A. H. Smith). § Eur.

11. SISÝMBRIUM, Allioni. (An ancient Greek name.) Calyx halfspreading, equal at base. Petals unguiculate, entire. Silique subterete, valves concave, marked lengthwise with 1–-3 veins. Style very short. Seeds in a single series, ovoid, $\|\circ$. Flowers small, yellow.

- 1 S. officinàle Scop. *Hedge Mustard*. Leaves runcinate; racemes slender, virgate; siliques subulate, erect, closely appressed to the rachis. (1) A common weed, with branches at right angles. 1-3f. June-Sept. §
- 2 S. Sophia L. *Flixweed.* Lvs. bipinnatifid, lobes linear-oblong, acute; sep. longer than pet.; pod linear, erect, longer than the spreading pedicel. (1) N. Y. Can. §
- **3 S. canéscens** Nutt. *Tansey Mustard.* Lvs. bipinnatifid, canescent, lobes oblong, subdentate, obtuse; pet. about equalling the calyx; pod oblong-linear, 3-6", ascending, shorter (or never longer) than the spreading pecicel. (1) U.S. 1-2f. Mar.-June.

12. WAREA, N. (Named for *Mr. Ware*, the discoverer.) Sep. colored, ligulate. Pet. with very slender claws. Silique flattened, long and slender, raised on a slender stipe. Cotyledons oblong, $\|\circ$. (1) Glabrous, entire-leaved. Flowers white or purple, in short racemes. Siliques curved and declinate.

- 1 W. cuneifòlia N. Lvs. oblong, obtuse, cuncate at base, and subsessile. , Ga. Fla. 1-2f. Pet. obovate, white. September.
- **2** W. amplexifòlia N. Lvs. oblong-ovate, partly clasping. Sand hills, Fla 1-2f. Pet. oval, purple. September.

13. HESPERIS, L. ROCKET. (' $E \delta \pi \epsilon \rho \alpha$, evening, when the flower is most fragrant.) Calyx closed, shorter than the claws of the petals. Pet. bent obliquely, linear or obovate. Silique subterete. Seeds not margined. Stig. forked, with the apices converging ($|| \circ \rangle$). Flowers white or purple.

H. matronàlis L. Simple, erect; lvs. lance-ovate, denticulate; pet. obovate; pod torulous, elongated (3'), erect. (2) Shores of L. Erie (Hankenson) and Haron. § † 14. SCHIZOPÉTALON, Sims. $(\Sigma \chi \iota \zeta \omega)$, to cut, as the peta's appear to be.) Sep. erect. Pet. pinnately lobed, involute in the bud. Silique linear, compressed. Stig. lobes erect, connate. Seeds oblong or globular, cotyl. twisted ($|| \circ$). (1) Lvs. sinuate-pinnatifid. Fls. white or purple.

S. WÁLKERI. Stem slender, erect, branching, 2f. Lvs. canescer.t. Fls. racemed. Chill. Raised from seed. Flowers large, curious, soon perishing.

15. BRÁSSICA (and Sinapis) L. CABBAGE, MUSTARD, &c. (The ancient names.) Silique long, terete, or 4-sided, pointed with a stout style or an ensiform 1-seeded beak. Valves 1-3-veined. Seeds in 1 row, globular, ((c. Root lvs. pinnatifid. Rac. elongated. Fls. yellow. Figs. 239, 192, 429.

§ SÍNAPIS. Sep. spreading. Pet. ovate. Pod with an acute beakNos. 1, 2, 3 § BRÁSSICA. Sep. erect. Pet. obovate. Pod squarish, with a blunt style...Nos. 4, 5, 6

- 1 B. nìgra L. Black Mustard. Smooth; pod 1', smooth, somewhat 4-angled, ap pressed to the rachis, and beaked with a slender, 4-sided style. (1) 3-6f. §
- 2 B. arvénsis (L) Field Mustard. St. and lvs. hairy; pod 14, smooth, many-angled, torulous, spreading, thrice longer than the slender ancipital style. (1) § June, July.
- **3 B. alba** (L) White Mustard. Lvs. smoothish; siliques hispid, torulous. shorter than the ensiform beak; seeds large, pale yellow. (1) Eur. 3-5f. Pod 4-seeded.
- 4 B. campéstris (L.) Cale. Lvs. somewhat fleshy and glancous, the lower lyrate dentate, subciliate, upper cordate-amplexicaul, acuminate. ① Fields. 2f. July. §
 β. Rutabaga. Swedish Turnip. Root tumid, napiform, subglobous, yellowish. ‡
- 5 **B.Rapa** L. Radical lvs. lyrate, rough, not glaucous, cauline ones incised, uppeentire, smooth.

 β. DEPRÉSSA. Common Turnip. Root depressed, globous or napiform, contracted below into a slender radicle. (2) Long cultivated for its root. \$

- 6 B. OLERÀCEA L. Cabbage. Lvs. very smooth and glaucous, fleshy, repand-toothed or lobed. (2) Europe, on rocky shores, forming no head.
 - β. BULLÀTA. Savoy Cabbage. Lvs. curled, subcapitate, finally expanding. ‡
 - y. BOTRYTIS-CAULIFLÒRA. Cauliflower. Stem low; heads thick, compact, terp nal; flowers abortive, on short, fleshy peduncles. ‡
 5. BOTRYTIS ASPARAGOÌDES. Broccoli. Stem taller; heads subramous; branches
 - **5.** BOTRYTIS ASPARAGOIDES. Broccoli. Stem taller; heads subramous; branches fleshy at the summit, consisting of clusters of abortive flower-buds. **‡**
 - E. CAPITÀTA. Head Cabbage. Stem short; leaves concave, packed in a dense head before flowering; raceme paniculate. \$\product 1

16. ALÝSSUM, L. MADWORT. (Gr. α , privative, $\lambda \vartheta \delta \delta \alpha$, rage; supposed by the ancients to allay anger.) Calyx equal at base. Pet. entire; some of the stamens with teeth. Silicle orbicular or oval, with valves flat, or convex in the centre. Seeds 1—4 in each cell (= 2). Showy European herbs, half shrubby at base.

- 1 A. marítimum Lam. Sweet A. Lvs. lance-linear, acute, entire, some hoary; pods oval, smooth, 2-seeded; fls. white, small, sweet. 24 1f. Escaped from gardens. §
- 2 A. calycinum L. Calyx persistent; lvs. linear-spatulate, canescent; pods orbicular, lens-shaped, with a thin border, 4-seeded; fls. yellowish. (1) 1f. Fields: rare. Mass. N. Y. (Wayne Co., Hankenson). §
- **5** A. SAXÁTILE. Rock A. Lvs. lanceolate, entire, downy; pods round-obovate, 2-seeded; flowers yellow, corymbed, abundant and brilliant. 24 Candia. 9'. April.

17. LUNARIA, L. HONESTY. (Lat. *luna*, the moon; from the broad, nound silicles.) Sep. somewhat bisaccate at base. Pet. nearly entire. Stam. without teeth. Silicle pedicellate, elliptical, or lanceolate, with fla

values; funiculus adhering to the dissepiment $(-\circ)$. European. Leaves cordate. Flowers lilac.

- 1 L. REDIVIVA L. Perennial Satin-flower. Lvs. ovate, petiolate, mucronately serrate; silicles lanceolate, narrowed at each end. 24 2-3f. June.
- 2 L. BIÉNNIS DC. Honesty. Lvs. with obtuse teeth; silicles oval, obtuse at both ends
 ② Flowers large, purple. May, June.

18. DRABA, L. WHITLOW GRASS. $(\Delta \rho \alpha' \beta \eta, \text{ acrid, biting; from the taste of the plant.) Calyx equal at base. Pet. equal. Fil. without teeth. Silicle oval or oblong, entire, the valves flat or slightly convex, veined. Seeds not margined, 2-rowed in each cell (<math>= \circ$). Flowers white, rarely yellow. Plants small.

- - a Style distinct, long or short. Pods twisted when ripe. Perenn. Nos. 2, 3, 4 a Style none. Pods straight, plane. Plants annual or bienn. (b)
- 1 D. (Eróphila) vérna L. Whitlow Grass. Scape naked; lvs. oblong, acute, subserrate, hairy; pet. bifid; stig. sessile; silicle oval, flat, shorter than the pedicel. (1) A little Spring flower, in rocky places. Can. to Va. 1-3'.
- 2 D. ramosíssima Desv. Minutely pubescent, diffuse; lvs. linear-lanceolate, with remote and slender teeth; rac. panicled; silicle lanceolate, about the length of the pedicel, the style half as long. 24 Va. Ky. 5–8'. May.
- 3 D. arábisans Mx. Slightly pubescent; root leaves in tufts, wedge-lanceolate. toothed; stems leafy, erect, its lvs. oblong; silicle glabrous, lance-oblong (6"), spreading; style very short. 24 Lake shores, Vt. N. Y. Mich. 6-10'. White. May.
- 4 D. incàna L. Hoary publication publication in the state of the st
- 5 D. nemoròsa Ehrh. Pubescecnt, branched; lvs. oval, the cauline lanceolate, toothed; pet. emarginate; silicles half the length of the spreading pedicels. (2) Mich. Mo. 8-10'. Flowers small, white or yellowish. May.
- 6 D. brachycárpa N. Minutely pubescent; lvs. ovate, the cauline oblong; rac.
 ∞-flowered; pet. obovate, entire; silicle as long as the ped. 6-seeded. ① Mo. and Sonth. 3-4'. Pod 2". April.
- 7 D. cuneifòlia N. Hirsute, pubescent, branching and leafy below, naked above;
 lvs. cuneate-oblong, sessile, denticulate; rac. elongated in fruit; silicles twice longer (4'') tnan the pedicels. (1) Ky. to La. 3-8'. March.
- 8 D. Caroliniàna Walt. Hispid, branching and leafy below, naked abovc; lvs. en tire, obovate and oval; rac. short : silicles oblong-linear, longer than the pedicels (5").
 (1) R. I. to Ga. and W. 1-3". Much like No. 7. April-June.

β. micrántha. Silicles minutely hispid; pet. often wanting. (D. micrantha N.) W

19. ARMORACIA, Rupp. HORSE-RADISH. (Armorica, its native country, now the province Brittany, France.) Sep. spreading. Pet. entire, much exceeding the calyx. Silicles ellipsoid or globular, turgid, 1-celled from the incomplete partition. Style distinct. Seeds few (= c). 24 Lvs. oblong, undivided, or the lower pinnatifid. Flowers white.

1 A. rusticàna Rupp. Radical lvs. oblong, crenate; cauline long, lanceolate. in cised; silicle roundish, ellipsoid, mnen longer than the style. S Eur.

2 A. Americana Arn. Aquatic; immersed lvs. doubly pinnatifid with capillary seg ments, emersed, oblong, pinnatifid, serrate or entire; silicle ovoid, little longer than the style. Lakes and rivers, Can. to Ky. July, Aug.

20. VESICARIA, Lam. BLADDER-POD. (Lat. vesica, a bladder or blister; from the inflated silicles.) Pet. entire. Silicle globous or ovoid; inflated valves nerveless, hemispherical or convex. Seeds several in each cell, sometimes margined ($= \circ$). Flowers yellow. (See Addenda.)

V. Shórtii T'. & G. Lvs. elliptical, sessile, entire; style twice as long as the globous silicle ; seeds 2-4, not margined. (1) Ky. rare.

21. CAMELINA, Crantz. FALSE FLAX. (Xaµai, dwarf, livor, flax.) Calvx equal at base. Pet. entire. Silicle obovate or subglobous, with ventricous valves and many-seeded cells. Styles filiform, persistent, Seeds oblong, striate, not margined ($|| \circ$). Flowers small, yellow.

C. sativa Crantz. Lys. lanceolate, sagittate at base, subentire; silicle obovate-pyriform, margined, tipped with the pointed style. (1) Fields. § Eur. 2f. June.

22. SUBULARIA, L. AWLWORT. (Named in reference to the linear subulate leaves.) Silicle oval, valves turgid, cells many-seeded. Stigma sessile; cotyledons linear, curved and incumbently folded on themselves. (1) Aquatic acaulescent herbs.

S. aquática L.-Shores of ponds, Me. N. H. Lvs. all radical, entire, subulate, 1' Scape 2-3', with a few minute white flowers. July.

23. IBÈRIS, L. CANDYTUFT. (Most of the species are natives of *Iberia*, now Spain.) The 2 outside petals larger than the 2 inner. Silicles compressed, truncate, emarginate, the cells 1-seeded. Handsome herbs from the Old World, pretty in cultivation. Flowers white or purple.

- 1 I. UMBELLATA. Purple C. Herbaceous; lvs. lin.-lanceolate, acuminate, the lower serrate; silicles umbellate, acutely 2-lobed. (i) Eur. 1f. Purple. June. July.
- 2 I. AMÀRA. Bitter C. Herbaceous; lvs. lanceolate, acute; fls. finally racemed; sili cles obcordate, narrowly emarginate. (1) Eng. 1f. White. June, July.
- 3 I. ODORÀTA. Herbaceous; lvs. linear, toothed, dilated at end; siiicle round, with acute, spreading lobes. (1) Alps. 1f. Sweet scented. Foliage pretty. July. 4 I. FINNÀTA. Lvs. pinnatifid, smooth. (1) Eur. 1f. White, corymbed.
- 5 I. SAXÁTILIS. Shrubby; lvs. linear, entire. 24 Eur. 1f. White, corymbed.

24. CAPSÉLLA, Vent. (Lat. capsa, a chest or box; alluding to the fruit.) Calyx equal at base; silicles triangular-cuneiform, obcordate, com pressed laterally; valves carinate, not winged on the back; septum sublinear; style short; seeds ∞ , oblong, small, $\|\circ$. Fls. white. A common weed. Fig. 193.

C. Bursa-pastòris Mænch. Shepherd's Purse. (1) Grows everywhere. 6'-11--21 Root lvs. rosulate, cut-lobed; stem leaves lance-lin. clasping-sagittate; rac. long.

25. LEPÍDIUM, R. Br. PEPPER GRASS. ($\Lambda \dot{\epsilon} \pi \imath 5$, a scale; from the resemblance of the silicle.) Sepals ovate; petals ovate, entire; silicles oval-orbicular, emarginate; septum very narrow. contrary to the greater

diameter; valves carinate, dehiscent; cells 1-seeded. Flowers small, white, often incomplete.

- **1 L. Virginicum** L. *Tongue-grass.* Lvs. linear-lanceolate, the lower incisely serrate; pet. 4; silicles orbicular, emarginate. \odot Dry places. If.
- 2 L. ruderale L. Cauline lvs. incised, those of the branches entire; pet. none; pods broad-oval, notched, wingless. (1) Dry fields. Rare. 10-15'. Always apetalous. §
- 3 L. campéstre R. Br. Yellow-seed. Cauline lvs. sagittate-clasping, denticulate; silicles ovate, notched, winged, rough. (1) Dry fields. Rare. 6-10'. Jn. § Eur.
- 1 L. SATÌVUM L. Pepper-grass. Lvs. oblong, variously incised and pinnatifid; silicles elliptic-ovate, notched and winged. (1) Eur. 2f. A garden salad. July.

26. SENEBLERA, Poir. CARPET CRESS. SWINE CRESS. (In honor of *Senebier*, a distinguished vegetable physiologist.) Silicle didymous, with the partition very narrow; valves ventricous, separating but indehiscent, and each 1-seeded, cotyledons incumbently folded on themselves. (1) or (2) Prostrate and diffuse, with minute white flowers.

- **1 S. dídyma** Pers. Lvs. pinnate, with pinnatifid segments; silicles rugously reticulated, notched at the apex. Waste places coastward, Atlantic and Pacific.
- 2 S. Coronòpus DC. Lvs. pinnate, with the segm. entire, toothed, or pinnatifid; silicles tubercled, not notched at apex. R. Isl. (Robbins) to Car. Rare.

27. ISATIS, L. WOAD. ('Id $\alpha' \zeta \omega$, to make equal; supposed to remove roughness from the skin.) Silicle elliptical, flat, 1-celled (dissepiment obliterated), 1-seeded, with boat-shaped valves, which are scarcely dehiscent ($\| o$). None North American.

I. TINCTÒRIA L. Silicles cuneate, acuminate at base, somewhat spatulate at the end, very obtuse, three times as long as broad. (1) Eng. 4f. Yellow. May—July. Cultivated for the dye which is yielded by its leaves.

28. CAKILE, Tourn. SEA ROCKET. (Named from the Arabic.) Silicle 2-jointed, the upper part ovate or ensiform; seed in the upper cell erect, in the lower pendulous, sometimes abortive. (1) Maritime, fleshy herbs Flowers purple.

C. marítima Scop. Lvs. oblong, bluntly serrate, obtuse, often lobed; lower joint of silicle clavate, upper ovate-ensiform: racemes spike-like. Coasts, N. States. Prostrate. 6-12'. July, August

29. RAPHANUS, L. RADISH. (' $P\alpha$ ', quickly, $\varphi\alpha i\nu\omega$, to appear; from its rapid growth.) Calyx erect. Pet. obovate, unguiculate. Siliques terete torulous, not opening by valves, transversely \Im -jointed, joints with 1 or several cells. Seeds large, subglobous, in a single series ((\circ

- **1 R. Raphanístrum** L. *Wild Radish.* Lvs. lyrate; silique moniliform, 3-8 seeded, becoming in maturity 1-celled, longer than the style. ① Fields: rare. 1-2£ Pet. yellow, blanching as they decay. June, July. § Eur.
- 2 R. SATÌVUS. Garden Radish. Lower lvs. lyrate, petiolate; silique 2-3-seeded, acuminate, scarcely longer than the style. ① China. 2-4f. Root napiform or fusiform red, black, or white. Flowers pink-white.

ORDER XII. CAPPARIDACEÆ. CAPPARIDS.

Herbs, shrubs, or even trees, destitute of true stipules. Leaves atternate, petiolate. Flowers cruciform, hypogynous. Sepals 4, Petals 4, unguiculate. Stamens 6—12, or some multiple of 4, never tetradynamous, on a disk or separated from the corolla by an internode of the torus. Ovaries often stipitate, of 2 united carpels. Style united. Fruit either pod-shaped and dehiscent, or fleshy and indehiscent. Seeds many, reniform. Albumen 0. Embryo curved. Cotyledon foliaceous.

1. GYNANDROPSIS, DC. (*Gynandria*, a Linnæan class, $\ddot{o}\psi i5$, appearance.) Sep. distinct, spreading. Stam. 6, separated from the 4 petals by a slender internode of the torus. Pod linear-oblong, raised on a long stipe which rises from the top of the torus. (1) Lvs. digitate. Fls. racemed.

G. pentaphýlla DC. Middle lvs. petiolate, 5-foliate, floral and lower ones 3-foliate leaflets obovate, entire, or denticulate. Waste grounds, Va. to Ga. 2-3f. White. §

2. CLEOME, L. SPIDER FLOWER. Sep. sometimes united at base. Pet. 4. Torus not developed between the petals and the stamens, which are 6-4. Pod stipitate more or less. Herbs or shrubs. Lvs. simple or digitate. Flowers racemed or solitary. (See Addenda.)

- C. pungens L. Stem simple, prickly; lfts. 5-9, elliptic-lanceolate, acute; flowers racemed; petals on filiform claws, half as long as the stamens. (2) Gardens and fields. 3-4f. Flowers purple, curious. May-Aug. §
- 2 C. SPECIOSÍSSIMA. Stem branched below; lfts. 5-7, lanceolate, acuminate; petals as long as their claws, rose-purple. Mexico. 3-4f. June-Sept.

3. POLANÍSIA, Raf. ($\Pi o \lambda v$, much, $\check{\alpha} \nu \iota \sigma \sigma \sigma$, unequal.) Sep. distinct, spreading. Pet. 4, unequal. Stam. 8—32, filaments filiform or dilated at the summit. Torus not developed, minute. Pods linear. (1) Strong-scented herbs, with glandular, viscid hairs.

- 1 P. gravèolens Raf. Viscid-pubescent; lvs. ternate, lfts. elliptic-oblong; fls. axıllary, solitary; stam. 8–12; caps. oblong-lanceolate, attenuate at base. Gravelly shores, Vt. to Ark. 1f. Flowers in leafy racemes, yellowish-white. July.
- **2 P. tenuifòlia** T. & G. Viscid-glandular; lfts. 3, filiform-linear; pet. unequal, oval, on short claws; stam. 12-15; pod linear. Ga. Fla. 1-2f. White.

ORDER XIII. RESEDACE Æ. MIGNONETTES.

Herbs, with alternate, entire, or pinnate leaves. Stipules minute, glandlike. Flowers in racemes or spikes, small and often fragrant, 4-7-merous, unsymmetrical and open in bud. Petals unequal, entire or cleft. Stamens 8-20, inserted on the hypogynous, one-sided glandular disk. Ovaries ses

⁵ TRIBE (APPAREÆ. Shrubs (or trees) with baccate or drupaceous fruit. S. Fla... CAPPARIS 5 TRIBE CLEOMEÆ. Herbs (or shrubs) with capsular l-celled pods. (a)

sile, 3-lobed, 1-celled, many-seeded. Fruit a capsule, 1-celled, opening between the stigmas before maturity. Illust. 40, 165.

RESEDA, L. (Lat. *resedo*, to calm : the plants are said to relieve pain.) Sep. 4—7. Pet. of an equal number, often cleft. Torus large, fleshy, one sided, bearing the $8-\infty$ stamens.

- **1 R. lutèola** L. Dyer's Weed. Lvs. lanceolate, with a tooth on each side at base; sepals 4, united below; petals (greenish-yellow) 3-5-cleft. ① Roadsides, N. Y. 2f Flowers numerous, in a tall raceme. § Eur.
- 2 R. ODORÀTA L. *Mignonette*. Lvs. cuneiform, entire or 3-lobed; sepals shorter than the 7-13-cleft petals. Egypt. 1f. Fragrant.

ORDER XIV. VIOLACEÆ. VIOLETS.

Herbs with simple (often cleft) alternate leaves with stipules. Flowers irregular, spurred, with the sepals, petals, and stamens in 5's. Sepals persistent, slightly united, elongated at base, the 2 lateral interior. Petals commonly unequal, the inferior usually spurred at base. Stamens 5, usually inserted on the hypogynous disk. Filaments dilated, prolonged beyond the anthers. Ovary of 3 united carpels, with 3 parietal placentæ. Style 1, declinate. Stigma cucullate. Fruit a 3-valved capsule. Seeds many, with a crustaceous testa and distinct chalaza. Illust. 50, 93, 137, 302, 515, 522.

 SOLEA, Gingins. GREEN VIOLET. (Dedicated to W. Sole, an English writer on plants.) Sep. nearly equal, not auriculate. Pet. unequal, the lowest 2-lobed and gibbous at base, the rest emarginate. Stam. united into a tube, sheathing the ovary and bearing a gland above the middle. Sds.
 6-8, very large. 24 An erect, leafy plant, with inconspicuous axillary fls.
 S. cóncolor Gingins. Green Violet.-Woods, W. N-Y. (Hankenson) to Car. and Mo 1-2f. Lvs. large, lanceolate, acuminate. Fls. greenish. Pod 1'. May, June.

2. VIOLA, L. VIOLET. PANSEY. (From the Latin.) Sep. 5, unequal, auricular at base. Pet. 5, irregular, the broadest spurred at base, the 2 lateral equal, opposite. Stam. approximate, anthers connate, 2 of them with appendages at the back. Caps. 1-celled, 3-valved, seeds attached to the middle of the valves. 24 Low, herbaceous plants. Ped. angular, olitary, 1-flowered, recurved at the summit so as to bear the flowers in a resupinate position. Joints of the rhizome often bearing apetalous flowers. Figs. 50, 137, &c.

- 1 V. rotundifòlia Mx. Fig. 50. Lvs. smooth, orbicular-ovate, cordate, with the sinus closed; petiole pubescent; sep. obtuse. Woods, N. E. to Tenn. Mar.-May.
- 2 V. lanceolàta L. Lvs. smooth, lanceola¹e, tapering at base into the long petiole, obtusish, subcrenate. Wet meadows. Lvs. 3-5'. Rt. stock creeping. Fls. white. May.
- **3 V. primulæfòlia** L. Lvs. lance-ovate, abruptly contracted at base and decu:rent on the petiole; pet. subequal, beardless. Damp soils, Mass. S. and W. White. Ap.May.
- **1 V. blanda** Willd. Lvs. cordate, roundish, slightly pubescent; petiole pubescent; petals beardless. Meadows, Can. to Penn. Root creeping. Flowers fragrant. May.
- 5 V. palústris L. Lvs. reniform-cordate; stip. broadly ovate; sep. ovate, obtuse, spur very short: caps. oblong-triangular. White Mts. 3'. Pale blue. June.
- 6 V. Selkírkii Goldie. Lvs. orbicular-cordate, crenately serrate, the sinus deep and nearly closed; spur nearly as long as the petals, thick, very obtuse. Hills, N. Y. to Can. and Mich 2'. Pale blue, with a large blunt spur. May.
- 7 V. pedàta L. Rt. premorse; lvs. pedately 5-9-parted, segments linear-lanceolate, entire; stig. large, obtusely truncate, scarcely beaked; spur short, obtuse. Hilly woods, 4-7'. Smooth and beautiful. Flowers large, violet-blue. April, May. B. bicolor. Upper petals violet, the lower pale blue and yellow. Mass. to Ga.
- S V. delphinifòlia Nutt. Lvs. pedately 7-9-parted, with linear, 2-3 cleft seg ments all similar; stig. thick, distinctly beaked. Ill. Iowa, Mo. Deep blue. Mar. Apr.
- 9 V. cucullàta Ait. Lvs. reniform-cordate, cucullate at base, acute, crenate: stip linear; inferior and lateral petals bearded. Common everywhere. 3-12. Known by its broad hooded leaves and blue flowers. Varies much. April, May.

B. palmata. Lvs. cordate. hastate-lobed, middle lobe largest. Fls. large. South, &c.

- y. septemioba. Lvs. concave at base, deeply 5-7 lobed, mid. lobe lance. Sonth
 10 V. villòsa Walt. Lvs. roundish-ovate, cordate, obtuse, flat, pubescent, sinus nar
 row or closed ; pet. bearded ; stig. beaked. Woods, Pa. to Ga.; com. 2-3'. Apr.
- 11 V. sagittàta Ait. Lvs. oblong-lanceolate. sagittate-cordate, subacute, often incised at base, serrate-crenate; pedicel longer than the leaves; pet. densely bearded. Dry hills. 3-5'. Lvs. varying to triangular-hastate. April-June.

B. ovata. Lvs. ovate, incised and decurrent at base. N. J., southward.

- 12 V. hastata Mx. Smooth; st. simple, erect, leafy above; lvs. deltoid-lanceolate or hastate, acute, dentate; stip. ovate, minute, ciliate-dentate; lower pet. dilated, obscurely 3-lobed; spur very short. Fla. to Tenn. 6-10'. April, May.
- 13 V. tripartita Ell. Hairy. St. simple, erect, leafy above; lvs. deeply 3-parted, lobes lanceolate, dentate; stip. lanceolate. Upper Ga. 1f. Yellow.
- 14 V. pubéscens Ait. Villous-pubescent; st. erect, naked below; lvs. broad-cordate, toothed; stip. ovate, large, subdentate. Dry woods. 5-20'. May, June.
 β. eriocárpa. Tall, pubescent; pods woolly. Westward.
 - y. scabriúscula. Some scabrous; sts. decumbent, branched at base. Ct. to Ky.
- 15 V. Canadénsis L. Smooth; lvs. cordate, acuminate, serrate; ped. shorter than the leaves; stip. short, entire. Woods. 8-12'. Leafy all the way. Flowers large, subregular, white or light blue. Summer.
- 6 V. striàta Ait. Smooth, nearly crect; lvs. roundish-ovate, cordate, crenate-serrate: stip. large, ciliate-dentate, oblong-lanceolate; spur one-fourth as long as the corolla. Wet grounds. 6-12'. St. semi-terete. Flowers cream-white.
- 17 V. Muhlenbérgii Torr. St. weak, assurgent; lvs. reniform-cordate, upper ones rather acuminate; stip. lanceolate, somewhat fimbriate; spur half as long as the corolla, obtuse. Swamps. 6-8'. Pale purple. May.
- 18 V. rostràta L. Smooth; st. terete, diffuse, erect, lvs. cordate, roundish, serrate, upper ones acute; stip. lanceolate, deeply fringed; petals bearded; spur longer than the cordla. Moist woods Can. to Ky. 6-8'. Pale blue. May.-Often beardless.

- 19 V. ODORÀTA L. Sweet, or English Violet. Neapolitan. Stolons creeping; lvs. cor date, crenate, nearly smooth; sep. obtuse. Eur. Flowers fragrant, blue, white, &c.
- 20 V. tricolor L. Pansey. Heartsease. St. angular, diffusely branched; lvs. oblong-ovate, lower ones ovate cordate, deeply crenate; stipules as large as the leaves; spur short, thick. Gardens. Flowers large, white-yellow-violet to black, in endless variety.
 β. arvénsis. Slender, subsimple; petals scarcely longer than sepals. Fields. Perhaps this is the primary form. Abundant in Oregon.
- 21 V. GRANDIFLÖRA L. Stem 3-cornered, procumbent; leaves crenate, shorter than the peduncles, much larger than the stipules; flowers large, all violet.
- 22 V. CORNÙTA. Stems 3-cornered, ascending; lvs. cordate, crenate; stip. cut-toothed; fis. violet-purp., the spur subulate, longer than the sepals. From the Pyrenees. Hardy.

ORDER XV. CISTACEÆ. ROCK ROSES.

Herbs or low shrubs with simple, entire, opposite (at least the lower) leaves, with flowers perfect, regular, hypogynous, in one-sided racemes, very fugacious. Sepals 5, unequal, persistent. Petals 5 (sometimes 3 or want ing), convolute in bud. Capsules 1-celled, 3-5-valved, with as many parie tal placentæ. Seeds albuminous. Embryo curved or spiral.

Petals 3, linear-lanceolate, small, brown-purple. Stamens 3—12.....LECHEA.
 Petals 5,—a large, yellow, very fugacious, or none. Stamens ∞.....HELIANTHENUM. 2
 —a small, bright yellow. Tufted shrublets. Stamens 9–30......HUDSONIA.

1. LECHEA, L. PINWEED. Sep. 5, the 2 outer minute. Pet. 3, lanceolate, small. Stig. 3, scarcely distinct. Caps. 3-celled, 3-valved, placentæ nearly as broad as the valves, roundish, each 1-2-seeded. 24 Often shrubby at base, with numerous very small brownish purple flowers.

- L. major Mx. Hairy; leaves elliptical, mucronulate; flowers minute, about as long as the pedicels. In dry woods. 1-2f, rigid, brittle, purple, much branched. Leaves 4". Capsules the size of a small pin-head. July, August.
- 2 L. minor Lam. Smoothish; leaves linear, very acute; flowers small, on pedicels which are mostly twice longer. Dry, sandy grounds. Stems 8-16', slender, red. Leaves 6-10". Capsules the size of a large pin-head. Summer.
- 3 L. thymitolia Ph. Shrubby; hoary with appressed hairs; leaves linear and linear-oblanceolate, rather acute, often verticillate; flowers small, on pedicels still shorter. Coasts, Mass. to N. J. 1f. Very bushy. Capsules size of a pin-head. Sum.
- 4 L. Novæ Cæsarèæ Austin. Hairs minute. appressed; lvs. ellip., 6", often opp.; pan. leafy, narrow; outer sep. lin., longer than the fl. or pedicels. N. J. (Prof. Porter).

2. HELIANTHEMUM, L. ROCK ROSE. Sep. 5, the 2 outer smaller Pet. 5, or rarely 3, convolute contrary to the sepals, sometimes 0. Stam. ∞ Stig. 3, scarcely distinct. Capsules triangular, 3-valved, opening at top Sds. angular. Fls. yellow, often of 2 kinds, the later ones being apetalous

§ Flowers of 2 sorts, the later ones apetalous, and 3-10-androus......Nos. 1, 2
 § Flowers all alike, pentepetalous and polyandrous......Nos. 3, 4

1 H. Canadénse Mx. *Frost Plant*. Hoary pubescent; petaliferous flowers solitary, pedicellate, terminal; apetalous axillary, small, clustered, subsessile; sepals acute; leaves revolute on the margin, lanceolate, acute. In dry soils, Can. to Va. 8-12'.

2 H. corymbosum Mx. Canescently tomentous; fis. in crowded, fastigiate cymes, the primary ones on elonga.ed, filiform pedicels, and with petals twice longer than the calyx; sep. obtuse; leaves oblong-lanceolate, margins revolute. Sands, N. J. to Fla. 11

- 3 H. Caroliniànum Mx. Villous, simple, erect; fls. all large, petallferous and subterminal; sepals acuminate; lvs. oblong-oval, edges denticulate, not revolute. Dry woods, South. 8-12'. April, May.
- 4 III. arenícola Chapm. Hoary-tomentous; lvs. lance-oblong, obtuse, small (9''); fia. few or solitary, pedicellate (7''), terminal. Fla. in sand. 3-6'. Apr. (H. Car.a dense, β. obtusum Wood. Ed. 5th.)

3. HUDSONIA, L. (In honor of *William Hudson*, author of Flora An glica.) Sep. 3, united at base, subtended by 2 minute ones outside pet. 5, sta. 9-30; style filiform, straight; cap. 1-celled, 3-valved, many seeded 5 with very numerous branches, minute leaves, and small, bright yellow flowers. May.

- 1 H. tomentòsa Nutt. Hoary tomentous; lvs. ovate, appressed-imbricate, acute, fis. subsessile; sep. obtuse. Coasts, Me. to N. J. and Wisc. In tufts, 7-10'.
- 2 H. ericoides L. Hoary-public extra subulate, a little spreading; pedicels exserted, as long as the calyx; sep. acutish. Shores, Vt. N. H. to Va. Delicate, 6'.
- 3 H. montàna Nutt. Minutely publicate; lvs. filiform-subulate; pedicels longer than the flowers; sep. acuminate, the outer ones longer, subulate. Mts. Car. 5'.

ORDER XVI. HYPERICACE Æ. ST. JOHN'S WORTS.

Herbs or shrubs with opposite, entire, dotted, exstipulate leaves, with flowers perfect, regular, hypogynous, 4 or 5-merous, cymous and mostly yellow; sepals unequal, persistent; petals mostly oblique or convolute in the bud; stamens few or many, polyadelphous; anthers versatile; ovary compound, with styles united or separate, becoming in fruit a 1-celled capsule with parietal placentæ, or 3 to 5-celled when the dissepiments reach the centre. Seeds exalbuminous, minute. (Illust. 128, 129, 275.)

1. ASCYRUM, L. ST. PETER'S WORT. Sep. 4, the two outer usually very large and foliaceous; pet. 4, oblique, convolute; fil. slightly united at base into several parcels; styles 2—4, mostly distinct; cap. 1-celled. 5 Lvs. punctate with black dots. Fls. pale yellow, 1 or 3 terminating each branch.

The onter pair of sepals—a very large, ovate. Styles 1 or 2...... Nos. 1, 2

- -a still larger, orbicular. Styles 3.....Nos. 3, 4
 - -a small, like the two inner Styles 3, long, distinct.... No. 5
- A. Crux-Andreæ L. Branches many, subcrect, ancipital above; lvs. linear-oblong, obtuse; outer sep. twice longer than the pedicel; 2 bracteoles a little below the flower. Sandy woods, N. J. to Ga. and La. 1-2f. Lvs. 6-12". Jn. -Sep. β. angustifblia. Lvs. smaller (3-6"), crowded; bractlets close to the fl. Car. Ga.
- 2 A. pùmilum Mx. Low, trailing at base; lvs. oval and obovate, obtuse, sessile: onter sepals shorter than the slender pedicel, inner sepal 0; bracteoles 0. Ga. Fla.
- **3 A. stans Mx.** St. erect, ancipital; lvs. oblong, sessile and half-clasping, obtuse; caps. ovate, acute. Swamps, N. J. to Fla. and La. 1 to 3f. Lvs 10 -15". Jn.-Aug.
- 4 A. amplexicaùle Mx. St. erect, terete below; lvs. broadly ovate, cordate, clasp ing: caps. oblong; bracteoles 0. Ga. and Fla. 1 to 2f. Lvs. 8-12". Apr.-Sep.
- 5 A. microsépalum Torr. and Gr. Lvs. oblong-linear, crowded; sep. much shorter than the obovate, rnequal petals. Bushy, 1-2f. Lvs. 3-6".

- - 4

2. HYPÉRICUM, L. ST. JOHN'S-WORT. Sep. 5, connected at base, subequal. Pet. 5, oblique, contorted in bud. Stam. mostly ∞, generally cohering in 3-5 sets (polyadelphous), with no intervening glands. Styles 3-5, distinct or united. Caps. 1-5-celled. Herbs or shrubs. Flowers cymous, yellow. June-August. Figs. 128, 129, 275. § Stamens 25-100, more or less united into sets (polyadelphous)(a)
Stamens 5-15, not at all united. Annuals. Flowers small. (g)

 caps. 5-celled, tipped with the 5 styles. Niagara, &c. 1f. Flowers 9". 3 H. Bucklèyi Curtis. Low, diffuse, shrubby; lvs. obovate, very obtuse; fls. soli tary, peduncled; caps. 3-celled, styles united. Mts. N. Car. to Ga. 8-12'.
4 H. prolíficum L. Branches ancipital, smooth; lvs. oblong-lanceolate, obtuse; cymes compound, leafy; sepals unequal, leafy, ovate, cuspidate. M. W. 3-4f. +
 β. densifiorum. Branches, lvs. and fls. crowded, and smaller. Lvs.1'. Fls. 6". South 5 H. galioides Lam. Branches erect, terete; lvs. linear-lanceolate; cymules axil lary and terminal, paniculate; sep. subequal, linear-lanceolate. S. Car. to Fla. 2-3f.
6 H. rosmarinifolium Lam. Erect, sparingly branched ; lvs. linear, shorter than the interno les, narrowed to a petiole. South. Handsome. 2f.
 7 H. fasciculàtum Lam. Shrub much branched, bushy; lvs. linear, 1', very narrow, longer than the internodes, sessile; cymules leafy. Pine-barrens, South. 1-2f. β. abbreriàtum. Lvs. very short (2-3''), tufted in the axils. Car. to Ga.
8 H. perforàtum L. Stem 2-edged, branched; lvs. with pellucid dots; sep. lanceo- late, half as long as the petals. 24 Dry pastures. 1-2f. Lvs. 6-10". Flowers 1'.
9 H. corymbosum Muhl. Stems terete, corymbously branched; lvs. oblong-ovate or oval, obtuse, marked with black (as well as pellucid) dots; sep. ovate, acute (very
 small), # as long as the petals. 21 Can. to Pa. and Ark. 2f. Lvs. 12'. Flowers 9". i) H. maculatum Walt. Stem terete, corymbously branched; lvs. oblong. thickly sprinkled with black dots; sep. lanceolate. 21 S. Car. to Fla. 2-4f. Lvs. 1'. Fls. 10".
11 H. aùreum Bartram. Branches spreading, ancipital; lvs. thick, lance-ovate, ob- tuse, sessile; flower: flarge) solitary, sessile. Ga. to Ark. 2-4f. Stamens 5001 +
 12 H. ambíguum Ell. Branches ancipital; lvs. lance-linear, thin, acute; fls. solitary and in 3's in the axils of the upper leaves. Ga. 1-2f. Flowers 8". 13 H. myrtifòlium L. St. terete; lvs. thick, ovate, or oblong, cordate-clasping; fis. in a leafy compound fastigiate cyme, the dichotomal sessile. Ga Fla. 1-2f. 3

- 14 H. cistifòlium Lam. St. 2-winged, subsimple; lvs. linear-obiong, obtuse, sessile; flowers in a leafless, compound cyme. Ga. to Fla. and La. (No. 6, β .?)
- 15 H. nudiflorum Mx. St. and branches 4-angled and winged; lvs. ovate-lanceo late or oblong, obtuse, sessile; cyme leafless, peduncled; sep. linear; capsule almost 3-celled. 24 Wet. Penn. to La. and Ga. 1-2f. Leaves 2', thin.
- 16 H. sphærocårpon Mx. St. obscurely 4-sided; lvs. linear-oblong, obtuse, with a minute callous tip; sep. ovate, mucronate; caps. globular. 24 Rivers, W. 1f. Fls. 7"
- 17 H. adpréssum Bart. St. 2-winged above; lvs. linear-oblong, half erect; cymes few-leaved; petals obovate. 24 R. I. to Ark.
- 18 H. dolabritórme Vent. St. scarcely 2-edged above; lvs. linear lanceolate spreading; fls. in a leafy, fastigiate cyme; pet. very oblique (dolabriform). 24 Ky.Tent
- 19 H. angulósum Mx. Herb smooth; st. acutely 4-cornered; lvs. oblong-lanceo late, acute; cymes leafless; style distinct, thrice longer than the ov. 24 N. J. to Fla.
- **20 H.** ellípticum Hook. Herb smooth : st. quadrangular, simple ; lvs. elliptical, obtuse, somewhat clasping, pellucid-punctate ; cyme pedunculate ; sep. unequal ; style united to near the summit, as long as the ovary. 24 Can. to Pa. 1f. Flowers 6".
- 21 H. gravèolens Buckley. Stem terete, smooth; leaves oblong-ovate, clasping; sepals and petals narrow; styles 3. 24 High Mts., N. Car. Strong-scented.
- 22 H. pilòsum Walt. Rough-downy; stem simple, terete, virgate; lvs. ovate-lanceolate, appressed, clasping, acute; styles distinct. ① Pine-barrens. South. 1-2f.
- 23 H. mùtilum L. Stem square, branched; lvs. ovate, 5-veined, clasping, obtuse; cymes leafy; pet. shorter (1'') than sep.; sta. 6-12. (D Damp sandy soils. 3-9'. Com. β. gymnánthum. Strict. simple or branched, cy, only bracted. Del., Penn. (Porter).
- 24 H. Canadénse L. Stem quadrangular, branched; lvs. linear, attenuated to the base, with pellucid and also with black dots, rather obtuse; petals shorter than the lanceolate, acute sepals; stamens 5–10. (1) Wet sandy soils. Capsule red. 6–12.
- 25 H. Saròthra Mx. Stem and branches filiform, erect, and parallel; lvs. very mu nute, subulate; flowers sessile; stam. 5–10. (1) Sandy soils. 4–12'. Fls. minute.
- **26 H. Drummóndii** T. & G. Branches alternate; lvs. linear, very narrow; flow ers pedicellate; stamens 10–20. (1) Dry. Ill. and South. 1f. Leaves 6".

3. **ELODEA**, Adams. ($E\lambda\omega\delta\eta\varsigma$, marshy; from the habit.) Sep. 5, equal. Pet. 5, equilateral, imbricated in bud. Stam. 9 (rarely more), triadelphous, the sets alternating with 3 orange-colored glands. Styles 3, distinct. Capsule 3-celled. 24 Herbs with pellucid-punctate leaves, the axils leafless. Flowers dull orange-purple. July—Sept.

- 1 E. Virgínica Nutt. Stem erect, somewhat compressed, subsimple; leaves oblong, amplexicaul: stamens united below the middle. with 2 in each set. Swamps. 1f.
- 2 E. petiolàta Ph. Leaves oblong, narrowed at base into a petiole; flowers mostly in 3's, axillary, nearly sessile; filaments united above the middle; caps. oblong, much longer than the sepals. Swamps, S. States, N. to N. J. Flowers smaller (4").

ORDER XVII. DROSERACE & SUNDEWS

Herbs growing in bogs, often covered with glandular hairs, with leaves alternate or all radical, mostly circinate (rolled from top to base) in vernation. Flowers regular, hypogynous, 5-merous, the Sepals, Petals, and Sta mens persistent (withering). Ovaries compound, 1-celled, with the Styles and Stigmas variously parted, cleft, or united. Seeds ∞ in the capsule, albuminous. Embryo minute.

 1. DROSERA, L. SUNDEW. ($\Delta \rho \delta \delta \sigma$, dew; from the dew-like secretion.) Sep. 5, united at base, persistent. Pet. 5. Stam. 5. Sty. 3-5, each 2-parted, the halves entire or many-cleft. Caps. 3-5-valved, 1-celled, many-seeded. (2) or 24 Small marsh herbs. Lvs. covered with reddish, glandular hairs, secreting a viscid fluid. Flowers in a raceme on a slender scape which is at first coiled, uncoiling as the flowers open.

- 1 D. rotundifòlia L. Lvs. orbicular, abruptly contracted into the hairy pethole; fls. white. (2) A curious little plant, in bogs and muddy shores. Scapes 6-9', 6-9-flow-ered. Leaves 1-2', glistening as with dew-drops. June-Aug.
- 2 D. capillàris Poir. Lvs. obovate, cuneiform at base, the petioles naked; flowers purple; scape erect. (2) Marshes, S. Car. to Fla. Scapes 3-12', 6-12-flowered. May.
- 3 D. brevifòlia Ph. Lvs. cuneiform-spatulate, forming a small, dense tuft (1' diam.); petioles very short, hairy; flowers few, rose-colored. (2) N. Car. to Fla. 2-5'.
- 4 D. longifòlia L. Lvs. spatulate-oblong or obovate, ascending, alternate, tapering at base into a long, smooth petiole; scape declined at base; pet. wh. 24 4-7'. Lvs.2-3'.
- 5 D. lineàris Goldie. Lvs. linear, obtuse; petioles elongated, naked, erect; scapes few-flowered, about the length of the leaves (3'); calyx glabrous, much shorter than the oval capsule; seeds oval, smooth. 24 Borders of lakes, North. White.
- 6 D. filifórmis Raf. Lvs. filiform, very long, erect; scape nearly simple, longer than the leaves, many-flowered; petals obovate, erosely denticulate, longer than the glandular calyx; style 2-parted to the base. 24 Wet sand. 1f. Purple.

2. DIONÆA, L. VENUS' FLY-TRAP. (One of the names of Venus.) Stam. 10—15. Sty. united into 1, the stigmas many-cleft. Caps. breaking irregularly in opening, 1-celled. Seeds many, in the bottom of the cell. 24 Glabrous herbs. Lvs. all radical, sensitive, closing convulsively when touched. Scape umbelled.

D. muscipula Ell.—A very curious plant. Sandy bogs in Car. Lvs. rosulate, lamina roundish, spinulose on the margins and upper surface, instantly closing upon insects and other objects which light upon it. Scape 6–12', with an umbel of 8–10 white flowers. April, May. †

ORDER XVIII. ELATINACEÆ. WATER PEPPERS.

Herbs small, annual, with opposite leaves and membranous stipules Flowers minute, axillary. Sepals 2-5, distinct or slightly coherent at base persistent. Petals hypogynous, as many as the sepals. Stamens twice as many as the petals, anthers introrse. Ovaries 2-6-celled. Stigmas 2-6, apitate; placenta in the axis. Fruit capsular. Seeds numerous, exalbun inous.

ELATINE, L. MUD PURSLANE. Fls. 2-, 3-, or 4-parted, symmetrical, all the parts distinct except the united ovaries. Stig. sessile. *Interview Very small* plants growing in mud, with minute, axillary, sessile flowers.

- 1 E. Americàna Arn. Stems creeping, diffuse, in patches; branches ascending 1-9; leaves wedge-obovate, 2", obtuse; flowers 2-parted, rarely 3-parted; seeds 6-8.
- 2 E. Clintoniàna (Peck). Stems erect, 4", in very dense tufts, from matted roots; lva snatulate, 1"; fis. 2-parted; seeds sl'ghtly curved. Sand Lake, N. Y. (C. H. Peck)

ORDER XIX. CARYOPHYLLACE ... PINKWORTS.

Herbs with swollen joints, opposite, entire leaves, and regular \checkmark (rarely \checkmark) flowers. Sepals persistent. Petals often unguiculate, or bifid, or 0. Stamens distinct, twice as many as the sepals, or fewer. Torus often some developed, separating the whorls. Styles 2-5, ovary 1. Fruit a 1-5-celled, $1 - \infty$ -seeded pod, opening by teeth or valves. Embryo curved around the albumen. Figs. 6, 41, 44, 45, 56, 131, 276, 330, 456.

§ Stipules present, dry (0 in No. 17). Calyx open. Petals sessile, minute, or 0. TRIBE III(h)

1. DIÁNTHUS, L. PINK. Calyx tube cylindrical, striated, with 2 or more pairs of imbricated scales or bracteoles at base. Pet. 5, with long claws, limb irregularly notched. Stam. 10, styles 2, recurved. Capsule cylindrical, 1-celled, 4-valved at top. Beautiful Oriental plants, everywhere cultivated. Figs. 6, 131, 276.

§ Bracts long-pointed, equalling the calyx tube (dry, obtuse, No. 2)......Nos. 1-4 § Bracts much shorter than the calyx tube.....Nos. 5-7

- 1 **D. Armèria** L. *Wild Pink*. Leaves linear-subulate, hairy; flowers aggregated, fascicled; bracteoles erect, lance-subulate. (1) Sandy fields, E. 1-2f. Flowers small (6" broad), pink-red sprinkled with white. August. § Europe.
- 2 D. pròlifer L. Slender, strict, smooth; lvs. linear, erect, 1-2'; bracts dry, ovate, covering the calyx and pod; pet. small, pink; fl. mostly but 1. Penn. (Porter). § Eur.
- 3 D. BARBATUS. Sweet-William, or Bunch P. Leaves lanceolate; flowers in dense cymes; bracteoles erect, ovate-subulate. 24 Europe. 14f. Red-white. May-July.
- 4 D. CHINÉNSIS. Leaves lance-linear; flowers solitary; bracteoles spreading, inear.
 (2) China. 1f. Evergreen, not glaucous. Flowers large, variegated.
- 5 D. CARYOPHÝLLUS. Carnation P. Glaucous; leaves linear; flowers solitary; bractlets very short, ovate; petals very broad, crenate. 24 England. 2-3f. Fragrant.
- 8 D. PLUMÀRIUS. Pheasant's Eye. Glaucous; flowers solitary; bracts ovate, acute; petals many-cleft, hairy at throat. 24 Europe. White-purple. June-August.
- 7 D. SUPÉRBUS. Leaves linear-subulate, green; cymes fastigiate; bracts ovate, mu cronate; petals pinnatifid-fringed. 2 Europe. White-roseate. July. August.

2. SAPONÀRIA, L. SOAPWORT. Calyx tubular, 5-toothed, without bractlets. Petals 5, unguiculate. Stamens 10. Styles 2. Capsules oblong, 1-celled. Flowers in cymous panicles. July, August. Fig. 45.

21. GYPSOPHILA, L. GYPSUM PINK. Sepals half united into a bell-form calyx. Pet. scarcely clawed. *Caps.* globular, 1-celled, 4-valved. —Neat, free-flowering exotics. Flowers panicled. June—Sept. Europe. 1 G. ÉLEGANS. Lvs. lance., thick; pan. loose, forked; pet. notched, wh. or pink. 1f. (1) 2 G. MURÀLIS. Low, diffuse, with linear lvs. and a profusion of pinkish small fls. (1) 6'. 3 G. PANICULÀTA. Tall; lvs. lance-lin.; fls. minute, numerous, white, in filiform pan. 21 4 G. STÈVENI. Lvs. lance-lin., keeled; fls. white, in corymbs, fine for bouquets. 21 24.

3. SILENE, L. CAMPION. CATCH-FLY. (Silenus was a drunken god of the Greeks, covered with slaver as these plants are with a viscid secretion.) Calyx tubular, swelling, without scales at the base, 5-toothed; pet. 5, unguiculate, often crowned with scales at the mouth, 2 or many-cleft, or entire; sta. 10; styles 3; capsule 3-celled, opening at top by 6 teeth, many-seeded. Figs. 41, 56, 330.

Caps. splitting into 3 (-5) valves. Disk large, 10-lobed......No. 11 § ALSINE. Capsule splitting into 3 entire valves. Disk inconspicuous..(a)

- 1 A. serpyllifòlia L. St. dichotomous, spreading; lvs. ovate, acute, subciliate; pet. shorter than the acute sep.; pod ovate. (1) Sandy pl. 2-5'. Lvs. 2-3". Jn.-Aug. §
- 2 A. diffusa Ell. St. long, diffuse; lvs. lance-ovate, acute at both ends; ped. 1-flwd.; pet. oval, much shorter than the calyx, or 0. 24 Moist woods, S. 2-5f. Apr. June.
- 3 A. laterifiòra L. Upright, slightly pubescent; lvs. oval, obtuse; ped. lateral, 2 to 3-flwd.; seeds (strophiolate) appendaged at the hilum. 2 Damp shades, N. 6-10'. Jn.
- 4 A. pátula Mx. Sts. divaricately branched, very slender; lvs. linear-filiform, obtuse; petals emarginate. (i) Cliffs, Va. and Ky. 6-10'. June-July.
- 5 A. Pítcheri T. & G. Erect, fastigiately branched, almost glabrons; lvs. linear, obtuse, flat; pet. entire, twice as long as the 5-veined sepals. ① Tenn. and W. 3-6'
- 6 A. stricta Mx. Glabrous, diffuse; st. branched from the base; lvs. subulate-linear, rigid, so fascicled in the axils as to appear whorled; cymes few-flowered, with spread ing branches. 24 Sterile grounds. 8-10'. May, June.
- 7 A. squarròsa Mx. Cæspitous; stem few-flowered; lower leaves squarrous-imbricate, crowded, upper ones few, all subulate, channelled, smooth; petals obovate, \$ times longer than the sepals. 24 Barrens, L. I. to Ga. 6-10'. April-Ang.
- 8 A. Greenlandica Spr. Cæspitous; sts. numerons, filiform; lvs. linear, flat, spread ing; ped. 1-flwd.. elongated, divaricate. 24 High Mts. N. 3'. Fls. 8", numerons. Jl.Aug
- 9 A. brevifòlia N. Erect (not tufted), few-leaved ; stems many, filiform ; lvs. minute, few, remote, ovate-subulate ; sepals oblong. (1) Rocks, Ga. 2-4'. May.
- 10 A. glàbra Mx. Cæspitous, glabrous; sts. filiform; lvs. linear setaceous, spreading; sep. oval, veinless, half as long as the petals. 24 Mts. S. 4-6'. Fls. 6". July.
- 11 A. peploides L. Sts. creeping, with upright branches, tufted; lvs. ovate, fleshy, half-clasping; fls. small, the veinless sepals exceeding the petals. 24 Coast. 1f. May.

9. MCENCHIA, Ehrh. (Dedicated to *Manch*, a German botanist.) Sep. 4, as long as the 4 entire petals and opposite to the 4 styles. Stam. 4. Caps. ovoid, not exceeding the calyx, opening by 8 teeth, ∞ -seeded. (1) Low, smooth, glaucous. Flowers white.

M. quaternélla Ehrh.—Dry places, Md. Stems simple, 2—3', with 1 or 2 flowers. Leaves lance-linear, acute. Apr. May. § Eur. (Sagina erecta L.)

10. SAGINA, L. PEARLWORT. (Lat. sagina, food or nourishment; badly applied to these minute plants.) Sep. 4 or 5. Pet. 4 or 5, entire, often 0. Stam. as many or twice as many as the sepals. Styles 4 or 5, alternate with the sepals, but the valves of the pod are opposite. Diminutive herbs with linear leaves and small white flowers.

* Petals 0, or 4, and much shorter than the 4 sepals. Stam. 4,......Nos. 1, 2

* Petals 5, equalling or much exceeding the 5 sepals. Stam. 10.....Nos. 3, 4

- **1 S. procúmbens** L. Procumbent, glabrous; pet. about half as long as the roundish, obtuse sepals, sometimes 0; lvs. linear-filiform. 24 Damp, N. 3-44. June.
- 2 S. apétala L. Erect, puberulent; pet. very minute, or none; sep. oblong, acute; lvs. linear-subulate. ① Sandy, N. Y., N. J. and W. Stems filiform, 2-4'. May, Jn.
- 3 S. subulata Wimmer. Smooth or puberulent, tufted; lvs. filiform-linear, mucronate, shorter than the erect ped.; pet. 5, as long as the ovate, obtuse sep., rarely 0. (2) Sandy, S. 2-6'. Lvs. 6". March, April. (S. Elliottii Fenzl.)
- 4 S. nodòsa Fenzl. Tufted, ascending, glabrous; lvs. subulate, the upper very short and fascicled: pet. much longer than the sepals. 2 Sandy shores. N.

⁻b Leaves soft, opposite, spreading......Nos. 8, 9, 10

- **1 S. rubra** Presl. Decumbent, divaricately branched, slender; stip. triangular-acuminate; lvs. linear; sep. lanceolate, with scarious margins; pet. as long, pink-red; seeds rough, marginless. 24 Sandy, near the coast. 3-6'. May-October.
- 2 S. marina. Plant thick and fleshy; caps. a third longer than the calyx, with the seeds nearly smooth and mostly margined. Otherwise like No. 1, and perhaps not distinct. 24 Salt marshes. May—October. (Arenaria, L.)

12. STIPULICIDA, Michx. (Lat. *stipula*, *cædo*; the stipules being much cleft.) Sep. with scarious margins. Pet. 5, as long as the sepals, entire. Stig. 3, subsessile. Caps. subglobous, 3-valved, few-seeded. (1) A slender, tufted, dichotomously branched herb, almost leafless, with the small flowers in terminal cymules.

S. setàcea Mx.—Dry sand, Ga. Fla. Stems almost setaceous, 6—10[']. Joints distant, with a fringe of leaves and stipules ¥^{''}. Root leaves roundish; 1^{''}. Fls. reddish. May.

13. SPERGULA, L. SPURRY. (Lat. sperge, to scatter; from the dispersion of the seeds.) Sep. 5. Pet. 5, entire. Stamens 5 or 10. Styles 5. Caps. ovate, 5-valved, seeds ∞ . Embryo coiled into a ring. (1) Herbs with fls. in loose cymes. Leaves verticillate. Stipules scarious.

8. arvénsis L. Lvs. filiform; ped. reflexed in fruit; sds. reniform, angular, rough. Cultivated grounds. 1-2f. Lvs. 1-2', many in a whorl. May-August. §

14. POLYCÁRPON, L. ALL-SEED. ($\Pi o \lambda \dot{v} 5$, much, $\varkappa \alpha \rho \pi \dot{o} 5$, fruit; the pods are many.) Sepals 5, carinate. Pet. 5, emarginate. Stam. 3-5. Style short, 3-cleft. Caps. 3-valved. (1) Low, diffuse, with whorled lys. **P. tetraphýllum** L. Lys. spatulate or oval, tapering to a petiole, some of them in

whorls of 4; stam. 3. Around Charleston, S. Car. 3-6'. Lvs. 3-5". Fls. minute. §

15. **PARONÝCHIA**, Tourn. NAILWORT. ($\Pi \alpha \rho \dot{\alpha}$, with, $\delta \nu v \dot{\xi}$, the nail; *i. e.*, the *whitlow*; supposed cure for.) Sep. 5, linear-oblong, connivent, mucronate or awned near the apex. Pet. or sterile filaments very narrow and scale-like, or none. Stam. 2, 3, or 5. Stig. 2, with the styles more or less united into 1. Utricle 1-seeded. Low herbs dichotomously branched, with scarious, silvery stips., and at least the lower lys. opposite.

§ PARONYCHIA. Sepals evidently awned at apex. Lvs. linear and subulate....Nos.1 2

- § ANÝCHIA (Mx. partly). Sep. merely mucronate at apex. Lvs. lanceolate to oval.(*)
 - * Stems procumbent, diffuse on the ground. Stamens 5.....Nos. 3, 4
 - * Stems erect, with diffusely ascending branches. Stamens 2 or 3.....Nos. 5, 6
- P. dichótoma Nutt. Glabrous, densely branched; lvs. acerose, mucronate; bracts like the leaves; cymes fastigiate, with no central flower; sepals 3-veined, cuspidate 24 kocks, Va. to Car. and Ark. 6-12'. Lvs. 1'. July-November.
- 2 P. argyrócoma Nutt. Pubescent, tufted, decumbent; lvs. linear, acute; cymes glomerate, terminal; fls. enveloped in dry, silvery bracts; sep. hairy, 1-veined, seta-ceous.y cuspidate. 24 Mts. N. H. Va. to Ga. 4-10'. Lvs. 6-10''. July.
- 8 P. herniarioides Nutt. Scabrous, diffusely branched; lvs. oval or oblong, mu cronate; the ramial alternate. Fls. sessile in the axils of the leaves; sep. 3-veined merely mucronate. 24 Sand, S. Small, flat. Lvs. 1-3". July-October.

- 4 P. Baldwinii Chapm. Diffusely branched, procumbent; leaves linear-lancoolate very acute, all opposite; flowers longer than the setaceous stipules, mostly terminal, stalked; stam. 5. (1) Dry fields, Fla. Ga. 6-10'. Lvs. few. July-Oct.
- 5 P. Canadénsis. Stem erect, slender, pubescent, many times forked, with slender or capillary branches; lvs. lanceolate, the ramial alternate; style none: utricle equalling the sepals. (1) Woody hills.
 - β. púmila. Dwarf (2-4'), tufted ; fis. closely sessile ; style as long as ovary, forked at apex. Dry hills, Md (Mr. Shriver.)

16. SIPHONÝCHIA, Torr. and Gr. $(\Sigma i \varphi \omega \nu, a \text{ tube}; \text{that is, Anychia})$ with a tubular calyx.) Sep. linear, petaloid above, coherent into a tube elow, unarmed. Pet. 5 setæ alternate with the stamens on the throat of ine calyx. Style filiform, minutely bifid; utricle included. ① Diffuse and widely spreading. Fls. in glomerate, terminal cymes, white. Jn.—Oct.

§ Calyx tube bristly with hooked hairs. Stems prostrate, diffuse......Nos. 1, 2 § Calyx smooth or merely pubescent. Stems erect.....Nos. 3, 4

- **1 S. Americàna** T. & G. Sts. pubescent in lines; lvs. lanceolate; sep. rounded, incurved at apex; fls. solitary and clustered. (i) S. Car. to Fla. 1-2f. Lvs. small.
- 2 S. diffùsa Chapm. Pubescent; lvs. lanceolate, obtuse; sep. linear, mucronate; fls. in dense cymes. (1) Pine-barrens, Fla. 1f.
- 3 S. crécta Chapm. Sts. smooth, rigidly crect, subsimple; lvs. linear; sep. lanceolate, tube smooth, furrowed. 24 Sands, Fla. 6-:24.
- 4 S. Rugèlii Chapm. Erect, dichotomous, pubescent; lvs. oblanceolate; sep. conspicnously mucronate, the tube hairy. (D. E. Fla. 1f. (Paronychia, Shutt.)

17. SCLERÁNTHUS, L. KNAWEL. ($\Sigma \varkappa \lambda \eta \rho \delta \delta$; hard, $\check{\alpha} \nu \Im \delta \delta \delta$; the calyx hardens in fruit.) Sep. 5, united below into a tube contracted at the orifice. Pet. 0. Sta. 10, rarely 5 or 2. Styles 2, distinct. Utricle very smooth, enclosed in the hardened calyx tube. (1) A prostrate, diffuse little weed, exstipulate.

5. ánnuus L. Dry fields and roadsides, N. and M. 3-6'. Lvs. linear, acute, short, partially united at their bases. Fls. very small, green, in axillary fascicles. July.

18. MOLLUGO, L. CARPET-WEED. Calyx of 5 sepals, inferior, united at base, colored inside. Cor. 0. Sta. 5, sometimes 3 or 10. Fil. setaceous, shorter than and opposite to the sepals. Anth. simple. Caps. 3-celled, 3 valved, many-seeded. Seeds reniform. Lvs. at length apparently verticillate, being clustered in the axils.

M. : erticillàta L. Lvs. cuneiform, acute; st. prostrate, branched; pedicels 1-flowered, subumbellate; sta mostly but 3. (1) Dry fields. 6-10'. White.

ORDER XX. PORTULACACEÆ, PURSLANES.

Herbs succulent or fleshy, with entire leaves, no stipules, and regular flowers. Sepals 2, united at base. Petals 5, more or less imbricated. Stamens variable in number, but opposite the petals when as many. Ovaries free, 1-celled. Styles several, stigmatous along the inner surface. Fruit a pyxis, dehiscing by a lid, or a capsule, loculicidal, with as many valves as stigmas. Seeds with a coiled embryo. Figs. 122, 123. * Stamens 4-15. Capsuie 3-valved. Leaves alternate......CALANDRINTA. 4

1. PORTULACA, Tourn. PURSLANES. Sep. 2, the upper portion deciduous. Pet. 5 (4 to 6), equal. Stam. 8—20. Style 3-6-parted. Pyxis opening near the middle, ∞ -seeded. Low, fleshy herbs.

 P. oleràcea L. Stems reddish, prostrate; leaves cuneate. ① Cultivated grounds, especially gardens. 1f. Plant very smooth, succulent. Fls. small, yellow. June—Ang.
 P. GRANDIFLÒRA. Upright; lvs. linear, acute; fls. large, rose-purple. ① S. Am. 8'.
 P. GILLÉSII. Upright; lvs. short, terete, blunt; fls. large, deep purple. ① S. Am.

2. TALINUM, Adans. Sep. 2, ovate, deciduous. Pet. 5, sessile, inserted with the 10—20 stamens into the torus. Style trifid. Caps. 3-valved, ∞ -seeded.—Herbs fleshy, smooth.

T. teretifolium L. Stem short, thick, with crowded linear lvs. at the ends of the short branches, with long (6') terminal, naked peduncles, bearing a cyme of purple, ephemeral flowers. 24 Rocks, Penn. to Ga. June-Aug.

3. CLAYTONIA, L. SPRING BEAUTY. (In memory of John Clayton, one of the earliest botanists of Virginia.) Sep. 2, ovate or roundish. Pet. 5, emargined or obtuse. Stam. 5, inserted on the claws of the petals. Stig. 3-cleft. Caps. 3-valved, 2-5-seeded.—Small, fleshy, early flowering plants, arising from a small tuber. (Stem with 2 opposite leaves.)

- 1 C. Caroliniàna Mx. Lvs. ovate-lanceolate; sep. and pet. obtuse. 24 Moist woods. Stem 3', bearing 2 (rarely 3 or 4) leaves; root leaves few; fis. white, with purple lines.
- 2 C. Virgínica L. Lvs. linear or lance-linear; sepals rather acute; petals obovate, mostly emarginate or retuse; ped. slender, nodding. 24 In low, moist grounds, more common than the first, the 2 opposite leaves 3-5' long. Flowers roseate.

4. CALANDRÍNIA, H. B. K. (*Calandrini* was an Italian botanist.) Sep. 2. Pet. 3-5. Stam. 4-15, mostly hypogynous. Style short, stig. 3. Caps. 3-valved.—Herbs of Chili and California, smooth, with alternate leaves and purple flowers.

1 C. GRANDIFLÒRA. Leaves rhomboid; raceme terminal. 4 Chili. 1f. Fls. near 2. 2 C. SPECIÒSA. Leaves linear-spatulate; flowers axillary. ① Cal. 6'. Fls. 1' broad.

ORDER XXIII. MALVACEÆ. MALLOWS.

Herbs or shrubs with alternate, stipulate leaves and regular flowers, with 5 sepcls united at base, valvate in the bud, often subtended by an involucel: 5 petals hypogynous, convolute in the bud, with the stamens ∞ monadel phous, hypogynous, and 1-celled reniform anthers. Pistils several, distinct, or united, and stigmas various. Fruit a several-celled capsule, or a collection of 1-seeded indehiscent carpels. Seeds with little or no albumen, and a curved embryo.

\$ Calyx naked, i. e., having no involucel. (b)
 \$ Calyx involucellate.—Carpels (and styles) more than 5. (a)
 —Carpels 3 to 5 only,—1-seeded. (c)
 —3— 00-seeded. (d)

1. ALTHÆA, L. MARSH MALLOW. (" $A\lambda \Im \omega$, to cure; the mucilaginous root is highly esteemed in medicine.) Calyx surrounded at base by a 6-9-cleft involucel. Styles ∞ , with linear stigmas. Carpels ∞ , 1-seeded, indehiscent, arranged circularly, and at maturity separating from the axis.

1 A. officinalis L. Lvs. soft-downyon both sides, cordate-ovate, dentate, somewhat 3-lobed; ped. much shorter than the leaves, axillary, many-flowered. 24 Salt marshes, North. 3f. Flowers large, pale purple. Sept. § Eur.

2 A. ròsea Cav. Hollyhock. St. erect, hairy; lvs. cordate, 5-7-angled, rugous; fls. axillary, sessile. (2) Gardens, often sowing itself. 6f. Flowers of all colors. §

2. MALVA, L. MALLOW. ($M\alpha\lambda\alpha\chi\eta'$, soft; on account of the soft mucilaginous properties.) Calyx 5-cleft, the involucel 3-leaved. Pet obcordate or truncate. Styles ∞ , with linear stigmas. Carpels ∞ , 1-celled, 1-seeded, indehiscent, arranged circularly, and at maturity separating from the axis.

- * Leaves triangular-hastate, crenate, scabrous. Carpels acute......No. 1
- * Leaves palmately 5-7-partedNos. 5-7
- 1 M. triangulàta Lav. Rough-hairy; lvs. triang.-hastate, crenate; the lower cordate; panicle many-flowered; carp. 10-15, slightly beaked, at length 2-valved. 24 Dry prairies, W. and S. 2-3f. Petals 1', purple. July, Aug. (Callirrhoë triang. Gr.)
- 2 M. rotundifòlia L. Low Mallow. St. prostrate; lvs. obtusely 5-lobed; cor. pale, twice as long as the calyx. 24 Waste grounds. 1f. June, July. § Eur.
- 3 M. sylvéstris L. High Mallow. St. erect; lvs. 5-7-lobed, lobes rather acute; pet. purple, 3 times longer than sepals. (2) Waysides. 3f. June, July. § Eur.
- 4 M. críspa L. St. erect; lvs. angular-lobed, dentate, crisped, smooth; fls. axillary, sessile, white. (1) Gardens and waste grounds. 5f. Junc-Aug. § Syria.
- 5 M. moschàta L. Musk Mallow. Erect; radical lvs. reniform incised. can¹¹:e 5parted, the segments linear-cuneiform, incisely lobed; peauncles shorter than the leaves. 24 'Gardens and waysides. 2f. Flowers large, roseate. July. § Eur.
- **6** M. Alcea L. Erect; rt. lvs. angular; st. lvs. 5-lobed, the lobes merely incised; stem and calyx velvety. 2t Escaped from gardens: rare. 3f. Fls. purple. July. † § Eur.
- 7 M. Papàver Cav. Poppy Mallow. Lvs. 3-5-parted, scgm. oblong or linear, entire or toothed; fis. on very long peduncles; bracteoles 1-3, subulate. 24 Open woods, South. 12-18'. Flowers bright red. May, June. (Callirrhoë Papaver Gr.)

3. LAVATERA, L. (Named in honor of the two *Lavaters*, physicians of Zurich.) Calyx subtended by an involucel of 3 united bracteoles. Stigmas ∞ , filiform. Carpels ∞ , 1-celled, 1-seeded, indehiscent, arranged circularly as in Malva.

L. TRIMÉSTRIS. Annual; lvs. roundish-cordate, the upper angular; fls. large, red, soli tary. Europe 2f. The flowers vary to white. July, Aug.

4. MODIOLA, Mœnch. (Lat. *modiolus*, a certain measure; from the fancied resemblance of the fruit to a basket.) Calyx 5-cleft, with an involucel of 3 bractlets at base. Stigmas 15—20, capitate. Carpels same number, 2-seeded, transversely 2-celled, 2-valved. (1)(2) Prostrate, with cleft leaves and small flowers.

M. multífida Mœnch. Lvs. roundish, cordate, 3-5 cleft; segm. cut-toothed; ped. soon longer than the petioles. 24 Car. Ga. and W. 1-2f. Fls 6", red. July, Aug.

5. MALVÁSTRUM, Gray. (Name altered from *Malva*.) Involucel of 1--3 leaves, or 0. Styles 5-20. Stigmas capitate. Carp. $5-\infty$, often beaked or awned, each 1-seeded.

1 M. angústum Gr. Branched, erect, hairy; lvs. lanceolate, with bristle-form stip.; invol. bristleform; carps. 5, dehiscent. ① S. Car. Ga. 1f. Fls. yellow. (Sida, Ph.)

2 M. tricuspidàtum Gr. Shrubby; rough-hirsute; lvs. ov.-oblong; stip. lanceolate; invol. 3-leaved; carp. 10-12, 3-awned at apex. 24 S. Fla. 1f. Yellow.

6. NAPÈA, Clayt. $(N\alpha'\pi\eta)$, a wooded valley between mountains, where Clayton discovered the plant.) Involucel none. Calyx 5-toothed; fls. diœcious. Styles 6—8, with filiform stigmas. Carpels as many, 1-seeded, indehiscent, beakless, circularly arranged. 24 Tall, with large, palmately divided leaves and small white flowers in leafy panicles.

N. dioìca L.-Rocky thickets, Pa. Va. to Ill. Stem weak. 4-6f. Leat segm. 5-11, lanceolate, acuminate, coarsely toothed. Flowers 4-5". August.

7. SIDA, L. Involucel 0. Fls. perfect. Calyx 5-cleft. Styles 5 or more, with the stigmas capitate or truncate. Carp. 5— ∞ , 1-seeded, finally separable. Herbs or shrubs, mostly tomentous.

- * Leaves undivided. Flowers red or yellow.-a Carpels 5 or 7.....Nos. 3, 4

-a Carpels 10-12.....Nos. 5-8

- 1 S. Napæa Cav. Nearly glabrous; lvs. palmately 5-lobed, lobes oblong, acuminate, coarsely-toothed; ped. many-flowered; carpels 10, acuminate-beaked. 24 Woods, Penn. to Va. 3f. Fls. 8". White. July.
- 2 S. alcœoides Mx. Strigous-pubescent; lvs. palmately 5-7-parted, the segments laciniate; fls. corymbed, terminal; carp. 10, acute. 24 In barren oaklands, Tenn. Ky. 1-2f. Fls. nearly as large as in the Musk Mallow. (Callirrhoë alcœoides Gr.)
- **3 S. spinòsa** L. St. rigid; lvs. ovate-lanceolate, serrate, with a spinous tubercle at the base of the petiole; stip. setaceous, shorter than the petioles or axillary peduncles; carp. 5, birostrate. (2) Sandy, M. and W. 8-16'. Yellow. July. §
- 4 S. ciliàris Cav. St. prostrate; lvs. elliptical, obtuse; stip. setaceous, and calyx ciliate; carp. 7, tipped with 2 spines; fis. red. 24 S. Fla.
- 5 S. stipulàta, Cav. Smoothish; leaves rhombic-lanceolate, dentate; stip. subulate, longer than the petioles, persistent; carpels 10-12, pointed with 2 short spines. 24 Sandy soils, S. 18'. Pet. 5", yellow. July. (S. hispida C-B.)
- 6 S. Ellióttii Torr. & Gr. Lvs. linear-oblong, obtuse at base; ped. 1-flowercd, a little longer than the petioles; caps. truncate. 24 Sandy soils, S. 3f. Yellow.
- 7 S. rhombifòlia L. Leaves rhombic-oblong, serrate, cuneate and entire at base; ped. much longer than the petioles; caps. 2-beaked. ① S. Car. to Fla. 2f. Yellow.

8. ABUTILON, Dill. INDIAN MALLOW. Calyx 5-cleft, without an involucel, often angular. Styles 5 to 20, with capitate stigs. Carps. as many, arranged circularly, each 1-celled, 3 to 6-seeded, and opening by 2 valves.

- 1 A. Avicénnæ Gært. Tomentous : lvs. roundish. cordate ; ped. shorter than the long petiole ; carp. about 15. inflated, 2-beaked, 3-seeded. ① Waste places. 3f. Yel. Jl. §
- 2 A. Hulscànum Torr. Pilous-hispid: lvs. roundish; ped. 3-5-flowered; carpels about 12; fls. near 2' broad, light purple. Fla. Lvs. small, whitish beneath.
- **3** A. STRIÀTUM. Tassel-Tree. Shrub with maple-like lvs. and tasselform fls., the column exserted. Greenhouse. 5–10f. (range-red, scarlet-veined. Brazil.
- 4 A. VEXILLÀRIUM. Shrub with long, slender, drooping branches; leaves lance-ovate, cordate, crenate-serrate; flowers droop on filiform stalks, cylindric; calyx scarlet, corolla golden yellow, column exserted. Greenhouse. Flowers all Winter.

9. MALVAVISCUS DRUMMÓNDII. GLUE MALLOW. Shrub 4f, with showy, erect, axillary scarlet flowers. Involucel of many bractlets. Pet. erect. Styles 10, with capitate stigmas. Fruit fleshy. Leaves roundish, cordate, angularly 3-lobed, coarsely crenate-toothed. Column long-exserted. § About N. Orleans.

10. PAVONIA, L. (Latin *pavo*, peacock; suggested by the colors.) Involucel of 5 or more bracteoles. Calyx 5-cleft. Carpels 5, half as many as the branches of the style, 1-seeded. Stig. capitate. Fruit dry. b

P. Lecóntii T. & G. Shrubby; lvs. sagittate-oblong, obtuse, hoary-tomentous beneath; bractlets 5; carpels blunt, rugous. 5f. Ga. (Mr. Jones), rare. Fls. 18" diam, rose-white, with a deep purple centre. (P. Jonesii C-B.)

11. KOSTELETZKYA, Presl. (In honor of *Kosteletzky*, a German botanist.) Calyx, involucel, styles, &c., as in Hibiscus. Fruit a 5-celled, de pressed capsule, with a single seed in each cell.

K. Virgínica Presl. Lvs. acuminate. cordate. ovate. dentate, upper and lower ones undivided. middle 3-lobed; ped. axillary, and in terminal racemes; fis. nodding, pistils declinate. 24 Marshes, L. I. to Ga. 3f. Fls. 24, rose-red. Aug.

12. HIBÍSCUS, L. Calyx 5-cleft, subtended by an involucel of many bractlets. Column long with the stamens lateral and the 5 stigmas capitate. Fruit a 5-celled capsule, loculicidal, the valves bearing the partitions in the middle. Seeds 3 or many in each cell. 524 Flowers large and showy. Plants often cultivated.

§ Hibiscus proper. Calyx equally 5-cleft or toothed, persistent...(a)

Stip. persistent.....Nos. 9–11 a Herbs.—b Calyx, &c., tomentous. Lvs. undivided, angularly lobedNos. 1, 2, 3 —b Calyx, &c., hispid. Leaves palmately dividedNos. 4, 5 —b Calyx, &c., glabrous.—c Leaves strongly 3-5-lobedNos. 6, 7 —c Leaves ovate, undividedNo. 8
- 1 H. Moscheùtos L. Simple, erect, hoary-tomentous; lvs. ovate, obtasely dentate, some 3-lobed; ped. long, often cohering with the petiole; pod and seeds smooth; sepals abruptly pointed. Brackish marshes. 4-6f. Fls. 6' diam., roseate. Aug.

β. flavéscens. Fls. larger (pet. 4' long), of a light sulphur-yellow, with a purple centre. Marshes, Indiana to Fla. (H. incanus Wendl.)

- **3 H. grandifiòrus** Mx. Lvs. cordate, acuminate, repand-dentate, downy both sides, hoary beneath; pods densely hirsute. S. and W. 5-7f. Pet. 44, flesh-color. Jl.-Oct
- 4 H. aculeatus Walt. Prickly-hispid; lvs. 3-5-lobed, repand-toothed; bractlets of the involucel linear, forked at the end; sep red-veined. S. 3-5f. Fls. 44', y-p. Jn. +

- 5 **H. Triònum** L. *Flower-of-an-Hour*. Hispid; leaves 3-parted, middle segments long, all sinuate-lobed; bractlets entire; calyx inflated, membranous; flowers yellowish, dark-brown centre, ephemeral, numerous. Fields and gardens. § Italy.
- 6 **H. militàris** Cav. Glabrous; leaves hastately 3-lobed, lobes acuminate, serrate; corolla tubular-campanulate; capsules smooth, ovoid-acuminate; seeds hairy. 24 Penn., S. and W. 4f. Petals flesh-color, purple at base, 3'. July, August.
- 7 H. coccíneus Walt. Very smooth; lvs. palmate, 5-parted, lobes lauceolate, acuminate; corolla expanding; caps. ovoid. 2 South. 6f. Flowers 6', scarlet. July. Aug.
- S H. Caroliniànus Muhl. Smooth; lvs. cordate, ovate, acuminate; ped. free from petiole; pet. downy inside, purple, 4'; pod globular. 24 Wilmington Isl., Ga. (Elliott).
- 9 H. Syriacus L. Althea. Tree Hibiscus. Lvs. ovate, cuneiform at base. 3-lobed, dentate; ped. scarcely longer than petiole. Fls. wh.-purp. or roseate. 8-15f. § Syria.
- 10 H. Floridànus Shutt. Hispid; lvs. ovate-cordate, obtuse, small; fls. pendulous on long peduncles, scarlet or crimson; stamens exserted. S. Fla. 4-5f. Fls. 1'.
- 11 H. ROSA-SINÉNSIS. Chinese H. Shrub with very smooth ovate pointed lvs. coarsely dentate at end; fls. very large, dark red, varying to buff, yellow, striped, and double.
- 12 H. ESCULÉNTUS. Okra. Lvs. cordate, 5-lobed, obtuse, dentate; petiole longer than the fl.; involucel about 5-leaved, caducous. (1) 5f. Cult. for its large, mucilaginous pods
- 13 H. MÁNIHOT. LVS. divided into 5-7 linear, pointed, few-toothed lobes; bractlets of the involucel 5-7, persistent. 24 China. 4f. Fls. sulph.-yellow, purp. centre. Jl. +

13. GOSSYPIUM, L. COTTON PLANT. Calyx obtusely 5-toothed, surrounded by an involucel of 3 cordate leaves, deeply and incisely toothed. Stamens very numerous, lateral. Stigmas 3, rarely 5, clavate. Seeds ∞ , involved in cotton. Flowers yellow. Fig. 201.

- 1 G. HERBÀCEUM. Leaves 3-5-lobed, with a single gland below, lobes mucronate; seeds brownish, cotton white. (1) 5f. Cultivated South. Yellow.
- 2 G. BARBADÉNSE. Sea Island C. Leaves with 3 glands on the mid-vein below; seeds black, cotton white, long and silky. (2) Coasts, South. Planted in Autumn.

ORDER XXIV. STERCULIACEÆ. SILK COTTONS.

Large *trees* or *shrubs* with simple or compound leaves, with flowers similar to those of the Mallow, except that the *anthers* are 2-celled and turned outward. *Fruit* capsular, of 3, rarely 5 carpels.

* Involucel 0. Petals 0. Carpels 5. Stamens 10-20, all fertile, monadelphous. STERCULIA.

- * Involucel 0. Petals 5, long-clawed. Carpels 5. Fertile stamens 5. S. Fla., AVENIA pusilla.
- * Involucel 3-leaved. Petals 5. Carpel 1. Stamens 5, all fertile. S. Fla..... WALTHERIA Americana.

1. STERCULIA, L. Calyx 5-lobed, sub-coriaceous Stam. monadelphous, united into a short, sessile cup. Anth. adnate, 10, 15, or 20. Carp. 5, distinct, follicular, 1-celled, $1 - \infty$ -seeded.—Trees with axillary panicles or racemes. (See Addenda.)

S. FLATANIFÒLIA L. Leaves cordate at base, palmately 3-5-lobed, smooth; calyx rotate, reflexed, greenish, in clusters. Cultivated South. 30f. Japan. A handsome tree.

ORDER XXIV. bis. TAMARISCINEÆ. TAMARISKS.

Shrubs or herbs with minute, scale-like leaves, dense slender racemes of small 4-5-parted flowers. Stamens definite, hypogynous Styles 3. Capsules 3. valved, 1-celled, ∞ -seeded. Seeds with a coma. Albumen 0. Embryo straight

TAMARIX GALLICA. Characters mainly as given in the Order. Pet and sta. 5. A beautiful shrub, 10f, with virgate branches, bearing numerous exceedingly delicate racemes of flesh-colored fls. Lvs. lance-subulate, clasping. Eur. Nearly hardy

ORDER XXV. TILIACEÆ. LINDENBLOOMS.

Trees or shrubs (rarely herbs) with simple, stipulate, alternate, dentate leaves, with *flowers* axillary, hypogynous, usually perfect and polyadelphous; with the sepals 4 or 5, deciduous, valvate in bud, the petals 4 or 5, imbricated. Stamens ∞ , with 2-celled, versatile anthers. Ovary of 2—10 united carpels, and a compound style. Fruit dry or succulent, many-celled, or 1-celled by abortion. Embryo in the axis of fleshy albumen.

1. CÓRCHORUS, L. Sep. and pet. 4 or 5. Stam. ∞ , rarely as few as the petals. Style very short, deciduous, stig. 2 to 5. Caps. roundish or siliquose, 2–5-celled, many-seeded. 5 Flowers yellow.

C. siliquòsus L. Lvs. ovate-lanceolate, acuminate, equally serrate, 4 times longer than the petioles; caps. siliquose, linear, 2-valved. La. to Fla. Flowers 4-merous.

2. TILIA, L. LINDEN OF LIME TREE. Calyx of 5, united sepals, colored. Cor. of 5, oblong, obtuse petals, crenate at apex. Stam. ∞ , somewhat polyadelphous, each set (in the N. American species) with a petaloid scale (staminodium) attached at base. Ov. superior, 5-celled, 2-ovuled. Caps. globous, by abortion 1-celled, 1-2-seeded. \mathcal{F} Lvs. cordate. Fls. cymous, cream-white, with the peduncle adnate to the vein of a large leaf-like bract.

§ Staminodia 5, petaloid, opposite the petals. Leaves mucronate-serrate....Nos. 1, 2 § Staminodia none. Stamens scarcely cohering......No. 3

I T. Americàna L. Bass-wood. Lvs. broad cordate, unequal at base, acuminate, coriaceous, smooth, and green on both sides; pet. truncate or obtuse at apex; sty. as long as the petals. Woods, N. and M. States. 70f. June. Timber valuable.

β. Wálteri. Lvs. pubescent (but green) beneath. A large tree. Va. to Fla.

2 T. heterophýlla Vent. White Bass-wood. Lvs. obliquely subcordate, scarcery acuminate, white and velvety beneath, shining, and dark green above; pet. obtuse, crenulate; sty. hairy at base, longer than the petals. River banks, W. 40f.

β. alba. Lvs. whitish and minutely tomentous beneath, servatures fine and longmucronate. Ky. and South along the mountains. 80f.

3 **T.** EUROPÈA L. *Lime Tree.* Lvs. suborbicular, obliquely cordate, abruptly acuminate, serulate, twice as long as the petioles, glabrous except a woolly tuft in the axils of the veins beneath. Parks. 40f. † Eur.

ORDER XXVI. CAMELLIACEÆ. CAMELLIAS OF TEAWORTS.

Trees or shrubs with alternate, simple, feather-veined, exstipulate leaves *Flowers* regular, polyandrous, hypogynous, cyanic, with sepals and petals unbricated, the former often unequal in size. Stamens more or less coherent at base into one, three, or five sets. Anthers 2-celled. Seeds few, with little or no albumen. Cotyledons large.

Calyx of many imbricated sepals.	Stamens monadelphousCAMELLIA.	1
----------------------------------	-------------------------------	---

 1. CAMELLIA, L. TEA ROSE: TEA. Sepals many, imbricated, the inner ones larger. Fil. ∞ , shorter than the corolla, united at base, some of the interior free. Styles united. Stigmas 3-5, acute. 55

- 1 C. JAPÓNICA L. Japan Rose. Leaves ovate, acuminate, acutely serrate, glabrous and shining; flowers terminal, solitary; petals obovate; stamens 50 (mostly transformed to petals); stigmas 5-cleft. Tree in Japan, here a beautiful greenhouse shrub.
- 2 C. (Thea) BOHÈA. Shrub 4f, .vs. elliptic-oblong, acute, some rugous, twice as long as broad; flowers axillary, white. Cultivated throughout China and Japan-rarely here.
- C. (Thea) víridis. Shrub 4f; lvs. lance-oblong, thrice longer than broad, flat, acute;
 fls. white, 1' broad. China. The leaf of these shrubs, variously cured, is the Bohea, Black, Green, or Imperial Tea.

2. STUARTIA, Catesby. Sepals 5 (or 6), ovate or lanceolate. Petals 5 (or 6), obovate, crenulate. Stamens monadelphous at base. Capsules 5 celled, 5- or 10-seeded, seeds ascending. 5 Leaves large, deciduous; flowers showy, fragrant, axillary, nearly sessile.

§ STUÁRTIA proper. Styles united. Capsule globous. Seeds lenticular.....No. 1

- § MALACHODÉNDRON. Styles distinct. Capsule ovoid. Seeds margined......No. 2
 1 S. Virgínica Cav. Leaves oval, acuminate, thin, serrulate, downy beneath; sepals
- roundish; pet. white; fil. purple, anth. blue. Va. to Fla. and La. 6-12f. Apr., May.
 2 S. pentágyna L'Her. Leaves ovate, acuminate; sep. lanceolate: one pet. smaller than the others, all cream-white; capsules 5-angled. Ky. to Ga. 10-15f. June, J.

3. GORDONIA, Ellis. LOBLOLLY BAY. Sepals 5, roundish, strongly imbricated. Pet. 5. Sta. 5-adelphous, one set adhering to each petal at base. Styles united into one. Caps. woody, 5-celled. Seeds 2 or more in each cell, pendulous. 5 With large, white, axillary, pedunculate flowers.

§ GORDONIA proper. Stam. inserted on a 5-lobed cup, as short as the style.....No. 1 § FRANKLÍNIA. Stam. inserted on the pet. at base, longer than the style......No. 9

- 1 G. Lasiánthus L. Leaves coriaceous, perennial, glabrous, shining on both sides lance-oblong; peduncles half as long as the lvs.; fis. 3'. S. 70f. July, August.
- 2 G. pubéscens L'Her. Leaves thin, serrate, deciduous, oblong-cuneiform, shining above, canescent beneath; fis. on short peduncles; sep. and pet. silky. S. 30f. May. +

ORDER XXVII. MELIACEÆ.

Trees or shrubs with exstipulate, often pinnate leaves. Flowers 4-5-merous. Stamens 6-10, coherent into a tube, with sessile anthers. Disk hypogynous, sometimes cup-like; style 1. Ovary compound, several-celled, cells 1-2-6-ovuled. Fruit fleshy or dry, often 1-celled by abortion. Seeds winged or wingless.

§ MELIEÆ. Cells of the ovary 2-ovuled. Seeds wingless, few (in a fleshy drupe)....MELIA. 1 § SWIETENIEÆ. Cells of ovary many-ovuled. Seeds winged, many in the capsule..SWIETENIA. 2

1. MELIA, L. PRIDE OF INDIA. ($M \notin \lambda \iota$, honey; the name was first applied to the Manna Ash.) Sep. small, 5, united. Pet. spreading. Sta tube 10-cleft at summit, with 10 anthers in the throat. Ovary 5-celled, 10ovuled. Style deciduous. Drupe with a 5-celled, bony nut, cells 1-seeded. 5 With bipinnate lvs. and panicles of delicate flowers.

M. AZÉDARACH L. Lvs. deciduous, glabrous, lfts. obliquely lance-ovate, acuminate, serrate. S. States. 30-40f. Fol. light; fls. lilac; drupes as large as cherries. † W. Ind

2. SWIETENIA MAHÓGONI, L. MAHOGANY TREE. A large and beautiful tree growing in South Florida, Mexico, and the Isthmus. 80–100f. The reddishbrown ornamental wood is well known. Lvs. smooth, abruptly pinnate, with 6–10 lanceovate lifts. Fls. small, yellowish, in panicles, 5-parted. Pod size of a goose-egg, ∞ -seeded

ORDER XXVIII. LINACEÆ. FLAXWORTS.

Herbs with entire, simple leaves, and no stipules; with flowers regular, symmetrical, and perfect, 5-(rarely 3 or 4)-parted. Calyx strongly imbricated in the bud, corolla contorted. Stamens definite, hypogynous, alternate with the petals. Styles distinct, with capitate stigmas, and each cell of the capsule more or less divided by a false dissepiment into two 1-seeded compartments. Seeds with little or no albumen, attached to axile placentæ. Figs. 10, 11, 130, 136, 469.

LINUM, L. FLAX. Sepals, petals, stamens, and styles 5, the latter rarely 3. Caps. 6-10-celled. Seeds 10, suspended, mucilaginous. Herbs with a bark of strong fibres, and simple, sessile leaves.

Flowers yellow, small (2-7" broad). Species (1), native. June-August(a)
a Sepals entire, 1-veined, as long as the depressed or globous capsuleNos. 1-4
a Sepals glandular-fringed, longer than the globular-ovoid capsuleNos. 5, 6
* Flowers blue, large (1' broad). In fields and gardensNos. 7, 8
* Flowers large, showy, red or yellow. Garden exotics

- 1 L. Virginiànum L. Sts. teretish, erect, corymbous above, branches short, spread ing, terete; lvs. oblong to lanceolate, mostly scattered; fis. 4-5' broad; caps. depressed, styles distinct. Woods and hills. 2f. Prof. Porter distinguishes No. 2 from this.
- 2 L. striatum Walt. St. striate, often clustered; branches short, ascending, sharply about 4-angled; lvs. lance-oblong, the lower mostly opp. Fls. and fr. as in No. 1. Com.
- 3 L. simplex Wood. Stem single, terete, corymbed at top, branches subterete; leaves linear-subulate, erect, scattered; caps. globular; sty. distinct; fls. 3", few. S-W. 18'.
- 4 L. diffusum Wood. Stems very slender, ascending, with long, filiform, diffuse, angular branches; lvs. veiny, lance., spreading, 9-12"; fis. 2" broad; pod depressed. W.
- 5 L. sulcatum Riddell. St. and branches *sulcate*, strict, erect; lvs. lin., erect; sep. 3veined, acuminate; sty. united below. Conn. to Ill., and S. 1-1ff. (L. rigidum C-B.)
- 6 L. rígidum Ph. Stems low and branches rigidly erect, angular-sulcate; lvs. linearsubulate, erect; sepals lance-linear, twice longer than the pod. Iowa, Min., and W.
- 7 L. USITATÍSSIMUM L. Common Flax. (1) Leaves lance-linear; panicle corymbous; flowers axillary; petals crenate. 2f. The strong bark yields *linen*. § Europe.
- 8 L. PERÉNNE L. 24 Leaves linear; flowers supra-axillary and terminal; petals retuse, light blue. California! and Europe. Flowers numerous and showy.
- 9 L. GRANDIFLORUM. Leaves lance-elliptical; flowers red; styles 5. N. Africa. 10'.

10 L. TRÍGYNUM. Leaves elliptical; flowers yellow; styles 3. E. India. 1f.

URDER XXIX. ZYGOPHYLLACEÆ. BEAN CAPERS.

Herbs, shrubs, or trees, with leaves opposite, mostly pinnate (not dotted) and stipulate. Flowers 4- or 5-merous, corolla imbricate or convolute in bud. Stamens twice as many as the petals, hypogynous, distinct, each often with a scale. Overy compound; style and stigma $1 \cdot$ fruit and seeds as in Linaceæ.

1. TRIBULUS, L. Sep. and pet. 5, imbricated. Stam. 10, the 5 alternate with the petals placed inside of hypogynous glands. Ov. sessile, cells 1-5-seeded, separating into nutlets.—Loosely branched, prostrate herbs, with abruptly pinnate leaves. Flowers solitary (yellow).

- 1 T. (Kallstræmia) máximus L. Lfts. 3 or 4 pairs, oblong or oval, oblique, the ter minst pair largest; nutlets 10, tubercled, 1-seeded. Ga. Fla. 1-2f.
- 2 T. cistoides L. Lfts. 5-8 pairs, linear-lanceolate, subequal; ped. elongated, with one large flower; nutlets 5, spiny, 2-5-seeded. Fla. 2f.

2. GUAIÀCUM, Plm. LIGNUM-VITÆ. Sep. and pet. 4 or 5, deciduous, imbricated. Stam. 8—10. Ovary stipitate, 2–5-celled, cells many-ovuled, in fruit 1-seeded. 55 Wood hard and resinous. Lvs. abruptly pinnate. Ped. in pairs, between the stipules, 1-flowered.

G. sanctum L. Branches jointed; lfts. 3 or 4 pairs, oblong, oblique, entire, mucro nate; ped. short; pet. obtuse, blue. S. Fla. 20f. Bark white.

ORDER XXX. GERANIACEÆ. GERANIA.

Herbs or shrubs with perfect, hypogynous, syn.metrical and regular, or irregular, 3-5-merous flowers. Stamens as many or twice as many as the sepals, often some of them abortive or rudimentary Carpels as many as the sepals, 1-few-seeded, mostly separating from the persistent axis at maturity.—A large and rather incongruous order, as now constituted (by Bentham and Hooker), including the following tribes, heretofore regarded as orders. Figs. 27, 28, 172, 243, 265, 270, 315, 350, 497.

§ Flowers regular.—a Styles 5. Carpels several-seeded. TRIBE I.

1. ÓXALIS, L. WOOD SORREL. (' $O\xi v_5$, acid: the herbage is sour.) Sep. 5, distinct or united at base. Pet. contorted. much longer than the calyx. Sty. 5, capitate. Caps. oblong or subglobous. Carp. 5, 1 to several-seeded. Mostly 24, with palmately trifoliate leaves and inversely heart-shaped leaflets. Figs. 265, 270, 497. (See Addenda.)

1 O. Acetosélla L. Acaulescent; scape longer than the leaves, 1-flowered; leaflets broad-obcordate with rounded lobes; styles as long as the inner stamens; root den tate, scaly. 24 Woods, Can. and N. States. 6'. Flowers white-purple. June. 2 O. violàcea L. Bulbous at base, acaulescent; scape umbelliferous; flowers nod ding; tips of the calyx fleshy; styles shorter than the outer stamens. 24 An elegan species in rocky woods. 5-8'. Flowers violet-purple. May.

3 0. strícta L. Caulescent; st. branching; ped. umbelliferous, longer than the peti oles; style as long as the inner stamens; flowers yellow. ① Fields. 3--9'. Common.
4 0. FLAVA. Scapes 6', 1-flowered; leañets 6-10, linear; petals yellow, 1' long. S. Afr 5 0. RòSEA. Stem erect, 8'; lfts. 3, obcordate; pet. roseate, 1', toothed; fls. many. Chili 6 0. VERSÍCOLOR. St. 3'; lfts. 3, linear, emarginate; pet. crimson-striped outside. S. Afr.

2. FLOERKEA, Willd. FALSE MERMAID. Sep. 3, longer than the 3 petals. Glands 3. Stam. 6. Ovaries 3, tuberculate. Style 2-cleft. Fruit separating into 3 achenia. (1) Small aquatics, with pinnately-divided leaves.

F. proserpinacoides Lindl.—By streams and lakes, Vt. to Penn., and W. 6-10'. Prostrate; lvs. alternate; lf. segm. 3-5; pet. white, shorter than the sepals; ach. 1-3

3. LIMNANTHES, Br. Sepals 5, valvate. Pet. 5, convolute, with 5 glands. Stamens 10. Style 1. Ovary deeply 5-lobed, separating 5 achenia in fruit.—Herbs with pinnate leaves and cut-lobed leaflets. Summer.

L. Douglásii. Stems low, diffuse, with numerous axillary flowers 1' broad; petals wedgeoblong, yellow, edged with white, notched at the end. California.

4. GERÁNIUM, L. CRANE'S BILL. Sep. and pet. 5, regular. Stam. 10, all perfect, the 5 alternate ones longer, and each with a gland at its base. Fruit at length separating from the axis into 5 achenia, and uplifted on the smooth curving styles.—Herbs. Ped. 1–3-flowered. Fig. 172.

- * Petals emarg. or 2-lobed, not longer than the sep., roseate. May—Aug...Nos.3—6 European perennials, cultivated, hardy, ornamental......No. 7
- **G. maculàtum** L. Stem erect, angular, dichotomous, retrorsely-pubescent; leaves palmately 3-5-lobed, lobes cuneiform and entire at base, incisely serrate above, radical ones on long petioles. 24 Woods. 2f. Flowers 1', purple. April—June.
- 2 G. Robertianum L. Herb Robert. Stems weak, reddish, diffuse, hairy; leaves pinnately 2-parted to the base, the segments pinnatifid, and the pinnæ incisely toothed; capsule rugous, seeds smooth. (2) Rocky places, Can. to Va. 1-2f. Jn.-Au7.
- **3 G. Caroliniànum L.** Erect, at length diffuse, hairy; leaves 5-7-parted; segm. 3lobed, lobes entire or incised; ped. short, clustered at the ends of branchlets; sepals awned; fruit hairy; seeds *obscurely* reticulated. ① Hills, dry or rocky. <u>1</u>-2f.
- 4 G. disséctum L. Diffuse, pubescent; lvs. 5- or 7-parted, segm. Enear, many-cleft; seeds strongly reticulated. (1) Fields: rare. 6-12'. Fruit some hairy. § Europe.
- 5 G. pusíllum L. Procumbent, puberulent; lvs. round-reniform, 7-parted, segments 3-cleft; sepals *awnless*; seeds smooth. (1) Waste grounds, N. Y., Mass. 1f. § Eur.
- 6 G. columbinum L. Slender, decumbent, with long, filiform flower-stalks; sep. awned, enlarged after flowering; fr. glab.; lvs. and sd. as in No. 4. Penn. (Porter). §
- G. BANGUÌNEUM. Erect, diffuse ; leaf-lobes 3-cleft, linear ; ped. 1-flowered ; flowers red, large. β. LANCASTRIÉNSE is prostrate, with smaller (1') purple flowers, very elegant.

5. ERÒDIUM, L'Her. HERON'S BILL. Sep. and pet. 5, regular. Stam. 10, the 5 shorter ones sterile. Styles in fruit spirally twisted and bearded.

E. cicutàrium Sm. Diffuse, hairy; leaves pinnately divided, segments sessile, pinnatifid, incised, acute; ped. several-flowered; petals equal, red. (1) Lake shores, N.
 Y.: rare. In California it is one of the chief forage plants. May, June. § Europe.

6. PELARGONIUM, L'Her. STORK'S BILL. GERANIUM. Sepals 5,

the upper one ending in a nectariferous tube extending down the pedicel. Petals 5, irregular, longer than the sepals. Filaments 10, 3 or 5 of them sterile. 5 or herbs. A large and ornamental genus, chiefly S. African, everywhere cultivated. Lower leaves (in plants raised from the seed) opposite, upper alternate. Figs. 243, 350.

§ Filaments 10, the alternate ones bearing anthers. Upper petals larger......Nos. 1, 2

1 P. TRÍCOLOR. Lvs. lanceolate, cut-dentate; 3 lower pet.white, 2 upper purp.-blk. 18'. 24 2 P. CORIANDRIFÒLIUM. Lvs. bipinnate; pet.white, upper purp.-veined, very large. 1f. 3 3 P. ZONÀLE. Horse-shoe G. Lvs. orbicular-cordate, slightly lobed, toothed, zoned; stem

fleshy, shrubby; petals cuneiform; flowers umbelled. 2-3f. Numerous varieties. **B. MARGINATUM.** Silver-edged; the leaves bordered with white.

4 P. ÍNQUINANS. LVS. round, reniform, scarcely lobed, crenate viscid; pet. obov. 2-3f 5 P. FOTHERGÍLLII. LVS. renifm., 5-lobed, crenate, zoned; stip. toothed, ciliate; pet. obov. 6 P. FLAVUM. Carrot-leaved Geranium. Lf. lobes many, lin., hairy: fls. brownish-yell. 7 P. TRISTE. Mourning Ger. Lf. lobes lin., acute; pet. dark-green, obl., obovate. 1f. 8 P. FRAGRANS. Nutmeg G. Branches thick velvety, lvs. very soft; stip. subulate. Fls. w. 9 P. ALCHEMILLOIDES. Villous; lvs. 5-lobed; peduncle few-flowered; fls. pink-colored. 10 P. PELTÀTUM. Ivy-leaved G. Br. fleshy; lvs. more or less peltate; fls. purplish. 11 P. GLAUCUM. Glabrous, glaucous; lvs. lanceolate, entire; ped. 1-2-flowered. 3f. 12 P. GRANDIFLÒRUM. Glab., glaucous; lvs. 5-lobed, toothed at end; fls. very large. 3f.

13 P. BETULÌNUM. Smoothish; lvs. ovate, unequally serrate : ped. 2-4-flwd. Pale. 3f. 14 P. WATSONII. Lvs. orbicular, cordate, some lobed, dentate ; fls. large, varieg. 3f. 15 P. GRAVÈOLENS. *Rose Ger.* Lvs. palmately 7-lobed ; lobes toothed, revolute, very

rough at the edge; umbels many-flowered, capitate. 3f. Very fragrant. **16 P.** BÁDULA. Lvs. palmate, rough, lobes narrow, rolled at edge, pinnatifid with linear

segments; umbels few-flowered. 3f. Fragrance mint-like.

17 P. QUERCIFÒLIUM. Hispid; lvs. sinuate-pinnatifid, often spotted, cordate at base. 3f.

7. TROPÆOLUM, L. INDIAN CRESS. NASTURTION. Fls. irregular. Sep. 5, produced behind into a free spur. Pet. 5, the 2 upper exterior, different from the 3 lower. Stamens 8, free, unequal, perfect. Style 1. Ov. 3-celled, in fruit separating from the short axis into 3 hardened achenia. b Leaves alternate. Stipule 0. Flowers showy. S. Am. (See Addenda.) 1 T. MAJUS L. Nasturtion. Lvs. peltate, roundish, repand on the margin; pet. obtase,

the 3 lower fringed and long-clawed at base. Flowers orange, scarlet, crimson, &c. 2 T. MINUS. *Smaller*, erect; petals pointed, yellow to white, or variegated. Peru.

8 T. LOBBIANUM. Leaves peltate, reniform, wavy, fixed near the base; petals crenate, rounded, the 2 lower fringe-toothed, all shades of red. Columbia.

4 T. PEREGRÌNUM. Canary Bird. Leaves deeply 5-7-lobed, lobes toothed; spur hooked; petals light yellow, 2 of them large and much lobed. A tall climber.

8. IMPATIENS, L. TOUCH-ME-NOT. Sepals colored, 4 (the upper one double), the lowest saccate and spurred. Petals apparently 2, each of them 2-lobed (double). Stamens 5, short, the anthers cohering at apex; caps. often 1-celled by the obliteration (f the dissepiments, 5-valved, bursting elastically.—Sts. smooth, succulent, tender, subpellucid, with tumid joints. Lvs. simple, alternate, serrate. Figs. 27, 28, 315.

- 1 I. pállida Nutt. Lvs. oblong-ovate; ped. 2-4-flowered, elongated; lower gibbons sepals dilated-conical, broader than long, with a very short, recurved spur; fis. pale yellow, sparingly dotted. ① Wet shades. 3-4f. Aug.
- 2 I. fulva Nutt. Lvs. rhombic ovate; ped. 2-4-flowered, short; lower gibbous sepal acutely conical, longer than broad, with an elongated, closely reflexed spur; fis. deep orange, spotted. (1) Damp grounds. 2-3f. July.
- 8 1. BALSÁMINA L. Balsamine. Lvs. lanceolate, serrate, upper ones alternate; pcd clustered; spur shorter than the flower. (1) E. India. Fls. large, white and red.

ORDER XXXI. RUTACEÆ. RUEWORTS.

Herbs or generally shrubs or trees, with the exstipulate leaves dotted with transparent glands containing aromatic or acrid oil. Flowers regular, 3-5-merous, hypogynous, perfect or polygamous. Stamens as many or twice as many as the sepals. Pistils 2-5, separate or united, styles united. Fruit capsular or separating into its component, 1-2-seeded carpels.

1. RUTA, L. RUE. Calyx of 4 or 5 sepals, united at base. Petals 4 or 5, concave, obovate, distinct, torus surrounded by 10 nectariferous pores. Stamens 10. Capsule lobed. 24 b, mostly European.

R. GRAVÈOLENS L. Common Rue. Suffruticous, nearly glabrous; leaves 2-3 pinnately divided, segm. oblong, obtuse, terminal ones obovate-cuneate, all entire or irregularly cleft; fls. terminal, corymbous; pet. entire. 3f. Greenish.

2. DICTÁMNUS, L. FRAXINELLA. Calyx of 5, deciduous sepals; petals 5, unguiculate, unequal; filaments 10, declinate, with glandular dots; capsules 5, slightly united. 24 Native of Germany.

D. ALBUS Willd. St. simple; lvs. pinnate, the rachis more or less winged; fis. in a large, terminal, erect panicle.—In gardens. 1—2f. Fls. showy.

 β . RUBRA. Fls. purple; rachis of the leaves winged.

3. ZANTHÓXYLUM, L. PRICKLY ASH. $(\Xi \alpha \nu \Im \delta \delta, \text{ yellow}, \xi \delta \delta \rho \nu, wood.)$ Sepals 4 or 5, rarely obsolete. Petals 4 or 5. Sta. as many as the petals in δ , rudimentary in \Im . Pistils 3 to 5, distinct below, with coherent styles, in fruit crustaceous, 2-valved, 1 or 2-seeded. 55 With sharp prickles, pinnate leaves, and small, greenish flowers.

- **Z. Americànum** Mill. Prickly; lfts. 9--11, ovate, sessile, equal **at** base; **umbels** axillary; sep. obsolete, pet. 5. Woods. 10--12f. Flowers before leaves April.
- 2 Z. Caroliniànum Lam. Prickly; lfts. 7-13, fulcate-lanceolate, very inequilat eral, petiolulate; panicles terminal; sep minute; bark warted around the prickles
 S. States. Tree, 20-40f. Bark intensely pungent to the taste. May.

β. fruticosum. Shrub; lvs. ovate-oblong, scarcely pointed; ovaries 2. S.

8 Z. Floridànum N. Satin-wood. Unarmed; lfts. 5-7, φ ovate-lanceolate, δ el liptical, obtuse; fls. minute; carp. 1-2, 1-seeded, obovo.d. S. Fla.

4. PTELEA, L. SHRUB TREFOIL. ($\Pi \tau \varepsilon \lambda \dot{\varepsilon} \alpha$, the elm-tree; from the resemblance of the fruits.) $\mathfrak{P} \not{\varepsilon} \dot{\varepsilon}$. Sepals 3 to 6, mostly 4, much shorter than the spreading petals. $\dot{\varepsilon}$ Stamens longer than the petals and alternate with them, very short and imperfect in \mathfrak{P} . Ovary of 2 united carpels. Stig 2. Fruit 2-celled, 2-seeded samaræ, with a broad, orbicular margin. $\overset{}{\mathcal{P}}$ Lvs 3-5-foliate. Fls. cymous.

- 1 P. trifoliàta L. Lvs. 3-foliate, lfts. sessile, ovate, short-acuminate, lateral ones in equilateral, terminal ones cuneate at base; cymes corymbous; stam. mostly 4; style short. Rocky places, N. Y. S. and W. 6-8f. Fls. white, odorous. June.
- β. mollis. Young branches, petioles and leaves beneath, soft-downy and hoary. S
 P. Baldwinii T. & G. Lvs. glabrous, very small; lfts. sessile, eval, obtuse; stam 4; stig. sessile. E. Fla. 1f. Branches numerous and scraggy. Lvs. 1/.

ORDER XXXII. AURANTIACEÆ. ORANGEWORTS.

Trees or shrubs, glabrous, abounding in little transparent receptacles of volatile oil, with *leaves* alternate, 1-3-foliate or pinnate. *Flowers* regular, 3-5-merous. *Stamens* with flat filaments, distinct or cohering in one or several sets. *Ovary* compounded of several united carpels. *Style* 1. *Fruit* (hesperidium) many-celled, pulpy, covered with a thick rind. *Albumen* 0 *Cotyledon* thick. Figs. 37, 363.

CITRUS, L. (*Kitptov*, the citron; the fruit of one of the species.) Sepals and petals in 5's. Anthers 20, or some other and higher multiple of 5, versatile, the connectile articulated to the filament. Filaments dilated at base, polyadelphous. Berry 9-18-celled. 55 A noble E. Indian genus Lvs. 1-foliate, entire, evergreen. Petiole often winged.

- 1 C. vulgàris Risso. *Bitter Orange*. Petiole winged; lvs. elliptical, acute, crenu late; stam. 20; fruit globular, with a thin rind and bitter pulp. S. Fla. 15-20f. § Asia.
- 2 C. AURÁNTIUM. Sweet Orange. Petiole scarcely winged; lft. oblong, acute, crenulate; sta. 20; fr. globous, with a thin rind and sweet pulp. 30f.
- 3 C. LIMÉTTA. Lime. Petioles not at all winged; lft. ovate-orbicular, serrate; stam. 30; fr globous, with a sweet pulp, and a protuberance at top. 15f.
- 4 C. LIMÒNUM. Lemon. Petioles somewhat winged; sta. 35; fr. oblong-spheroid, with a thin rind and very acid pulp. 20f. Fr. yellow.
- 5 C. DECÙMANA. Shaddock. Petioles broadly winged; lft. obtuse, emarginate; fr very large, with a thick rind. 15f. Fruit green-yellow. 5' diam.

ORDER XXXIV. SIMARUBACEÆ. QUASSIAWORTS.

Trees or shrubs with bitter bark, alternate, exstipulate, pinnate leaves, and small, diclinous, regular, hypogynous 3-5-merous flowers. Stamens as many or twice as many as the *petals*, inserted on the hypogynous disk. Styles 2-5. Ovaries 2-5-lobed or carpelled. Fruit 1-5 one-seeded drupes or samaras. 1. SIMARÙBA, Aubl. QUASSIA. (Its name in Guiana) 55

8. glauca DC. Leaflets 4-8, alternate, entire, obtuse, coriaceous. S. Fla. Tree, 40t.

2. AILANTHUS, Desf. CHINESE "TREE-OF-HEAVEN." (Ailante, ita name in China.) ♀ ダ ♂ Sep. 5. Pet. 5. ダ Stam. 2—3. Ov. 3—5. Sty. lateral. Fr. 1-celled, 1-seeded samaræ, with oblong margins. ♂ Stam. 10. ♀ Ovaries, styles, and samaræ as in ♀. 55 Oriental, with odd-pinnate leaves. Flowers in panicles.

1. GLANDULÒSUS Desf. Lfts. glabrous, 21-41, ovate or oblong-lanceolate, acuminate, with 1 or 2 obtuse, glandular teeth each side at base, terminal one long-petiolate. Parks, &c. 40-60f. Flowers greenish, ill-scented. June.

ORDER XXXV. BURSERACEÆ. BURSERIDS.

Trees and shrubs abounding in balsam or resin, with exstipulate, compound, dotted leaves, and small, regular, racemed or panicled flowers. Calyx 3-5-cleft. Petals 3-5. Stamens twice as many. Ovaries free, 1-5celled. Stigmas 2-5-lobed, ovules 2 in each cell. Fruit drupaceous, indehiscent, rarely capsular. Seeds pendulous, exalbuminous.

* Flowers perfect, 4-parted. Stamens 8, hypogynous. Leaves opposite...... AMYRIS. 1

• Flowers polygamous, 4 and 6-parted. Stamens 8-10 ; disk crenate. Leaves alternate....BURSERA. 2

1. AMÝRIS, L. BALM-OF-GILEAD. ($M \dot{\nu} \dot{\rho} \dot{\rho} \alpha$, myrrh; from its perfumed gum.) 55 Flowers in panicles, white.

A. Floridàna N. Torch-wood. Shrub; lvs. opposite, trifoliate, on short petioles lfts. ovate, obtuse, entire, petiolulate; drupes small, globular. E. Fla.

2. BURSERA, L. (To Joachin Burser, an Italian botanist.) 5 B. gummífera Jacq. Lfts. 3-9, petiolulate, ovate, acum., entire; fls. racemed. Fla.

ORDER XXXVI. ANACARDIACEÆ. SUMACS.

Trees or shrubs with a resinous, gummy, caustic, or even milky juice. Leaves alternate, simple, or ternate, or unequally pinnate, without pellucid dots. Flowers with bracts, commonly diæcious, small. Sepals 3-5, united at base, persistent. Petals of the same number (sometimes 0), imbricated. Stamens as many as petals, alternate with them, perigynous. Ovary 1celled, free. Ovule 1. Stigmas 3. Fruit a berry or drupe, usually the tatter, and 1-seeded. Albumen 0.

RHUS, L. SUMAC. (The ancient name, from Celtic, *rhudd*, red?) Calyx of 5 sepals united at base. Pet. and stam. 5. Sty. 3. Stig. capitate. Fruit a small, 1-seeded, subglobous, dry drupe.—Small trees or shrubs. Leaves alternate, mostly compound. Flowers often, by abor tion, imperfect, greenish.

- Leaves simple. Flowers perfect (or all abortive in cultivation)......Nos. 10, 11
 Leaves compound. Flowers directors. A tree. South Florida.....No. 3
 Leaves compound. Flowers polygamous...(a)
 a Flowers in clustered spikes preceding the trifoliate leaves....No. 8
 a Flowers in axillary panicles, with the 3-13-foliate lvs. Poisonous....Nos. 5-7
 a Flowers in terminal thyrses, with the 9-31-foliate leaves...(b)
 b Common petiole winged between the leaflets......Nos. 1-3
 - o common petrole not winged......
- **1 K. glabra L.** Lvs. and branches glabrous; lfts. 11-31, lanceolate, acuminate, acutely serrate, whitish beneath; fr. red, with crimson hairs. Thickets and pastures. 6-15f. The fruit hairs are extremely acid, and dye red. June, July.
- 2 R. týphina L. Branches and petioles densely villous; lfts. 11-31, oblong-lanccolate, acuminate, acutely serrate, pubescent beneath; fruit red, with crimson hairs. Rocky soils. 10--20f. Branches thick, straggling. Drupes acid. Wood yellow. June.
 B. laciniata. Lfts. irregularly gashed; panicles leafy. Hanover, N. H. (Ricard.)
- 3 R. pùmila Mx. Procumbent, villous-pubescent; lfts. 9-13, oval or oblong, coarsely toothed; drupes red, silky pubescent. N. Car. to Ga. Branches 1f high.
- 1 R. copallina L. Mouniain Sumac. Branches and petioles publicscent; lfts. 9-21, oval-lanceolate, mostly entire, unequal at base, common rachis winged; fls. in dense panicles; drupes red, hairy. Rocky hills. 2-Sf. Thyrse sessile. July.
- 5 R. venenàta DC. Poison Sumac. Dog-wood. Very glabrous; lfts. 7-13, oval, abruptly acuminate, very entire; panicles loose, axillary, pedunculate; drupes greenishyellow, smooth. Swamps. 10-15f. Flowers green. Very poisonous. June.
 6 R. Toxicodendron L. Poison Oak. Poison Ivy. Erect, or decumbent; lvs. pu-
- 6 **R. Toxicodendron** L. Poison Oak. Poison Ivy. Erect, or decumbent; lvs. pubescent; lfts. 3, broadly oval, acuminate, angular, or sinuate-dentate; drupes smooth, roundish. Thickets, Can. to Ga. Perhaps runs into the next. June.
- 7 R. radicans L. *Climbing Ivy.* Stems climbing by means of innumerable radicating tendrils; leaflets ovate, smooth, entire. Ascending trees, 20-50f. Drupes dull white. Stems 1-2' in thickness. June.
- **S R. aromática** Ait. Sweet Sumac. Lfts. sessile, incisely crenate, pubescent beneath, lateral ones ovate, terminal one rhomboid; fls. in close aments, preceding the leaves; drupe globous, villous. Copses. 2-6f. Flowers yellowish. May.
- 9 R. Metòpium L. Lfts. 3-7, smooth, entire, ovate, acumin.; drupes smooth. 30t.
 10 R. cotinoides N. Smooth; lvs. oval, obtuse, entire, acute at base, thin, long-stalked: fis. minute, in loose, erect panicles; drupes smooth. Mts. Car. to Ark.
- 11 R. CÓTINUS. Venetian Sumac. Smoke-tree. Lvs. obovate, entire, thick; flowers mostly abortive, pedicels diffusely branched and hairy. Italy.

ORDER XXXVII. SAPINDACEÆ. MAPLEWORTS.

Trees, shrubs, or rarely herbs, with simple or compound, alternate or opposite leaves. Flowers mostly unsymmetrical, often irregular, 4 or 5-mercus, with the sepals and petals both imbricated in the bud, with the stamens 5 to 10, inserted on a hypogynous or perigyhous disk. Ovary 2 or 3-celled, lobed, and with 1 or 2 (rarely more) ovules in each cell. Embryo mostly curved or convoluted, with little or no albumen. Figs. 100, 224, 230, 236, 237, 308, 312, 444, 515.

I. ACERINEÆLeaves opposite. Flowers regular, diclinous. Fruit a double samara(a)	
a Disk annular. Petals 4 or 5 or 0. Leaves simple, lobedACER.	1
a Disk obsolete. Petals none. Leaves pinnately compoundNEGUNDO.	2
II. STAPHYLE ÆLeaves opposite. Flowers regular, perfect. Stamens 5STAPHYLEA.	3
III. HIPPOCASTANE Leaves opposite. Flowers irregular. Stamens 7 ESCULUS.	1
IV SAPINDE & Leaves alternate. Flowers polygamo-directous	

b Petals 5 or 4, regular. Ovules 2 or 3 in each sell. Trees. South Florida HYPELATE.

b Petals 4, irregular. Trees. KCELREUTERIA, NO. 7.......Vines......CARDIOSPERMUM. 6 b Petals 0. Ovules 2 in each cell. Capsules winged. Shrub. South Fla....DODONEA.

1. ACER. MAPLE. (The ancient name, meaning sharp, vigorous.) Fls. polygamous. Cal. 5 (4-9)-cleft. Cor. 5 (4-9)-petalled or 0. Stam. 8 (4.-12). Sty. 2. Samaræ 2-winged, united at base, by abortion 1-seeded.

Leaves simple, palmately 5 (rarely 3–9)-lobed. (See Addenda.)

- § Flowers in dense, umbellate clusters, appearing before the leaves Nos. 1. 2
- § Flowers in pendulous corymbs, yellowish, appearing with the leaves......Nos. 3, 4
- § Flowers in terminal racemes, greenish, appearing after the leaves...(a)
- A. rubrum L. Red Maple. Swamp Maple. Lvs. cordate, acutely and incisely toothed, the sinnses acute, glaucous beneath; ped. elongated in fruit; pet. linear-oblong; ovaries and fruit smooth. Swamps. 30-S0f. Flowers red. April. β. tridens. Lvs. 3-lobed, rounded at base; flowers yellowish. N. J. to La. 20f.
- 2 A. dasycárpum Ehrh. White Maple. Lvs. truncated at base, unequally and in cisely toothed, with obtuse sinuses, white and smooth beneath; fls. greenish, with downy ovaries; petals 0; fruit divergent. Woods. 50f. Mar. April. (Fig. 308.)
- **3 A. saccharinum** L. Sugar Maple. Rock Maple. Lvs. subcordate at base, acu minate, remotely toothed, with rounded and shallow sinuses, glaucous beneath; fls. pedunculate, pendulous. Rocky hills, N. 40-70f. A noble tree.
- **4** A. nigrum Mx. *Black Maple. Sugar Tree.* Lvs. cordate, with the sinus closed, lobes divaricate, sinuate-dentate, paler beneath, with the veins beneath and the petioles public public public flowers on long, slender pedicels. Vt. to Ind. 30-70f. April.
- 5 A. Pennsylvánicum L. Striped Maple. Whistle-wood. Lvs. with 3 acuminate lobes, rounded at base, sharply denticulate. smooth; rac. simple, pendulous. Can. to Ga. and Ky. 10-15f. Bark striped, green and black. May.
- 6 A. spicatum Lam. Mountain Maple-bush. Lvs. 3-5-lobed, acute, dentate, pubes cent beneath; racemes erect, compound. Woody hills. 5-8f. Flowers greenish.
- A. PSEUDO-PLÁTANUS L. Sycamore. Lvs. cordate, glabrous, glancous beneath, lobes acute, uncqually dentate; raceme pendulous; fruit smooth. Europe. 40f.
- 8 A. MACROPHYLLUM Ph., with large, very deeply 5-lobed leaves, nodding racemes, and hispid fruit. Oregon. 30-50f.

2. NEGÚNDO, Mœnch. Box ELDER. ASH MAPLE. Flowers & S. Corolla 0; & flowers racemed, & fascicled. Disk O. Stam. 3—5. Fruit as in the last genus. Leaves compound, pinnately 3-5-foliate.

N. aceroides Mœnch. Lfts.ovate, acuminate, remotely and unequally dentate; **?rac.** long and pendulous; fruit oblong, with large wings dilated upward. A handsome tree, 20-40f. N.Y. to Car. and Cal. 1 April.

3. STAPHYLEA, L. BLADDER-NUT. (A Greek word, meaning a cluster of grapes; from the form of the fructification.) Fls. §. Calyx of 5, colored, persistent sepals. Pet. and sta. 5. Styles 3. Caps. 2—3, membranous and inflated, slightly cohering. Seeds not arilled. 5 With opposite, 3-7-foliate lvs. and caducous stipules. Fig. 444.

- **5. trifòlia** L. Lfts. 3, ovate, acuminate, serrate; fls. in drooping cymous panicles, white; pet. ciliate at base. Can. to Car. and Tenr. 6-10f. Caps. large. May.
 - 4. ÆSCULUS, L. HORSE CHESTNUT BUCKEYE. Calyx 5-toothed

cor. irregular, 4 or 5-petalled; sta. 7 (6 to 8), distinct, unequal. Style filiform, ov. 3-celled, with 2 ovules in each cell. Fruit coriaceous, 2-3-valved, containing but one or very few large, smooth seeds. Cotyledons thick, bulky, inseparable. 55 With opposite, digitate, 5-7-foliate leaves. Fls. • paniculate, terminal. Fig. 100.

- 1 Æ. Pàvia L. Lfts. 5-7, shining, oblong-lanceolate; cuneate at base, short-acuminate, finely serrate; fis. red, very irregular in a lax, thyrsoid raceme; pet. as long as stamens; cal. half as long as the two shorter petals. S. 3-10f. Mar. April.
- 2 Æ. parvifiòra Wal^{*}. Lfts. 5—7, obovate, acuminate, serrate, velvety canescent beneath; petars 4 white, somewhat similar and spreading, thrice shorter than the capillary stamens. S. 2—9f. Fls. very numerous.
- 3 Æ. flava Ait. Sweet Buckeye. Lfts. 5-7, oblong or elliptic-ovate, acuminate, serrulate, pubescent beneath; fls. in thyrsoid, pubescent panicles; pet. very unequal, longer than the stamens. W. and S. 6-70f. Yellowish. April, May.
- 4 Æ. glabra Willd. Ohio Buckeye. Lfts. 5, oval or oblong, acuminate, serrate or ser rulate; fls. in lax thyrsoid panicles; pet. 4, half as long as the stamens. River banks, W. Tree 20-40f, ill-scented, with small, yellowish flowers. June.
- 5 Æ. HIPPOCÁSTANUM L. Horse Chestnut. Lvs. of 7 obovate lfts.; pet. 5, spreading; fruit prickly. Tartary. A noble tree, in parks, &c. June.

5. SAPINDUS, L. SOAP-BERRY. (That is, by syncope, Sapo Indicus, Indian soap.) Sep. 4 or 5. Pet. as many, or one less by abortion, appendaged inside with a gland, scale, or beard. Sta. 8—10. Stig. 3. Fruit 3, connate, globular, fleshy carpels, often by abortion 2 or 1. Seed large, solitary. $\overline{5}$ Lvs. alternate, pinnate, exstipulate.

S. marginàtus Willd. Common petioles wingless; lfts. 9-18, ovate-lanceolate, longpointed, very inequilateral, short-stalked, entire, glabrous, shining above; flowers in white, dense panicles. Ga. to Ark. 20-40f. Fruit globular.

6. CARDIOSPÉRMUM, L. HEART-SEED. $(K\alpha\rho\delta i\alpha, \text{heart}, \sigma\pi\epsilon\rho\mu\alpha, \text{seed.})$ Sep. 4, two of them smaller. Pet. unequal, each with a scale at base. Sta. 8. Style 3-fid. Caps. membranous, inflated. \flat Leaves biternate. Pedicels changed to tendrils.

C. Halicácabum L. Lfts. ovate-lanceolate, incisely lobed and dentate; fr. pyriformglobous, large, bladder-like. Banks of streams, S. and W. 4-6f. July. §

7. KCELREUTERIA, Lam. (To J. G. Köhlreuter, a Russian botanist and author, 1755.) Sep. 5. Pet. 4, irregular. Sta. 8. Sty. exserted. Caps inflated, 3-celled, cells 2-seeded. 5 Lvs. alternate. pinnate, lfts. about 13 cut-serrate. Flowers yellow, in large panicles.

K PANICULÀTA.-China. 20-30f. Odd leaflet cut-lobed. A curious tree.

ORDER XXXVIII. CELASTRACEÆ. STAFF TREES.

Shrubs with simple leaves alternate or opposite, with *flowers* small, regular, 4 or 5-merous, perigynous, *sepals* and *petals* both imbricated in æstivation, *stamens* alternate with the petals, and inserted on a disk which fills the bottom of the calyx. Carpels 2-5, styles united. Fruit free from the calyx, with 2-5 cells. Seeds arilled, few, albuminous.

* Leaves alternate.—a Capsule dehiscent.	Cells 2-ovuled. Vine	CELASTRUS.
		S. FlaMAYTENUS.
-a Drupe dry, 2-celled,	2-seeded. Erect. S. Fl	aSchaefferia.
* Leaves oppositeb Capsule 3-5-celled.	Cells 2-ovuled	EUONYMUS.
		Fla MYGINDA.

1. CELASTRUS, L. STAFF-TREE. Fls. often imperfect. Sep. and pet. 5. Disk 5-lobed, bearing the 5 stamens on its edge. Caps. subglobous, or 3-angled, 3-celled. Seeds with an arillus, 1 or 2 in each cell. $\stackrel{,}{>}$ With alternate, deciduous lvs. and minute, deciduous stipules.

C. scándens L. St. twining; lvs. oblong, acuminate, serrate; rac. terminal; flowers diæcious. Woods. 20-40f. Arilled seeds scarlet, persistent in winter. June.

2. EUÓNYMUS, Tourn. BURNING BUSH. $(E\check{v}, \text{good}, \check{o}\nu o\mu\alpha, \text{name.})$ Fl. perfect; calyx flat, of 5 (sometimes 4 or 6) united sepals. Corolla flat, inserted on the outer margin of the broad disk. Stamens 5, with short flaments. Caps. colored, 5-angled, 5-celled, 5-valved. Seeds wholly invested with a scarlet aril. 55 Lvs. opposite, serrate. Flowers purple.

- 1 E. atropurpureus Jacq. Lvs. elliptic-ovate, petiolate, acuminate, finely serrate, puberulent beneath; ped. compressed, many-flowered; fls. usually 4-merous; capsule smooth, lobed. Woods. 4-10f. Fruit crimson. June. Varieties in cultivation have orange-red or even whitish fruit.
- 2 E. Americànus L. Branches 4-angled; lvs. oval and elliptic-lanceolate, acumi nate, acute, or obtuse, smooth, subsessile; ped. round, about 3-flowered; fls. mostly pentamerous; caps. warty. Woods. 2-5f. Fruit dark red. June.

 β . obovatus. Trailing; lvs. obovate, obtusish, petiolate. Ohio, &c.

y. angustifolius. Lvs. linear-lanceolate, inequilateral, acute at each end. South.
3 E. EUROPÈUS, has smooth, shining, lance-oblong, serrate leaves, the flattened ped 3-flowered; fls. 4-parted. Europe. Not hardy North. (See Addenda.)

ORDER XL. RHAMNACEÆ. BUCKTHORNS.

Shrubs or small trees, often spiny, with simple, alternate, stipulate leaves, with flowers regular, sometimes apetalous or otherwise imperfect; with the stamens perigynous, as many (4 or 5) as the valvate sepals, alternate with them, and opposite to the petals when they are present. Disk perigynous. Capsule or drupe with one albuminous seed in each cell.

* Leaves opposite or subopposit	te, with opposite bran	chesa	
a Flowers small, in axillar	v clusters or umbels.	S. Fla	SCUTIA.
a Flowers minute, spicate,	in terminal panicles.		SAGERETIA. I
Leaves alternate b Shrubs of	limbing by twining.	Petals sessile	BERCHEMIA. 2
-b Shrubs	climbing by tendrils.	Pet. short	
• Leaves alternatec Clusters	of (white) flowers ter	minal. Pet. unguiculate.	CEANOTHUS. 4
-c Clusters	axillary. Pet. 4, 5, o	or 0, on the margin of disk	
-c Clusters	axillary. Pet. 5, und	er the 5-lobed disk. S. Fl	aColubrina.

1. SAGERÈTIA, Brongn. (Named for *M. Sageret*, a French florist and veg. physiologist.) Calyx 5-cleft. Petals 5, cucullate. Sta. 5. Ovary immersed in the entire disk, with a 3-lobed stigma. Drupe 3-celled. 5With slender branches. Fls. in rigid, interrupted spikes.

5. Michàuxii Brongn. Branches at length spiny; leaves ovate or oblong-ovate, sub sessile, shining, subentire. Sandy coasts. Car. to Fla. Trailing, 6-15f. October. 2. BERCHÈMIA, Necker. SUPPLE JACK. Calyx 5-parted Pet. 5, convolute, enclosing the 5 stamens. Ovary half immersed in the disk, but free from it, 2-celled. Style bifid. Drupe oblong, with a bony, 2-celled nut. 5 5 Unarmed. Lvs. pinnate-veined. Panicles terminal, small.

B. volùbilis DC. Climbing, glabrous; lvs. ovate, straight-veined, repandly serrate; drupe dark purple. Damp soils, S. Stem supple, 10-20f. May, June.

4. CEANOTHUS, L. JERSEY TEA. RED-ROOT. Calyx tubular-campanulate, 5-cleft. Petals 5, saccate, arched, with long claws. Sta. mostly exserted. Style 3-cleft. Capsule obtusely triangular, 3-celled, 3-seeded, surrounded at base by the persistent tube of the calyx. 55 Thornless. Fls. small, aggregated at the end of the branches.

- 1 C. Americanus L. Leaves oblong-ovate, or ovate, serrate, 3-veined; flowering branches leafy or leafless, elongated. Dry woods. 2-4f. June.
- 2 C. ovàtus Bw. Lvs. oval-lanceolate or narrowly oblong, with glandular serratures, 3-veined, veins pubescent beneath; thyrse corymbous, abbreviated. Vt. to Mich. 2-3f. Less common than No. 1. Lvs. smooth, shining. May.
- 3 C. microphýllus Mx. Diffusely branched, branches very slender; leaves minute. obovate, rigid, glabrous, strigous beneath. Pine-barrens, S. 1-2f. April.

β. serpyllifolius. Very slender; branches filiform; lvs. oval (2-3" long). S.

5. RHÁMNUS, L. BUCKTHORN. (The Greek name.) Calyx urceolate, 4 or 5-cleft. Pet. 4 or 5, notched, lobed, or entire, or sometimes wanting. Ov. free, not immersed in the thin torus, 2–4-celled. Styles 2–4, more or less united. Drupe containing 2–4 cartilaginous nuts. 5 Lvs. alternate, rarely opposite. Fls. in axillary clusters.

- 1 **R. cathárticus** L. Thorny; lvs. ovate, denticulate-serrate; fis. fascicled; polygamo-diœcious, mostly tetrandrous; sty. 4, at apex distinct and recurved: fr. globu lar, 4-seeded. Hedges, rarely wild. 10-15f. Drupes black, cathartic. May +. § Eur.
- 2 R. lanceolàtus Ph. Thornless; lvs. lanceolate or oblong, acute at each end, the earlier ones obtuse; fis. 1-3 together; pet. 4, minute; sty. 2 at apex, distinct; drupe 2-seeded. Pa. to Iowa (Colman). Rare. 4-8f. May.
- 3 R. alnifòlius L'Her. Unarmed; lvs. oval, acute, serrate; ped. aggregate, 1-flow-
- ered; fis. mostly pentandrous and apetalous; sep. acute; styles 3, united, very short; fruit 3-seeded. Pa. to Can. 2-4f. June.
- 4 R. Caroliniànus Walt. Unarmed ; leaves oblong-oval, serulate, acute, paler beneath; fis. perfect, in short, axillary umbels, petals minute; stigmas 3; fr. 3-seeded. River banks, Va. to Fla. 7—15f. June.

ORDER XLI. VITACEÆ. VINES.

Shrubs with a watery juice, tumid nodes, and usually climbing by tendrils. Flowers small, regular, racemous, often polygamous or diæcious. Calyx minute, truncated, the limb obsolete or 5-toothed. Petals hypogynous, valvate in æstivation, as many as and opposite to the stamens. Stamens inserted on the disk which surrounds the 2-celled, 1-styled ovary. Fruits berry, usually 4-seeded. Seeds bony. Albumen hard. Figs. 187, 250

VITIS, L. GRAPE-VINES. (Celtic gwyd, a tree or shrub.) Petals 4 or

5, deciduous, cohering at the top, or distinct and spreading. Ovaries 2-celled, cells 2-ovuled. Fruit a globular berry, 1-4-seeded. 5 Lvs. simple or compound. Ped. opposite the lvs. often changed to tendrils. Fls. small, clustered.

- 1 V. labrúsca L. Fox Grape. Isabella, Catawba. Leaves broad-cordate, angularlobed. hoary tomentous beneath; berries large. Woods. 30-80f. Fr. p. gr. or amb.
- 2 V. æstivàlis L. Lvs. broadly cordate, 3-5-lobed or palmate-sinuate, coarsely dentate, with scattered ferruginous hairs beneath; fertile racemes long, panicled, berries small. Shady banks. Fruit deep blue, small, ripe in September.
- 3 V. Caribàea DC. Hoary; lvs. round-cordate, 3-lobed or entire, smooth above. Fla.
- 4 V. cordifòlia Mx. Frost Grape. Lvs. cordate, acuminate, somewhat equally toothed, smooth, or pubescent beneath the veins and petioles; rac. loose, many-fiwd.; berries small. River banks. 10-20f. Fruit blackish, ripe in November.
- **5 V. vulpina L.** Muscadine. Scuppernong. Lvs. (small) cordate, slightly 3-angled or lobed, shining on both sides, coarsely toothed, the teeth not acuminate; rac. composed of many capitate umbels. Va. to Fla. Fruit large, purple, few.
- 6 V. indivisa Willd. Lvs. simple, cordate or truncate at the base, often angularlobed; flowers 5-merous; berry 1 or 2-seeded. Swamps, S. Fruit small (2).
- 7 V. bipinnaca T. & G. Lvs. bipinnate, lfts. incisely serrate, glabrous; flowers 5 merous. S. States along rivers. Frnit small, black. No tendrils.
- 8 V. incisa N. Lvs. 3-foliate, thick; lfts. 2-3-lobed; berry 1-seeded. Fla. to La.
- **9 V. quinquefòlia** Lam. *Virginia Creeper*. Lvs. digitate, lfts. 5, oblong, acumn nate, dentate; berries dark blue, smaller than peas, acid. Woods, thickets. 20-40f.
- 10 V. VINÍFERA L. *European Wine-grape*. Lvs. cordate, sinuately 5-lobed, glabrous; flowers all perfect. Europe. Many varieties.

ORDER XLII. POLYGALACEÆ. MILKWORTS.

Herbs or shrubs, with the leaves mostly simple and without stipules. Flowers irregular, unsymmetrical, hypogynous, perfect. Sepals 5, unequal, distinct, some or all of them colored. Petals 3, often 5, and 2 of them scale-like. Stamens 4 to 8, distinct, or cohering in a tube which is split on the upper side. Ovary superior, compound, with suspended ovules, united styles and stigmas. Fruit a 2-seeded pod. Seeds pendulous, with or without a caruncle and albumen.

1. POLÝGALA, Tourn. MILKWORT. ($\Pi o \lambda \dot{v} \varsigma$, much, $\gamma \dot{\alpha} \lambda \alpha$, milk; said to favor the lacteal secretions of animals.) Fls. very irregular. Sep. 5, 2 of them wing-shaped and petaloid. Pet. 3, cohering by their claws to the filaments, lower one carinate and often crested on the back. Stam. 6 or 8, filaments united into a split tube. Anth. 1-celled. Caps. obcordate, 2-celled, 2-seeded, loculicidal. Sd. appendaged with a various caruncle at the hilum. Mostly herbs, bitter, and with simple leaves. Flowers often of two forms, the subterranean apetalous.

- **1 P. paucifòlia** L. St. simple, erect, naked below; lvs. ovate, acute, smooth; terminal fis. large, crested, radical ones apetalous. 24 Woods. 3-4'. Flowers few, large (10"), very showy. May, June.
- 2 P. grandiflora Walt. Ascending, publication publication of the second state of the second s
- * P. polýgama Walt. Sts. simple, numerous, glabrous; lvs. linear-oblong, mucro nate, obtuse; fls. racemed, short-pedicelled, those of the stem winged, those of the root wingless; keel cristate. (2) Fields. 6-12'. Rac. showy. Fls. 2". June, July.
- 4 P. Sénega L. Seneca Snake-root. St. erect, smooth, simple, leafy; lvs. lanceolate, tapering at each end; fls. slightly crested, in a terminal spike-form, slender raceme.
 24 Woods, W. States, rare in E. 8-14'. Spike 1-2'. Leaves 1-2'. July.
 B. latifolia. Leaves ovate, acuminate at each end. Leaves 2-3'. Ind.
- B. Tantona. Leaves ovale, adminate at each end. Leaves 2-3. Ind.
- 5 P. alba N. St. angular, branched above; lvs. linear; spike lance-linear, pointed, on a long stalk. 24 Ala. to La. 6-12'. Spikes 1-3'.
- 6 P. setàcea Mx. Sts.filiform, simple, apparently leafless (lvs. minute, deltoid-acum.); spike (small) oblong, acute; wings short-pointed, shorter than the petals; caruncle enclosing the short stipe of the hairy seed. 24 South. 1f. Leaves 1". June.
- 7 P. incarnàta L. Glaucous; st. erect, slender, mostly simple; lvs. few, scattered, linear-subulate; spike oblong; wings lanceolate, cuspidate; claws of the petals united into a long, cleft tube; seed very hairy. (1) N. J. to Fla. 1-2f. June.
- 8 P. Chapmánii T. & G. Very slender, simple, or nearly so; lvs. linear-subulate; spike loose, roundish-oblong, rather acute; wings obovate, slightly clawed; caruncle lateral on the thin-haired seed. ① South. 1f.
- 9 P. Nuttállii T. & G. St. erect, somewhat fastigiate; lvs. linear; spikes acute, roundish-oblong, dense; wings elliptical, attenuate at base; crest minute; caruncle notched, lateral on the thick seed-stipe. ① Mass., R. I., to La. 6–10'. August.
- 10 P. fastigiàta Nutt. Slender and much branched above; lvs. linear; spikes roundish, loose-flowered; wings ovate-oblong, distinctly clawed; caruncle broad, nearly embracing the small seed-stipe (immature). ① N. J. to Fla. S-12. July+.
- 11 P. sanguínea L. St. branching at top; lvs. linear and lance linear; spikes oblong, obtuse, dense; wings oval or ovate, obtuse, subsessile; caruncle mostly simple, nearly as long as the hairy seed. (1) Wet grounds. 10'. Leaves 1'. July+.
- 12 P. lùtea L. St. mostly simple; root leaves spatulate, obtuse, attenuate at base; cauline ones lanceolate, acute; rac. ovate-globous, obtuse, dense; fis. pedicellate; wings ovate, mucronate, keel with a minute crest. (2) Sands, N.J. to Fla. 1f. June +.
- 13 P. nana DC. Low, ascending; lvs. obovate and spatulate, mostly radical; heads ovate, becoming oblong, dense; wings lance-ovate, cuspidate-acuminate, twice longer than the slightly-crested keel. (2) Pine woods, S. 4'. April, May.
- 14 P. ramòsa El. Erect, corymbously branched above; spikes loose, oblong, numerous, forming der se, level-topped cymes; radical lvs. few, spatulate, cauline oblong linear; seed oval caruncled. (2) Swamps, Del. to Fla. 1f. June.

- 15 P. cymòsa Walt. Tall, corymbously branched at top; lvs. mostly radical, linear pointed, crowded; stem lvs. very few, linear-subulate; racemes spike-like, torming a dense, fastigiate cyme; seed globular, naked. (2) Swamps, S. 2-5f. June+.
- 16 P. verticillàta L. St. branched above, erect; lvs. linear, verticillate both on the stem and opposite branches; fls. crested; calycine wings roundish; seed oblong. smooth, caruncle hardly half as long. (1) Dry hills. 6-8'. July+.

β. ambigua. Branches and upper lvs. alternate; spikes long; fis. scattered.

- 17 P. Boykínii T. & G. Sts. erect from an ascending base, simple; lvs. obovate and lanceolate; spike slender, pointed, dense; caruncle two-thirds the length of the very hairy seed. 24 South. 12-18'. June-Aug.
- 18 P. leptóstachys Shuttl. Sts. filiform, strict; lvs. setaceous, in 4's or 5's, remote; spikes linear; seed smooth. (1) Dry sands, Fla. 1f. Greenish.
- 19 P. INoókeri T. & G. Sts. weak, 4-angled; lvs. in 4's, linear; spikes lance-ovate pointed. Pine woods, Fla. to Tex. 1f. Flowers pale red.
- 20 P. cruciàta L. St. erect, winged at the angles, fastigiate; lvs. in 4's, linear-oblong, punctate; spikes ovate, dense, obtuse, subsessile; caruncle as long as the ovoid smooth seed. (1) Wet grounds. 3-12'. July, Aug.

 β . cuspidata. Lvs. linear; heads squarrous with the wing-cusps. South.

- 21 P. brevifèlia Nutt. Slender, branched above; lvs. linear, short, remote, in 4's, or on the branches scattered; spike oblong, dense, obtuse, on long peduncles; wings ovate-lanceolate, acute; seed just as in No. 20. (1) N. Y. to Fla. 1f. August.
- 22 P. SPECIÓSA. Shrub 6f; lvs. cuneate-oblong, alternate; fls. purple, in terminal rac.
- 23 P. MYRTIFÒLIA. Shrub 3-4f; lvs. oblong-obovate, altern.; fls. purple, in lateral rac.
- 24 P. OPPOSITIFÒLIA. Shrub 3f; lvs. opp., sessile, cordate, smooth; fls. roseate, large.
- 25 P. LATIFÒLIA. Shrub 3f; lvs. opposite, ovate, glaucous, downy beneath; fis. purple.

2. KRAMERIA, L. Ovary 1-celled, with 2 collateral ovules. Seed with no caruncle and no albumen. b Racemes terminal.

K. lanceolata Torr. Prostrate; lvs. lance-lin., acute, longer than ped.; fr. spiny. Fla

ORDER XLIII. LEGUMINOSÆ. LEGUMINOUS PLANTS.

Herbs, shrubs, or trees. Leaves alternate, usually compound, margins entire. Stipules 2, at the tumid base of the petiole. Stipels commonly 2. Sevals 5, more or less united, often unequal, the odd one always anterior. Petals 5, either papilionaceous or regular, perigynous, the odd one (when present) posterior. Stamens diadelphous, monadelphous, or distinct. Anthers versatile. Ovaries superior, single, and simple. Style and stigma simple. Fruit a legume, either continuous (1-celled), or (a loment) jointed into 1-seeded cells. Seeds solitary or several, destitute of albumen. Figs. 59, 60, 102, 157, 190-1, 203-4, 214, 233, 308–354-6, 361-2, 397, 401-2, 480.

A vast and important order, containing 400 genera and 6,500 species, of which 850 are native in the United States.

1. MIMOSA, L. SENSITIVE PLANT. ($Mi\mu o5$, a buffoon : the leaves seem sporting with the hand that touches them.) Fls. $2 \notin 3$. \notin Calyx valvate, 5-toothed. Cor. 0, or 5-toothed. Stam. 4—15. Legume separated into 1-seeded joints. 3 Like the perfect, but without ovaries or fruit. 24 5 Tropical. Leaves bipinnate.

- 1 M. strigillòsa T. & G. Nearly unarmed, prostrate, diffuse, strigous; stip. ovate; petioles and peduncles very long; pinnæ 4 to 6 pairs; lfts. 10 to 15 pairs, oblong-linear: heads oblong. 24 Fla. to La. Flowers rose-color.
- 2 M. PUDICA L. St. prickly, more or less hispid; lvs. digitate-pinnate, pinnæ 4, of many (30 or more) pairs of linear leaflets. Brazil. 1f. Leaflets 3".

2. SCHRÁNKIA, Willd. SENSITIVE BRIER. (In honor of *Francis de Paula Schrank*, a German botanist.) Fls. § 5. Cal. minute, 5-toothed. Pet. united into a funnel-shaped, 5-cleft corolla. Stam. 8—10. Pod long and narrow, echinate, dry, 1-celled, 4-valved, many-seeded. 24 Prickly. St. procumbent. Lvs. sensitive, bipinnate. Fls. in spherical hds., purplish.

S. uncinàta Willd. St. angled, grooved; pinnæ 6 to 8 pairs; lfts. numerous, minute, elliptic-oblong or linear; heads axillary, 1 to 2 together, on peduncles shorter than the leaves. S. States. 2-4f. Leaflets 2". May-July. (& S. angustata T. & G.)

3. DESMANTHUS, Willd. $(\Delta \epsilon \delta \mu \eta, a \text{ bundle}, \tilde{\alpha} \nu \Im \circ \delta, \text{ flower.})$ Cal. varvate, 5-toothed. Pet. 5, distinct. Stam. 5 or 10, distinct. Pod dry, flat, 2-valved, 4-6-seeded, smooth. 24 b With bipinnate lvs. and white fls. in axillary, pedunculate heads. Petioles with 1 or more glands.

D. brachýlobus Benth. Erect, smoothish; pinnæ 6 to 13 pairs; lfts. minute, 20 to 30 pairs; stam. 5; pods short 1', 2-4-seeded. 24 Ill. to La. 2f. June-Aug.

4. NEPTUNEA, Lour. Anthers 10, crowned with a stipitate gland. Pod oblong, oblique, deflexed on the stipe, 2-valved. Otherwise as in Desmánthus.

N. lùtea Benth. Sts.ascending, strigous; pinnæ 4-5 pairs; lfts. linear-oblong, ciliate. crowded; ped. longer than the leaves; pod 5-8-seeded. 2 Prairies, Fla. to La. The leaves similar to those of Mimosa. Flowers yellow. Pods stiped. (Acacia lutea C-B

b. ALBIZZIA, Durazz. Calyx 4- or 5-toothed. Petals united into a funnel-form corolla. Stamens ∞ , monadelphous at base, very long. Pod linear and flat, jointless, dry, 2-valved, many-seeded. 55 Tropical, with the leaves twice pinnate. Flowers in dense heads or spikes, roseate or white, polygamous.

A. JULIBRÁSSIN. Silk Tree. Tree about 20f, glabrous, thornless; pinnæ 8-12 pairs, each with 20-30 pairs of *halved* leaflets (being one-sided), acute; heads pedunculate, forming a terminal panicle; corolias white, with the innumerable long silky stamens purplish; pods some contracted between the seeds. Very ornamental, hardy Sonth, sparingly naturalized in the Gulf States. 6. GYMNÓCLADUS, Lam. COFFEE TREE. (Γυμνό5, naked, τλάδο5, a shoot; for its coarse, naked shoots in winter.) Fls. 2 δ. Cal. tubular, 5-cleft, equal. Pet. 5, inserted into the summit of the tube. δ Stam. 10, distinct. 2 Style 1. Leg. 1-celled, oblong, very large, pulpy within. 5 Unarmed, with unequally bipinnate lvs. Lfts. ovate, acuminate. Fig. 480.
G. Canadénsis Lam.-Woods, N. Y. to Ill. and Tenn. 50f. Rac. greenish; seeds round, polished, brown, very hard, 4' diam. May-July.

7. GLEDÍTSCHIA, L. HONEY LOCUST. (To John G. Gleditsch, a botanical writer, Leipzig.) Fls. $Q \not Q \delta$. Sep. equal, 3-5, united at base. Pet. 3-5. Stam. 3-5, distinct, opposite the sepals. Style short. Legume continuous, compressed, often intercepted between the seeds by a sweet pulp. \mathcal{F} With branched spines. Lvs. abruptly pinnate and bipinnate, often in the same specimen. Fls. small, green, racemous. Figs. 362, 401.

- 1 G. triacánthus L. Branches armed with stout, triple, or multiplex spines; lf.s. alternate, oblong-lanceolate, obtuse; leg. linear-oblong, compressed, many-seeded. Pa. to Mo. and La. 40-70f. Wood very heavy. Pods 8-18'. May-July.
- 2 G. monospérma Walt. Water Locust. Spines few, mostly simple; lfts. ovate oblong; pod broadly oval, without pulp, 1-seeded. Swamps, S. 30f.

8. CÁSSIA, L. SENNA. (Hebrew Katzioth.) Sep. 5, scarcely united at base, nearly equal. Pet. 5, unequal, but not papilionaceous. Stam. distinct, 10, or by abortion fewer, anth. opening by terminal pores, the three upper often sterile. Pod many-seeded, 1-celled or many-celled transversely. 5,5 or herbs. Lvs. abruptly pinnate. Fls. mostly yellow. Fig. 357.

- § Stam. 5 or 10, all perfect. Sep. acute. Lfts. small. Stip. persistent......Nos. 1, 3
 § Stam. 10, the 3 upper abortive. Sep. obtuse. Lfts. large. Stip. deciduous..(a)
- C. Chamæcrísta L. Sensitive Pea. Lfts 8-12 pairs, oblong-linear, obtuse, mucronate; fis. large, pedicellate, 2 or 4 in each fascicle; anth. 10, unequal, all fertile.
 Dry soils. 12-18'. Flowers large, 2 petals spotted. August.
- 2 C. níctitans L. Wild Sensitive Plant. Lfts. 6-15 pairs, oblong-linear, obtuse, mucronate, sessile; fis. small, 2 or 3 in each subsessile fascicle; stam. 5, subequal.
 (1) Sandy soils. 1f. Flowers small (3"), pale yellow. July.
- 3 C. Marilándica L. American Senna. Lfts. 6-9 pairs, oblong-lanceolate, mucronate, an obovoid gland near the base of the common petiole; fls. racemed; pod curved, 12-20-seeded. 24 Stony places. 4-5f. Flowers showy. August.
- 4 C occidentàlis L. Lfts. 3-6 pairs, ovate or lance-ovate, sharply acuminate; fia in short racemes; pod nearly straight, 25-40-seeded. ① Va. to Ga. 5-6f. July. §
- 5 C. obtusifòlia L. Lfts. about 6, obovate. obtuse; pod long (6') and narrow, re curved, 20-40-seeded; seeds longitudinal. (1) Dry soil, S. 1-4f. July, Aug.
- 6 C. melanocárpa Vegel. Shrubby; lfts. 2-3 pairs, narrowly lanceolate, acute, coviaceous; rac. as long as the leaves. Ga. §

9. CÉRCIS, L. JUDAS-TREE. RED-BUD. Calyx 5-toothed. Petals scarcely papilionaceous, distinct, wings longer than the banner and smaller than the keel petals. Stamens 10, distinct. Pod compressed. Seeds obovate. 5 Leaves simple, appearing after the roseate flowers. Fig. 308.

1 C. SILIQUÁSTRUM. Lvs. round-reniform; flowers more open than in No. 2. Eur. 201

2 C. Canadénsis L. Lvs. broadly ovate-cordate, acuminate, villous on the veins be neath. Mid. and W. States. 20-30f. Flowers covering the branchlets. April.

10. CLADÁSTRIS, Raf. YELLOW-WOOD. Cal. 5-toothed, teeth short obtuse. Pet. of nearly equal length, those of the keel distinct and straight like the wings. Vex. large, roundish, reflexed. Stam. 10, distinct. Fil. glabrous, incurved. Leg. flat and thin, short-stiped, 5 or 6-seeded. 5 With yellow wood, pinnate leaves, and pendulous clusters of white flowers.

('. tinctòria Raf.-Hills, Ky. and Tenn. 20-40f. Lfts. 7-11, oval, pointed, 3', rac. 6-10', resembling Robinia. April, May.

11. BAPTÍSIA, Vent. WILD INDIGO. ($B\dot{\alpha}\pi\tau\omega$, to dye; a use to which some species are applied.) Cal. 4-5-cleft half way, persistent. Pet. of about equal length, those of the keel nearly distinct and straight. Vex. orbicular, emarginate. Stam. 10, distinct, deciduous. Pod inflated, stipitate, many (or by abortion few)-seeded. \simeq Lvs. palmately 3-fol. or simple

- **1 B. perfoliàta** R. Br. Glabrous and glaucous; lvs. large, oval-orbicular, perfoliate; fls. solitary, axillary. Pine woods, S. Car. Ga. 1-2f. Pod inflated. May—July.
- 2 B. simplicifòlia Croom. Lvs. broadly ovate, obtuse, sessile; rac. terminal, elonga ted, many-flowered. Quincy, Fla. 2-3f. Pod ovate. 6". June.
- **3 B. austràlis** R. Br. Petioles short; lfts. obovate or oblong, obtuse; stip. lanceolate; rac. long, erect; pod oblong-oval. Ohio River and S. 2-3f. Flowers large and showy, indigo blue. June-Aug.
- **4 B. leucoph**ea Nutt. Lfts. oblanceolate, varying to obovate; stip. triangularovate; rac. nodding, the many flowers turned to the upper side on their long pedicels; pod ovoid, inflated. Prairies, W. and S. 2-3f. Flowers large. April.
- 5 B. villòsa Ell. Lfts. lance-oblong, or oblanceolate; stip. lance-linear, persistent; rac. long, declining; bracts minute, deciduous; ped. not secund; leg. oblong. N. Car. to Ga.: rare. 2-3f. Plant of rough aspect, as well as No. 4. June, July.
- 6 B. lcucántha T. & G. Lvs. petiolate; lfts. cuneiform-obovate, obtuse; stip. lancelinear, about as long as petioles; rac. elongated, erect; bracts caducous; pod inflated, stipitate. Prairies, &c. W. and S. 2-3f. Flowers large. May-July.
- **7 B. alba** R. Br. Fastigiate-branched above; petioles slender; lfts. elliptic-oblanceolate, acute at base; stip. and bracts minute, caducous; rac. erect or nodding, on a long peduncle. In rich soils, Va. to Fla. 2-3f. March, April.
- 8 B. lanceolàta Ell. Much branched, bushy; lvs. subsessile; lfts. narrowly elliptic to oblanceolate, obtuse, petiolulate; fls. axillary, subsolitary, short-pedicelled; pod ovate-globous. Pine woods, S. 14f. Flowers large, dull yellow. April, May. β. stricta. Erect, strict; lfts. obovate, very obtuse; rac. few-flwd., termin. La. Fla.
- 9 B. tinctòria R. Br. Glabrous, branching; lvs. subsessile; lfts. small, roundishobovate, acute at basc, very obtuse at apex; stip. setaceous, caducous; rac. loose, terminal; pod subglobous. Dry woods. 2f, bushy. Pod size of a pea. July-Sept.
- 10 B. microphýlla N. Smooth, bushy; lvs. small, 2-3-foliate below. simple, sessile above; stip. and bracts large, persistent; fis. small, axillary, and in terminal racemes. S. Car. to Fig. 2-3f. (B. stipulacea Ravenel.)

- 11 B. Lecontii T. & G. Pubescent; lvs. short-petioled; lfts. obovate-oblong; pedicels with 2 bractlets; bracts persistent; pod short-stiped; branches, stipules, and racemes as in No. 9. Ga. Fla. 2f. May.
- 13 B. Serènae Curtis. Smooth, diffuse; lfts. oblong-obovate, cuneate; fls.in terminal racemes, the central longest. S. Car. 1-2f. Pod oblong.
- 13 B. megacárpa Chapm. Glabrous. slender; lvs. petioled; lfts. oval; rac. short and short-stalked; stip. and bracts minute, caducous; fls. nodding; pod large, globu lar, and much inflated. Ga. Fla.: rare. 2-3f. Pods 14'.

12. THERMÓPSIS, R. Br. (Named for its resemblance to the Egyptian Lupine—*L. Thermis.*) Vex. roundish, sides reflexed. Sta. persistent. Pod subsessile, linear-oblong, many-seeded. 24 Rhizome creeping, stems with sheathing bracts at base. Leaves 3-foliate. Flowers large, yellow.

- 1 T. mollis M. A. Curtis. Pubescent, diffusely branched; lfts. obovate-oblong; stip. leafy, as long as the petioles; ped. shorter than calyx. Woods, N. Car. 2f. Aprin.
- 2 T. fraxinifolia Curt. Smoothish, slender, branching; petioles longer than the stipules; lfts. wedge-oblong; ped. as long as the flower. Mts. Tenn. Car. 2f. May.
- 3 T. Caroliniàna Curt. St. stout, simple; petioles as long as the ovate clasping stipules; lfts. obl.-obov.; fls. on short ped. with decid. bracts. Mts. N. Car. 4f. June.

13. FABA, Mœnch. COFFEE BEAN. Fls. as in Vicia. Seeds oblong, with a long scar (hilum) on the narrower end, and leathery, tumid legumes. (1) Lvs. equally pinnate, with the tendril obsolete (in the following species, Peduncle shorter than the flowers.

F. VULGÀRIS Mœnch. St. rigidly erect, with very short axillary racemes; lfts. 2-4, oval entire; stipules semisagittate Gardens. From Egypt. 2-3f. Glaucous.

14. CICER ARIETÌNUM, the CHICK PEA, rarely cultivated, may be known by its serrated leaflets, a character quite strange in this Order.

15. PISUM, L. PEA: (Celtic *pis*, Lat. *pisum*, Eng. *pea*, Fr. *pois*.) Style dilated above, grooved on the back, villous and stigmatic on the inner side. Otherwise as in Lathyrus. (1) Figs. 59, 60, 190.

P. SATÌVUM L. Lfts. ovate, entire, usually 4; stip. ovate, semicordate at base, crenate. ped. several-flowered. Nativity unknown. Many varieties.

16. LÁTHYRUS, L. Calyx campanulate, the two upper sepals shortest. Stam. diadelphous (9 and 1). Style flat, dilated above, ascending, bent at a right angle with the ovary, pubescent or villous along the inner side next the free stamen. Pod oblong, several-seeded. $\frac{1}{2}$ b Leaves abruptly pinnate, of 1 to several pairs of leaflets. Petioles produced into tendrils. Peduncles axillary. Fig. 497.

- V. sativa L. Vetch. Tares. Fls. solitary or in pairs, subsessile; lfts. 10-12, oblong obovate, often linear, retuse, mucronate; pod linear, erect, 4-8-seeded. (1) Fields. 2-3f. Fls. 6", pale purple. June. § Eur.
- 2 V. tetraspérma Loisel. Ped. 1-2-flowered, in fl. shorter (in fr. longer) than the lvs.; pod 4-seeded; lfts. 4-6, small, linear, obtuse. Fields, Can. to Penn. St. very slender, 1-2f. Fls. bluish-white. Pod 5". July.
- 3 V. micrántha N. Lfts. 4-6, linear, acute, obtuse or retuse; fls. mostly solitary, minute, pale; pod 1', sabre-shaped, erect, 6-10-seeded; seeds black. S. 2-3f.
- 4 V. acutifòlia Ell. Leaflets 3-6, linear, acute; stip. lance-linear; tendrils mostly simple; rac. 3-9-flowered, longer than the leaves. Ga. Fla. 2-4f. Whitish.
- 5 V. Americana Muhl. Ped. 4-8-flowered, shorter than the lvs.; stip. semisagittate, deeply dentate; lfts. 10-14, elliptic-lanceolate, obtuse; pod oblong-linear, compressed, reticulated. N. Y. westward. 1-3f. Blue-purple. May.
- 6 V. Caroliniàna Walt. Pedicel 6-12-flowered, rather shorter than the eaves; fls. loose; calyx teeth very short; stip. lance-linear; lfts. 8-12, linear-oblong or linear, smoothish; pod oblong. Woods and banks. 4--6f. Pale purple. May.
- 7 V. Cracca L. Tufted Vetch. Fls. imbricated, 12-20 or more in the raceme; lfts 12-24, oblong, puberulent; stip. semisagittate, linear-subulate, entire. Thickets 2-3f. Flowers blue-purple, 4". July.
- 8 V. hirsùta Koch. Hairy; lfts. 8-20, linear, truncate, macronate; ped. 3-6-flwd. shorter than leaves; leg. hirsute, 2-seeded. Fields. 1-3f. June. §

18 ZORNIA, Gmel. (For *John Zorne*, M. D., of Bavaria.) Cafyx bilabiate, upper lip obtuse, emarginate, lower 3-cleft. Vex. orbicular, with the sides revolute. Sta. monadelphous, the alternate anthers different. Pod compressed, of 2-5 roundish joints. 24 Lvs. palmately 2-4-foliate with sagittate stip., which are enlarged above and supply the place of bracts.

Z. tetraphýlla Mx. Lfts. 4; stip. or bracts oval, acute : pod aculeate, about 3-jointed.
 24 N Car. to Fla. and Tex. 1-2f. Deep yellow. Pods adhesive. June-Aug.

19 ÆSCHYNÓMENE, L. ($Ai\delta\chi \dot{\upsilon}\nu \rho\mu\alpha i$, to be modest; alluding to its sensitive property.) Calyx bilabiate, bibracteolate; upper lip bifid, lower trifid. Vex. roundish. Stamens diadelphous, 5 in each set. Pod exserted, composed of several truncated, separable, 1-seeded joints.—Lvs. odd-pinnate. Stip. semisagittate. Rac. axillary (yellow). August.

- 1 Æ. híspida Willd. Erect, scabrous; ifts. very smooth, 27-37, oblong-linear, obtuse; rac. 3-5-flowered; pod 6-9-jointed. (1) Marshes, Pa. and S. 2-3f.
- 2 Æ. viscídula Mx. Slender, procumbent, viscidly pubescent; lfts. 7-11, obovate; ped. filiform, 1 or 2-flowered; pod 2 or 3-jointed. (1) Sandy fields, S.

20. CHAPMÁNIA, T. & G. (To A. W. Chapman, M. D., author of "Flora of the Southern States.") Fls. nearly as in Stylosanthes. Cor. inserted on the throat of the calyx. Keel 2-cleft at apex. Anth. alike, oblong. Leg. hispid, 1-2-jointed.—A viscid-hirsute branching herb. Leaves pinnately 3-7-foliate. Fls. small, yellow, in terminal racemes.

C. Floridàna T. & G.-E. Fla. 2-3f. Lfts. oblong.

21. STYLOSÁNTHES, Swartz. ($\Sigma \tau \tilde{\upsilon} \lambda \sigma 5$, a style, $\mathring{\alpha} \nu \Im \sigma 5$.) Fls. of two kinds. σ Calyx bibracteolate at base, the tube slender and stalk-like, with the corolla inserted on its throat. Vex. orbicular. Sta. 10, monadelphous. Ov. sterile, with a filiform style. \Im Cal. and corolla 0. Ov. between 2 bracteoles. Leg. 1-2-jointed, uncinate with the short, persistent style.—Lvs. pinnately trifoliate.

S. elàtior Swartz. Pencil Flower. St. publication on eside; lfts. lanceolate, smooth, acute; spikes 3-4-flowered; loment 1-seeded (lower joint abortive). 24 Dry, gravelly woods, Long Isl. to Fla. 1f. Fls. yellow. July, August.

22. ÁRACHIS, Willd. PEANUT. (Lat. aracos, used by Pliny to designate some subterranean plant.) Calyx bilabiate. Cor. resupinate. St. monadelphous. Pod gibbous at base, coriaceous, veiny, turgid, and indehiscent, the joints not separating.—S. American herbs, with equally pinnate leaves and yellow flowers.

A. hypogàca Willd. Leaflets 2 pairs, oval or roundish, cuneate at base; stip. entire, lance-subulate, as long as the leaflets; fruit subterranean. Cult. South.

23. CORONILLA, L. (Lat. corona, a crown; from the inflorescence.) Calyx bilabiate. Petals unguiculate. Loment somewhat terete, jointed. Seeds mostly cylindrical. 524 Lvs. unequally pinnate. Fls. in simple, pedunculate umbels, rose-colored.

1 C. ÉMEBUS. Scorpion Senna. St. woody, angular; ped. about 3-flowered; claws of the petals thrice longer than the calyx. France. 3f. May.

2 C. VÀRIA. Herbaceous; lfts. 11-19, oblong; ped. 10-15-flwd. Eur. 2-4f. Jl.-Sept.

24. HEDYSARUM. L. (H $\delta \dot{\upsilon}$ s, sweet, $\ddot{\alpha}\rho\omega\mu\alpha$, smell.) Calyx cleft into 5 linear-subulate, subequal segments. Keel obliquely truncate, ionger

than the wings. Sta. diadelphous (9 and 1), and, with the style, abruptly bent near the summit. Pod (loment) of several 1-seeded joints connected by their middle. 24 Leaves unequally pinnate.

H. boreàle N. Erect; lfts. 13-21, oblong; stip. united, sheathing; flowers deflexed. spiked on the long peduncle, violet-purple; pod of 1-4 lens-shaped, veiny joints. Rocks, Willoughby Lake, Vt. and N. 1-2f. Flowers large. June, July.

25 DESMODIUM, DC. BUSH TREFOIL. Calyx more or less bilabiate. Vex. roundish, keel obtuse. Sta. diadelphous (9 and 1) sometimes monadelphous. Pod (loment) compressed, jointed, constricted most on the lower (dorsal) suture, the joints 1-seeded, separable, mostly aculeate and adhesive. 24 b Leaves pinnately trifoliate. Flowers in racemes or often large, loose panicles, purplish, in Summer. Figs. 191, 355.

- 1 D. rotundifolium DC. Plant prostrate, downy; leaflets suborbicular; bracts and stipules broadly ovate, acuminate; racemes few-flowered; loment constricted on both margins nearly alike. Rocky woods. 2-3f. Purplish. August.
- 2 D. ochroleùcum Curt. Plant decumbent, smoothish ; lfts. ovate, rarely single ; stip. ovate, pointed; raceme long, fls. white; loment twisted. Woods, Md. & S. (Porter).
- 3 D. nudiflorum DC. Lfts. roundish ovate, bluntly acuminate, slightly glaucous beneath; scape radical, panicled, smooth; joints of the loment obtusely triangular. Woods, com. St. 1f, scape 2-3f, with many shall purple flowers.
- 4 D. acuminatum DC. Plant erect, simple, pubescent, leafy only at top; leaflets ovate, long-acuminate, the odd one round-rhomboidal; pan. terminal, on a very long peduncle. Woods, com. 8-12, the panicle 2-3f. Fls. small, flesh-color. Pod 3-jointed.
- 5 D. paucifiorum DC. St. assurgent, leafy all the way, retrorsely hairy; lfts. thin, obliquely ovate, acutish, terminal one thomboidal; rac. terminal, the flowers few, in pairs; petals all distinct, spreading. Woods, N. Y. to Ill. and La. 1f. Whitish.
- 8 D. paniculàtum DC. Erect, slender, nearly glabrous; lfts. oblong-lanceolate, obtuse; stip. subulate, deciduous; fls. on slender pedicels in panicled racemes; ioment of about 3 triangular joints. Woods, common, 2-3f. Purple.
- 7 D. viridiflorum Beck. Densely pubescent; lfts. ovate, scabrous above, whitened beneath; stip. lance-ovate, acuminate; pan. naked, very long; pod of 3 or 4 triangular joints. Alluvion, N. Y. and S. 3-4f, rigid. Violet, fading to green.
- 8 D. lævigatum DC. Glabrous, or nearly so; lfts. ovate; panicle subsimple, pedicels slender, in pairs. Woods, N. J., and S. 2-3f. Purple

8. monophýllum. Dwarf, simple ; lower lvs. 1-foliate. Uxbridge. Ms. 1f. (Ricard.

- **9 D. glabéllum** DC. St. smoothish; lfts. ovate, small, rough-pubescent on both sides; pod of 3 or 4 triangular, minutely hispid joints. Shades, Car.
- 10 D. cuspidàtum T. & G. Smooth; lfts. oblong-oval, or ovate, sharply acuminate; bracts decidnous, ovate, acuminate; joints of the loment suboval. Woods. 3-5f. Stipules and bracts 9". Flowers 8", purple.
- 11 D. canéscens DC. St. striate, scabrous; lfts. ovate, rather obtuse, scabrous on the upper surface, soft-villous beneath; pan. densely canescent, naked; joints of the loment 4, obliquely sval, mspid. Woods. 3f.
- 12 D. Canadénse DC. St. pubescent; lfts. oblong-lanceolate, obtuse, nearly smooth; stip. filiform; bracts ovate, long-acuminate; joints of the loment obtusely triangular, hispid. Woods, Can. to Pa. and W. 3f. Flowers 8", purple.
- 13 D. sessilifòlium T. & G. St. tomentous-publicent; lvs. sessile; lfts. linear or linear-oblong, obtuse at each end, scabrous above, softly tomentous beneath; stip subulate; pod of 2-3 semiorbicular joints. Woods, W. 2-3f. Fls. small, crowded.
- 14 D. Dillènii Darl. Branching, hairy; lfts. oblong, villous beneath; stip. subulate; rac. panicled; joints of the loment 3, rhomboidal, reticulate, a little hairy, connected by a narrow neck. Moist soils, N. and W. 2-3f. Purple.
- 15 D. rígidum DC. Scabrous, pubescent; lfts. ovate-oblong, obtuse; petioles short, hairy; stip. ovate-acuminate, ciliate, caducous; leg. with 2-4 obliquely obovate joints. Hills and woods, Mass. to La. 2-3f. (D. Floridanum Chapm.)
- 16 D. ciliàre DC. Erect, slender, scabrous-pubescent; lvs. crowded, on short, hairy petioles; lfts. small, ovate, ciliate on the margin; joints of the short-stiped loment 2 or 3. Woods. 2f. Purple.
- 17 D. Marilándicum Boott. Erect, slender, nearly smooth; lfts. ovate, obtuse, subcordate at base, the lateral ones as long as the petioles; loment stipe as long as the calyx, joints 1 or 2. Woods. 2-3f. Violet.
- (8 D. lineàtum DC. Slender, reclining; st. finely striate with colored lines; lfts. small, roundish oval, smoothish, green both sides; pod quite sessile in the calyx. joints about 2. Dry woods. 2 or 3f.
- 19 D. strictum DC. Slender, nearly glabrous; lvs. petiolate; lfts. linear, elongated: pan. few-flowered; pod hispid, incurved, of 1-3 lunately triangular joints, with a fillform isthmus. Pine woods, N. J. and S. 3f.
- **20 D. GYRANS.** Moving-plant. Lateral lfts. very small; pods pendulous. From Bengal. Wonderful for the leaves, which in warm weather are always in motion.

26. LESPEDÈZA, Mx. BUSH CLOVER. Calyx 5-parted, bibracteolate, segments nearly equal. Keel of the corolla very obtuse, on slender claws. Pod (loment) lenticular, compressed, small, unarmed, indehiscent, 1 seeded. 24 Leaves pinnately trifoliate, reticulately veined. Summer.

§ Fls. an complete. Calyx villous, long. Cor. whitish with a purple spot....Nos. 1, 2
 § Fls. partly apetalous. Calyx short. Corolla violet.—a Stems upright.....Nos. 3, 4
 —a Stems prostrate.....No. 5

L. capitàta Mx. *Bush Clover*. Lfts. elliptical to linear, silky beneath; stip. subulate; fascicles of flowers ovate, subcapitate, shorter than the leaves, axillary; loments hairy, shorter than the villous calyx. Dry soils, Can. to Car. 2-4f.

- 2 L. hirta Ell. Stem villous; lfts. roundish oval, pubescent beneath; rac. capitate, axillary, oblong, longer than the leaves; corolla and pod about as long as the calyx. Dry woods. 2-4f. Flowers reddish-white.
- **% L. Steùvi** Nutt. Branched and bushy, tomentous or pubescent; lfts. oval-obovate or roundish, longer than the petiole; rac. axillary, capitate or loose; pod villous-pubescent. Dry soils, Mass. to Ga. 2f. Variable.
- 4 L. violàcea Pers. Erect or diffuse, sparingly publicated ; lfts. oval, varying to oblong and linear, obtuse, mucronate, as long as the petioles; rac. axillary, few-flow ered, the apetalous ones generally below. Dry woods. Leaflets 1/.

8. sessiliflora. Flowers many, in clusters shorter than the leaves.

y. reticulata. Leaflets linear, rigid; flowers in short fascicles. Erect.

δ. divergens. Leaflets ovate; upper peduncle longer than the leaves.

5 L. procúmbens Mx. St. prostrate, diffuse, tomentous-pubescent; lfts. oval or obovate-elliptical, smooth above, on very short petioles; ped. filiform few-flowered; pod roundish. Dry soils. Leaflets 5-9". Fed. 2-5'.

β. repens. Nearly smooth and very slender; leaflets oval or elliptical.

y. Feayina. Decumbent; leaflets obovate upper ped. apetalous. South.

27 SPÁRTIUM, L. COMMON BROOM. $(\Sigma \pi \alpha \rho \tau \sigma \nu, a ro_{\nu}e;$ formerly u.ade of the Broom.) Calyx spathe-like, split behind, teeth very short. Keel incurveć, acuminate, longer than the wings. Otherwise like Genista. S. scopárium.—Shrub native of Spain, 6f, with rush-like erect branches often leafless

Leaves simple (if any), oblong. Flowers showy, yellow or white.

28. GENISTA, L. DYER'S BROOM. WOAD-WAXEN. (Celtic gen, Fr. genet; a small shrub.) Calyx with the upper lip 2-parted and the lower 3-toothed. Vex. oblong. Keel oblong, scarcely including the stamens and style. Stigma involute. Stamens monadelphous. 5 With simple leaves and yellow flowers.

G. tinctòria L. Branches round, striate, unarmed, erect; lvs. lanceolate, smooth pod smooth. Dry hills, Mass. N. Y. 1f. August. § Europe.

29. CROTALÀRIA, L. RATTLE-POD. ($K\rho \delta \tau \alpha \lambda \sigma \nu$, a rattle; from the rattling of the loose seeds in the horny pod.) Calyx 5-cleft, somewhat bilabiate. Vex. cordate, large. Keel acuminate. Stam. 10, monadelphous. Filamentous sheath cleft on the upper side. Pod pedicellate, turgid.— Herbs or shrubs. Lvs. simple or palmately compound. Flowers yellow.

- 1 C. sagittàlis L. Annual, erect, branching, hairy; lvs. lance-oval to lance-linear; stip. acuminate, decurrent; rac. 3-flowered, opposite to the leaves; cor. shorter than the calyx. Sandy fields. 6-12'. Cor. small. July.
- 2 C. ovàlis Ph. Perennial, hairy, diffuse; lvs. oval and elliptic; stip. small or minute, partly decurrent; pedicels long, 3-6-flowered; corolla longer than the calyx. Sandy woods, S. 4-12'. Flowers showy. April, May.
- 8 C. Púrshii DC. Perennial; slender, assurgent, nearly smooth; lvs. oblong-linear or linear, subsessile; stip. narrowly decurrent through the whole internode; pedicels 5-7-flowered; corolla as long as the calyx. Damp shades, S. 1-14f.

30. LUPINUS, Tourn. LUPINE. (Lat. *lupus*, wolfish as a weed?) Cal. deeply bilabiate; upper lip 2-cleft, lower entire or 3-toothed. Wings united at the summit. Keel falcate, acuminate. Stam. monadelphous, the sheath entire. Anth. alternately oblong and globous. Pod compressed. (1)24 b Leaves palmately 5-15-foliate, rarely unifoliate. Raceme terminal.

- L. villòsus Willd. Unifoliate, densely silky-tomentous; sts. decumbent-assurgent; lvs. large, elliptic-oblong, long-petioled; rac. terminal, long, dense-flwd. Pine woods, S. 1-2f. Flowers roseate, with a purple spot. Pods very woolly. April-June.
- 2 L. Diffusus N. Diffusely branched from the base; lvs. oval, obtuse, soft, silky, on short petioles; pods very silky. Sands, S. Blue-purple. April.

3 L. Perennis L. Minutely pubescent, 5-7-foliate; lfts. oblanceolate, mucronate; fls. alternate; calyx without appendages, upper lip emarginate, lower entire. Sandy hills. 1f. Flowers blue, varying to white. May, June. Cultivated. 4 L. POLYPHÝLLUS. Lfts. 11-15, lanceolate; calyx lips subentire. Oreg. 3f. Purp.-wh.
5 L. ΝΟΟΤΚΑΤÉΝSIS. Villous; lfts. 5-9, oblong; cal. lips subentire. N.W. Coast. 2f. Par.
6 L. HARTWÉGU. Hairy; lfts. 7-9, obl. obtuse; stip. and bracts setaceous. Mex. Blue
7 L. VÀRIOS. Small and delicate; calyx appendaged, lips 2-tid and 3-fid. Blue.

31. LABÚRNUM, Benth. Calyx campanulate, bilabiate, upper lip 2-, lower 3-toothed. Vex. ovate, erect, as long as the straight wings. Fil. diadelphous (9 and 1). Leg. continuous, tapering to the base, severalseeded. 57, Leaves palmately trifoliate. Flowers mostly yellow.

- **1 L.** VULGÀRE L. Golden Chain. Arborescent; lfts. oblong-ovate, acute at base, acuminate; raceme elongated (1f), pendulous; legume hirsute. Europe. 15f.
- 2 L. ALPÌNUM L. Arborescent; lfts. oblong-ovate, rounded at base; raceme long, simple, pendulous; legume glabrous. Alps. 30f.

32. TRIFOLIUM, Tourn. CLOVER. ($T\rho\iota\varphi\dot{\upsilon}\lambda\lambda\sigma\nu$ (three-leaved), Lat. trifolium; Fr. trèfle; Eng. trefoil.) Calyx 5-toothed. Pet. united at the base, withering. Vex. reflexed. Alæ oblong, shorter than the vexillum. Carina shorter than the alæ. Stam. 10, diadelphous (9 and 1). Legume mostly indehiscent, covered by and scarcely longer than the calyx, 1–4seeded. Seeds roundish.—Herbs. Leaves palmately trifoliate. Leaflets with straight veinlets. Flowers in heads or spikes. Figs. 233, 354.

- § Flowers yellow, in small, dense, roundish heads. Legume 1-seeded Nos. 1, 2
- § Flowers cyanic, -c pedicellate, finally deflexed...(a)
 - -c subsessile, never deflexed...(b)
 - a Heads small, on stalks some ten times longer. Legume 4-seeded.....Nos. 3, 4
- 1 T. procúmbens L. Yellow Clover. St. procumbent or ascending; lfts. denticulate, terminal one stalked; stip. ovate-lanceolate, acuminate, much shorter than the petioles; heads small, subglobous; style short. (1) Dry soils, N. H. to Va. 1-2f. Jn.
- 2 T. agràrium L. St. ascending or erect; lfts. denticulate, all subsessile; stipules linear-lanceolate, cohering with and longer than the petiole; heads ovoid-elliptic; style equalling the pod. ① Dry fields, N. H. to Va. 1f. July.
- 3 T. Caroliniànum Mx. Slender, diffuse; lfts. cuneate-obovate, the middle one obcordate; stip. ovate-acuminate, foliaceous; cal. teeth thrice longer than its tube.
 (1) Fields, S.
- 4 T. repens L. White Clover. Shamrock. St. creeping, diffuse; fts. obcordate, denticulate; stip.narrow, scarious; cal. teeth shorter than the tube. 24 Pastures, &c.
- 5 T. refléxum L. Buffalo Clover. Pubescent; ascending or procumbent; lfts. obovate, serrulate; stip. leafy, semicordate; cal. teeth nearly as long as the corolla; leg. 4-seeded. (2) Prairies, W. and S. 8-16'. April-June.
- 6 T. stoloníferum Muhl. Glabrous, creeping; lfts. broadly obcordate, denticu.ate; stip. leafy, ovate-lanceolate; cal. teeth not half the length of the corolla; .egume 2-seeded. W. States. 6-12'. May, June.
- 7 T. arvénse L. Hds. cylindrical, very hairy; cal. teeth setaceous, longer than the cot; leaflets narrow-obovate. (1) Dry, sandy fields. 5-10'. June-Aug. § Eur.
- 8 **T. praténse L.** *Red Clover.* Ascending, thinly hirsute; lfts. spotted, oval, entire; stip. ovate, cuspidate-acuminate; heads sessile; lower tooth of the cal. longer than the four others which are equal. 24 Fields and meadows. 2f.
- 9 T. mèdium L. Zig-zag Clover. St. suberect, branching, flexuous, nearly glabrous; lfts. not spotted, oblong, subentire; stip. lanceolate, acuminate; heads ovoidglobous, pedunculate; cal. teeth setaceous, hairy. 21 Hills, N. § Eur

10 T. INCARNATUM. St. erect, flexuous; lfts. round-ovate, obtuse or obcordate, villous; spike dense, oblong, pedunculate. Italy. 2f. Red.

33. MEDICAGO, L. MEDICK. Calyx 5-cleft. Cor. deciduous. Vex. free and remote from the keel. Leg. variously curved, or spirally coiled or twisted.—Lvs. pinnately 3-foliate, denticulate. European.

* Pods smooth......Nos. 1, 2, 3. ** Pods spiny.....Nos. 4, 5, 6.

- I M. lupulina L. None-such. Procumbent, pubescent; lfts. wedge-obovate; ffs. yellow; pod reniform, 1-seeded. (1) Waste grounds. 6-20'. May-July. §
- 2 M. sativa L. Lucerne. Erect, glabrous; lfts. oblong-lanceolate; stip. lance-linear; fls. violet-purple, large; pod spiral. 24 Fields: rare. 2-3f. June, July. §
- 3 M. scutellàta L. Snails. Lfts. elliptical and obovate; ped. 1-3-flowered, shorter than the leaf; pod coiled like a snail-shell. Gardens. July. §
- 4 M. denticulàta Willd. Lfts. obovate; stip. bristly-gashed; ped. with 1-3 yellow flowers; pod loosely spiral, border doubly echinate. (1) 1-2f. June. §
- 5 M. maculàta Willd. Lfts. obcordate, with a purple spot; ped. 2-3-flowered; pod compactly spiral, outer edge grooved and doubly spiny. ① §
- 6 M. intertéxta L. Hedgehog. Lfts. rhomboidal; stip. gashed; pod spirally coiled in 5 or 6 turns, bordered with bristly prickles. Rare. §

34. MELILOTUS, Tourn. MELILOT. Legume ovoid, wrinkled, longer than the calyx, 1–2-seeded. Fls. as in Trifolium. ①② Leaves pinnately trifoliate, leaflets toothed. Flowers in racemes. June, July.

- 1 M. officinàlis Willd. Fls. yellow; lfts. obovate-oblong, obtuse; stem erect, with spreading branches. Alluvion. 3f. Raceme slender, one-sided. §
- 2 M. alba Lam. Sweet-scented Clover. Fls. white; lfts. ovate-oblong, truncate, mu cronate; vex. longer than the other petals. Fields. 4-6f.

35. PSORALEA. Cal. 5-cleft, campanulate. Segm. acuminate, lower one longest. Stam. diadelphous, rarely somewhat monadelphous. Pod as long as the calyx, 1-seeded, indehiscent. 24 b Often glandular-dotted. Stip. cohering with the base of the petiole. Flowers cyanic.

- * Leaves all pinnately 3-foliate.....Nos. 3, 4, 5

* Leaves pinnately 19-21-foliate.....No. 6

- * Leaves palmately 3-7-foliate.—a Silky or smooth. Fls. loosely spicate...Nos. 7, 8, 9 —a Villous. Flowers densely capitateNos. 10, 11
- 1 P. canéscens Mx. Bushy, downy-canescent; lower lvs. palmately 3-foliate; lfts. roundish obovate, dotted, upper simple. Woods, S. 2f.
- 2 P. virgàta N. Virgate, smoothish; lowest lvs. pinnately 3-foliate; fts. linear or obtong, often all simple; spikes rather dense. Ga. 2f.
- 3 P. stipulàta T. & G. Smoothish; lfts. elliptic-ovate, obtuse; stipules large, ovate; ped as long as the leaves; spikes capitate. Falls of Ohio, Ky.
- 4 P. melilotoides Mx. Smoothish; lfts. lance-oblong, obtuse; stip. lanceolate; ped. much longer than the leaves. Dry soils, S. and W. 2f.
- 5 P. Onóbrychis N. Pubescent; lfts. ovate, acuminate; stipules filiform; ped. long, with slender spikes. Thickets, W. 3-5f. June, July.
- **6 P. multijuga** Ell. Lfts. numerous, oblong-lanceolate, obtuse; spikes oblong; calyx villous, with long teeth. Upper country. Car. Ga.
- 7 P. Lupinéllus Mx. Slender, glabrous; lfts. 5-7, linear-filiform; rac. elongated; fls. violet; pod S-shaped. Woods, S. 2f. May. June.

- 8 P. foribúnda N. Canescent; lfts. 3, rarely 5, dotted, oblong to linear; rac. slender; ped. as long as the flowers (3"); pod smooth. Ill. and W. 3f. June.
- 9 P. argophýlla Ph. Erect, silky-white; lfts. elliptic, obtuse, 5, rarely 3; ped. much longer than the leaves; fls. whorled. Wis. to Dakota (Matthews.)
- 10 P. subacaùlis T. & G. Nearly stemless, hirsute; lvs. 7-foliate on very long petioles; lfts. obovate-oblong; ped. long, rigid; cal. teeth obtuse. Tenn. April.
- 11 P. esculénta Ph. Erect, rigid, diffuse, white-haired; lfts. 5, oblanceolate; petioles long, ped. longer (3'); head oblong; sep. and bracts long, pointed. Minn. to Da kota (Matthews, Colman.) 1f. Tubers farinaceous.

36. SESBÀNIA, Pers. Calyx bell-shaped. Vex. spreading or reflexed. Keel incurved, with long claws. Leg. linear or oblong, ∞ - or few-seeded. Seeds transverse.—Lvs. abruptly pinnate, with many leaflets. Raceme axillary, loose (yellowish). Fig. 356.

- 1 S. macrocárpa Muhl. Tall, glabrous; lfts. oblong-linear, 20-30; pod linear, long, jointed, many-seeded. (1) Damp, S. 3-9f. Pods 1f. Aug.-Oct.
- 2 S. platycárpa Pers. Tall, glabrous; lfts. as above; pod oblong-elliptic, valves double, the inner membranous, 2-seeded. (1) S. 10f. Aug. (Glottidium Flor. DC.)

37. AMÓRPHA, L. LEAD PLANT. Calyx 5-cleft. Vex. concave, unguiculate, erect. Wings and keel none. Stam. exserted. Leg. oblong, somewhat curved at the point, scabrous with glandular points, 1 or 2seeded. 55 American. Lvs. unequally pinnate, punctate. Fls. bluishwhite, small, in spikes.

- * Leaves stalked (lowest leaflets remote from base). Legume 2-seeded..........No. 1
- * Leaves sessile or nearly so. Lfts. 16-20 pairs. Legume 1-seeded Nos. 2, 3
- 1 A. fruticòsa L. Scarcely pubescent; lfts. 9–19, oval, obtuse (1'); cal. teeth short, obtuse, the lowest pointed. W. and S. to Rocky Mts. 6–16f. May, June.
- 2 A. herbàcea Walt. Pubescent or not; lfts. 41-51, oblong, obtuse (7"); cal. teeth subequal, villous, upper obtuse, lower acute. South. 2-4f. June, July.
- 3 A. canéscens N. Villous-canescent; lfts. small (4"), crowded, ovate-oblong; vex. bright blue; calyx teeth equal, acute. Wis. to Ga. and W. 2-4f. July, Aug.

38. DÀLEA, L. Calyx subequally cleft or toothed. Pet. unguiculate, claws of the wings and keel adnate to the staminate tube half way up. Vex. free, the limb cordate. Sta. 10, united into a cleft tube. Ov. 2-ovuled. Pod enclosed in the calyx, indehiscent, 1-seeded.—Glandular-punctate. Lys. odd-pinnate. Stipels 0. Stip. minute, setaceous. Spikes mostly dense.

D. alopecuroides Willd. Glabrous and much branched; lfts. 8—14 pairs, linearoval, obtuse or retuse, punctate beneath; spike pedunculate, oblong-cylindric, silky villous. (1) Ill. to Ala. and W. 2f. Flowers white and violet August.

39. **PETALOSTEMON**, Mx. Calyx 5-toothed, nearly equal. Pet. 5, on filiform claws, 4 of them nearly equal, alternate with the stamens and **mited** with the staminate tube. Stam. 5, monadelphous, tube cleft. Leg. **i**-seeded, indehiscent, included in the calyx. 24 Leaves unequally pinnate, **exstipellate**. Flowers in dense, pedunculate, oblong spikes or heads.

a Bracts not awned, short, acute or obtuse. South...... Nos. 3, 4

- **1 P. cándidum** Mx. Glabrous, erect; lfts. 7–9, all sessile, linear-lanceonate, mu cronate, glandular beneath; spikes on long peduncles; bracts longer than the white petals. Dry prairies, S. and W. Slender. 3f. Leaflets 1'. July.
- 2 P. violàceum Mx. Minutely pubescent, erect; lfts. 5, linear, glandular beneath: spikes pedunculate; bracts shorter than the violet petals. Prairies, West. 2f. Leaf lets 1'. Heads 1' long, brilliant. July, Aug.
- **3 P. cárneum** Mx. Glabrous, erect; lfts. 5–7, lance-linear; spikes oblong, pedun culate; bracts obovate; pet. oblong. Ga. and Fla. Slender. 1–2f. Rose-wh. Aug.
- **1 P. gracile** Nutt. Glabrous, decumbent at base; lfts. 7, lance-linear; spikes somewhat sessile; bracts acute; petals ovate. Pine woods, Fla. and W. 1-2f. White.
- 5 P. corymbosum Mx. St. corymbously branched; spikes capitate, sessile; bracts broad, colored, the outer leaf-bearing; lfts. linear, 5-7 South. 2f. White. Sept.

40. ASTRÁGALUS, L. MILK VETCH. Calyx 5-toothed. Pet. elongated, erect, clawed. Vex. narrow, equalling or exceeding the obtuse keel. Stam. diadelphous (9 and 1). Legume mostly turgid, 2-valved, 1-celled, or 2-celled partly or completely by the intrusion of the sutures. Seeds $1-\infty$, funiculus slender. 24 chiefly. Leaves unequally pinnate. Flowers in spikes or racemes. (Including Phaca, L.)

- 1 R. Pseudacàcia L. Common Locust. Branches armed with spines; lfts. ovate and oblong-ovate; rac. pendulous, white, smooth, as well as the pods. Penn. S. and W. Introduced everywhere. 30-80f. Wood very durable. April, May.
 2 R. viscòsa Vent. Clammy Locust. Spines very short; branchlets, petioles, and
- pods glandular-viscid; lfts. ovate; rac. crowded, erect, roseate. Mts. S. 40f. Ap. Jn. †
- 3 R. híspida L. Rose Acacia. Spines almost wanting, shrub mostly hispid; rac. .oose, mostly pendulous ; fis. large, rose-red. Mts. S. 3-Sf. May, June. +

44. COLUTEA, L. BLADDER SENNA. Calyx 5-toothed. Vex. with 2 callosities, expanded, larger than the obtuse carina. Stig. lateral, under the hooked summit of the style, which is longitudinally bearded on the back side. Legume inflated, scarious. 5 Leaves odd-pinnate.

C. ARBORÉSCENS L. Lfts. elliptical, retuse; vex. shortly gibbous behind. Mt Vesuvire 8-12f. Leaflets aboat 9. Flowers large, yellow. June-Aug.

45. WISTÀRIA, Nutt. Cal. bilabiate, upper lip emarginate, the lower one 3 subequal teeth. Vex. with 2 callosities ascending the claw and separating above. Wings and keel falcate, the former adhering at top Legume torulous. Seeds many, reniform. 5 Leaves odd-pinnate. Ra ceme large, with large, colored bracts. Flowers lilac-purple.

- 1 W. frutéscens DC. Pubescent when young, at length glabrous; lfts. 9-13, ovstu or elliptic-lanceolate, acute; raceme densely OC-flowered; calyx teeth obtuse; ovary glabrous. Swamps, S. 15-30f. Woody. April, May.
- 2 W. CONSEQUÀNA Benth. Pubescent; lfts. 9-13, ovate or oblong-lanceolate, acumi nate; raceme loose, pendulous, 1f long; calyx teeth acuminate. China. April.

46. APIOS, L. GROUND NUT. Calyx obscurely bilabiate, the upper bip of 2 very short, rounded teeth, the 2 lateral teeth nearly obsolete, the lower one acute and elongated. Keel falcate, pushing back the broad plicate vex. at top. \geq Glabrous. Root bearing edible tubers. Leaves pinnately 5–7-foliate.

4. tuberòsa Ph. St. twining; lfts. ovate-lanceolate; rac. shorter than the lvs. Thick ets and shady woods. 2-8f. Rac. 1-3' long. Fls. brownish-purple. Handsome. Jl.Aug

47. VIGNA, Savi. (To *Dominic Vigna*, commentator on Theophras tus.) Calyx of 4 lobes, the upper twice broader, the lower longer. Vex oroad, with 2 callosities near the base of the limb. Keel not twisted Stigma lateral. Legume terete. b Leaves pinnately trifoliate.

V. hirsùta Feay. Plant hirsute, the stem retrorsely so; cal. with 1 bractlet at base, segm. all acute, the lower acuminate; lfts. ovate-lanceolate, pointed. Marshes, S. Car. Fla. to La. 6-10f. Flowers pale yellow, 6". Pod 2', 4-6-seeded. July-Sept.

48. RHYNCHOSIA, DC. Calyx somewhat bilabiate, or 4-parted, with the upper segment 2-cleft. Vex. without callosities. Keel falcate. Style glabrous. Legume oblique, short, compressed, 1-2-seeded. Seeds carunculate. 24 b Leaves resinous-dotted beneath, pinnately 3-foliate, sometimes reduced to a single leaflet. Flowers yellow.

- § PHASEOLOIDEE. Twining. Raceme long, OO-flowered. Calyx teeth short....No. 1 § ARCLIMÍLLUM. Low, or twining. Flowers in fascicles or short racemes.
- 1 R. minima DC. Scrambling; lfts. thin, rhomboidal; rac. with about 12 remote, reflexed fis.; pod torulous, 6" long. Banks, S. Car. to Fla. and La. 3-5f, delicate.
- 2 **R. simplicifòlia** (Ell.) Low, erect, pubescent; lvs. reduced to a single leaflet, or bicular or reniform, obtuse. Sandy woods, S. 1-3'. Leaves 14'. April, May.
- 3 R. volùbilis Wood. Twining, pubescent; lvs. 3-fol.; lfts. oval or orbicular; rac.
 3-10-flwd.; calyx teeth ovate, cuspidate. Dry woods, S. 3-4f. Lfts. 1'. June, July.
- **4 R. erécta** Wood. Tall, velvety pubescent; lvs. 3-foliate; lfts. oval, acute; sepals scarcely us/ted, lance-ovate to linear. Dry. Md. to Fla. 2-5f. June-Aug.
- 5 R. galactoides Chapm. St. erect, rigid, branched; lfts. small, elliptic or oval, margins revolute; pcd. half as long as the flowers. Ala. Fla. 2-3f.

49. PHASEOLUS, L. KIDNEY-BEAN. Cal. upper lip 2-toothed, lower 3-toothed. Keel with the stamens and style spirally twisted. Leg, com pressed and falcate, or cylindric, many-seeded. Seeds compressed, reniform. Leaves pinnately trifoliate. Leaflets stipellate. Figs. 157, 203-4, 214.

§ Flowers arranged in racemes. Legume falcate. July-Sept......No. 1 § Flowers few. capitate on long stalks. Legume straight, linear.....Nos. 2-4

Exotic.—a Stems climbing......Nos. 5, 6, 7

- -a Stem erect, bushy.No. 8
- 1 P. perénnis Walt. Wild Bean Fine. Twining, pubescent; rac. paniculate, mostly in pairs, axillary; lfts. ovate, acuminate, 3-veined; leg. pendulous, falcate, broadmucronate. Dry woods: common. 4-7f. Pod 2'.
- 2 P. diversifòlius Pers. St. prostrate, scabrous; lfts. angular, 2-3-lobed or entire; ped. longer than leaf; pod pubescent, broadly-linear, cylindric. (2) Sandy shores. 3-5f.
- 3 P. hélvolus L. St. slender; lfts. between oblong-ovate and lance-ovate, not lobed; ped. slender, several times longer than the leaves; pod straight, cylindric, 8-10seeded. 24 Sandy fields. 3-5f.
- 4 P. paucifièrus Benth. Stem slender, retrorsely hirsute; lfts. linear-oblong; not lobed, as long as the petiole, hirsute; pod hirsute, 5-8-seeded. Prairies, Ill. (Mead) and W. 2-4f.
- 5 P. VULGÀRIS. Lfts. ovate, acuminate; rac. solitary; pod pendulous, long-pointed, seed reniform, variously colored. (1 E. Ind. Flowers white. 3-8f.
- 6 P. LUNÀTUS. Lima B. Lifts. ovate-deltoid; pod broad, flat, falcate, with large, flat, white seeds; flowers whitish. ① E. Ind. 6-12f.
- 7 P. MULTIFLÒRUS. Scarlet Pole B. Lfts. ovate, acute; rac. as long as the lvs.; fis. scarlet; pod pendulous, seeds reniform. (1) S. Am. 6-10f.
- **3 P.** NANUS. Bush B. Lfts. broad-ovate, acute; pod torulous; flowers and seeds white. (1) India. 1f. There are many varieties.

50. **ERYTHRINA**, L. Calyx truncate or lobed. Vex. long, lanceolate, with no callosities. Wings and keel much smaller. Stam. straight, nearly as long as the vexillum. Style glabrous. Legume torulous. 554 Often prickly. Leaves pinnately trifoliate. Flowers racemed.

- 1 E. herbàcea L. Glàbrous; lfts. rhombic-hastate, with 3 rounded, shallow lobcs, petioles with here and there a small hooked prickle; rac. terminal; flowers slender, deep scarlet, 2'. Rich soils, S. Rhizome thick. 3-4f. April.
- 2 E. CRISTA-GALLI. Shrub or tree; lfts. ovate or elliptical, with hooked prickles beneath; banner recurved; fls. scarlet, in large racemes. Planted South.

51. AMPHICARPÆA, Ell. PEA-VINE. Calyx with 4 or 5 nearly equal segments. Pet. oblong. Vex. with the sides appressed. Stig. capitate. Ovary on a sheathed stipe. Leg. flat, 2–4-seeded. ① Slender, twining. Leaves pinnately trifoliate. The upper flowers complete, but usually barren, the lower apetalous and fruitful.

- **1 A. monoica** Nutt. St. retrorsely pubescent; lfts. ovate, thin; cauline racemes pendulous; cal. segm. very short; bracts minute. Woods. 4-8f. Very slender. Flowers pale purple. Upper pods 4-seeded, lower 1-seeded. July-Sept.
- 2 A. Pítcheri T. & G. Stem rusty-villous; lfts. rhomboid-ovate; rac. erect, often branched; bracts broad, conspicuous. N. Orleans and W. Seeds blackish.

52. GALACTIA, L. Cal. bibracteolate, 4-cleft, the segments of nearly equal length, upper one broadest, entire. Pet. oblong. Vex. broadest and incumbent. Keel petals slightly cohering at top. Legume many-seeded.

§ Leaves pinnate, 7-9-foliate. Sts prostrate, twining. Lvs. coriaceous......No. 1
§ Leaves pinnately 3-foliate. Sts. prostrate, twining. Pods 12-18" long. Nos. 2-4
§ Leaves pinnately 3-foliate. Sts. erect or ascending. Petioles longer than lfts. Nos. 5, 6

- 1 G. Ellióttii N. Lfts. elliptic-oblong, obtuse; ped. longer than the lvs., few-flwd. at the top; upper sep. (double) broad-ovate. 24 Ga. Fla. 3-7f. Rose-white. May, Jn.
- **t** G. glabélla Mx. St. nearly glabrous; lfts. elliptic-oblong, emarginate at each end, shining above, a little hairy beneath; rac. pedunculate, about the length of the leaves; flowers 6", pedicellate. 24 Arid soils, N. J. to Fla. 2-4f. Rose-purple.
- 3 G. mollis Mx. St. softly publicscent; lfts. oval, obtuse, nearly smooth above, softly villous and whitish beneath; rac. longer than the leaves, pedunculate, fasciculate; fls. 4", on very short pedicels; pod villous. 24 Dry soils, Md. to Ga. 2-4f.
 - β. microphýlla. Lfts. small (4--6"), oval; fls. solitary, and nearly sessile in the upper axils; pods 5 or 6-seeded. Ga. Fla. (Miss S. Keen.)
- 4 G. pilòsa N. St. pubescent or smoothish; lfts. thin, oblong-ovate or oval, obtuse or retuse at both ends; rac. very slender, twice or thrice longer than the leaves, with scattered, distant flowers. 24 Dry soils, S. 3-7f. Leaflets 1-2'. Flowers 4".
- 5 G. brachýpoda T. & G. Slender, branching; lfts. oblong, odd one petiolulate; rac. stalked, shorter than the leaves. 24 Sandy woods, W. Fla. 2-3f, ascending.
- 6 G. scssiliftora T. & G. St. simple, flexuous; lfts. oblong-linear, odd one subses sile; rac. very short, sessile. Sandy woods, S. 1-2f. Lfts. 1'-20". Pod erect.

53. DÓLICHOS, L. Calyx 4-lobed, the upper lobe 2-toothed or entire. Vex. with 2 or 4 callosities at the base of the limb. The free stamen spurred at base. Legume flattened with a few oval, flattened seeds. 2 Leaves pinnately 3-foliate.

- 1 D. multiflorus T. & G. Lfts. ample, orbicular, acute, thin, pubescent; racemes equalling the periodes, densely 00-flwd. at the top of the stout peduncle; calyx upper lip entire; pod 4-5-seeded. 24 Banks, Ga. to La.
- P. Hàlei Wood. Lfts. ample, round-ovate, acuminate; petioles 3 times longer than the few-(3-8)-Awd., stalked raceme; pod broad, 2-3-seeded, the point incurved. 24 N. Orleans and W. (Dr. J. Hale.) Pod 2'.
- 3 D. SESQUIPFPÅLIS. Pods smooth, subterete, very long (1f). W. Ind. + South.
- 4 D. CAT-IANG. Pods linear, erect, twin at top of the long ped. E. Ind. + South.

54. CLITÒRIA, L. Calyx bibracteolate, 5-toothed, segm. acuminate. Vex. large spreading, roundish, emarginate, not spurred. Keel smaller than the wings, acute, on long claws. Legume linear-oblong, torulous, several-seeded. > Leaves pinnately 3-5-foliate. Flowers very large, solitary, or several together.

C. Mariàna L. Glabrous; lfts. 3, oblong-ovate or lanceolate, obtuse, lateral ones petiolaiate; ped. short, 1-3-flwd.; bracteoles and bracts very short; pod 3-4-seeded 2 Dry soils, N. J. to Fla. 1-3f. Flowers pale purple. July, Aug.

55 CENTROSEMA, DC. Sep. lance-linear, slightly united, the lower longest and with 2 broad bractlets. Vex. very large, with a short spur on the back near the base. Keel and stamens much shorter, incurved Legume long, linear, margined and long-pointed. b Leaves pinnately 3 foliate. Flowers very large, purple.

C. Virginiàna Benth. St. very slender; lfts. oblong-ovate to oblong-linear, firm, very veiny, the veins incurved; ped. 1-4-flowered, bractlets larger (not longer) than the calyx; pod veined along the margin. 24 Drv soils, S. 2-5f. July, August.

56. KENNEDYA, Vent. Two upper lobes of calyx half-united Ban ner broad, spreading, keel as long as the wings, incurved. Legume linear 2 Australian twiners with brilliant flowers in clusters. Leaves 3-nate.

K. COMPTONIÀNA. Smoothish; Ifts. 3, ovate, retuse, veiny; peduncle bearing an erect raceme of many bright blue flowers, very ornamental in the conservatory. 12f.
 K. RUBICÚNDA. Hairy; Ifts. ovate; ped. 3-flwd., fls. dark-red or crimson, to scarlet. 5f.

58. ACÀCIA, Necker. Calyx valvate, 4- or 5-toothed. Pet. 4 or 5, small, distinct or nearly so. Sta. numerous, distinct. Legume not jointed, dry, 2-valved, ∞ -seeded. Beautiful trees or shrubs, native of warm climates. Lvs. twice pinnate, or reduced to phyllodia (§ 321). Fls. yellow or yellowish, in spikes or heads, very numerous and showy.

-x in globular, racemed heads.....Nos. 6, 7

-x in cylindrical spikes.....Nos. 8-11

- **1** A. Farnesiàna L. Sponge Tree. Tree armed with straight stipular spines; lvs. with 4-8 pairs of pinnæ, leaflets 15-20 pairs, oblong, crowded; ped. 2 or 3 together. Naturalized along the Gulf, Fla. to N. Orleans. Pods 2-3' long. (Vachellia, C-B.)
- 2 A. ÁLBICANS. Shrub from Mexico, 5f, with stipular spines. silvery-pubescent; leaves with 8 or 9 pairs of pinuæ, leaflets 19-30 pairs, linear-oblong, glabrous; flowers white, the heads in axillary racemes, 2-5 together.
- 3 A. DEALBÀTA. Shrub thornless, 5f, from N. Holland, all velvety-pubescent; pinnæ 15 pairs, leaflets 30-35 pairs, linear, crowded; heads in axillary racemes.
- 4 A. JUNIPERÌNA. Shrub from N. Holland, spinescent; phyllodia linear-subulate, pungent; branches terete, hairy or downy; heads solitary; petals 5.
- 5 A. ARMÀTA. Shrub 5-8f, downy or hairy, with spinescent stipules; phyllodia halfoblong-ovate, entire, 1-veined; heads solitary; pods velvety. N. Holland.
- 6 A. VESTÌTA. Shrub 6f, clothed with a soft down; leaves (phyllodia) halved, ellipticoblanceolate; heads loosely racemed along the ped., one being terminal. N. Holland.
- 7 A. CULTRIFÓRMIS. Shrub 5f, smooth and glaucous; leaves curved, triangular-lanceolate, coriaceous; heads in racemes, panicled at the end of the branches.
- 8 A. VERTICILIÀTA. Shrub bushy, leafy, with the phyllodia and leaf-like stipules crowded and irregularly whorled; spikes oblong, solitary, axillary. New Holland.
- 9 A. LONGIFÒLIA. Shrub 5f, unarmed, with the phyllodia long, linear-lanceolate, 3veined at base, veiny above; spikes axillary, in pairs; flowers 4-parted. N. S. Walea,
- 10 A. LINEÀRIS. Shrub 5f, unarmed, with phyllodia very long (7') and narrowly lin ear, 1-veined; spikes axillary, many, often branched; calyx 4-parted.
- 11 A PLORIBÚNDA. Shrub or small tree, 6-10f; phyllodia linear-lanceolate, attenuate both ways, 3-5-veined; spikes simple, axillary, solitary; calyx 4-toothed. N. Holland.

59. POINCIÁNA, L. Sepals 5, united just at base. Petals broad, unguiculate, spreading. Stam. 10, very long, decurved with the slender style Legume flat. 5 Tropical. Leaflets very many, no odd one. Fls. large.

1 P. PULCHÉRRIMA. Shrub prickly (used in the W. Ind. for hedges. hence called *Flower* fence); leaflets oval-oblong; fis. 2' broad, orange, with crimson flaments 2' long. 104.

2 P. GILLÈSH. From S. Am. Thornless; lfts. very small; fls. 2', ylw., the pet. subequal subsessile, glandular-ciliate at apex. [one spotted. From Madagascar. 10]

3 P. REGIA, has crimson flowers 3' broad, the petals long-clawed, crenate-edged, upper

60. CALLISTACHYS, Vent. Calyx 2-lipped. Banner erect, keel and wings deflexed. Stam. 10, separate, as in Baptisia. Style incurved. Pod woody before ripening, many-seeded. 5 From New Holland. Leaves 3-foliate but sessile. Flowers yellow, in a terminal cluster.

C. LANCEOLÀTA. Hairy, half-shrubby; leaflets lanceolate, apparently whorled in 3's.
 C. ovÀTA. Pubescent; leaves ovate, acute; spike short and broad, many-flowered.

61. SOPHÒRA, L. Keel obtuse, not shorter than the wings or roundish banner. Pod stipitate, many-seeded, moniliform, indehiscent. Seeds globular. 55 Leaves odd-pinnate. Panicles terminal.

1 S. tomentòsa L. Shrub 4-6f, hoary-tomentous; lfts. about 15. oblong, thick; fla in long racemes, yellow, handsome; calyx obscurely 5-toothed; pod 6'. Coast, Fla.

2 S. JAPÓNICA. Tree 30-40f, from Japan, hardy from Philadelphia south. Leaflets about 13, smooth; panicles large, erect, open, white, in July and August.

62. CHOROZEMA ILICIFOLIA. Shrub from N. Holland, 3f, bushy, with thick spinescent, holly-like, simple leaves, and a profusion of deep orange or scarlet racemes. Calyx 2-lipped. Keel shorter than the wings. Pod inflated, many-seeded.

63. ÓROBUS, Tourn. BITTER VETCH. Calyx obtuse at base, deeper cleft on upper side. Cor. long, keel incurved, shorter than wings or banner. Sty. terete, downy above. 24 Lfts. 2—12, rachis ending in a short point.

O. VÉRNUS. Lfts. 6, ovate, pointed; stip. 4-sagit., entire; fls. blue and purp. Apr. 1f.
 O. NIGER. Branched, 3f; lfts. 12, ovate to oblong; flowers dark purple. June—Aug.
 O. ATROPURPÙREUS. Leaflets 6, linear; flowers dark purple, in long 1-sided racemes.

64. LENS ESCULÉNTA. LENTIL. Herb cultivated for food at the East since the times of Esau, seldom seen here. Stem weak, 1f. Leaves of many pairs of oblong leaflets, ending in a branched tendril. Raceme of 2 or 3 pale flowers succeeded by a short broad pod. Seed exactly lens-shaped, giving the name. (1)

65. CYTISUS, L. Cal. 2-lipped, with 5 teeth, keel obtuse, straightish. Style incurved or at length involute. Seeds with a *scale* at the hilum (strophiolate). 5 Leaves of 3 leaflets, the upper becoming simple.

C. scopARIUS. Scotch Broom. Shrub with smooth angular, virgate branches; lfts. oblong, pedicels solitary, axillary; flowers yellow, showy; pods hairy at edge. Europe.

66. TRIGONELLA FŒNUM-GRÆCUM. FENUGREEK. Herb from Europe, in gardens. Cult. for its strong-scented herbage. 2f. Lfts. 3, cuneate at base. Fls. axillary, sessile, small, white. Pods linear, long, slightly falcate at point, 2 or 3 together.

67. CLIANTHUS, Soland. Cal. bell-form, 5-cleft. Banner lance-ovate, acuminate, reflexed, keel boat-shaped, decurved, as long as the banner, longer than the narrow wings. Pod oblong, inflated. 5 From New Zealand. Leaves odd pinnate. Flowers large and splendid.

1 C. PUNICEUS. Shrub smoothish, 4f; leaflets about 17, oblong, retuse, alternate. flowers 3' wide, crimson-red, in dense hanging racemes of superb appearance.

C. DAMPIÉRII. Shrub hairy, 4f; leaflets about 17, oval, acute; flowers very large scarlet, with a black prominence at the base of the banner. Flowers freely.

ORDER XLIV. ROSACEÆ. ROSEWORTS.

Herbs, shrubs, or trees, with alternate, stipulate leaves and regular flowers. Sepals 5, rarely fewer, united, often re-enforced by as many bractlets. Petals 5, rarely 0, distinct, inserted on the disk which lines the calyx tube. Stamens ∞ , rarely few, distinct, inserted with the petals (perigynous) Ovaries 1, 2, 5, or ∞ , distinct, or often coherent with each other, or immersed in the tube of the calyx. Fruit a drupe, or achenia, or a dry or juicy etærio (§ 158), or pome. Seeds 1 or few in each carpel, anatropous, exalbuminous. Embryo straight. Figs. 5, 35, 38, 117, 139, 158, 183-5, 188, 197, 244, 251, 285, 297, 300-1, 307, 358, 365-6, 400, 428.

T	oval and obovate, abruptly and strongly acuminate, doubly serrate; drupes roundish
	oval, reddish orange, with a tough skin. Low woods. 10-15f. May. †
2	P. marítima Wang. Beach Plum. Lvs. oval or obovate, slightly acuminate,
	sharply serrate; petioles with 2 glands; umbels few-flowered; ped. short, pubescent;
9	fruit nearly round. Sea beach, Me. to Va. 3-4f. Fruit size of a grape. May. P. umbellàta Ell. Lvs. lanceolate or lance-oval, acute or barely acuminate, ob-
3	scurely serulate; petioles glandless; umbels 3-5-flowered, precocious; fruit oval.
	small, glaucous, red. Dry soils, South. 10-15f. Fruit pleasant. May.
4	P. Chicaso Mx. Chickasaw Plum. Branches spinous; lvs. oblong-lanceolate or
	oblanceolate, glandular serrulate, not at all acuminate; pedicels short, smooth; drupe
5	globous. Thickets, South. $6-12f$. Fruit red or yellowish. April. P. spinosa L. β . <i>instituta</i> . Bullace Plum. Branches thorny; lvs. pubescent
0	Leneath; obovate-elliptical, varying to ovate, sharply and doubly dentate; umbels
	1-2-flowered; fruit globular, black, glaucous. Roadsides. 15-20f. §
6	P. DOMÉSTICA L. Common Garden Plum. Damson Plum. Branches unarmed; lvs.
	oval or ovate-lanceolate, acute; pedicels nearly solitary; drupe globous, oval, ovoid,
7	and obovoid. Long cultivated. 15f. Italy. P. pùmila L. Sand Cherry. Lvs. oblanceolate or obovate, acute, subserrate,
•	smooth, paler beneath; umbels few-flowered, sessile; drupe ovoid. Shrub trailing in
	sandy soils. 1-2f. Fruit small, dark red, pleasant. May.
8	P. Pennsylvánica L. Wild Red Cherry. Lvs. oblong-ovate, acuminate, finely
	serrate, thin, smooth; umbels corymbous, with elongated pedicels; drupe small, ovoid-subglobous. Woods, N. 25f. Bark red-brown. May.
9	P. AVIUM L. Ox-heart. English Cherry. Branches erect or ascending; lvs. oblong-
-	obovate, acuminate, hairy beneath; umbels sessile, with rather long pedicels; drupe
	ovoid-globous, subcordate at base. Gardens, parks. 30-50f. †
1(P. CÉRASUS L. Sour Cherry. Large Red. Morello, &c. Branches spreading; lvs.
	ovate-lanceolate, acute at apex, narrowed at base, nearly smooth; fls. with short pedi- cels; drupes globous. Tree 15-20f. †
11	P. serótina Ehr. Black or Wild Cherry. Lvs. firm, oval-oblong or elliptic, acu-
-	minate, smooth, shining above, unequally glandular-serrate; petioles with 2-4 glands;
	raceme long; drupes black. Woods. 50-80f. Bark black. May.
12	P. Virginiàna L. Choke Cherry. Lvs. smooth, oval or obovate, short-pointed,
	thin, not shining, with sharp, subulate serratures, veins bearded at base; petioles with 2 glands; raceme short. Thickets. 5-20f. Fruit blackish, astringent. May.
19	P. Caroliniàna Ait. Cherry Laurel. Lvs. oblong-oblanceolate, acuminate, on
	short petioles, entire, coriaceous; fis. small, in numerous, dense racemes shorter than
	the leaves : drupes persistent, poisonous. Banks, S. 80-50f. April. +

- 14 P. ARMENÌACA Willd. *Apricot*. Lvs. broadly ovate, acuminate, subcordate at base. denticulate; stip. palmate; fls. sessile, subsolitary; drupe large, subglobous. From Armenia. 10-15f. Fruit purple-yellow, 1-2'.
- 15 P. DASYCÁRPA Ehrh. Black Apricol. Lvs. ovate, acuminate, doubly serrate; petioles with 1 or 2 glands; fis. pedicellate; drupe subglobous. From Siberia. 10-15f Fruit dark purple, in July. Flowers white, April.
- 16 P. VULGÀRIS Mill. *Peach.* Lvs. lanceolate, serrate, with all the serratures acute; fls. solitary, subsessile, preceding the leaves; drupe tomentous. Persia. 8-15f. Fls. rose-color, with the odor of prussic acid. Fruit yellow-purple.

β. LÆVIS. Nectarine. Drupes glabrous, yellow, purple, red, large.

- 17 P. COMMUNIS. Almond. Lvs. lanceolate, serrate, with the lower serratures glandular; flowers sessile in pairs. Barbary. 15f. Varies with flowers double.
- 18 P. NANA. Dwarf single-flowering Almond. Lvs. ovate, attenuate at base, simply and finely serrate; flowers subsessile. Russia. 3f. May, June.
- 19 P. LANCEOLÀTA. Dwarf double-flowering Almond. Lvs. lanceolate, doubly serrate; is. pedicellate, covering the stems. China. 2-3f. Roseate. (Amygd. pumila, Ait.)

3. SPIRÆA, L. Calyx 5-cleft, persistent. Pet. 5, roundish. Stam. 10—50, exserted. Carp. distinct, 3—12, follicular, 1-celled, 1-2-valved, 1-10-seeded. Styles terminal. 5 2 Branches and leaves alternate. Flowers white or rose-colored. Fig. 244.

- 1 S. opulifòlia L. Ninebark. Lvs. roundish, 3-lobed, doubly serrate; fis. white, in pedunculate corymbs; carp. 3-5. By streams. Rare. 4f. June.
- 2 S. SORBIFÒLIA. Lvs. odd-pinnate; lfts. lanceolate, acuminate, doubly serrate, terminal one lobed; fis. white, in terminal panicles. Siberia. 6f. May.
- **3 S. corymbòsa** Raf. Lvs. ovate, cut-serrate above, whitish beneath; fls. innumer able, white or roseate, in a dense, level-topped corymb; styles and carpels generally 3. Penn. Ky. and S. 1-2f. May, June.
- 4 S. HYPERICIFÒLIA. St. Peter's Wreath. Lvs. obovate-oblong, subentire; fis. in many lateral clusters, on short branches, white, mostly double. Europe. 3f. May.
- 5 S. PRUNIFÒLIA. Branches virgate; lvs. ovate, petiolate, serrate, 5-veined, silky beneatn; fls. in 3's-5's (very double), white. Japan. Beautiful.
- 6 S. REFURSIANA. Lvs. lanceolate, serrate, 3-lobed or pinnatifid, glaucous beneath; rac. capitate, pedunculate, often forming long wreaths. June.
- 7 S. TRILOBÀTA. Lvs. roundish, lobed, crenate, veiny: fis. corymbed. Alps.
- 8 S. tomentòsa L. Hardhack. Rusty tomentous; lvs. lance-ovate, smoothish above serrate; rac. short, dense, aggregated into a dense thyrse-like, terminal panicle; carp 5. Pastures, thickets. Common. 2-3f. July, Aug. †
- 9 S. DOUGLÁSH. Much like No. 8, but larger, smoother, and with redder fis. Oregon.
- 10 S. salicifòlia L. Nearly smooth; lvs. lanceolate to oblanceolate, serrate; rac. panicled, dense or lax, white, often with a blush; carp. 5. Meadows, thickets. Com mon. Stem purplish. 3-4f. Stam. conspicuous as in other species. July. †
- 11 S. ARLÆFÒLIA. Lvs. elliptic-oblong, crenately lobed and toothed; fis. innumerable in large, terminal panieles, white. Oreg. 6-12f. Stems virgate. June, July.

[§] Herbs, without stipules. Leaves tripinnate. Ovaries 5, drooping......No. 13

- 12 S. LÆVIGATA. Lvs. obovate-oblong, very smooth and entire, sessile. Siberia.
- 13 S. Arúncus L. Goat's Beard. Lvs. tripinnate; lfts. oblong-lanceolate, acuminate, straight-veined, doubly serrate, odd ones lance-ovate; pan. large, of numerous slender racemes; carpels 3-5, glabrous, 1". Mts. N. Y. to Ga. 3-5f. July.
- 14 S. lobàta L. Queen-of-the-Prairie. Lvs. pinnatifid, the term. lobe largest, pedately 7-9-parted, lobes all doubly serrate; stip. reniform; panicle large, roseate, exceedingly delicate; carpels 6-8. Low prairies, W. & S. 4-Sf. June, July. †
- 15 S. ULMÀRIA. Double Meadow-sweet. Lvs. interruptedly pinnate, white-downy beneath; lfts. lance-ovate, the terminal one large, palmately 3-5-lobed. Eur. July.
- 16 S. FILIPÉNDULA. Pride-of-the-Meadow. Lfts. 9-21, pinnatifid-serrate, minute ones between; stip. clasping, large; corymbs lax; sep. reflexed. Europe. Root tuberous.
- 17 S. JAPÓNICA. Lvs. biternate; lfts. oblong, acuminate, cordate, their stalks bearded at base; panicle terminal; flowers with 10 stamens and 2 styles, pure white. 3-49

4. GILLÈNIA, Mœnch. INDIAN PHYSIC. Calyx tubular-campanulate, contracted at the orifice, 5-cleft. Pet. 5, linear-lanceolate, long. Sta. 10—15, very short. Carpels 5, connate at base. Styles terminal. Follicles 2-valved, 2–4-seeded. 24 With trifoliate, doubly-serrate leaves.

- 1 G. trifoliàta Mœnch. Lfts. ovate-oblong, acuminate; stip. linear-setaceous, entire; fls. on long pedicels, in pedunculate, corymbous panicles. In woods, W. N. Y. to Ga. 2-3f. Flowers axillary and terminal, rose-white, 1½ broad. June, July.
- 2 G. stipulàcea Nutt. Bowman's Root. Lvs. lanceolate, deeply incised; radical leaves pinnatifid; stipules leafy, ovate, doubly incised, clasping; flowers large, in loose panicles. W. N. Y. to Ala. Flowers rose-color. June.

5. KÉRRIA, DC. Calyx of 5, acuminate, nearly distinct sepals. Cor. of 5 petals. Ov. 5-8, smooth, globous, ovules solitary. Sty. filiform. Ach. globous. 5 Stems virgate. Lvs. simple, ovate, acuminate, doubly serrate, with stipules. Flowers terminal on the branches, solitary or few together, orange yellow.

K. JAPÓNICA. Japan Globe-flower.-Gardens. 5-8f. Flowers double.

6. NEVIUSIA, Gray. Calyx 5-parted, the lobes leafy, cut-serrate, persistent. Cor. 0. Sta. ∞ , filiform. Ov. 2—4, 1-ovuled. Ach. drupaceous. 5 Lvs. simple, ovate, petiolate. Stipules subulate, free. Flowers terminal, numerous, showy.

N. Alabaménsis Gr.-Tuscaloosa, Ala. (Rev. R. D. Nevius.) 2-3f.

7. RUBUS, L. BRAMBLE. Calyx spreading, 5-parted. Pet. 5, deciduous. Stam. ∞ , inserted into the border of the disk. Ovaries many, with 2 ovules, one of them abortive. Achenia pulpy, drupaceous. $5 \mid_{\sim}$, With (2) stems, armed with prickles. Inflorescence imperfectly centrifugal. Fruit esculent, July—Sept. Flowers in May, June. Fig. 185.

1 K. villosus Ait. High Blackberry. Pubescent, viscid, and prickly; st. recurved

At top, angular; lfts. 3-5, ovate, acuminate, serrate; petioles prickly; culyx acuminate; raceme leafless, ∞ -flowered; fruit ovoid, small-grained, sweet. The ckets. 3-6f. Fruit black, in August.

β. frondosus. Lawton B. Smoothish; rac. leafy at base, short; fr. subglobons, large-grained, very acid. Fields and gardens.

y. humif usus. Trailing; leaves smaller; peduncles few-flowered.

- 2 R. cuncifòlius Ph. Sand B. Pubescent; lvs. 3-foliate; lfts. wedge-obovate. entire at base, dentate above; racemes few-flowered, loose. Sandy woods, L. I. to Fla 2-3f. Pet. white, thrice longer than calyx. May, June.
- 3 R. híspidus L. Hispid with retrorse bristles; lvs. 2-foliate, smooth, green both sides; lfts. obovate, thickish, persistent; fls. and fr. small, corymbed, on filiform pedicels. Damp woods. 3-7f long. Fruit sour. May, June.
 - β. setosus. Lvs. oblanceolate; fruit red. (R. setosus Bw.)
- 4 **R. Canadénsis** L. Northern Dewberry. Slightly prickly; lvs. 3 (rarely 5)-foliate; lfts. elliptic or rhomb-oval, acuminate, thin; ped. long, hardly in clusters; fruit large, black, very sweet in August. Stony fields, North.
- 5 **R. triviàlis** Mx. Southern Deuberry. Prickly and bristly; lvs. 3-5-foliate, thick. ovate-oblong or oval; ped. 1-3-flowered; sep. obtuse, reflexed. South.
- 6 R. odoràtus L. *Mulberry*. St. erect or reclining, unarmed, glandular-pilous; lvs. palmately 3-5-lobed, middle lobe longest, unequally serrate; fls. large, in terminal corymbs; pet. orbicular, purple. Woods: common. 3-5f. Fr. red, sweet, in Aug.
- 7 **R. Nutkànus** Mocino. Somewhat pilous; lvs. broad, 5-lobed, lobes nearly equal, coarsely serrate; ped. few-flowered; sep. long-acuminate, shorter than the very large, round-oval, white petals. Mich., Wis. to Oreg. 5-7f.
- 8 R. Chamæmòrus L. *Cloudberry*. Herbaceous, diæcious; st. decumbent at base, erect, unarmed, 1-flwd.; lvs. mostly but 2, cordate reniform, rugous, with 5-rounded lobes, serrate; sep. obtuse; pet. obovate, white. White Mts. 1f. June.
- **9 R. triflorus** Rich. Branches herbaceous, green; lvs. 3- or 5-foliate; lfts. nearly smooth, thin, rhombic-ovate, acute, odd one petiolnlate; stip. ovate, entire; pet. erect, oblong-obovate. Hilly woods, N. Fruit few-grained, dark red.
- 10 R. strigosus Mx. Wild Red Raspberry. St. strongly hispid; lvs. pinnately 3- or 5-foliate; lfts. oblong-ovate or oval, obtuse at base, canescent-tomentous beneath, odd one stalked; cor. cup-shaped, white. Old fields, N. Common. Fruit red.
- 11 R. occidentàlis L. Black Raspberry. Thimble-berry. St. glaucous with bloom, long, recurved, prickly; lvs. pinnately 3-foliate; lfts. ovate, acuminate, hoary-tomentous beneath, lateral ones sessile; pet. shorter than sep.; fr. blk. Rky, fields and gard,
- 12 R. IDAUS. Garden R. Hispid or prickly; lvs. pinnately 3-5-foliate; lfts. rhombovate, acuminate, hoary-tomentous beneath; sep. hoary-tomentous, pointed, longer than the white petals; fruit red, white, or yellow. §? ‡
- 13 R. ROSÆFÒLIUS. Bridal Rose. Prickles straight; lvs. pinnately 3-7-foliate; lfts. lance-ovate, doubly serrate, velvety; flowers large, white. Mauritius.

8. DALIBÁRDA, L. FALSE VIOLET. Calyx inferior, deeply 5–6parted, spreading, 3 of the segm. larger Pet. 5. Sta. ∞ . Sty. 5–8, long, deciduous. Ach. nearly dry. \downarrow , Lvs. undivided. Scaves 1–2-flowered.

D. repens L. Low, public earling creeping shoots; lvs. simple, roundish-cordate, crenate; stipule linear-setaceous; calyx spreading in flower, erect in fruit. 24 Damp woods, Fean. to Can. 2-12'. Scapes with 1 small white flower. June.

9. DRYAS integrifolia, Vahl.—On the White Hills of N. H. Prof. Peck (Pursh). On Pike's Peak, Colorado. (A. H. Thompson.)

10. GEUM, L. AVENS. Calyx 5-cleft, with 5 alternate segments or bractlets smaller and exterior. Pct. 5. Sta. ∞ . Ach. ∞ , aggregated

on a dry receptacle, and caudate with the persistent, mostly jointed, geniculate and bearded style. 24 Leaves pinnately divided.

- 1 G. triftorum Ph. Villous, erect, about 3-flowered; lvs. mostly radical, interrupt edly pinnate, of numerous cuneate, incisely dentate, subequal lfts.; bractlets linear, longer than the sepals: styles plumous, very long in fruit (2-3'). N-W. States, rare in the North. 8-12'. Flowers purplish-white. May, June.
- 2. G. radiàtum Mx. Hirsute or smoothish; stem erect, nearly leafless; root lvs. lyrate, the terminal leaflet large, reniform, lobed and toothed, lateral ones minute; bractlets minute; pet. obcordate, yellow, large; styles hairy at base. White Mts. N. H., Roan Mt. N. Car. 9-15'. (G. Peckii Ph.)
- **3 G. vernum** T. & G. Smoothish; lvs. pinnately divided, incisely lobed and toothed, the lowest often simple; fls. small, yellow; sep. reflexed; torus conspicuously stipitate. W. and S-W. 12-20'. Stipules large. April-June.
- 4 G. rivàle L. Pubescent; st. subsimple; radical lvs. lyrate; stip. ovate, acute; fis. nodding, purple; pet. as long as the erect cal. segments, purplish-yellow; upper joint of the persistent style plumous. Wet meadows, N. and M. 1-2f. June.
- 5 G. strictum Ait. Hirsute; lvs. interruptedly pinnate; lfts. ovate, lobed and toothed; pet. roundish, longer than the reflexed sepals; torus densely pubescent. Fields, N. States and Can. 2-3f. Terminal leaflet largest. July, August.
- 6 G. macrophýllum Willd. Hispid; lvs. interruptedly lyrate-pinnate, the terminal lft. much the largest, roundish cordate, 3-5', all unequally dentate; petals longer than the calyx; recept. nearly smooth. White Mts. and Can. 1-2f. June, July.
- 7 G. album Gmel. Smoothish or pubescent; root lvs. ternate or often simple, upper lvs. simple; lfts. ovate, lobed and dentate; pet. as long as calyx; torus white-bristly. Thickets. Common. 2-3f. July. (G. Virginianum T. & G. &c.) (See Addenda.)
- 8 G. Virginiànum L. Hirsute; lvs. pinnate below, then ternate, the upper simple; lfts. incisely lobed, wedge-lanceolate, very acute, cut-toothed; pet. shorter than calyx · torus nearly naked. Wet thickets. 2-3f. Stout. July.

11. FRAGARIA, L. STRAWBERRY. Cal. concave, deeply 5-cleft, with an equal number of alternate, exterior segments or bractlets. Pet. 5, obcordate. Sta. ∞ . Sty. ∞ , lateral. Ach. smooth, affixed to a large, pulpy, deciduous receptacle. $24 \mid_{\sim}$ Stems stoloniferous. Leaves trifoliate. Fruit red. Flowers white, in Spring. Figs. 5, 117, 184, 251, 428.

F. Virginiàna Ehrh. Pubescent; lvs. thick; cal. of the fruit erect-spreading; acn. imbedded in pits in the globous receptacle; ped. commonly shorter than the lvs Fiells and gardens. 6-12. Some of its varieties are polygamo-diœcious.

β. Illinoensis. Larger, very villous in the stems. Prairies. Westward.

- 2 F. vesca L. Alpine, Wood, or English Strawberry. Villous-pubescent; cal. cf the fruit spreading or reflexed; ach. superficial on the conical or hemispherical receptacle, which is without pits; lvs. thin. Fields and woods.
- β. pállida. Fruit white. A var. well established in Wayne Co. N.Y. (Hankenson.) **S F. Índica** Ait. Pubescent, rooting at the joints; lfts. ovate, obtuse, incisely crenate-serrate; stip. lanceolate, free; pedicels axillary, solitary 1-flowered; bractlety leafy in fruit. 24 Damp places, Penn. and S. § India.

12. WALDSTÉINIA, Willd. DRY STRAWBERRY. Cal. 5-cleft, with 5 alternate, sometimes minute and deciduous bractlets. Pet. 5 or more, sessile, deciduous. Sta. ∞. Sty. 2-6. Ach. few, dry, on a dry receptacle.
24 Acaulescent, with lobed or divided leaves, and yellow flowers.

- 1 W. fragarioides Traut. Lvs. trifoliate; lfts. broad-cuneiform, incisely dentate crenate, ciliate; scapes bracteate, many-flowered. Hilly woods. 8'. June.
- 2 W. lobàta T. & G. Lvs. simple, roundish, cordate, 3-5-lobed, incisely crenate; scapes filiform, bracted, 3-7-flowered. Hills, South. 6'. May, June.

13. POTENTÍLLA, L. CINQUEFOIL. Calyx concave, deeply 5-cleft, with 5 bractlets added. Pet. 5, roundish. Sta. ∞ , slender. Ovaries collected into a head on a small, dry, hairy torus. Sty. terminal and lateral, deciduous. Achenia ∞ . (1) 24 b Leaves compound. Flowers solitary or cymous, mostly yellow. Figs. 365-6.

- **P. procúmbens** Clairv. Lfts. 3, obovate, 3-toothed at apex, hairy beneath; fls corymbed. White Mts.? (Pursh), and N. (Sibbaldia L.)
- 2 P. palústris Scop. Lvs. pinnate; lfts. 3-7, lance-oblong, obtuse, sharply serrate, hoary beneath; sep. much longer than the purple petals; torus persistent, large, tasteless. 24 Swamps, N. 1-2f. June. (Comarum L.)
- 3 P. Norvégica L. Hirsute; st. erect, dichotomous above; lfts. 3, elliptical or obovate, dentate-serrate, petiolulate; cymes leafy; cal. exceeding the emarginate pale yellow petals; sty. terminal. (2) Old fields, thickets, Can. to Car. 1-4f. July-Sept.
- 4 P. tridentàta Ait. Smooth; st. ascending, woody and creeping at base; lfts. 3. obovate-cuneate, evergreen, entire, with 3 large teeth at the apex; cymes nearly naked; petals white, obovate. 24 High Mts. N. Eng. 6-12'. June.
- 5 P. mínima Haller? St. pubescent, ascending, mostly 1-flowered; lfts. 3, obovate, obtuse, incisely serrate with 5-9 teeth above; petals yellow, longer than the sepals. 24 White Mountains. 1-37, tufted. June, July.
- 6 P. Canadénsis L. Villous-pubescent, procumbent, producing runners: lfts. 5, obovate, cut-toothed above; pedicels axillary, solitary, 1-flowered.
 α. púmila. Small and delicate, flowering in Apr. May, everywhere.

 α . primita, small and dencate, howevering in Apr. May, everywhere. β . simplex. Sub-imple, ascending. 8-14', smoothish; fis. June-Aug. Common

- 7 P. argéntea L. St. ascending, tomentous; lfts. 5, oblong-cuneiform, with a few, larg. incised teeth. smooth above, silvery canescent beneath, sessile; flowers in a cymous corymb, small (3"). 21 Rocky hills, N. 6-10'. June-Sept.
- S P. fruticosa L. St. fruticous, very branching. hirsute, erect; lfts. 5-7, linearoblong, all sessile, margin entire and revolute; petals large, much longer than the calyx. A low, bushy shrub, N. States. 1-2f. Flowers 1'. June-Aug.
- 9 P. anserina L. Silver-weed. Goose-grass. St. slender, prostrate, rooting; lvs. interruptedly pinnate; lfts. many pairs, oblong, deeply serrate, cancecent beneath; peduncle solitary, 1-flowered, very long. 24 Wet, N. Eng. N. and W. 1-2f. Jn.-Sept.
- 10 P. paradóxa N. Decumbent at base, pubescent; lvs. piunate; lfts. 7-9, ovateobl. incised, upper ones confluent; ped. solitary, recurved in fruit; ach. 2- obed. () Shores of Sodus Bay (Hankenson), W. to Oreg. 1f. June-July.

- 11 P. Pennsylvánica L. Erect, whitish-downy; lfts. 5-9, oblong, obtuse, pin natifid, upper ones larger; cyme fastigiate, at length loose. 24 N. Eng.: rare.
- 12 P. argùta Ph. Erect, grayish, pubescent and villous; radical lvs. on long pettoles, 7-9-foliate, cauline few, 3-7-foliate; lfts. broadly ovate, cut-serrate, crowded; fis. in dense terminal cymes. 2 By streams, N. and W. 2-3f, stout. May, June.
- 13 P. NEPALÉNSIS. Root lvs. quinate; stem ternate; lfts. wedge-oblong. serrate; stip. large, adnate, entire. 24 Nepal. 14f. Flowers large, rose, scarlet, orange, &c.
- 14 P. ATROSANGUÍNEA. Lvs. ternate; lfts. obovate, cut-serrate, white-downy beneath; scp. elliptic; pet. obcordate. 24 Nepal. 14f. Flowers crimson, often double.

14. ALCHEMÍLLA, L. LADIES' MANTLE. Calyx 4-toothed, with 4 external bractlets. Petals 0. Sta. 1—4. Carp. (1—4) mostly solitary, with the style lateral. Stig. capitate. Seed suspended. Low herbs, with palmately lobed or incised leaves and small green flowers. Fig. 38.

- 1 A. arvénsis Scop. Parsley Piert. Lvs. crenate at base, incisely 3-lobed or parted, the segm. 2-3-cleft, pubescent; fls. axillary. ① E. Va. A small weed. § Europe.
- 2 A. alpinus L. Lvs. radical, silky beneath, 5-7-parted, cut-serrate at apex; fls. corymbed. High Mts. of N. Eng. (Pursh, 1816.) † Europe.

15. POTERIUM, L. BURNET. Calyx tube contracted at the top. Lobes 4, imbricated, petaloid, deciduous. Pet. 0. Sta. $4-\infty$, exserted. Styles slender, 1-3. Stig. penicillate. Ach. included in the hardened, 4angled calyx tube. 24 Lvs. unequally pinnate, with long stalks and adnate stipules. Lfts. petiolulate, serrate. Fls. in a spike or head, on a long peduncle or scape, often ϑ . (Includes Sanguisorba L.)

- 1 P. Canadénse (L.) Glabrous; lfts. many, ovate or oval, obtuse, cordate, with seirate stipels and stipules; spikes cylindric (3'); stam. 4, long exserted. Wet meadows along the mountains. Can. to Ga. 2-4f. Flowers green-white. Aug.
- 2 P. Sanguisórba L. Glabrous; leaflets many, ovate or roundish, deeply serrate, heads subglobous; sta. ∞ , in the lower fls. L. Huron (*Hooker*) and W. Purp. † Aug.

16. AGRIMONIA, L. AGRIMONY. Calyx tube turbinate, contracted at the throat, muricate, limb 5-cleft, connivent in fruit. Pet. 5. Sta. 12— 15. Ov. 2. Styles terminal. Ach. included in the inducated tube of the calyx. 24 Lys. pinnately divided. Fls. yellow, in long, slender racemes.

- 1 A. Eupatòria L. Lfts. 5 to 7, lance-oval or obovate, with small ones interposed, coarsely dentate; stip. large, dentate; pet. twice longer than the reflexed calyx. Dry soils, common. 1-3f. Rac. spicate, 6'-1f. Fls. 3-4" broad. July, Aug.
- 2 A. parviflora Ait. Lfts. 9–17, crowded, pubescent beneath, lanceolate, cut-serrate, with smaller ones interposed; pet. small. Woods, &c., Pa. S. and W. Plant fragrant, 3–4f, with spreading brownish bairs. July, Aug.

β. incisa. Lfts. incisely pinnatifid. South. (A. incisa T. & G.)

17. ROSA, Tourn. ROSE. Calyx tube unceolate, contracted at the orn fice, lined with the fleshy disk. Petals 5 (greatly multiplied by cultivation). St. ∞ , inserted into the rim of the disk. Ach. ∞ , bony, hispid borne free within the calyx tube. 5 Prickly. Lvs. odd-pinnate. Stip. mostly adnate to the petiole. Figs. 35, 139, 197, 301.

Obs. Our innumerable varieties of garden Roses have mostly originated with the few species mentioned below. To define these varieties in order to their recognition would generally be impossible, for their forms are as evanescent as their names are arbitrary. All that we propose is to aid the learner in tracing back each form to the species whence it sprung. This will be easily done in all cases except with the hybrids

	Wild Roses, with simple, 5-petalled flowers, open in June and July(§)
	§ Leaflets 3, rarely 5, smooth. Branches long, climbing or trailing Nos. 1, 9

	f Lvs. not at all glandular. Prickles numerous, weak, or 0. Nos. 22, 23, 24
	R. setigera Mx. Prairie Rose. Spines strong, straightish; lfts. ovate; stip. adhe-
	rent; fis. in corymbs, deep roseate, becoming pale, scentless; styles united in an ex-
	serted column. Prairies, &c., N. Y. W. and S. 12-20f. June, July. +
	Var. Prairie Queen, Baltimore Belle, Rosa Superba, &c.
2	R. lævigàta Mx. Cherokee R. Prickles very strong, recurved ; lfts. elliptical, ever.
-	green, polished; stip. free, setaceous; fis. solitary, large, white; calyx bristly; styles
	separate. Tenn. to Fla. 15-30f. §? In hedges and gardens.
3	R. rubiginòsa L. Sweet Brier. Eglantine. Prickles strong, recurved, many weak
	ones intermixed; lfts. broad-oval; fls. solitary; fruit obovoid and, with the pedicels.
	glandular hispid. Fields, roadsides. 4-8f. Fls. light red, single or double.
	Var. Clementine, Maiden, Royal, Scarlet, Tree-double, White, &c.
4	R. micrántha Smith. Prickles strong, recurved, few and equal; lfts. ovate; fis.
	solitary, small (15"), mostly white. Pastures, &c. N. Eng. 6-8f. June.
5	R. Carolina L. Swamp R. Tall, erect, glabrous; lfts. elliptical, glaucous beneath,
	not shining; fis. corymbed; fr. depressed globous, dark red, with hispid peduncles.
	Damp woods. 4-8f. Fls. varying from red to white. June, July.
e	
U	R. lùcida Ehrh. <i>Wild R.</i> Prickles scattered, setaceous; lfts. elliptical, simply ser-
	rate, shining above; fis. in pairs (1-3); fr. depressed-globous and, with the pedi-
	cels, glandular-hispid. Dry woods. 13f. Branches greenish. Fls. red.
7	R. nítida Willd. Wild R. Stems reddish with very numerous reddish prickles;
	lfts. narrow-lanceolate, smooth and shining; fis. solitary; calyx hispid. Swamps, N.
	Eng. 1-2f. Fls. red. Fr. scarlet. Perhaps a variety of No. 6.
•	Ing. 1—21. Fis. red. Fis. Scarlet. I ethaps a variety of red. 0.
8	R. blanda Ait. Thornless Wild R. Prickles few, slender, deciduous; lfts. oblong,
	obtuse, not shining; stip. broad; ped. short, and with the calyx smooth and glau-
	cous; fr. globous. Dry hills, N. and M. 2-3f. Petals reddish.
9	R. SEMPÉRVIRENS. Prickles subequal; lfts. thick, evergreen; fis. clustered, mostly
-	white; fr. round-ovoid, yellow, glandular-hispid. S. Eur. 6-12f.
1	
	0 R. ARVÉNSIS. Ayreshire R. Prickles unequal, falcate ; lfts. ovate, acute, deciduous,
	glaucous beneath; fis. solitary or clustered, white to purple. Eur. 20f.
	Var. Dundee Rambler, Virginia Lass, Weeping-tree R., &c.
1	1 R. M. SCHÀTA. Musk R. Lfts. lanceolate, acuminate; stip. very narrow; sep. long-
	appendaged, pinnatifid; fls. panicled, peculiarly fragrant, white. Asia. 10-12f.
1	
I	2 R. MULTIFLORA. Japan R. Lfts. lance-ovate, rugous, soft; stip. pectinate-fringed;
	fls. corymbed; sep. short and ped. tomentous. South. 15-20f. Pet. wh. to purp. § †
	Var. Roursault, Seven Sisters, Russel's, &c.
1	3 R. BRACTEÀTA. Macartney R. Erect; prickles recurved; lfts. 5-9, obovate, shin-
	ing; stip. bristle-fringed; fis. solitary, with large bracts under the tomentous calyx.
	China. 2-3f. Fls. white, creamy, &c. § S.
	Carrier & Cis I alle Hander Country & Country

- 14 R. BÁNKSLE. *Thornless R.* Prickles none; lfts. lanceolate, 3-5, subentire; fis. small, in umbels; fruit globular, nearly black. China.
- 15 R. INDICA. Chinese Monthly R. Bengal R. Lfts. 3-5, ovate, pointed, shining: stip. very narrow; sep. subentire; stam. inflexed; fruit top-shaped. China. 1-8f. Fls. white to crimson. April to November.

β. LAWRENCIÀNA. Miss Lawrence's R. Aculeate; fis. small (1'), pink-purple.

Other var. Noisette, Youland of Aragon, Giant of Battles, Cloth of Gold (sulphur yellow), and the favorite Tea Roses.

- 16 R. CANÌNA. Dog R. Prickles strong, compressed; lfts. 5-9, with acute, incurved serratures; stip. rather broad, serrulate; sep. deflexed after flowering, deciduous; fr. ovoid, red. Eur. 4-Sf. Fls. often simple, red. Often runs wild.
 - β. BOURBONLÀNA. Lfts. ovate, subcordate, glossy; fls. double and semidouble, purple. Numerous subvarieties, everblooming.
- 17 R. CINNAMÒMEA. Cinnamon R. Lfts. 5-7, oval-oblong, grayish-downy beneath; stip. broad, involute, pointed; ped. and cal. glabrous; sep. as long as the petals, closed and persistent on the fruit. Eur. 6-12f. Purple.
- 18 R. DAMASCÈNA. Damask R. Prickles broad, unequal; lfts. large, broad-elliptic, whitish-downy; sep. reflexed. Levant. 3-4f. Fls. pale roseate, very fragrant. The common Monthly is a variety.
- 19 R. ALBA. White R. Erect, tall; prickles slender, or 0; lfts. round-ovate; petioles and veins downy, glandular; sep. pinnatifid; fr. ovoid. Eur. Stout, 4-8f. Flowers large, clustered, sweet-scented, pure white, semidouble.
- 20 R. CENTIFÒLIA. Provens R. Cabbage R. Very prickly; leaflets 5-7, ovate, edges gland.-ciliate; cal. and ped. gland.-hispid, viscid and frag. S. Eur. 2-4f. Fls. pink, &c. Var. very numerous, among which is the incomparable Moss Rose.
- 21 R. EGLANTÈRIA. Yellow R. Austrian Eglantine. Branches red, all prickly; lfts.
 5-7, small, broad-oval, or obovate; sep. smooth, entire; pet. large, yellow. Aust. 3f. Var. The Copper Austrian, single; Persian Yellow, double, and others.
- 22 R. ALPÌNA. Boursault R. Climbing; lfts. 5-11, ovate or obovate, sharply serrate; ped. deflexed after flowering, and sep. connivent on the ovoid hip. Alps. 10-20f. Older stems thornless. Fls. clustered, pink, blush, crimson, &c.
- **23 R.** GÁLLICA. Common French R. Erect; leaflets 5-7, oval to lanceolate, thick; fls. erect, with large spreading red petals; sep. ovate, some viscid. Eur. 2-5f.

Var. 300 or more; as the Velvet, Carmine, Carnation. Some are variegated, as York-and-Lancaster, Tricolor, Picotée, Nosegay, &c.

24 R. PIMPINELLIFOLIA. Scotch R. Burnet R. Very prickly, erect; lfts. 5-9, roundovate, obtuse, smooth; sep. entire, finally convergent on the fruit; fls. small, rose ate; but there are varieties with purple and even yellow flowers.

18. AMELÁNCHIER, Medic. SHAD-FLOWER. WILD SERVICE. Cal. 5-cleft. Pet. 5, oblong-obovate or oblanceolate. Sta. short. Sty 5, somewhat united at base. Pome 3-5-celled, cells partially divided, 2-seeded 5 th Leaves, simple, servate. Flowers racemous, white.

- A. Canadénsis T. & G. Lvs. oval or oblong-ovate, sharply serrate, smooth; raceme loose; calyx segments lance-triangular; fruit globous, purplish. Woods: common. 5-35f. Flowers showy, in early Spring. Fruit pleasant, ripe in June.
 - β. oblongifolia. Shrub; lvs. oblong-oval, mucronate; pet. oblong-obovate.
 - y. rotundifblia. Lvs. broad-oval; pet. linear-oblong. Shrub 10-20f.
 - 8. alnifolia. Lvs. round-oval, serrate near apex; pet. linear-oblong. 15-30f.
 - E. oligocárpa. Shrub; lvs. elliptic-oblong, cuspidate; rac. 2-4-flowered. North.

19. CRATÆGUS, L. THORN. HAWTHORN. Calyx urceolate, limb 5-cleft. Pet. 5. Sta. ∞ . Ov. 1—5, with as many styles. Pome fleshy, containing 1—5 bony, 1-seeded carpels, and crowned at the summit by the

persistent calyx and disk. 55 Armed with thorns. Lvs. simple, often lobed. Bracts subulate, deciduous. Fls. corymbous, white or purplish.

- C. tomentòsa L. Black Thorn. Lvs. broad-ovate or oval, abrupt at base, doubly serrate or cut-lobed, villous beneath when young, and plicate; fis. large, in compound pubescent corymbs; fruit oval, large (8'), 2-5-seeded, red. Can. to Ky. and Car. Mts. 15-25f. Flowers white, April, May. Fruit July, Aug. Varies greatly.
 - B. plicata. Lvs small, glabrous, strongly plicate. Vt., N. H., N. Y.
 - y. pyrifolia. Lvs. elliptic, acute at base, thinly pubescent. Styles 3. W.
 - 8. flabellata. Lvs. fan-shaped; corymbs glandular-pubescent. W.
 - E mollis. Lvs. large, soft-villous, subcordate, many-lobed; corymbs canescentlyvillous; fruit downy when young. Ohio to Iowa.
- 2 C. punctàta Jacq. Lvs. cuneiform-obovate, doubly and often incisely serrate, entire at base, and narrowed to a short, winged petiole, veins straight and prominent, corymbs villous-downy; styles 3; fruit globous, punctate. Woods. 12-25f. April-June. (See Addenda.)
- 3 C. arboréscens Ell. Thornless; lvs. lanceolate, acute at each end, deeply serrate; calyx hairy; segments subulate, obtuse, entire; corymbs very numerous; styles 5: fruit ovoid, red, 3". Ga. Fla. and W. 20-30f. March, April.
- 4 C. apiifòlia Mx. Thorny. Lvs. deltoid, truncate at base, cut-lobed and toothed; petioles slender; styles 2 or 3. Woods, S. 8-12f. March, April.
- 5 C. Oxyacántha L. Hawthorn. Lvs. wedge-obovate, 3-5-lobed at apex; corymbs glabrous, white to purple; styles 1-3; fruit small, red. Hedges, &c. 8-18f. §
- 6 C. coccínea L. White Thorn. Lvs. broadly ovate, acutely serrate, 7-9-lobed (lobes shallow), thin, abrupt at base; petioles long, slender, and (with the calyx) subglandular; styles 3-5. Thickets: common. 10-20f. May.
- 7 C. cordàta Ait. Washington Thorn. Lvs. cordate-ovate, somewhat deltoid, incisely and often deeply 3-5-lobed, serrate, with long petioles; sep. short; sty. 5; fr. small, globous-depressed. Banks, Va. to Fla. 15-20f. ‡
- 8 C. Crus-galli L. Cock-spur Thorn. Lvs. obovate-cuneiform, tapering to a short petiole, serrate, coriaceous, shining above; spines very long; corymbs glabrous; sep. lanceolate, subserrate; styles 1 (2 or 3). Thickets. 10-20f. Fruit pyriform. June.
- 9 C. spathulàta Mx. Lvs. small, coriaceous, shining, oblong-spatulate, attenuated to the subsessile base, crenate above, sometimes lobed; corymbs numerous, lateral, 20-25-flowered; sepals very short; fruit very small, scarlet. South. 10-15f. June.
- 10 C. æstivalis T. & G. Apple Haw. Young lvs. rust-downy, older smooth above, elliptic, repand, short-stalked; corymbs glabrous, 2-5-flowered; fruit large (8-9"), globular, red. Wet shores, S. 20-30f. Fruit pleasant, in May. (See Addenda.)
- 31 C. parvifolia Ait. Thorns straight and slender; lvs. cuneate-obovate, subsossile; fls. subsolitary, villous-tomentous; sep. incised, leafy, as long as the petals; sty. 5; fr. large, roundish, yellowish. Sandy woods, N. J. and S. 4-7f. April, May.
- 12 C. flava Ait. Summer Haw. Thorns straight or arcuate; lvs. rhombic-obovate, attenuate into a glandular petiole; corymbs 1 (often 2 or 3)-flowered; styles 4 or 5; fruit large, pear-shaped. Va. to Fla. 15-25f. April, May.
- 13 C. víridis L. Thorns few and short; lvs. roundish or oval, acute at each end, sharply and doubly toothed above; petioles glandless; corymbs 3-6-flowered; atyles
 3 or 8; fruit large, globular. Iowa to Fla. 12-18f. April, May.

20. PYRUS, L. PEAR, APPLE, &c. Calyx urceolate, limb 5-cleft. Pet 5, roundish. Styles 5 (2 or 3), often united at base. Pome closed, 2-5-carpelled, fleshy or baccate. Carp. cartilaginous, 2-seeded. 5 5 Lvs. simple or pinnate. Flowers white or rose-colored, in cymous corymbs.

- 1 P. COMMÙNIS. *Pear-tree*. Lvs. ovate-lanceolate, obscurely crenate, glabrous and polished above, acute or acuminate; corymbs racemous; cal. and pedicels pubescent; styles 5, distinct and villous at base. Europe. 20-35f.
- 2 P. MALUS. Common Apple-tree. Lvs. ovate or oblong-ovate, serrate, not lobed, downy, the veins all incurved; corymbs subumbellate; pet. with short claws; styles 5, united and villous at base. Europe. 20—30f. Nearly §.
- **3 P. coronària** L. *Wild Crab-tree*. Lvs. ovate, rounded at base, cut-serrate, often sublobate, straight-veined, soon smoothish; sep.subulate; fis. large, roseate, corymbed, fragrant; pome large (18"), sour. Glades. 10-20f. May.
- 4 P. angustifòlia Ait. Lvs. lanceolate, often acute at base, crenate-serrate or subentire, short-stalked; sep. ovate; styles distinct. Pa. and S. 20-30f. March.
- 5 P. arbutifòlia L. f. Choke Berry. Downy; lvs. oblong or obovate, crenate-serrulate, narrowed at base into a short petiole; fruit pyriform or subglobous, dark red. Damp woods. 5-8f. Fruit size of currants. May, June.
 - β. melanocarpa. Nearly smooth; fruit blackish purple. Swamps. 2-4f.
- 6 P. Americàna DC. *Mountain Ash.* Lfts. oblong-lanceolate, acuminate, mucro nately serrate, smooth, subsessile; cymes compound, with numerous flowers; pome small, globous; styles 3-5. Mountain woods, Can. to Ga. 15-20f. May. †
- 7 P. AUCUPÀRIA. English Mountain Ash. Lfts. as in P. Americana, except that they are always smooth on both sides, and, with the servatures, less acute at apex, flowers corymbous; fruit globous. Europe. 20-40f. †

21. CYDONIA, Tourn. QUINCE. Flowers and leaves as in Pyrus. Carpels cartilaginous, many-seeded. Seeds covered with mucilaginous pulp. 55 Flowers mostly solitary.

- 1 C. VULGÀRIS. LVS. oblong-ovate, obtuse at base, acute at apex, very entire, smooth above, tomentous beneath; fls. solitary, large, roseate; pome tomentous, obovoid. Europe. 8-12f. Stems crooked. April, May.
- 2 C. JAPÓNICA. Japan Quince. Lvs. glabrous, shining, coriaceous, ovate-lanceolate, acute at each end, serrulate; stip. reniform; spines short, straight; fis. axidary, subsessile, crimson. Japan. 5-6f. Very bushy. April, May.

ORDER XLV. SAXIFRAGACEÆ. SAXIFRAGES.

Herbs or shrubs Leaves alternate or opposite, sometimes stipulate. Sepals 4 or 5, cohering more or less, and partly or wholly adherent. Petals as many as the sepals, inserted between the lobes of the calyx. Stamens as many as the petals, and alternate with them, or 2 to 10 times as many. Ovary mostly inferior, usually of 2 (2-4) carpels cohering at base and distinct or united above. Fruit generally capsular, 1-2-celled. Seeds small, many, albuminous. Figs. 25, 52, 53, 132, 250, 273.

A large order, now including Ribes and Parnassia, each often regarded as constituting separate orders.

- 1 S. oppositifòlia L. Lvs. opposite, obovate, carinate, obtuse, punctate, persistent: fls. solitary; cal. free; pet. large, obovate, 5-veined, longer than the stamens. Rocky cliffs, Willoughby Lake, Vt. June.
- 2 S. aizoides L. Cæspitous, leafy; lvs. linear-oblong, thick, flat; sep. ovate, slightly adherent; pet. oblong, yellow, longer than the sepals; capsules as long as the styles. With No. 1, and N. W. June.
- **3 S. rivulàris** L. St. weak, ascending, 3-5-flowered; radical lvs. petiolate, reniform, crenately lobed, cauline lanceolate, subentire; cal. lobes broad-ovate, nearly as long as the white, ovate petals. White Mts. and N.
- 4 S. tricuspidàta Retz. St. thick, erect; lower lvs. crowded, oblong, 3-cuspidate; fls. few, large, somewhat corymbed; sep. thick, ovate, shorter than the oblong-obovate, yellow, dotted petals. Lake shores, Can. and N.
- 5 S. leucanthemifòlia Mx. Viscid-pubescent; lvs. radical, spatulate, cut-dentate, tapering to a petiole; scape diffusely paniculate; calyx free, reflexed; pet. unequal, white, 3 of them spotted. Mts. S. 18'.
- 6 S. eròsa Ph. Viscid-pubescent; lvs. radical, thin, oblong-lanceolate, acute, with erose teeth; panicle oblong, loose, with leafy bracts; cal. free, with reflexed, obtuse sepals as long as the equal, obtuse white petals. Mts. Pa. to Car. 15'.
- 7 S. Careyàna Gr. Lvs. round-ovate to deltoid, coarsely dentate, abrupt at base; panicle diffuse; pet. equal, ovate or oblong, white, dotted, twice longer than the recurved sepals. Mts. S. (and S. Caroliniana Gray).
- 8 S. a12001 Jacq. Lvs. spatulate, obtuse, bordered with white cartilaginous teeth, and a marginal row of impressed dots; flowers corymbous paniculate; pet. obovate, white. Rocky shores, N. Ver. to Mich. and N. 5-10'. July.
- **9 S. Virginiénsis** Mx. *Early Saxifrage.* Lvs. spatulate obovate, crenately toothed, shorter than the broad petiole; scape nearly leafless, paniculately branched; petals white, oblong, much exceeding the calyx. Rocks, common. 4–12. April. May.
- 10 S. Pennsylvánica L. Lvs. oblong-lanceolate, rather acute, tapering at base, denticulate; scape forming a diffuse panicle; fls. pedicellate; pet. greenish, linearlanceolate, but little longer than the cal. Wet meadows, N. Eng. to O. 1-2f. May, Jn.
- 11 S. SARMENTÒSA. With creeping runners; leaves roundish; pet. white, 2 longer than the other 3; scapes naked; plant hairy. China. Pretty for baskets.
- 12 S. CRASSIFÒLIA. No runners; lvs. thick, oval; sc. naked; fls. pk. Siberia. Jn. Jl.

5. ASTILBE, Don. $5 \notin 9$ Calyx obconic, with 4 or 5 erect segments. Pet. 4 or 5, spatulate. St. 8 or 10, exserted. Ov. 2-celled. Carpels in fr. separating and dehiscing lengthwise inside. Seeds 1—4 in each cell. 24 Coarse, weed-like plants. Leaves bi- or tri-ternate. Fls. small, yellowishwhite, in spicate rac. forming a compound panicle (like Spiræa Aruncus).

A. decándra Don. St. tall, angular; lfts. subcordate, incisely lobed, mucronate-see rate; sterile flowers mostly apatelous; sta. 10. Mts. South. 4-6f. June-August.

6. BOYKÍNIA, Nutt. Calyx turbinate, adherent, 5-cleft. Pet. 5, deci duous. Sta. 5. Ov. 2-celled, 2-beaked. Capsule invested with the calyx, dehiscent between the beaks. 24 Lvs. alternate, petiolate, palmate. Fls. cymous, white.

B. aconitifelia Nzte. St. viscia-glandular; lvs. smoothish, deeply 5-7-lobed (like those of Acazeum); cyme fastigiate, the fls. secund. Mts. S. 1-2f. July.

7. SULLIVANTIA, T. & G. Calyx adherent to the base of the ovary

Segm. ovate, acute. Pet. oval-spatulate, twice as long as the calyx. Sta. 5, shorter than the calyx. Capsule 2-beaked, 2-celled. Seeds wing-margined. 24 Lvs. mostly radical, palmate-veined. Fls. in a loose pan., small, wh. **S. Ohionis** T. & G.—Ohio, Wisc. Stem weak, ascending, 6—12. Lvs. roundish, cor-

date, lobed and toothed. May, June.

8. HEUCHERA, L. ALUM ROOT. Calyx of 5 obtuse segm. Cor. of 5 small, entire petals, inserted with the 5 stamens on the throat of the calyx. Cap. 1-celled, 2-beaked, dehiscent between the beaks. Seeds many, with a rough, close testa. 24 Lvs. radical, long-petioled, petioles with adnate stipules at base.

§ Fls. small (1--2" long), regular; stamens and style much exserted......Nos. 1-3 § Fls. larger (3-5" long), oblique; stamens and style short.....Nos. 4, 5

- 1 HI. Americàna Willd. Viscid-pubescent; leaves roundish, cordate, somewhat 7-lobed; pan. elongated, loose, divaricate; cal. obtuse, short, about equalling the spatulate petals; stam. much exserted. Shades, W. and S., rare N. 2–4f. May, June.
- 2 H. villòsa Mx. Villous, with rusty, spreading hairs; radical lvs. round-cordate, thin, glabrous above, 7–9-lobed; pan. loose, filiform; pet. white, about as long and narrow as the filaments. Mts. Md. to N. Car. and Ky. 1–3f. June, July.
- **3 H. cauléscens** Ph. Smooth or nearly so; lvs. 5-7-lobed, dentate; pan.loose, slender; scape bearing one or two leaves below; pet. linear-spatulate, twice longer than the calyx. Mts. Car. Tenn. Ky. 1-2f. (H. Curtisii Gr.)
- **4 H. pubéscens** Ph. Lvs. glabrous, round-cordate, 7-9-lobed; panicle dichotomous, geniculate; style exserted, stam. included; pet. white. Mts. Middle States.
- 5 H. hispida Ph. Lvs. hispid-rough, 5-7-lobed, lobes very obtuse; fis. scattered; pet. spatulate, purple; sta. a little exserted. Mts. S. and prairies W. June.

9 LEPUROPÉTALON, Ell. Calyx 5-parted, lobes obtuse, tube tur binate, adherent to the base of the 3-carpelled ovary. Petals 5, minute, spatulate, persistent. Sta. 5, short. Capsule globous, 1-celled, 3-valved, many-seeded. Placentæ opposite the stigmas. ① A minute, succulent herb, growing in tufts. Lvs. entire, dotted. Fls. terminal.

L. spatulàtum Ell.—Hard soils S. Stems scarcely 1'; leaves spatulate, veinless; fls. large in proportion, white. March, April.

10. PARNASSIA, Tourn. GRASS OF PARNASSUS. Sep. 5, united at base, persistent. Pet. 5, persistent, with a bundle of sterile fil. at the base of each, and 5 perfect stamens alternating. Caps. 1-celled, 4-valved. Placentæ opposite the stigmas, in the middle of each valve Seeds winged \mathcal{U} Glabrous. Lvs. radical. Scape 1-flowered, often with one sessile leaf. Pet. white, with green veins.

- 1 P. Caroliniàna L. Sterile filaments 3 in each group, each with a little round head; pet. sessile; lvs. broad-oval, rounded at base, one sessile on the scape. Wet meadows. 10-15'. Flower handsome, 1' broad. June-August.
- 2 P. asarifòlia Vent. Sterile fil. 3 in each set; pet. abruptly clawed; lvs. reniform. Mts. Va. and Car. 10'. Lvs. large (1-2').
 3 P. palustris L. Sterile fil. pellucid, setaceous, 9-15 in each set; cauline leaf, if
- **3 P. palustris** L. Sterile fil. pellucid, setaceous, 9–15 in each set; cauline leaf, if any, sessile; radical lvs. all cordate. Bogs, Mich. N. and W. 6'. Fls. 1'. August.

11. ITEA, L. Calyx small, with 5 subulate segm. Pet. 5, lance-linear, inflexed, inserted with the 5 stam. on the calyx. Styles united. Caps. 2

celled, 2-furrowed, 8-12-seeded. 5 With alternate, simple leaves, and a simple, spicate, terminal raceme of white flowers.

I. Virgínica L.-Swamps, Pa. to Fla. 6f. Lvs. oval, acuminate, short-stalked. May, Jn.

12. ESCALLONIA RUBRA and E. GLANDULOSA are handsome shrubs, with evergreen leaves and scarlet flowers, prized in the greenhouse. S. Am.

13. HYDRÁNGEA, L. HYDRANGEA. Marginal fls. sterile, neutral an enlarged, rotate 5-lobed, colored calyx only. \checkmark Calyx tube hemispherical, adherent. Limb 4-5-toothed, persistent. Pet. ovate, sessile. Stamens twice as many as the petals. Caps. 2-beaked, opening between the beaks. Seeds ∞ . \Rightarrow With opposite leaves. Fls. cymous, generally radiant.

§ Cymes paniculate. Lvs. sinuate-lobed. Fls. rose-white......No. 1 § Cymes corymbous, level-topped. Leaves undivided......Nos. 2, 3, 4

- 1 **H.** quercifòlia Bartram. Lvs. deeply sinuate-lobed, dentate, tomentous beneath, and on the petioles and veins above; cymes paniculate, radiant, the sterile fis. very large and numerous. Shady banks, S. 4-8f. A superb plant. †
- 2 H. arboréscens L. Lvs. ovate, obtuse or cordate at base, acuminate, serrate-den tate, paler beneath, nearly smooth; fls. white-red. Banks, S. and W. 5-6f.
- **3 H. radiàta** Walt. Lvs. ovate, abrupt or cordate at base, acuminate, serrate, silvery tomentous beneath; fls. white. Uplands, S. 6-8f.
- 4 **H.** HORTÉNSIS L. Changeable Hydrangea. Lvs. elliptical, narrowed at each end, den tate-serrate, strongly veined, smooth. China? 1-3f. In cultivation the fis. are generally *all* neutral, of varying hues, white, blue, pink, &c.

14. DECUMARIA, L. Calyx 7-10-toothed, tube adherent to the 5-10-celled ovary. Pet as many as calyx teeth, valvate in the bud. Sta. 3 times as many as the petals, in one row. Stig. radiate. Caps. manyribbed, crowned with the style, ∞ -seeded. \ddagger With rootlets, opposite leaves and cymes of white, fragrant flowers.

D. bárbara L.-A beautiful climber, in damp woods, S. 15-30f.

15. PHILADÉLPHUS, L. FALSE SYRINGA. Calyx 4-5-parted, halt superior, persistent. Cor. 4-5-petalled. Sty. 4-cleft. Sta. 20-40, shorter than the petals. Caps. 4-celled, 4-valved, with loculicidal dehiscence. Sds. many, arilled. 5 Handsome. Leaves opposite, exstipulate.

- P. inodòrus L. Lvs. ovate, acute or pointed, 3 (rarely 5)-veined, smooth, entire or with remote slender teeth; calyx lobes ovate, acute, as long as the tube; styles united; fis. scentless, 1 or several together, pure white, 1'. Uplands, S. 5-Sf. May-J. β. grandiflorus. Pubescent; flowers larger (14'); sepals acuminate. Cultivated. γ. hirsùtus. Hairy; leaves and flowers smaller, the latter 7". Mt. woods.
- 2 P. CORONÀRIUS. Mock Orange. Glabrous; lvs. ovate, remotely serrate above, 5-7veined; flowers in dense clusters, cream-white, very fragrant; styles separate. S. Europe. 5-8f. June, July.

16. **DEÚTZIA**, Thunb. Pet. 5, valvate or imbricate in bud. Sta. 10, the alternate longer, fil. dilated, 3-toothed, middle tooth antheriferous. Ov inferior. Caps. 3-5-celled. 5 Leaves opposite. Fls. numerous, white.

- 1 D. SCABRA. Lvs. ovate, acute, serrate, rough-hairy; racemes terminal, dense; styles 3; flowers bell-shaped. Japan. 5-8f. Very fragrant. June.
- 2 D. GRÁCHIS. Foliage similar to the other bui smoother. Shrub only 2-3f, branches covered with flowers in June.

17. RIBES, L. CURRANTS. Calyx tube ovoid, adherent to the onecelled ovary, limb tubular or bell-shaped, 4-5-cleft. Pet. 4-5, small, inserted with the 4-5 stamens on the top of the calvx tube. Sty. 2. Berry filled with pulp, with 2 parietal placentæ. Seeds ∞ , albuminous. 55Leaves alternate, palmately lobed. 3-6f. Styles often united.

1. TILLÆA, Mx. PIGMY-WEED. Calyx of 3 or 4 sepals united at base. Petals 3 or 4, equal. Sta. 3 or 4. Caps. 3 or 4, distinct, follicular, opening by the inner surface, 2- or many-seeded. IN Very small. Lvs. opposite.

T. simplex Nutt. St. ascending or erect, rooting at base; lvs. counate at base, linear-oblong, fleshy; flowers axillary, solitary, subsessile, their parts in 4's; pet. greenish; carpels 8-10-seeded. (1) Muddy banks, Ct. to Md. 1--2'. July-Sep

2. SEDUM, L. STONE-CROP. Sep. 4 or 5, united at base. Pet. 4 or 5, distinct, spreading. Sta. 8-10. Carp. 4-5, distinct, many-seeded, with an entire scale at the base of each. 24 Lvs. fleshy. Inflorescence cymous.

§ Fls. in scorpoid racemes or spikes, or axillary, the latter often 4-parted Nos. 1-4
 § Fls. in corymbous cymes, all 5-parted.—a Leaves mostly alternate Nos. 5-7
 —a Leaves opposite, and whorled...... No. 8

- 1 S. ternatum Mx. Leaves scattered, flat, obovate, the lower mostly in whorls of 3, the upper spatulate; spikes 3, rarely 2-4, radiating, secund; central flower 5-parted, the rest 4-parted, white. Damp woods. 3-8'. May, June.
- 2 S. Nèvii Gr. Stem weak, branched, 3-5'; leaves alternate, imbricated, small, obo vate-spatulate; petals lance-linear, white. Mts., Va. (Porter), and S. June, July.
- 3 S. pulchéllum Mx. Leaves linear, alternate, crowded; spikes radiating, dense flowered, secund, central flower 5-, the others 4-parted, rose-purple. Rocks, Va. to Tex. 4-12'. May-July. Very pretty in gardens.
- 4 S. acre L. English Moss. Procumbent, diffuse; leaves very small, fleshy, crowded, alternate, appressed: cyme leafy, somewhat trifid; fls. yellow. Gardens. Jl. § Eur.
- 5 S. Rhodiola DC. Stems clustered, erect. 5-10'; leaves mostly scattered, obovate, with several angular teeth or entire, crowded; flowers 4-parted, in a small cyme at top, yellowish, *diæcious*. Rocks, Penn. (Prof. Porter), Me., and Can.
- 6 S. telephioides Mx. Ascending, tall; lvs. round-oval to lance-oval, narrowed to the base, subdentate, alternate; pet. acuminate. pink. Rocks, Md., and S. Stems 1f, leaves 1-2'. Flowers numerous, in a terminal branching cyme. June.
- **1 S. Telèphium** L. Live-forever. Clustered, erect, very leafy; lvs. ob'eng-ovate, ob tuse, dent-serrate; corymb dense, leafy, blue-purple. Waste grounds, &c. Stems 1-2f. round, simple, with a compact pale-purple cyme at top. August. § Europe.
- 8 8. SIEBÓLDH. LVS. opposite, or in 3's, roundish, glaucous, sessile; cymes dense, leafy

fis. 5-parted, small, bluish-purple, blooming in October. Japan. In dense tufts. A pretty plant, and one of the last to flower in the garden. Like most of the Sedums its severed stalks will grow even if suspended in air.

3. CRÁSSULA, Haw. Parts of the flower all in 5's, distinct and free Scales at base of ovaries 5. 5 2 Fleshy plants, from S. Africa, remark able for the perfect symmetry of their flowers.

- 1 C. ARBORÉSCENS. Stem shrubby, terete, erect; lvs. opposite, fleshy, roundish, cuspi date, flattish, glaucous, dotted above; cyme 3-parted; flowers handsome, roseate.
- 2 C. LÁCTEA. Stem erect, twisted below, branched; lvs. ovate, narrowed to the connate bases, dotted along the margin; cyme panicled, with many white star-like flowers. Leaves bright green. From S. Africa, as are many other species.

4. SEMPERVIVUM, L. LIVE-FOREVER. HOUSE-LEEK. Sep. 6-20, nearly distinct. Petals and pistils as many, and stamens twice as many. Scales lacerated. 54 Leaves thick and fleshy, crowded.

S. TECTÒRUM. Lvs. oval-obovate, ciliate-fringed, densely packed at the ends of the offsets, scattered on the stems; flowers purplish, usually 12-parted. Europe. Will grow on walls and on the roofs of houses (*tectorum*), or in borders.

5. BRYOPHÝLLUM CALYCÌNUM. b Evergreen, fleshy, 2f. Leaves opposite. 3-5-foliate, with thick, oval, crenate leaflets. Flowers in a loose, terminal panicle, with an inflated calyx and a tubular, exserted, purplish corolla, which has a 4-lobed limb. The plant is propagated from the leaves, which produce buds on their margins becoming new plants,—like ovules from a carpellary leaf.

6. ROCHEA, DC. Corolla funnel-form, 5-cleft. Sepals, stamens, ova ries, and hypogynous scales each 5. 5 Fleshy. S. African.

1 R. FALCÀTA. Shrub 2f; leaves opposite, the pairs some united at base, glaucous, ohlong, deflexed-falcate; flowers in corymbous cymes, red, open, fragrant.

2 R. COCCÍNEA. Leaves connate-sheathing, ovate-oblong; cymes scarlet. Beautiful.

7. ECHEVERIA, DC. Corolla tubular to bell-form, 5-lobed or parted. Calyx 5-cleft. Stamens 10. Ovaries 5, with 5 scales. 5 24 Fleshy.

1 E. GRANDIFÒLIA. Plant 2f, erect, glaucous with a bloom; lvs. spatulate to obovate, acute, the lowest large, rosulate; flowers urn-shaped, panicled, orange-red. From Mexico.

2 E. COCCÍNEA. Plant 2f, erect; leaves obovate-cuneate, acute, scattered; flowers car mine outside, yellow within, in a tall leafy spike. Mexico.

8. DIAMÓRPHA, N. Fls. 4-parted, with 8 stamens. Carp 4, united below, at length spreading, opening by an irregular valve on he back 4-8-seeded. (2) Small, fleshy, tufted, with cymes of white or pink flowers **D. pusílla** N.-Sunny rocks, S. 1-3'. Leaves oval, sessile, 1". March, April.

9. **PENTHORUM**, L. VIRGINIA STONE-CROP. Calyx of 5 sepals united at base. Pet. 5 or 0. Sta. 10. Caps. of 5 united carpels, 5-angled, 5-celled, 5-beaked, dehiscent by an obliquely-terminal valve. Seeds ∞ , minute. 24 Not succulent. Lvs. alternate. Fls. yellowish, cymous.

Sedoides L. Stem branched and angular above; leaves nearly sessile, lanceolate, acute, serrate; fis. in secund, radiating racemes. Wet places. 10-16'. Julg-Sept.

ORDER XLVII. HAMAMELACEÆ. WITCH HAZELWORTS.

Shrubs or trees with alternate simple leaves and deciduous stipules. Flowers in heads or spikes, often $\delta \not\subseteq 2$ or ϑ . Calyx adherent. Petals linear, or 0. Stamens twice as many as the petals, the opposite sterile and scale-like, or ∞ . Ovaries of 2 carpels, 2-celled, 2-styled, ovules 2 or ∞ . Fruit a woody capsule, 2-beaked, 2-celled, 1-2-seeded.

1 \$ Pstals 0. Calyx 0. Stamens co. Flowers g, in globular heads......LIQUIDAMBAR. 3

1. HAMAMELIS, L. WITCH HAZEL. Calyx with an involucel of 2-3 bracts at base. Pet. very long, linear. Sterile stamens scale-like, opposite the petals, alternating with the 4 fertile ones. Caps. nut-like, 2-celled, 2-beaked. 55 Flowers vellow.

H. Virginiàna L. Lvs. oval or obovate, acuminate, crenate-dentate, obliquely cordate; fls. sessile, 3-4 together, blooming in late autumn and winter. Woods. Stems crooked, 10-15f. Pet. twisted, 9" long.

2. FOTHERGILLA. L. filius. Calyx campanulate, truncate and ob scurely 5-7-toothed, bearing the stamens in one marginal row. Styles distinct. Caps. 2-lobed. 5 Lvs. oval or obovate, expanding after the dense spikes of flowers.

F. alnifòlia L. f.-Swamps, Va. to Fla. 2-4f. Calyx white, fringed with the long white or pink filaments. Styles long, recurved. March, April.

3. LIQUIDAMBAR, L. SWEET GUM TREE. Involucre 4-parted deciduous. & Ament conical. & Ament globular. Calyx a scale, if any. Fruit a globular sorosis (§ 171), woody, consisting of the scales, and capsules which open between their beaks. Ovules ∞ , 1 or 2 maturing 5 Leaves and gum fragrant. Twigs winged with corky bark.

L. styracíflua L. Lvs. palmate, with 5 acuminate, serrate lobes; veins villous a' their bases. A large and handsome tree, Conn. to Ill. and S. 60f. May.

ORDER XLVIII. HALORAGEÆ. THE HIPPURIDS.

Herbs mostly aquatic, with incomplete or minute $\sqrt[4]{-4}$ flowers. Calya tube adherent. Petals 0-4. Stamens 1-8. Pollen 4-grained. Ovary 1-4celled. Styles 1-4, distinct, one pendulous ovule in each cell. Fruit in. dehiscent, 1-4-celled, 1-4-seeded. Seed pendulous, anatropous, albuminous. (Formerly joined to Onagraceæ.)

- * Flowers 3-parted, apetalous, perfect.....PROSERPINACA. 1
- 3

* Flowers 1-parted, apetalous, perfect..... HIPPURIS.

1. PROSERPINACA, L. MERMAID WEED. Calyx tube adherent to the ovary, 3-sided, limb 3-parted. Pet. none. Sta. 3. Stig. 3. Fruit 3angled, 3-celled, bony, crowned with the calyx m Roots creeping Lvs. alternate. Fls. greenish.

- **P. palústris** L. Lvs. linear-lanceolate, sharply serrate above the water, those be low (if any) pinnatifid. 24 Swamps: common. 6-20%. Lvs. 1--2%. June, July.
- 2 P. pectinàcea Lam. Lvs. all pectinate, with linear-subulate segm.; fr. obtusely
 3-angled. 24 Sandy swamps, Ms. (rare) to Fla. 5-10'; long creepers at base. Jl. Aug.

2. MYRIOPHYLLUM, Vaill. WATER MILFOIL. Flowers ϑ , or frequently ξ . Calyx 4-toothed in the ξ and φ flowers, 4-parted in the ϑ . Pet. 4, often inconspicuous or none. Sta. 4—8. Stig. 4, pubescent, sessile. Fr. of 4 nut-like carpels, cohering by their inner angles. m 24 Submersed lys. parted into capillary segments. Upper fls. usually ϑ , middles ones ξ , lower φ , greenish, emerging in summer.

- \$ Stamens 8. Carpels smooth and even. Leaves whorled in 3's, rarely in 4's...Nos. 1, 2
 \$ Stamens 4.—Carpels ridged on the back. Leaves whorled in 4's and 5's...Nos. 3, 4
- -Carpels smooth and even. Leaves alternate or wanting.....Nos. 5, 6 1 M. spicatum L. Floral lvs. ovate, entire, shorter than the flowers, the rest all pin-
- nately capillary; fls. in term. spikes. Deep waters, fls. emerging. 10f.
 2 M. verticillàtum L. Floral lvs. pectinate-pinnatifid, much longer than the flow-
- ers, the lower pinnately-setaceous. Spikes leafy, terminal. Slow waters. 3 M. heterophýllum Mx. Floral lvs. ovate-lanceolate, serrate, longer than the fls.

crowded, the rest pinnately or pectinately capillary. Ponds: rare.

- 4 M. scabràtum Mx. Floral lvs. linear, pectinately toothed; fr. roughened, sharply angled; verticils axillary. Shallow waters. 6-12. Capillary segments few.
- 5 M. tenéllum Bw. Erect and almost leafless; floral leaves or bracts alternate, minute, entire, obtuse; fls. 8; petals linear. Water edges, N. Eng. N. Y. and N. Scapes 4-12′, from long creeping rhizomes. Fls. purplish-white, sessile.
- 6 M. ambíguum Nutt. Lvs. many, submersed ones pinnate, with capillary segments, middle ones pectinate, upper linear; fls. mostly §. Floating in ponds and ditches. Ms. to Ga.

β. limosum. Small, procumbent, rooting, in muddy places; lvs. all linear.

Y. capillaceum. Very slender; lvs. all immersed and capillary, in ponds.

3. HIPPURIS, L. MARE'S TAIL. Calyx with a minute, entire limb crowning the ovary. Cor. 0. Sta. 1, inserted on the margin of the calyx. Anth. 2-lobed, compressed. Style 1, longer than the stamen, stigmatic the whole length. Seed 1. #24 St. simple. Lvs. verticillate, entire. Fls. axillary, greenish.

H. vulgàris L. Lvs. in verticils of 8 to 12, linear, acute, smooth, entire; fis. solitary, minute. Borders of ponds. marshes. N. and W.: rare. 1-21. Dakotah (Matthews)

ORDER LI. MYRTACE Æ. MYRTLEBLOOMS.

Trees and shrubs, without stipules. Leaves opposite, entire, punctate, usually with a vein running close to the margin. Calyx adherent below to the compound ovary, the limb 4- or 5-cleft, valvate. Petals as many as the segments of the calyx. Stamens numerous. Anthers introrse. Style and stigma simple. Fruit with many seeds. Albumen none.

Our Myrtleblooms are either tender exotics, or indigenous far South The following table must suffice for their recognition.

a Stem terete or teretish. Leaves lanceolate to linear......Nos. 3, 4

- **1 R. Virgínica** L. *Meadow Beauty*. Stem narrowly 4-winged; leaves sessile, and with the stem clothed with scattered hairs; calyx hispid. Wet grounds, E. Mass., S. and W. 12-16'. Cymes corymbed. Flowers purple. July, August.
- **2 II.**, stricta Ph. Stem tall, strongly 4-winged, glabrous; leaves acuminate, glabrous; calyx glabrous, tube very short. Bogs, S. 3-4f. Purple. June, July.
- 3 R. Mariàna L. Hairy; leaves lanceolate and lance-linear, acute, bristly-serrate, tapering to a short petiole. Sandy bogs, N. J. to Fla. 1-2f. Purple.
- β. linearis. Diffusely branched; lvs. almost linear. South. (R. lanceolata Walt.)
 4 B. glabélla Ph. Glabrous, glaucous; lvs. lanceolate, subserrulate, acute, sessile; cal. glandular-hispid. Damp woods, S. 2-3f. Fls. few, large, purple. June-Aug.
- 5 R. ciliòsa Mx. Stem 1-2f, squarish; leaves broad-ovate, sparsely hispid above, margin ciliate with long bristles; flowers few, subsessile, terminal; calyx glabrous, lobes acute. Damp woods, Md. to Fla. Petals roundish. June-August.
- 6 **H. serrulata** N. Stem 6-8', square; leaves small, roundish-oval, glabrous both sides, serralate-ciliate; calyx glandular-hispid, lobes obtuse. Swamps, S.

R. litea Walt. Leaves oblong-linear: flowers panicled; calyx much constricted above the ovary, limb bell-form, with cuspidate teeth. Damp woods, S. 18'.

2. CENTRADENIA ROSEA, from Mexico, is often seen in conservatories. A small shrub, with opposite, lanceolate leaves (one of each pair much smaller or obsolete). Fls. 4-parted, reseate, in numerous hanging clusters. Sta. 8, anthers appendaged.—C. GRANDIFÒLIA has the arge lanceolate leaves crimson beneath, and cymes erect.

ORDER L111. LYTHRACEÆ. LOOSESTRIFES.

Plants with entire, exstipulate, mostly opposite leaves, with a tubular calyx bearing the (4-7) petals and stamens in its throat, and a compound ovary and style. Stamens 4-14, rarely ∞ . Fruit capsular and free, or baccate, 2-6-, or by abortion, 1-celled, ∞ -seeded. Albumen 0.

	-c 4 teeth. Horus 0. Petals 0 DIDIPLIS.	7

1. LAGERSTROEMIA INDICA. CRAPE MYRTLE. Petals 6, crisped, on claws inserted into the calyx tube. Sta. ∞ . Lvs. round-ovate, thick, smooth. Branches winged. Flowers blue-purple, in panicles. Common S. † and §. From E. India.

2. PUNICA GRANATUM. POMEGRANATE. Lvs. lanceolate. Pet. 5, oval, obtuse, erect, scarlet, large. Fr. large, crim., crowned with the calyx, eatable, of singular structure, being 3-celled below and 5-celled above, 10-20f. Hardy in Fla. and La. (Eur.)

3. CUPHEA, Jacq. Calyx tubular, 12-veined, gibbous at base, with 6 crect teeth, and often as many intermediate processes. Pet. 6 or 7, unequal. Stam. about 12, unequal. Sty. filiform. Caps. thin, 1–2-celled, few-seeded.

- 1 C. viscosíssima Jacq. (1) Viscid-pubescent; branches alternate; lvs. opp., lanceovate: flowers violet-purple, short-stalked, 1 in each axil; capsules bursting laterally before ripe. Wet grounds, Mass., W. and S. Not common. 9-18'. August.
- 2 C. PLATYCÉNTRA. Low, bushy perennial; leaves lanceolate; fls. with a scarlet calyx tube and short, purple petals, produced in profusion all Sum. From Mex. Not hardy.
- 3 C. STRIGULÒSA. Shrubby, hispid and viscid; lvs. oblong-ovate; cal. scarlet, gibbous at base; petals 6, subequal, large, violet-purple, varying to yellow; sta. 11, hairy.
- 4 C. SILENOIDES. Lvs. lanceolate; cal. green and red; pet. 5. purple, 2 large and 3 small.

4. LYTHRUM, L. LOOSESTRIFE. Calyx cylindrical, striate, "imh 4-6-toothed, with as many intermediate, minute processes. Pet. 4-6, equal. Stam. as many or twice as many as the petals, inserted in the calyx. Style filiform. Capsule 2-celled, many-seeded. 24 Mostly with entire leaves and purple or pale flowers. June—Aug.

- 1 L. hyssopifòlium L. Grass-poly. Glabrous, slender; branches square; lvs. alternate or opposite, linear or oblong-lanceolate, obtuse; fls. solitary, axillary, subsessile; pet. and stam. 5 or 6. Low grounds, coastward, Ms., N. Y. Rare. 6-10'.
- 2 L. alàtum Ph. Glabrous, erect, branched; stem winged below; lvs. lance-ovate acute, sessile, broadest at base, alternate and opposite; flowers axillary, solitary with 6 wavy petals and 6 short stamens. Damp. S. and W. 1-2f.
- 8 L. lineàre L. St. slender, somewhat 4-angled, branched above; lvs. linear, mostly opposite, obtuse; fis. nearly sessile; pet. and sta. 6. Swamps, N J. to Fig. 2-4f.

4 L. Salicària L. More or less publicent; lvs. lanceolate, cordate at base, ne nearly sessile, in a long, somewhat verticillate, interrupted spike; pet. 6 or 7; stam. twice as many. Wet meadows, N. Eng., N. Y. Rare. 2-5f. Fls. showy, purple. † β. ROSEUM. Flowers rose-red, in many spikes, all summer. A fine garden variety.

5. NESÆA, Juss. Calyx short, broadly campanulate, with 5 erect teeth, and 5 elongated, spreading, hornlike processes. Sta. 10, al ernate ones very long. Sty. filiform. Caps. globous, included, ∞ -seeded. 24 Lvs opposite or verticillate. Flowers axillary, purple.

N. verticillàta Kunth. Swamps, common. Stems woody at base, stoloniferous 2-4f, angular; lvs. lanceolate, acuminate, opposite or in whorls of 3's; fls. in a long leafy, showy, slender panicle of umbels. (Decodon verticillatum Ell.)

6. AMMÁNNIA, L. Calyx campanulate, 4–5-toothed or lobed, gen erally with as many hornlike processes, alternating with the lobes. Pet 4 or 5. Sta. as many, rarely twice as many as the calyx lobes. Capsule globular, 2–4-celled, ∞ -seeded. (1) Stems square and leaves opposite, entire. Flowers axillary.

- 1 A. hùmilis Mx. St. branched from the base, ascending; lvs. lanceolate, obtuse, tapering at base into a short petiole: fls. solitary, closely sessile, all the parts in 4's; sty. very short. Ditches. A low herb, with inconspicuous flowers. Aug., Sept.
- 2 A. latifolia L. St. erect, branching; lvs. linear-lanceolate, acute, dilated and auricled at the sessile base; cal. 4-angled, 4-horned; fls. crowded. Wet, W. 1-2f. Purp.

7. **DIDIPLIS**, Raf. Calyx 4-lobed, without accessory teeth. Pet. 0 Sta. 2-4. Ov. 2-celled. Stig. 2-lobed, subsessile. Caps. globous, bursting irregularly, ∞ -seeded. In Leaves opposite, crowded, linear. Flowers axillary, sessile, minute. (Hypobrichia, Curt.)

D. diándra,-Ponds and sluggish streams, Ill. and S. 10-20' long. Jn.-Aug.

ORDER LIV. ONAGRACEÆ. ONAGRADS.

Herbs, rarely shrubs, with the flowers 4-(sometimes 2 or 3)-parted, with the calyx tube adhering to the 2-4-celled ovary, and teeth valvate in the bud; the petals convolute in the bud, sometimes obsolete as well as the calyx teeth. Stamens as many or twice as many as the petals or calyx teeth. Ovary 2-4-celled, styles united, and stigmas capitate or 4-lobed Fruit capsular or baccate, 2-4-celled. Seeds with little or no albumen Figs. 13, 54, 138, 317, 385.

1. EPILOBIUM, L. WILLOW-HERB. ROSE BAY. Cal. tube not prolonged beyond the ovary, limb deeply 4-cleft, deciduous. Sta. S. Stig often with 4 spreading lobes. Ov. and caps. linear, 4-cornered, 4-celled, 4-valved. Seeds ∞ , comous with long silky hairs. 24 Flowers purple to white. July—Sept.

- Lvs. alternate. Fls. showy, expanding. Stig. with 4 long lobes. Sty. declined .. No. 1

- 1 E. angustifòlium L. St. simple, erect; lvs. lanceolate, subentire with a mar ginal vein; rac. long, terminal, spicate; pet. unguiculate, purple; stig. with 4 linear, revolute lobes. In newly-cleared lands, fence-rows, &c., E. and W. 4-6f.
 - β . canescens. Flowers pure white throughout; ovaries silvery canescent.
- 2 E. alpinum L. St. creeping at base, usually with 2 pubescent lines, few-flwd.; lvs. glabrous, oblong-ovate, obtuse; caps. glabrous. High Mts. N. 6-12'. Fls. pale-roseate.
 β. nutanc. Taller (1f), nodding at the summit; lvs. oblong, denticulate. White Mts.
- 3 E. palústre L. β. albitiorum. Minutely downy, branching; lvs. sessile, linear or narrowly lance-lin.; caps. pubescent. Swamps, Pa., N. & W. 6'-2f. Fls. nearly wh.
- 4 E. molle Torr. Velvety-pubescent, strict, branched above; lvs. sessile, crowded, lanceolate- to linear-oblong, subentire; pet. deeply-emarginate, rose-color. Swamps, E. and W. 1-2f. Varies to nearly smooth, and less leafy. (N. Y., Hankenson.)
- 5 E. coloràtum Muhl. Nearly smooth, much branched; lvs. lance-oblong, dentserrulate, some petiolate, often with reddish veins; pet. 2-cleft, rose-color. Wet. 1-3f

2. JUSSIÈA, L. Calyx tube long, but not produced beyond the ovary; the lobes 4-6, leafy, persistent. Pet. 4-6, spreading. Sta. 8-12. Pod 4-6-celled, long, opening between the ribs. Seeds very numerous.- Herbs with alternate leaves and yellow flowers.

- 1 J. decúrrens DC. Glabrous; fls. 4-parted, 9"; st. erect, branched, winged by the decurrent, lanceolate lvs.; pod clavate, 4-angled. 24 Wet. Pa., and S. 6-20'. Jl.-Sep.
- 2 J. repens L. Smooth, or hairy above, creeping, with erect branches; fls. 5-parted,
 2'; lvs. oblanceolate to oblong, narrowed to the slender pet.; ov. much shorter than the ped. 24 Ponds, ditches, Pa. to Ill., and S. 2-3f. May-Aug. (J. grandiflora Mx.)
- 3 J. leptocárpa N. Hairy; fls. mostly 6-parted, small (9"); lvs. langeolate, subsessile; pod slender, much longer than the ped. (1) Marshes, Fla. to La. 1-2f. June

3. ZAUSCHNÈRIA CALIFÓRNICA. 24 Bushy, hairy-viscid, with lanceolate leaves and scarlet (varying to white) flowers resembling Fuchsias. Sta. exserted.

4. CENOTHÈRA, L. EVENING PRIMROSE. Calyx tube prolonged beyond the ovary, deciduous. Segm. 4, reflexed. Pet. 4, equal, obcordate or obovate. Sta. 8. Caps. 4-celled, 4-valved. Stig. 4-lobed. Seeds many, without a coma.—Herbs with alternate leaves. Summer.

- Native. Fls. diurnal, yellow. Pods clubshaped, 4-angled and 4-ribbed..(a)
 a Calyx tube not longer than the ovary. Fls. 5" or 6" diameter......Nos. 4, 5
 a Calyx tube about twice longer than the ovary. Fls. 15"-18".....Nos. 6-8
 a Calyx tube 8 or 4 times longer than the ovary. Fls. 2'-4'....Nos. 9, 16
 Exotic.-b Fls. yellow, large. Tube much longer than the ovary....Nos. 11, 12
 - -b Fls. white, very large. Pods 4-winged and 4-ribbed......Nos. 13, 14 -b Fls. purple or roseate. Tube short, funnel-form. GODETIA.. Nos. 15-18
- 1 **(C. biénnis** L. St. erect, hirsute; lvs. ovate-lanceolate, repand-denticulate; fis. in a terminal, leafy spike; cal. tube 2 to 3 times longer than the ovary; stam. shorter than the obcordate or obtuse petals; pod oblong, obtusely 4-angled. Com. 2-5f.

⁻a Petals 2-lobed.....Nos. 4, 5

β. muricata. Stem rough-hirsute; petals but little longer than the star ens.

y. grandiflora. St. branching; pet. much longer than stam., deeply obcordate. •

8. parviflora. Calyx tube elongated ; petals small, as long as the stamens.

E. cruciata. Petals linear-oblong, shorter than the stamens.

ζ. canéscens. Petals enlarged ; whole plant canescently hairy.

2 **(E. rhombipétala** N. St. erect, tall, smooth; lvs. lance-linear; pet. rhombicelliptical, pointed; cal. tube 3-4 times longer than ovary. (2) Prairies, W. 2-3f. **†**

3 **(E. sinuàta** L. Pubescent, decumbent at base; lvs. oval-oblong, sinuate-dentate, or incised; fis. axillary, solitary; tube twice longer than ovary. (1) N. J. and S. 3-8'.
 B. minima. Low, simple, 1-flowered; lvs. subentire. Pine-barrens, N. J. and S.

4 **(E. pùmila** L. Low, pubescent, half-erect; lvs. lanceolate; fls. 6", in a leafy spike; calyx tube shorter than the oblong-clavate ovary. (2) Meadows, Can. to Car. 6-10'.

5 **(E. chrysántha** Mx. Ascending, slender; fls. small (5") crowded, spicate; lvs lanceolate; cal. tube as long as the ovary; pet. emarginate. (2) N. Y. to Wis. 12-18"

- 6 **(E. fruticòsa L.** St. rigid, hairy or downy; lvs. lance-oblong; rac. corymbed; fis 16" diam.; pod oblong-clavate, 4-winged, 4-ribbed, pedicellate. 24 Hard soils. 1-3f.
- 7 **(E. ripària** N. St. slender, branched, purple, and polished; lvs. lin.-lanceolate, peti olate, denticulate; rac. corymbed; fls. large (18"). Banks, N. J., and S. 1-2f. May+.

3 (E. linearis Mx. Hoary-puberulent, subsimple; lvs. linear, subentire, obtuse; fls. large, corymbed; pod obovoid. 24 Montauk Pt. to Tenn., and S. 1-1+f. May, June.

- 9 CE. glauca Mx. Smooth, glaucous; lvs. ovate, sessile, pointed; fls. large. clustered at the ends of the branches; pod oval. 24 Va. to Ky., and S. 2-3f. May-July.
- 10 CE. MISSOURIÉNSIS Sims. Simple, decumbent; lvs. thick, lanceolate, petiolate; fla. very large (4'), tube very long; pod very large, 4-winged. Dry hills, Mo. July-Oct
- 11 Œ. NOCTÚRNA. St. erect, downy; lvs. lanceolate, repand-dentate. (2) S. Af. 2f.

12 CE. LONGIFLORA. Simple, hairy: 1vs. lanceolate, denticulate; pet. 2-lobed. (2) S. Am.

13 Œ. speciòsa. Lvs. pinnatifid bevow; fis. diurnal, white, fading red. 24 Ark. 18'.

- 14 CE. TETRÁPTERA. Lvs. pinnatifid below; fls. nocturn., large, pure wh. (1) Mex. 1-2f. CE. RUBICÚNDA. Erect; lvs. lance-linear; pet. rose-purp., orange at base. (1) Cal. 2f.
 - 6 **(E.** LÍNDLEYI. Diffusely branched; lvs. lance-lin.; pet. lilac, red at base. (1) Cal. 1f.
- 17 Œ. VINÒSA. Erect; lvs. linear-oblong: pet. white-roseate; fis. 2' broad, (1) Cal. 2f.
- 18 Œ. LÉPIDA. Erect, simple; lvs. lance-obl.; pet. pale-purp., crimson-spotted at edge.

5. GAURA, L. Calyx tube much prolonged above the ovary, cylindric, limb 4-cleft. Pet. 4, unguiculate, somewhat unequal. Sta. 8, declinate, alternate ones a little shorter. Ovary oblong, 4-celled, nut usually by abortion, 1-celled, 1-4-seeded.—Herbaceous or shrubby. Lvs. alternate Flowers white and red, in slender spikes. July, August.

1 G. biénnis L. St. branched, pubescent; lvs. lance-oblong, spikes dense; cal. tube as long as the segments, the pet. rather shorter. (2) Dry bluffs, rare, handsome. 3-5f.

2 G. filipes Spach. Paniculate and naked above; lvs. linear-oblong, tufted at the base of the slender racemes; calyx segments longer than the tube or petals; pode obovoid-clavate, on slender pedicels. Dry soils, S. and W. 3-5f.

3 G. angustifòlia Mx. Pubescert; lvs. linear, very acute; calyx seg. much longer than tube or pet.: pod sessile, ovoid, sharply 4-angled. S. Car. to Fla. Fls. small, wh

4 G. LINDHEIMERI. Erect, much branched; lvs. lin.; cal. red; pet. blush, long in bloom.

6. CLÁRKIA, Ph. Calyx tube slightly prolonged beyond the ovary, limb 4-parted, deciduous. Pet. 4, unguiculate, 3-lobed or entire, claws with 2 minute teeth. Sta. 8. Sty. 1, filiform. Stig. 4-lobed. Capsule largest at base, 4-celled, 4-valved, many-seeded. -(1) Herbs (from Oreg. and Cal.) with showy, axillary flowers.

1 C. FULCHÉLLA. Lys. lin.-lanceolate ; pet. 3-parted ; 4 sterile sta. F.s. wh., rose, or lilac

2 C. ÉLEGANS. LVS. lance-ovate; pet. rhombic-ovate; sta. all fertile. Purple to white. 3 C. RHOMBOÌDEA. LVS. ovate-obl.; pet. rhomb.-ovate, 2-toothed, lilac, with purple spots.

7. FÚCHSIA, L. LADIES' EARDROP. Calyx tubular-funnel-form, colored, deciduous, iimb 4-lobed. Pet. 4, in the throat of the calyx. Sta. 8, exserted. Disk glandular, 8-furrowed. Baccate capsule oblong, obtuse, 4-sided. 5 S. American, beautiful. Fls. drooping, axillary. Figs. 54, 138.

- **I F.** coccíneA. Smooth; lvs. opp. or 3-whorled, ovate, denticulate; pet. convolute, violet-purple, half as long as the scarlet sepals, quarter as long as the purple stamens.
- 2 F. GRÁCILIS. Half-shrubby; lvs. ovate, glandular-dentate; pet. nearly as long as sep.
- 3 F. FULGENS. LVS. cordate-ovate; cal. tube long, trumpet-shaped, bright red.—Many hybrid varieties of the above three species are in cultivation.

8. LUDWIGIA, L. BASTARD LOOSESTRIFE. Calyx tube not prolonged beyond the ovary, limb 4-lobed, mostly persistent. Pet. 4, equal, obcordate, often minute or none. Sta. 4, opposite the sepals. Sty. short. Caps. short, 4-celled, 4-valved, many-seeded, and crowned with the persistent calyx lobes. 24 and mostly *m*. Leaves entire. Flowers in summer.

ş	Leaves opposite. Stems creeping.— a Petals none. Flowers very smallNos. 1, 2

- 1 L. palustris Ell. Water Purslane. Creeping or floating, smooth, some fleshy; lvs. ovate-spatulate, on winged petioles; fls. sessile, solitary, apetalous; pod oblong (2''), with 4 green angles. Stem 10-18', round, reddish.
- 2 L. spatulàta T. & G. Ascending, branched, downy, not fleshy; lvs. obovatespat., on winged petioles; fls. very small, sess.; pod ovoid, 4-sided, downy. Fla. 6-12/.
- **3 L. natans** Ell. Creeping or floating, smooth; lvs. oblong, on margined petioles; fls. sessile; pet. as long as the calyx; ov. with 2 bractlets at base. Swamps, S. Pod 4".
- **4 L. arcuàta** Walt. Creeping, smoothish; lvs. linear-oblanceolate, tapering to the slender base; fis. solitary, on ped. twice longer than the lvs.; petals bright yellow, longer than the narrow sepals; pod clavate, finally arcuate. Va. to Fla. 3-10'.
- 5 L. alternifòlia L. Seed Box. Erect, glabrous; lvs. lanceolate, acute; ped. axillary, 2-bracted; sep. large, purplish, crowning the 4-winged pod. Swamps. 1-3f.
- 6 L. hirtélla Raf. Erect, hairy; lvs. ovate-oblong, obtuse; ped. axillary, 2-bracted; sep. shorter than the yellow petals; pod 4-winged, subglobous. Wet. N. J. to Fla. 1-3f
- 7 L. virgàta Ph. Erect, with virgate branches, pubescent; lvs. oblong to linear, obtuse; fls. large; pet. longer than the leafy calyx, which is inally persistent and reflexed on the roundish-cubical 4-winged pod. Dry soils, S. 2-3f. Flowers 1'.
- 8 L. lineàris Walt. Slender, with erect branches; lvs. lance-linear, acute; fls. axil lary, sessile; pet. obovate-obl.; pod clavate, 4-sided, longer than sep. N. J. and S. 2f
- 9 L. linifòlia Poir. Simple, erect from a creeping base; lvs. spreading, lin., attenu ate at base; sep. ovate, pointed, equalling the pet. and oblong pods. Mad, S. 1f. Lvs. 1'
- 10 L. cylindrica Ell. Smooth; lvs. lanceolate; fis. minute, 1-3 together, apetalous. pod slender, cylindrical, blunt, longer than the calyx segm. S. Car. to Fla. and La. 3f
- 11 L. pilòsa Walt Villous-pubescent; lvs. lanceolate; fls. axillary and spiked above pod villous, oblong, 4-sided, as long as the ovate, pointed sepals. Swamps, S. 2f.

- 12 L. sphærocàrpa Ell. Lvs. lanceolate, attenuate to base; ped. subsol., tractiese short; sep. as long as the small subglobous pod. Wet swamps, Mass. to Ga.: rare. 3f
- 13 L. microcárpa Mx. Ascending from a creeping base; lvs. spatulate-obovate sep. roundish, acuminate, larger than the very small obovoid pod. Wet, S. 1f.
- 14 L. alàta Ell. St. slender, strongly 4-angled; lvs. wedge-lanceolate; fls. in the upper axils few, white, apet.; pod cubic-obconic, winged; sds. ovoid. Marshes, S. 2-3f.
- 15 L. lanceolàta Ell.? (Chapm.) St. stout, terete; lvs. lanceolate; fls. in all the axils green, apetalons; pod cubical, with sharp angles. Swamps, Ga. Fla. 1-2f, bushy.
- 16 L. polycárpa Short & Peter. Lvs. lance-lincar, on the runners oblanceolate; fls solitary, with 2 subulate bractlets at base; pod cubical-obconic. Swamps, W. 1-3f.
- 17 L. capitàta Mx. Erect; lvs. lance-linear to lance-obl. obtuse at the sessile base flowers sessile, crowded in a terminal bracted head or spike. Wet barrens, S. 2-3f.

CIRCÆA, L. ENCHANTER'S NIGHTSHADE. Calyx slightly produced above the ovary, deciduous, limb 2-parted. Pet. 2, obcordate. Sta.
 Caps. obovoid, uncinate-hispid or pubescent, 2-celled, 2-seeded. Sty. united. 24 Leaves opposite. Flowers small, racemed. Figs. 13, 317, 385.

- 1 C. Lutetiàna L. St. erect, pubescent above; lvs. ovate, subcordate, acuminate, slightly repand-dentate, opaque, longer than the petioles; bracts none; fr. reflexed, hispid-uncinate. Damp shades. 1-2f. Rac. slender. Fls. rose-colored. June, Jl.
- 2 C. alpina L. Smooth; st. ascending at base, weak; lvs. broad-cordate, diaphanous, dentate, as long as the petioles; bracts setaceous; caps. pubescent. Wet, rocky woods, N. Eng. to Oreg. 6-10'. Fls. white. Plant small and delicate. July, Aug.

ORDER LV. LOASACEÆ. LOASADS.

Herbs often hispid with stinging hairs, with leaves opposite or alternate and no stipules. Calyx adherent to the ovary, 4 or 5-parted, lobes persistent, equal. Petals 5, or 10 in 2 circles. Stamens ∞ . Ovary 1-celled, with several parietal placentæ.

1. **MENTZELIA**, L. Calyx tubular, limb 5-parted. Pet. 5—10, flat, spreading. Sta. ∞ , 20 to 200. Ov. inferior. Sty. 3, filiform, connate, and often spirally twisted. Stig. simple, minute. Caps. 1-celled, many-seeded. —Branching herbs. Leaves alternate.

- 1 M. oligospérma Nutt. Very rough, with barbed hairs; stem dichotomous; lvs ovate-lanceolate, lobed or incisely toothed; pet. entire, cuspidate, longer than the 20 + sta.; caps. 3-5-seeded. 24 Dry rocks, Ill. Mo. and S. 1f. Fls. deep yellow, 9". May-Jl.
- 2 M. Floridàna N. Slightly roughened; lvs. deltoid-ovate, unequally toothed, petio late; pet. wedge-oval, obtuse; sta. 30; caps. 6-seeded. Fla. 1f. Fls. small, yellow.
- 3 M. LINDLEYI. Golden Bartonia. Hispid; lvs. lance-ovate, pinnatifid, lobes often dentate; pet. broad obovate; seeds ∞; stamens 200. ① California. Fls. golden, 2-5'.

2. LOASA, Adans. Cal. 5-parted. Pet. 5, concave. Scales 5, petaloid, 2-3-lobed, connivent, with 2 sterile filaments inserted at base. Sta. ∞ , in many fascicles. Style 3-fid. Caps. 1-celled, half 3-valved.

L. LATERÍTIA. Brick-red L. Climbing, stinging; leaves palmately lobed, cordate; fls. large, on long stalks, brick-red to orange. Chili. 20f. June-October.

ORDER LVI. TURNERACEÆ.

Herbs with alternate, exstipulate leaves, solitary, 5-parted flowers, a free calyx bearing the 5 petals and 5 stamens in its throat. Ovary 1-celled, with

8 parietal placentæ. Styles 3, distinct. Fruit a 3-valved capsule. Seeds albuminous, strophiolate.

TURNÈRA, L. Calyx campanulate. Styles 3. Stigmas 2–5-∞parted or fringed. Caps. of 3 valves separating to the base. Herbs pubescent or tomentous. Flowers on jointed pedicels, yellow. (Piriqueta, Aub.)

1 T. cistoides L. Hairy, erect; lvs. lanceolate, obtuse, denticulate; the upper bractlike, shorter than the peduncles; pet. obovate, cor. 1'. Dry. S. 1f. June, July.

2 T. tomentosa. Tomentous; lvs. oblong (1'), longer than the peduncles. F4. 1f.

3 T. glabra (Chapm.) Smooth, branched; ped. 2-3 times longer than lin. lvs. Fla

ORDER LVII. PASSIFLORACEÆ. PASSIONWORTS.

Plants often woody, climbing by tendrils, with alternate leaves and leafy stipules. Flowers perfect, 5-parted. Calyx tubular, the throat crowned with several rows of sterile filaments, and the corolla above them. Stamens 5, monadelphous, sheathing the stipe of the ovary. Fr. fleshy, ∞ -seeded. Figs. 111, 112, 348.

- 1 P. lùtea L. Lvs. glabrous, cordate, 3-lobed, obtuse; petioles glandless; ped. mostly in pairs; pet. gr.-yel., narrower and much longer than sep. 24 Woods, O., and S. 10f.
- 2 P. incarnàta L. Lvs. deeply 3-lobed, serrate; petioles with 2 glands above; in-. volucre 3-leaved; crown triple, roseate. 24 Dry fields, Va. to Fla. 20-30f. Pet. wh.
- 3 P. CERÙLEA. Shrubby; lvs. palmately 5-parted, entire; invol. 3 bracted; petioles glandular; pet. longer than the crown, blue, purple, and white. Brazil. Not hardy

ORDER LVIII. CUCURBITACEÆ. CUCURBITS.

Herbs succulent, creeping or climbing by tendrils, with alternate leaves. Flowers monocious or polygamous, never blue. Calyx 5-toothed, adherent. Petals 5, often united, inserted on the calyx. Stamens 5, generally cohering in 3 sets. Anthers united, contorted. Ovary 1-celled, with 3 parietal placentæ often filling the cells. Fruit a pepo or membranous. Seeds flat, with no albumen, often arilled. Figs. 186, 476, 482.

§ Corolla white, -a 6-cleft. Stigmas 2. Fruit echinate	ECHINOCYSTIS.	1
-a 5-petalled. Pepo smooth, many-seeded	LAGENARIA.	2
-a 5-parted. Berry smooth, few-seeded	BRYONIA.	3
-a 5-lobed. Fruit prickly, 1-seeded		4
§ Corolla yellow,-b 5-lobed. Berry small, smooth, OO-seeded		5
-b 5-lobed. Pepo large. Seeds thick at edge	CUCURBITA.	6
-b 5-cleft. Pepo large,-c Seeds colored, thick-edged	CITRULLUS.	7
-c Seeds white, acute-edged		3

1. ECHINOCÝSTIS, T. & G. Flowers 8. Calyx of 6 filiform-subulate segments, shorter than the corolla. Petals 6, united at base into a rotate-campanulate corolla. 3 Sta. 3, diadelphous. 9 Abortive fil. 3, distinct, minute. Style very short. Stig. 2, large. Fruit roundish, inflated, echinate, 4-seeded. (1) Climbing, with branched tendrils.

E. lobata T. & G. Alluvion, Can. to Pean. and W. Smoothish. Lvs. thin, palmately 5-lobed. Fls. small, white, the barren in large racemes, fertile few below. Jl.-Sep.

2. LAGENÀRIA, Ser. GOURD. Fls. 8. Calyx campan., 5-toothed. Pet. 5, obovate. 8 Sta. 5, triadelphous. 9 Stig. 3, thick, 2-lobed, subsessile. Pepo ligneous, 1-celled. Seeds arilled, obcordate, compressed, margin tumid.—Mostly climbing by tendrils.

L. VULGARE. Stem soft-pubescent; tendrils branched; lvs. roundish, cordate, 2 glands beneath at base; fis. solitary, peduncled, white; pepo bottle-shaped. (1) Gardens.

3. BRYONIA, L. BRYONY. Fls. 8 or 3 9. Cal. 5-toothed, teeth short. Cor. 5-cleft or -parted. 3 Stamens 5, triadelphous, with flexuous anthers. 9 Sty. trifid. Berry small, globular. b Fls. greenish-wh. June.

B. Boykinii T. & G. Scabrous pubescent; lvs. deeply 3-5-lobed, cordate; flowers small, axillary, mixed, on short pedicels; berries 3-seeded, bright red. Ga. to La. 10f.

4. SÍCYOS, L. SINGLE-SEED CUCUMBER. Fls. 8. Cal. 5-toothed. Pet. 5, united at base. Anthers cohering, contorted. Styles 3, united at base. Fruit ovate, membranous, hispid or echinate, with one large, compressed seed. 2 With compound tendrils. Flowers axillary, mixed.

S. angulàtus L. Hairy, branched; lvs. roundish, 5-angled or lobed, lobes pointed; fls. wh. with gr. veins, the \$ in long rac., the \$ smaller, capitate. Thickets. Jl.—Sep.

5. MELOTHRIA, L. Fls. 9 \$ \$ or \$. Calyx bell-form, limb in \$ subulate segments. Pet. 5, united into a bell-form corolla. Sta. 5, triadel-phous. Style 1, stig. 3. Berry ovoid, small, ∞ -seeded. > Tendrils simple. M. péndula L. Lys. roundish, small, 5-lobed or angled, pointed; fls. axillary, \$ in

small rac., & solitary, on long poduncles. N. Y. to Ga. Delicate. Fls. yellowish. Jl.

6. CUCÚRBITA, L. SQUASH. Fls. 8. Cal. 5-toothed, limb deciduous after flowering in 9. Cor. bell-shaped, cohering with the calyx. Stam. 3, anth. connate, straight. Stig. 3. Pepo fleshy. Seeds thick at margin, smooth. b Flowers yellow.

1 C. PEPO. Pumpkin. Rough-hispid; lvs. very large, cordate, 5-lobed or angled; fis. large, 3 long-stalked; fr. very large, rounded, smooth, torulous, finally yellow. (1)

2 C. MELOPÈPO. Flat Squash. Hairy; lvs. cordate, 5-lobed; fr. depressed-orbicular, margin torulous, smooth or warty, whitish. (1) Hybridizes with No. 1.

3 C. VERRUCÒSA. Crookneck S. Hairy; lvs. cordate, deeply 5-lobed; fr. oblong or cla vate, often elongated and curved at base. ① The varieties are numerous.

B. MEDULLÒSA. Vegetable Marrow. Lvs. triangular in outline, deeply 3-lobed; fr. oblong or club-form, dark-green and wh., 10-20' long Highly prized in England.
 4 C. máxima. Mammoth S. Winter S. Rough-hairy; lvs. round-reniform, obtusely

5-lobed; fruit 10'-3f! diam., with a lobed, yellowish-white surface and dense pulp.

7. CITRÚLLUS, Neck. WATERMELON. CITRON. Cal. deeply 5-cleft, segm. linear-lanceolate. Pet. 5, united at base. Sta. triadelphous. Style trifid. Stig. reniform-cordate. Fr. rounded or oblong, the succulent placentæ filling the cell. Seeds colored, truncate at base. > C. vulgāris Schrad. Hirsute; lvs. somewhat 5-lobed, the lobes sinuate-pinnatifid, guaucus beneath; fls. with a bract; fr. dark-spotted. (1) India. Africa.

8. CUCUMIS, L. Fls. \mathscr{E} or $\check{\varphi}$. Cal. tubular-campanulate, with subulate segments. Cor. deeply 5-parted. Sta. triadelphous. Style short. Stig. 3, thick, 2-lobed. Pepo elongated. Seeds lance-oblong, white, acute, not margined at the edge. \flat Fls. axillary, solitary, yellow.

* Leaves deeply-lobed or cleft. Tendrils simple or forkedNos. 3-5

1 C. SATÌVUS. Cucumber. Rough; lf. angles acute; fr. oblong, prickly when young. (1) 2 C. MELO. Musk Melon. Hairy; lf. angles obtuse; fr. globular, torulous. (1) Asia.

3 C. ANGÙRIA. Prickly C. Lvs. sinuate-lobed; tendrils simple; fr. ovoid, echinate.

4 C. Colocynthis. Colocynth. Lvs. cut-lobed; tend. short; fr. round, yel., very bitter.

5 C. ANGUINUS. Serpent C. Lvs. 3-5-lobed; tendrils forked; fr. long, coiled, snake-like

ORDER LIX. BEGONIACEÆ. BEGONIADS.

Herbs or shrubby plants, with alternate, inequilateral leaves, and dicknows, unsymmetrical flowers. Perianth of $2-\infty$ lvs., all petaloid or the inner only. Stamens ∞ , anth. connate. Ovary inferior, 3-angled or winged, 3-celled, the placentæ in the angles. Styles united at base. Albumen 0, or thin.

BEGONIA, L. & Sepals 2. Pet. 2, rarely more, or 0. \Im Sepals 2, larger than the 4 petals. Cap. with 3 angles unequally winged, opening below the apex. Sds. ∞ , minute. 24 b Lvs. alternate, stipulate, with the sides unequal, margins toothed or lobed. Fls. often showy. Species 320. mostly tropical, often found in the greenhouse. Much mixed.

 b Staminate flowers with 2 sepals and 2 petals. E. India.......Nos. 12-15

- 1 B. MACULÀTA. Very smooth; lvs. ovate-oblong, wavy, cordate, white-spotted above, purple beneath; fls. white or flesh-colored, in forked cymes. Brazil. (B. argentea.)
- 2 B. FUCHSIOIDES. Smooth; lvs. oblong to obovate, obtuse at base, serrulate; fis. bright red, drooping like Fuchsias, in many terminal cymes, very handsome. N. Granada.
- 3 B. SEMPÉRFLORENS. Leaves bristly on the crenate edges, ovate, subcordate; fis. white to rose-colored, 1'-18", in an open panicle, with scarious, persistent bracts. Brazil.
- **4 B.** INCARNÀTA. Leaves bristly-serrate, ovate to oblong; fls. roseate, large, in compound, pendulous cymes, with caducous bracts or 0. Mexico. (B. insignis.)
- 5 B. NÍTIDA. Leaves ovate, half-cordate, subcrenate, shining, green as well as the stipules ' flowers purplish-white, with caducous bracts, on axillary peduncles. W. Ind.
- 6 B. SANGUÍNEA. Leaves oblique-ovate, deeply cordate, crenulate, red bencath, large; flowers white, small, many, in cymes longer than the leaves. Stalks red.
- **7 B.** coccíneA. Leaves oblique oblong, half cordate, dentate; stipules obovate, caducous; flowers scarlet, pendulous, 8" broad, in cymes equalling the leaves (5').
- 8 B. HERACLEIFOLIA. Leaves roundish, palmately 7-cleft, lobes toothed; fringed scales on the petiole above; scape long, with many roseate flowers, 1' diameter. Mexico.
- 9 B. PARVIFLORA. Shrub rusty-downy; leaves ample, roundish, subcordate, 7-9-lobed, lobes serulate; cymes 1f long, with numerous small pale flowers. Peru.

- **10 B.** MANICÀTA. Leaves oblique-ovate, cordate, angular, toothed, with purple-fringen scales on the petioles; flowers flesh-colored, in open cymes, on long peduncles. Mex.
- 11 B. PHYLLOMANIACA. Stem covered with leaf-like bulblets; leaves broad-ovate, cordate, doubly dentate; peduncles longer than the leaves; flowers roseate. Brazil.
- 12 B. EVANSIÀNA. Leaves ovate, subcordate, bristly denticulate, purple beneath; fowers rose-colored, 1', in cymes on long stalks. Our oldest species, from China.
- 13 B. Rex. Leaves ample, ovate, cordate, variegated with zones of dark-green, silvery gray, and purple, sinuate-crenate; scape 1-2f, with large roseate flowers. E. Ind.

14 B. GRIFFÍTHI. Like No. 13, but densely downy all over, even the large whitish fie. 15 B. XANTHÌNA. LVS. like No. 13, but varied with metallic spots; scape with *yellow* fis

ORDER LX. CACTACEÆ. INDIAN FIGS.

Plants with a green fleshy caudex or stock, angular or jointed, mostly leafless, armed with numerous prickles and terrible spines. Flowers solitary, mostly very showy. Sepals ∞ on the surface. Petals and stamens ∞ on the top of the ovary or calyx tube. Fruit fleshy, 1-celled, with parietal placentæ. Style filiform, with stellate stigmas. Figs. 472, 487.

	Calyx tube not produced above the overy. Stock jointed, branching	T.
	Calyx tube produced above the ovary.— a Joints flat, leaf-like, spineless(x)

ovary, not produced into a tube above it, longer than the stamens, the inner obovate. Stig. 4—10. Berry smoothish or prickly. 5 Branches composed of fleshy, mostly flattened joints. Lvs. small, deciduous, alternate, with tufts of prickles in their axils. Flowers large, yellow.

§ Joints obovate or broadly oval. Stigmas 8-10. Seeds many. Fr. eatable...Nos. 1-4 § Joints oblong or nearly cylindrical. Stigmas 4-6. Sceds 1-6......Nos. 5, 6

- 1 0. Ficus-Indica Haw. Stock branches stout, erect-spreading, pale-glaucous; lvs. subulate, with pungent bristles, no spines; fr. bristly, obovoid, purple. Florida ! to San Diego ! 3-20f. Joints 1f. Fruit pleasantly acid. § Trop. Am.
- 2 O. vulgàris Mill. Stock prostrate, pale-glaucous; lvs. minute, scale-like, with ∞ bristles and few spines; fr. nearly smooth, ovoid, eatable, crimson when ripe. Dry rocks, &c., Ct. to Fla. 1-2f, the joints 4-6'. Flowers 21-4' broad. Pet. 7-10. Jn.
- 3 0. Kafinésquii Eng. Stock prostrate, bright green ; lvs. spreading, subulate, longer (3-4"); spines 1-5 in each axil ; petals 10-12, often purplish at base. Ky. to Il., and W
- 4 0. Missouriénsis DC. Stock prostrate; leaves minute, the axils bristly and with whorl of many spines; fruit prickly, dry. Wis., along the rivers, and W. June
- 5 0. polyántha Haw. Erect; joints oblong, the upper bearing many flowers at top; spines strong, yellow, unequal; stigmas 6; fruit small, 6-seeded. Waysides, Fla. Jn.
- 6 0. Pes-Corvi Leconte. Stk. prostrate; joints compressed-cylindric, small (2'); spines in pairs, unequal; pet. few, spatulate; stig. 4; fr. small, prickly, 1-4-seeded. Ga., Fla.
- 7 O. BRAZILIENSIS Stock cylindrical, 6-10f; branches short, bearing ovate joints, which are thin and somewhat leaf-like; spines 1-3 together, sharp and strong. Brazil.

2. EPIPHYLLUM TRUNCÀTUM. Stock consisting of short, flat, notched joints, truncate at top; flowers at top of the joints, 2-3' long, conspicuously oblique. Style longer than the stamens or 6-8-10 reflexed petals. From Brazil. 1f.

3. PHYLLOCACTUS PHYLLANTHOIDES. Stock consisting of narrow, onsiform, crenate joints, fleshy but leaf-like. Flowers 4' long, open by day, with many rose-colored petals and sepals longer than the tube, gradually spreading. Mexico.

2 P. ACKERMÁNNI. Fls. scarlet; pet. channelled, pointed, very many, 3-4'. Mexico.
3 P. PHYLLÁNTHUS. Spleenwort. Joints ensiform, serrate; fls. 9-12', the white funnel-form cor. much shorter than the slender tube, opening by night, fragrant. S. Am.

4. CEREUS, DC. Sep. and pet. imbricated, adnate to and prolonged into a long tube above the ovary. Sta. and style filiform, adnate to the tube. Stig. 10. Berry scaly with the remains of the sepals. 55 Stock fleshy, green, prismatic, often jointed, with fascicles of spines on the ridges.

- C. GRANDIFLÒRUS. Night-blooming C. Stock long, about 5-angled; flowers very large, nocturnal; pet. spreading 6-8', pearl-white; sep. yellow. Mex. A magnificent flower.
- C. TRIANGULÀRIS. Stock 3-angled, prickles bristly; fl. very large, white; sep. green.
 C. FLAGELLIFÓRMIS. Stock slender, long, prostrate, 10-angled, hispid; fls. pink-color,
- smaller, open by day many days in succession; tube longer than the petals.
- 4 C. SERPENTINUS. Stock 12-angled, 4f; spines white, bristly; fis. pale, open by night.
 5 C. SPECIOSÍSSIMUS. Stock 3- or 4-angled, erect, 4f; angles winged, undulate; fis. large (4' long), with many red or crimson petals and white stamens, diurnal. Common.
- 6 C. SENILIS. Old-Man C. Stk. erect, oblong, with tufts of long, white, hair-like bristles.

5. MELOCÁCTUS COMMÙNIS. Stock very succulent, roundish ovate, 1f, 12-18-ribbed, surmounted by a sort of spadix, consisting mostly of dense wool, in which at the top the small red flowers are imbedded. W. Indies.

ORDER LXI. FICOIDEÆ. MESEMBRYANTHS.

Plants fleshy, of forms variously singular, with entire, mostly opposite leaves, and solitary, regular flowers, remarkable for their profusion and duration. Calyx lobes 4 or 5. Petals ∞ -5, or rarely 0. Stamens ∞ , distinct, perigynous. Ovary more or less adherent. Stigmas 2- ∞ . Capsules 1- ∞ -celled, ∞ -seeded. Embryo curved.

1. MESEMBRYANTHEMUM, L. ICE PLANT. Calyx lobes 5. Pet. linear, inserted with the filiform stamens on the calyx tube. 24 b Air bubbles beneath the epidermis appear like dew or frost.

1 M. CRYSTALLÌNUM. Procumbent, fleshy; lvs.large, ovate, acute, wavy at the margin, 3-veined beneath. 24 Greece. Stem 1f. Flowers white, all summer. Not hardy.

2 M. GRANDIFLÒRUM. Procumb.; lvs. cord. ovate; cal. 4-cleft, 2-horned; pet. pink. Afr.

2. SESUVIUM, L. SEA PURSLANE. Sep. 5, united at base, colored inside. Sta. 5-50, inserted on the calyx tube. Ov. free, 3-5-celled. Sty. 3--5. Pyxis opening transversely by a lid. 24 Prostrate sea-side herbs.

S. Portulacustrum Tourn. Lvs. linear-spatulate; fis. on short peduncles; sta. ∞ . Sandy coasts, N. C. to Fla. 1f+. Plant very smooth and fleshy. Fls. axil., roseate. Jl.+.

ORDER LXIII, UMBELLIFERÆ. UMBELWORTS.

Herbs with hollow, striate stems, sheathing petioles, and flowers in un-

bels. Calyx adherent to the ovary. Petals 5, usually inflected at the point Stamens 5. Ovaries 2-carpelled, surmounted by the fleshy disk which bears the petals and stamens. Styles 2, distinct, or united at their thickened bases. Fruit a cremocarp (§151), consisting of 2 coherent achenia called mericarps, which separate along the middle space, which is called the commissure.

Carpophore, the slender, simple, or forked axis attached to and supporting the mort carps at top, enclosed between them at the commissure.

Ribs, 5 ridges traversing each mericarp lengthwise, and often 4 intermediate or secondary ones, some, all, or none of them winged.

Vittæ, little tubular receptacles of colored volatile oil imbedded in the substance of the pericarp, just beneath the intervals of the ribs, and also sometimes in the face of the commissure.

Embryo in the base of abundant, horny albumen.

Figs. 42, 177, 235, 238, 303, 334-5, 360, 442-3.

A large and well-defined Order. As the flowers in all are nearly alike, the genera are best distinguished by characters taken from the fruit—the number and form of the riba, the presence or absence of vittæ, the form of the albumen at the commissure, &c. These parts, therefore, minute as they are, will require the special attention of the student.

- 3 E. prostràtum Baldw. Sts. prostrate, filiform, rooting; lvs. of two forms at the same node, small, some ovate, some 3-parted with lance-linear segm.; invol. scales linear, longer than the small oblong heads; fis. blue. 24 Swamps, Ga. Fla. 6-12′. Jn.+ β. follosum. Bracts of the invol. leafy, twice longer than the heads. Fla. La.
- 4 E. aromáticum Baldw. Sts. assurgent; 'vs. short (1'), pinnate, with cuspidate segm., the 3 terminal largest; hds. globous (6--8'); invol. scales 5. Dry. Fla. 9--18'.
- 5 E. Mettaùeri. Erect, tall; lvs. linear-terete, consisting chiefly of the fistulous, jointed midvein, barely winged and toothed; bracts 8-10, leafy. Wet. Fla. 4-6f.
- 6 E. Virgintànum Lam. Erect; lvs. lance-oblong to linear, flat, the lower long-stalked upper uncinate-serrate; bracts longer than the roundish head. 24 Swamps.
 2-4f. flds. in umbel-like cymes, numerous, 5-6". Varies with lvs. all linear. Jl. Azg.
- 7 E. virgàtum Lam. Erect; lvs. oval or oblong, thin, petiolate, dentate, the upper sessile; bracts 6-8, longer than the depressed, cymous heads. 24 Wet, S. 2-4f.

5. HERACLEUM, L. Cow PARSNIP. Calyx 5-toothed. Pet. often radiant in the exterior flowers, and apparently deeply 2-cleft. Fruit compressed, flat, with a broad, flat margin, and 3 obtuse, dorsal ribs to each carpel; intervals with single vittæ. Seeds flat. 24 Stout, with large umbels. Involuce deciduous. Involucels many-leaved.

H. lanàtum L. Villous; lvs. ternate, petiolate, tomentous beneath; lfts. petioled, round-cordate, lobed; fr. orbicular. Can. to N. Car. and W. 4f. Lvs. very large. June.

6. POLYTÆNIA, DC. Calyx 5-toothed. Fruit oval, glabrous, compressed on the back, with a thickened, corky margin. Commissure with 4 to 6 vittæ. Seeds plano-convex. 24 A smooth herb, with bipinnatelydivided leaves. Involuce 0. Involucel of setaceous bracts.

P. Nuttállii DC.—Prairies, W. 2—3f. Smoothish. Lower leaves long-stalked. Um bels 2'. Fruit 3". May.

7. PEUCEDÁNUM, L. Fruit ovate, oval, or roundish, compressed on the back, the margin acute or broadly winged, carpels plane or convex, intervals with single vittæ. Seeds plano-convex. 24 (2) Smooth, rarely pubescent. Lvs. pinnately or ternately divided or decompound. Umbels compound, with or without involucra. Fls. yellow or white. Fig. 238.

§ EUPEUCEDANUM. Cal. 5-toothed. Lvs. pinnatisect. Fr. narrowly winged. Yellow...1, 2
 § ARCHÉMORA. Cal. 5-toothed. Lfts. 1—11, narrow. Fr. narrowly winged. Fls. white. 3-5
 § PASTINÀCA. Calyx teeth 0. Lfts. oval. Fruit broadly winged. Flowers yellow....No. 6

- 1 P. foeniculàceum N. and other species with radical, pinnatisect leaves grow in Kansas, and W. (Rev. J. H. Carruth.)
- P. GRAVÈOLENS. Dill. Lvs. cauline, tripinnate; seg. capillary; umb. on long stalks; fr. oval, fiat, brown, aromatic, pungent, medicinal. (2) Spain. 2f. (Anethum, C-B.)
- **3 P. rígidum** Cowbane. St. rigid, striate; lvs. pinnate; lfts. 3-11, lance-ovate, sub entire; umb. 2 or 3, spreading, with slender rays; fr. with large purp. vittæ. 2 Swamps, N. Y., W. and S. 2-5f. August.

 β . ambigua, has the leaflets linear and entire.

- 4 P. ternàtum. Stem slender, smooth; lvs. on long petioles, ternate; segm. very long, linear, entire, 3-veined; invol. 0-3-leaved; involucel 4-6-leaved. Swamps, in pine-barrens, S. 2-3f. Sept.-Nov. (Neurophyllum longifolium, C-B.)
- 5 P. teretifolium. Tall, slender, smooth; lvs. reduced to fistular, jointed phyllodia, terete, tapering, 6-16' long; fr. 3"; invol. 5-6-leaved. 2 Wet, S. (Tiedmannia, C-B.)

8 P. sativum. Root fusiform; stem furrowed: lvs. pinnate, downy beneath; lfts. oblong, incisely toothed, the terminal 3-lobed: umbels large; involucra nearly 0.
(2) Fields, gardens. 3-4f. July-Sept. ‡ Wild and Common Parsnip.

8. ANGÉLICA, L. Calyx teeth obsolete. Fruit dorsally compressed, doubly winged. Carpels 5-ribbed, the 3 dorsal ribs filiform, the 2 marginai winged, intervals with single vittæ. Carpophore 2-parted. Seed semiterete. 24 Leaves bi- or tri-ternate, sessile. Umbels terminal. Invol. 0 or few-leaved. Involucels many-leaved.

A. Curtísii Buckley. Lvs. biternate or with 3 quinate divisions; lfts. thin, ovate on lance-ovate, acuminate, incisely toothed; fr. broadly winged. Mts. Pa., & S. Aug.

9. ARCHANGÉLICA, Hoffm. ANGELICA. Calyx teeth short. Fr. dorsally compressed, with 3 carinate, thick ribs upon each carpel, and 2 marginal ones dilated into membranous wings. Seed loose in the ripe carpel, covered with vittæ. 24 Petioles usually large, inflated and 3-parted. Umbels perfect. Involucels many-leaved. Fls. greenish white. Fig. 177.

- * Involucels less than half the length of the pedicels. Fruit 3" long, winged No. 1

- 1 A. atropurpùrea Hoffm. St. dark purple, furrowed; petioles 3-parted, the divisions quinate; lfts. incisely toothed, terminal lft. rhomboidal, sessile, the others de current; involucels setaceous. Meadows, E. and W. 4-6f. Stout, aromatic. June.
- 2 A. peregrina N. St. striate; If. divisions ternate, segm. incisely serrate; involucel of many bracts, as long as the pedicels; fruit ribs corky, thick. Sea-coast, Mass. to Labrador. 2-3f. July. (A. Gmelini DC.)
- 3 A. hirsùta T. & G. Stem striate, the summit with the umbels tomentous-hirsute: lvs. bipinnately divided, the divisions quinate; segm. oblong, acutish, the upper pair connate, but not decurrent at base. Dry woods, N.Y. to Car. 2-5f. July.
- 4 A. dentàta Chapm. Slender, smooth; lvs. 1-2-ternate; segm. lance-ovate, incised; umbels few-rayed; involucel 5-6-leaved, as long as the pedicels. Ga. Fla. 2-3f. Jl.+

10. SCANDIX, L. VENUS'S COME. Cal. limb obsolete. Fr. laterally compressed or nearly terete, attenuated into a beak which is longer than the seed. Carpels with 5 obtuse, equal ribs. Vittæ 0, or scarcely any. (1) or (2) Lvs. finely dissected. Invol. 0. Involucel 5-7-leaved. Flowers white. S. apiculàta Willd. Petioles and peduncles slender; .vs. finely dissected into subu-

late segments; umbels 3-rayed; fruit with beak and forked style 9". Ga. 1f. § Eur.

11. OSMORHIZA, Raf. SWEET CICELY. Calyx margin obsolete. Sty. conical at base. Fr. linear, very long, clavate, attenuate at base. Carpels with 5 equal, acute, bristly ribs. Vittæ 0 Commissure with a deep, bristly channel. 24 Leaves biternately divided, with the umbels opposite. Involucels 4–7-leaved. Flowers white. May, June. Figs. 42, 442–3.

- 1 0. longístylis DC. Sty. filiform, nearly as long as the ovary; fr. clavate; rt. spicy and sweet-flavored; st. and lvs. smoothish. Rich woods, Can. to Va. 1-3f. Fruit 1'.
- 2 **().** brevistylis DC. Sty. conical, scarcely as long as the breadth of the ovary; fr. somewhat tapering at the summit; root nauseous; plant hairy. Woods. 1-3f.

12. CHÆROPHÝLLUM, L. CHERVIL. Calyx limb obsolete. Fruit laterally compressed, linear or oblong, contracted above but scarcely beaked. Carpels with 5 obtuse, equal ribs, intervals with single vittae Commissure deeply sulcate. (1) (2) Leaves 2-3-pinnately divided. Segm incisely cleft or toothed. Invol. 0, or few-leaved. Involucel manyleaved. Flowers mostly white. Umb. mostly sessile.

- 1 C. procúmbens Lam. Slender, spreading, smoothish; lf. segm. trifid and pinnatifid, lobes oblong, obtuse; umb. few-rayed, sessile or pedunculate; fr. acute, ribe narrower than the intervals. Damp woods, Ill. to Penn., and S. 1-2f. Apri., May
- 2 C. Tainturièri Hook. Ascending or erect, some hairy; lf. segm. crowded, again pinnatifid or bipinnatifid, ultimate segm. acute; fr. short-beaked, ribs broader than the intervals. Ga. to Fla. and La. 10-20'. Much branched. Fruit 4". March, Apr
- 3 C. SATÌVUM. Garden C. Lf. segm. ovate, cut or cleft; fr. smooth, shining. Eur. 18'.

13. CRYPTOTÈNIA, DC. HONEWORT. Margin of the calyx obselete. Fruit elliptical, with slender styles. Carpels with 5 obtuse ribs. Carpophore free, 2-parted. Vittæ very narrow, twice as many as the ribs. 24 Leaves 3-parted, lobed and doubly-serrate. Umbels compound, with very unequal rays. Invol. 0. Involucels few-leaved. Flowers white.

C. Canadénsis DC.—Common in moist woods. Plant smooth, 2-3f, with large lfts. (3' by 2'). Umb. panicled, slender, involucels minute. Fr. 2" long, styles 1". Jn.-Sept.

14. BUPLEURUM, Tourn. THOROUGH-WAX. Calyx teeth 0. Fruit laterally compressed. Carpels 5-ribbed, lateral ones marginal. Seed teretely convex, flattish on the face.—Herbaceous or shrubby. Lvs. (or phyllodia) entire. Involucra various. Flowers yellow.

B. rotundifòlium L. Lvs. (phyllodia) roundish-ovate, entire, perfoliate; invol. 0, involucels of 5, ovate, mucronate bracts. (1) Fields, N. Y. to Va. Rare. § Europe.

15. CARUM, L. CARAWAY. ALEXANDERS. Cal. teeth minute or 0. Disk broad-conic. Fr. ovate or oblong, laterally compressed. Carpels 5-angled, with 5—10 prominent, filiform, equal ribs, the two lateral bordering the commissure. Intervals with a single, rarely 2, vittæ. Seeds subterete.—Leaves ternate to decompound. Involucra various.

§ ZIZIA. Lvs. simple, or 1-2-ternate, ovate. Cal. teeth minute. Pet. yellow...Nos. 1, 2 § CARUM. Lvs. pinnately or ternately dissected. Cal. teeth 0. Pet. white...Nos. 3, 4

- 1 C. aùreum. Golden Alexanders. Lvs. 1-2-ternate; lfts. thin, lance-oblong, sharply serrate; umb. rays 1'; invol. 0; involucels 3-lvd.; fr. oval, the ribs acute or winged. 24 Meadows and banks. 1-2f. Smooth throughout. Fls. deep yel. Jn. (Thaspium, N.)
- 2 C. cordàtum. Root lvs. simple, cordate, crenate, on long stalks; st. lvs. becoming 3-parted, ternate, or quinate, serrate: fr. roundish-oval, with acute or winged rips; fls. yellow, varying to brown ish. Rocky shades. 2-3f. May, June. (Thaspium, N.)
- 3 C. PETROSELÌNUM B. & H. Parsley. Leaf segm. numerous, wedge-ovate to lance-oblong, acute, incised; invol. lvs. few or 0; involucels subulate. 24 Greece. 2-3f. Jn.
- 4 C. CARVI. Caraway. Lf. segm. numerous, linear to filiform; invol. 1-lvd. or 0; involucels 0. 24 Europe. 2-3f. Lvs. large. Fls. white. Fr. oblong, aromatic. June.

16. THASPIUM, Nutt. GOLDEN ALEXANDERS. Calyx margin 5toothed. Fruit ovoid, transversely subterete. Carpels semiterete, with 5 prominent or winged ribs, the lateral margined. Intervals with single vitta. 24 Umbels without an invol. Involucels 3-lvd., lateral. Fls. yellow

- 1 T. barbinòde N. St. pubescent at the podes; lvs. triternate and biternate; lfts. wedge-ovate. cut-serrate: fr. large (3"), elliptical, 6-winged. River banks. St 2-3f, angular and grooved. Rays 2', each 20-flowered. Flowers deep yellow. June.
- 2 T. Wálteri Shutt. Stem rough-puberulent above; lvs. triternate to ternate; lfts. pinnatifid with linear oblong segments; fruit oblong, narrowly 8-10-winged. Barrens, Ky. to E. Tenn. and W. Car. (Zizia pinnatifida Buckley.)

17. PIMPINÉLLA, L. ANISE. ZIZIA. Calyx teeth obsolete. Fruit ovate, oval, or roundish, laterally compressed and contracted at the commissure, ribs very slender, with many vittæ. Styles slender. Seeds teretely 5-angled. 24 Leaves decompound. Involucra 0, or scarcely any.

- P. integerrima (B. & H.) Smooth, glaucous; lvs. bi- or tri-ternate, with elliptic-oblong, entire, acute lfts. (1'); umb. (yellow) with 13 very slender (2-3') rays; fr. oval,
 with 3 vittæ in each interval. Rocky woods. 1-2f. May-July. (Zizia, DC.)
- 2 P. ANISUM. Anise. Smooth, shining; root lvs wifid, cauline multifid, with narrowly-linear segments; umbels large, many-rayed Egypt. Richly aromatic.

18. FCENÍCULUM, Adans. FENNEL. Fruit elliptic-oblong, subterete. Carpels each with 5 carinate ribs, intervals with single vittæ Involucra 0. Leaves biternately dissected. Flowers yellow.

 F. VULGÀRE. Leaf segm. linear-subulate, elongated, or filiform; umb. of 15-30 unequal rays. (2) Europe. 3-5f. The turgid seeds are warmly aromatic. (Anethum, C-B.)

19. DAUCUS, Tourn. CARROT. Calyx limb 5-toothed. Pet. the 2 outer often largest and deeply 2-cleft. Fr. oblong. Carpels with 5 primary, bristly ribs, and 4 secondary, the latter more prominent, winged, and divided each into a single row of prickles, and having single vittæ beneath. (2) Invol. pinnatifid. Involucels of entire or 3-cleft bracts. Fls. white, the central one abortive.

- 1 D. Caròta L. Stem hispid; lvs. tripinnatifid, the segm. linear, cuspidate-pointed; umbels dense, concave; invol. pinnate. Fields, waysides: common. 3f. § Eur.—In cultivation the root becomes conical, fleshy, red to yellow, and nutritious. Jl.—Sept.
- 2 D. pusillus Mx. Slender, retrorsely hispid; lvs. bipinnatifid, divisions deeply lobed with linear-oblong, merely acute segments; invol. bipinnatifid. Dry soils, S. Car. to Fla., and W. 1-3f. June.

20. CONIUM, L. POISON HEMLOCK. Calyx margin obsolete. Fruit ovate, laterally compressed. Carpels with 5 acute, equal, undulate-crenulate ribs, lateral ones marginal. Vittæ 0. Seeds with a deep, narrow groove on the face. (2) Poisonous. Leaves decompound. Involucra and involuculs 3–5-leaved, the latter unilateral. Flowers white.

C. maculàtum L. St. spotted; lvs. tripinnate; lfts. lanceolate, pinnatifid; involu cel short; fruit smooth. Waste grounds, waysides. 4f. Much branched. An illscented narcotic. July. § Europe.

21. SELINUM, L. Calyx teeth obsolete. Fr. ovoid to oblong, terete. Carpels slightly compressed on the back, semiterete, with 5 winged ribs, the lateral wings broadest, intervals with 1 (rarely 2) vittæ. 24 Glabrous, tall, branched. Lvs. pinnately decompound. Un b. rays ∞ . Invol. bracts 0—few. Involucels ∞ -bracted. Fig. 303.

S. Canadénse B. & H. Petioles large, sheath-like, inflated ; lf. segm. linear-oblong, very acute, or acuminate ; umb. 12-rayed, long-stalked ; bracts lin.-filiform ; fls. white, conspicuous. Wet woods, Me. to Va. and Wis., rare. 3-5f. Aug., Sept. (Conioselinum.)

22. LIGÚSTICUM, L. LOVAGE. Calyx teeth minute. Fruit as in Selinum, except that the intervals are filled with numerous vittæ. 24 Glabrous. Lvs. ternately divided. Involucra few- ∞ -bracted. Fls. white.

- 1 L. Scóticum L. Sea L. Lvs. 2-1-ternate; lfts. rhombic-ovate, cut-dentate, some oblique; invol. bracts O-linear; fr. oblong. Sea-coast, northward. 2f. Fruit 5". July.
- 2 L. actæfòlium Mx. Angelico. Lvs. triternate, with ovate, dent-serrate leaflets; unbels panicled or triply compound; involucra about 3-bracted; fruit short. Woods, Ms. to Tenn. 3-6f. May-July.

23. ÆTHÙSA, L. FOOL'S PARSLEY. Calyx margin obsolete. Fruit globous-ovate. Carpels with 5 acutely-carinated ribs, lateral ones marginal, broader. Intervals acutely angled, with single vittæ, commissure with 2. ① Poisonous herbs. Leaves ternately or pinnately decompound. Involucera 0. Involucels one-sided, 3-leaved, deflexed. Flowers white.

Æ. Cynàpium L.-Waste grounds, N. Eng. to Penn.: rare. 2f. Stem green. Leaf segm. numerous, wedge-shaped, uniform. Plant ill-scented, dark green. Jl. § Eur.

24. ERIGENIA, Nutt. DAUGHTER-OF-SPRING. Calyx limb cbsolete. Pet. not inflexed, entire. Fr. contracted at the commissure. Carpels 3ribbed, ovate-reniform. 24 Rt. tuberous. Radical leaf triternately decompound. Involucrate lvs. solitary, biternately compound. Involucels of 3-6 entire, linear-spatulate bracts. Figs. 235, 369.

E. bulbòsa Nutt. A small, early-flowering herb, 4-6'. Shady banks, Penn., W. N.Y. and W. Tuber roundish, deep in the ground. Pet. white, anth. brown-purple (hence called *Pepper-and-Salt*). March, April.

25. APIUM, L. CELERY, &c. Calyx teeth obsolete. Pet. not emarginate. Fr. ovate or globular, laterally compressed, often diaymous. Carpels 5-angled, ribs equal, obtuse. Vittæ single in each interval. Carpophore undivided. Seed terete. 1 2 Smooth. Leaves pinnately decompound. Involucra various. (Flowers white.)

- § HELOSCIADIUM. Lvs. simply pinnate. Involucels Co-bracted. Fr. roundish.. Nos. 1-3
 § EUÀPIUM. Lvs. pinnately decompound. Involucels 0. Involuce 1-leaved...Nos. 4-6
- 1 A. lineàre. Stem angular, tall ; lfts. 9-11 (3 above), linear-oblong or linear, tapering to a very acute point, serrate ; umb. pedunculate ; invol. ∞ -bracted ; fr. globulør with very prominent ribs. 24 Wet. 2-4f. July, Aug. (Sium, C-B.)
- 2 A. Carsònii (Durand). Erect, branched; lfts. 3-7, lin. to ovate, serrate to gashed fr. broadly ovate, the ribs filiform, with broad intervals. Wet. Conn. to Penn. Jn., Jl
- **8 A. nodiflòrum.** Stems procumbent; lvs. pinnate; lfts. lance-oblong, equally ser rate; umb. opposite the lvs., subsessile; invol. 0-2-lvd. ① Wet. S. Car. 1-2f. Apr. §
- **1 A. leptophýllum.** Erect or diffuse; lf. segm. linear to filiform; umb. opp. the lvs., sessile; fr. very small (4''), globular, with thick ribs. ① Ga. to La. Jn. (Helosc.)
- 5 A. divaricàtum. Small and slender; lf. segm. filiform or capillary, obtuse; umb. very small, pedunculate. 3-5-rayed; fr. rough with minute scales. (1) Dry sands, S. 2-8'. March, April. (Leptocaulis, N.)
- **B** A. GRAVÈOLENS. Celery. Lvs. on long petioles, segm. broad-cuneate, incised, upper lvs. 3-parted and cat-bobed; invol. 0; fr. roundish. (2) Eur. Well known as a salad.

26. EULOPHUS, N. Calyx limb 5-toothed, deciduous. Fr. contracted laterally, somewhat double. Carpels surrounded with large vittæ, ribs obsolete. Seed channelled on the inner face. 24 Smooth, branched. Lvs. ternately decompound. Invol. nearly 0. Involucel setaceous. Fls. white.

E. Americàna N. Lvs. mostly radical; segm. lance-lin., 1' long, acute, upper ivs. in 3 long, entire seg.; umb. long-stalked, 3-10-rayed. Prairies, O. to Ill. and Tenn. 3-44

27. CICÙTA, L. WATER HEMLOCK. Calyx margin of 5 broad segments. Fr. subglobous, didymous. Carpels with 5 flattish, equal ribs, 2 of them marginal, intervals filled with single vittæ. Seeds terete. x 2 Poisonous. Leaves compound. Stems hollow. Umbels perfect. Invol. few-leaved or 0. Involucels many-leaved. Flowers white.

- 1 C. maculàta L. St. streaked with purple; lower lvs. triternate and quinate, upper biternate; segments lanceolate, mucronately serrate, the veins running to the notches. Wet meadows. 3-6f. Smooth, glaucous. Leaflets 1-3'. Fruit 14", 10-ribbed. Umbels 3'. July, August.
- 2 C. bulbífera L. Lvs. biternate; lfts. linear, with remote, divergent teeth; lvs. of the branches 3-cleft or simple, subopposite, bearing bulblets in their axils. Swamps. Can. to Penn. and W. 3-4f. Leaflets 2-4' by 1-4". Umbels few. August.

28. SIUM, L. WATER PARSNIP. Calyx teeth acute. Pet. obcordate, with an inflexed point. Fr. nearly oval, laterally compressed. Carpels with 5 obtusish ribs, and several vittæ in each interval. Carpophore undivided. 21 Leaves pinnate, dentate. Umbels perfect, with many-leaved involucra. Flowers white.—Stout herbs.

S. latifolium L. St. angular, sulcate; lfts. oblong-lanceolate, acutely and coarsely serrate, barely acute; cal. teeth conspicuous. Swamps, Ind. (Green Co. !) and Can. 3-4f. Lfts. 4-6' by 1-2', 2-10-toothed. Umb. with 20-30 long (3-4') rays. Jl., Aug

29. DISCOPLEURA, DC. BISHOP-WEED. Cal. teeth subulate, persistent. Fr. ovate, often didymous. Carp. 5-ribbed, the 3 dorsal ribs filiform, subacute, prominent, the 2 lateral united with a thick, accessory margin; intervals with single vittæ. Sds. subterete. ① Lvs. capillaceous dissected. Umbels compound. Bracts of the invol. cleft. Fls. white.

- 1 D. capillàcea DC. Erect or procumbent; umbels 3-10-rayed; lfts. of the invol. 3-5, mostly 3-cleft; fr. ovate. Swamps near the coast, Mass. to Ga. 1-2f. June +.
- 2 D. costàta Hale (1850). Branched, erect; umbels 7-15-rayed; bracts of the invol. 10-12, 2-5-parted; lf.-segm. filiform, numerous, apparently verticillate; fr. with ribs and vittæ strongly contrasted. Swamps, Ogeechee R. and W. 1-2f, stout. Oct., Nov
- **3 D. Nuttállii** DC. Erect, tall; umbel 15-20-rayed; invol. few-bracted, bracts en tire; fr. broadly cordate-ovate. Wet prairies, Ky. and S. Slender, 2-41.

30. CORIANDRUM, L. CORIANDER. Cal. with 5 conspicuous teeth. Outer petals radiant, inflex-bifid. Fr. globous. Carp. cohering, with the 5 depressed, primary ribs, and 4 secondary more prominent ones, seeds concave on the face. (1) Smooth. Invol. 0 or 1-leaved. Involucels 3 leaved, unilateral.

C. sativum L. Lvs. bipinnate, lower ones with broad-cuncate lfts., upper with her earlfts.; carp. hemispherical. Europe. 2f. Cultivated for its spicy frait.

ORDER LXIV. ARALIACEÆ. ARALIADS.

Trees, shrubs or herbs closely allied to the Umbelworts in the leaves, inflorescence and flowers, but the styles and cells of the OVARY are usually more than 2 (3 to 5), cells 1-ovuled. Fruit baccate or dry, 3-5-celled, with 1 albuminous seed in each cell, and the petals not inflected. Fig. 242.

\$ Styles and carpels 5. Umbels 00. Flowers perfect. Leaves alternate, pinnate.....ARALIA. 1
\$ Styles and carpels 2-3. Umbel 1. Flowers directious. Leaves verticillate, palmate.....GINSENG. 2
\$ Styles 5, united into 1. Umb. 00. Flowers polygamous. Lvs. simple. Climbing......HEDERA. 3

1. ARALIA, L. WILD SARSAPARILLA. Cal. tube adherent, limb 5toothed. Pet. 5, ovate, spreading. Stam. 5, epigynous. Styles 5, recurved above, persistent. Fr. a berry, 5-celled, 5-seeded, and 5-angled when dry. 45 Lvs. pinnately compound, alternate. Umbels several or many, white or greenish, in summer.

* Plants low (1-2f), with few (3-7) umbels corymbously arranged.....Nos. 1, 2

- * Plants tall (3-12f), with numerous umbels in racemes......Nos. 3, 4
- 1 A. nudicaùlis L. Nearly stemless, with 1 ternate-pinnate leaf longer than the scape, which bears 3 umbels at top; plant smooth. 24 Rich, Rocky wds. E. & W. 1f.
- 2 A. híspida L. Wild Elder. Stem shrubby and hispid-prickly at base, herbaceous above; lvs. 1-2-pinnate; lfts. ovate, cut-serrate, often lobed; umbels about 5, long-stalked, forming a terminal corymb. 24 Dry fields. N. Eng. to Va. 1-2f. Fr. blue-blk
- 3 A. racemòsa L. Pettymorrel. Herbaceous, smooth, branched; lvs. large, bi-ter nate-pinnate, lfts. ovate, serrate; umb. small, ∞, in a panicle of racemes. 24 Rocky woods. 3—5f. Root aromatic, an ingredient in small-beer.
- 4 A. spinòsa L. Angelica-tree. Hercules' Club. Shrub prickly; lvs. bi- and tri-pinnate, lfts. thick, ovate, cusp-pointed, glancous beneath. Damp woods, O. to Fla. 8-12-20f. Trunk usually simple, bearing all the lvs. and panicles at the top.

2. GINSENG. (Panax, L. *in part.*) Directious-polygamous. Cal. tube adherent, limb obsolete. Pet. 5, ovate, obtuse. Stam. 5, epigynous. Sty. 2 or 3, distinct, erect. Fruit baccate, 2- or 3-seeded. & Styles obsolete. 24 Root tuberous. Stem simple, bearing 3 leaves in a whorl and one umbel. Flowers white. Fig. 242.

- 1 G. trifòlium. Ground-nut. Root a round tuber; stem low (3-6'); lvs. palmately 3-5-foliate, lfts. lance-oblong, serrate, subsessile; peduncle longer than the petioles; sty. 3; berries 3-lobed, greenish-yellow. Low woods: com. May. Root farinaceous.
- 2 G. quinquefòlium. True Ginseng. Root fusiform, fleshy; st. taller (1f+); lva palmately 5-foliate, lfts. ample, obovate, petiolulate, acuminate. serrate; peduncle shorter than the petioles; sty. 2; berries 2-seeded, bright red. Rocky woods. Jn.-Aug.

3. HÉDERA. L. EUROPEAN IVY. Calyx 5-toothed. Pet. 5, valvate. Sta. 5. Sty. united into 1. Fr. ovoid, baccate, 5-seeded. 5 Lvs. coriaceous, simple. Flowers green.

II. HELIX. Stems woody, slender, climbing high by radicating fibres; lvs. dark green, with whitish veins, roundish ovate, 5-angled; umbels corymbed; fr. black. Europe.

ORDER LXV. CORNACE Æ. CORNELS.

Trees and shrubs, seldom herbs, without stipules. Leaves opposite or rarely alternate, simple, with pinnate veinlets. Calyx adherent to the

ovary, the limb minute, toothed or lobed. *Petals* distinct, alternate with the calyx teeth, valvate in the bud, often 0. *Stamens* same number as petals, inserted on the margin of the epigynous disk (in the \notin flowers.) *Ovary* 1. or 2-celled. *Fruit* a baccate drupe, crowned with the calyx. Fig. 43C.

1. CORNUS, L. DOGWOOD. Flowers perfect. Calyx limb of 4 minute segments. Pet. 4, oblong, sessile. Sta. 4. Style somewhat club-shaped. Drupe baccate, with a 2- or 3-celled nut. 552 Lvs. entire. Flowers in cymes, often involucrate. Floral envelopes valvate in æstivaticn. Bark bitter, tonic. Fig. 430.

- 1 C. Canadénsis L. Low Cornel. Herbaceous, low; upper lvs. whorled. veiny, on short petioles; st. simple; invol. lvs. ovate. 24 Damp woods. N. 4-8'. May, June.
- 2 C. flórida L. Flowering Dogwood. Arboreous; lvs. opposite, ovate. acuminate, entire; fls. small, in a close, cymons umbel or head, surrounded by a very large, 4-lvd. obcordate involuce. Tree in woods, 20-30f. Invol. showy. May. Bark tonic.
- **3 C. alternifòlia** L. Lvs. alternate, oval, acute, hoary beneath ; branches alternate, warty ; drupes purple, globous. Shrub or tree, S-20f, with a flattened top. June.
- 4 C. sericea L. Branches spreading, purplish, branchlets woolly; lvs. ovate or elliptical, acuminate, silky-pubescent beneath; cymes depressed, woolly; cal. teeth lanceolate; drupes light blue. Shrub 5—9f. Flowers yellowish white, crowded. June.
- 5 C. asperitòlia Mx. Branches erect, brownish, branchlets rough-downy; lvs. lanceoval, scabrons above, downy beneath; cymes hispid; sep. minute. W. and S. May+.
- 6 C. stricta Lam. Branches erect, brown, smooth; lvs. ovate to lanceolate, smooth and green both sides, long-acuminate; cymes loose, smooth; sepals subulate, half as long as the ovary; anth. and fr. pale blue. Swamps, Va. to Fla. 8-12f. April.
- 7 C. circinàta L. Branches warty; lvs. round-oval, white-tomentous beneath; cymes spreading, depressed; drupes light blue. Shrub 5-10f, E. and W. Lvs. large. June.
- 8 C. paniculàta L'Her. Branches erect, grayish, smooth; leaves ovate-lanceolate, acuminate, hoary beneath; cymes and drupes small, paniculate, white. 6f. May, Jn.
- 9 C. stolonífera Mx. *Red Osier*. St. often stoloniferous; branches smooth; shoots virgate, reddish-purple; lvs. broad-ovate, acute, pubescent, hoary beneath; cymes naked, flat; berries bluish-white. Small tree, E. and W. 8-10f. May, June.

2. NYSSA, L. TUPELO. GUM-TREE. Fls. directious or polygamous. σ Calyx tube very short, limb truncate. Pet. 5, oblong. Sta. mostly 10 inserted in the bottom of the calyx. Ov. 0. \circ Calyx tube oblong, adherent to the 1-celled ovary, limb as in σ . Pet. 2—5, oblong, often 0. Sty large, stigmatic on one side. Drupe oval, 1-seeded. \mathfrak{H} with small green ds. clustered on axillary peduncles, the sterile more numerous. Apr. June.

- 1 N. multifiòra Wang. Lvs. oblong-obovate, acutish or obtuse at each end, antire; the petiole, midvein, and margin villous; fertile peduncles 3-(2-5)-flowered; sty. revolute; nut short, oborate, striate, obtuse. Tree 30-70f. Drnpe blue-black. †
- 2 N. uniflora Walt. Swamp Tupelo. Lvs. green, oblong-ovate or ovate, long-petiolate; fertile fls. solitary, 3-bracted, on slender peduncles; sty. nearly straight; sterilc fls. 5-10; drupe oblong, as large as a plum. Tree 50-S0f, in swamps, S.
- 8 N. capitàta Walt. Ogeechee Lime. Leaves oval or oblong, short-petiolate, entire,

whitened beneath, obtuse at apex, acute at base; fertile fls. solitary, on short pedun cles, downy, 3-4-bracted, with 5 petals and 10 stamens; sterile fls. 20-30 in each dense globular head; fruit large, oblong. River banks, S. 20-30f.

COHORT 2, GAMOPETALÆ,

OR MONOPETALOUS EXOGENS.—Plants having a double peranth, consisting of both calyx and corolla, the latter composed of petals partially or wholly united. (Cohort 3, page 278.)

ORDER LXVI. CAPRIFOLIACEÆ. HONEYSUCKLES.

Shrubs, rarely herbs, often twining with opposite leaves; no stipules. Flowers clustered and often fragrant, 5-parted and often irregular. Corolla monopetalous, tubular or rotate. Stamens inserted on the corolla tube, rarely one less than the lobes. Ovary adherent to the calyx. Style 1, stigmas 3 to 5. Fruit a berry, drupe, or capsule. Embryo small, in fleshy albumen. Figs. 67, 383, 390, 466, 471, 477.

1. LINN ÆA, Gron. TWIN-FLOWER. Calyx tube ovate, limb 5-parted, deciduous. Bractlets at base 2. Cor. campanulate, limb subequal, 5-lobed. Sta. 4, two longer than the others. Berry dry, 3-celled, indehiscent, 1-seeded (two cells abortive). \mid_{\sim} Lvs. roundish, petiolate. Ped. filiform, erect, 2-flowered. Inhabits the N. temperate zone of both hemispheres.

L. boreàlis Gron.-Moist rocky shades, N. J. to Oreg. and N. Filiform stems 3-6f. Ped. 3, bearing at top a pair of nodding, bell-shaped, roseate, fragrant flowers. June.

2. TRIOSTEUM, L. FEVERWORT. Calyx tube ovoid, limb 5-parted, segm. linear, nearly as long as the corolla. Cor. tubular, gibbous at base, limb 5-lobed, subequal. Sta. 5, included. Stig. capitate, lobed. Fr. drupaceous, crowned with the calyx, 3-celled, containing 3 ribbed, bony seeds. 24 Coarse, hairy, with large, connate leaves and axillary flowers.

 T. perfoliàtum L. Hirsute; lvs. oval, acuminate; fls. verticillate or clustered sessile, brownish-purple. Rocky woods. 2-4f. Fruit orange-colored, 6". June.
 T. angustifòlium L. Hispid; lvs. lanceolate, acuminate, scarce.y connate; fls.

2 T. angustifolium L. Hispid; lvs. lanceolate, acuminate, scarce.y connate; fls. mostly solitary, short-stalked, yellowish or straw-colored. L. I., W. & S. 2-3f. May.

3. SYMPHORICARPUS, Dill. SNOWBERRY. Calyx tube globous, lumb 4-5-toothed. Cor. funnel- or bell-shaped, the limb in 4-5 equal lobes Sta. 4 or 5. Stig. capitate. Berry globous, 4-celled, 2-seeded (two opposite cells abortive). Leaves oval, entire. Flowers small, roseate.

- 1 S. racemosus Mx. Fls. in terminal, loose, interrupted, often leafy rac.; cor. campanulate, densely bearded within; sty. and sta. included; berries snow-white. W. Vt. to Wis. and Pa., on rocky banks. 2-3f. A smooth, handsome shrub. July-Aug. †
- 2 S. occidentàlis R. Br. Wolfberry. Lvs. ovate, obtusish; spikes dense, axillary and terminal, nodding; cor. densely bearded inside; sta. and bearded style exserted: berries white. Woods, Mich. Wis. and N. 2-4f July.
- **3 S. vulgàris** Mx. Lvs. roundish-oval; spikes axillary, subsessile, capitate, and crowded; cor. lobes nearly glabrous; sta. and bearded style included; berries dark red. River banks, Penn. to Iowa, and S. 2–3f. Flowers greenish-red. July.

4. LONICE'RA, L. HONEYSUCKLE. WOODBINE. Calyx 5-toothed, tube subglobous. Cor. funnel- or bell-form, limb 5-cleft, often labiate. Sta. 5, exserted. Ov. 2–3-celled. Berry few-seeded. Stig. capitate. 5 Lvs. entire, often connate. Fls. fragrant and beautiful. May–Jl. Figs. 67, 390.

- 2 L. oblongifòlia Hook. Lvs. oblong or oval, velvety beneath; cor. limb deeply bilabiate; ped. long, filiform, erect; berries connate or united into one, globous, purple. Swamps, N. Y., W. and N. 2-3f. Purple-yellow. †
- 3 L. coerùlea L. Lvs. oval-oblong, ciliate, obtuse, villous both sides, at length smoothish; ped. short, reflexed in fruit; bracts longer than the ovaries; cor. lobes short, subequal; berries connate, deep blue. Rocky woods, Ms. N. Y. and N. 2-3f.
- 4 L. TARTÁRICA. Tartarian Honeysuckle. Much branched; lvs. ovate, cordate, polish ed; cor. segm. oblong, obtuse, purple-white. Russia. 4-10f.
- 5 L. JAPÓNICA. Chinese Honeysuckle. Sts. soft-pubescent; lvs. ovate and oblong; ped axillary, 2-bracted and 2-flowered; flowers orange, &c. China. 15f.
- 6 L. PERICLÝMENUM TOURN. Woodbine. Lvs. deciduous, elliptical. acute, on short petioles; fls. in dense, terminal heads, red, yellow. Europe. 15f.
 β. QUERCIFÒLIUM. Leaves sinuate-lobed.
- 7 L. sempérvirens Ait. Trumpet Honeysuckle. Lvs. oblong, evergreen; flowers in nearly naked spikes of distant whorls; cor trumpet-shaped nearly regular. ventri cons above. Moist groves, N.Y., W. and S. 15f. May-Sept. †
- 8 L. flava Sims. Yellow Honeysuckle. Lvs. ovate, glaucous both sides; spikes terminal, of about 2 close whorls; cor. smooth, slender, bright yellow; stam exserted.
 N. Y., W. and S. Shrub scarcely twining. Corolla 15". †
- 9 L. grata Ait. Evergreen Honeysuckle. Lvs. evergreen, obovato, smooth, glancons beneath; fls. in sessile, terminal, and axillary whorls; cor. ringent, long, slender, reddish without, yellowish within. Damp woods, M. and W. States. 12f.
- 10 L. CAPRIFÒLIUM. Italian Honeysuckle. Lvs. deciduous; fls. in a single, terminal verticil; lips of corolla revolute, red, yellow, white. Europe.
- 11 L. parvifiòra Lam. Lvs. smooth, shining above, glaucous beneath, oblong, all sessile or connate, the upper pair perfoliate; fls. in heads of 1 or more approximate whorls; cor. glabrous, short, yellow-red: fil. bearded. Rocky woods. 8-10f.

8. Douglasii. Lvs. large, pubes. beneath, lower petiolate ; fls. pubes. O., and W

12 L. hirsùta Eaton. Lys, hairy above, soft-villous beneath, yeiny, broad-oval, so ruptly acuminate; fls. in verticillate spikes, greenish-yellow; fil. bearded. Woods, N. Eng. to Mich. and N. 15-20f.

5. DIERVILLA, Tourn. BUSH HONEYSUCKLE. Calyx tube oblong, limb of 5 linear segm. Cor. twice as long, funnel-shaped, limb 5-cleft and nearly regular. Sta. 5. Capsular fr. 2-celled, 2-valved, crowned with the cal., many-seeded. 5 Lvs. acuminate, serrate, deciduous. Ped. axillary. Jn.

- 1 D. trífida Mænch. Lvs. ovate, on distinct petioles; ped. 1-3-flwd.; pod attennate at top beneath the calyx limb. Thickets, Can. to Car. 2f, bushy. Fls. greenish-yellow.
- 2 D. sessilifòlia Buckley. Lvs. lauce-oblong, sessile or subamplexicaul; peduncles 3-5-flwd., crowded in the axils above; caps. short-beaked. High Mts. N. Car. 2-4f.

6. SAMBUCUS, L. ELDER. Calyx small, 5-parted. Cor. 5-cleft, segm. obtuse. Sta. 5. Stig. obtuse, small, sessile. Berry globous, pulpy, 3-seeded. 5 24 Lvs. odd-pinnate or bipinnate. Fls. in cymes, white. Figs. 466, 477.

- 1 S. Canadénsis L. Woody, with large pith; lfts. 7-11, oblong-oval, acuminate, smooth; cymes fastigiate; berries dark-purple. Hedgerows, thickets: common. 9-12f. Cymes broad, white. May-July.
- 2 S. pubens Mx. Woody; lfts. lance-oval, acuminate, 5-7, downy beneath : cymepaniculate; berries scarlet. Copses. Can. to Car. 5-10f. June.-Berries rarely white. Catskill Mountains.

7. VIBURNUM, L. Calyx small, 5-toothed, persistent. Cor. rotate, limb 5-lobed, seg. obtuse. Stam. 5. Stig. 1-3, sessile. Fr. a drupe, 1celled, 1-seeded,—a stony nut covered with soft pulp. 55 Lvs. simple, petioles often minutely stipulate. Fls. white, in compound flat cymes, which are often radiant. Fig. 383.

- 3 G. circæzans Mx. Wild Liquorice. Smoothish; lvs. oval or ovate-lanceolate, ob tuse, 3-veined, ciliate on the margins and veins; ped. divaricate, few-flowered; fr. subsessile, nodding, hispid. 24 Woods: common. 8-12'. July.

B. lanceolatum. Very smooth; leaves lanceolate, 2' long; fruit sessile.

y. montanum. Dwarf; leaves obovate. White Mountains. (Oakes.)

- 4 G. latifòlium Mx. St. erect. smooth; lvs. lanceolate, 3-veined, very acute; ped. axillary (leafy) and terminal, about twice 3-forked; purple flowers and smooth fruit on filiform pedicels. 24 Woody hills, Pa. S. and W. 2f. July.
- 5 G. boreàle L. Erect, smooth; lvs. linear-lanceolate, rather acute, 3-veined, smooth; fis. in a terminal pyramidal panicle. 24 Shaded rocks, N. 1f. July.
- 6 G. hispídulum Mx. Diffuse, minutely hispid; lvs. oval, thickish, mostly acute; ped. axillary, 1-3-flwd.; fr. large, bluish-purple. 24 Sandy. S. 2f. May-Oct.
- 7 G. uniflorum Mx. Glabrous, cæspitous, slender; lvs. linear, acute; ped. axillary, solitary, mostly 1-flwd. bracted; fr. purple. 24 Damp woods, S. 1f. May.
- 8 G. trifforum Mx. Stems weak, rough on the angles; lvs. in 5's and 6's, lance-elliptic, cusp-pointed, 1-veined; ped. mostly 3-flowered. 24 Moist woods. 1-2f. July.
- 9 G. aspréllum Mx. Rough Cleavers. St. diffuse, very branching, rough backward, lvs. in 6's, 5's, or 4's, lanceolate, acuminate, or cuspidate, margin and midvein retrorsely aculeate; ped. short, in 2's or 3's. 24 Thickets, N. 2-5f. July.
- 10 G. trífidum L. Dyer's Cleavers. Goose-grass. St. decumbent, very branching, roughish with retrorse prickles; lvs. in 6's and 4's, linear-oblong or oblanceolate, obtuse, rough-edged; flowers mostly 3-parted. 2 Swamps. 6'. July.—Variable.
 - β. tinctorium. Ped. 3-6-flowered; parts of the flower in 4's. The root dyes red.
 y. latifolium. Lvs. in 4's, oblanceolate; ped. 3-flowered; fls. 4-parted.
- G. concinnum T. & G. St. decumbent, diffuse, scabrous; lvs. in 6's, linear, glabrous, 1-veined, scabrous upward on the margins; ped. filiform, twice or thrice 3 forked, panicled. 24 Dry woods, Pa. Va. Ill. 1f. June.
 G. Aparine L. St. weak, procumbent, retrorsely prickly; lvs. in 8's, 7's, or 6's.
- 12 G. Aparine L. St. weak, procumbent, retrorsely prickly; lvs. in 8's, 7's, or 6's. linear-oblanceolate, mucronate; ped. axillary, 1-2-flwd. ① Wet thickets, N. 3-5f. (n.

2 RUBIA, Tourn. MADDER. Like Galium, but its flowers are most.y 5-merous, and its fruit always smooth and berry-like.

R. TINCTÒRUM L. Stem weak, rough backward; lvs. in 6's, lanceolate, aculeate; fls. brownish-yellow, par.iculate above, with 3-forked peduncles. Europe. 3-5f.

3. MITCHELLA, L. PARTRIDGE BERRY. Flowers 2 on each double ovary. Cal. 4-parted. Cor. funnel-shaped, hairy within. Stam. 4, short,

inserted on the corolla. Stig. 4. Berry composed of the 2 united ovaries, each 4-seeded. L. Smooth. Leaves opposite.

M. repens L.-Woods: com. Sts. creeping, 6-18'. Lvs. roundish-ovate, petiolate, evergreen. Ccr. reddish-white, fragrant. Berry red, seeds (nutlets) bony. Very pretty. Jn.

4. SPERMACOCE, L. Cal. 2-4-parted. Cor. tubular, limb 4-lobed. Stam. 4. Stig. 2-cleft. Fr. dry, 2-celled, crowned with the calyx, separating into 1 open and 1 indehiscent carpel. Sds. 2.—Low herbs. Stip. bristly. Flowers small, in dense, axillary, sessile whorls, or clusters, white.

- 1 S. glabra Mx. Glabrous; lvs. lanceolate; cal. 4-toothed; cor. funnel-form, short, throat hairy; anth. included in the tube; stig. subsessile. 24 River banks, W. 1-2f.
- 2 S. Chapmánii T. & G. Nearly glabrous; lvs. oblong-lanceolate; cor. funnel-form, thrice longer than the calyx; stam. and sty. exserted. Fla. Ga. 10'.
- 3 S. involucràta Ph. Hispidly hairy; lvs. ovate-lanceolate; heads terminal, involucrate; stam. exserted. Carolina (Fraser). 1f. Leaves oblique.

5. DIODIA, L. Carpels 2, rarely 3, separating, each 1-seeded and indehiscent. Fls. otherwise as in Spermacoce.—Herbs. Stip. fringed with bristles. Fls. few or solitary, axillary, sessile, small, white; the tube often slender. Summer.

- 1 D. Virgínica L. Procumbent; lvs. lanceolate, sessile; corolla tube slender, with a broad, spreading limb; sta. exserted. 24 Damp places. 1-2f. Varies with the lvs. ovate-lanceolate; also with the leaves more or less hairy.
- 2 D. teres Walt. Erect or ascending, nearly terete; lvs. lance-linear, rigid, sessile; bristles long; cor. reddish-white, with a wide tube and short limb; sta. scarcely exserted. (1) Sandy fields, N. J. to Ill., and S. 5-18'.

6. HOUSTONIA, L. BLUETS. Cal. 4-toothed or cleft, persistent. Cor. tubular, the 4 lobes spreading. Fil. 4, inserted on the corolla. Style 1. Anth. and stig. dimorphous, that is, in some plants the former exserted and the latter included—in others the style exserted and anthers included. Caps. 2-lobed, the upper half free, cells few- (8-20)-seeded.—Herbs. Stip. connate with the petiole, entire. Fls. solitary or in cymes, white, bluish, &c.

§ Corolla salver-form, glabrous. Peduncles 1-flowered—a terminal.....Nos. 1, 2 —a axillary....Nos. 3, 4 § Corolla funnel-form. Peduncles ∞-flowered, cymous.—b Lvs. lance-ovate...No. 5

- H. coerùlea L. Dwarf Pink. Innocence. Cæspitous; radical lvs. ovate-spatulate, petiolate; sts. erect, numerous, dichotomous; ped. filiform, 1-2-flowered. ② Moist soils. 3-5'. Flowers 5", pale blue, with a yellow centre. May, June. Pretty. β. minor. Branches divaricate; flowers smaller (3-4" wide). South.
- 2 II. serpyllifòlia Mx. Cæspitous; sts. filiform, procumbent; lvs. roundish-ovate,
- petiolate; ciliolate; ped. terminal, very long. 24 Mts. of Car., Tenn. 6—12'. May—Jl.
 8 H. mínima Beck. Glabrous; lvs. linear-spatulate; ped. at first nearly radical, at length axillary, often not longer than the leaves; seeds concave, smooth. (2) Prairies, Ill. to La. 1—3'. Flowers rose-color, 3—4". March—May.
- 4 H. rotundifòlia Mx. Procumbent, creeping, leafy; lvs. roundish-oval, abrupt at base, petiolate; ped. mostly longer than the leaves; caps. emarginate, few-seeded. 24 Sandy, damp places, S. In patches. 2-5'. Flowers white. Mar.-Dec.
- 5 H. purpurea L. Erect; lvs. 3-5-veined, closely sessile; cymes 3-7-flowered, often clustered; calyx segm. lance-linear, longer than the pod. 24 Penn., S. and W. 1f White-purple May-July. Very pretty.

⁻b Lvs. lance-linear..Nos. 6,7

6 H. longifòlia Gaert. Radical leaves oval-elliptic, canline linear or ince-linear, 1 veined; fis. in small, paniculate cymcs; sepals shorter than the pod.

5. tenuifolia. Much branched ; leaves very narrow; ped. filiform.

- v. ciliolàta. Leaves oblong-linear, obtuse, often ciliatc; branches erect. N. and W.,-all the forms, on river banks and prairies. 1f. June, July.
- 7 H. angustifòlia Mx. Sleuder, tall, strictly crect; lvs. narrowly linear, 1-veined; fls. very numerous, short-pedicelled, in compact, terminal cymules; cal. lobes subulate; caps. obovoid or top-shaped. 21 Prairies, Ill. to La. 1-2f. June-July.

7. OLDENLÁNDIA, L. Calyx 4- or 5-lobed, persistent. Cor. funnelform, with a short tube, little longer than the calyx, 4-5-lobed. Sta. 4-5. Sty. short or 0. Stig. 2. Caps. wholly adherent. Seeds very numerous and minute (40-60 in each cell).—Herbs erect or prostrate. Stipules with 2-4 subulate points each side. Flowers small, axillary, white.

- 1 O. glomeràta Mx. Creeping Greenhead. Stems assurgent; lvs. ovate-lanceolate, pubescent, narrowed at the base; fls. glomerate in the axils and terminal; cor. shorter than the leafy calyx teeth. Swamps, N.Y. to La. 1-12'. June-Sept.
- 2 O. Bóscii. Erect, much branched; lvs. lance-linear, acute; fls. subsolitary, axillary, sessile. 24 Banks of rivers, S. 6-10'. Corolla purplish. July, Aug.
- 3 O. Hàlei. Weak, diffuse, succulent; lvs. oval-oblong, acute; fls. subsolitary, white, pentamerous. 24 River banks, Fla. to La. 8-10'.

8. CEPHALANTHUS, L. BUTTON BUSH. Calyx limb 4-toothed. Cor. tubular, slender, 4-cleft. Sta. 4. Sty. much exserted.—Shrubs with opposite lvs. and short stip. Fls. in globous heads, without an involuce.

C. occidentàlis L. Lvs. opposite and in 3's, oval, acuminate, entire, smooth; heads pedunculate. Margins of streams. 6f. Heads nearly 1' diam. July.

9. PINCKNEYA, Mx. Calyx 5-parted, one of the segm. in the outer flowers changed to a large, rose-colored bract. Cor. tubular, lobes 5, spreading. Sta. 5, exserted. Stig. 2-lobed. Caps. 2-valved, ∞ -seeded. 5 Lvs. large, ovate. Cymes corymbous, terminal, splendidly *radiant*. Cor. purplish.

P. pubéscens Mx.-Swamps, S.: common. 15-25f. Pods size of a hazel-nut. May, June.-In cultivation it is a shrub, flowering when 8-12f high.

10. BOUVÁRDIA, H. K. Calyx toothleted between its 4 lobes. Contubular. Anth. 4, included. Caps. 2-partible, ∞-seeded. Sds. margined.
b Glabrous. Leaves lanceolate, coriaceous. (See p. 445.)

1 B. TRIPHÝLLA. Lvs. in whorls of 3's; cymes corymbed; fis. scarlet. Mexico. 2f.

2 B. VERSÍCOLOR. LVS. opp. ; cymes racemed ; cor. clavate, curved, red and purp. S. Am.

ORDER LXVIII. VALERIANACEÆ. VALERIANS.

Herbs with opposite leaves and no stipules. Calyx adherent, the limb either membranous or resembling a pappus. Corolla tubular or funnelform, 4-5-lobed, sometimes spurred at base. Stamens distinct, inserted into the corolla tube alternate with, and generally fewer than its lobes. Ovary inferior, with one perfect cell and two abortive ones. Seeds solitary, pendulous, in a dry, indehiscent pericarp.

1. VALERIANA, L. VALERIAN. Calyx limb at first very small, in-

volute, at length evolving a plumous pappus. Cor. funnel-form, regular, 5-cleft. Sta. 3. Fruit 1-celled, 1-seeded. 24 Leaves opposite, mostly pinnately divided. Flowers in close cymes. June, July.

§ Stems climbing and twining. Leaves ternately divided, long-stalked No. 1

§ Stem crect.—a Leaves and leaflets broad, somewhat ovate, Root fibrous...Nos. 2, 3

-a Leaves and leaflets narrow, nearly linear. Root fusiform......No. 4

+ Garden exotics, native of Europe Nos. 5-8

- 1 V. scandens L. Glabrous; lfts. ovate, thin, entire, pointed; cymes diffusely pauicled, axillary and terminal; corolla very short. E. Fla. 4-6f, slender.
- 2 V. pauciflora Mx. Rt. lvs. ovate, cordate, crenate-serrate; cauline of 3-7 ovate, toothed lfts.; cor. tube long (7-8'') and slender, rose-white. O. to Va. and W. 1-2f.
- 3 V. sylvática Richd. Rt. lvs. ovate or oblong, never cordate, entire; cauline of 5--11 lance-ovate, entire lfts.; cor. short (3 -4"), roseate. Swamps, Vt. and W.
- 4 V. édulis N. Smooth, thickish; root avs. linear-spatulate, entire; cauline of 3-7 lance-linear, acute segm., the margins ciliate; cor. white, short (2-3"), in a dense panicle. Low grounds, O. Wis. and W. The thick root is edible. 1-3f.
- 5 V. DIOÌCA. Root lvs. undivided; cauline pinnatifid; fls. panicled, & Q, blush. 1f.
- 6 V. PHU. Root lvs. undivided; cauline pinnate; fls. corymbed, ø, white. 3f.
- 7 V. OFFICINÀLIS. LVS. all pinnate and toothed; fls. corymbed, blush-colored. 3f.
 8 V. PYRENÀICA. LVS. cordate, toothed, upper pinnate; fls. corymbed, pink-red. 1-2f.

2. VALERIANELLA, Mœnch. DC. Calyx limb obsolete. Cor. tube short, not spurred, limb 5-lobed, regular. Sta. 3. Stig. 3-cleft or entire. Fr. 3-celled, 1-seeded, 2 cells empty. (1) Stems forked above. Lvs. opposite, oblong or linear, entire or toothed, sessile. Fls. in dense, terminal cymelets. The specific characters are afforded mainly by the fruit. (Fedia, Gaert. T. & G.)

- * Flowers pale blue. Fruit orbicular, fertile cell larger than the emptyNo. 1
- * Flowers white.—a Frait ovoid, fertile cell larger than the 2 empty...... Nos. 2, 3 $-\alpha$ Fruit subglobous, empty cells larger than the fertile....Nos. 4, 5
- 1 V. olitòria Mœnch. Lamb Lettuce. Fr. finally broader than long; fertile cell with a corky back, seed laterally compressed. Fields, N.Y. to Va.: rare. 8-12'. June.
- 2 V. Fagopyrum. Fruit smooth, ovoid-triangular, the empty cells at the obtuse angle, and no groove between ; fis. large (11/). W. N-Y. to Wis. 1f. June.
- 3 V. radiata Dufr. Fruit pubescent, ovoid. somewhat 4-angled, 1-toothed at apex; empty cells with a groove between ; fls. small $(\frac{1}{2})$. N. Y. (*Howe*) to Mich., and S.
- 4 V. umbilicata. Fr. inflated, apex 1-toothed, the anterior face deeply umbilicate and perforated into the empty cells, which are much larger. Ohio (Sullivant).
- 5 V. patellària. Fruit orbicular, flattened, the empty cells widely divergent. at length forming a winged margin to the fertile cell. N. Y. to O. (Howe, Sullivant.)

ORDER LXIX. DIPSACEÆ. TEASELWORTS.

Herbs with whorled or opposite leaves and no stipules. Flowers in dense heads, surrounded by an involucre as in Compositæ. Calyx adherent, pappus-like, surrounded by a special scarious involucel. Corolla tubular. Stamens 4, alternate with the lobes of corolla, and distinct. Ovary inferior, 1-celled, 1-ovuled. Style 1, simple. Fruit dry, indehiscent, with a single suspended seed. Fig. 441.

1. DIPSACUS, L. TEASEL. Fls. in heads. Involucre many-leaved

Involucel 4-sided, closely investing the calyx and fruit. Cor. 4-cleft, lobes erect. Fruit 1-seeded, crowned with the calyx. (2) Stout, prickly. Leaves connate at base. Hds. oblong, the middle zone of florets first expanding.

- **1 D. sylvéstris** Mill. Wild T. Lvs. sinuate or jagged; bracts slender, erect, pungent, longer than the heads; chaff pungent, with a straight point. Waysides and hedges, Mass. to Cal. 1 5f. Flowers bluish. July. § Europe.
- 2 D. FUILÒNUM. Fullers' T. Leaves serrate or entire; bracts of the involucre spreading; chaff rigid, erect, with sharp, hooked points. Europe. 4f. July.

2. SCABIOSA, L. SCABISH. Fls. in heads. Involucre many-leaved. Involucel nearly cylindrical, with 8 little excavations. Calyx limb consisting of 5 setæ, sometimes partially abortive. 24 Mostly European.

S. ATROPORPÙREA. Mourning Bride. Leaves pinnatifid and incised; heads radiant. receptacle cylindric. India? 3f. Purple. Beautiful.

β CANDIDÍSSIMA. Flowers pure white.—There are many other varieties.

ORDER LXX. COMPOSITÆ. ASTERWORTS.

Plante herbaceous or shrubby, with compound flowers (of the old botanists), *i. e.*, the flowers in dense heads (capitula) surrounded by an involucre of many bracts (scales), with 5 united anthers, and the fruit an achenium (cypsela). Leaves alternate or opposite, exstipulate, simple, yet often much divided. Flowers (florets) ∞ , crowded, sessile, on the receptacle with or without pales (chaff). Calyx adherent, the limb wanting or divided into bristles, hairs, &c. (pappus). Corolla tubular, of 5 lobes with a marginal vein, often ligulate or bilabiate. Stamens 5, alternate with the lobes of the corolla, anthers cohering into a tube. Ovary 1-celled, with 1 erect ovule Style single, with 2 stigmas at summit. Fruit a cypsela (§ 151), dry, inde hiscent, 1-seeded, often crowned with a pappus. (See § 104, 348, 362.)

Figs. 68, 72–7, 103, 146, 160, 178, 261, 319, 341–6, 387–8, 433–4, 446–8, 492. An immense and perfectly natural assemblage, of about 1000 genera and 9000 species. In the United States very few are shrubby.

The flowers are perfect or variously diclinous. If the head has all its flowers of one kind, whether \forall , or \diamond , or \diamond , it is *homogamous*; if of different kinds, it is *heterogamous*.—The following are De Candolle's Suborders and Tribes, with a convenient artificial analysis appended.

I. 7	UBULIFLORÆ	Corolla	of the	perfect	flowers t	tubular,	5-lobed.	(
	A TRADITORY OF T							

TRIBE I, VERNONIACEE. Branches of the style long, slender, terete, and hispid all
over Heads discoid. Flowers all alike, perfectNos. 1-3

- 6 V. oligophýlla Mx. Lvs. mostly radical, oblong-obovate, the 2 or 3 cauline bract like, lanceolate; scales sprcading, acuminate. S. 2f. June, July.

2. STOKÈSIA, L'Her. Fls. all tubular, the marginal larger, ray-like, nrregular; scales of the invol. imbricated, in several rows, the outer spinulous and leaf-like. Recept. naked. Cypsela 4-angled. Pap. of 4 or 5 awn-like, rigid, deciduous scales. 24 Erect, with a downy stem, alternate lvs., and large terminal heads of showy blue flowers.

S. cýama L'Her.-Wet woods, S. Car. and W.: very rare. 2f. Lvs. glabrous, entre. Bracts spinnlous at base, gradually becoming scales. †

3. **ELEPHÁNTOPUS**, L. ELEPHANT'S-FOOT. Heads 3-5-flowered, glomerate into a compound head with leafy bracts. Fls. all \notin and equal. Invol. scales about 8, in 2 series. Cor. deeply cleft on one side. Fr. ribbed. Pap. chaffy-setaceous. 24 Erect, with large, alternate, subsessile lvs. Cor. purple or white. July—September.

- 1 E. Caroliniànus Willd. St. much branched, leafy, hairy; lvs. somewhat hairy, ovate or oval-oblong, obtuse, crenate-serrate. Dry soils, Pa. S. and W. 2f.
- 2 E. tomentòsus L. St. hirsute, nearly leafless, simple or dichotomous above; root lvs. hirsute-tomentous, oblong-obovate. Woods, S. 1-2f. Flowers whitish.

4. AGERATUM, L. Heads ∞ -flowered, \notin , discoid. Scales linear, imbricated, pointed. Recept. naked. Corollas all tubular. Cyp. 5-angled, narrowed at base. Pap. 5 or 10, chaffy, awned scales. (12) Mostly tropical, with opposite, petioled lvs. and corymbed heads. Fig. 75.

A. conyzoides L. Branching; lvs. ovate, tooth-crenate, acute or cordate at base, somewhat rugous; pap. scales 5, as long as the corolla, but much shorter than the conspicuous styles. Wet places, near Savannah. 1-14f. Blue or white. Apr.-Jn. *B.* MEXICANA. Lvs. all, or nearly all, cordate. Fls. light blue, perpetual. +

5. SCLERÓLEPIS, Cass. Head ∞ -flowered, \gtrless , discoid. Scales equal, linear, in 2 series. Recept. naked. Cor. 5-toothed. Styles much exserted. Cyp. 5-angled, crowned with a cup-shaped pappus of 5 obtuse, horny scales. And Glabrous, simple, with 1-3 terminal hds. Lvs. verticillate. Flowers purple.

S. verticillàta Cass. 24 In shallow water, N. J. to Fla. Erect, 1-2f, from a decumbent base. Lvs. lin., entire, 1', in whorls of 5's and 6's. Hds. mostly solitary. Jl.-Sep

6. CARFHÉPHORUS, Cass. Heads (about 20-flowered), involucre flowers, and fruit as in Liatris. Recept. chaffy. Pales narrow, 3-veined

.

rigid, shorter than the flowers. 24 Sts. simple, leafy, corymbous at top, with mildle-sized heads of purple flowers in Autumn. (Liatris, Mx. Ell.)

- * Scales of the involucre rounded-obtuse, nearly glabrous. Leaves obtuse .. Nos. 3, 4
- 1 C. pseudo-liàtris Cass. Lvs. linear-subulate, rigid, closely appressed to and covering the stem ; hds. few, rac. or cor. ; plant downy, erect. W. Fla. to La. 2f.
- 2 C. tomentosus T. & G. Lvs. lanceolate, petiolate, the cauline lance-ovate, sessile, small, erect; plant tomentous, corymb loose. Swamps, S. 2f.
- 3 C. bellidifòlius T. & G. Low, nearly smooth, tufted; lvs. spatulate below, linear above; hds. few, in a loose corymb; scales herbaceous. Sand hills, N. Car. 1f.
- I C. corymbosus T. & G. St. single, stout, erect, hairy; lvs. oblanceolate, the up per oblong, sessile; corymb dense; scales scarious-edged. Swamps, S. 3f.

7. LIATRIS, L. Fls. all ¥, tubular. Invol. oblong, imbricate. Recept. naked. Pap. of ∞ capillary bristles. Cyp. tapering to the slender base, 10-striate. Styles much exserted. 24 With simple, erect stems, alternate, entire lys., and handsome rose-purple flowers in spicate, racemed, or paniculate heads. August-November.

- § Heads in a corymb or thyrse-like panicle. Root fibrous, no tuber Nos. 1-3
- § Heads in a spike or a simple raceme. Root a roundish tuber..(a)
 - a Scales of the involucre colored and petaloid at their lengthened ends..... No. 4
 - **a** Scales not petaloid, green or slightly tinged at the end..(b)

 - b Pappus only barbellate (smooth to the naked eye)..(c)

 - - -d Scales all, or the inner only, acute.... Nos. 12, 13
 - c Heads 3-7-flowered, -e in a regular spike, raceme (or panicle)... Nos. 14-16

- L. odoratíssima Willd. Vanilla Plant. Deer's Tongue. Smooth; lvs. obovatespatulate, obtuse, thick, the cauline oblong; heads 7-8-flowered, in a loose, compound corymb. Pine-barrens, Va. to Fla. 1-3f. Used to perfume tobacco.
- 2 L. paniculàta Willd. Viscid-tomentous; lvs. lance-spatulate, the cauline small, pointed; hds. 5-flwd., in an oblong, dense panicle, white-purple. Damp. S. 2-3f.
- 3 L. fruticosa N. Shrubby, smooth; lvs. obovate, fleshy, veinless, the lowest opposite; hds. corymbed, 5-flowered; scales lanceolate, acute, dotted. E. Fla. Lvs. 1'.
- 4 L. élegans Willd. Hairy above : lvs. oblanceolate, cauline linear : rac. dense, 1f: hds. 4-5-flowered, scales longer and more showy than the flowers. Woods, S. 4f.
- 5 L. squarrosa Willd. Blazing Star. St. 2-3f; lvs. linear, the lower narrowed at base; rac. leafy; hds. few, 15-40-flowered, 9-12" long, scales squarrous-spreading, the outer leafy, inner sharp-pointed. Dry soils, Penn. to Fla and W.
- **b L. cylindràcea** Mx. St. low (6-18'), slender; lvs. linear, rigid; hds few, cylindrical, 15-20-flowered; scales short, rounded, appressed. Dry. N. Y. and W.
- 1 L. Boykínii T. & G. Lvs. linear, dotted; hds 3 or 4-flowered in a close, virgate epike; scales pointed and spreading at the tips. Near Columbus, Ga. 1-2f.
- 8 L. tenuifòlia L. Lvs. narrowly linear or filiform; hds. 5-flwd., crowded in a .ong raceme; scales oblong, obtuse-mucronulate. Woods, S. 2-4f. Fine.
- 9 L. scariòsa L. Gay Feather. Scabrons-pubescent; lvs. lanceolate, the lower on long petioles, upper linear; hds. remotely racemed; invol. hemispherical, with obovate, very obtuse scales. Dry soils. 4-5f. Beautiful.
- 10 L. spicata Willd. Lvs. lance-linear, the lower narrowed at base; hds. sessile, in a long spike; scales oblong, obtuse, narrow-margined. N. J., W. and S. 2-5f.

- 11 L. graminifòlia Willd. Leaves linear, 1-veined; hds. mostly pedicchate, rac rarely paniculate below: invol. acute at base, scales obovatc-spatulate, obtuse, ap pressed; cyp. hairy. Sandy soils, N. J. and S. Variable.
- 12 L. pilòsa Willd. Downy and hairy, stout ; lvs. linear and lance-linear ; hds. loosely racemed, scales linear-oblong, obtusc, the inner linear. N. Car. Rare.
- 13 L. heterophýlla R. Br. Glabrous; lvs. lanceolatc, the upper greatly diminished, hds. spiked, scalcs lance-acuminate, spreading. N. Car. to Ga. Rare.
- 14 L. grácilis Ph. Pubescent; lvs. linear, 1-veined, the lower lanceolate; heads or slender stalks, in a long virgate rac.; scales oblong, obtuse. Dry. Ga. Fl. 2-3f.
- 15 L. pychnostáchia Mx. Hirsute; lvs. rigid, lanceolate, the upper narrow-lla ear; spike dense, thick, of numerous cylindric heads; scales appressed, with acute, scarious, colored and spreading tips. Prairies. Ill. to Tex. 3-5f. Spike 10-20.
- 16 L. Chapmánii T. & G. Tomentous; lvs. linear, obtasish, the upper very short; hds. cylindric. 3-flowered, densely spiked; scales acum.; fr. bairy. Fla. 1-2f.
- 17 L. pauciflòra Ph. St. pubescent, recurved; lvs. linear, short, the lowest lance linear; rac. recurved, with the hds. all turned to the upper side; hds. 4-5-flowered, scales lance-oblong, acute. Dry sand-hills, S. 1-3f. (L. secunda Ell.)

8. KUHNIA, L. Heads 10–25-flowered, §. Scales lanceolate, loosely imbricated. Recept. naked. Cor. slender, 5-toothed. Pap. in a single series, plumous. Fr. cylindrical, striate, public cent. 24 With alternate, resinous-dotted lys., and corymbed heads of pale yellow florets. September.

K. eupatorioides L. St. somewhat viscid-pubescent; lvs. lance-ovate to lance-lin., resinous-dotted, petiolate, toothed or entire. Dry soils, N. J., W. and S.

9. BRICKELLIA, Ell. Heads many-flowered, \heartsuit . Scales imbricated, lanceolate or linear, striate. Receptacle naked, flat. Cor. tube slightly expanded above, 5-toothed. Branches of the style clavate. Fr. 10-striate, contracted above. Pap. setaceous, in one series. 24 With opposite, 3-veined leaves and large heads of purple florets in corymbs.

B. cordifòlia Ell. Pubescent; lvs. triangular, truncate or cordate, crenate, petiolate; hds. 30-40-flowered, scales obtuse; pap. purple. Ga. Fla. 2-4f. August.

10. **EUPATORIUM**, Tourn. BONESET. Fls. all tubular, \S . Invol. imbricate, oblong. Style much exserted, deeply cleft. Anth. included. Recept. naked, flat. Pap. capillary, simple, scabrous. Cyp. 5-angled. 24 Generally with opposite, simple lvs. and corymbous hds. Fls. of the cyanic series—that is, white, blue, red, &c., never yellow. July—September. § Leaves mostly alternate, pinnately dissected. Heads paniculate, very ∞Nos. 1, 2 § Leaves mostly opposite or verticillate,—c pinnately dissected. Hds. corymbed...No. 3

-c undivided. Heads corymbed..(*)

- * Scales imbricated in several rows, the outer gradually shorter...(a)

 - a Flowers white, 5 only in each head. Lvs. subsessile. (exc. No. 18)..(b)
 - b Leaves acute at base. Scales with acute white points.........Nos. 8-10
 - b Leaves acute at base. Scales obtuse, short, dcwny.....Nos. 11-14
- 1 E. foeniculàceum Willd. Very branching; lvs. all alternate, compoundly pinnate, in linear-filiform segments, the upper setaceous, simple; heads 3-5-flowered Fields, Pa. (rare) to Fla. 3-1(f. Flowers yellowish-white, 1-2" long.

- 2 E. coronopifòlium Willd. Much branched, pubescent; leaves mostly alternate (the lower opp.), twice pinnatifid, with lance-linear lobes and segm., the upper linear. simple; hds. 5-flowered, scales 10. Dry soils, S. 3-5f. Flowers white, 2".
- 3 E. pinnatífidum Ell. Pubescent; lvs. laciniate-pinnatifid, segm. linear, toothed or entire, the lower whorled in 4's, middle opp., upper altern.; corymb fastigiate; hds. small, ∞, 5-9-flowered; scales oblong, mucronate. Pine woods, S. 3-4f.
- 4 E. ivæfòlium L. Lvs. opposite, lanccolate, tapering to each end, 3-veined: heads pedicellate, 15-20-flowered; scales 20, imbricated, erect, obtuse, with 3-5 distinct striæ. Woods, Miss. and Fla. 3-5f. Blue.

E. purpareum L. Stem solid, purple at the joints; lvs. feather-veined, in whorls of 3's-5's, thin, ovate to lanceolate, coarsely serrate. Dry. 3-6f.

- 6 E. fistulòsum Barratt. Trumpet-weed. Stem hollow, striate, glabrous, glaucouspurple; lvs. lance-oblong, in 5's, 6's, finely serrate; corymb globous, with whorled rays. Thickets. 6-10f. Lvs. 8'. Corymbs 1f. (E. purpureum. β. T. & G.)
- 7 E. maculàtum L. Stem solid, marked with purple glands and lines; leaves 3veined, ovate, in 3's-5's. Low grounds: common. 3-5f. (E. purpureum. β. Darl.)
- S E. scábridum Ell. ? (Chapm.) St. stout, tomentous; lvs. lance-ovate, acute. scr.,
 3-veined from base; scales lance-obl., cuspidate, edged, shorter than fls. Car Fla. 2f.
- 9 E. album L. Rough-downy; lvs. lance-oblong, acutish; hds. oblong, 5-flowered; scales white-scarious at the point, longer than the fls. Sauds, N. J. and S. 2f.
- 10 E. leucólepis T. & G. Nearly smooth; lvs. lance-linear, obtuse; heads 5-flwd.; scales white-scarious at the tip, as long as the fls. Sands, L. I. and S. 2-3f.
- 11 E. hyssopifòlium L. Lvs. linear-lanceolate, 1-3-veined, punctate, lower ones subserrate, upper ones entire; scales oval. Dry. Mass., W. and S. 2f. Hds. 3".
- 12 E. parviflorum Ell. Lvs. lanceolate, sessile, acutely servate above, 3-veined : heads 2", crowded; outer scales very short, inner linear. Damp. Va. to Fla. 2-3f.
- 13 E. altíssimum L. Tall, downy; lvs. lanceolate, few-toothed above. conspicu ously 3-veined; scales 8-12, elliptical, 24"; fls. 5". Dry. Pa. to Car., and W. 3-7f.
- 14 E. cuneifòlium Willd. Downy; lvs. small, glaucous, obovate-oblong, 3-veined. apex obtuse and subserrate; scales oval, 2"; fls. 4". Rich shades, S. Car. to Fla. 21
- 15 E. teucrifòlium Willd. Rough-downy; leaves sessile. ovate, veiny, the lower doubly serr.; scales elliptical, faintly striate, rather acute. Damp. Mass. to La. 2-3f.
- 16 E. sessilifòlium L. Smooth; leaves half-clasping, lance-ovate, serrate; inner scales oblong-obovate, obtuse. Rocky woods, Mass. to Ind., and S. 2–4f. Lvs. 3–5'
- 17 E. rotundifòlium Willd. Hoarhound. Downy; lvs. roundish ovate, subcordate, 3-veined, sessile, coarsely toothed; inner scales acuminate, as long as the fls. Dry fields, N. J. and S. A compact, bushy plant. 3f.
- 18 E. mikanioides Chapm. St. creeping at base, ascending; lvs. deltoid, truncate at base, petioles subconnate; scales lanceolate, acute. Isl. St. Vincent, Fla. 1-2f.
- 19 E. pubéscens Muhl. Hairy; lvs. distinct, sessile, ovate, acute, blunt-toothed; hds. about 8-flwd.; scales lanceolate, acute, short. Dry. N. H. to N. J., and Ky. 3-4f.
- 20 E. resinòsum Torr. Viscid-resinous; leaves distinct, closely sessile, lin.-lanceolate, long-pointed; hds. 10-15-flwd.; scales obtuse, white-downy. Barrens, N. J. 2-3f.
- 21 E. perfoliàtum L. *Thoroughwort. Boneset.* Hairy; lvs. lanceolate, each pain united at base around the stem; heads about 12-flowered, in a large, dense corymb; scales lance-oblong, acute. Low grounds: common. 3-4f. A powerful tonic.
- 92 B. seròtinum Mx. Soft-puberulent; lvs. petiolate, lance-ovate, sharp-serrate, 3-veined; hds. 12-15-flwd.; scales 9-11, similar, very downy, obtuse. Md., S. and W. 5f.
- 23 E. ageratoides L. Smooth; lvs. long-petiolate, ovate, acuminate, sharp-serr.,
 3-veined; hds. 10-20-flwd., in a compound corymb; scales oblong, obtusc. Woods. 3f.
- 24 E aromáticum L. Rough-downy; lvs. petiolate, lance-ovate, acute, 3-veined, blunt-serr.; hds. 10-15-flwd., in small corymbs; scales lance-linear. Low woods. 2f.
- 25 E. incarnàtum Walt. Diffusely branched; leaves long-petioled, deltoid-ovate, pointed, coarsely crenate-dentate; hds. on slender ped., 15-20-flwd.; scales lin.-subn late. 3-striate; lobes of the corolla pale purple. Damp soils, N. Car. to Fla. 3f.

11. MIKÀNIA, Willd. CLIMBING BONESET. Fls. all tubular, \emptyset . In volucre 4-leaved, 4-flowered. Receptacle and flowers as in Eupatorium 24 Climbing and twining. Leaves opposite.

M. scandens Willd. Smooth; lvs. cordate, repand-toothed, acuminate, the lobes divaricate; hds. in pedunculate, axillary corymbs. Thickets, Ms. to Ga. Not common. Clusters on the short, lateral branches, of white or pink-colored flowers. Aug. Sept.

12. CONOCLÍNIUM, DC. Heads many-flowered. Receptacle conical. Character otherwise as in Eupatorium. 24 b Leaves opposite, petilate, serrate. Flowers sky-blue, in crowded corymbs.

C. cœlestinum DC. Much branched; lvs. deltoid-ovate, truncate or subcordate, cre nate-serrate, petiolate; seales linear. 24 Copses, Pa., S. and W. 1-2f. Aug. Sept.

13. TUSSILAGO, Tourn. COLT'S-FOOT. Head radiate, many-flowered Flowers of the ray \mathfrak{P} , those of the disk \mathfrak{F} . Invol. simple. Recep. naked. Pappus capillary. \mathfrak{L} Lvs. radical. Fls. yellow, with very narrow rays.

T. Fárfara L.—Cold, elayey banks, N. and M. Scape 5', appearing with its single head of yellow flowers in March and April, before the large angular leaves.

14. NARDÓSMIA, Cass. Heads radiate, ∞ -flowered, somewhat $\mathfrak{F} \mathfrak{F}$. Fls. of the ray \mathfrak{P} , of the disk \mathfrak{P} , but abortive in the sterile plant. Invol. simple. Recep. flat, naked. Pappus capillary. 24 Leaves radical. Fls. cyanic. The ray flowers of the sterile heads are in a single row; of the fertile in several rows, but very narrow.

N. palmàta Hook. Scape with a thryse or eorymb; lvs. roundish-cordate, 5-7-lobed, woolly beneath, eoarsely dentate. Swamps, N. Eng. and W. Rare. May.

15. ADENOCAÙLON, Hook. Fls. few, all tubular, of the margin φ , of the disk ϑ . Scales equal, in one series. Recep. naked. Cyp. clavate, exserted, bearing stalked glands above. Pap. 0. 24 Nearly acaulescent, with alternate leaves, and small, paniculate heads, also gland-bearing.

A. bicolor Hook. Lvs. deltoid. cordate, angular-toothed, decurrent on the petioles, white-downy beneath. Shores of Lake Superior, and W. (Common in Oregon.) 2f.

16. AGATHÆA, Cass. Heads as in Erigeron, but the scales are 1veined, keeled or channelled, and the cypselæ rough-haired. ① 5 S. Afr Leaves opposite. Disk flowers yellow, rays blue. (Cineraria, L.)

A. AMELLOIDES. Lvs. ovate or oval, petiolate, entire, scabrous. Not hardy. A beau tiful shrub, often cultivated in the greenhouse. 1-2f. Heads solitary.

i7. SERICOCÁRPUS, Nees WHITE-TIPPED ASTER. Ray fls. 4—6, i: disk fls. 6—10, i. Invol. oblong, imbricated. Scales appressed, white with green, spreading tips. Recep. alveolate. Cyp. obconic, very silky. Pap. simple. 24 With alternate lvs. and close corymbs. Rays white.

¹ S. solidagineus Nees. Smooth; lvs. linear-oblanceolate, obtuse, entire, sessile; heads subsessile; scales obtuse; pap. white. Woods: eom. 2f. Rays long. Jl. Aug.

² S. conyzoides Nees. Some pubescent; lvs. lance-oval, acute, serrate, the lower narrowed into a petiole; rays short; pappus rusty. Woods, Ms. to Fla. 1-2f. Jl. Aug.

³ S. tortifòlius Nees. Grayish pubeseent; lvs. short, oblong-obovate, sess., twisted to a vertical position, both sides alike; pappus white. Woods, Va. to Fla. 2f. Sept

18. ASTER, L. Invol. oblong, imbricate. Scales loose, often with
green tips, the outer spreading. Disk fls. tubular, \Diamond , ray fls. \Diamond , in one row,
ligulate, 3-toothed at apex, finally revolute. Recep. flat, alveolate. Pap.
simple, capillary. Cypsela compressed. 24 Very abundant in the U.S.,
flowering in late summer and autumn. Lvs. alternate, diminishing grad-
nally upward. Disk-flowers yellow, changing to purple; ray-flowers blue,
purple, or white, never yellow. Figs. 146, 388. (See also p. 446.)
A Scales of the involucre tipped with green or wholly green $(\S 1, 2, 5)$
B Scales destitute of green tips, white or scarious. Lys. never cordate($\S 4-p$)
§ 1. BIOTIA. Heads corymbous, large. Rays 6-15, white. Lvs. cordate Nos. 1, 2
§ 2. CALLIÁSTRUM. Heads corymbous or few, large. Rays 12-30, violet-
blue. Pap. bristles unequally thickened. Lvs. rigid, not cordate (a)
a Lvs. ovate to lanceolate, serrate more or less. Fr. smoothish Nos. 3-5
a Leaves lance-linear to linear, -b entire, merely acute
-b bristly-fringed, pungent
§ 3. ASTÈRIA. Hds. panicled or racemed, rarely few. Pap. equal, soft(c)
c Leaves petiolate, the lower cordate, $-d$ evidently servate
-d entire or obscurely servateNos. 12-15
c Leaves all sessile, entire, silky-canescent both sides. Pap. tawnyNos. 16, 17
c Lys. not silky, $-d$ clasping with a cordate or auriculate base (f)
-d clasping with a broad base not cord, or auric(h)
-d sessile with a narrow base, not clasping(m)
f Lys. very small $(1''-3'')$, entire. Scales with spreading tipsNos. 18, 19
f Leaves ordinary $(1'-6')$.—e Scales with abrupt, appressed tipsNos. 20, 21
-e Scales lossely spreading. Lvs. entireNos. 22–25
-e Scales very loose. Lvs. long, serrateNos. 26, 27
A Scales of the involucre closely imbricated (obtuse, No. 20), acuteNos. 23-31
h Scales loose, or spreading, or recurved.—k Pappus bright-coloredNos. 32-34
-k Pappus tawny-brownNos. 35, 36
m Scales squarrous-spreading at the tips.—o Hds. large $(6''-1')$, purple Nos. 37, 38
-o Hds. small (2-4"), whitish. Nos. 45-47
m Scales loosely divergent, straight. Heads medium size, rays pale No. 42
<i>m</i> Scales resct, straight, in 1 row. Heads 2–3, or solitary, rays whiteNo. 49
<i>m</i> Scales closely imbricated.— <i>n</i> Hds. medium (3-6 ^{\prime}), purp. or paleNos. 43, 44, 31
-n Heads small (2-3'/), white or paleNos. 39-41
§ 4. SCARIÒSI.— p Lvs. lanceolate, broadly or narrowly. Scales obtasishNos. 49–51
-p Lys. subulate or lin. Scales very acute.—s Hds. large, fewNos.52, 53
-s.Hds. small, many54-50
1 A. corymbosus Ait. Nearly smooth ; lvs. thin, ovate-acuminate, serrate, the peti-
oles wingless; rays 6-9. Dry woods, N., M. 1-2f. Heads oblong, 4". Lvs. large.
2 A. macrophýllus Willd. Rough-pubescent; leaves thickish, ovate, serrate with
close teeth, petioles some winged; rays 8-15. Woods, N. 1-2f. Lvs. very large. Hds. 6".
3 A. mirábilis T. & G. Lvs. ovate, serrate, the lowest petiolate, the ramial round
ish; invol. hemispherical, scales obtuse; rays about 20. S. Car. Very rare.
A. ràdula Ait. Lvs. lanceolate, acuminate, sessile, sharp-serrate, rough and rugous,
invol. squarrous with the spreading scale-tips; rays 20. N. 1-3f.
5 A. spectábilis Ait. Lvs. lance-oblong. sessile, entire, the lower subserrate; invol
hemispherical, scales linear-spatulate, ciliate. Sands, Mass. to Fla. 1-2f.
6 A. surculòsus Mx. Root a creeping, knotted rhizome ; lvs. lance-linear and linear
heads 1-5; scales linear-oblong, ciliate, inner obtuse. Wet. N.J. to Car. 1f.
β. grácilis. Heads 8–12, smaller; rays 12; scales but slightly spreading.
7 A. paludòsus I. Slender glabrons: lys. long linear: hds. 1-6: scales lance-linear

7 A. paludòsus L. Slender, glabrous; lvs. long, linear; hds. 1-6; scales lance-linear rays 30, longer than the (6") invol. Swamps, S. 2-3f. Heads very large

8

- **S A. spinulòsus** Chapm. Bristly-hairy, rigid; lvs. narrowly linear, pungent, bristlo fringed; heads few, spicate; scales spine-pointed; rays 13, blue. Fla. 1f.
- 9 A. eryngifòlius T. & G. Hairy, rigid; lvs. lance-linear, pungent, fringed with spiny teeth; heads very large, 1-4, loosely racemed; scales green, rigid, lanceolate, long-pointed; rays many, white. Fla. 1-2f. (Prinopsis Chapmanii, C-B.)
- 10 A. cordifòlius L. Stem pauiculate; leaves sharply serrate, acuminate; petioles winged; scales appressed, with short green tips. Woods and glades, N. and W.: com 1-3f. Heads numerous, rather small, blue varying to white, in a large panicle.
- 11 A. sagittifòlius Willd. Branches racemed; lvs. lance-obl., some arrow-shaped petioles winged; scales loose, lin.-subulate. Low woods, N. and W. 2-4f. Wh.-blue
- 12 A. undulàtus L. Racemous-paniculate, rough, grayish; lvs. ovate-oblong, undulate-crenate, the base, or the winged petioles, cordate-clasping, the upper acute, entire, sessile; scales appressed. Dry woods. 2f. Blue. (A. diversifolins Mx.)
 β. aspérulus. Lowest petioles slender, not clasping; lvs. scarcely cordate. Com.
- 13 A. azùreus Lindl. Slender, rigid, rough; lvs. below on slender petioles, cordatelanceolate, the others successively lanceolate, linear, and subulate, acute at each end; rac. paniculate, heads obconic; scales acute, appressed. Woods, prairies, W. 2f.
- 14 A. Shórtii Hook. Smoothish, subsimple; lvs. lance-ovate, deeply cordate, petiolate, long-pointed, entire, the upper sessile; rac. paniculate; scales green-tipped, shorter than the disk, Rocky banks, O. to Wis. and Ark. 3f.
- 15 A. anómalus Eng. Lvs. as in No. 13; scales with linear, spreading, leafy tips; hds. large; rays spreading, 15-18", bright blue. Rocks, Ill. Mo. (Mr. J.Wolf.) 2-4f.
- 16 A. seríceus Vent. Bushy; lvs. silvery-silky both sides, lance-oblong, sessile; hds. large, terminal on the short, leafy branches; scales spreading at tip; fr. glabrous; rays 15-25, violet blue. Banks, Mich. (H. Mapes) to Iowa, and S. 1-2f.
- 17 A. cóncolor L. Subsimple; lvs. grayish-silky, lance-oblong, the upper cusppointed; heads in a terminal, virgate raceme; scales lanceolate, appressed; fruit silky; rays purple. Pine-barrens, N. J. to Fla. 2-3f. Aspect of Liatris.
- 18 A. squarròsus Walt. Slender, with simple, 1-flowered branches; leaves very small, triangular, heart-clasping, reflexed-squarrous; scales with spreading green tips; fr. pubescent. Dry soils, S. 2-3f. Rays 20. blue.
- 19 A. adnàtus N. Slender, rough ; lvs. oblong to lanceolate, erect, adhering to the stem by the midvein, the summit only free. Sands, Fla. to La. 2-3f.
- 20 A. turbinnéllus Lindl. Smooth, subcorymbed; lvs. lance., tapering both ways; hds. club-top-shaped (6''); sc. tips short, blunt. Ill. Mo. to La. Blue. Pap. brown.
- 21 A. lævis L. Very smooth; branchlets 1-flwd.; lvs. oblong, entire, shining, lowest lanceolate, subserrate, upper auriculate; scales with a broad, acute, appressed tip; heads large, rich blue, showy. Low woods. 2-3f.
 - β. lævigatus. Not glaucous; leaves linear-lanceolate; scales linear.
 - y. cyaneus. Plant glaucous; leaves thickened, very entire. Beautiful Asters.
- 22 A patens L. Pubescent; rac. paniculate; lvs. ovate-oblong, cordate-clasping, ciliate at edge; heads large, terminal on the leafy branchlets; scales lax, green-tipped; rays 20, violet-blue. Wet soils, Mass. to Ga. 2-3f.

β. phlog if olius. Leaves lance-ovate, auriculate-clasping, very acute.

- 23 A. amethystinus N. Hoary-puberulent; rac. paniculate; lvs. lin.-oblong, acute. some auricled at the clasping base; heads broad-bell-shaped (3"); scales erect, with only the green tips spreading. Damp, Mass. to Ill. (J. Wolf.) 2-3f.
- 24 A. Novæ-Angliæ L. Corymbous-paniculate, pubescent; lvs. lanceolate and lance-linear, auriculate-clasping; scales equal, lax, glandular-viscid, green their whole length; rays 70+, deep purple. Damp. 4-6f.-Varies with the rays rose-purple. or rarely, white. Fine in cultivation.
- 25 A. Caroliniànus Walt. Rough-downy; branches divaricate; lvs. lance-ovate, entire, clasping with small auriculate lobes; heads very large, scattered; scales with spreading green tips; rays rose-purple. Damp, S. 6–13f.
- 26 A. vuniceus L. Hispid, panicled; lvs. lance-oblong, auriculate-clasping, ap-

pressed-serrate; scales 2-rowed, long, revolute; heads large, showy, with 30-60 narrow, pale-purple rays Swamps, Can. to Car., and W. 4-6f. Stem often red.

- β. vimineus. Tall, slender, smoothish; heads few, very large; leaves narrow.
- y. glaber. Low (2f), subsimple, smoothish; leaves narrow, erect, entire; scalor loose, not recurved; rays large, about 20, white? Ill. (J. Wolf.)
- δ. firmus. Low (2-3f), scabrous, stout; leaves thick, subentire; heads many.
- E. cándidus-the common form, with white rays. N. Y. (Hankenson.)
- 27 A. prenanthoides Muhl. Hairy or downy, corymbous-paniculate; lvs. lancooval, pointed, serrate, the long petiole winged and auriculate-clasping: scales spatulate, the green tips spreading. Wet banks, N. Y. to Va., and W. 2-3f.
- 28 A. concinnus Willd. Pubescent, subsimple; lvs. lanceolate and lance-linear, remotely serrate, narrowed to the clasping base, the upper entire; scales appressed-imbricate; heads medium, rays blue. Woods, &c. 2-3f.
- 29 A. gracilléntus T. & G. Very smooth, slender, simply panicled: leaves longlinear, the lower toothed, upper clasping, erect; scales short; rays blue. S. Rare.
- **30 A. mutábilis** Ait.? Stem smooth, paniculate-branched from base, dense-flwd.; leaves linear-lanceolate, serrulate, clasping, thickish, upper lance-oblong, entire; heads medium; scales lanceolate, loose, much shorter than the disk; rays pale? Wet. Ill. (J. Wolf.) 2-3f.--Varies with leaves serrate, heads loose, &c.
- **31 A. cárneus** Nees. Smoothish; branches leafy, ascending, racemed with 1-headed branchlets; lvs. uniform, linear-lanceolate, pointed, only the upper clasping; scales acute, shorter than the disk. Moist, E. and W. Heads larger than in No. 30, purple to rose, showy. Stem often red, 2-3f high.
- 32 A. virgàtus Ell. Smooth, virgate branches racemed; leaves linear-lanceolate, ciliate-serrulate, half-clasping, graded above into numerous subulate bracts and spreading, pointed scales; fruit glabrous. Ga. to La. 3-4f.
- 33 A. Novi-Bélgii L. St. smoothish, branches pubescent; lvs. subclasping, lanceobl. to linear, pointed, the lower subserrate; heads large, racemed or subcorymbed; scales subequal, loose, equalling the disk. N.Y. to Ill. 2-4f. Blue. (A. æstivus Ait.)
 β. latifiorus. Branches slender, corymbed at end; lvs. very narrow. W. Showy.
- 34 A. longifòlius Lam. Stem glabrous, paniculate-spreading; lvs. lance-linear to linear, long, pointed, subclasping, nearly or quite entire, upper subulate; heads large; scales linear-subulate, the outer spreading. E. and W. 2-6f. Blue.
 - β. praálius. Tall, strict, with thyrsoid panicles, medium heads : lvs. serrulate.
- 35 A. Ellióttii T. & G. Stout, smooth, corymbous-branched; lvs. ample, lanceolate, subclasping, subserrate; ped. naked; scales attenuate. Swamps, S. 2-4f. Purple.
- 36 A. oblongifòlius N. Hairy, bushy; branches spreading; leaves obl.-lanceolate, acute, entire, clasping, graded above into subalate bracts and subequal spreading scales. Va. (Harper's Ferry) to Iowa and Mo. Rays purple. 1-2f.
- 37 A. grandiflorus L. Rough, bristly-hairy; branches some corymbed, 1-flowered; lvs. small, linear-oblong, obtuse; hds. very large, blue-purple; scales obtuse. S. 2f.
- 38 A. Curtísii T. & G. Smooth, racemous; lvs. thin, sessile, lanceolate, acuminate, subentire; scales with green spreading tips; heads large, showy. Mts. N. Car.
- A. dumòsus L. Rac. paniculate ; *lvs. linear* to oblong, sessile, lowest subserrate ; invol. obtuse at base, closely imbricated ; scales obtuse ; heads small, rays 20+, purplish-white. Dry woods, &c.: common. 1-2f. Lvs. very numerous, 3'-3".
 B. coridifolius, is a starved, attenuate form, very slender every way.
- 40 A. Tradescánti L. Smoothish, slender, much branched; lvs. lance-linear, long, remotely serrulate, teeth sharp, upper leaves entire, all sessile; heads many, subsecund; scales close; rays small, pale. Fields, copses. 2-4f. Leaves 5'-5".
 β. frágilis. Leaves nearly linear, minutely serrulate; heads scattered.
- 41 A. miser L. Hairy or downy, very leafy; branches spreading, racemous; lvs. all lanceolate, tapering both ways, sessile, sharply serrate in the middle. the ramial smaller. entire; scales acute, close; rays whitish, short. Old fields. br--30'.--Varies greatly. Lvs. 5'--1', broad or narrow. Hds. dense or scattered. Rays 15+, 2--3''.

- 42 A. simplex Willd. Loosely corymbous-paniculate, smoothish: lvs. .anceorate acuminate, the lower serrate; heads scattered; scales loosely imbricated, linear-subu late. Low grounds: common. 3-6f. Heads twice larger than No. 41, blue to white. β. divergens. Diffusely branched, loosely racemous; branches hairy in lines.
- **43 A. tenuifòlius** L. Paniculate-branching, with 1-flowered branchlets; lvs. linearlanceolate to lance-linear, slender-pointed, sessile, remotely serrulate, upper eutire; scales linear-subulate, equalling the disk. Moist fields. 2-6f.

β. belliditiorus. Leaves scabrous, slightly clasping; scales loosely imbricated.

- y. distichus. Leaves and strict ascending branches in 2 rows! Ill. (Mr. J. Wolf.)
 44 A. subásper Lindl.? Pubescent above; racemous-branched, branches short, dense-fiwd.; lvs. lance-acuminate, appressed-serrate, rough, attenuate to a petiole, up per reduced, entire, sessile; invol. closely imbricated; rays purp. Dry. Ill. 2f. (Wolf.)
- **45 A. ericoides** L. Smoothish; branches virgate, branchlets secund, 1-headed; lvs lance-lin. to subulate; hds. small; sc. as long as disk, with subulate-mucronate spread ing tips. Rocky fields. 1-3f. Lvs. 4'-4'', attenuate-mucronate. Rays white or purplish
- 46 A. racemòsus Ell. Rough-downy; branches slender, erect; hds. very small (2") spicate-racemous, crowded above; lvs. linear, sessile, rigid, 3'-3". Coast, S. Car. 2f.
- 17 A. multiflorus L. Grayish-downy, diffusely branched; lvs. linear, entire, sess., obtuse-mucronate; hds. small; sc. with obtusish spreading tips. Dry fields. 1f. Very bushy, with crowded racemes. Rays about 12, pale, 2-3" long.
- 18 A. graminifòlius Ph. Slender, with filiform erect branches, 6 -12' Ivs. linear, crowded below; ped. slender, leafless, 1-flwd.; sc. subulate-linear; rays about 20, white or rose. Rocks, Vt. N. H.: rare. (Willoughby Lake, Vt., Bradford, Vt., White Mts.)
- **49 A. acuminàtus** Mx. St. simple, flexuous, angular, branching into a corymbous panicle above; lvs. broad-lanceolate, narrowed and entire at the base, serrate and acuminate; scales lax, linear. Wooded hills, N. 1f. Rays 12+, long, white.
- 50 A. nemoràlis Ait. Branches corymbed or 0; ped. 1-flwd., nearly naked, filiform · lvs. narrowly lanceolate, acute at each end, veinless, subentire; sc. very acute, loose, shorter than the disk; rays long, about 20. Wet woods. 1f. White-purple.
- 51 A. ptarmicoides T. & G. St. corymbous-fastigiate above; lvs. lin.-lanceolate acute, rough-margined, entire, lower ones dentate, attenuated into a short petiole. rays short, snow-white. Rocky shores, Vt. to Mo. Rare. Heads rather large.
- 52 A. flexuòsus N. Smooth, slender, flexuous; branches leafy, 1-flwd.; lvs. fleshy, long-lance-linear to subulate; hds. large; rays short, many, purple. Marshes. 1f.
- 53 A. Chapmánii T. & G. Smooth, slender, strict; branches filiform, 1-flwd.; lvs. linear-subulate; rays longer than invol., 20-30, purp.; cyps. glabrous. Swamps, Fla.
- 54 A. linifòlius L. Sea Aster. (1) Smooth, much branched, paniculate; lvs. lancelinear to subulate; scales in 3 rows; rays minute, scarcely exserted. Marshes. 1f.
- 55 A. subulàtus Mx. ① Smooth, slender, much branched, corymbed; lvs. linear-subulate; rays many, narrow, in 1 row, longer than the disk, blue. Wet. S. 1-3f. β. éxilis. Taller (2-4f), less branched; heads few, rays pale purple. Ga.

19. DIPLOPÁPPUS, Cass. DOUBLE-BRISTLED ASTER. Ray-flowers about 12, \mathfrak{P} . Disk-flowers $\mathfrak{O}, \mathfrak{P}$. Invol. imbricate. Scales narrow, destitute of green tips. Recep. flat, subalveolate. Pap. double, the exterior very short (about $\frac{1}{2}$ " long), interior copious, capillary. Fruit compressed. \mathfrak{P} Lvs. entire, alternate. Heads corymbous or few, rays cyanic, disk yellow.

- 1 D. linariifòlius Hook. St. clustered, leafy; branches 1-flwd., fastigiate; lvs. lin., entire, 1-veined, obtuse, rigid, rough. Dry places. 1f. Heads rather large, showy.
- 2 D. umbellàtus Hook. Smooth, simple, strict, with co heads in a level corymb;

[§] Rays violet. Achenia silky. Bristles of the inner pappus alike. Sept. Oct.....No. 1

[§] Rays whitish. Some of the longer bristles clavellate.—Ach. smoothish. Aug.. Nos. 2, 3 —Ach. villous. Sept. Oct...No. 4

Ivs. long (4-6'), lanceolate, acuminate; sc. obtuse; fr. pubes. in lines. Low grounds
2-4f. Stems purplish. Rays about 12, 3-4" long. Handsome.

- β. amygdalinus. St. roughish above; lvs. ovate-lanceolate; sc. rather loose. 2-3f
 8 D. cornifòlius Less. Rough above, some hairy in lines; hds. few, corym.-panicu late; lvs. elliptical, thin, long-pointed both ways, entire; scales shorter than the disk obtuse; cypsela glabrous. Woods, Can. to Car. 1-2f. Rays about 10, white.
- 4 D. obovàtus (Ell.) Cinereous-pubescent: heads corymbed; lvs. obovate-oblong acute; sc. lin.-subulate, rusty yellow; fr. villous; rays white Damp shades, S. 2-31

20. ERÍGERON, L. FLEABANE. WHITE-WEED. Heads subbemi spherical. Ray-flowers \Im (40—200), narrow, linear. Fis. of the disk \oiint , ∞ Recep. flat or convex, naked. Invol. scales nearly in one row and equal Pap. generally simple. Herbs with alternate lvs., rays cyanic, disk yellow

- § Rays minute, shorter than the cylindrical involucre, white. Pappus simple....1, 2, 10
- § Rays long, showy, 30-40. Pappus simple. Lvs. all radical. Hds. corymbous. No. 3
- § Rays long, showy, 50-200.—a Pappus simple. Leaves clasping. Corymbous...Nos. 4-6

-a Pappus double. Leaves sessile. Corymbous.... Nos. 7-9

- 1 E. Canadénse L. Erect; invol. oblong; rays 40-50, crowded, minute; pap. simple; stem hairy, paniculate; leaves lanceolate. (1) A common weed. 6'-6f. Jl.-Oct.
- 2 E. divaricàtum Mx. Decumbent and diffusely branched, hirsute; lvs. linear and subulate; hds. very small, loosely corymbous. (2) Dry soil, W. and S-W. 6'-2f. Purp
- 3 E. nudicaùle Mx. Glabrous; lvs. obovate or spatulate, radical, rosulate, entire hds. few; rays narrow, white. 24 Pine-barrens, S. Scape bracted, slender. 18'. Jn. Ji.
- 4 E. bellidifòlium Muhl. Robins' Plantain. Hirsute; radical lvs. obovate, obtuse, subserrate; stem lvs. remote, mostly entire, clasping; hds. 3-7; rays 50-60, purple, linear-spatulate. 24 Dry soils: common. 1-2f. May, June. Handsome.
- 5 E. Philadélphicum L. Pubescent or hirsute; lvs. thin, lower spatulate, crenate-dentate, upper clasping, sometimes cordate-auriculate; heads few, on long, slender ped.; rays 150-200, filiform, reddish. 24 Damp: com. 2f. St. lvs. various. Jn.-Aug.
- 6 E. quercifòlium Lam. Pubescent; root lvs. oblong-obovate, lyrate-pinnatifid, or deeply sinuate-toothed, the cauline sharply serrate, clasping; heads ∞, small, with innumerable filiform flesh-colored rays. 24 Low grounds. S. May.
- 7 E. **ánnuum** Pers. Common Fleabane. White-weed. Hirsute, branching; leaves coarsely serrate, ovate to lanceolate, the lower on winged stalks; rays very numerous, narrow, white. ① ② Fields: common. 2—4f. June—Aug.
- 8 E. strigosum L. Rough, with short, appressed hairs, or nearly smooth; lvs. lanceolate, tapering to each end, entire, or with a few large teeth in the middle, lower ones 3-veined and petiolate; pan. corymbous, white. (2) Grass lands: com. 2f. Jn.—Oct.
- 9 E. glabéllum Nutt. Lvs. smooth, entire, spatulate, long-tapering at base, upper lanceolate and lance-linear, sessile, acuminate; heads 4-6, pubescent; rays very numerous, pale blue. Wis. to Dak. 12'-18'. July, Aug.
- 10 E. acre L. Erect, 1f; lvs. entire, oblong to lanceolate; heads few or many, hemi spherical, with bluish-purple rays as long as the pappus. Lake Superior (Porter).

21. CALLISTEPHUS, Cass. CHINA ASTER. Ray flowers \mathfrak{P} , \mathfrak{D} , disk-flowers \mathfrak{P} . Involucre hemispherical. Recep. subconvex. Pappus double, each in \mathfrak{s} series, outer series short, chaffy-setaceous, with the setæ united into a crown; inner series of long, filiform, scabrous, deciduous bristles.

C. CHINÉNSIS. Stem hispid; branches divergent, 1-flwd.; leaves ovate, coarsely dentate, petiolate, cauline ones sessile, cuneate at base. China? Cultivation has produced innumerable varieties, double and semi-double, of every color. Aug., Sept. (1)

22 BELLIS, L. GARDEN DAISY. Rays ∞ , \mathfrak{S} . Disk \mathfrak{S} . Involuce

hemispherical, of equal scales. Recep. subalveolate, conical. Pap. none (1) 24 Heads solitary.

- 1 B. integrifòlia Mx. Annual, diffusely branched; lvs. entire, spatulate-obovate to lance-obl.; sc. with scarious margins; rays violet-purp. Ky. to Tex. 6-12'. Mar.-May.
- 2 B. PERÉNNIS. Perennial, acaulescent; root creeping; scape naked, single-flwd.; lvs. obovate, crenate. Europe. 3-4'. Fls. white, double, quilled, &c. June-Aug.

23. DÀHLIA, L. Rays \mathcal{L} . Disk $\mathbf{\xi}$. Invol. double, the outer series of many distinct scales, the inner of 8 scales united at base. Recep. chaffy. Pappus none. 24 Splendid Mexican herbs. Leaves opposite, pinnate.

(D. VARIÁBILIS. Lfts. ovate, acuminate, coarsely serrate, 3-7 in number; stems stout, widely branched; heads solitary, very large; root tuberous. Colors exceedingly variable and splendid. Heads about 3' diameter; but a variety (the *bouquet Dahlia*) has the heads from 14 to 2' broad.

24. BOLTONIA, L'Her. Ray-flowers ♀, in a single series, those of the disk tubular, ♀. Scales in 2 series, appressed, with membranous margins. Recep. convex, punctate. Cyp. flat, 2- or 3-winged. Pap. of minute setæ, 2 (to 4) of them usually lengthened into awns. 24 Glabrous, loosely branching. Leaves sessile. Rays white. Aug.—Oct.

- 1 **B. asteroides** L'Her. Lvs. lanceolate, all entire; heads corymbed; fruit broadlyoval with a few minute setæ,—no awns. Swamps, Pa. to Ga. 1—3f. Rays 13—20.
- 2 B. glastifòlia L'Her. Lvs. linear-lanceolate, the lowest serrate; heads in a loose paniculate corymb; fruit obovate, with 2 long awns. Prairies, W. & S. 3-7f. Rays 30.
- **3 B. decúrrens.** Lvs. lance-oblong, the broad base decurrent on the green, winged stem; heads corymbed, globular in fruit; fruit obovate, with 2 awns and several minute bristles; rays purple. Bottoms. Ill. (J. Wolf.) (B. glastifolia. β .? T. & G.)
- **t B. diffusa** Ell. Lvs. lance-linear to subulate, entire; hds. small, in a diffuse panicle; fruit obovate, with 2 short (half its own length) awns. Prairies, W. & S. 3-6f.

25. BRACHYCHÆTA, T. & G. FALSE GOLDENROD. Pap. a single row of scale-like bristles, shorter than the obconic cypsela. Otherwise as in Solidago. The golden yellow heads arranged in little clusters, forming 1 or nore unilateral racemes.

B. cordàta T. & G.-Woods, E. Ky. (at Cumberland Gap) to Ga. along the mountains. 2-4f. Lvs. ovate, cordate, the lower petiolate, serrate. Hds. small (3" long). Aug.-Oct.

26. SOLIDAGO, L. GOLDENROD. Fls. of the ray about 5, 2, remote; of the disk 2. Invol. oblong, imbricate, with appressed scales. Recep. punctate, narrow. Pap. simple, capillary, scabrous. 24 Very abundant in the U. S. Stem erect, branching near the top. Lvs. alternate. Hds. small, with 1-15 (very rarely 0) small rays. Fls. yellow (one species whitish), expanding in the autumnal months. Fig. 319. (Addenda.)

- 12 S. virgaurea L. β. alpina (Bw.) St. dwarf, furrowed, simple; lvs. oval, subservate or entire, narrowed to a petiole, upper lanceolate; hds. few (1-9), large, rays 10-12; sc. acute, very thin. Tops of high mts. Me. to N. Y., shores of L. Sup. 3-6'.
 y. glomerata. Taller; lvs. ovate-oblong, servate; hds. very large. Mts. N. Car.
- 13 S. humilis Ph. Glabrous, simple; lvs. oblanceolate, crenate-serrate, acute, the lower obtuse, petiolate; rac. paniculate; hds. middle-size, about 12-flwd.; sc. obtuse. Mt. streams, N. H. and N. 6-12'-2f.-Varies with the branches public entrance.
- 14 S. virgàta Mx. Tall, virgate, with a simple raceme at top; lvs. thickish, entire, oblanceolate, the lower subserrate, petiolate: hds. about 15-flwd., rays 6-7; fr. pubescent. Damp pine-barrens, N. J. to Fla. 3-5f. Rac. 6'-1f. long, of small clusters.
- 15 S. stricta Ait Strict, simple; lvs. lanceolate, lower serrate, very long-petiolate, upper entire, panicle slender; heads 10-12-flowered; scales obtuse; rays 5 or 6. Wet woods, N. 2f.
- 16 S. speciòsa N. Stout, simple; lvs. lanceolate, entire, thick, lower very broad, subserrate, petiolate; panicle thyrsoid; ped. pubescent; rays, 6-8, large. Thickets: not common. 3-6f. Very handsome.-Varies with the panicle slender or virgate.
- 17 S. verna Curtis. Hoary-public stem few-lvd., loosely paniculate; lvs. ovate to lance-ovate, the lower finely serrate; rays, 10-12. Barrens, S. Fls. in May, June.
- 18 S. pubérula N. Puberulent as if dusty, strict, simple; lvs. oblanceolate to lanceolate, the lower subserrate; pan. deuse, compound; sc. linear-subulate; fis. 20-25, rays about 10, elongated. In woods. Stem purplish, 2-3f. Heads rather large.
- 19 S. sempérvirens L. Lvs. thick, lanceolate, entire, obscurely 3-veined; hds. paniculate, 25-30-flwd., rays 8-10; ped. scabrous-pubescent. Marshes. 3-6f. Handsome.
- 20 S. angustifòlia Ell. Lvs. thick, entire, erect, 1-veined, the lower lanceolate; pan. dense, virgate; hds. 15-20-flowered, rays 7; ped. glabrous. Swamps, S. 2-4f.
- 21 S. pilòsa Walt. Hirsute, tall, stout; lvs. lance-oblong to lance-ovate, remotely serrulate, rough; rays minute, 2-10, disk-fis. 5-6. Damp barrens, N. J. and S. 4-7f.
- 22 S. odòra Ait. St. terete, smoothish, slender; lvs. lin.-lanceolate, abrupt at base, acute, pellucid-punctate; rays 2-4, disk-fis. 3-4. Dry hills and woods. 2-3f. The plant is yellowish-green, fragrant, and yields by distillation a fragrant oil. β. retrórsa. Lvs. linear to subulate, acute, often twisted; rays 1-3. Ga.
- 23 S. tortifòlia Ell. St. rough-pubescent; lvs. many, linear, small, subentire, not punctate, often twisted at base; sc. obtuse; rays 3-5, disk-fis. 3-5. Dry fields, S. 2-3f.
- 24 S. nemoràlis Ait. Dusty-subtomentous; lvs. obscurely 3-veined, roughish, acute, attenuate at base; hds. small; fis. 10-15, rays 5-6, conspicuous. Dry fields, roadsides. 1-2f.—Varies with stem much branched, or with stem and panicle simple and slender.
- 25 S. rupéstris Raf. Smooth, slender; lvs. linear-lanceolate, plainly 3-veined; hds. small, in a simple panicle; fls. 15, rays very short. Rocky banks, Ind. Ky. 2-3f.
- 26 S. Leavenwórthii T. & G. St. minutely downy, very leafy; lvs. smooth, lin.lanceolate, entire above; panicle open; heads rather large; ray and disk flowers each 10-12. Damp soils, South. 2-3 feet high.
- 27 S. Missouriénsis N. Low, simple; lvs. lance-lin., tapering both ways, shining, the lowest oblanceolate, with slender serratures; rac. small, dense; pedicels glabrous hds. small, 12-15-flwd.; sc. with greenish tips; rays about 8. Dry prairies, Ill. Mo. 1-2f
- 28 S. serótina Willd. St. terete, striate, tall : lvs. slightly serrate, lin.-lanceolate, veins beneath pubescent; ped. pubescent; hds. snull, 15-20-flwd. Low grounds. 3-6f.
- 29 S. gigántea Ait. St. striate, tall; lvs. lanceolate, with sharp, spreading serratures, strongly 3-veined; pan. downy-hirsute; hds. 15-20-flwd. 4-7f. Generally much branched.
- 30 S. Canadénsis L. St. downy; lvs. lanceolate, acuminate, rough; hds. very numerous and small; fls. 12-17, rays short and obscure, about 7. Copses, hedges: com. 2-5f.
 prócera. St. and lvs. beneath villous; hds. and rays larger. Low grounds. 4-7f.
- 31 S. Shórtii T. & G. St. minutely rough-downy; lvs. lance-oblong, acute, smooth pan. contracted, elongated; sc. with greenish tips; fls. 10-15, rays 5-7. O. Ky. 2f.
- 32 S. gracíllima T. & G. Smooth, slender; lvs. lance-spatulate, obtuse, to linear, entire; panicle narrow, hds. 9-12-flowered, scales obtuse; rays 0. Barrens, Fla. 21.

- **33 S. brachyphýlla** Chapm. Pubescent; leaves spatulate to round-oval. serrulate; rac. spreading; scales obtuse, rigid; disk-fis. 3-5, rays 0. Dry soils, Ga. Fla. 3f.
- **34 S. altíssima** L. Hairy, tall; lvs. lanceolate, very veiny, rough and wrinkled, the lower serrate; scales acute; rays 6-8. Fields: common. 3-5f. Variable.
- 35 S. Drummóndii T. & G. Minutely velvety; lvs. ovate or broad-oval, acute both ways, sharply serrate, veiny; scales oblong-obtuse; rays 4-5. Ill. opp. St. Louis. 1-2f.
- 36 S. Rádula N. Rough-downy, simple; lvs. oblong-spatulate, tapering to base, serrate above, very rough and rigid; hds. small, rays 5, disk-fis. 3-6. Ill. to La. 1-2f.
- 37 S. amplexicaulis T. & G. Rough-pubescent, subsimple; lvs. broad-cordate to ovate, servate; petioles wing-clasping; rays 1-3. Dry woods, W. Fla. to La. 2-3f.
- **38 S. ulmifòlia** Willd. Stem glabrous, with hairy branches; lvs. thin, elliptic-ovate, acuminate, serrate, tapering to base, smooth above, villous beneath; raceme recurved-spreading; hds. small, scales acute, rays 3–4, disk-fis. 3–4. Thickets, N. and W. 3f.
- **39 S. Boottii** Hkr. Stem glabrons, with hairy branches; lvs. ovate to lance-ovate, pointed at both ends, serrate; pan. long, loose; hds. middle-size, scales oblong, obtuse; rays 2-5, disk-flowers 8-12. Sandy soils, S. 2-3f.-Varies with stem downy.
- 40 S. linoides Sol. Smooth throughout, slender, simple; lvs. lanceolate, finely serrate; scales oblong-linear, obtuse; hds. small, rays 1-4, disk 4-5. Bogs, near Boston to N. J. 12-20'. Racemes of the panicle short, secund, at length spreading.
- **41 S. Muhlenbérgii** T. & G. St. furrowed; lvs. smooth both sides, strongly serrate, ovate to lanceolate, pointed both ways; rac. axillary, remote, spreading; hds. 15-20-flowered, scales linear, obtuse. Damp woods, N. H. to Pa. 2-3f.
- 42 S. pátula Muhl. St. angular-striate; lvs. elliptic, acute, serrate, very rough above. the lower oblong-spatulate; panicle loose; scales obtuse, flowers 12-15. N. and W. 3f
- 43 S. ellíptica Ait. Glabrous, leafy; lvs. elliptical, acute both ways, subserrate; pan. pyramidal; rays very short, 5-8, disk-fis. 6-7; scales obtuse. Marshes, R. I. to Ga. β. Ellióttii. Panicle more widely spreading. South. (S. Elliottii T. & G.)
- 44 S. argùta Ait. Strict; lvs. smooth, unequally serrate with divergent teeth, ob long-ovate to elliptical; pan. corymbous; rays about 10, disk-fis. 9-10; cyp. smooth Woods, meadows: common. 3f. Plant smooth and shining.
 - β . juncea. Leaves lanceolate, upper entire; rays twice longer than involuce.
- 45 S. neglécta T. & G. St. striate; leaves lanceolate to linear. the lower divergent-serrate, long-stalked; panicle oblong or pyramidal; rays 6-10, disk-flowers 7-12; cypscla smooth. Swamps, Me. to Penn., and W. 3-4f. Root leaves 6-12'.
- 46 S. Ohiénsis Riddell. Entirely smooth; lvs. entire, lanceolate, flat, obtuse, to oblong-lanceolate, abruptly-acute, the lower on long stalks; hds. numerous, large, 15-20-flowered, rays about 6. Meadows and prairies, West N-Y. to Ind. and Wis. 2-3f.
- 47 S. Riddéllii Frank. Stout, nearly smooth; root lvs. very long, lance-linear, long-pointed, on long petioles, the cauline clasping, carinate, acute; heads 20-24-flowered, densely clustered in the level corymb. Wet prairies, O. to Mo., and N. 15-30'.
- 48 S. corymbosa Ell. Glabrous, with the corymbous branches hirsute; lvs. scssile, lance-obl., thick, rigid, smooth; hds. large, rays 10, disk-fis. 20; fr. smooth. Ga. 4-6f.
- 49 S. **£Ioughtónii** T. & G. Low, smooth; lvs. lin.-lanceolate, acutish, flat, entire, tapering to base or petiole; hds. few, large, 20-30-flwd., rays 9 or 10. N. Y. Mich. 1-2f.
- 50 S. rígida L. Stout, rough-hairy; lvs. rigid, ovate to oblong, serratc, upper minate; hds. very large (4-5"), scales obtuse, rays 7-10, disk-fis. 25+. Dry. Ct., S. and W. 3-5f.
- 51 S. spithamæa Curt. Low, villous; lvs. lance-oval to oblong, thin, sharply serrate; hds. middle-size; scales lanceolate, acute; rays 6-8, disk-fls. 15-20. High mts. N. Car.
- 52 S. lanceolàta Ait. St. angular, hairy, much branched; lvs. lin.-lanceolate, entire, 3-veined; rays minute, about 17. disk-fis. 10. Meadows, copses: com. 2-4f. Fragrant,
- **53 S. tennifòlia** Ph. St. angular, smooth, much branched; lvs. narrowly linear, 1-veined, the axils leafy; corymb open, loose; rays about 10. Dry fields, coastward.

27. BIGELOVIA, DC. Fls. 3-4, all tubular, \notin . Rays 0. Invol. cylindrical, as long as the flowers. Scales rigid, linear, closely imbricated Recep. pointed by a scale-like cusp. Fr. obconic, hirsute. Pap. bristles m one row. 24 Glabrous, slender. Leaves alternate, entire. Heads fastigiately corymbous, with yellow flowers and colored scales.

B. virgàta DC.-Swamps, N. J. to Fla. and La. 1-2f. With virgate branches from base. Lvs. narrowly lin., 1-veined, the caulinc lin.-spatulate. Sc. glutinous. Aug.-Oct.

28. ISOPÁPPUS, T. & G. Ray-fis. 5—12, \mathfrak{P} ; disk-fis. 10—20, \mathfrak{P} . Scales of the invol. lance-subulate, closely imbricated. Recep. alveolate. Fr. terete, silky-villous. Pap. a single row of equal capillary bristles. (2) Roughhairy, branching, with alternate leaves and loose panicles. Aug.—Oct.

I. divaricàtus T. & G. Scabrous, hispid; lvs. lin.-lanceolate, taper-pointed each way; ped. slender, naked; rays 6-8, disk-fls. 10-13; pappus tawny. Dry. Ga. Fla. to Tex.

29. HETEROTHECA, Cass. Hds. ∞ -flowered. Rays in one series, \Im ; disk-fls. \oiint . Scales imbricated, appressed. Recep. alveolate, fringed Fr. minutely canescent, of the ray without pappus (naked), of the disk with a double pap., the outer very short, scale-like, the inner of capillary bristles. \Im Hairy, corymbously branched, with alternate leaves and yellow flowers.

H. scàbra DC. St. flexnons, striate; lvs. scabrous, oblong-ovate, dentate; pet. wing clasping; hds. large, rays 15-20; pap. tawny red, the outer white. S. 2-3f. Sept. Oct.

30. CHRYSÓPSIS, Nutt. Hds. ∞ -flowered. Ray-fls. \mathfrak{P} ; disk-fls. \mathfrak{P} . Invol. imbricate. Recep. subalveolate, flat. Pap. of the ray and disk similar, double, the exterior short, interior copious, capillary, brownish. Cyp. hairy, compressed. \mathfrak{L} (2) Hairy, with alternate and entire leaves and yellow flowers. Heads corymbous.

- I C. graminifòlia N. Canescent with long, silky hairs; stcm leafy to the top; lvs. linear, the upper reduced; hds. many, large, loosely corymbed. Del. to Fla. 2f. Sept.
- 2 C. oligántha Chapm. Canescent with silky hairs; st. almost leafless above; hds quite large, few, on slender peduncles; lvs. lance-lin. Damp sands, Fla. 2f. Apr. May.
- 3 C. pinifòlia Ell. Glabrous; lvs. narrowly linear to setaceons, rigid, erect; hds. solitary, few; cyp. villous; pap. reddish-brown, the outer whitish. Hills, Ga. 1-2f. Sept.
- 4 C. falcàta Ell. Villous; lvs. somewhat falcate, spreading, narrow; hds. small, in axillary corymbs; rays 3-toothed. Dry sands, Ms. to N. J. St. 8', stout, leafy. Sep. Oct.
- 5 C. Mariàna N. Silky-arachnoid, simple; lvs. oblong-lanceolate, smooth when old, the lower spatulate, rather obtuse, upper reduced, acute; hds. about 7, large, 15-20-rayed; ped. and acute scales glandular. 24 Barrens, N. J. to Fla. 2f. Sept.
- 6 C. gossýpina N. Cottony-tomentous, simple; lvs. uniform, ovate-oblong, optuse, the lower tapering to base; hds. few, large; ped. short, glandular. (2) Md. to Fla. m barrens. 1--2f. Lower leaves rarely sinuate-toothed. (C. dentata Ell.) Sept.
- 7 C. villòsa N. Villons-pubescent, leafy to top; lvs. acute, lower oblong-spatulate, npper oblong-linear, bristly-ciliate; hds. large, umbel expanded. Ill. to Ala. 2f.
- 8 C. trichophýlla N. Silky-villous, branching, leafy; lvs. oblong to lance-linear, the lower obtuse; corymb large; ped. and scales smoothish. (2) Barrens, S. 2-3f. Sept.
- 9 C. scabrélla T. & G. Dusty-scabrous, stout, branched; lvs. obloug-lanceolate, the lower narrowed to base, upper acute; corymb large; ped. glandular. Fla. 2f. Oct.
- 10 C. decúmbens Chapm, Silky-villous, decumbent; lvs. lance-oblong, obtuse. with leafy axils, lower spat.-oblong; hds. very large. panicu.ate. glandular. Fla. 3-4f. Nov

AL CONVZA, L. GNATBANE. Fls. all tubular, those of the margin \mathfrak{P} of the centre \mathfrak{F} or \mathfrak{P} . Scales in several rows. Recep. flat or convex. Cyp compressed. Pap. 1 row of (red) capil. bristles.—Herbs chiefly trop. Fls. yel

C. ambígua DC. Cinereous-pubescent; lower lvs. sinuate-lobed, acute, middle ropand-dentate, npper linear, entire; hds. paniclea. Ga. S. Car. Ap.-Jl. § (C. sinuata Ell.)

32. ÍNULA, L. ELECAMPANE. Hds. many-flowered. Invol. imbricate. Ray-fls. numerous, \mathfrak{P} ; disk-fls. \mathfrak{P} . Recep. naked. Pap. simple, scabrous. Anthers with 2 bristles at base. \mathfrak{U} Coarse European herbs, with alternate leaves and very large yellow heads.

I. Helènium L. Lvs. amplexicaul, ovate, rugous, downy beneath; hds. solitary, terminal; sc. ovate. Pastures and roadsides, N. Eng. to Ill. 4-6f. Root lvs. 1-3f. J. Aug. §

33. PLUCHEA, DC. MARSH FLEABANE. Hds. ∞ -flowered; fls. of the margin \Im , of the centre \oiint , but sterile. Invol. imbricated. Recep. flat, naked. Sty. undivided. Pap. capillary, simple.—Strong-scented herbs, with alternate leaves and corymbs of purple fls., and copious, reddish pappus.

- 1 P. bifrons DC. Pubescent, leafy; lvs. oval-oblong, acute, fincly serrate, cordateamplexicaul, veiny; heads in compound, corymbous clusters. 24 Damp, S. 2f.
- 2 P. camphoràta DC. Lvs. ovate-lanccolate, somewhat pubescent, acute, sessile or short-petioled, serrate; fls. in crowded corymbs; sc. viscid-downy, pointed. (1) Salt marshes, Mass. to Fla. 1-3f. Stout, some fleshy, with upright branches. Aug. Sept.
- 3 P. purpuráscens DC. Glandular-tomentous; lvs. ovate-lanceolate, serrate, ou slender petioles; hds. on slender ped.; sc. downy, acute. (1) Swamps. 1-2f. Fla. Sept.
- 4 P. foetida DC. Nearly glabrous, very leafy; lvs. broadly lanceolate, acute or acuminate at each end, petiolate, obtusely subserrate; heads numerous, in paniculate corymbs; scales smoothish, acute. 24 Open hills, W. & S. 1-2f. Aug.-Oct.

34. BÁCCHARIS, L. GROUNDSEL TREE. Hds. discoid, 5 9. Invol. imbricate, cylindric, or ovate, with subcoriaceous, ovate scales. 5 Sta. exserted. Recep. naked. Pap. capillary. 5 With alternate leaves and white flowers in Autumn.

- **1 B. halimitòlia** L. Whitish-scurfy; lvs. obovate, incisely- or repand-dentate above the highest lanceolate; paniele compound, leafy; fascicles pedunculate, termiual, in a dense paniele. Sea-coast, Conn. to Fla. 6–12f. A handsome shrub.
- 2 B. glomeruliflora Pers. Minutely scurfy; lvs. all obovate, very obtuse, repandfew-toothed; heads in sessile, axillary glomerules. Coast, Va. to La. 3-6f.
- B. angustitòlia Mx. Diffusely branched; lvs. linear, sessile, entire; hds. small.
 15-20-flowered, cylindrical, axillary, loosely paniculate. Marshes, S. 6-10f.

35. PTEROCAULON, Ell. BLACK-ROOT. Hds. many-flowered, the fertile flowers \mathfrak{P} , in several rows, the sterile flowers central, mostly \mathfrak{P} . Sc. imbricated, caducous with the fruit, \mathfrak{P} corollas 3-toothed, \mathfrak{P} 5-cleft. Cyp angular, hispid. Pap. of equal capillary bristles longer than the involuce. \mathfrak{Q} Rhizome tuberous. Leaves alternate, decurrent, and the stem winged Heads sessile, crowded in a thick woolly spike.

P. pychnostáchyum Ell. Simple; lvs. lanceolate, smooth above, cream-white tomentous beneath, as well as one side of the wings of the stem. Sandy soils, S. 2-3f. Spike 2-3'. May-Aug. A curious plant.

36. BORRÍCHIA, Adans. SEA OX-EVE. Ray-fis ligulate, 9, fertile

Scales imbricated, the outer leafy. Recep. flat, chaffy, the chaff rigid, per sistent. Fr. 4-angular, crowned with a 4-toothed pappus. 55 Maritime with oppos'te leaves and solitary yellow heads.

 B. frutéscens DC. Canescent, downy; lvs. oblanceolate, repand, obtuse-cuspidate subconnate at base; chaff of the recep. rigidly cuspidate. Marshes, Va. to Fla. 1-3f.
 B. arboréscens DC. Smoothish; lvs. spatulate, entire; chaff obtuse. S. Fla. 8f.

37. ECLÍPTA, L. Ray-fls. \mathcal{Q} , numerous, narrow; disk \mathcal{Q} , mostly 4toothed. Scales 10—12, in two rows, leafy, lance-ovate. Recep. flat. Chaff bristly. Cypsela somewhat angular or 2-edged. Pap. 0. (1) Strigous. Lvs. opposite. Heads axillary and terminal, solitary. Flowers white. Fig. 72.

E. alba (L.) Erect or diffuse, with short, appressed hairs; lvs. lance-oblong, tapering to each end, subserrate; ped. longer than the hds.; scales lanceolate. Damp soils, Ill. to Md., and S. 1-3f. Rays minute. (E. erecta L. E. procumbens Mx. Cotula alba L., &c.)

38. GALINSÒGA, R. & P. Rays 4 or 5, small, obtuse, \mathfrak{P} . Invol. scales 4 or 5, ovate, thin. Recep. conical, chaffy. Cyp. angular. Pappus of small, fringed scales, or 0. ① Leaves opposite, 3-veined. Heads small, with white rays and yellow disk-flowers.

G. parvifiora Cav. Lvs. ovate, acute, subserrate; pap. scales 8-16. A weed in cultivated grounds, coastward, Mass. to Penn. 1-3f. Summer. § S. America.

39. POLÝMNIA, L. LEAF-CUP. Involucre double, outer of 4 or 5 large, leafy scales, inner of about 10 leaflets, concave. Ray-flowers pistil late, few; disk sterile. Receptacle chaffy. Pappus none. 21 Coarse and clammy. Leaves opposite. Flowers yellow.

- 1 P. Canadénsis L. Viscid-villous; lvs. petiolate, acuminate, lower piunatifid, up per 3-lobed or entire, rays shorter than the invol. Can. to Car. and Ill. 3-5f. June
- 2 P. uvedàlia L. Hairy and rough, stout; lvs. 3-lobed, acute, decurrent into the pet iole, lobes sinuate-angled; rays 7-12, much longer than the involucre. In highland woods, N. Y. to Ill., and S. 3-6f. Lvs. very large (as also in No. 1). Hds. showy.

40. CHRYSÓGONUM, L. Rays about 5, \mathfrak{P} , fertile ; disk \mathfrak{P} but sterile. Scales in two rows of about 5 each, the outer leafy, the inner chaffy. Recep. flat, chaffy. Cyp. of the ray obcompressed, obovate, each embraced by a chaff scale, of the disk abortive. Pappus a small, 2–3-toothed crown \mathfrak{U} A little prostrate herb, with opposite leaves and solitary, pedunculate, bright vellow vernal flowers.

C. Virginianum L.—In rich shady soils, Md. to Ill., and South. Acaulescent. finally caulescent. One of the earliest flowers of Spring.

41. SÍLPHIUM, L. ROSIN-WEED. Ray-fls. numerous, in 2 or 3 rows. dertile, outer row ligulate; disk-fls. sterile. Invol. campanulate. Scales in several series, leafy and spreading at summit. Recep. small, flat, chaffy. Cyp. broad, flat, obcompressed, crowned with a 2-toothed pappus. 24 Stout, coarse, resinous herbs. Heads large. Flowers yellow. Summer (p. 447).

* Stem nearly leafless, scape-like. Lvs. very large, alternate, mostly radical....Nos. 1-3

- 2 S. terebinthinàceum L. Prairie Burdock. St. glabrous; lvs. ovate to oblong, cordate, tooth-serrate, obtuse (1-2f); hds. panicled; scales round-oval; rays about 20; fr. winged. Prairies, W. and S. 4-Sf. Exudes much resin. Hds. 1' broad, rays 1' long. β. pinnatifidum. Lvs. more or less deeply lobed or pinnatifid. Prairies.
- 8 S. compósitum Mx. Glabrous throughout; slender, glaucous; lvs. cordate, vari ously sinuate-pinnatifid with lobed segments; hds. corymbed; fr. roundish-obcordate; rays about 10. Barrens, S. 3-6f. July, Aug. Varies with leaves only toothed. Hills.
- **4 S. trifoliàtum** L. St. glabrous, **ter**ete or 6-angled; lvs. lanceolate, acute, short-petioled, in 3's or 4's, upper opp.; cyme loose; fr. oval, 2-toothed. Dry, O. to Fla. 4-6f.
- 5 S. integrifòlium Mx. Scabrons; st. 4-angled; lvs. opp., sessile, ovate-lanceolate, entire, cordate; corymb close; fr. broad-winged, 2-toothed. Prairies, W. and S. 2-3f. β. ternatum. Stem 6-angled; lvs. verticillate in 3's. With the common form.
- 6 S. scabérrimum Ell. Rough-hispid; lvs. rigid, oval, some pointed, serrate, petiolate, scales ciliate-serrulate; fr. roundish, broad-winged, deeply notched at apex. W Ga. to La. 3-4f. Corymbed. Rays 20, spreading 2'. Fruit 6". Aug. Sept.
- 7 S. lævigàtum Ell. Glabrous; lvs. lance-oblong, acute, serrate, petiolate; scales ciliate; fruit, large, oval, narrowly winged, emarginate. W. Ga. Ala. 2-3f. Heads small, loosely corymbed. Rays spreading, 11. Fruit 4". Aug. Sept.
- 8 S. Asteríscus L. Hispid or hairy; lvs. lanceolate, crenate-serrate, petiolate; scales leafy; fruit broad-obovate, 2-toothed. Dry soils, Va. to Fla. 2-4f. June-Aug.
 β. pùmilum. Downy, low; leaves elliptical; heads small; fruit truncate.
- 9 S. perfoliàtum L. Cup-plant. Stem square; leaves large, thin, ovate, forming a cup with their connate bases; heads on long peduncles; fruit broad-obovate, winged, notched. By streams, W. and S. 4-7f. Heads large. July, Aug.

42. BERLANDIÈRA, DC. Ray-fis. 9, fertile, in one series; disk 9 but sterile. Scales in three series, leafy, subequal. Recep. chaffy. Pales obtuse. Cyp. all marginal, in one row, obcompressed, wingless, obovate, adherent to the inner scales. Pap. minute. 24 Velvety-canescent, with alter nate, cordate, petiolate leaves and yellow rays.

1 B. tomentòsa T. & G. Caulescent, simple, white-tomentous; lvs. oblong, obtuse, crenate; heads in small, dense corymbs. Barrens, S. 1-2f. April-Aug.

2 B. subacaùlis N. Acaulescent, at length some caulescent, roughish canescent; lvs. sinuate-pinnatifid; scapes tall, bearing a single head. Ga. Fla. May, June.

43. MADIA, Molina. Invol. scales as many as the rays, complicate and embracing the compressed cypselæ. Recep. chaffy at its border. Rays 5-15, φ ; disk-fls. φ , but often sterile. Pap. 0. (1) Hairy and glandular.

M. ÉLEGANS. Lvs. lance-linear, sessile; heads corymbed; rays lincar-cuneate, 3-toothed at apex, yellow, with a purple base. From California, very showy. (Madaria, DC.)

44. SPHENÓGYNE, Br. Invol. imbricate. Sc. with broad scarious tips. Recep. chaffy, pales embracing the flowers. Rays neutre; disk-fis.
§. Cyp. hairy. Pap. of obtuse, contorted, chaff-scales.—S. Afr. Lvs. alternate.
S. SPECIÓSA. Leaves pinnatifid, with oblong cut segments; rays linear-oblong, spread ing 2', yellow, disk dark purple. (1) 1f. Blooms profusely from July to Oct.

45. PARTHÈNIUM, L. Rays 5, very short, fertile; disk-fls. ∞ , tubular, sterile. Invol. hemispherical. Sc. in two series, outer ovate, inner orbicular. Recep. conical, chaffy. Cyp. 5, compressed, cohering with 2 contiguous pales. American herbs with alternate leaves. (Flowers white.)

- 1 P. integrifòlium L. Pubescent, rigidly erect; lvs. lancc-ovate, coarsely dentatecrenate, coriaceous; hds. many, corymbed. 24 Dry. Md., W. and S. 3-5f. J.-Sept.
- **2 P. Hysteróphorus** L. Puberulent, decumbent; lvs. bipinnatifid, the upper linear; heads numerous, very small, in a diffuse panicle. River banks, Fla. to La.

46. IVA, L. MARSH ELDER. HIGHWATER SHRUB. Hds. discoid, monœcious. Invol. of 3-9 scales, distinct or partly united. Marginal fls. 1-5, fertile, the others sterile. Recep. chaffy. Cyp. obconic, obtuse. Pap. none. Herbs or shrubs. Lower lvs. opposite. Hds. small, greenish white

- 1 I. frutéscens L. Shrubby; lvs. fleshy, lanccolate, coarsely serrate, upper lance linear, entire; hds. axillary; scales 5, distinct, rounded; cypselæ 5. Borders of san marshes, Mass, to Fla. 3-8f, bushy. Racemes paniculate, hds. drooping. July-Sept
- 2 I. ciliàta Willd. Annual, hairy; lvs. lance-ovatc, acuminate, coarsely toothed; lds. spicate; sc. 3, distinct, roundish, ciliate; cyp. 3. Wet. Ill. to La. 3-7f. Aug.-Oct.
- **3 I. imbricària** Walt. 24 Terete, glabrous; lvs. fleshy, linear-lanceolate, 3-veined, sessile; heads drooping, in leafy racemes; scales 6-9, obtuse, imbricated in 2 rows, with torn edges. Sea-coast, S. 1-2f.

47. AMBROSIA, Tourn. HORSE-WEED. Monœcious. Sterile involucre of several scales united into a depressed, hemispherical cup, many-flowered. Anth. approximate, but distinct. Fertile involucre 1-leaved, entire or 5toothed, 1-flowered. Cor. 0. Sty. 2. Sta. 0.—Herbaceous plants with mostly opposite leaves and unsightly flowers. July—Sept. Figs. 73, 342.

- **(A. bidentàta** Mx. Hairy and leafy, with simple branches; lvs. sessile or clasping, oblong, with a single tooth on each side near the base; fertile hds. axillary; fr. 4-angled, acutely pointed, the ribs produced into 4 short spines. ① Prairies, Ill. to La. 1-3f.
- 2 A. trífida L. Rough-hairy; lvs. 3-lobcd, serrate, lobes oval-lanceolatc, acuminate;
 fr. with 6 ribs ending below the conical top. ① Along streams, &c. 5-10f. Aug.
 β. integrifolia. Leaves ovate, acuminate, often some of them 3-lobed.
- **3 A. artemisiæfòlia** L. *Hog-weed*. Lvs. twice-pinnatifid, smoothish, petioles cill ate; sterile hds, in panicled racemes, fertile axillary, sessile. ① Gardens, fields, 2-3f.
- 4 A. psilostàchya DC. Whitish, woolly, branching and leafy; lvs. rigid, the lower opp., bipinnatifid, upper pinnatifid; rac. spike-like; fr. hairy. (1) Prairies, Wis. to Tex.

48 XÁNTHIUM, Tourn. CLOT-WEED. Monœcious. & Hds. spicate above. Scales distinct, in one row. Anth. approximate, but distinct. Recep. chaffy. 2 Invol. clustered below, 2-lvd., clothed with hooked prickles, 1- or 2 beaked, enclosing 2 fls. Sta. 0. (1) Coarse weeds with alternate leaves.

- 1 X. Strumàrium L. Rough, unarmed, branching; lvs. cordate, lobed, 3-veined, unequally serrate; fruit elliptical, armed with stiff, hooked thorns, and ending with 2 spreading, straight horns. Fields, waysides, N., M. 2-3f. Aug. Unsightly.
- 2 X. spinòsum L. Whitish-downy, armed with triple, slender, subaxillary spines;
 lvs. lance-ovate, 3-lobed, dentate, or entire; \$ invol. oblong Waysides, &c. 2f. Sept.

49. MELANTHERA, Cass. Fls. all tubular, \forall . Scales in 2 subequal scries. Recep. chaffy, the pales partly investing the fls. Cyp. short, truncate

angular. Pap. a few minute caducous awns or bristles. \mathcal{U} Scabrous, with square stems, opposite, petioled, 3-veined leaves and long peduncled heads. Corolla white. Anthers black, tipped with a white appendage.

M. hastàta Mx. Lvs. hastately 3-lobed, acuminate, dentate; sc. lance-ovate, acuminate, pales rigid, cusp-pointed. Dry soils, S. Car. to Fla., and W. 3-6f. Jl.-Sept.
 M. deltoìdea Mx. Lvs. ovate-deltoid; scales ovate; pales or chaff obtuse. S. Fis

50. ZÍNNIA, L. Ray-fls. ligulate, \mathfrak{P} ; disk tubular, \mathfrak{P} . Sc. oval, mar gined, imbricate. Recep. chaffy, conical. Pap. of the disk of 1 or 2 erect, flat awns. (1) American herbs, with opposite, entire leaves and solitary terminal heads. Rays bright-colored, showy.

- 1 Z. multifiòra L. Lvs. lance-oblong, sess.; peduncles scarcely longer than the lvs.; rays oval, shorter than the invol.; fr. 1-awned; pales entire. Fields, S. 6'-2f. May, Jn. §
- 2 Z. ÉLEGANS L. LVS. ovate, cordate, sessile and clasping; peduncles much longer than the leaves; pales serrated; fruit 2-awned. Mexico. 2-4f. Fls. single or double, of all colors, often brilliant, blooming in gardens throughout the Summer.

51. HELIÓPSIS, Pers. OX-EYE. Invol. imbricate, with ovate, sub equal scales. Rays linear, large, \Im ; disk \oiint . Recep. chaffy, conical, the pales lanceolate. Fruit 4-sided. Pappus 0. 24 Leaves opposite. Heads large. Flowers yellow, like Helianthus.

H. lævis Pers. St. smooth; lvs. ovate-oblong to lanceolate, coarsely serrate, petiolate, 3-veined, smooth beneath. Hedges and thickets: common. 3-5f. June, July.

 $\beta.\ gracilis.$ Slender, 2f; lvs. lance-ovate, scabrous, acute at base.

y. scabra. Stem and leaves scabrous, yellowish ; leaves truncate at base. W. 6f

52. TETRAGONOTHÈCA, Dill. Hds. radiate. Invol. double, the outer of 4 leafy bracts united at base, the inner of 8 small scales similar to the chaff of the conical receptacle. Ach. smooth, truncate, destitute of pappus. 24 Clothed with viscid hairs, opposite leaves, with 1 or few yellow-flowered, large heads, on long peduncles.

T. helianthoides L.—Sandy soils, Va., and S. 3f, A stout, coarse, unsightly herb. Leaves ovate, sessile, repand-toothed. Rays spreading nearly 3'. April—June.

53. ECHINÀCEA, Mœnch. PURPLE CONE-FLOWER. Scales of the invol. in 2 or 3 rows. Ray-fls. neutral; disk-fls. \checkmark . Recep. conic, bristling with stiff, spiny pales. Cyp. 4-angled. Pap. a few teeth. 4 Branches each with 1 large head. Leaves alternate. Rays rose-purple, drooping.

- E. purpùrea Mœnch. Very rough; lower lvs. broad-ovate, 5-veined, cauline lanceovate, acuminate, nearly entire; rays 12-15, very long (2-3'), bifd. Thickets, W. and S. 4f. July-Sept.-Varies in roughness, and with white rays. (See Addenda.)
- 2 E. angustifòlia DC. St. hispid, slender; lvs. all entire, hispid-pubesceut, 3-vein ed, lanceolate to lance-linear; rays 12-15, narrow, 1-2' long. Prairies and marshes, Ill. Mo., and S. 2-3f. Rays sometimes white. May-July. (See Addenda.)
- 3 E. atrórubens N. Smooth or rough; stem simple, furrowed; lvs. lance-linear to linear. rigid, the lower 3-veined; rays 8-11, shorter than the disk (1'); scales in 3 rows; pappus of 4 teeth. Damp barrens, Ga. Fla., and W. 2f. June-Aug.

54. RUDBÉCKIA, L. Invol. scales nearly equal, leafy, in a double row, 6 in each. Ray-fis. neutral; disk §. Recep. conic or columnar, with

unarmed pales or chaff. Cyp. 4-angled. Pap. a lacerate or toothed mar gin, or 0. 24 Leaves alternate. Heads large. Rays yellow.

§ Rays large, drooping.—a Leaves divided. Disk ovoid or rounded......Nos. 1, 9 —a Leaves undivided. Disk columnar.....Nos. 3, 4

- § Rays spreading. Disk dark purple, conical or rounded...(b)
 b Leaves deeply lobed or parted, the upper undivided......Nos. 5, 6
 - b Leaves undivided.—c Pales of the disk whitish downy......Nos. 7, *

-c Pales dark purple as well as the flowers.....Nos. 9-1

- **R.** laciniàta L. Glabrous; lower leaves pinnate, segments 3-lobed, upper leaves ovate; disk ovoid, yellowish, pales truncate. Swamps. 3-5f. Rays near 2'. Aug.
- 2 R. heterophýlla T. & G. Downy; lvs. coarsely toothed, 3-5-lobed or parted, the lowest often round-cordate, highest ovate; disk globous; pales acute. Fla. 4f. Aug.
- 3 R. máxima N. Glabrous; leaves thin, ample, oval to oblong, subentire, the upper clasping; head solitary, on a long ped.; rays 2. Wet barrens, Fla. to La. 7f. Aug.
- **4 R. nítida** N. Glabrous and shining; leaves thick, lanceolate, acute, 3-5-veined; heads few or solitary; disk brown; rays 9–12, near 2. Swamps, S. 4f. July.

5 **R. subtomentòsa** Ph. Tomentous-downy, corymbous; leaves serrate, the lower 3-parted or lobed, upper ovate; disk globular; pales bearded, obtuse; rays 10-15, orange-yellow, 1'. Prairies, W. and S-W. 3-5f. July, Aug.

- 6 R. tríloba L. Hairy, paniculately branched; lvs. coarsely serrate, 3-lobed to ovatelanceolate, the lowest cut-pinnate or undivided; hds. rather small, disk conical, dark purple; pales smooth, awned. Fields. M., W. 3-4f. Aug. Sept.
- 7 R. mollis Ell. Soft-woolly all over; lvs. oblong, sessile or clasping; sc. reflexed; disk dark purp., with canescent pales; rays 15-20, 1'. W. Ga. 2-3f. Lvs. small. Aug.-Oct.
- 8 R. Heliópsidis T. & G. Slightly downy; lvs. ovate or oval, 5-veined, petiolate; sc. obtuse, squarrous, rays 10-12; pales canescent. W. Ga. and Ala. 1-2f. Aug. Sept.
- 9 R. hirta L. Very rough-hairy; ped. leafless; lvs. ovate-spatulate, 3-veined, petiolate, mostly entire, upper ones sessile, lance-ovate; scales in 3 rows; rays oval, 12-15; disk rounded, dark brown; pales bearded. Fields. 2f. Showy. July-Sept.
- 10 R. fùlgida Ait. Rough-hirsute; branches leafless above; lvs. ovate to lance-oblong, remotely dentate, lower petiolate; scales oblong, spreading as long as the 12-14 orange rays; pales glabrous, lin.-oblong, obtuse. Mts. Pa. to O., and S. 1-3f. July-Oct.
- 11 R. speciòsa Wend. Hairy and downy ; branches slender, leafless above ; lvs. strongly dentate, acuminate, ovate to lanceolate, 5-3-veined, lower long-petiolate ; sc. much shorter than the 18 rays ; pales smooth, acute. Ill. to Va. 2-4f. Aug.-Oct.
- 12 R. AMPLEXIFÒLIA. (1) Branching, glabrous; lvs. cordate-clasping; rays spotted at base, brilliant. La. (Dracopsis.)

55. LÉPACHYS, Raf. Invol. in one series of linear scales. Ray-fis. few, neutral; disk §. Recep. columnar, chaffy. Chaff obtuse, and bearded at apex. Pap. 0. Fertile achenia compressed, 1-2-winged. 24 Lvs. alternate, pinnately divided. Hds. with long, drooping, yellow rays. June-Sept.

1 L. pinnàta T. & G. Rough; lvs. all pinnate, divisions 5-7, 2-parted or entire; rays light yellow, twice longer than the ovoid yellowish disk. W. N-Y., W. and S. 2-4f.

2 L. columnaris. Rough, branching; root-lvs. undivided, oblanceolate; stem lvs. pinnatifid; disk nearly 2' long, longer than the 5-8 broad rays, which, in Variety purcherrima, are crimson, tipped with yellow. Montana. 2f.

56 HELIANTHUS, L. SUN-FLOWER. Ray-fls. neutral; disk §. Sc. of the invol. imbricated in several series. Recep. flat or convex, the chaff persistent, embracing the fruit. Pap. of 2 or 4 chaffy awns, mostly deciduous. Fruit compressed or 4-angled. (1) 24 Rough. Lvs. opposite, the up

per often alternate, rostly tripli-veined. Rays yellow; disk yellow or purpie: in late Summer and Autumn. Figs. 74, 261, 433-4.

§ HELIANTHÉLLA (T. & G.) Pap. persistent. Lvs. scattered, 1-veined.....Nos 24, 25 9 HELIÁNTHUS proper. Pappus deciduous. Lower leaves opposite...(*)

* Disk (its corollas and pales) dark purple, mostly convex...(a)

 - b Leaves chiefly opposite and 3-veined or tripli-veined...(c)

c Scales erect, closely imbricated.—f Plants green, rough.....Nos. 12, 13 —f Plants whitish, downy...Nos. 14, 15 c Scales loosely spreading. Heads large, 9-15-rayed...(d)

d Scales lance-linear, longer than disk. Leaves thin.....Nos. 16, 1°

- d Scale: lance-ovate, as long as the disk. Leaves thick...Nos. 18-21
- c Scales loosely spreading. Heads small, 5-8-rayed......Nos. 22, 23
- **1 H. annuus L.** Great Sunflower. Erect, stout; lvs. all cordate, only the lowest opposite; hds. very large (6-12'), nodding; fr. glabrous. Gardens and fields. 2-10f. § S. America.-A variety with the flowers all ligulate is sometimes found in gardens.
- 2 H. débilis N. Decumbent, slender; leaves mostly alternate, ovate, serrulate, petiolate; hds. small; scales with slender points; fr. pubescent. Shores, E. Fla. to La. 1-2f.
- 3 H. Rádula T. & G. Hirsute, simple, bearing a single head; lvs. roundish-obovate or ovate, obtuse; scales and pales lanceolate, acuminate, erect; rays 7-10, rarely 0.
 24 Barrens, Ga. Fla. Ala. 1-3f. Often growing in clusters. Hds. near 1'. Aug. Sept.
- 4 II. heterophyllus N. Slightly hispid, slender, bearing a single head; lvs. entire. the lower oval, upper linear-lanceolate; scales acuminate, erect, ciliate; pales acute; rays 12-18. 24 S. 1-2f. Heads 6" diam., rays spreading 24". Aug. Sept.
- 5 **H. angustifòlius L.** Erect, slender, scabrous or hispid; lvs. lance-linear, tapering to a long point, 1-veined, rigid; heads few; scales lance-linear, the long point spreading; pales linear, 3-toothed. Dry soils. N. J., Ky. and S. 2-3f. Aug.-Oct.
- 6 H. rígidus Desf. Rigid, subsimple; lvs. lanceolate, pointed, rough both sides; hds. few; scales ovate, acute, short; rays 12-20. Prairies, Wis. Mo. to La. 2-3f.
- 7 **H. atrórubens** L. Ped. few, long, leafless; st. hirsute below; lvs. ovate or oval, obtusish, on winged petioles; sc. oblong, obtuse, 3-veined. Dry soils. S. 2-4f.
- 8 **H. gigánteus L.** Rough or hairy; lvs. lanceolate, serrate, pointed, on ciliate, wing ed petioles; scales lance-linear, ciliate; rays 12-20; pappus of 2 short, fringed scales Can. to Car. and Ky. 4-10f.-Varies with the leaves mostly opposite.
- 9 H. tomentòsus Mx. Stout, pubescent, branched; lvs. ovate to long-lanceolate, acuminate, subentire, the lower petiolate; scales long-pointed, villons. spreading · pales hairy and 3-toothed at top. Dry hills, Ill. to Ga. 4-Sf. Rays 15".
- 10 H. grosse-serràtus Martens. St. smooth and glaucous; lvs. lanceolate or lance ovate, long-acuminate, sharply serrate, downy beneath, on winged stalks; scales loose, subulate, as long as the disk; rays 15-20. W. and S. 4-6f.
- **(II. tuberòsus** L. *Jerusalem Artichoke*. Root bearing oblong tubers ; lvs. cordate ovate to ovate, acuminate ; petioles ciliate. Fields, hedges. 4f. § Brazil.
- 12 H. lætiflórus Pers. St. branched above; lvs. thick, lance-oval, pointed, serrate, on short stalks; scales ovate-lanceolate; rays 12-20, 2'. Woods, W. and S-W. 3-4f.
- 13 H. occidentàlis Riddell. Slender, simple, nearly naked above; lvs. oval, subserrate, on long hairy petioles; hds. 1-5, small; scales lance-oval. Sandy. W. 3f.
- 14 II. mollis Lam. Canescent-tomentous, subsimple; lvs. ovate, sessile, cordateclasping, acuminate; sc. lanceolate; pales entire, acute; rays 15-25. O. to Mo. 2-4f.
- 15 H. cinèreus, β. Sullivántii (T. & G.) Cinereous-pubescent; stem virgate, branched above; lvs. ovate-oblong, narrowed to the sessile base, the lower to a winged petiole; pales pointed, with 2 lateral teeth; rays about 20 Ohio. 2-3f.

- 16 H. decapétalus L. Lvs. all opposite, thin, ovate, acuminate, toothed, on winged stalks, scabrons above, smoothish beneath.—Varies with the invol. scales enlarged and leaflike, or only lance-linear. Can. to Penn. 3-4f.
- 17 H. tracheliifòlius Willd. Branch lvs. alternate, thin, appressed-serrate, acumi nate, all ovate to lance-linear; pales 3-toothed; rays 12-15. Thickets, W. 3-8f.
- 18 H. doronicoides Lam. Branching; lvs. ovate to lance-ovate, acuminate, ser rate; scales lance-linear; rays 12-15, 1¼, very showy. W. and S. 4-7f.
 β. plena-flora. Flowers all lignlate. Gardens. Very handsome.
- 19 H. strumòsus L. Smooth below; lvs. all similar, ovate-lanceolate, acuminate, serrulate; heads few, about 10-rayed; scales ciliate, squarrons. Swamps. 3-5f.
- 20 H. hirsùtus Raf. St. simple or forked, hirsute; lvs. petiolate, ovate-lanceolate, subservate, hirsute beneath; scales lance-ovate, hairy; rays 11-15. Dry, W. and S. 6f. β. pubéscens. Leaves tomentous beneath, subsessile. (H. pubescens Hook.)
- 21 H. divaricàtus L. St. smooth, simple, or forked; lvs. rough, lance-ovate, long-pointed from an abrupt sessile base; heads few, corymbous. Woods, &c. 4-5f.
 β.? scabérrimus. Stem subsimple: leaves thick, exceedingly rough and rigid, opposite or ternately verticillate, rounded at base W.
- 22 H. microcéphalus T. & G. St. smooth or hispid, branched; lvs. lanceolate, acuminate, narrowed to a short petiole, rough above, whitish-downy beneath; scales lanceolate; rays 5-8, spreading 1'. Dry, W. and S. 3-5f. (H. Schweinitzii T. & G.
- 23 H. longifòlius Ph. Smooth throughont, branching; lvs. lance-oblong to lance-linear, acute, the lowest petiolate, serrulate; heads few; scales ovate-lanceolate rays 6-10, spreading 14-2'. Damp. S. 3-5f. (H. kævigatus T. & G.)
- 24 H. grandiftòrus. Rough-downy; simple, leafy; lvs. 1-2', lance-linear, sessile, scales lanceolate, loose; rays 15-20, near 2'; pappns 2 fringed scales. E. Fla. 3f.
- 25 H. tenuifòlius. Rough-hairy, simple; lvs. narrow-linear; scales lance-subulate, loose; rays 10-13 (15''); pappus 2-4 awns. W. Fla. 1-2f. Leaves 2-3'. July.

57. ACTINOMERIS, Nutt. Heads many-flwd.; ray-fls. 4-14, rarely 0. Invol. scales foliaceous, subequal, in 1-3 series. Recep. conical or convex, chaffy. Ach. compressed, flat, obovate, mostly winged and 2-awned. 24 Plants tall, with 3-veined, serrate leaves. Heads corymbous. Rays when present yellow. Autumn.

- § ACTÍMERIS. Pappus of 2 awns. Stems tall, corymbous...(a)
- **1 A. pauciflòra** N. Lvs. opp. or alternate, lanceolate to elliptical, rigid, obtuse; hds 1-3, discoid, yellow; fr. narrowly winged, the disk cupshaped. Barrens, Fla. 1-2f.
- 2 A. alba T. & G. Lvs. narrow-lanceolate. acute both ways. serrulate; scales lancelinear, few, in one series; fruit broadly winged. S. Car. to Fla. and La. 7f.
- **3 A. helianthoides** N. Stem winged; lvs. alternate, ovate-lanceolate, d current, acuminate, serrate, rough, hairy; rays 1' long, 6-14, unequal, scales erect; fruit narrowly winged. Copses, prairies, Ohio to Ga., and W. 2-4f. June, July.
- 4 A. squarròsa N. Stem winged, tall (6-10f); lvs. alternate, some opposite, lance oblong, long (6-14'), pointed both ways, decurrent; heads small; scales spreading or deflexed; rays 4-8, regular, short. Alluvion, N. Y., W. and S. Homely.
- 5 A. nudicaulis N. Stem wingless, branched and leafless above; lvs. oblong, un equally serrate, closely sessile; rays 7–12, broadly winged. Ga. Fla. Ala. 2–3f.

58. COREÓPSIS, L. TICK-SEED. Rays about 8, rarely 0. Involucie double, each 6-12-leaved. Recep. chaffy. Cyp. obcompressed, emarginate, each commonly with a 2-toothed, upwardly-hispid pappus, sometimes none. Leaves mostly opposite. Rays usually yellow; disk-flowers yellow or dark purple.

§ Corollas of the disk dark purple...(a)

- C. DRUMMÓNDH. ① Pubescent; lvs. pinnately (1-5)-divided; segm. oval or oblong, entire; sc. lance-acuminate; rays unequally 5-toothed. Tex. 1-2f. Rays ample, showy.
 β. atrosanguinea. A garden variety, with the rays wholly dark purple. July-Oct
- 2 C. TINCTÒRIA. (1) Glabrous; lvs. alternate, some pinnate; lobes lin.-oblong and linear; scales very short, acute; rays 3-lobed at apex. Nebraska. 1-3f. Beautiful. Summer
- 3 C. ATKINSONIÀNA. 24 Lf. lobes linear-spatulate to linear; sc. oblong, obtuse; rays 3lobed; fr. distinctly winged. Columbia River, Oreg. Hds. handsome, like C. tinctoria.

4 C. gladiàta Walt. St. terete; lvs. alternate, thick, some ternately divided, lance oblong to lance-linear; outer scales lance-ovate; fr. fringed, awns 2, slender; rays 3 toothed at the dilated apex. Moist barrens, S. 2-3f. Heads several, corymbed.

5 C. angustifòlia Ait. St. square; lvs. opposite (mostly), undivided, spatulate to linear, obtuse; outer sc. ovate, obtuse; fr. wing-fringed, awns 2, short; rays 3-lobed. S.

- 6 C. Æmleri Ell. St. angular above; lvs. opp., lance-ovate to lanceolate; outer scales oblong, obtuse; fruit margined, ciliate, the 2 awns very short. Ga. (Elliott) and Fla.
- 7 C. nudàta Nutt. Very slender; lvs. few, terete, rush-like, alternate, the lower very long; hds. few; rays wedge-obovate, crenate-lobed at apex. 24 Swamps, Ga. Fla. 2f.
- 8 C. ròsea N. Branching; lvs. opp., 1-veined, linear; ped. short; outer sc. very short; rays oblong, obscurely tridentate. 24 Wet grounds, Ms. to Ga. 8-16'. Delicate. Jl. Aug.
- 9 C. senifòlia Mx. Minutely downy or glabrous; lvs. opposite, ternate, sessile, appearing in whorls of 6; lfts. ovate-lanceolate, varying to linear-lanceolate or even to linear; scales downy, obtuse; rays entire. 24 Dry, Va. Ky. to Ga. 1-2f. July, Aug.
- 10 C. delphinifòlia Lam. Lvs. opp., sessile, divided into lfts. which are each again 2-5-parted; seg. linear, entire, acute; disk-fls. brown at the tips. 24 Va. to Fla. 2f. Aug.
- 11 C. verticillàta L. Branched; lvs. 3-divided, closely sessile, the divisions 1-2-pin nately-parted; seg. filiform-lin.; rays 1-3-toothed. 24 Moist, Md. to Ga. 1-3f. Jn.-Aug.
- 12 C. palmàta N. St. angled, striate, leafy to top; lvs. sessile, deeply 3-cleft, rigid lobes linear, acutish, entire or again cleft; fr. linear-elliptic. 24 Prairies, W. 1-2. July.
- 13 C. trípteris L. St. simple 'all, corymbous; lvs. opp., stalked, thick, 3-5-divided; seg. lin.-lanceolate, entire, acute; hds. small; rays obtuse. 24 Dry, W. and S. 4-8f. J.
- 14 C. grandifiòra N. St. low; hds. solitary, large, on long naked stalks; lws. lar(e olate, mostly divided into lance-lin. seg.; rays 4-5-cleft. 24 Mo. to Tex. Much like No.15.
- 15 C. lanccolàta L. Ascending; lower lvs. oblanceolate, upper lanceolate, all entire; heads solitary, on long naked peduncles; rays 4-5-toothed. 2 Damp soils, West and So.th. Head shewy. Rays about 8, spreading 2' or more. June-Aug. †
 16 C. auriculàta L. Lower lvs. round-ovate, petiolate, some of them with 2 small
- 16 C. auriculàta L. Lower lvs. round-ovate, petiolate, some of them with 2 small lateral segm. (auriculate) at base, the upper oblong, subsessile; hds. few, on long ped., outer scales oblong-linear. Dry soils, Ill. to Va., and S. 1-3f. May-Aug.
- 17 C. latifòlia Mx. Very glabrous, tall; lvs. thin, opp., ovate to oblong, acuminate unequally toothed; hds. small, rays 5 or 6, entire, large; sc. lin., spreading. Mts. S. Aug
- 18 C. argùta Ph. Stem strict; lvs. simple, ovate to lanceolate, petiolate, acuminate, sharply serrate; scales oblong; rays 9-12, 3-toothed; awns obsolete. Hills, S. 2-5f

- 19 C. aurea A.t. Lower lvs. pinnately divided, upper ternately, or simple; lfts. orate to lance-linear, secrate; rays 6-9, obtuse; fruit toothed. Ditches, S. 2-4f. Aug.-Oct.
- 20 C. aristòsa Mx. Sparingly public ent; lvs. pinnately 5-9-parted, segm. lance-lin., incised; hds. small, rays large; outer scales 10-12, linear; awns slender, spreading as long as the fruit. (2) Low woods, W. 2-3f. Rays expanding 18". Aug.-Oct.-Varies with the outer involucre leafy; and with the awns short, &c.
- 21 C. trichospérma Mx. Stem glabrous, square, dichotomous; lvs. pinnately 5.7 parted, segm. lanceolate, cut; rays entire, large; cyp. narrowly cuneate, with 2 short stout awns. ① Wet grounds, Mass. to Ill. (J.Wolf), and Car. 1-2f. Fls. showy. Jl. Aug.
- 22 C. discoidea T. & G. Glabrous, much branched; leaves ternate, long-petiolate; lfts. lance-ovate, dentate; hds. small (2-3"); fr. linear-cuneate, the 2 stout awns (upwardly hispid) half as long and equalling the corolla. (1) Wet, W. and S. 1-3f. Jl.-Sept.
- 23 C. bidentoides N. Glabrous, paniculate; lvs. simple, lanceolate, serrate; heads 7-1 γ ; fr. lin.-oblong, the slender (up-hispid) awns longer than cor. ① Pa. Del.: rare.

59. BIDENS. L. BURR-MARIGOLD. Invol. double. Scales somewhat similar, or the outer foliaceous. Rays 4-8 (sometimes none), neutral; disk-flowers perfect. Recep. chaffy, flat. Pap. of 2-4 awns, rough backwards. Cypsela obcompressed, obscurely quadrangular. Leaves opposite, incised. Flowers yellow. July-October. (See Addenda.)

§ Cypsela linear-subulate, tapering to the top, 3–4-angled, 2–6-awned......Nos. 1–3 § Cypsela oblanceolate, broader at the top, flat, 2–4-awned......Nos. 4–7

- 1 B. leucántha Willd. Lvs. in 3-5 serrate lobes : hds. with 5 white rays. S. Fla. 1f.
- 2 B. bipinnàta L. Spanish Needles. Lvs. bipinnate, lfts. lanceolate, pinnatifid; rays very short, obovate, 3, 4, or 0; sc. all equal in length. (1) Waste grounds, Ct. to Ill. 2-4f.
- **3 B. Beckii** Torr. St. subsimple; submersed lvs. capillaceous-multifid, emersed lvs. lanceolate, connate, acutely serrate or cut; rays longer than the involucre. 24 Slow waters, Vt. (rare), W. and N. Stem 2–3f. Heads solitary, terminal.
- **4 B. frondòsa** L. Beggar-ticks. Rays 0; outer sc. leafy, 6 times longer than the fls.; lower leaves pinnate, ternate, upper lanceolate, serrate; awns 2. ① Fields: com. 2f.
- 5 B. connàta Willd. Rays 0; outer sc. leafy, longer than the head; lvs. lanceolate, serrate, subconnate at base, lower some trifid; awns 3. ① Swamps, E. and W. 1-3f.
- 6 B. cérnua L. Rays 0-4-8, small; hds. cernuous; outer scales as long as the disk; leaves all lanceolate, subconnate, dentate. (1) Swamps, ditches, E. and W. 1-2f.
- 7 B. chrysanthemoides L. Lvs. oblong, attenuate at each end, connate at base, regularly serrate; rays thrice longer than the involuce. (1) Ditches: common. 6'-2f.

60. SPILÁNTHUS, L. Invol. shorter than the disk, double, appressed. Recep. conical, chaffy, the pales embracing the flowers. Cyp. of the disk compressed, with 1—3 bristly awns or awnless, of the ray (when present) 3-angled. Herbs with acrid taste, opposite leaves, and solitary, yellow heads. Chiefly tropical. Aug.—Oct. (Acmella, Rich.)

- 1 S. repens Mx. Diffuse, rooting at the lower joints; lvs. lanceolate, subserrate, acute at each end, petiolate; rays about 12; fr. awnless, not ciliate. 24 Wet, S. Car. to Fla.
- 2 S. Nuttállii T. & G. Ascending, diffuse; lvs. ovate to oblong, coarsely serrate abruptly petiolate; fruit ciliate on the margins; rays 10-12. Bogs, E. Fla. 1-2f.

61. VERBESINA, L. CROWN-BEARD. Rays φ , few or none; disk φ . Sc. in 2 or more series, imbricated, erect. Chaff concave or embracing the flowers. Achenia compressed, 2-awned. 24 b Leaves often decurrent serrate or lobed. Heads solitary or corymbous.

1 V. Sieglsbeckii Mx. Stem 4-winged; lvs. opposite. ovate, serrate, acuminate, 8

veined, tapering to the winged petiole; hds. corymbous, yellow; rays 1-5; fr. wing less. 24 Dry, W. and S. 5f. Aug. Sept.

- 2 V. Virgínica L. Stem narrowly winged; lvs. alternate, lance-ovate, subserrate feather-veined, tapering to the sessile base; rays 3-4, white; fruit narrowly winged. 2 Dry woods, Pa. to La. 4f. August.
- 3 V. sinuàta Ell. St. wingless, striate-angled; lvs. alternate, ovate, acuminate, contracted to a long slender base and petiole, irregularly repand-toothed or lobed; rays 3-5, white; fr. broadly winged. 24 Sandy fields, S. 2-4f, with ample lvs. Sept.-Nov.

62. DYSÒDIA, Cav. FALSE DOG-FENNEL. Rays 2, disk 3. Invol. a single series of partially united scales, usually calyculate. Cyp. elongated, 4 angled, compressed. Pap. scales chaffy, in 1 series, fimbriately and palmately cleft into bristles. (1) With large, pellucid glands. Lvs. mostly opp., pinnately parted or toothed. Hds. paniculate or corymbous. Fls. yellow.

D. chrysanthemoides Lagasca. Smooth, much branched; lvs. pinnately-parted, lobes linear, toothed; hds. with few very short rays. Prairies and waysides, W., migrating E. 1f. An ill-scented plant. Aug. Sept.

63. GAILLARDIA, Foug. Rays neutral. Scales in 2 or 3 series, acute, leafy, spreading, outer largest. Recep. convex, fimbrillate (naked in No. 1) Rays cuneiform, 3-cleft. Cyp. villous with long hairs from its base. Pappus of 6—10 long awns, which are membranous at base.—Leaves alternate, entire, often dotted. Heads on long, naked peduncles. May—Aug.

- 1 G. lanceolàta Mx. Lvs. lanceolate to linear; sc. as long as the dark purple disk; rays 8-10, small, yellow; *recep. naked.* (2) Barrens, S. Car. to Fla. and Tex. 1-2f.
- 2 G. PICTA. Lvs. lanceolate; sc. hairy, longer than disk; rays 10-12, violet-purple with yellow teeth; recep. fimbrillate with slender awns. ① 24 Dak. to Tex. 2f. Handsome.

64. GAZÀNIA, Gært. Rays neutral, disk-fis. §. Sc. in several rows, united at base. Cyp. wingless, densely hairy. Pap. chaffy. Recep. alveolate. —From S. Africa. Hds: solitary, showy, on naked stalks. Rays tricolored

G. SPECIOSA. Trailing, half-shrubby; leaves oblong, entire or pinnatifid, smooth above, white-tomentous beneath; rays (1') orange-yellow, each with an eye of white and chocolate at its base. Singularly beautiful.

65. PALAFÓXIA, Lagasca. Rays \circ or 0. Sc. 8—15, scarious at tip, shorter than the disk. Recep. flat, naked. Cyp. 4-angled, slender at base. Pap. of 6—12 membranous, denticulate, pointed scales. 24 b With scattered, narrow, entire lvs. and cyanic fls. in a corymb. (Polypteris, N.) Jl.-Sept. **P. integrifòlia** T. & G. Rough; lvs. lance-linear, 1-ve'aed; rays none; pap. of 8—10

pointed scales with fringed edges. Barrens, Ga. and Fla. 3-5f. Heads purplish.

66. HYMENOPÁPPUS, L'Her. Fls. all \notin , tubular. Sc. 6—12, in 2 series, oval, obtuse, colored. Recep. small, naked. Anth. exserted. Cyp. broad at the summit, attenuate to the base. Pap. of many, short, obtuse, membranous scales in 1 series. 24 Hoary-villous. Stem grooved and angled. Leaves alternate, pinnately divided.

H. scabiosneus L'Her. Leaf segm. linear-oblong; corymb simple; sc. obovate, white, greenish at base, longer than the disk; fr. pubescent. W. and S. 1-2f. Apr.-June.

67. HELENIUM, L. Rays 9 or neutral, 3-5-cleft at the expanded

summit. Disk-fls. §. Invol. small, scales linear to filiform, reflexed. Recep. naked, convex to oblong. Cyp. angled, clavate or turbinate. Pap. of 5-12 silvery, thin scales.—Herbs with alternate, often decurrent leaves, punctate resinous. Heads corymbous or solitary, showy, yellow.

- § HELLENIÁSTRUM. Rays pistillate. Pappus awned. Heads corymbed...(a)
 - a Disk globular, its corollas 5-toothed. Pappus awned.......Nos 1---2 a Disk oblong, its corollas 4-toothed. Pappus scales obtuse.....No. 1
- § LEPTÓPODA. Rays mostly neutral and fruitless...(b) b Heads corymbed, on short peduncles. Pappus awned. Disk globous.....No. 5 b Head solitary, on a long ped. Disk convex.—c Cypsela glabrous.....Noa. 6, 7

-c Cypsela hairy.....Nos 8-10

- 1 H. autumnàle L. St. strongly winged; lvs. lanceolate, serrate, decurrent, heads loosely corymbed. 24 Damp. 2-3f. Hds. large, with drooping rays. Sept. Very bitter.
- 2 H. parviflorum N. St. scarcely winged; lvs. lanceolate, subentire, slightly decurrent; sc. filiform, shorter than the globular disk; hds. small, few. Ga. (Nuttall.) Scarce.
- 3 H. tenuifòlium N. St. and numerous fastigiate branches wingless; lvs. crowded, linear or filiform, fascicled; sc. subulate. (2) Fields, Ga. to La. 1-2f. Rays sprcad 10".
- 4 II. quadridentàtum Lab. Much branched, strongly winged; lvs. oblong, some lobed or toothed; disk oblong, longer than the rays. Swamps, S-W. 1-3f. June-Aug.
- 5 H. Brachýpoda. St. strongly winged, branches few, corymbous, 1-headed; hds small (4''), rays 8-12, short (3-4''); disk brown-purp., globular. Damp, Ill. to Ga. 1-2f.
- 6 H.Leptópoda. Smooth; st. simple, clustered, naked above; lvs. lanceolate to ob long-linear, some decurrent; rays 20-30, spreading 14'; disk convex. Moist soils, S. Car. to Fla. 2f. March, April.
- 7 H. incisum. Smooth; lvs. lanceolate, sessile, not decurrent, sinuate-pinnatifid or incised; rays about 40, in 2 or 3 rows; fruit glabrous. Low barrens, Ga., and W. 2f.
- 8 H. pubérulum. Downy; sts. much clustered; lvs. lance-linear, sessile, not do current; rays 20-30, broad. sprcading 1¹/₂-2'; fr. hairy. Wet pine-barrens, S. 2f. Ap., May.
- 9 H. brevifolium. Pubescent above, single, often some branched; lvs. lance-obl. to linear, obtuse, the radical spatulate, cauline subdccurrent. Wet. S. 2f. May, June
- 10 H. fimbriàtum. Smooth; often branched; leaves lance-linear, subentire, acute, decurrent; pap. scales deeply cleft into a fringe of bristles. Barrens, Fla. 1-2f. Apr.+

68. BALDWÍNIA, N. Invol. scales closely imbricated in 2-4 rows. Recep. convex, deeply honeycombed, with horny walls. Rays 8-20, neutral, in 1 row, 3-toothed. Disk §. Cypsela silky-villous, immersed in the cells. Pappus of 9-12 oblong scales. 24 Simple or corymbed. Leaves alternate, linear, punctate. Heads yellow. July-Sept.

B. uniflora N. St. simple, puberulent, with 1 large head; rays about 20; lvs. below linear-spatulate; pap. scales 9. Swamps, Va. and S. 1-2f. Rays spreading 2'.

2 B. multifiòra N. Glabrous, corymbously branched; rays about 10; lvs. crowded, narrow-linea-; frnit truncate and ray-marked at summit, crowned with 12 obo7ate scales. Sand hills, Ga. Fla. 1—3f. Rays 1↓. (Actinospermum, T. & G.)

69. MARSHALLIA, Schreb. FALSE SCABISH. Invol. scales lance linear, subequal, erect, in 1 or 2 rows. Recep. convex, with linear, rigid pales. Fls. all tubular, §. Cor. lobes slender, spreading. Cyp. 5-angled. Pappus of 5 or 6 membranous, awned scales. 24 Simple or branched, with alternate, entire, 3-veined leaves, and solitary, long-stalked heads of purplish flowers, resembling a Scabish. Ornamental.

1 M. latifolia Ph. St. simple, leafy; lvs. ovate-lanceolate, acumir ate, sessile; scales

rigid, acute; pales narrowly linear; pappus triangular-acuminate. Dry soils, Va. to Ala. 1f. Stem purple, smooth. Corollas 6-7", slender. May, June.

- 2 M. lanceolàta Ph. Stem simple, leafy below; leaves oblanceolate to lanceolate mostly obtuse and petiolate; scales obtuse. Uplands, S. 1-2f. April-June.
- 3 M. angustifòlia Ph. Mostly branching, leafy; lvs. narrow-lanceolate to linear all acute; scales acute. Swamps, S. 1f. Very handsome. July, Aug.

70. **ANTHEMIS**, L. CHAMOMILE, &c. Invol. hemispherical, with subequal, small imbricated scales. Rays numerous, generally \notin . Recep. chaffy (at least at summit), convex or conical. Disk-flowers \notin . Cypsela ribbed, smooth, linear or clavate. Pappus a slight border, or 0.—Herbs with 1–3-pinnatifid leaves, usually strong-scented. (Rays white.)

\$ CHAMÆMELUM. Rays pistillate. Cyp. teretish. Lvs. mostly alternate....Nos. 1, 2
 \$ MARÙTA. Rays neutral. Cypselæ clubshaped or obovoid. Lvs. alternate....No. 3

- A. arvénsis L. Corn C. St. erect, bushy, whitish-downy; lvs. bipinnatifid, segm. lance-lin.; branches naked above. 1-headed; pales cuspidate, longer than the flowers.
 (1) Fields: not common. Resembles Mayweed, but inodorous. 8-15'. § Eur. July.
- 2 A. nóbilis L. Garden C. St. prostrate, branched from base, woolly; lvs. hairy, decompound-pinnatifid, seg. lin.-subulate; pales some shorter than the fls. 24 Gardens. rarely in fields, "Aromatic. § Eur.—Var. with fls. double (florets all radiate). J.-Sept
- 3 A. Cótula L. Mayweed. Nearly smooth. erect, bushy; lvs. bipinnatifid, seg. linear subulate; pales bristly, shorter than the flowers. (1) Waysides: com. 1f. Hds. terminal, corymbed, disk yellow, rays white, showy. Ill-scented. Jn.-Sept. (Maruta, DC.)

71. ACHILLÆA, L. MILLFOIL. YARROW. Invol. ovoid, of unequal, imbricated scales. Rays 5-10, short, \mathfrak{P} . Recep. flat, chaffy. Cyp. without a pappus. 24 Leaves much divided, alternate. Heads small, corymbous.

- 1 A. Milletölium L. Lvs. bipinnatifid, with lincar, dentate, mucronate segments; stem furrowed, corymbed at top; sc. oblong, rays 4-5, short. Fields. waste grounds, everywhere. 1-2f. June-Sept.-A variety with rose-purple flowers, is very pretty.
- 2 A. ptármica L. Sneezewort. Leaves linear, acuminate, sharply serrate, smooth, hds. loosely corymbed; rays 8-12, longer than invol. (double in cult.) Rare. 15'. §

72. LEUCANTHEMUM, Tourn. WHITEWEED. Invol. broad, depressed, imbricated. Rays φ , numerous. Recep. flat, naked. Cyp. striate, without pappus. 24 Lvs. alternate. Hds. solitary, disk yellow, rays white.

- L. vulgàre Lam. St. simple or branched; cauline lvs. clasping, few, lance-oblong, obtuse, cut-pinnatifid at base; scales brown at the edge. Too common in our fields and pastures. 2f. Rays spreading 14'. July—Sept. § Europe. [N. Y. (Gerard.) β. tubuliforme (Tenney). Ray-fis. tubular, very slender, 5-3-lobed. Po'keepsie,
 L. Parthènium Godron. Feverfew. Branched; lvs. petiolate, 2-3-pinnate, segm.
- 2 L. Parthènium Godron. Feverfew. Branched; lvs. petiolate, 2-3-pinnate, segm. ovate, cut; hds. corymbed. Gardens, rarely in fields. 2f. Often double (Matricaria, C-B)

73. MATRICARIA, Tourn. MOTHER-CAREY. Invol. scales imbricated, with scarious margins. Recep. conical or convex, naked. Rays \circ or 0. Pap. a membranous border on the cyp., or 0.—Herbs with alternate leaves.

- 1 M. discoidea DC. Hds. discoid. few, terminal; lvs. sessile, 2-3-pinnately-parted, lobes small, linear-oblong, acute; sc. oval, obtuse, white-edged, much shorter than the conical disk. Ill. and W. Common in Cal. 3-8'. Disk 3" broad and high. Jl.—Sept.
- 2 M. TANACÈTUM. English Mint. Downy; leaves oval, serrate, lower petiolate; heads small, corymbed, discoid. Europe. 1-2f. Aromatic. J. Aug. (M. Balsamitæ C-B.)

74. TANACETUM, L. TANSY. Invol. hemispherical, imbricate the

scales all minute. Recep. convex, naked. Pap. a slight membranous bor der. Cyp. with a large, epigynous disk.—Lvs. alternate, much dissected. Flowers yellow, discoid.

- 1 T. vulgàre L. Lvs. pinnatifid, segm. oblong-lanceolate, pinnatifid and cut-serrate; hds. fastigiate-corymbous, ray-fis. teretc, tubnlar, 3-toothed. 24 Waysides 2-3f. Aug.
- 2 T. Huronénse Nutt. Lvs. bipinnatifid, lobes oblong, often again pinnatifid; heads large, corymbed; ray-fls. flattened, nncqually 3-5-cleft. 2 Sandy shores, W. 2-3f.

75. CHRYSANTHEMUM, L. Invol. bell-shaped, sc. imbricated, sca rous at the edges. Recep. flat or convex, naked in the disk. Rays 2, disk-fls. 2, 5-toothed. Cyp. angular or compressed. Pap. 0 or tooth-like.—Plants ornamental, from E. Asia, with alternate, lobed lvs. and large rays. Fig. 387.

§ PYRÈTHRUM. Cypselæ wingless, angular, all alike. Plants perennial....Nos. 1-3
 § CHRYSÁNTHEMUM. Cyp. of the ray 3-angled, of the disk compressed. (1)....Nos. 4, 5

- 1 C. SINÉNSE. Shrubby; lvs. sinuate-pinnatifid, thick, glaucous; rays much longer than the obtuse scales. Beantiful flowers of all colors, late in Autumn. 2-3f.
- 2 C. INDICUM. Shrubby; leaves incisely-pinnatifid, thin, flaccid; rays little longer than the obtuse scales, spreading about 1'. Heads much smaller than in No. 1.
- 3 C. RÒSEUM. Perenuial, glabrous; lvs. 2-3-pinnatisect; hds. solitary, terminal; scales brown-edged; rays rose-colored or white, often double. 24 Heads 1' broad.
- 4 C. CORONÀRIUM. Annual; lvs. clasping, bipinnatifid, lobes dilated at summit; flowers large, terminal, yellow; pappus none. S. Europe. 3f. Varieties double, &c. Aug.
- 5 C. CARINÀTUM. Tricolored C. Annual; lvs. thick, bipinnatifid; scales carinate; rays white, yellow at base, disk purple. Barbary. 1-2f. Flowers all Summer.

76. ARTEMÍSIA, L. WORMWOOD, &c. Invol. ovoid, imbricate, with dry, connivent scales. Recep. without pales. Disk-fis. numerous, \notin , tubular; ray-fis. few, often without stamens and with a subulate corolla or none. Cypsela with a small disk. Pappus 0.—Bitter herbs. Leaves alternate. Heads yellow or purplish, discoid. Aug., Sept.

§ ABSÍNTHIUM. Recep. villous or hairy. Fls. all fertile, heterogamous.....Nos. 1,

§ ABRÓTANUM. Recep. naked. Fls. all fertile.—a Lvs. or segm. lanceolate..Nos. 3, 4 —a Lvs. or segm. linear....Nos. 5—7

- § DRACÚNCULUS. Recep. naked. Disk-fis. sterile.-b Lvs. trifid or entire...Nos. 8, 9 -b Lvs. pinnatisect....Nos. 10-12
- 1 A. Absínthium L. Common W. Leaves multifid, clothed with short silky down both sides; seg. lanceolate; hds. hemispherical, drooping. Waysides, N. 1-2f. § Eur.
- 2 A. frígida Willd. Lvs. silky canescent, the cauline pinnatifid; seg. linear, 3-5-cleft; hds. smail, glob., drooping; inner sc. woolly. Rocky hills, Minn. Dak., and W. 6-12'.
- 3 A. Ludoviciàna N Canescent-tomentous; leaves lanceolate, the lower serrate or pinnatifid, upper entire; heads ovoid, in a slender, leafy panicle. 24 Shores, Mich. and W. 2-5f. Heads small and crowded.
- **A. vulgàris** L Mugwort. Lvs. canescent-tomentous beneath, pinnatifid with lan colate segments, upper entire; heads erect, ovoid, subsessile, in a branched panicle. Waysides, N. and W. 3f. § Europe.
- 5 A. ABRÓTANUM. Southernwood. Hoary; leaves bipinnatisect; heads hemispherical, nodding, downy. From S. Europe. 3f. [ding. Eur. 31.
- 6 A. PÓNTICA. Roman W. Lvs. hoary beneath, 2-3-pinnatisect; heads globular, nod-
- 7 A. biénnis Willd. Erect, glabrous, simple ; lvs. 1-2-pinnatifid, lobes sharply serrate or cut, those above subentire ; hds. globular, erect, spicate, in a virgate, leafy panicle
 (2) Common westward, migrating E. to Po'keepsie (Gerard), and to Pa. 1-3f. Aug +

- 8 A. DRACÚNCULUS. Tarragon. Glabrons; lvs. lir.-lanceolate, lower trifid; heads globous. From Siberia. 3f. A garden salad. Give a rich fragrance to vinegar.
- 9 A. dracunculoides Ph. Canescent when young, branched; lvs. lin.-filiform, the radical often trifid; hds. small, globular; inner scales roundish, outer oblong. 24 N-W.
- 10 A. boreàlis Pal. Tufted, silky-villous, simple; lower lvs. petiolate, lance-linear, entire at base, ternately, pinnately, or bipinnately parted at apex with lin. lobes; hds. uemispherical; scales colored. 2 Shores of Lake Superior, N. and W. 6-12'.
- 11 A. Canadénsis Mx. Sea W. Glabrous (mostly); lvs. 1-2-pinnatisect with linear seg.; hds. roundish, sessile, in a pan. of glomerules. 24 Lake shores, N. 2-4f. Hds. 1".
- 12 A. caudàta Mx. Glabrous, simple, densely paniculate; lvs. 3-2-1-pinnatisect with alternate, filiform segm.; heads globous, pedicellate, erect. (2) Coast, N. H. to Ga. 4f.

77. SOLIVA, R. & P. Invol. of 5—15 scales in 1 row. Recep. flat, naked. Fertile fis. in several rows, apetalous; \Im fis. few, interior, with a 3 5-toothed corolla. Cyp. obcompressed, tipped with the persistent style and no pappus.—Little matted herbs with pinnatifid lvs. and sessile heads.

S. nasturtiifòlia DC. Lf. lobes 5-9, oblong, obtuse; sc. 10-15; fr. obconic, rugous, crowned with a dense tuft of wool instead of a pappus. Sandy shores, S. 1-3'.

78. GNAPHÀLIUM, L. CUDWEED. EVERLASTING. Heads discoid., heterogamous. Invol. imbricate with scarious, colored scales. Marginal fils. 9, subulate, mostly in several rows; central fils. 9. Recep. flat, naked. Pappus a single row of scabrous, hair-like bristles.—Herbs generally clothed with whitish wool. Leaves alternate, entire.

- * Heads in axillary, somewhat spicate clusters......Nos. 4, 5
- 1 G. decúrrens Ives. Lvs. decurrent, linear-lanceolate, very acute, naked above, white and woolly beneath; fis. in dense, roundish, terminal clusters. 24 Hilly pastures, N. Eng. to Penn. and Mich. 2f. Lvs. green above. Fls. yellow, scales white.
- 2 G. polycéphalum Mx. Woolly; lvs. sessile, linear-lanceolate, acute, scabrous above; hds. capitate, corymbous; sc. ovate-lanceolate, acute. (1) Dry. 1-2f. Fragrant.
- 3 G. uliginòsum L. Cudweed. St. diffusely branched, woolly; lvs. sessile, linear-lanceolate; hds. small (1" wide), in terminal, crowded, leafy clusters; scales obtuse, yellowish or brownish; fruit smooth. (1) Moist hollows, N. M. W. 4-6'.
- 4 G. purpùreum L. Erect; lvs. linear- or obovate-spatulate, canescent beneath, green above; hds. sessile, crowded; sc. acuminate, purplish. (1) Dry fields. 8–12'. June.
- 5 G. supinum Villars. Cæspitous, woolly; lvs. linear; hds. few, oblong, in a spicate raceme or solitary; scales acute. brown. White Mountains. 2-4'. Rare.
- 6 G. FETIDUM, from S. Africa, has yellow neads, entire, clasping leaves. 2f. Hardy.

79. ANTENNÀRIA, Br. EVERLASTING. Heads 9 &. Invol. of imbricate, colored scales. 9 Cor. filiform. Recep. subconvex, alveolate. Pap. a single row of bristles. 24 Tomentous. Lvs. alternate, entire. Hds corymbous, with white or brownish, never yellow scales.

- 1 A. margaritàcea Br. Woolly-white, erect, corymbed above; lvs. lin.-lanceolate, 3-veined; scales elliptic, obtuse, pearl-white, fadeless. Fields. 1-2f. July.
- 2 A. plantaginifòlia Br. Mouse-ear E. Simple, with running stolors; leaves oval to spatulate, the cauline small, bract-like; hds. in a close terminal cluster, purplish. all \$\varepsilon\$ in some plants, all \$\varepsilon\$ in others, in early Spring. Borders of woods. 5-8³.

80. FILAGO, Tourn. COTTON ROSE. Heads heterogamous. Recep columnar, naked at top, chaffy below, with pales resembling the scales.

each with a \circ fl. in its axil. Cyp. terete, the central with a hairy pappus —Herbs can escent downy. July, Aug. §.

F. Germánica L. Lvs. erect, crowded, linear-lanceolate; hds. in capitate clusters, which are successively proliferous; scales cuspid., straw-color. (1) Fields, E. 6-10'.

81. AMMOBIUM, Br. Invol. imbricated, sc. with broad, scarious, spreading tips. Recep. broad-conic, chaffy. Fls. all tubular, §. Cyp. 4-angled, 4-toothed. 24 Australia. Stems winged with the decurrent leaves.
A. ALÀTUM. ① In gardens. 1-2f. Villous-canescent. Root lvs. oblong-petioled. Involucre white, flowers yellow. Summer.

82. RHODÁNTHE, Lindl. Involucre top-shaped, imbricate, sc. dry, ovate, acute, the inner radiate-spreading. Recep. naked. Fls. all tubular, 5-toothed, §. Cyp. woolly. Pap. of plumous bristles. (1) Australia.

R. MANGLÉSH. Lvs. oblong, clasping, entire; hds. large, fadeless, rose-colored, varie gated. A splendid "Everlasting," with many beautiful varieties. Hds. 1-2' diam.

83. **HELICHRYSUM**, Cass. IMMORTAL FLOWER. Invol. imbricate, with scarious, colored scales. Recep. flat, naked of pales. Pap. a row of bristles, often cohering.—Herbs or shrubs, chiefly S. African. Lvs. alternate. A vast genus of 200 species.

- 1 **H.**BRACTEÀTUM. Branching, puberulent; lvs. lanceolate to linear, repand, acuminate, hds. terminal, bracted at base; outer scales brownish, the inner radiant, ylw. to wh.
- 2 III. MACRÁNTHUM. Subsimple, scabrous; lvs. spatulate to lance-oblong, obtuse, en tire; hd. 1 or few, large, white outside, roseate within; inner scales radiant. (1)-24
 - β. COMPÓSITUM. Hds. composite (or double), purple, carmine, yellow, white.
 - $\gamma.$ atrosanguíneum. Hds. composite, with deep crimson scales and pappus. 18^\prime

84. **XERANTHEMUM**, Tourn. Hds. discoid, heterogamous. Invol hemispherical, imbricated, dry, with radiant, colored scales. Recep. with 3-toothed, dry pales. Pap. chaffy-bristly. (1) S. Eur. Lvs. entire. Hds. white or rose-colored.

X. RADIÀTUM. Eternal Flower. Erect, branched. Lvs. linear-oblong; hds. 1-2' diam.

85. ERÉCHTITES, Raf. FIRE-WEED. Fls. all tubular, those of the margin \Im , of the disk \oiint . Invol. cylindrical, simple, slightly calyculate. Recep. naked. Pap. of numerous, fine, capillary bristles. (1) Lvs. simple, alternate. Fls. corymbous, whitish. A rank weed.

E. hieracifòlius Raf. St. virgate, paniculate; lvs. oblong, acute, clasping, unequally and deeply cut-toothed; invol. smooth; fr. hairy. Burnt grounds, &c. 3f. Aug.+.

85. CACALIA, L. TASSEL-FLOWER. Fls. all tubular, ξ . Involuce cylindric, oblong, in one series, often caluate with small scales at the base. Recep. not chaffy. Pap. capillary, scabrous. (124). Smooth. Lvs. alternate. Heads of flowers corymbed, mostly cyanic.

- **1 S. vulgàris** L. St. paniculate, erect, angular; lvs. sinuate-pinnatifid, dentate, am plexicaul. (1) A weed in gardens, &c. 1f. 18'. Flowers all Summer.
- 2 S. aùreus L. Radical lvs. ovate, cordate, crenate-serrate, petiolate, cauline ones lyrate-pinnatifid, dentate, terminal segments lanceolate; ped. subumbellate, thick; rays 8-12; fr. glabrous. 24 Woods, meadows. 1-2f. Rays spread 1'. May-Aug.
 - β. Balsámitæ. Pubescent; lvs. few, small, the radical lance-oblong. Rocks.
 - y. grácilis. Root lvs. roundish, on long petioles, cauline linear-oblong, dentate.
 - $\delta.$ obovatus. Root leaves obovate to oblong-spatulate ; pc duncles long.
 - E. lanceolatus. Lvs. lanceolate, the cauline pinnatifid at base. Vt. Rare.
 - ζ. discoideus (Porter). Rays none; lvs. obov.-spatulate, cauline pinnatifid. Penn
- **3 S. obovàtus** Ell. Tomentous, becoming glabrous; root lvs. obovate or roundish. crenate, with an attenuated, sessile base; cauline few, small, cut-pinnate; corymit small, rays 10-12, spreading 1'. 24 Va. to Fla. 1f. Stem nearly leafless. May.
- 4 S. tomentòsus Mx. Cottony-tomentous; st. lvs. obovate to oblanceolate, obtuse long-petioled, crenate, upper sessile or none; rays 12-15, spreading 16". 24 Va. & S.
- 5 S. anónymus Wood. Cottony-tomentous; root lvs. oblong, obtuse, crenately toothed or lobed, cauline pinnatifid, the lobes dentate; hds. small, rays 6-9, spreading 6". 24 Thickets, Ala. (Montgomery). 2f. Corymbs compound. May, June.
- 6 S. Canadénsis L. Lvs. glabrous, bipinnatifid; seg. lobed, obtuse, the few upper pinnatifid; corymbs compound; rays 9-.2. 24 Canada (Kalm), Mts. N. Car.
- 7 S. lobàtus Pers. Butterweed. Glabrous; leaves all pinnatifid, the lower lyrately, lobes crenate; invol. subcalyculate; rays 10-12. (1) Wet. S.: com. 2-3f. Mar. Apr.
- 8 S. ÉLEGANS. *Purple Jacobæa*. Lvs. pinnatifid, hairy, viscid; scales scarious at tip, calyculate with an outer row of short green ones. (1) S. Afr. Purp., varying to white.
- 9 S. LANÀTA. LVS. roundish, angular, cordate, woolly beneath; rays vivid purple in side, wh. outside; disk white or blue. 24 Canaries. 3f. Shrubby.-Many var cties.

- 10 S. CRUÉNTUS. LVS. angular, cordate, cut-toothed, purple beneath, the petioles wing ed. ear-shaped at the base; heads in a broad corymb, crimson, purple, blue, white 24 Canaries. A common handsome greenhouse plant.
- 11 S. SCANDENS. German Ivy. Climbing and twining; leaves smooth, roundish-cordate, 5-7 angled or lobed; corymbs axillary, of small rayless yellow heads. 24 S. Africa. Blooms freely in California, rarely in our greenhouses.

88. **ÁRNICA**, L. Involucre of equal, lanceolate scales, 1- or 2-rowed. Ray fls. \mathfrak{P} , disk \mathfrak{P} . Receptacle flat, with scattered hairs. Pap. single, rigid, and serrulate. \mathfrak{P} Stem simple. Leaves opposite. Flowers vellow.

- 1 A. mollis Hook. Pubescent; stem leafy; lvs. becoming nearly glabrons, deutate. lance-oblong, radical ones petiolate; hds. few; fr. hairy. Mts. &c. N. H., N. Y. July
- 2 A. nudicaùlis Ell. Hairy; st. nearly naked; lvs. all sessile, ovate, subentire, the cauline bract-like; heads large, rays 12, spreading 2'; fruit glabrons. Wet sands Va. to Fla. 1f. April, May.

89. RUGÈLIA, Shutt. Invol. as in Arnica. Fls. all tubular, §. Re cep. convex, naked. Cyp terete, striate. Pap. of rough bristles. 24 Lvs alternate. Heads large.

R. nudicaùlis Shutt. St. simple, erect; branches 1-flwd.; root lvs. ample, ovate. narrowed to long winged petioles; stem lvs. small, subsessile. Mts., Tenn. 1f.

90. CÝNARA, L. Heads discoid, homogamous. Invol. dilated, im bricate, scales fleshy, emarginate, pointed. Receptacle fibrillate. Pap. plumous. Cypselæ not beaked. 24 Spiny. Leaves not decurrent.

- 1 C. SCÓLYMUS. Garden Artichoke. Leaves subspinous, pinnate, and undivided; invol. scales ovate. Gardens. The heads are used as asparagus. Coarse plants.
- 2 C. CARDÚNCULUS. Cardoon. Leaves spiny, all pinnatifid; invol. scales ovate. S. Eur The petioles, blanched by culture, are used as celery.

91. TAGETES, L. MARIGOLD. Heads heterogamous. Invol. simple, tubular, of 5-10 united scales. Ray-fis. 5, persistent. Receptacle naked. Pap. of 5 erect awns. (1) Tropical America. Leaves pinnately divided.

- 1 T. PÁTULA. French Marigold. Stem erect, with widely-spreading, 1-headed branches, lf. segm. linear-lanceolate; ped. long; invol. terete. Yel. and dark purp. Hands(me.
- 2 T. ERÉCTA. African Marigold. Stem stout, erect; lf. segm. lanceolate; ped. 1-fiwd., thickened at top; involucre angular. Yellow and orange.
- 3 T. FLÓRIDA. Erect, corymbously branched; lvs. lanceolate, opposite, aristate-serrate; rays mostly 3, large, yellow. Mexico. 18'.

92. CALÉNDULA, L. POT MARIGOLD. Heads radiate. Invol. of many equal leaves, in about 2 series. Rays 2, disk 3. Receptacle naked. Cyp. of the disk membranaceous. Pap. 0. (1) Oriental. Lvs. alternate.

(!. OFFICINÀLIS. Viscid-pubescent; stem branched; lvs. oblong, acute, mucronate, sessile; hds. terminal, solitary; large, brilliant, orange, lemon, double, &c. June-Sep.

93. CENTAUREA, L. KNAP-WEED. BACHELOR'S-BUTTON. Hds. discoid. Invol. imbricate. Fls. all tubular, the marginal often enlarged, ray-like, neutral. Pappus filiform, scale-form, or 0. (1)24 Lvs. alternate.

- I C. Americàna N. Erect, sparingly branched; leaves sessile, glabrous, repand toothed, ovate-oblong to lanceolate; hds. few, very large, with the marginal fls. much enlarged, pale-purple. (1) Ark. La. and § in Ill. 2-4f. Appendages straw-ye.low.
- 2 C. nigra L. Erect, branched, pubescent; lvs. angular-lyrate to lanceolate, dentate; sc. ovate; marg. fls. not enlarged, all purp. 24 Fields. Append. dark brown. § Eur.
- 3 C. Cýanus L. Bachelor's-button. Erect, branched, downy; lvs. linear; sc. ciliateserrate : outer fis. much enlarged. (1) Fields, gardens. Purple, blue, white.
- 4 C. Calcitrapa L. Star Thistle. Hairy, diffusely branched; lvs. pinnately lobed lobes lin.; scales tipped with spreading spines. (2) Pa. to N. Car. Purple. § Eur.
- 5 C. MOSCHATA. LVS. lyrate, dentate; invol. subglobous, smooth; sc. ovate; ray-fis. scarcely enlarged; pap. 0. (1) Persia. Purple, varying to white. July-October. 6 C. SUAVEOLENS. Yellow Sweet Sultan. Lvs. oblong, toothed, the upper pinnatifid at
- base; ray fis. much enlarged, yellow; pap. chaff-like. (1) Levant. 1-2f. July-Sept.

94. CARTHAMUS, L. SAFFRON. Hds. discoid. Invol. imbricated, outer bracts foliaceous. Fls. all tubular and &, filaments smooth. Pap. 0. Receptacle with setaceous pales. Cypselæ 4-angled.—Oriental herbs.

C. TINCTÒRIUS. St. smooth; leaves ovate-lanceolate, sessile, spinous-denticulate, half clasping. 1) Egypt. Heads large, with long, slender, orange-colored flowers. July.

95. CNICUS, Vaill. BLESSED THISTLE. Heads discoid. Invol. ventricous, imbricate with doubly spinous scales. Ray-fis, sterile. Receptacle very hairy. Pappus in 3 series, the outer 10-toothed, the 2 inner each 10bristled.—Oriental herbs.

C. benedictus L. Lvs. somewhat decurrent; dentate and spiny; invol. doubly spinous, woolly, bracteate. Fields, &c.: rare. 2f. Heads large, yellow. §

96. ONOPORDON, Vaill. COTTON THISTLE. Heads discoid, homogamous. Involucre ventricous, imbricate with spreading, spinous scales. Recep. deeply alveolate. Pappus copious, capillary, scabrous. Cypselæ 4angled.—Large, branching herbs, with decurrent leaves.

0. acánthium L. Plant cottony-white; involucre scales spreading, subulate; leaves ovate-oblong, sinuate, spinous. (2) Waste grounds: rare. 3f. Fls. purp. Jl., Aug.

97. CIRSIUM, Tourn. THISTLE. Hds. discoid, homogamous. Invol subglobous, of many rows of spinous-pointed, imbricated scales. Recep. bristly. Style scarcely divided. Pap. copious, plumous. Cyp. compressed, smooth.—Herbs with alternate lvs., generally armed with spinous prickles. Flowers in Summer. Figs. 178, 345.

- 3 C. Pítcheri T. & G White-tomentous; lvs. pinnatifid, segm. linear, spinous, margine revolute; scales spine-pointed; flowers ochroleucous. 24 Lake shores, W. June, July.
- 4 C. undulàtum Spr. White-tomentous; lvs. lance-oblong, sinuate-pinnatifid, wavy, prickly; scales scarcely prickly; flowers purple. (2) Mich., and N. 1–2f.
- 5 C. díscolor Spr. Slender, much branched; lvs. pinnatifid, segm. 2-lobed, divaricate, spinous; scales ovate, tipped with a spreading spine. (2) N. 3-5f. July+.
- 6 C. altissimum Spr Tall, branching, villous, leafy to the top; lvs. lance-oblong, often sinuate-dentate, or pinnatifid, spinescent; scales lance-ovate, the outer with a spreading spine. Fields, M. and W. 3-8f. Purple. August.
- 7 C. Virginiànum Mx. Slender, subsimple, naked above; lvs. lanceolate, marging revolute, spinescent, lobed or dentate, white-downy beneath; heads small (6"); scales bristle-tipped. Woods, W. and S. 3-4f. Purple. April-Sept.
- S C. horrídulum Mx. Cottony when young; leaves cut-pinnatifid, spinous; heads large, invested by a whorl of very spiny bracts; scales sharp-pointed. (2) Uplands, N. Eng. to Fla. Flowers purple or cream-color. 1-3f. April-August.
- C. pùmilum Spr. Hairy; lvs. few above, green, clasping, lance-oblong, pinnatifiu, segm. lobed, spinous; heads few, very large, subtended by 1-5 bracts; invol. round-ovate, spinous. (2) Pastures, waysides, N. Eng. to Pa., and W.: com. 1-2f, stout. Flowers purple, fragrant. July, August.
- ? 9 C. mùticum Mx. Lvs. pinnatifid; heads on naked peduncles, braetless; invol unarmed, with webbed and glutinous scales. (2) Damp. 3-7f. Hds. 1'. Aug., Sept.
 B. glabrum, Nearly glabrous; lvs. lance-lin., lobed; scales with minute spines. S.
- 11 C. repándum Mx. Lvs. crowded to top, at length green both sides, clasping, lin. oblong, wavy, spinous-eiliate; hds. 1 or 2; inner seales subulate. Barrens, S. 1-2f
- 12 C. arvénse Scop. Canada Thistle. Lvs. sinuate-pinnatifid, wavy, lance-oblong hds. panicled, small (5"), numerous; scales with minute prickles. 24 Waysides, fields. N. and W. A pernicious weed, hard to extirpate. 3f. Very prickly, except its heads.
- J & C. PULCHÉRRIMUM with yellow flowers, 3f high, is rarely planted in borders.

14 C. LANTHIUM. A greenhouse shrub, covered with pale blue flowers. From Mexico.

98. LÁPPA, Tourn. BURDOCK. Heads discoid, homogamous. Invol globous, the scales imbricated and hooked at the extremity. Recep. bristly Pap. bristly, scabrous, caducous. (2) European herbs. Lvs. alternate, large cordate, petiolate. Hds. panicled, pink-purple, very adhesive by the hooks

L. officinalis Allioni.—A coarse weed, in waste and cultivated grounds, E. and W. 3f (L. major Gært.)—Varies with small hds. and lvs. somewhat pinnatifid. (L. minor DC.)

99. LAMPSANA, Tourn. NIPPLEWORT. Hds. radiant, 8-12-fiwd. Invol. cylindrical, angular. Scales 8, erect, in one row, with 2 or 3 minute bractlets at base. Recep. naked. Cyp. glabrous. Pap. 0.—Slender, oriental herbs, with small, yellow heads, in paniculate corymbs.

L. commùnis L. Stem leafy; lvs. ovate, petiolate, dentate; pcd. cylindrical; invol. angular in fruit. (1) Waysides, Quebec, Boston, and W. Rare.

100. APOGON, Ell. Heads radiant. Invol. scales ovate, acuminate, about 8, in two rows. Recep. naked. Ach. glabrous, oval, longitudinally 12-striate. Pappus 0. (1) Herbs glabrous and glaucous, branched from the base. Leaves alternate, lanceolate. Heads small, yellow.

A. hùmilis Ell.—Woods, S. Car. to Fla. and La. 3—12'. Slender, smooth; lvs. varying to linear, entire or lyrately lobed. Heads 3" broad. March—June.

101. CICHORIUM, Tourn. CHICORY. Invol. double, the outer of 5

leafy scales, the inner of about 8 linear ones. Receptacle chaffy. Pappus scaly. Cypselæ not rostrate, obscurely 5-sided.—Oriental herbs with bright blue flowers, about 20 in a head.

- 1 C. Íntybus L. Root lvs. runcinate, cauline bract-like; heads axillary, subsessile mostly in pairs. 24 Dooryards, waysides, E. 2-3f. Rays large, showy, 5-toothed The root, or its extract, is often mixed with coffee. July-Sept. § Europe.
- 2 C. ENDÍVIA. Endive. Root leaves sinuate-dentate or pinnatifid, cauhue auric.ed an base; heads axillary, 3-5 together. (1) India. Cultivated as a salad.

102. KRÍGIA, Schreb. DWARF DANDELION. Involucre many-leaved, nearly simple, equal. Recep. naked. Cypselæ turbinate, striate, 5-angled. Pappus double, consisting of 5 broad, membranous scales, alternating with as many slender, scabrous bristles. (1) Acaulescent, small. Leaves lyrately lobed. Scapes simple. Heads solitary, with 20—30 yellow flowers.

- 1 K. Virgínica Willd. Early lvs. round-spatulate, subentire, the fater toothed and pinnatifid; scapes 1-5 or more, 1'-10' high. Rocks and sands. Hds. 5-6". May +.
- 2 K. Caroliniàna N. Early lvs. lin.-oblanceolate, few-toothed, later lvs. lyrate-pin natifid, or angular-lobed; scapes 1-5 or more, 2'-12'. Sands. S. Feb.-May.

103. CÝNTHIA, Don. Invol. nearly simple, of equal, narrow scales. Recep. flat, alveolate. Pap. double, the outer minute, scaly, inner copious, capillary. Cyp. short. \mathcal{U} Lvs. alternate or all radical. Fls. 15–20, yellow.

- 1 C. Virginica Don. St. few-leaved, subumbellate; lvs. lance-obl., repand-dentate. rarely lobed, petiolate. N.Y. to Ill., and S. Very smooth. 1-2f. Hds. 9". June.
- 2 C. Dandèlion DC. Acaulescent; scapes leafless, simple, 1-flwd.; lvs. spatulate-obl to lance-lin., entire or toothed, rarely pinnatifid. Md. to Ga. and Tex. 6–18'. Mar.-Jn

104. LEÓNTODON, L. AUTUMN DANDELION. Invol. imbricate, the outer sc. very short. Recep. naked. Pap. plumous, persistent on the some-what rostrate cypsela.—Acaulescent herbs with yellow fls., many in a head.

L. autumnàlis L. Scape branching; ped. scaly-bracted; lvs. lanceolate, dentatepinnatifid, smoothish. Waysides, meadows, &c. E. N. Eng. 6'-20'. Hds. several, near 1' in diameter. July-Oct. § Europe.

105. TRAGOPÒGON, L. VEGETABLE OYSTER. Invol. simple, of many leaves. Recep. naked. Pap. plumous. Cyp. longitudinally striate, contracted into a long, filiform beak. (2) European, with long, grass-like lvs

T. porrifòlius L. Invol. much longer than the corolla; lvs. lance-linear; ped. thick ened upward; pappus tawny. Waysides, &c. N. Y. (Hankenson). 3f. June. § ‡

105. HIERACIUM, Tourn. HAWKWEED. Invol. more or less imbri cated, ovoid, many-flwd. Sc. very unequal. Cyp. not rostrate. Pap. a single row of copious, tawny, fragile bristles. 24 Lvs. alternate, entire or toothed.

- * Heads 40-50-flwd. Invol. more or less imbricated. Cyp. blunt at tcp.....Nos. 1, 2

- 2 N. nanus DC. Smooth, simple ; lvs. deltoid-hastate and variously lobed, upper lan ceolate, all petiolate ; hds. clustered-paniculate ; sc. 8, fls. 10–12. White Mts. Aug.
- 3 N. altissimus Hook. Smooth, strict, paniculate, tall, leafy; lvs. petiolate, palmately 3-5-cleft, or lobed, varying to hastate, cordate, or even ovate, dentate; hds. 6" long, yellowish, forming a slender, leafy panicle; sc. 5. Woods, N. 3-5f. Augnst.
- 4 N. albus Hook. Lion's-foot. White Lettuce. Smooth, glaucous, corymb.-paniculate; lvs. hastate-lobed to ovate, petiolate, the lobes or leaves obtuse; heads 6-7", with 8 scales, 9-12 fls., and brown pappus. Moist woods. 2-4f. Purplish in spots. Aug. B. Serpentaria. Snake-root. Lvs. deeply 3-lobed, the middle lobe 3-parted.
- 5 N. Fràseri DC. *Earth-gall.* Smoothish, corymb.-paniculate; lvs. hastate or deltoid, rarely 5-7-lobed, on winged stalks, upper lanceolate.—Varies with the leaves all lanceolate and merely toothed. Hard soils, Conn. to Fla. 2-4f. August.
- 8 N. virgatus DC. Glaucous, simple, strict; lvs. sinuate-pinnatifid, narrow, the upper toothed or entire; panicle or raceme virgate. Sands, N. J. to Fla. 2-4f. Sept., Oct.
- N. racemòsus Hook. Smooth (exc. the invol.), simple, slender; lvs. lance-oval to lance-ovate, denticulate; hds. suberect, spicate-paniculate. Swamps, N. J. to Iowa, and N. 2-4f. Flowers pale red.—Varies with the lower leaves cut-pinnatifid. Sept.
- 8 N. asper T. & G. Rongh-downy, simple, strict; leaves oval-oblong to lance oblong, dentate; hds. erect. fascicled in a spicate panicle; fls. yellowish. W. 2-4f. Sept.

9 N. crepidíneus DC. Smoothish, tall, stout, corymb.-paniculate : lvs. broadly triang.-ovate to lanceolate, toothed, petiolate; hds. nodding, of 12 sc. and 25-35 ochroleucous fis. Fields, thickets, W. States. 5-8f. Larger than any of the foregoing. Sept.

109. LYGODÉSMIA, Don. Invol. fls., &c., as in Nabalus. Pappus whitish. Corollas rose-colored. 24 With linear-subulate leaves and erect heads on long, naked peduncles.

- 1 L. aphýlla DC. St. scape-like, erect, slender, forked above; lvs. nearly all radical, short, linear-filiform; heads 5-flowered. Pine woods, Ga. Fla. 2f. May.
- 2 L. júncea N. St. much branched; lvs. lance-linear; fls. 5. Min. (Matthews), and W.

110. TRÓXIMON, Nutt. Hds. many-flowered. Invol. campanulate, scales loosely imbricate, in 2—3 rows. Cyp. oblong-linear, compressed, glabrous, not rostrate. Pap. setaceous, copious, white. 4 Lvs. all radical. Scape bearing a single, large, showy head, with yellow flowers.

T. cuspidatum Ph. Rt. fusiform; lvs. linear-lanceolate, woolly at the edge; scales lanceolate, cuspidate-pointed. Prairies, Ill. Wis., and West. April—June.

111. **PYRRHOPÁPPUS**, DC. FALSE DANDELION. Invol. double, the outer row numerous, loose and spreading. Receptacle naked. Cyp. 5-grooved, at length long-beaked, bearing a copious, soft, capillary, reddish pap. (1) 24 Hds. solitary on long ped., large, with numerous deep yel. fls.

P. Caroliniànus DC. St. simple or branched, scape-like : lvs. mostly radical, lanceolate, acute, sinuate-toothed, lobed, or pinnatifid. Fields, Md. to Fla. May—July.

112. TARÁXACUM, Desf. DANDELION. Invol. double, the outer of small scales, much shorter than the inner appressed row. Recep. naked. Cyp. produced into a long beak crowned with the copious, white, capillary pappus.—Acaulescent herbs, with runcinate leaves. Figs. 68, 346, 492.

T. Dens-leònis Less Outer scales of the involucre reflexed ; lvs. runcinate, smooth, dentate ; scape short in fl., long in fr.—a globe of pappus. 24 Fields : common. § Eur.

113. LACTÙCA, Tourn. LETTUCE. Invol. few-flowered, scales imbricated in 2 or more unequal rows. Cyp. obcompressed (flattened same way as the scales), glabrous, abruptly narrowed to a long, filiform beak. Pappus copious, soft, capillary, white.—Herbs with leafy stems and paniculate heads of variable colors. Fig. 77.

L. Canadénsis L. β. elongata. Trumpet Milkweed. St. tall, hollow; lvs. pale beneath, clasping, runc.-pinnatifid, upper lance., entire; heads racemous-paniculate, with few scales and 12+ fls. (2) Rich soils, thickets. 3-6f. Yel. to purplish. Jl., Aug. β. sanguinea. Stem, lf. veins, and fls. purple; lvs. some hairy, glaucous beneath. γ. graminifolia. Lvs. long, linear, the lower few-lobed, upper entire. South.

δ. integrifolia. Lvs. lanceolate, all entire, lower some sagittate at base.

2 L. sativa. Garden Lettuce. Stem corymbous; lvs. roundish, the upper cordate; fis. white. (1) Said to be § in some places, when its lvs. become dentate-lobed and prickly.

114. MULGEDIUM, Cass. WILD LETTUCE. Involuce somewhat double, outer scales short and imbricated. Recep. naked, faveolate. Pap. capillary, crowning the short-beaked, *compressed* cypsela.—Leaves mostly spinulous. Hds. paniculate, small, ∞ -flwd. Jl.—Sept. Figs. 76, 448–50.

- 1 M. Floridànum DC. Smooth; lvs. runcinately pinnate-parted, segua. few, sinuate-dentate or angular; pan. loose, hds. 9". (2) Thickets, N. Y., W. and S. 3-6f.
- β. acuminatum. Lvs. lance-ovate, acuminate, toothed, or the lower subruncinate.
 2 M. pulchéllum N. Smooth and glaucous, strict; lvs. lance-oblong to lin., entire,
- or the lowest runcinate; pan. corymbed; fls. bright blue. L. Huron to Oreg. 2-7f. 3 M. leucophàum DC. Tall, leafy; lvs. lyrate-runcinate, coarsely-toothed; ped.
- scaly-bracted; pan. long, compound; fr. scarcely beaked. (2) Moist thickets. 5-10f.

115. SÓNCHUS, L. Sow THISTLE. Invol. many-flowered, imbricate, of numerous unequal scales, at length tumid at base. Recep. naked. Pap. of white-silky hairs, in many series. Cypselæ compressed, not rostrate.— Leaves mostly spinulous. Heads with many yellow flowers. Europe.

- § Flowers bright yellow, in showy heads. Achenia angular. Perennial......No. 1
 § Flowers pale yellow, in large heads. Achenia flat. Annual. Aug., Sept. Nos. 2, 3
- § Flowers pare yellow, in large neads. Achenia hat. Annual. Aug.
- 1 S. arvénsis L. Smooth, erect, hispid above; leaves runcinate-pinnatifid, spinulous-dentate, clasping with short auricles at base; hds. subumbellate. Fields, waysides, N. Eng., N. Y. 2f. §.
- 2 S. asper Vill. Leaves cordate, amplexicaul, oblong-lanceolate, undulate, spinulous dentate; ped. subumbellate; fruit oval-obovate, 3-ribbed on each side. 1-2f. §
- 3 S. olcràceus L. Lvs. sagittate-amplexicaul, runcin.-pinnatifid, subspinulous, den tate; ped. downy; involucre at length smooth; fruit many-striate. Rubbish. 2-3f. §

116. HUMEA ELEGANS. Tall, 4f, branching above into an ample capillary panicle; lvs. lance-ovate, clasping; heads numerous, small, drooping, with dry, 100se scales, and 3 or 4 carmine-red florets, with no pales or pappus. N. Hol. July-Oct.

117. CHAPTÀLIA, Vent. Invol. campanulate. Scales in few series, inear, acute. Recep. naked. Ray-fis. 9, ligulate, disk-fis. 9, but sterile, oilabiate, lips equal, outer 3-, inner 2-parted. Cypselæ glabrous. Pappus capillary. 24 Acaulescent. Lvs. all radical. Head cyanic. Mar., Apr.

C. tomentòsa Vent. White-tomentous; lvs. oblong-ovate to lance-oval; hd. nodding in bud, erect in fl., on the scape. Moist barrens, S. 6-12'. Rays 20, rose-colored.

ORDER LXXI. LOBELIACEÆ. LOBELIADS.

Herbs or shrubs with a milky juice, alternate, exstipulate leaves and scattered flowers. Calyx 5-lobed or entire. Corolla monopetalous, irregular, split down to the base on one side. Stamens 5, free from the corolla, united into a tube at least by their anthers. Ovary adherent to the calyx tube. Style 1. Stigma surrounded by a fringe. Fruit a capsule 2-3-(rarely 1-) celled. Seeds numerous, albuminous.

1. LOBÈLIA, L. Cor. tubular, irregular, cleft nearly to the base on the upper side, upper lip of 2 separate lobes, lower 3-lobed. Anth. united above into a curved tube. Stig. 2-lobed. Caps. opening at the summit. Seeds minute. (1) 24 Flowers axillary and solitary, or in terminal, bracted racemes. July—Sept.

¶ Corollas scarlet or bright crimson, large...* Exotic, Nos. 15, 16.....* Native, No. 1

T Corollas blue, or blue and white. ... † Exotic, Nos. 17, 18.... † Native.. (a)

- a Calyx lobes auricled at base, denticulate, shorter than corolla tube.... Nos. 2-4

c Leaves cauline, entire, few. Racemes loose, few-flowered......Nos. 10-12 c Leaves radical, entire. Racemes strict, few-flowered.......Nos. 13, 14

L. cardinàlis L. *Cardinal Flower*. Tall, simple, glabrous; lvs. oblong-lanceolate, slightly toothed, acute at each end, sessile; fls. in a terminal, bracted, secund raceme; stam. longer than the corolla. 2 Swamps. 2–4f. Splendid.

β. integérrima. Leaves all very entire; stem naked above. Northern N. Y.
 γ. cándida. Flowers white, the segments narrower. Mass.

2 L. syphilitica L. *Great Lobelia*. Stem erect, angular; leaves oblong-lanceolate acute or acuminate, unequally serrate, some hairy; raceme leafy; calyx hispidly cili ate, with the sinuses reflexed. 24 By streams. 1-3f. Flowers 1'.

β. alba. Flowers pure white. N.Y. (E. L. Hankenson; G. M. Wilbur).

- 3 L. glandulòsa Walt. Subsimple, leafless above; lvs. lance-lin., acutish, and with the lanceolate, auricled sepals some glandular-toothed; fls. few, remote, large (9''); cal. hispid or smoothish, short. 21 Damp barrens, Va., and S. 11-2f. Sept.-Oct.
- 4 L. brevifòlia N. Erect, simple, hispid; lvs. 1', crowded, oblong-lin., denticulate; sep. ovate, fringe-toothed, half as long as cor. Damp, Fla. to La. 18'. (L. Ludov. C-B.)
- 5 L. leptóstachys A. DC. Glabrous, erect, simple, virgate; lvs. lance-oblong; fls. small (4"), spike not secund; auricles awl-shaped, long. 24 Prairies, W. and S. 1-2f.
- 6 L. pubérula Mx. Downy or smoothish, erect, simple; lvs. elliptic-ovate, denticulate; fis. large (7-8"), in a long, secund spike; auricles ear-shaped. N. J., W. and S. 2f.
- 7 L. amèena Mx. Erect, simple, smooth; lvs. lanceolate, pointed both ways; fls. large (8-9"), secund, numerous, in a long rac.; bracts very small. 24 Swamps, Va., and S. 2f.
- 8 L. spicàta Lam. Erect, simple, puberulent; lvs. oblong, mostly obtuse; fls. small (3-4"), crowded in a slender rac.; pedicels and bracts as long as the fl. Dry soils. 1-2f.
- 9 L. inflata L. Indian Tobacco. Erect, branching, hairy; lvs. ovate-lanceolate, serrate; fis. short (4"), with leafy bracts; caps. inflated, large. (1) Fields. 1f. Narcotic.
- 10 L. Boykínii T. & G. Slender, smooth; branches erect; lvs. awl-shaped, erect; fis. small (4"), on filiform ped. in long, loose racemes. Wet sands, Ga. Fla. 2f. Lvs. 6".
- 11 L. Nuttállii DC. Erect, very slender, smooth; lvs. few, linear, remote; fls. few, small (3"); ped. as long as cor.; cal. tube almost none. (2) Swamps, L. I., and S. 1-14f.
- 12 L. Kálmii L. Simple or branched; rt. lvs. spatulate, st. lvs. lance-lin. to lin., all obtuse; rac. loose, leafy; ped. about equalling the showy blue-wh. fls., minutely bracted, or naked (in same specimen); cor. 5", lobes obovate. Rocky swamps, E. &W. 6-18'.
- 13 L. paludòsa N. Lvs. lin.-spat., thickish, obtuse, petiolate; scape simple, nearly naked; rac. loose, ped. about as long as the cal. (2) Bogs, Del., and S. 2-3f. Lvs. 5-10.
- 14 L. Dortmánna, L. Lvs. submerged, tufted, linear, entire, hollow with 2 longitudinal cells, short, obtuse; scape simple, nearly naked; fls. in a terminal raceme, remote, pedicellate, nodding. 24 In ponds, N. States. 2-3f. Only the fls. emerging.
- 15 L. FULGENS. Downy, erect, simple; lvs. narrow-lanc., revolute at edge. 21 Mez. 3f
- 16 L. SPLENDENS. Smooth, erect; lvs. narrow-lanc., flat; fls. large, in long rac. sfex. 3f.
- 17 L. ERYNUS. Slender, diffuse; lvs. toothed, ellip. to lin.; fls. scattered, bluish. S. Afr.
- 18 L. CELESTINA, a garden variety, with larger blue flowers, yellow in the centre.

2. DOWNÍNGIA, Torr. Sep. 5, linear. Cor. 2-lipped, tube not split, upper lip 2-parted, erect, lower lip 3-lobed. Stam. tube incurved. Caps. silique-form, 1-celled, ∞ -seeded, opening by 3 linear valves. (1) Low, with axillary, solitary flowers. (Clintonia, Doug.)

- 1 D. ÉLEGANS. Stem few-branched, angular; lvs. ovate, acute; ovary curved, 3-angled, longer than the lvs.; corolla blue with a white palate. Oregon! 6-12'. July, Aug.
- 2 D. PULCHÉLLA. Stem much branched ; lvs. obtuse ; fis. 8", middle lobe longest. Cal. 1

ORDER LXXII. CAMPANULACEÆ. BELLWORTS.

Herbs with a milky juice, alternate leaves, and without stipules. Flowers mostly blue, showy. Calyx superior, generally 5-cleft, persistent. Corolle regular, campanulate, generally 5-cleft, withering, valvate in estivation Stamens 5, free from the corolla. Anthers distinct, 2-celled. Pollen spherical. Ovary adherent to the calyx, 2 or more celled. Capsule crowned with the remains of the calyx, loculicidal. Seeds many. Figs. 62, 63.

S Calyx tube short. Pod roundish, opening at the sides. Cor. bell or wheel form.....CAMPANULA. 1 Calyx tube elongated. Pod prismatic, opening at the sides. Corolla whee form.....SPECULARIA. 2 S Calyx tube short. Pod ovoid, opening at the top. Corolla bowl-form......PLATYCODON. 3

1. CAMPANULA, Tourn. Calyx mostly 5-cleft. Cor. campanulate, or subrotate, 5-lobed, closed at base by the broad, valve-like bases of the 5 stamens. Stig. 3-5-cleft. Caps. 3-5-celled, opening by lateral pores. Mostly 24. Flowers in racemes or spikes, or few and axillary.

V. cæspitdsum Mx. Bilberry. Dwarf, cæspitous; lvs. obovate, attenuate at the				
base, thin, serrate, reticulate with veins, shining; flowers subsolitary; corolla oblong,				
5-toothed; stamens 10. White Mountains. 2-3'. July.				

3 V. stamíneum L. Deerberry. Lvs. oval-lanceolate, acute, dull, glaucous beneath; pedicels solitary, axillary, nodding; cor. bell-spreading, seg. acute, oblong; anth. 10. with the long tubes exserted. Dry woods. 2-3f. Fruit greenish-white. May, June.

4 V. arboreum Mx. Lvs. obovate, acute at base, mucronate, veiny, shining above

12

pale green and subpubescent beneath; pedicels secund, in leafy racemes; cor. cylin dric-bell-shaped, rose-white; antn. 10, included. Woods, S. 8-20f. Fr. black. May, Jn.

- 5 V. Vitis-Ideea L. Decumbent, much branched, smooth, evergreen; lvs. 4-7", oval, obtuse, thick, margin revolute, pale beneath; fis. solitary or in short clusters, 4-parted; corolla campanulate. Hills and mts., N. Eng.: rare. June, July.
- 6 V. Myrsinites Mx. Erect, much branched; lvs. small, elliptical, acute at each end, glabrous, serrulate; fls. in small lateral clusters of 2-5; cor. ovoid, urceolate; style slightly exserted. Woods, S. 1f. Whole plant often purplish. March, April.
- 7 V. myrtifòlium Mx. St. simple, decumbent at base, from long, creeping roots; lvs. 1-2', cuneate-obovate or oval, pale beneath; fis. in dense. sessile, lateral clusters of 6-12; cor. oblong-cylindric; fr. round, black. Woods, S. 1f. Mar., April.
- S V. Canadénse Rich. Branches reddish-green, pubescent, leafy; lvs. elliptic-lanceolate, acute at each end; rac. fasciculate, sessile, subterminal; cor. campanulate; cal. lobes acute. Rocky thickets, N. Eng., and W. 8–12′. Berries blue, sweet. May.
- 9 V. Pennsylvánicum Lam. Common Low Blueberry. Branches green, with 2 public public public structure in the structure of the str
 - y. alpinum. Dwarf, decumbent; lvs. small (3-4"), narrow-oblanceolate. Mts.
- (0 V. vacillans Soland. Low, bushy; lvs. oval to ovate, acute or mucronate, pale green, dull, glancous beneath, minutely serrulate; rac. dense-flowered, preceding the full-grown lvs. Hilly woods, N. Eng. to Tenn. 1-24f. Fr. blue-black, sweet. May, Jn.
- •1 V. corymbosum L. Common High Blueberry. Tall; flowering branches nearly leafless; leaves oval to lanceolate, acute or acuminate at each end, *entire*, pubescent when young, often glancons beneath; rac. short, sessile; cor. cylindrical to ovoid. Low woods. 5-10f. March-June.-Varies exceedingly.
 - β. virgatum. Branchlets leafless, covered with rose-colored rac. Sts.virgate. 5f. S.
 - y. amænum. Lvs. oblong; fis. cylindric, large, roseate; sty. included; fr. blk. 8f.
 - δ. fuscatum. Lvs. serrulate; ped. elongated; sty. exserted; fis. striped with red. 3f.
 - E. glabrum. Plant glabrous throughout, the leaves entire. Rare.
- 12 V. galèzans Mx. Flowering branches leafy; lvs. sessile, cuneate-lanceolate, sub serrate, veiny, glabrous when old; flowers in small, sessile fascicles; corolla small, yellowish; style exserted; fruit small, black. Swamps, S. 1f. April +.
- 13 V. hirsùtum Buckley. Whole plant, with fls. and fr., densely hirsute; lvs. ovate, entire; corolla oblong, nearly closed at mouth; berry round. Mts. of N. Car. 1f.

3. OXYCÓCCUS, Pers. CRANBERRY. Calyx adherent, 4-cleft. Cor. 4-parted, with long, narrow, reflexed segments. Sta. 8. Anth. tubular, 2parted, opening by oblique pores. Berries globous, 4-celled, many-seeded. b L. Delicate, with alternate lvs., red and purple berries on slender ped.

- * Stem prostrate, slender. Leaves evergreen, small. Berries acid Nos. 2, 3
- 1 0. erythrocárpus Ell. Lvs. oval, acuminate, thin, ciliate-serrulate; fls. axillary, solitary, the long segments at length reflexed. Mts. of Va. and Car. 1--2f. June.
- 2 0. palústris Pers. Sts. filiform, purple ; lvs. ovate, entire, revolute on the margin ; pedicels terminal, 1-flowered ; corolla pink, segments ovate. Alpine bogs, N.
- 3 O. macrocárpus Pers. St. filiform ; lvs. oblong, obtuse at each end, edges revolute, glaucous beneath ; pedicels axillary, elongated, 1-flowered ; corolla segm. linearlanceolate. Sphagnous swamps, Va., and N. Fruit large, valuable. June.

4. CHIOGENES, Salisb. Calyx 4-cleft, persistent. Cor. broadly campanulate, limb deeply 4-cleft. Stam. 8. Anth. cells distinct, awnless on the back, bicuspidate at apex, opening longitudinally. Ov. adherent. Fr. white, 4-celled, many-seeded. L., Delicate. Lvs. very small, alternate, with the flavor of the Checkerberry. Cor. small, wh., axillary, solitary. Fig. 248.

C. hispídula T. & G.-In old woods, N. Eng., N. and W. Stems creeping, slender, 1-3f. Leaves oval, 4-6". Berries very small. May, June.

5. CALLUNA, Salisb. HEATHER. Cal. of 4 scarious, colored sepals. Cor. campanulate, 4-parted, shorter than the calyx. Stam. 8. Anth. 2crested on the back, cells opening laterally. Stig. 4-lobed. Caps. 4-celled, 8-seeded, 4-valved. 5 Lvs. opposite, minute, crowded. Fls. axillary, or crowded in 1-sided racemes, scarious, roseate, with 4-6 scarious bracts. C. vulgaris Salisb.-Low grounds, Tewksbury 1 Mass., Me., and N. 2f. Lvs. 4".

6. ERÌCA, L. HEATH. Cal. 4-parted. Cor. tubular, bell-, cup-, urn-, globe-, egg-, or salver-form, the limb in 4 short lobes. Stam. 8. Sty. filiform. Caps. 4-celled, opening by 4 loculicidal valves. Sds. $2-\infty$ in each cell. 5 Very delicate, chiefly S. African, branching and brittle. Leaves whorled, rarely alternate, linear or acerous. Flowers nodding, cyanic.

- 1 E. cinèrea L. Scotch Heath. Stems clustered; branchlets and linear lvs. (1') in 3's, crowded; fls. racemous-clustered on the upper branchlets; cal. colored, with few or no bractlets, 1''; cor. purple, oval, 2''; anth. included, awned beneath. Sandy "moors," Nantucket Is. ! Found by Mrs. E. E. Atwater, June, 1868. Apparently indigenous.
- 2 E. CARNEA. Very slender, 6-10'; leaves in 3's or 4's, 2-3" long, obtuse; flowers axillary; corolla 2", and calyx 1", flesh-color; anthers dark-purple, exserted. A_ρs. April.-Of the 400 known species, only this is yet common in cultivation.

7. KALMIA, L. AMERICAN LAUREL. Cal. 5-parted. Cor. with 10 prominences beneath and 10 corresponding cavities within, including the 10 anthers. Border 5-lobed. Fil. elastic. Caps. 5-celled, many-seeded 5 5 Beautiful, N. American. Leaves entire, evergreen, coriaceous. Flowers in racemous corymbs, white and red, in May—July.

- * Flowers in terminal corymbs. Leaves thick, mostly acute......Nos. 1, 2

- 1 K. latifòlia. L. Calico Bush. Spoon-wood. Lvs. alternate and ternate, oval lanceolate, acute at each end, smooth and green on both sides; corymbs terminal, viscidly pubescent. Woods, Me. to O., Ky., and Fla. 5-20f. Profusely and splendidly flowering.
- 2 K. glauca Ait. Swamp Laurel. Branches ancipitous; lvs. opposite, subsessile, lanceolate, polished, glaucous beneath, revolute at the margin; corymbs terminal, the peduncles and bracts smooth. Bogs, Pa., and N. 2-3f. Lvs. 1/. Corymbs 8-10-flowered. β. rosmarinifolia. Leaves linear, more revolute, green beneath.
- 3 K. angustifòlia L. Sheep-poison. Lvs. ternate and opposite, elliptical-lanceolate, petiolate, obtuse at each end, smooth; corymbs lateral; bracts linear-lanceolate. Hille and copses, Can. to Ky. and Car. 2-4f. Flowers deep purple, few in each cluster.
- 4 K. cuneàta Mx. Lvs. scattered, sessile, cuneate-oblong, obtuse, mucronate, glandular-pubescent beneath; flowers white, in sessile clusters. Swamps, Car.: rare. 3f.
- 5 K. hirsùta Walt. Slender, branched, hairy; leaves scattered or opposite, ovate to linear-oblong, as long as the pedicels (4-6"). Barrens, S.: common. 1f. Fls. 7".

8. EPIGÆA, L. TRAILING ARBUTUS. MAY-FLOWER. Cal. large, 5parted, with 3 bracts at base. Cor. salver-form, tube villous within, limb 5-parted, spreading. Stam. 10. Anth. dehiscent by 2 longitudinal openings. Caps. 5-celled, 5-valved. \mid , Trailing, with cordate, ovate, enti.e, alternate leaves, and axillary clusters.

E. repens L.-Rocky woods, N. Eng. to Pa., Ky., and N. Stems half-shrubby, hairy, 10-15' long. Lvs. evergreen, 2'. Fls. rose-colored, delightfully fragrant. Apr. May.

9. ARCTOSTÁPHYLOS, Adans. BEAR-BERRY. Cal. 5-parted, persistent. Cor. ovoid, diaphanous at the base, limb with 5 small recurved segments. Anth. 10, with 2 long, reflexed awns, and opening by pores. Drupe or berry 5–10-celled, the cells 1-seeded. 5 Trailing. Leaves alternate. Racemes terminal.

- 1 A. Uva-ursi Spr. Lvs. entire, thick, evergreen, shining above, obovate; flowers drooping; drupe red, as large as a currant, the nut 5-seeded. Rocky hills, N. May.
- 2 A. alpina Spr. Lvs. thin, serrate, deciduous, obovate, acute, strongly netted; ped. hardly longer than the bractlets; drupes black. High mts., Me., N. H., and N.

10. GAULTHERIA, Kalm. CHECKERBERRY. WINTERGREEN. Cal. 5-cleft, with 2 bracts at the base. Cor. ovoid-tubular, limb with 5 small, revolute lobes. Fil. 10, hirsute. Caps. 5-celled, invested by the calyx, which becomes a berry. 5 Leaves alternate. Pedicels bibracteolate.

G. procúmbens L. St. procumbent, with the branches erect or ascending; lvs. obovate, mucronate, denticulate, crowded **at** the top; fls. few, drooping, terminal. Woods and pastures, Can, to Penn. and Ky. 3'. Red berries and leaves spicy. June-Sept.

11. MENZIESIA, Smith. Cal. deeply 4- or 5-cleft. Cor. urceolate or campanulate, 4- or 5-lobed. Sta. 8 or 10, anth. opening by terminal pores. Caps. 4- or 5-celled, opening septicidally. Seeds ∞ . Low, shrubby plants, of various habits. Flowers in terminal clusters.

§ PHYLLODOCE, Salisb. Lvs. evergreen, heath-like. Fls. 5-parted, bell-form....No. 1 § MENZIESIA proper. Leaves deciduous. Flowers 4-parted, urceolate......No. 2

- 1 M. taxifòlia Robbins. *Mountain Heath.* St. prostrate at base; lvs. linear, obtuse; pedicels erect, slender, terminal, aggregate, 1-flowered. Alpine bogs, N. H., Me., and N. 6-12'. Leaves 6-7". Flowers purple, the ped. 18". June.
- 2 M. ferruginea Smith. β. globularis Sims. Shrub low, straggling, pubescent; leaves lance-oval, ciliate; flowers small, nodding, on slender pedicels, greenish-purple Mts., Penn. to Car. 3-4f. June.

12. CASSIOPE, Don. Moss-PLANT. Sep. bractless, imbricated, ovate. Cor. globular-campanulate, 4- or 5-lobed. Anth. 8 or 10, pendulous, cells opening by a terminal pore, with a long reflexed awn behind. Caps. 4- or 5-celled, valves 2-parted. Placentæ pendulous, ∞-seeded. 5 Small, alpine, moss-like or heath-like shrubs. Flowers solitary, pedicellate.

C. hypnoides Don. Stem filiform, tufted; leaves evergreen, subulate, smooth, crowded; flowers 5-parted, purple, nodding. High mts., N. H., N. Y., Me. 2-3'. Jn.

13. ANDRÓMEDA, L. Cal. 5-parted, persistent, not becoming fleshy in fruit. Cor. urceolate, the mouth more or less contracted, 5-toothed. Anth 10, cells 2, opening by a terminal pore. Caps. 5-celled, 5-valved, often re-enforced with 5 external valvelets. Seeds ∞ . 5 5 with entire, or serrulate, alternate leaves. Figs. 64, 438.

- 1 A. calyculàta L. Leather-leaf. Lvs. oblong, obtuse, flat, acute at base, rusty beneath; fls. white, each with a leaf, in leafy racemes; cal. 2-bractleted at base, sep acute; inner pericarp 10-valved, thin. Bogs, Can. to Car. and Wis. 3f. April +.
- 2 A. angustifòlia Ph. Leaves linear-lanceolate, acute, the margins revolute; calyx segments acuminate, 2-bracteolate. Otherwise as No. 1. Swamps, S. Car., Ga.
- 3 A. axillàris Lam. Leaves oblong, acute, denticulate, petiolate; rac. dense, short, sepals roundish, obtuse. Banks, low country, Va. to Fla. 2-4f. Evergreen. Mar.
- 4 A. Catesbæi Walt. Lvs. lance-ovate, conspicuously pointed, petiolate, finely ser rulate; rac. dense, nodding, nearly as long as the leaves; sep. ovate, acute. Banks, up-country, Penn. to Ga. 2-5f. Racemes 2-3', white. Evergreen. May.
- 5 A. acuminàta L. Pipe-wood. Leaves very smooth, rigid, lance-ovate, gradually pointed, entire; rac. loose, short; branches hollow. Swamps, S. 3-10f. April.
- 6 A. racemòsa L. Lvs. lance-oval, slightly pointed, serrulate, deciduous; rac. strict, ascending, terminal, naked, long and 1-sided; sep. ovate, acuminate; anth. cells each 2-awned at apex; seeds wingless. Wet woods. 2-6f. Rac. 2-3', white. Jn., July.
- 7 A. recúrva Buckley. Lvs. deciduous, lance-ovate, acuminate; anth. cells each 1 awned; pod 5-lobed; sds. winged, flat; branches recurved-spreading. Mts., Va., N. Car.
- 8 A. polifòlia L. Wild Rosemary. Erect, smooth, glaucous; lvs. oblong-linear, with margins revolute, white beneath (2-3'); umb. 5-9-flwd., roseate. Bogs, N. 1f. Jn.
- 9 A. floribúnda Lyon (Ph.) Lvs. thick, evergreen, lance-oblong, acute or pointed, bristly-serrulate; rac. paniculate, crowded; bractlets minute; cor. white; anth. awns 2, reflexed, white. Mts., Va. to Ga. 2-10f. Flowers numerous and handsome. Apr
- 10 A. phillyræfòlia Hook. Lvs. thick, shining, evergreen, elliptic-oblong, obtuse, serrulate above; rac. subterminal, loose; sep. lanceolate; cor. oval; anth. each with 2 long reflexed black awns. Woods, Quincy, Fla. 1-3f. (A. Croomii, C-B.)
- 11 A. nítida Bartram. Fetter-bush. Lvs. thick, evergreen, shining, elliptical, acuminate at each end, margins veined and revolute; umbels axillary, nodding, roseate; branches sharply angled. Low pine-barrens, S. 3-6f. March, April. Elegant. β? rhombifolia. Leaves broad-oval; sepals ½ as long as the ovoid corolla. Fla
- 12 A. Mariána L. Stagger-bush. Lvs. thin, decidnous, oval, entire, acutish; flowering branches leafless; fls. large (4-5"), white or reddish, in lateral crowded fascicles; sepals linear, ½ as long as the cylindric corolla. Sands, N. J. to Fla. 3f. June, July.
- 13 A. speciòsa Mx. Lvs. oval, obtuse, servate, veiny, deciduous; flowering stems mostly leafiess, branched; sepals 4 as long as the large bell-shaped white corolla. Swamps, S. June.-Varies with the leaves broad, crenate, whitish beneath.
- 14 A. ligustrina Muhl. Pubescent; lvs. deciduous, lance-obovate to obovate, short acuminate, serrulate; rac. panicled on the leafless flowering branches. Wet soils, Ct. to Fla. 6f. June.—Var. with small lvs. scattered among the small (1") downy fls. S.
- 15 A. ferruginea Walt. Lvs. thick, rigid, evergreen, obovate to oblanceolate, rusty beneath, revolute-edged; umb. axillary; fis. small (1"); valvelets nearly as broad as the valves. Pine-barrens, S. 3-20f. Shrub or small tree. Apr., May. (A. rigida Ph.)
- 16 A. montàna Buckley. Lvs. evergreen, lance-ovate, ciliate-serrulate; fis. in large panicles; pedicels pubescent, with 3 linear bractlets. Mts., N. Car. 4-6f.

14. OXYDÉNDRUM, DC. SORREL-TREE. Sep. bractless, valvate n the early bud. Cor. urceolate, ovoid, 5-toothed. Anth. 10, linear, erect, awnless, cells opening lengthwise. Capsule oblong, truncate, 5-celled, 5valved. Seeds ∞ . 5 Lvs. petiolate, oblong-lanceolate, acuminate, serrulate. Flowers white, in terminal panicles of slender, spicate racemes.

0. arboreum DC .-- Ohio, Penn., and S. along the Alleghany Mts. Tree 40-50ft. Jn., J.

15. LOISELEURIA, Desv. ALPINE AZALEA. Calyx 5-parted, lobes equa. Cor subcampanulate, 5-parted, regular. Sta. 5, equal, erect, shorter than the corolla, anth. dehiscing laterally. Style straight, included. Caps. 2- or 3-celled, 2- or 3-valved, ∞ -seeded. 5 Delicate, procumbent, tufted, with opposite, petiolate, entire leaves. Pedicels terminal, solitary, 1-flowered. Corolla rose-color.

L. procúmbens Desv.- Summit of the White Mts., N. H. A tiny shrub, 3-6'. Lvs elliptical, 3'', margins revolute. Flowers nearly sessile. June, July.

16. AZALEA, L. SWAMP PINK. Cal. small, 5-parted. Cor. funnelform, somewhat irregular, with 5 spreading lobes. Sta. 5. Fil. and style long, exserted, declined, anth. opening by pores. Caps. 5-celled, 5-valved, ∞ -seeded. 5 Erect. Lvs. alternate, deciduous, oblong or obovate, entire. Flowers in umbelled clusters, terminal, large and showy. Fig. 114.

- Calyx lobes all oblong and of conspicuous length.-a Native......Nos. 3, 4

-a Exotic.....Nos. 5, 6

- A. viscòsa L. Branchlets hispid; leaves obovate-oblong, the edges, midvein, and petiole bristly; fls. appearing after the lvs., very viscid, the tube much longer than the segments; stamens exserted; style much longer. Swamps. 4-10f. May-July. β. nitica. Lvs. smooth, green, shining, oblanceolate. Dry woods, N. 1-2f. γ. htspida. Lvs. very hispid above, smooth and glaucous beneath. Mts., Pa.
- 2 A. nudifiòra L. *Pinxter-bloom*. Young branchlets and lvs. beneath pubescent; clusters naked, appearing with or before the young lvs.; corolla slightly viscid, tube downy, scarcely longer than the segm. Woods: more common S. 3-7f. Apr.+.-Varies with the flowers *pink*, *deep purple*, *white-variegated*, *white* with a buff centro, and *buff* all over; the latter two fragrant. Also, with 10-20 stamens.
- S A. calendulàcea Mx. Flaming Pinxter. Young branchlets pubescent; lvs. attenuated to the base, corymbs nearly or quite leafless; tube of the cor. hirsute, not viscid, shorter than the ample lobes. Upland woods, O., Pa., and S. 3-10f. May, Jn. -The splendid flowers vary to yellow-scarlet, flame-color, brick-red, saffron-yellow, &c.
- 4 A. arboréscens Ph. Branches smooth; lvs. obovate, glabrous, glaucous beneath, margins ciliate; corymbs leafy with full-grown leaves; corolla tube not viscid, longer than the lobes. Mts., Penn., and S. 10-20f. May-July.
- 5 A. INDICA. Strigous, but not glandular; lvs. wedge-lanceolate, acuminate, ciliate; fls. terminal, 1-3 together. Japan. Fls. scarlet, crimson, white, &c. Splenāid.
- 6 A. PÓNTICA. Lvs. oblong, acute, margin ciliate; fls. viscid, corymbed, after the leaves; tube equalling the limb, yellow, very fragrant. Asia Minor.

17. RHODODENDRON, L. ROSE BAY. Calyx small, deeply 5-parted, persistent. Cor. campanulate, often slightly unequal, 5-lobed. Stam.
10 (rarely fewer), mostly declinate, anthers opening by 2 terminal pores. Caps. 5-celled, 5-valved, many-seeded. 5 5 With alternate, entire leaves Flowers in dense, terminal umbels from large, scaly buds. Figs. 99, 311

- * Leaves acute or acuminate, dotted or discolored beneath. Fls. spotted. Nos. 3, 4, 5
- * Leaves acuminate, scarcely paler beneath. Flowers very broad, purple......No. C
- 1 R. Lappónicum Wahl. Laplana Rose Bay. Dwarf; lvs. elliptical very small, roughened with concave rusty scales both sides; fls. small (7"), lobes equal, purple; sta. 5, 7, or 10, exserted. High mts., N. Eng., N. Y. 8-10', very bushy. June, July.
- 2 R. Catawbiénse Mx. Catawba Rose Bay. Lvs. oval, rounded-obtuse at each end, paler beneath, smooth; cal. lobes oblong, elongated; cor. broad-campanulate lilac-purple, large (14"); stam. 10. High mts., Va., N. Car. 3-6f. Lvs. 3-5'. Jn. 4
- 3 R. punctàtum Andr. Lvs. elliptical, acute or acuminate, glabrous, the lower surface and dense corymbs covered with resinous dots; fls. bell-funnel-form, pink-red green-spotted within, the lobes wavy. - **4 R. máximum** L. Lvs. obovate-oblong, acute, smooth, coriaceous, rusty beneath, revolute on the margin; cal. lobes oval, obtuse; cor. white to roseate, spotted within; lobes unequal, roundish. Along streams, N. Eng. to Ga. 6-20f. Splendid. †
- 5 **R.** ARBÒREUM. Lvs. lanceolate, silvery-spotted beneath; cor. lobes crenulate and curled, white, buff, red, crimson, &c.; calyx downy. Himmaleh Mts. 5-20f.
- 6 R. PÓNTICUM. Lvs. lance-oblong, attenuated to each end, smooth, green both sides; corolla bell-rotate; calyx smooth. Asia Minor. Low bush, flowers broad (2/), purple.

18. RHODÒRA, Dunham. Cor. adnate to the 5-toothed calyx, deeply divided into 3 segments, upper one much the broadest, 2–3-lobed at the apex, in bud enfolding the 2 lower. Sta. 10, declinate, fil. unequal, anthers opening by 2 pores. Caps. 5-celled, 5-valved. Cells many-seeded. 5 With alternate leaves, and pale-purple flowers. April, May.

R. Canadénsis L.-Woods or swamps, N. Eng. to Penn. 2-3f. Fls. in terminal clusters, 1', appearing before the oblong leaves, which are downy-canescent beneath.

19. BEJÀRIA, Mut. Fls. heptamerous. Calyx 7-toothed, campanulate. Corolla of 7 distinct petals. Sta. 14. Caps. 7-celled, 7-valved, manyseeded. 5 With alternate, entire lvs., and fls. in dense, racemous panicles.
B. racemòsa Vent. Branches hispid and glutinous; lvs. ovate-lanceolate, glabrous; racemes terminal, white. Sandy soils, Ga., Fla. 3-4f. June, July.

20. LEDUM, L. LABRADOR TEA. Calyx minute, 4-toothed. Cor. 5-petalled, spreading. Sta. 5—10, exserted, anthers opening by 2 terminal pores. Caps. 5-celled, opening at the base. 5 Lvs. alternate, entire, ferruginous-tomentous beneath, coriaceous. Fls. in terminal corymbs, white.

L. latifòlium Ait. Lvs. elliptic-oblong, strongly revolute at edge; sta. 5-7, sca.ce.y xserted. Mountains, Penn., to Greenland. 2-4f. May-July.

21. LEIOPHÝLLUM, Pers. SAND MYRTLE. Calyx 5-parted. Pet 5, ovate-oblong, spreading. Sta. 10, exserted, anthers dehiscing by lateral cleft² Caps. 3-celled, 3-valved, many-seeded. 5 Glabrous, with erect branches. Lvs. alternate, entire, oval, coriaceous, revolute-edged. Corymbs terminal. Flowers white.

L. buxifolium Ell.-Pine-barrens, N. J. to Car. 8-12f. Leaves shining. May.

22. CLETHRA, Gært. SWEET PEPPER-BUSH. Cal. 5-parted, persist ent. Pet. 5, distinct, obovate. Sta. 10, exserted, anth. inverted in the bud, at length erect. Style persistent, stigma 3-cleft. Caps. 3-celled, 3-valved ∞ -seeded, enclosed by the calyx. 55 Lvs. alternate, petiolate. Flowers white, in downy-canescent racemes. Bracts deciduous.

- C. alnifòlia L. Lvs. cuneiform-obovate, acute, acuminately serrate, green on both sides, shoth or slightly pubescent beneath; racemes terminal, elongated, somple or branched; bracts subulate. Swamps, N. Eng. to Ga. 3-8f. Fragrant. July, Ang. B. tomentosa. Lvs. tomentous beneath; spikes subpanicled; fls. 3". S. Apr.-Jn. y. scabra. Lvs. coarsely serrate, rough-downy both sides. Ga. (Bainbridge). Pet. 2".
- 2 C. acuminàta Mx. Arborescent; lvs. glabrous, glaucous beneath, oval, acuminate abruptly acute at base, finely serrate, on slender petioles; rac. terminal, solitary bracts long, caducous. Mts., Va., Ky., to Car. 10-18f. Lvs. 4-6'. July, August.

23. ELLIÓTTIA, Muhl. Calyx small, 4-toothed. Corolla of 4 petals slightly cohering at base. Stamens 8, anth. sagittate. Style slender, with a capitate, undivided stig. Caps. 3-celled, 3-seeded. 5 With virgate-branched, alternate, lanceolate, entire leaves, and terminal racemes of white flowers.

E. racemòsa Muhl.-Dry, rich soils, S. Ga. 4-Sf. Racemes bractless. June.

24. CYRÍLLA, L. Cal. 5-parted, minute. Pet. 5, distinct, spreading. Sta. 5, anth. opening lengthwise. Style short, with 2 stig. Caps. 2-celled, 2-seeded, indehiscent. Seeds suspended. 5 Branches irregularly whorled, with entire, elliptic-oblanc. lvs., and the white fls. in slender clustered rac. C. racemiflora Walt.—Sandy swamps, S. 12—18f. Lvs. 2—3'. Rac. 4—6'. June.

25. MYLOCÁRIUM, Willd. BUCKWHEAT TREE. Calyx 5-toothed, minute. Pet. 5, obovate, obtuse. Sta. 10, very short, fil. thickened below. Caps. corky, 2- or 3-winged, 3-celled, with 3 subulate seeds. 5 Very smooth, with branches irregularly whorled, elliptical leaves, and terminal racemes of white, fragrant flowers.

M. ligustrinum Willd.-Borders of swamps, Ga. and Fla. 4-8f. April, May.

26. PÝROLA, Salisb. WINTERGREEN. Cal. 5-parted. Pet. 5, equal. Sta. 10, anth. large, pendulous, fixed by the apex, 2-horned at base, opening by 2 pores at top. Style thick, as if sheathed. Stig. 5, appearing as rays or tubercles. Caps. 5-celled, opening at the angles, many-seeded. 24 Low, scarcely shrubby, evergreen herbs. Lvs. radical or nearly so, entire. Scapes mostly racemous, from a decumbent stem or rhizome. Fig. 99.

- § Stamens and style straight. Stigmas peltate, 5-rayed. June, July......Nos. 1, 2
 § Stamens ascending. Style declined and curved. Stigma 5-tubercled...(a)
- **1 P. minor** L. Lvs. round-ovate, repand-crenulate, longer than their petioles; rac. spike-like; corolla globular, including the short style. Woods, N. H., and N. July
- 2 P. secúnda L. Lvs. broadly ovate, acute, subserrate, longer than the petiole; rac. secund; cor. oblong; style exserted. Woods, N. States. 5-8'. Lvs. near the base.
 pumila (Paine). Lvs. nearly orbicular, thin; scape 3-6-ficwered, 4-8'. N. Y.
- 3 P. chlorántha Swartz. Lvs. orbicular, crenulate, shorter (1') than the petiole scape tall (6-12'), few-flowered; segm. of the cal. very short, obtuse; pet. half-open, oval, greenish; anth. conspicuously tubular. Woods, N. States and Can. June, July.
- 4 P. elliptica N. Leaves oval or elliptical, thin, longer than their petic es; scape naked, 6-10-flowered; sep. very short and obtuse; anth. pores blunt; fls nodding-fragrant. Woods, N. States and Can. 3-9'. Petioles white. June, July.

- 5 P. rotundifòlia L. Lvs. round-ovate, shorter than the petiole, thick; scape 3 angled, bracted below, ∞-flowered; sepals ovate, obtuse; anther pores distinctly tubular. Woods, Can. to Car., and W. 8-14'. Flowers large. June, July.
 β. uliginosa, Lvs. dull, 14', the stalk much longer; sep. acute; fls. smaller.
- 6 P. asarifòlia Mx. Lvs. round-reniform, thick, shining, shorter than the petiole; scape angular; rac.lax, Oo-flowered; sepals lanceolate, acute; anther pores blunt. Old woods, N. States and Can. 6-12'. Flowers purple. June.

27. CHIMÁPHILA, Ph. PIPSISSIWA. Cal. 5-parted. Pet. 5, spreading. Stamens 10, fil. dilated in the middle, anth. cells produced into tubes, opening by a 2-lipped pore at apex. Style very short, thick. Capsule 5celled, opening from the summit. 5 Small, glabrous. Leaves cauline, serrate, thick. Ped. scape-like. Flowers terminal, nodding, roseate. Fig. 255

- 1 C. umbellàta Nutt. Prince's Pine. Lvs. cuneate-lanceolate, shining, 1-colored, serrate, in 4's-6's; umbel 4-7-flowered. Dry woods. 8-12'. July.
- 2 C. maculàta Pursh. Lvs. lanceolate, acuminate, rounded at base, remotely ser rate, discolored, opposite or in 3's; ped. 2-3-flowered. Sandy woods. 6-8'. Jn., Jl.

28. MONESES, Salisb. Calyx 5-parted. Cor. 5-parted, rotate. Sta. 10, regular, 2-spurred at base, opening by 2 tubular pores at apex. Style straight. Stig. 5-lobed. Caps. 5-valved, 5-celled, ∞ -seeded. 24 Low, simple, smooth. Lvs. at top of the stem, roundish, serrulate, petiolate, veiny Peduncle terminal, longer than the stem.

M. grandiflora Salisb.—Mossy woods, N. Eng., N. Y.: rare (com. in Oreg.) 3'. Scape with a bract in the midst, and a single, terminal nodding white flower, 6" broad. Jn.

29. SHÓRTIA, Gray. (This genus was founded upon an imperfect specimen in the Herbarium of Michaux, labelled, "High mountains of Carolina." (See Addenda.)

30? GALAX, L. BEETLE-WEED. Cal. of 5 distinct, persistent sepals. Cor. of 5 oblong-obovate, distinct petals. Fil. 10, united into a tube with as many teeth, those opposite the petals sterile. Anth. 5, 1-celled, opening across the top. Caps. 3-celled. Seeds ∞ , enclosed in a loose, cellular testa. 24 Roots tufted, creeping, deep red, sending up roundish-cordate, long-stalked, glabrous leaves and a scape bearing a dense raceme of white flowers. (Shortia and Galax have been lately referred to Diapensiaceæ.)

C. aphýlla L.-Damp woods, Md. to Tenn., and S. Lvs. 2-3'. Scape 1-2f. Jl., Aug.

31. MONÓTROPA, L. INDIAN PIPE. PINE SAP. Sep. 1—5, bractlike. Pet. 4—5, connivent in a bell-shaped corolla, gibbous at base. Sta 8—10, anthers opening transversely at apex. Stig. 5-rayed. Caps. 4- ξ celled, 4-5-valved. Seeds ∞ , minute.—Low, parasitic herbs, destitute of green herbage, furnished with scale-like bracts instead of leaves.

§ Sepals (or bracts) 1—3. Flowers solitary, scentless. Style very short......No. 1
§ Sepals 4 or 5. Flowers in a secund raceme, fragrant. Style long......No. 2

- M unifiòra L. Indian Pipe. Bird's-nest. St. short; scales approximate; fl. nodding; fr. erect. Common in woods. 6-8'. Plant whitish. June-Sept.
- 2 M. Hypópitys L. Pine Sap. Bird's-nest. More or less downy; pedicels as long as the flower; caps. subglobous. Woods · com. 6-10'. Plant tawny. June-Aug

32. SCHWEINÍTZIA, Ell. CAROLINA BEECH-DROPS. Calyx persistent, of 5 erect, ovate-acuminate sepals. Corolla persistent, campanulate, limb 5-lobed. Sta. 10, anthers awnless, opening by pores at apex. Style thick, stig. large, 5-angled, caps. 5-celled, 5-valved. Seeds numerous, minute. Plant leafless, brownish. Flowers subsessile, capitate, reddishwhite, with the odor of the violet.

S. odoràta Ell.-Woods, Md. to Car. 3-5'. Habit of Monotropa. February, March.

33. PTERÓSPORA, Nutt. ALBANY BEECH-DROPS. Calyx 5-parted. Cor. urceolate, roundish-ovoid, the limb 5-toothed and reflexed. Sta. 10, anthers peltate, 2-celled, 2-awned, opening lengthwise. Caps. 5-celled, 5valved. Seeds very numerous, minute, winged at the apex. 24 Leafless, brownish-red, simple, viscid-woolly. Fls. racemed, white.

P. Andromedéa Nutt.—Near Albany, N. Y. (A. Stores), N. and W.: rare. 12-30. Rac. erect, loose, with 40 or more drooping fls. resembling those of Andromeda. J.

ORDER LXXIV. AQUIFOLIACEÆ. HOLLYWORTS.

Shrubs or trees, with simple, coriaceous, exstipulate leaves. Flowers small, axillary, sometimes directions. Sepals 4--6, imbricate in bud, very minute. Corolla regular, 4-6-cleft or parted, hypogynous, imbricate in æstivation. Stamens inserted into the very short tube of the corolla and alternate with its segments. Anthers adnate. Ovaries free from the calyx, 2-6-celled, with a solitary, suspended ovule in each cell. Fruit drupaceous, with 2--6 stones or nucules. Albumen large, fleshy.

 § Habitually tetramerous.

1. ILEX, L. HOLLY. Fls. 4- (rarely 5-) parted, mostly perfect, but many abortive. Calyx 4-toothed, persistent. Pet. 4, distinct or scarcely united at base. Sta. 4. Stig. 4, or united into one. Drupe red, with 4 bony nutlets, ribbed and furrowed on the convex back. 555 Leaves alternate. Flowers small, white, lateral, single or clustered.

- * Shrubs evergreen Leaves unarmed, serrate or entireNos. 2-4
- * Shrubs deciducus. Lvs. thin.-a Pedicels short as the petioles......Nos. 5, 6

 $-\alpha$ Ped. (the sterile) longer than petioles.....No. 7

1 I. op 2 ca Ait. Lvs. thick, smooth, oval, spinescent at apex, and with remote, repand, spinescent teeth; drupe ovoid, nutlets 5-ribbed on the back. Woods, Mass to Ga and La. 15-30f. A beautiful evergreen. June.

 β . integra. Lvs. entire, only a few of them 1-3-toothed. Tree, S.

2 I. Dahoon Walt. Downy, more or less; lvs. 2—3', oblong to oblanceolate, thick, shining above, pale bencath, entire, acute or obtuse; sterile ped. O-flowered, fertile few-flowered; nutlets 3-ribbed. Swamps, Va., and S. 5—12f. May.

β. ligustrina has narrow, wedge-lanceolate, acute, subserrate leaves. South.

8 I. myrtifòlia Walt. Nearly smooth ; lvs. very small (5-9"), oblong-linear, thick, serrulate when young, subsessile ; pedicels 1-9-flowered. Pine-barren ponds, Md. to Fla. 12-20f. Stems straggling, light gray. Very unlike No. 2. May.

- 4 I. Cassine Walt. Cassena Tea. Smooth; lvs. small (10-18''), elliptical, obtuse, crenate, thick, shining; ped. about 2-flowered. Coastward, S.: common. 6-15f, bushy. March, April. Was used as a tea by the Creek Indians.
- 5 J. decídua Walt. Nearly smooth; lvs. thin, 1-2', lance-oval, pointed, blunt-ser rate; ped. short as the petioles, the *s* clustered; seeds obtusely ribbed. S. 6-91.
 β. urbana. Lvs. 2-3', oval, obtuse, tapering to the base. Ill., and S. May.
- 6 I. Amelánchier Curt. Leaves (variable) ovate, oblong to lanceolate, acute on pointed, serrulate, thin, downy beneath; ped. short as the petioles, s clustered, s solitary; drupe red. Hills and mts., N. Y. to S. Car. (Prinos ambiguus Ph.)
 β. monticola. Lvs. large (3-5'), glabrous, the short ped. and cal. some downy
- 7 I. ambigua Chapm. Lvs. oval or elliptical, acute (scarcely pointed), serulate or nearly entire, smoothish; s ped. much longer than the pet., clustered, s short, solitary. Wet grounds, S. 4-Sf. March, April. (Prinos ambiguus Mx.)

2. NEMOPÁNTHES, Raf. Parts of the flower in 4's or 5's. Calyx very small. Petals linear-oblong, shorter than the stamens. Stig. sessile Drupe globular, red, with 4, rarely 5, smooth, horny nutlets (seeds). 5 Lvs. entire, smooth, thin. Fls. white, small, on slender pedicels, $\delta \neq \xi$. N. Canadénsis DC.-N. Eng. to Mich. Shrub 4-6f. Lvs. 2'. Ped. 9-12'. May, Ju.

3. **PRINOS**, L. WINTER-BERRY. Fls. small, habitually 6-parted and perfect, but often fruitless. Calyx 6-cleft. Cor. monopetalous, subrotate, 6-parted. Sta. 6 (in the sterile flower's rarely fewer, in the fertile rarely more). Berry 6-seeded, seeds with a smooth, cartilaginous testa. 55 With alternate lvs., small white fls, and red or black berries. (See Addendu.)

- **1 P. verticillàtus** L. *Black Alder*. Lvs. oblanceolate or elliptical, acuminate, mucronate-serrate, small; pedicels shorter than the petioles; berries scarlet, in close bunches as if vericillate, all Winfer. Low woods. 8f. Leaves $1-1\frac{1}{4}$. July.
- 2 P. lanceolàtus Ph. Lvs. lanceolate, long-acuminate, sharp-serrate, glab., 1-3'; fls. subsessile, the sterile 3-androus; berries large, red. Swamps, S. (Dr. J. Hale.)
- 3 P. levigàtus Ph. Leaves lanceolate, appressed-serrulate, glabrous, shining above, short-acuminate; ped. longer than the pet., in 2's or 3's. Swamps, Can. to Va. 7f. Jn.
- 4 P. glaber L. Ink Berry. Lvs. coriaceous, cuneate-lanceolate, glabrous, serrate at the end; ped. longer than the pet., 1-3-flowered. Swamps, Ms. to La. 3-4f. Jn., Jl.
- 5 P. coriàceus Ph. Lvs. thick, obovate, serrate at the end, glabrous, shining; fls. all solitary, on very short peduncles, 6-S-parted. Woods, S. 4-6f. Lvs. 2'. May.

ORDER LXXVI. STYRACACEÆ.

Trees of shrubs with alternate, simple leaves, destitute of stipules. Flowers or racemes solitary, axillary, bracteate. Calyx 5-, rarely 4-lobed Corolla 5- rarely 4- or 6-lobed, imbricated in bud. Stamens definite or ∞ , unequal in length, usually cohering. Anthers innate, 2-celled. Ovaries adherent, 2-5-celled, the partitions sometimes hardly reaching the centre. Fruit drupaceous, generally with but one fertile cell. Seeds 5-1.

fribe I.	SYMPLOCINEÆ. Calyx 5-cle	ft. Anth. 00, innate, globular.	Fls. yellow SYMPLOCOS. 1
FRIBE II.	STYRACEÆ. Calyx mostly	runcate. Anthers 8-12, linear	-oblong, adnate.
	Flowers white,-a 5-parted.	Fruit wingless, 1-seeded	
	-a 4-parted.	Fruit winged, 2- or 3-seeded	

1. SYMPLOCOS, Jacq. Cal. 5-cleft. Cor. 5-parted, spreading. Sta ∞ , in 5 clusters, one attached to the base of each petal. Fil. slender. Anth globular. Ovary 3-celled, half-adherent. Drupe dry, with a 3-celled, mostly 1-seeded nut. 5 5 With clusters or racemes of small yellow flowers.

S. tinctòria L'Her. Lvs. oval or elliptical, acuminate, acute at base, thick; fis. sessile, in axillary, dense clusters of 6-12; calyx lobes ovate, obtuse. Va., and S. 10-20f. Drupe ovoid, 6". The dried leaves dye yellow. March, April.

2. STYRAX, Tourn. Cor. deeply 5-parted, much longer than the campanulate calyx. Sta. 10, joined to the base of the corolla, fil. united into a short tube at base. Anth. linear, erect. Ov. adherent at base. Fr. coriaceous, 1-celled, mostly 1-seeded. 5 With alternate leaves and axillary racemes of white, drooping, showy flowers. March-May.

- 1 S. pulverulénta Mx. Pulverulent-downy; lvs. broadly oval, obtuse, glandularserrulate; fis. axillary and terminal. Va. to Fla. 2-3f. Petals 6".
- 2 S. Americana Lam. Plant glabrous; lvs. oblong or elliptical, acute at each end; rac. leafy, few-flowered, cor. often downy. Swamps, Va., and S. 4-8f.
- **3 S. grandifòlia** Ait. Lvs. ample, broadly obovate, acute or short-acuminate, hoary tomentous beneath; racemes leafless, longer than the leaves. Va. to Fla. 6–12f.

3. HALESIA, Eliis. SNOWDROP TREE. Cal. obconic, briefly 4-lobed. Cor. inserted into the calyx, campanulate with a narrow base, 4-parted. Sta. 8-12, connate into a tube below. Sty. filiform. Fr. dry, 2-4-winged. Sds. 1-3. 55 Lvs. alternate, abruptly acuminate, finely denticulate or entire. Flowers in advance of the leaves, pendulous, in lateral clusters of 3-5, white, showy.

- 1 H. tetráptera L. Lvs. oblong-ovate; fls. 6" long; pet. half-united; stam. 12; fr. equally 4-winged. Woods, Va. to Ky., and S. Shrub 10-20f. April.
- 2 H. díptera L. Lvs. oblong-ovate; fls. 1' long; pet. slightly united; stam. 8; fruit 2-winged. Woods, S. Tree 15-30f, often 50f. Lvs. 6'. Pods near 2'. April, May.

ORDER LXXVII. EBENACEÆ. EBONADS.

Trees or shrubs without milky juice and with a heavy wood. Leaves al ternate, exstipulate, coriaceous, entire. Inflorescence axillary. Flowers by abortion diæcious, seldom perfect. Calyx free, 3-6-cleft, divisions nearly equal, persistent. Corolla regular, 3-6-cleft, often pubescent, imbricate in æstivation. Stamens twice or 4 times as many as the lobes of the corolla. Fruit a fleshy, oval, or globous berry. Seeds large, suspended, albuminous.

DIOSPYROS, Dalesch. PERSIMMON. Fls. $\varepsilon \$ Cor. tubular or campanulate, convolute in bud. ε Sta. mostly 16. Fil. shorter than the authers. Style 0. ε Sta. mostly 8, without anthers. Style 2–4-cleft. Berry ovoid or globous, 4–12-, mostly 8-celled, cells 1-seeded. $5 \$ A large genus, mostly tropical.

D. Virginiàna L. Lvs. elliptic, abruptly acuminate, entire; racemes axillary, 8-1.
 dowered, pedicels shorter than the flowers; calyx 4-parted; stamens 8. Woods, lst.
 420, and S 10-30f Berry large as a plum, sweet after frost.

ORDER 81.-PRIMULACEÆ.

ORDER LXXVIII. SAPOTACEÆ. SOAPWORTS.

Trees or shrubs, mostly with a milky juice, and simple, entire leaves Flowers small, regular, perfect, mostly in axillary clusters. Calyx free, persistent. Corolla hypogynous, short, stamens usually as many as its lobes and opposite to them, inserted into its tube along with one or more rows or appendages. Anthers extrorse. Ovary 4-12-celled, with a single anatropous ovule in each cell. Seeds large. (Included Theophrastaceæ.)

1. HOTTONIA, L. WATER-FEATHER. Calyx 5-parted. Cor. salver form, with a short tube, and a flat, 5-lobed limb. Sta. inserted in the tube of the corolla, included. Stig. globous. Caps. globous-acuminate. 24 Fleshy, with pectinate-pinnatifid, submersed, radical leaves.

H. inflàta Ell. St. immersed, with a whorl of lvs. (1-2') at or near the surface; scapes clustered, jointed, hollow, 3-10', bearing several whorls of small white fis. Pools. N. and S April-June. Curious.

2. **PRÍMULA**, L. PRIMROSE. AURICULA. Cal. angular, 5-cleft. Cor. salver-shaped or often rather funnel-shaped, with 5 entire or notched or bifid lobes. Sta. included, fil. very short. Caps. ovoid, 5-valved, valves often bifid, opening at the top, ∞ -seeded.—Herbs with the leaves all radical and flowers in an involucrate umbel, often showy.

- * Native, wild species. Corolla salver-form, the lobes abruptly spreading...Nos. 1, 2
- P. Mistassínica Mx. Lvs. spatulate, dent-crenate, green both sides; invol. 1-8fiwd., 4 as long as pedicels; cor. lobes obcordate, tube much exserted. Lake shores, Vt. (Willoughby) N. Y. (Seneca), and N. 3-7'. Fls. 5" broad, white. Jn. Delicate.
- 2 P. farinosa L. Bird's-eye P. Lvs. lance-elliptic, obtuse, dentic. at apex, whitishmealy beneath, as well as the 3-20-fiwd. invol.; cor. pale-purple, with a yellow centre, its lobes bifid Lake shores, Mich., Me. (A. H. Smith), and N. 6-12'. June, July.
- 3 P. GRANDIFLORA. Common P. Lvs. obovate-oblong; umb. radical; cor. limb flat, yellow, varying to all shades of orange, and red, to white, single or double. Europe.
- 4 P. PURPUREA. Lvs. lanceolate, obtuse, yellowish-mealy beneath; scape longer than the leaves; invol. OD-flwd., as long as the pedicels; lobes entire, dark-purple. Nepal.
- 5 P. OFFICINÀLIS. Cowslip P. Lvs. oblong, hairy beneath; fis. all nodding; cal. angu lar; cor. concave. Endless varieties are raised from the seed. Europe. (P. veris.)
- 6 P. ELATIOR. Ox-lip P. Lvs. hairy both sides; outer fls. nodding; cor. flat. Eur. 1f. Yel.
- 7 P. AURÍCULA. Lvs. obovate, fleshy; scape Oo-flowered, as long as the leaves; bracts short; calyx powdery. Alps. The varieties are innumerable and beautiful.
- 8 P. CALYCÌNA. Leaves lanceolate, entire, acute, edged with white; invol. 3-5-flwd., as long as the pedicels; cal. tube inflated; corolla lobes emarginate. Austria. Purple.

3, **ANDRÓSACE**, Tourn. Cal. 5-cleft or toothed. Cor. funnel-form or salver-form, the 5 lobes entire, tube constricted at the throat, ovate, shorter than the calyx. Fil. and style very short. Caps. globous. Minute cæspitous herbs, with radical, rosulate leaves. (Scape bearing an umbel.)

A. occidentàlis Ph. Lvs. oblong-spatulate and ovate, entire, glabrous; scape ∞. flowered; bracts oval, pedicels slender; calyx angular, segments longer than the small white corolla. (i) Gravelly shores, Ill., and W. 1-3'.

4. DODECATHEON, L. AMERICAN COWSLIP. PRIDE OF OHIO. Cal. 5-parted, reflexed. Cor. tube very short, limb 5-parted, segm. reflexed. S'a. 5, inserted into the throat of the corolla. Fil. very short. Anth. large, acute, connivent at apex. Style exserted. Caps. oblong-ovoid, 5-valved, ∞ -seeded. 24 Root fibrous, with radical, oblong leaves, an erect, simple scape, and a terminal umbel of nodding white flowers and erect fruit.

D. Meádia L.—Ohio, Penn. to Cal. ! common in prairies. Whole plant glabrous, 1—2f scape 9-20-flowered, usually about '2 flowered. Singularly elegant. May, June.

5. CYCLAMEN, L. Cal. bell-shaped, 5-parted. Corolla tube ovate short, limb 5-parted, reflexed. Anth. 5, included, sessile. Caps. globous, 5-valved.—Oriental herbs. Root a large tuber. Leaves all radical, ovate or roundish, cordate. Scapes naked, erect, with one nodding flower, but in fruit coiling up and hiding the capsule in the ground.

1 C. EUROPÈUM. Lvs. crenate; petals lance-ovate, fragrant, roseate. Europe.

2 C. Coum. Lvs. entire; petals round-ovate, inodorous, purple. Asia Minor.

6. GLAUX, L. BLACK SALTWORT. Calyx campanulate, 5-lobed, colored. Corolla none. Sta. 5 Caps. roundish, surrounded by the calyx, 5-valved, 5-seeded. 24 Maritime, branching, glabrous, with opposite leaves and small, axillary, solitary flowers.

G. marítima L.-Salt marshes, Can. to N. J. Plantfleshy, branching, leafy, 4-6'; lvs. round-ovate, obtuse, entire, darkly glaucous; calyx reddish-white. July.

7. TRIENTÀLIS, L. CHICKWEED-WINTERGREEN. Cal. and cor. 7-(6-8-) parted, spreading. Sta. 7 (6-8). Fruit capsular, somewhat fleshy, ∞ - seeded. 24 St. low, simple. Lvs. subverticillate. Pedicels 1-flowered.

T. Americàna Ph. St. erect, simple, leafless at base; lvs. glomerate at top of the stem, few, narrow-lanceolate, serrulate, acuminate; sepals linear, acuminate. Rocky woods: com. 3-6'. Pedicels 1-4, filiform; corolla white, starlike, 6". May, June.

8. LYSIMÁCHIA, L. LOOSE-STRIFE. Fls. 5-(rarely 6- or 7-) parted. Cor. wheel-shaped, the petals nearly or quite distinct. Sta. 5, on the base of the corolla. Fil. often somewhat connate or with intervening, sterile ones. Capsules globous, 5-10-valved, opening at the apex. Seeds few or many. 24 With opposite or verticillate entire leaves. (Flowers yellow.)

 - c Flowers not racemed—axillary or paniculate......Nos. 4-6
 - d Leaves acute at base, tapering to the short petiole.Nos. 7, 8
 - d Leaves rounded or abrupt at base, long-petioled......Nos. 9, 10
- 1 L. thyrsiftora L. St. simple; lvs. dotted, linear-elliptical, pointed, sessile; thyrsoid racemes from the middle axils pedunculate, shorter than the leaves; pet. linear, brown-dotted. Meadows, N. Eng. to O., and N. 2f. June. (Naumbergia C-B.)
- 2 L. stricta Ait. Lvs. opposite, rarely in 3's, lanceolate to lance-linear, acute, sessile, dotted; axils producing bulblets after flowering; fls. whorled, in a long, open, terminal raceme, yellow, with purple streaks. Low grounds. 1-2f. July.
 - β. angustifolia (Chapm.) Lvs. very narrow, obtuse; petals acute. South.
- 3 1.. Herbemónti Ell. St. simple: lvs. whorled in 4's or 5's, ovate to lance-ovate, pointed, sessile, revolute at edge, dotted; fls. racemed, dotted. Carolina: rare. 2f.
- 4 L. Fràseri Duby. Glandular-downy at top; lvs. opposite, ovate or ovate-cordate, pointed, petiolate, dotted; fls. in a terminal panicle; sep. fringed. S. Car. (Fraser).
- 5 L. quadrifòlia L. Erect, simple; lvs. in whorls of 4's (rarely 5's or 3's), lanceolate, pointed, sessile, dotted; ped. slender, solitary in each axil; pet. oval, obtuse. Damp shades, Can. to Car. and Ky. 18'. Corolla yellow, with purple lines. June.
- 6 L. nummulària L. Moneywort. Trailing, weak; lvs. roundish, subcordate, on short petioles, opposite, dotless; fls. solitary, large, showy Fields and gardens. §

- 7 L. longifòlia Ph. St. slender, flexuous. 4-angled; lvs. linear, shining, revolute au edge; fls. large, in pairs or 4's, terminal on the stem or short branches; petals broad-ovate. erose-dentate; anthers large. Low prairies. W. and S. 1f-20'. July.
 8. ténuis. Leaves lance-linear, flat, edges not revolute. Miss. and La.
- 8 L. lanceolàta Walt. St. angular above; leaves lance-oblong, acute at each end, subsessile, veiny, ciliate at base; ped. solitary, axillary. Meadows. 12-18'. July.
 β. heterophýlla. Lower lvs. oval or oblong, petiolate; flowers at the summit.
- 9 L. ciliàta L. St. erect, 4-angled; lvs. opposite, ovate to lance-ovate, rounded at base, petioles distinct, *ciliate*; flowers nodding, mostly opposite, in the upper axils, large (1'); stamens distinct. Thickets, along streams. 2-3f. Often branched. Jl. *b. tonsa*. Pet. entire, destitute of ciliæ; lvs. and fls. smaller. Mts., Ky., Tenn
- 10 L. radicans Hook. St. square, long, trailing, rooting at the joints; br. slender; ivs. lance-ovate, acute, on long pet.; fis. small (4"). Swamps, Va., and S. 2-4f. Jl.

9. ANAGALLIS, L. SCARLET PIMPERNEL. Calyx 5-parted. Cor. rotate, deeply 5-parted, tube 0. Sta. 5, hairy, anth. introrse. Caps. globular, thin, opening all around (pyxis).—Herbs with square stems and opposite or whorled entire leaves. Pedicels axillary, solitary. Fig. 249.

A. arvénsis L. Procumbent; lvs. broad-ovate, sessile, shorter (6-10") than the curved ped.; sepals lance-linear, as long as the roundish crenate-glandular, red petals. I Fields, waysides. The flowers (sometimes blue, Dr. Buel) close at 2 P. M., or on the approach of foul weather; hence called the *Poor Man's Weather-glass*.

10. CENTUNCULUS, L. FALSE PIMPERNEL. Cal. 4-parted. Cor. urceolate-rotate, 4-cleft, shorter than the calyx. Sta. 4, beardless, united at base. Capsules globous, circumscissile. Seeds very minute. (1) Very diminutive, with alternate lvs. Fls. axillary, solitary, subsessile, white?

C. mínimus L. St. ascending, branched; leaves subsessile, oval, obtuse, entire, the lower opposite; sep. linear-subulate. Wet, Ill., and S. 1-6'. April-July.

11. SAMOLUS, L. WATER PIMPERNEL. Calyx partly adherent, 5cleft. Corolla salver-form, 5-cleft. Sta. 5, alternating with 5 scales (sterile filaments). Caps. dehiscent at top by 5 valves, many-seeded.—Herbs with alternate lvs. Flowers corymbous or racemous. May—Aug. Figs. 22, 133.

- 1 S. Valerándi L. (S. floribundus K.) St. simple or branched; lvs. obtuse, wedgeoval, the lower petiolate; fls. in a raceme or panicle of racemes, pedicels with a mi nute bract near the middle; petals longer than the sepals. Wet gravels, 6-12'.
- 2 S. ebracteltus Kunth. Erect, leafy below; lvs. obovate-spatulate; fis. racemed, ped. bractless; cor. white, 3 times longer than the calyx (3"). Marshes. Fla., and W.

ORDER LXXXII PLANTAGINACEÆ. RIBWORTS.

Herbs rarely shrubby, with radical leaves and the flowers in spikes on scapes. Flowers wegular, tetramerous. Stamens 4-2, alternate with the lobes of the corolla, and inserted on its tube. Anthers versatile, filaments usually slender and exserted. Fruit a membranous pyxis, with 1, 2, or many albuminous seeds.

PLANTAGO, L. PLANTAIN. RIBWORT. Sep. 4, membranous, persistent. Cor. limb 4-toothed, spreading, persistent on the fruit. Stamens 4 (rarely 2), the long, slender filaments exserted, or in some of the fls. in cluded. Ovary 2-(4-) celled. Pyxis membranous, opening below the middle by a lid, when the loose dissepiment falls out with the seeds.—Herbs acaulescent. Fls. small, whitish, in a slender spike raised on a scape.

§ Flowers uniform; stamens exserted in all of them...(a)

- § Flowers dimorphous, the anthers included in most of them...(b)
 - a Seeds 7-16. Leaves broadly ovate, 7-veined. Spike dense..... No. 1
 - a Seeds 4 only. Leaves oblong or cordate, 3-7-veined......Nos. 2, 3
 - a Seeds 2 only. Leaves lanceolate. Scape tall. May—October.....Nos. 4, 5 a Seeds 2 or 4. Leaves linear. fleshy.....No. 6
 - b Corolla lobes permanently spreading. Seeds 2, concave......Nos. 7, 8
 - b Corolla lobes closing, and erect on the fruit. Summer.....Nos. 9-11
- 1 P. major L. Common P. Leaves ovate, some toothed, smoothish, palmately 7veined, ample; spikes 1-2f high. 24 Door-yards: common. Long white elastic fibres are drawn from the veins when the leaf is plucked.
- 2 P. Kamptschática Cham. Leaves elliptic-oblong, obtuse, 3-5-veined; spikes loose-flowered; bracts acute, shorter than the sepals. Ala. (P. Rugelii C-B.)
- 3 P. cordàta Lam. Lvs. ovate, cordate or very abrupt at base, obscurely toothed, subpinnately 5-7-veined; fis. loosely spicate, larger than in No. 1; the bracts ovate, obtuse. 24 Along streams, Can. Wis., and S. As large as P. major. June, July.
- 4 P. lanceolata L. Lvs. lanceolate, pointed at each end; scape angular, longer than the leaves; spike dense, ovate or cylindric, brown. 24 Meadows. 1-2f.
- 5 P. sparsiflora Mx. Leaves lanceolate or oblong, pointed each way; scape terete, longer than the leaves; spike long, loose, interrupted. S. and S-W. 6-18'.
- 6 P. marítima L. β . *juncoides*. Leaves linear, glabrous, fleshy, nearly as long as the slender scape; spike loose, bracts roundish. Coast, N. J., and N. 4-12'.
- 7 P. aristàta Mx. Lvs. linear, woolly at base, smoothish above; scape longer; spike dense; bracts long, rigid, awn-like (5"); petals round-cordate, spreading, conspicuous; seeds 2, boat-shaped. Prairies, Ill. 6-10'. June, July. (P. Patagonica, β. (Gray.))
- 8 P. gnaphaloides L. White-woolly; lvs. oblong to linear; spike dense, exceed ing the lvs.; bracts deltoid, not exceeding the calyx. Wis. to Tex. 3-6'. June, Jl.
- **9 P. Virginica** L. Hoary publicsent; lvs. elliptical, 3-5-veined; scapes and spikes elongated, dense-flowered; cor. closed on the pod, erect; seeds rarely more than 2; bracts shorter than the cal. (2) Dry hills and rocks, Conn., W. and S. 5-10'. May-Sept
- 10 P. heterophýlla N. Lvs. linear, entire, or some of them with a few slender teeth; ped. many, as long as the leaves; spikes loose; pod conoid, twice longer than the calyx, crowned with the closed cor., 10-24-seeded. (2) Wet, Penn., and S. 4-8'.
- 11 P. pusílla N. Thinly pubescent; lvs. filiform-linear, shorter than the capillary, few-flowered scapes; pod crested, longer than the calyx, 4-seeded. (1) Conn. (Mr. Bowles), W. and S. 1-3'. Seeds oblong. May-July.

ORDER LXXXIII. PLUMBAGINACEÆ. LEADWORTS.

Herbs or undershrubs with the leaves alternate or all clustered at the root. Flowers regular. Calyx tubular, 5-toothed, plaited, persistent. Corolla hypocrateriform, of 5 petals united at base, or sometimes almost distinct. Stamens 5, hypogynous and opposite the petals, or inserted on their claws. Ovary 1-celled, free from the calyx. Styles 5 (seldom 3 or 4). Fruit a utricle, or dehiscent by valves, containing 1 anatropous seed.

I.	STATICEÆ. Styles	distinct, at least above.	Utricle not valvate.	Leaves radical(a)	
Π	PLUMBAGINEÆ.	Style 1, with 5 stigmas.	Pod subvalvate. I	Leaves cauline(b)., PLUMBAGO.	3
	a Stigmas filiform.	Styles glabrous. Scape	branching	STATICE.	I
	a Stigmas filiform	Styles nlumous Scane	canitate	ARMERIA	2

1. STÁTICE, L. MARSH ROSEMARY. Calyx funnel-form, limb scanous, 5-nerved, 5-parted. Pet. scarcely united at base. Fil. 5, adnate to the very base of the corolla. Ovary crowned with the 5 glabrous, filiform styles, utricle opening crosswise. 24 Herbs with the scape branching, the flowers 3-bracted, sessile on the 3-bracted branchlet.

8. Limònium L. Very smooth. Leaves oblong to oblancelate, acute, tipped with a bristle, long-stalked; scapes terete, corymbous-paniculate; fis. separate or in pairs, on the upper side of the branchlets, blue-purple. Marshes. 6–12'. July-October.

2. ARMERIA, Willd. THRIFT. Flowers collected in a dense head. Invol. 3- to many-leaved. Cal. tubular-campanulate, 5-angled, with 5 shallow lobes, scarious and plaited. Pet., sta., etc., as in Statice. 24 Lvs. radical, mostly linear. Scape simple, appendaged above with a sheath.

- 1 A. VULGÀRIS. Scape terete, smooth; lvs. linear, flat, obtuse; oute. bracts of the in vol. ovate-acute; fls. rose-colored. Sea-coast, Oreg., &c. 1f. June-August.
- 2 A. LATIFÒLIA. Scape solitary, tall; lvs. broad-oblong, 5-7-veined; flowers rose-red, bracts cusp-pointed, scarious. Portugal. 1-2f. June-August.

3. PLUMBAGO, Tourn. LEADWORT. Cal. 5-lobed. Corolla salverform, tube longer than calyx, limb twisted in æstivation. Anth. 5, linear Stig. 5, filiform. Utricle membranous, mucronate with the persistent style. 524 Flowers cyanic, numerous through the season.

1 P. CAPÉNSIS. Shrubby; lvs. oblong, entire, white-scaly beneath; fls. in short term. nal spikes, pale blue, the tube 1' or more in length. S. Africa. 2-4f. Hardy S.

2 P. CERÙLEA. Herbaceous; lvs. acuminate; fls. in loose spikes, blue. 6^{''}. 2 S. Am.
3 P. COCCÍNEA. Herb tall; lvs. oblong, large; spikes long, loose; fls. scar. 1-2[']. India

ORDER LXXXIV. LENTIBULACEÆ. BUTTERWORTS.

Herbs small, growing in water or wet places, with showy, bilabiate fis on scapes. Calyx inferior, of 2 or 3 sepals. Corolla irregular, bilabiate personate, spurred. Stamens 2, included within the corolla and inserted on its upper lip. Anthers 1-celled. Ovary 1-celled, with a free, central placenta. Style 1. Stigma cleft. Fruit, capsule many-seeded. Seeds minute. Embryo straight, with no albumen. Fig. 399.

1. **PINGUÍCULA**, L. BUTTERWORT. Cal. 5-parted, somewhat bilabiate. Cor. bilabiate, ringent, upper lip bifid, lower trifid, spurred at base beneath. Sta. 2, very short. Stig. sessile, 2-lobed. Caps. erect. Sds. ∞ . 24 Lvs. radical, rosulate, entire, greasy to the touch. Scapes 1-flowered, nodding. March—May.

* Corollas yellow, the lobes nearly equal......No. 4

1 P. vulgàris L. Scape and calyx a little downy; cor. lips very unequal, lobes obtuse, entire; spur cylindrical, straightish. N. Y. (rare), and N. 6-8'. Cor. 1 long.

2 P. elàtior Mx. Lvs ovate to spatulate ; scapes villous near the base ; cal. g.andu-

^{*} Corollas blue, purple, or white, lobes very unequal......Nos. 1-2

lar; corolla lobes obtuse, 2-lobulate; spur half as long as the tube, bin.nt. S. Car. tc Fla. Scape very slender, 8-12' high. Lvs. 1' or less. Fls. 1'. (P. australis N.)

- **3 P. pumila** Mx. Lvs. glabrous, roundish-ovate; corolla tube oblong, lobes emarginate; spur acute, nearly as long as tube. Ga., Fla. 2-4'. Fls. 4-5" long.
- 4 P. lùtea Walt. Lvs. elliptic to obovate; cor. bell-shaped, nearly regular, the lobes sinuate-dentate; spur slender, a slong as corolla. S. 5-8'. Fls. 9" broad.

2. UTRICULÀRIA, L. BLADDERWORT. Cal. 2-parted, lips subequar Cor. irregularly bilabiate, personate, spurred. Stamens 2. Stig. bilabiate. Caps. globular, 1-celled. And Loosely floating, or fixed in the mud. Lvs. radical, multifid or linear and entire, mostly furnished with little inflated *utricles* (whence the name) as buoys. Scape erect. Junc—Sept. Fig. 399.

	Floating. Scape involucrate with a whorl of large inflated petioles
	Stems creeping and rooting in mud, with few or no air-bladders(b)
Ĩ	a Flowers purple. Branches whorled, submersed
	a Flowers yellow.— c Bladders borne on the capillaceous leaves(d)
	-c Bladders and leaves borne on separate branchesNos. 3, 4
	<i>d</i> Spur acute or retuse, about as long as the lipsNos. 5–7 <i>d</i> Spur obtuse, short.— <i>e</i> Fls. of 2 kinds, the <i>lipless</i> down on the stemsNo. 8
	-e Fls. of 1 kind only, all on the scapesNo. 9–11
	b Spur appressed to and scarcely equalling the lower lip of the corolla Nos. 12, 13
	b Spur remote from the corolla, slender, acute
1	U. inflata Walt. Upper lvs. in a whorl of 5 or 6 at the surface of the water; pet.
	and midvein inflated, lower lvs. capillaceous, dissected, submerged; scape 4-5-flwd.
	24 In ponds and ditches. Rhizome or stem long. Scape 8'. Fls. 8" broad, yellow, upper lip rounded, entire, lower lip 3-lobed. August.
2	U. purpàrea Walt. Leaves all submersed, fibrillous, whorled on the long stem;
Ĩ	scape assurgent, 2-3-flowered; lower lip 3-lobed, bisaccate, longer than the conical
	spur beneath it. (1) Ponds. Scape 3-5'. Flowers 6" broad, violet-purple.
3	U. intermèdia Hayne. Lvs. 2-ranked, crowded, 4-5 times forked, divisions lin-
	ear-subulate, ciliate-denticulate, rigid, 2-3" long; bladders all on leafless branches; scape 2-3-flowered; spur conical, acute; corolla 6-8". (1) Pools, Pa., and N. 6-8'.
J	U. Robbinsii Wood. Leaves alternate, 3–4 times forked, divisions flaccid, linear-
	capillary, entire, 8-12" long; bladders all on leafless branches; scape tall (8-13'),
	4-7-flowered; spur fusiform; corolla 4-5". (1) Mass. (Dr. Robbins.)
5	U. striàta Le Conte. Lvs. 3-4-furcate, divisions capillary; scape 2-6-flowered, 8-
	1%; fls. $6''$, on slender pedicels, lips subequal, 3-lobed, the upper <i>striate</i> with red, concave, the lower as long as the obtuse, notched spur. (1) L. I. to Fla.
6	U. longiróstris Ell. Lvs. 2-3-furcate, with setaceous segments; scape 1-3-flow-
	ered $(3-4')$; lower lip entire, shorter than the subulate spur. South.
7	U. biflora Lam. Lvs. capillary, root-like, bearing numerous bladders; scape 2-5',
6	2 flowered; spur obtuse, notched, equalling the lower lips. W. and S.
C	U. clandestina N. Lvs. capillaceous-multifid, scattered, bladder-bearing; scape slender, 3-4', 2-3-flwd., seldom seen; cor. 5", spur shorter than the 6-lobed lower lip;
	ped. down on the stems 1', with 1 apetalous flower. 24 Ponds, Mass. to N. J. and Pa.
6	U. gibba L. Minute, with hair-like leaves and few utricles; scape 1-2-flwd., naked
	(2-3'); corolla spur blunt (<i>gibbous</i>) and short, iips many-lobed. 24 R. I. to Car.
1	0 U. vulgàris L. Lvs. capillaceous-multifid, fibrillous; sc. scaly, 5-12-flwd., 6-12'; spur conical, shorter than the closed lips (3-4'), divergent; fr. nodding. 24 Ponds.
1	1 U. minor L. Lvs. short, several times forked; sc. 3–6-flwd., 4–7'; cor. ringent.
	spur blunt, deflexed, much shorter than the obovate, flat lower lip; fr. nodding. 24
1	2 U. bipartita Ell. Lvs. fibrillous-multifid; sc. 1-3-flwd., 2-3'; cal. lower lip 2
	parted : spur obtuse, half as long as the entire lower lip. Soft mud, South

- 13 U. subulàta L. Minute, creeping; lvs. few, linear, entire, obtuse; sc. few, 1-5 flwd., 3', with ovate bracts; spur acute, appressed to the lower 3-lobed lip. Springs
- **4 U. resupinàta** Green. Rooting; lvs. linear-capillaceous, erect, undivided (1'): scapes ∞ , simple, 1-fiwd., 1-bracted (3-6'); spur ascending, remote from and shorter than the erect lips of the *light-purple* corolla (which is 4''). Muddy shores, N. Eng.
- 15 U. cornùta Mx. Scape rooting, tall (9-12'), scaly, 2-5-flwd.; lvs. fugacious or 0; flowers subsessile, palate very prominent; spur subulate, decurved away from the erect tube and limb. Mud or shallow pools. Flowers large, yellow.

ORDER LXXXV. OROBANCHACEÆ. BROOM-RAPES.

1. EPIPHEGUS, Nutt. BEECHDROPS. $\delta \notin \mathcal{Q}$ Upper fls. complete, but sterile, with a tubular, curved, 2-lipped cor. barely including the stamens. Lower fls. \mathcal{Q} , with a short, 4-toothed cor. and imperfect stamens. Caps. 2-valved, with 2 placentæ on each valve.—A smooth, dull-red, leafless, branching plant, with sessile flowers all along the branches.

E. Virginiàna Bart .- In beech-woods : common. 1f. Fls. brownish, 5". Aug., Sept.

2. CONOPHOLIS, Wallroth. SQUAW-ROOT. Fls. §, crowded in a thick, scaly spike. Cal. with 2 bractlets at base, 4-toothed, split down in front. Cor. ringent, upper lip arched, notched, lower 3-lobed. Sta. exserted. Caps. 1-celled, 2-valved, with 2 placentæ on each valve.—Stem simple, thick, short, covered with scales, the flowers in the upper axils.

C. Americana Wal.-In old woods: com. 4-7' high, and 1' thick, pale-yellowish. Jl.

3. PHELIPÆA, Tourn. BROOM-RAPE. Fls. \checkmark , spiked or racemed. Cal. 2-bracted at base, 4–5-cleft. Cor. 2-lipped, including the stam. Caps. 1-celled, 2-valved, with 2 placentæ on each valve.—Stem thick, scalv.

P. Ludoviciàna Don. Glandular-pubescent; stem thick, short; spike dense; cal.
 5-cleft; cor. funnel-form, lips subequal; bracts ovate, obtuse. Alluvion, Ill.

4. APHÝLLON, Mitchell. NAKED BROOM-RAPE. Fls. &, solitary, on long, bractless ped. or scapes. Cal. 5-cleft. Cor. tube elongated, curved, limb spreading, subequally 5-lobed. Anthers included. Capsule with 4 placentæ.—Plants glandular-pubescent. Stem nearly subterraneous.

- 1 A. unifiòra T. & G. Ped. *in pairs*, simple, naked, each 1-flwd. Woods and thickets. Ped. 4-5', scape-like, purplish-yellow, like the nodding flowers. June.
- 2 A. fasciculàta T. & G. Stem 2-3' high, bearing many peduncles from near the summit, each with few scales and 1 purple flower. Mich., and W. 4-6'. May.

ORDER LXXXVI. BIGNONIACEÆ. TRUMPET-FLOWERS.

Trees, shrubs, or herbs, often climbing, with opposite, exstipulate leaves, and large, showy, monopetalous, irregular, 5-parted flowers. Stamens 2 or 4, often with 1 or 3 sterile rudiments. Anthers 2-celled. Ovary 2-carpelled. Style 1. Stigma divided. Capsule woody, 2-valved, with few or many large seeds. Figs. 30, 31, 95, 199, 445.

Plants woody, with the leaves mostly opposite, and the flat seeds winged...(I.)

§ Plants herbaceous, leaves all simple, some alternate. Seeds wingless...(II.)

I. BIGNONIADS.—Trees, with simple leaves, and long, cylindric pods CATALPA.	1
-Shrubs climbing. Leaves compound (binate). Calyx truncateBIGNONIA.	2
-Shrubs climbing. Leaves pinnate. Calyx 5-toothed	3
-Half-shrubby climbers (exotic). Lvs. compd. (bipinnate)Eccremocarpus.	4
II. SESAME ÆCoarse, clammy herbs, the fleshy pods 2-horned	5
-Smoothish, erect. Pods dry, 4-celled, not beaked SESANUM.	e

1. CATÁLPA, Scop. CATALPA. Cal. 2-parted. Cor. campanulate, 4or 5-cleft, the tube inflated. Sta. 2 fertile, 2 or 3 sterile. Stig. 2-lipped. Caps. 2-celled, long, cylindric. 5 Lvs. opposite or in 3's, simple, petiolate. Flowers in large, showy, terminal panicles, May—July. Figs. 3C-1, 445.

1 C. bignonioides Walt. Lvs. ample, thin, cordate-ovate, lustrous above, downy beneath, long-petioled; fls. in erect, pyramidal panicles, large, irregularly bell-shaped, white, with yellow and violet spots. A beautiful tree 30-50f. Native and cultivated

2 C. KÉMPFERI. Lvs. smaller, entire or lobed, glabrous both sides; fis. smaller. Japan

2. BIGNÓNIA, Tourn. Cal. margin nearly entire. Cor. somewhat bilabiate, 5-cleft, bell-funnel-shaped. Sta. didynamous, 4 fertile, 1 a sterile filament. Caps. long and narrow, valves flat or scarcely convex, parallel with the partition. 555 2 Often with tendrils.

1 **B. capreolàta** L. Climbing, smooth; leaves binate, consisting of a pair of ever green, cordate-lanceolate leaflets and a branching tendril between them; fis. axillary, near 2', red-yellow; pod 6-7' long. Woods, S. 50f. Very slender. March-May.

2 B. TWEEDIANA. With yellow fls. 2', in panicles; cal. bilabiate. From Buenos Ayres.

3. **TECOMA**, Juss. TRUMPET-FLOWER. Cal. campanulate, 5-toothed. Cor. tube short, throat dilated, limb 5-lobed, subequal. Sta. 4, didynamous, with the rudiment of a fifth, anther-cells 2, diverging. Caps. 2-celled, 2valved, the valves contrary to the partition. Seeds winged. 555 Lvs. opposite, odd-pinnate in the following.

- 1 T. radicans Juss. Climbing by *radicating* tendrils; lfts. 4 or 5 pairs, ovate, dentate-serrate, pointed; corolla thrice longer than the calyx; stam. included. Woods. thickets, Penn., S. and W. 20-80f. Fls. red, 2' long. June-Aug. Very showy.
- 2 T. CAPÉNSIS. Climbing; lfts. broad-ovate, crenate-serrate; cor. long, trumpet-shaped, incurved, stam. and style exserted. S. Afr. Flowers corymbed, 2' long, orange.
- **3 T.** GRANDIFLÒRA. Climbing; lfts. lance-ovate, pointed, dent-serrate; cor. scarcely longer than the 5-toothed calyx (3'), scarlet. China and Japan.
- 4 T. JASMINOÌDES. Climbing; lfts. ovate, shining, entire; pan. terminal; cor. trumpet-shaped, white, roseate in the throat. Australia. Common in greenhouses.

4. ECCREMOCÁRPUS, R. & P. Calyx acutely 5-cleft, broader and much shorter than the tubular corolla, whose lobes are 5, rounded, reflexed Sta. 4, included. Caps. 1-celled, 2-valved, valves placentiferous in the mid dle. Half-shrubby climbers, from S. Am. Tender. (Calampelis, Don.)

1 E. SCABER. Lvs. bipinnate; cor. tube inflated above the calyx, scarlet, drooping, 1'. 2 E. LONGIFLÒRA. Lvs. tripinnate; cor. tube cylindric, curved, yellow, 3', drooping.

5. MARTÝNIA, L. UNICORN PLANT. Cal. 5-cleft, bracteolate at base. Cor. campanulate, tube gibbous at base, limb 5-lobed, unequal. Sta. 5, one rudimentary and sterile, four didynamous. Caps. coriaceous, ligneous, 4celled, 2-valved, each valve terminating in a long, hooked beak. (1) Chiefly southern, branching, viscid-hairy, strong-scented. Flowers large.

- 1 M. proboscídea Glox. Branches mostly decumbent; lvs. cordate, entire, roundish, villous, upper ones alternate; fls. on long, axillary peduncles; beaks 2 (when the valves separate), hooked; corolla dull yellowish. Fields, thickets, S. and W. 2f. Jn.
- 2 M. FRÀGRANS. Lvs. roundish-3-lobed, sinuate-dentate; raceme few-flowered; corolla purple, yellow inside, fragrant; beaks shorter than the pod. Mexico.
- 5 M. LÙTEA, with large yellow funnel-form corollas, is from Brazil.

6. SÉSAMUM, L. OIL-SEED. Cal. 5-parted. Cor. campanulate, 3cleft, the lower lobes the longest. Sta. 4, didynamous. Stig. lanceolate. Caps. 2-celled, the cells divided by the inflexed edges of the valves. (1) E. India. Leaves petiolate, the lower opposite, upper alternate.

S. Indicum DC. Lvs. lance-ovate, lower ones 3-lobed, upper ones undivided, serrate; flowers axillary, sessile, pale purple. Fields and gardens. Seeds rich in oil. §

ORDER LXXXVII. GESNERIACEÆ. GESNERWORTS.

I'ropical plants, somewhat fleshy, with opposite or radical leaves, no stipules, and showy, somewhat irregular flowers. Calyx half adherent to the ovary (in the following genera), 5-parted. Corolla tubular, 5-lobed, imbricated in bud. Stamens 2 or 4, didynamous, with a rudiment. Style 1. Fruit a capsule nearly free, 1-celled, with 2 double, many-seeded placentæ.

1. GESNERIA, L. 21 With tuberous roots and toothed leaves. Sta. 4, with a rudiment, anthers cohering at first. Brazil.

- 1 G. LÍNDLEYI. LVS. opposite, ovate-oblong, rugous; flowers in a terminal raceme; corolla 18", scarlet or red, the limb very short. Brazil.
- 2 G. DOUGLASH. Leaves whorled, ovate, pubescent, with the numerous red-yellow flowers in their axils.—The species are many and much mixed.

2. GLOXÍNIA, L'Her. Has often radical leaves (or with very short stems), crenate, and large axillary or radical flowers. Stamens 4, with a fifth rudiment, anthers cohering. Brazil.

G. SPECIÒSA. Leaves oval-oblong, on long radical petioles; ped. subradical, 1-flowered; corolla bell-shaped, 1∦, violet, varying to white.

3. ACHIMENES, Br. Erect, downy herbs, with scaly buds. Anth 4, separate, the rudiment on the base of the corolla.

- 1 A. LONGIFLORA. Leaves oblong, pointed at both ends, servate; coroita violet-purple 15"; calyx 4-5", pedicel still shorter, 1-flowered, axillary. Mexico.
- 2 A. COCCÍNEA. Leaves ovate, acuminate; corolla scarlet, 10", calyx 5", the pedice longer, axillary, crect, with the flower nodding. Jamaica.

ORDER LXXXVIII. SCROPHULARIACEÆ. FIGWORTS.

Herbs chiefly, without fragrance, the leaves and inflorescence various, Fls.irreg., 5-(rarely 4-)parted, didynamous or diandrous (rarely pentandrous). Calyx free from the ovary, persistent. Corolla monopetalous, imbricated in bud. Stamens inserted in the tube of the corolla, 1 or 3 of them usually rudimentary. Ovary free, 2-celled, with 1 style, a 2-lobed stigma, and becoming in fruit a 2-celled, co-seeded capsule, with axile placentæ and albuminous seeds. Figs. 70, 106, 134, 167, 434, 502.

1. SCHIZÁNTHUS, R. & P. CUT-FLOWER. Cor. irregular, the upper lip 5-cleft, external in æstivation, lower much smaller, 3-parted. Fil. 4, 2 of them sterile. Capsules 2-celled. ① Chili. Leaves pinnatifid, alternate. Cymes supra-axillary.

S. FINNÀTUS. LVS. once or twice pinnatisected; cor. segm. longer than tube, the middle segm. of the posterior lip 2-lobed and hood-like; stam. exserted. 1-2f. Fls. delicate and handsome, 1' broad, purple and yellow, with a dark spot in the midst. Aug.-Oct.

2. SALPIGLÓSSIS, R. & P. TRUMPET-TONGUE. Corolla obliquely tubular-funnel-form, with an ample throat, lobes all emarginate. Sta. 4, fertile, with a short rudiment. Style trumpet-shaped at apex and incurved. Capsules oblong, valves bifid. 24 Chili. Resembles Petunia.

S. SINUÀTA. Annual in our gardens, 1-2f, weak, viscid-downy. Leaves elliptic-oblong, sinuate-toothed or pinnatifid. Fls. 11/ long, very showy, dark-purple, striped, &c.

3. BROWÁLLIA, L. Cor. salver-form, with a long tube, and oblique, 5-lobed limb. Anth. of the two posterior stamens halved, sub-1-celled. Lobes of the stigma broad, divaricate. Caps. membranous, valves bifid.— S. American herbs, with alternate, entire leaves and cyanic flowers.

1 B. DEMÍSSA (also elata). Leaves petiolate, ovate; lower fls. axillary, upper racemed; calyx hairy; cor. tube 6", limb 1', blue or violet, varying to wh. ① 1-2f. Summer.

4. BRUNFÉLSIA, Sw. Corolla salver-form, with a long tube, and a broad 5-lobed limb. Sta. 4, all equal. Style incurved at apex, stig. of 2 broad lobes. Caps. coriaceous, valves entire.—S. American shrubs, with alternate, entire leaves and large blue flowers. (Francisea, Pohl.)

- 1 **IB.** HOPEÀNA. Lvs. obovate to ovate; fis. solitary; cor. tube little exceeding the cai., lobes rounded, subequal, violet, blue, or white, 1' broad. 3f. Much branched.
- 2 **B.** LATIFÒLIA. Leaves elliptic to oblong; fls. in loose cymes; cor. tube thrice longer than the calyx, and longer than the limb (1'). Leaves 3-5' long, shining above.

5. CALCEOLÀRIA, L. SLIPPER-FLOWER. Calyx 4-parted, varvate in bud. Cor. tube very short, limb 2-lobed, lobes entire, concave or spurlike, the lower inflated. Sta. 2, lateral, with no rudiments. Caps. ovoid conical, valves bifid.—S. American and New-Zealand herbs or shrubs, with opposite or whorled leaves and very curious flowers, of all colors, endlessly varied in cultivation.

§ Leaves pinnatisect. Anther cells separated, one empty. Annual........... No. 1 § Leaves ovate to lanceolate. Fls. corymbous. Anth. cells contiguous.....Nos. 2-4

1 C. PINNÀTA. Rough-downy, weak, 1f, the lower lip orbicular, pale-yellow.

2 C. CORYMBÒSA. Erect; lower lip broad-ovate, obtuse, open beyond the middle, ylw.

3 C. CRENATIFLORA. Villous; lower lip hanging, large, obovate, 3-furrowed, spotted, ylw.

4 C. INTEGRIFÒLIA. Viscid; lower lip orbicular, little longer than the upper, scarcely contracted at the base; upper lip twice longer than the calyx. Shrub. 2-3f.

6. VERBÁSCUM, L. MULLEIN. Cor. rotate, 5-lobed, unequal. Sta. **5**, declinate, all perfect. Caps. ovoid-globous, 2-valved. (1) Rarely 24 or suffruticous. Leaves alternate. Flowers in spikes or paniculate racemes. June—August. Fig. 434.

- V. Thápsus L. Common Mullein. Leaves decurrent, densely tomentous on both sides; rac. spiked, dense; 3 of the sta. downy, 2 of them smooth. (2) Fields, waysides. 3-5f. Almost never branched, woolly all over. Flowers numerous. §
- 2 V. Blattària L. Moth Mullein. Lvs. clasping, oblong, smooth, serrate; ped. 1 flwd., solitary, racemous; filaments all bearing violet wool. ① Waste grounds, way-sides. 3f. Flowers 1', white or yellow. Stem often branched.
- **3 V.** PHENÍCEUM. Leaves mostly radical, ovate to oblong, petiolate, smooth above, downy beneath; racemes rarely branched; flowers violet to red. (2) Eur. 3f.
- 4 V. Lýchnitis L. White Mullein. Whitish tomentous; st. angular; leaves green above, the lower petiolate; fls. in loose fascicles, forming a pyramidal panicle; fil. all white-woolly. (2) Sandy fields, N. Y. to Ga.: rare. Flowers pale yellow. § Eur.
- 5 V. PULVERULÉNTUM. Clothed in cottony, deciduous tomentum; lvs. tomentous both sides, ovate-oblong; fls. numerous, yellow, in a large panicle. (2) Eur.

7. ALONSOA, R. & P. Cor. resupinate by the twisted pedicel, rotate 5-cleft, lobes very obtuse, unequal. Sta. 4, short, declinate. Caps. obtuse, flattened, septicidal.—S. American, very branching herbs, with opposite leaves, square branches, and terminal racemes of scarlet flowers.

 A. INCISÆRÒLIA. Leaves lance-ovate, incisely serrate, petiolate; cor. 1' or less wide, 3-4 times longer than the calyx. (1) All Summer. From Chili.

8. NEMESIA, Vent. Calyx 5-parted. Corolla personate, saccate or spurred behind, upper lip 4-lobed, lower entire. Sta. 4, lower pair circumflexed at base. Caps. compressed, with 2 keeled valves, and winged seeds. (1) S. Africa. Lvs. opposite. Fls. solitary and axillary, or racemed.

1 N. VERSÍCOLOR. LVS. ovate to lanceolate and linear, entire or toothed; cor. lobes ob long, all subequal (4-5"), spur 4", incurved, acute. 3f. Blue-white.

2 N. FLORIBÚNDA, has ovate leaves, an obtuse spur, and white-yellow flowers.

9. LINÀRIA, Juss. TOAD-FLAX. Calyx 5-parted. Corolla personate,

upper lip bifid, reflexed, lower 3-cleft, throat closed by the prominent palate, tube inflated, with a spur behind. Caps. 2-celled, bursting below the summit.—Herbs. Lower leaves generally opposite, upper alternate. Fls. solitary axillary, often forming terminal, leafy racemes. Fig. 70.

- * Stems prostrate, creeping. Leaves broad, reniform or hastate. Eur.. ... Nos. 1, 2
- * Stems erect, with narrow leaves, mostly scattered......Nos. 3-5 * Stems erect, with broad lanceolate leaves, all verticillate.....No. 6
- 1 L. Cymbalària. Lvs. palmate-veined, reniform, 5-7-lobed, mostly alternate; fis. axillary, small, yellow, spur shorter than tube. 2 Smooth, delicate.
- 2 L. Elátine L. Hairy; lvs. feather-veined, hastate, entire, alternate; ped. solitary, long; cor. yellow and purple. (1) Fields. 1-2f. Very slender. § Eur. July.
- 3 L. Canadénsis Dumont. Lvs. scattered, erect, linear, obtuse; fls. racemed; st. simple; scions procumbent; fls. blue. ① Fields, waysides. 6-12'. Very slender. Flowers small, in a loose raceme. Spur filiform, long, short, or 0. June-Sept.
- 4 L. vulgàris Mill. Common Toad-flax. Leaves linear-lanceolate, crowded; spikes terminal; fls. dense, imbricate; cal. smooth, shorter than the spur. 24 Meadows, way-sides. 1-2f. Very leafy, with showy rac. of yellow and orange fls. Jl., Aug. § Eur. β. Peloria. Corolla with 3-5 spurs, and a regular border of 3-5 lobes, with 5 stamens. Penn. (Dr. Darlington). Poughkeepsie, N. Y. (Mr. W. R. Gerard).
- 5 L. BIPARTÌTA. Erect; lvs. linear, alternate; ped. much longer than the lance-linear. scarious-edged sepals; cor. 8-10'', violet, the palate orange.
- 6 L. TRIORNITHÓPHORUM. Three Birds. Smooth, glaucous; leaves in 3's and 4's; fls. whorled, each resembling 3 little birds. 24 Eur. 2-3f. Curious.

10. ANTIRRHINUM, L. SNAP-DRAGON. Calyx 5-sepalled. Corolla gibbous (not spurred) at base of tube, throat closed (personate) by the prominent palate, upper lip bifid, reflexed, lower trifid. Sta. 4. Capsules opening by 2 or 3 pores, as in Linaria.—Herbs, European, &c., with the lower leaves opposite, the upper alternate. Flowers axillary, large, racemed above. Fig. 502.

- 1 A. MAJUS. Erect; leaves lanceolate; fls. evidently racemed; sep. hairy, shorter than the cor. tube; cor. pink, purple, or scarlet, mouth yellow. 24 18'. Fls. 1'. Summer.
- 2 A. ORÓNTIUM. Low, spreading; lvs. oblong-lanceolate; fls. smaller than in A. majus (6'), the sepals equalling the cor., which is rose or white, with purp. spots. (1) Sum.

11. MAURÁNDIA, Ort. Calyx 5-parted. Cor. bilabiate, tube scarcely gibbous at base, throat open, with 2 prominent glabrous folds, upper lip of 2 rounded lobes, lower of 3. Sta. 4. Caps. oblique, opening by chinks below the apex. 24 Mexican, climbing and twining, with large purple flowers all Summer.

- 1 M. ANTIRRHINIFLÒRA. Leaves mostly triangular-hastate; fls. glabrous, 1', tube some gibbous at base, throat partly closed by the prominent hairy palate. 10f.
- 2 M. SEMPERFLÒRENS. Lvs. cordate-hastate, angular; calyx glabrous; cor. bell-form, not gibbous (throat open), 11/ long, pale violet or rose-colored. 10f.
- 3 M. BARCLAYÀNA. Leaves broadly triangular-cordate or hastate; calyx clothed with long glandular hairs; cor. near 2/ long, very oblique, purple, throat open. 10f.

12. LOPHÓSPERMUM, Don. Corolla tubular-campanulate, limb 5lobed, subregular, throat open, between two hairy lines. Caps. globular Seeds winged. Otherwise as in Maurandia. Fig. 106.

- 1 L. ERUBÉSCENS Lvs. triangular-cordate, dentate-lobed, pubescent; cal. segm. ovate hirsute; cor. downy, 21-3' long, red, with an ample border. 10-20f.
- 2 L. SCANDENS. LVS. cordate-ovate, pointed, coarse-toothed, smoothish; calyx segm lance-ovate; cor. glabrous, 2', scarlet, limb erect-spreading. 10f.

13. SCROPHULÀRIA, L. FIGWORT. Calyx in 5 acute segments Cor. subglobous, limb contracted, sub-bilabiate, lip with an internal, intermediate scale (sterile filament). Capsules 2-celled. Valves with 2 inflated margins.—Herbs or suffruticous, often fœtid. Leaves opposite. Cymes in simple or compound, terminal, thyrsoid panicles. Fig. 167.

S. nodosa L. Glabrous, tall, branching; leaves ovate, oblong, or lanceolate; fls. in loose pedunculate cymes, combined into an oblong panicle; sterile anther a roundish green scale on the dull, olive-colored corolla. 24 Thickets. 4—6f. July—Oct.

14. CHELONE, L. TURTLE-HEAD. SNAKE-HEAD. Calyx deeply 5parted, with 3 bracts at base. Cor. inflated, bilabiate. Sta. 4, woolly, the sterile filament shorter than the rest. Caps. valves entire. Seeds broadly winged. 24 With opposite leaves and sessile flowers in the upper axils.

- C. glabra L. Smooth; lvs. subsessile, oblong-lanceolate, acuminate, serrate, acute at base; flowers densely spiked. By brooks and in wet places. 2f. Stems simple, in clumps. Flowers 1' long, white or roseate, with short gaping lips. Aug., Sept. β. purpierea. Lvs. distinctly petiolate, acuminate; flowers rose-purple. West.
- 2 C. Lyòni Ph. Smooth; lvs. ovate, acuminate, petiolate, serrate, the lower cordate; fls. in a dense spike. Mts. of Car. and Ga. 1-2f. Corolla purple, 14'. July-Sept.

15. **PENTSTÉMON,** L. BEARD-TONGUE. Calyx deeply 5-cleft. Cor elongated, often ventricous, lower lip 3-lobed, spreading. The fifth filament (tongue) sterile, bearded, longer than the rest or about as long; anth. smooth. Seeds ∞ , angular, not margined. \mathcal{L} N. American, branching, paniculate. Leaves opposite, the lower petiolate, upper sessile or clasping. Flowers showy, red, violet, blue, or white, in Summer.

- P. disséctus Ell. Lvs. pinnately divided into linear segm.; fls. in a loose panicle; cor. with a curved tube, 9-10", purple; tongue bearded at apex. Dry. Ga. 2f. Jn., Jl.
- 2 P. pubéscens Sol. Pubescent or glabrous; lvs. ovate-oblong to lanceolate; fls. in a loose panicle; cor. tube 7-9", gradually enlarged upward, pale purple, lower lip with two bearded folds inside, some longer than the upper. Hills and bluffs. 1-2f. †
- **3 P. Digitàlis** N. Glabrous; lvs. elliptic to lanceolate, the upper clasping; fls. many, large, corolla tube abruptly enlarged to bell-form, pale blue or purplish, 12–15" long, throat widely open, beardless. Rich soils, Pa., W. and S. 3f. Leaves 3–6'.
- **4 P. grandifiòrus** Fras. Glabrous and glaucous; lvs. oblong-obovate to roundishovate, upper clasping, all entire; janicle long, slender; corolla bell-shaped, 15", limb nearly regular, bluish purple. Ill., Wis., and W. 3f. Handsome. **†**

- 5 P. RICHARDSONI. Smoothish, branching; fls. 1', violet, in leafy panicles. Oreg. 21
- 6 P. ovàrus. Puberulent ; lvs. cordate-clasping ; fis. 9", numerous, light blue. Oreg. 2f
- 7 P. COBÆA. Puber., tall; lvs. lance-ovate, clasping; fls. 2/, broad-campanulate. Tex.
- 8 P. CAMPANULÀTUS. Glabrous; lvs. lance-linear to lance-ovate, long-pointed; panicle long, loose, 1-sided; corolla tube inflated, large, bell-shaped. Mexico.
- 9 P. BARBÀTUS. Smooth and glaucous; lvs. oblong to lance-linear; cor. tube long (13"), scarcely dilated upward, lower lip and tongue densely bearded. Mexico 2-4f.
- 10 P. MURRAY MUS. Glaucons; lvs. connate-clasping, upper roundish; cor. 18' bright red, dilated upward, in a long virgate panicle; tongue smooth. Texas. 3f.
- 11 P. HARTWEGI. Upper lvs. clasping; cor. tubular, 2', crimson; tongue glab. Mex. 3f.
- 12 P. GLABER. Smooth and glancous; sts. in bunches, simple; lvs. lanceolate to ovate, entire; flowers 18", in slender panicles, blue-crimson. Nebraska, and W. 2f.
- 13 P. SPECIÒSUS. Tall; st. lvs. lanceolate, sessile; cor. blue, 18", mouth ample, tongue filiform, the panicle long, virgate, secund, each cyme with 5–9 fls., very showy. Oreg.
- 14 P. GENTIANOIDES. Tall; st. lvs. broad-clasping; cor. 16", violet, mouth ample, tongue glabrous, dilated and retuse at apex, the panicle long, some leafy. Mexico. 3-4f.
- 15 P. CERÙLEUS. Low, leafy; lvs. lance., sessile; cor. blue, S"; tongue bearded. Nch.

16. COLLÍNSIA, Nutt. INNOCENCE. Calyx 5-cleft. Cor. bilabiate, orifice closed, upper lip bifid, lower trifid, with the middle segment carinately saccate and closed over the declinate style and stamens. Caps. with 2 bifid valves. Seeds large, concavo-convex. (1) With verticillate or opposite leaves, axillary and terminal flowers, very pretty.

- 1 C. verna N. Lvs. ovate to lanceolate, the cauline cordate-clasping, dentate; verti cils 4-6-flwd.; cor. blue and white, twice longer than the calyx, 2 or 3 times shorter than the pedicel. Banks of streams, N. Y., and W. 8-18', branching. May, June.
- 2 C. parviflora Doug. Lvs. ovate to lanceolate; verticils 2-6-flwd; cor. blue, little longer than the calyx and little shorter than the pedicels. L. Sup., and W. 6-10'. Jn.
- 3 C. BÍCOLOR. Stem lvs. ovate, crenate, sessile; verticils 6-10-flwd. : calyx hairy, longer than the ped.; cor. 9'', rose-violet and white. California. 2f. Hardy and handsome.
- 4 C. GRANDIFLORA has lvs. thickish and all entire, with ∞ large blue-purple fis. Oreg.

17. RUSSÉLIA, Jacq. Cal. 5-parted. Cor. tubular, limb sub-bilabiate, of 5 short rounded lobes, the 2 upper twin. Sta. 4, the fifth a small rudiment. Caps. subglobous, septicidal, valves bifid. Sds. ∞ , mixed with hairs. 5 Mexican. Lvs. opposite or whorled, often minute or scale-like.

R. JÚNCEA. Very smooth, with long, drooping, rush-like branches; lvs. lanceolate to linear, or scale-like on the branches. Flowers scarlet, 1', remote in drooping racemes.

18. PHYGÈLIUS, Mey. Cal. 5-parted. Cor. tube long, enlarged above, limb oblique, lobes rounded. Fifth stamen a minute rudiment. Caps. very oblique, with unequal cells. 5 Caffraria. Leaves opposite. Flowers in a 100se panicle of cymes.

P. CAPÉNSIS.—Shrub 2f, smooth and beautiful. Leaves lance-ovate, crenate, petiolate. Flowers pendulous, 1¹/, crimson, yellow within.

19. PAULÓWNIA, Siebold. Calyx deeply 5-cleft, fleshy. Ccr. tube long, declinate, enlarged above, limb oblique, with rounded segments. Sta. 4, arched downward, with no rudiment. Caps. acuminate, valves septiferous in the middle. Seeds ∞ , winged. 5 From Japan, with very large cordate, ovate leaves and large blue-purple fragrant panicles. P. IMPERIÀLIS.—In parks, 40f high. Flower-buds formed in Autumn, pening in the following Spring. Corolla near 2'. Tree of rapid growth and kingly port.

20. MIMULUS, L. MONKEY-FLOWER. Calyx tubular, 5-angled, 5toothed. Corolla ringent, the upper lip reflected at the sides, palate of the lower lip prominent. Stig. thick, bifid. Caps. ∞ -seeded.—Herbs prostrate or erect, with square stems and opposite lys Ped axillary, solitary, 1-flwd.

§ Leaves pinnate-veined. Flowers blue (wild) or yellow (cultivated).....Nos. 1, 2, 6 § Leaves palmate-veined. Flowers yellow or scarlet......Nos. 3, 4, 5

- 1 M. ríngens L. Lvs. sessile, smooth, lanceolate, acuminate; ped. axillary, longer than the flowers. 24 A common inhabitant of dirches and mud soils. 2f. Flowers large, (1'), pale blue, yellow-mouthed, appearing in July and August.
- 2 M. alàtus Ait. Leaves petiolate, smooth, ovate, acuminate; ped. shorter than the fis.; st. winged at the 4 corners. 24 N. Y., W. and S., in muddy places. 2f. Aug.
- 3 M. Jamèsii Torr. Stems diffuse, rooting; leaves subentire, round-reniform, 5-7veined, the upper as long as the peduncles of the small yellow fis. L. Sup., and W.
- 4 M. LUTEUS. Lvs. round-ovate, the cauline sessile or clasping, shorter than the peduncles; calyx ovoid, half as long as the broad, large, yellow, spotted flowers. Cal.
- 5 NI. CARDINÀLIS. Branching, villous-clammy; leaves ovate, narrowed to the clasping base, shortor than the long ped.; cal. large, inflated; cor. ample, rose-orange. Cal.
- 6 M. MOSCHÀTUS. Musk Plant. Decumbent, hairy-viscid; leaves ovate, dentate; cor. tube exceeding the calyx, yellow. Oregon. Smells strongly of musk.

21. TORENIA, L. Calyx tubular, with prominent angles, oblique. Cor. ringent, upper lip notched, lower larger, trifid. Sta. 4, arched beneatly the upper lip, the longer pair appendaged at base. Stigma double. Capsules included.—Herbs tropical, diffuse, with opp. leaves and racemed fls.

T. ASIÁTICA. Lvs. petiolate, lance-ovate, crenate-dentate; calyx acute at base, $\frac{1}{4}$; cor. twice longer, ample, pale purple tipped with violet. 2f+, trailing.

22. CONOBEA, Aublet. Calyx 5-parted, equal. Upper lip of the corolla 2-lobed, lower lip 3-parted. Fertile sta. 4, anth. approximating by pairs, cells parallel. Caps. round-ovoid, ∞ -seeded.—Herbs, with opposite leaves. Peduncles axillary, solitary or in pairs, 1-flowered.

C. multífida Benth. Low, diffusely-branched, puberulent; leaves petiolate : nnately dissected; segments linear or cuneate, lobed or entire, obtuse; cor. greenish, scarcely exserted (2"), lobes entire. (1) Sandy banks of rivers, O. to La. 6-12". July.

23. HERPÉSTIS, Gært. Calyx unequally 5-parted. Corolla subbilabiate, upper lip emarginate or 2-lobed, lower 3-lobed. Sta. 4, fertile. Caps. 2-furrowed, valves parallel with the dissepiment. Seeds ∞ , small. 24 Obscure weeds with opposite leaves. Peduncles 1-flowered, axillary, or subracemous, often with two bractlets near the calyx.

\$ Leaves feather-veined, or obscurely 1-3-veined. Cor. yellow, or bluish.....Nos.1, 2 \$ Leaves palmately many-(5-9-)veined, subentire. Corolla blue......Nos.3, 4

1 H. nigréscens Benth Erect; st. square, branched; leaves oblanceolate, crenateserrate above; ped. equalling or exceeding the leaves; corolla yellowish, upper lip rounded, entire. Wet pl., S. 1-2f. Cor. rather longer (5") than cal. Blackens in drying.

2 H. Monnièra Humb. Prostrate, fleshy; lvs. wedge-obovate, subentire; ped. as long (9") as the lvs.; fls. few, bluish; cor. 4" wide, nearly regular. Wet banks, Pa., & S.

3 H. amplexicaùlis Ph. Stem submersed, woolly; leaves ovate, cordate-clasping,

obscurely crenate, obtuse; ped. shorter than the calyx, cor. $\frac{1}{2}$ longer, the upper lig emarginate; disk 10-toothed. Swamps, N. J., and S. 6-12'. August.

4 H. rotundifòlia Ph. Creeping, smooth ; lvs. round-obovate, entire ; ped. 2 or 3 times longer than cal. ; cor. upper lip notched. Pools, Ill. to La. 1f. Fls. 5". Aug.

24. GRATIOLA. HEDGE HYSSOP. Calyx 5-parted, subequal. Ccr. upper lip entire or slightly bifid, lower trifid, the palate not prominent. Sta. 2, fertile, mostly with 3 sterile filaments. Capsules 2-celled, 4-valved, valves inflexed at margin. 24 Low, with opposite leaves. Peduncles axillary, 1-flowered, usually bibracteolate near the calyx.

- § Flowers sessile. Cells of anthers vertical. Plants rigid, bristly-hairy.....Nos. 7, 8
- 1 G. Virginiana L. St. sscending, branched; leaves lanceolate, sparingly toothed; ped. as long or longer than the lvs.; cor. twice longer than the cal.; sterile fil. none 24 Common. 4-8'. St. terete, branching, with white or pale-yellow flowers. July.
- 2 G. Floridàna Nutt. St. erect, branched; lvs. lanceolate, few-toothed; ped. longer than the lcaves; cor. 4 times longer than the calyx (7"), yellow. 2 Fields, S. 6-9'.
- 3 G. sphærocárpa Ell. Ascending, branched; leaves lance-ovate, attenuate to the base, sparingly toothed; ped. scarcely longer than the cal. Damp. 3-7'. W. and S.
- 4 G. aùrea Muhl. Smooth; lvs. oblong-lanceolate, subentire, clasping; ped. as long as or longer than the leaves; cor. golden yellow. Muddy soils. 6-8'. August.
- 5 G. viscòsa Schw. Viscid-downy; leaves lance-ovate, sharp-serrate, clasping; ped. longer than the leaves; corolla white, twice longer than calyx, which is 2 or 3 times longer than the capsule. Wet places, Ky. to N. Car., and S. 9-12'. (G. Drummondii.)
- 6 G. ramòsa Walt. St. terete, creeping at base; leaves linear, acute, with few teeth near the apex; bractlets nearly 0: sep. linear; cor. white. Muddy shores, S. May-Jl.
- 7 G. pilòsa Mx. Erect, hispid; vs. ovate, few-toothed, clasping, rugous; cor. tube scarcely longer than the calyx, white. Wet, Md., and S. 9-12'. July-September.
- 8 G. subulàta Baldw. Erect, hispid; lvs. linear or lance-linear, margins revolute, entire; cor. tube slender, thrice longer than the calyx. Wet sands, Ga., Fla. Sept.

25. ILYSÁNTHES, Raf. Cal. 5-parted. Cor. upper lip short, erect, bifid, lower lip larger, spreading, trifid. Sta. 2, fertile; 2 sterile fil. forked, one of the divisions tipped with an obtuse gland, the other acute, or rarely with half an anther. Caps. ovate or oblong, about equalling the calyx. (1) With opp. lys. and axillary, 1-flwd. ped., resembling Gratiola in habit.

1 I. gratioloides Benth. Branching, ascending 3-8'; lvs. oblong, obtuse, subsessile, obscurely dentate; cor. twice longer than the calyx, bluish-white, 4". A small weed-like herb, in wet places: common. Peduncles 3-6". July, August.

- 2 I. grandifiòra Benth. Diffusely creeping; lvs. thick, roundish, entire, subclasping; ped. hirsute, 1', corolla 6" long, violet-blue. Sandy swamps, Ga. (Nuttall.)
- 3 **I. refrácta** Benth. Erect, slender; lvs. clustered below, obovate to oblong, entire, the cauline remote, bract-like, linear-subulate; ped. filiform, refracted in fruit; cor. light-blue, 4 times longer than the calyx (5"). Damp pine woods, S. 6-10'. June.

4 I. saxícola (Curtis). Stems leafy, clustered; leaves oblong, obtuse, entire, sessile; ped. 3-4 times longer than the leaves (7-9'), refracted in fr.; cor. blue, 4". S. Ang.

26. MICRÁNTHEMUM, Rich. Cal. 4-toothed or cleft. Cor. upper lip shorter, entire, lower trifid. Sta. 2, fertile, a glandular scale at the base of each, sterile filament none. Style short, apex clavate or spatulate. Caps 2-valved. *m* (1) Slender, glabrous, with opposite lys. and minute fis. M. orbiculàtum Mx. Sts. creeping and rooting, branches ascending 1--2'; lvs. o bicular to obovate. 3-veined, entire. subsessile; fls. $\frac{1}{2}$ long. lower lip of cor. long. than the calyx. Brackish mud, Del., and S. (M. micranthum, &c.)

27. HYDRANTHELIUM, H. B. K. Calyx 4-cleft. Cor. 3-cleft, the upper lobe broader, emarginate. Sta. 3, on the corolla, anth. cells parallel, distinct. Style with two short lobes. Caps. ∞ -seeded. In Tropical, with opposite leaves and minute, axillary flowers. Habit of Callitriche.

H. crenatum Wood. Submersed stems flaccid, bearing the lvs. above; lvs. round ish, glabrous, *crenate*, abrupt at base, 7-9-veined, on flat, veiny petioles; pedicels 3', reflexed; corolla little exserted, white. Pools, Miss., La. (Dr. Hale).

28. AMPHIÁNTHUS, Torr. Calyx 5-parted. Corolla small, funnelform, limb 4-lobed, lower lobe larger. Sta. 2, included, style lightly bifid, lobes acute. Capsule obcordate, compressed, ∞ -seeded. (1) Minute, with flowers both axillary, and on terminal, 2-bracted peduncles 1' long.

A. pusillus Torr.—On wet rocks, Newton Co., Ga. Leaves nearly radical, linear, ob tuse; 1—2" long; flowers minute, white. March, April.

29. LIMOSELLA, L. MUDWORT. Calyx 5-cleft. Cor. shortly campanulate, 5-cleft, equal. Sta. approximating in pairs. Capsule partly 2celled, 2-valved, many-seeded. *IN* (1) Minute. Scape 1-flowered.

L. tenuifòlia Nutt. Lvs. linear, scarcely distinct from the petiole; scape as long as the leaves; cor. segments oval-oblong, shorter than the cal. Mud, Penn., and N. 1'.

30. SÝNTHYRIS, Benth. Calyx 4-parted. Corolla subcampanulate, segments 4, erect-spreading or 0. Sta. 2 (rarely 4), on the cor., exserted, anth. cells parallel, distinct. Caps. compressed, obtuse or emarginate. 24 N. American, with a thick root. Radical leaves petiolate, cauline bract-like, on the scape-like stem, alternate. Fls. racemed or spicate. May.

8. Houghtoniàna Benth. Hairy; lvs. ovate, subcordate, crenulate, obtuse; stem or scape dense-flwd. above; cor. greenish, as long as the cal. Hills, Mich., and W. 1f.

31. DIGITALIS, L. FOX-GLOVE. Calyx 5-parted. Cor. campanulate, ventricous, upper lip reflexed, spreading, middle segment of the lower lip broadest. Caps. ovate, 2-celled, 2-valved, with a double dissepiment. 24 Europe, Asia. Lower leaves crowded, petiolate, upper alternate. Flowers in showy racemes. Poisonous and medicinal. July, August.

§ Corolla light-yellow, tube twice longer than the lower lip......Nos. 1, 2 § Corolla purple, white, brown, often spotted, tube inflated and short.....Nos. 3-5

- 1 D. GRANDIFLÒRA (or ochroleuca). Great Yellow F. Leaves ovate, veiny, serrulate, clasping; racemes downy, loose; corolla 14 long, segments very broad. 4f.
- 2 D. LÙTEA. Plant very smooth, with lance-oblong leaves; raceme smooth, with many flowers, all on one side; corolla 8-10" long, tube not inflated. 2f.
- 3 D. PURPÙREA. Purple F. Lvs. oblong, rugous, petiolate, crenate, large; flowers in a .ong, 1-sided raceme, thimble-shaped, purple or white, spotted. 2-3f.
- 4 D. FERRUGÍNEA. Leaves very smooth, lance-oblong; corolla rusty-brown, the lower lip densely bearded, its middle segment ovate. 4f.
- 5 D. LANÀTA. Leaves lance-oblong often woolly; flowers downy or woolly, white or brown; lower segment of the corolla obovate. 2f.

32. VERÓNICA, L. SPEEDWELL. Calyx 4-parted. Cor. subrotate, deeply 4-cleft, lower segments mostly narrow. Sta. 2, inserted into the tube, exserted. Caps. flattened, often obcordate, 2-celled, few-seeded.—Our species are herbs. Leaves opposite. Flowers solitary, axillary or in racemes, blue, flesh-colored, or white.

- **1 V. Virginica** L. *Culver's Physic.* Erect, tall, glabrous or downy; lvs. whorled in **4's-6's**, lance-ovate to lance-linear; spikes mostly several, paniculate. 24 In thickets, Vt., W. and S. 2-5f. Corolla white, with exserted style and stamens. July.
- 2 V. SIBÍRICA. Hardly different from No. 1, but it has blue flowers. Siberia. 3f.
- 3 V. Anagállis L. Glabrous, erect; lvs. sessile, clasping and subcordate, lanceolate, acutish, entire or serrulate; rac. in opposite axils; caps. orbicular, slightly notched.
 24 Brooks and pools. Plant fleshy, 1f. Flowers small, blue-purple. June, July.
- 4 V. Americàna Schw. *Brooklime*. Glabrous, decumbent at base, erect above; lvs. ovate or ovate-oblong, serrate, petiolate, abrupt at base; rac. loose; caps. roundish, turgid, emarginate. 24 In clear streams. 12-18', fleshy. Fls. blue. June, July.
- 5 V. scutellàta L. Glabrous, ascending, weak; lvs. linear or lance-linear, sessile, acute, remotely denticulate; rac. very loose; capsule flat, broader than long, cordate at both ends. 24 Swamps, N. and W. 1f. Fls. flesh-color, rather large. June-Aug.
- **6 V. officinalis** L. Roughish-downy, prostrate, branching; lvs. wedge-oblong, obtuse, serrate, short-petioled; racemes dense, with pale-blue flowers; capsule downy, triangular-obcordate. 24 Dry fields. 6-12'. May-July. § Europe.
- 7 V. Buxbáumii Tenore. Prostrate, hairy; lvs. roundish-ovate, coarsely crenateserrate, the floral similar, all on short petioles; ped. longer than the lvs.; caps. triangular-obcordate, broader than long. (2) Waste grounds, E.: rare. 7-12'. Cor. blue. § Eu.
- 8 V. agréstis L. Neckweed. Hairy, procumbent, diffuse; lvs. cordate-ovate, deeply crenate-serrate, floral similar, all petiolate; ped. as long as the lvs.; caps. roundish, acutely notched, ∞-seeded. ① Fields, E.: rare. 2-8'. Light blue. May-Sept. § Eu.
- 9 V. hederæfòlia L. Prostrate, pilous; lvs. petiolate, cordate, roundish, coarsely
 3-5-toothed or lobed, shorter than the ped.; sep. triangular, subcordate, acute, closed in fruit; caps. turgid, 4-seeded. (1) Hard soils, E.: rare. Cor. blue. Mar.—May. § Eu.
- 10 V. alpina L. Branched at base, ascending 1-5'; lvs. roundish-oval to elliptical, very obtuse, toothed or entire, subsessile; *racemes hairy*, densely few-flwd.; capsule obovate, notched. 24 Summits of White Mts., N. H., and R. Mts. Fls. small, blue.
- 11 V. serpyllifòlia L. Branched below, ascending 3-12'; lvs. oval, obtuse, subcrenate, the lower rounded and petiolate, upper bract-like, oblong, entire; *rac. smoothish*, 100se; caps. obcordate, broader than long. 24 Pastures : com. Cor. blue-wh. May-Aug. §
- 12 V. peregrina L. Smoothish, ascending; lvs. petiolate, oblong, few-toothed, obtase, upper obl.-lin., entire; fls. subsessile, whitish; caps.roundish, slightly notched, O -seeded. (1) Clay soils, fields: com. 4-10'. Plant rather fleshy. May, June.
- 13 V. arvénsis L. Corn S. Hairy, branched; lvs. below round-ovate, si bcordate, petiolate, crenate, the upper lanceolate; corolla pale blue, pencilled, shorter than the calyx (as in No. 12); caps. obcordate. ① Dry fields: com. 2-6'. May, June. § Eur

- 14 V. SPICÀTA. Erect, 1-2f; leaves opposite, lanceolate, petiolate, serrate; racemee mostly solitary; pedicels shorter than the calyx; corollas blue, showy. 2f Europe.
- 15 V. PANICULÀTA. Erect, bushy, 1-3f; lvs. opposite and in 3's, lanceolate, acute at base, petiolate; rac. panicled; ped. longer than the calyx. 2 Many garden varieties, hybrids between this and No. 14, all with handsome blue racemes. Europe.
- 16 V. SPECIÒSA. Very smooth, shrubby, with oblong-obovate entire lvs., dense short (2') racemes in the upper axils, and violet-blue flowers, very beautiful. 1-3f.
- 17 V. SALICIFÒLIA. Smooth (tree-like at home), with lanceolate, acute, entire leaves, dense glandular-downy racemes (3'), and innumerable blue flowers. 2-5f.

33. BUCHNÉRA, L. BLUE-HEARTS. Calyx 5-toothed. Cor. salverform, with a slender tube, and flat limb in 5 subequal lobes. Stam. 4, included, with halved (1-celled) anthers. Caps. 2-valved. 24 Turns blackish in drying. Leaves opposite. Flowers in a terminal spike. June—Aug.

B. Americàna L. Rough-hispid, slender; leaves oblong to linear, few-toothed, obtuse, 3-veined; spike long-stalked, 6-12-flowered; cor. tube 6-7" long, limb half as long, deep blue. Woods, N. Y., and S. 2-3f, nearly leafless above.

34. MACRANTHÈRA, Torr. Calyx lobes 5, long and narrow. Cor tubular, with an oblique limb, short entire segments, and 4 long exserted subequal stamens. Style long, filiform. Caps. ovate, acuminate. 24 Tall, with opposite pinnatifid leaves and yellow fis. on long decurved peduncles.

M. fuchsioides Torr.—Pine-barrens, Ga., Fla., and W. 2—3f. Lvs. lanceolate in outline, with lanceolate segments. Rac. long, loose, 1-sided. Cal. seg. denticulate, shorter than the corolla (or *entire* and still shorter in β . LECONTH). Sept., Oct.

35. SEYMERIA, Ph. Calyx deeply 5-cleft. Cor. tube short, dilated, lobes 5, ovate or oblong, entire. Stam. 4, subequal, valves of the capsule loculicidal, entire. Seeds ∞ .—Herbs erect, branching. Cauline leaves mostly opposite and incised. Flowers yellow.

§ Tube of the corolla woolly within, incurved, as long as the limb..........No. 1

§ Tube of the corolla much shorter than the subrotate limb. Leaves small.. Nos. 2, 3

- 1 S. macrophýlla N. Tall, smoothish; lvs. large, pinnatifid, with lance-oblong incised segments, upper servate or entire. 2? Woods, W. 4-6f. Cor. 6". July.
- 2 S. pectinàta Ph. Viscid-downy, profusely branched; lvs. small (1' and less), pin natifid, seg. few, narrow and entire; caps. acute at base. Dry, S. 3f. Aug.—Oct.
- 3 S. tenuifòlia Ph. Smoothish, much branched; lvs. bipinnatifid, 6" long, segments and rachis filiform; capsule obtuse at base. Wet, S. 2-3f. Cor. 4". Aug., Sept.

36. DASÝSTOMA, Raf. WOOL-MOUTH. WILD FOXGLOVE. Cal. campanulate, 5-cleft. Cor. tube dilated, longer than the 5 entire lobes, woolly within. Stam. didynamous, scarcely included, woolly, anthers all equal, awned at base. Caps ovate, acute, 2 valves bearing a septum in the middle. Seeds ∞ . 24 Tall, erect. Lower leaves opposite. Corolla large, yellow. July—Sept. All blacken in drying. (Gerardia, L.)

* Calyx segments entire.—a Plants pubescent......Nos. 1, 2 —a Plants glabrousNos. 3 4

- * Calyx segments toothed or pinnatifid. Plants downy......Nos. 5, 3
- 1 D. flava Wood. Plant pubescent, subsimple; lvs. lance-oblong, entire, or toothed, the lower pinnatifid or incised; cal. lobes oblong, obtuse, shorter than the tube; ped very short. Woods. 2-4f. A showy herb. Corollas 18". (G. flava L.)

- 2 D. grandifiora Wood. Minutely pubescent, branched; lvs. petiolate, lance-ovate, pinnatifid, toothed, or entire; ped. as long as the calyx; cal. tube as long as the lobes (4'), corolla 2' long. Wis., Ill. (J. Wolf), and S. (G. grandiflora Benth.)
- **3 D. quercifòlia** Benth. Glabrous and glaucous, branched; lvs. petiolate, the lower bipinnatifid, upper lance-oblong; cal. lobes longer than the tube, both as long as the pedicels; corolla 2'. Thickets. 3-5f. Common.
- 4 D. integrifòlia Wood. Glabrous, subsimple; lvs. lanceolate, acute, entire or nearly so; pedicels shorter than the calyx. Woods, Pa., and W. 1-2f. August.
- 5 **D. pediculària** Benth. Smoothish or downy; lvs. lance-ovate, pinnatifid with toothed segments; pedicels longer than the hairy calyx, whose toothed segments are about as long as its top-shaped tube. Dry woods. 2-3f. Corolla 15".
- 6 D. pectinata (Torr.) Very hairy; lvs. lanceolate, pectinate-pinnatifid, seg. toothed; calyx longer than the pedicels, segm. longer than tube. Woods, S. 3f. Corolla 18".

37. GERÁRDIA, L. Cal. 5-toothed or cleft. Cor. tubular, ventricous or subcampanulate, tube longer than the 5 broad, entire, unequal lobes. Sta. didynamous, in pairs, shorter than the corolla. Caps. obtuse or pointed, ∞ -seeded.—American herbs, rarely shrubby. Leaves opposite (except No. 4). Flowers axiidary, solitary, purple or rose-color. July—Sept.

- 2 G. Mettaùeri Wood. Smooth, slender, diffusely branched; lvs. linear-filiform; ped. filiform, many times longer than the calyx; cor. 8", upper lip vaulted, notched, lower of 3 rounded lobes, tube with spots and 2 yellow stripes within. (1) Wet sardy places, Mid. Fla. (Dr. Mettauer, 1855). 1-2f. Lvs. 1'-1". (G. divaricata Chapm.)
 8.? clausa, Cor. tube flattened on the back, throat closed by the inflected lip. Fla.
- 3 G. nuda Wood. Smooth, filiform, branched; lvs. (except a few at the base) all reduced to minute bracts scarcely 1" long; fis. all terminal, small (5"); caps. globous, exceeding the calyx. Middle Fla. (Dr. Mettauer, 1855). (G. filicaulis Chapm.)
- **4 G. filitòlia** N. St. terete, much branched; leaves filiform, alternate and fascicled; ped. 1′, much longer than the leaves; cor. smooth, 9′′. (2) Barrens, Ga., Fla. 2–3f.
- 5 G. linifòlia N. 24 Stems virgate, clustered at root, smooth; lvs. opposite, erect, linear, 3-1'; ped. 8-12'', cal. 2'', truncate; cor. 1', spotted. Wet barrens, S. 2-3f.
- 6 G. tenuifòlia Vahl. Smooth, paniculately branched; leaves linear to filiform, 1', often coiled; ped. as long as the leaves, longer than the flowers, which are 9" long; calyx teeth very short, acute; capsule globular. Fields and woods. 1f.
- 7 G. Skinneriàna Wood (1848). Roughish; st. virgate, angular, few-branched; lvs. linear, rather obtuse, 1'; ped. axillary, very long (1-2'); cal. 1", teeth obtuse; cor. small (5"), rose-color, not fringed. Low grounds, W. and S. 1-2f. Unlike all the rest, this species does not blacken in drying. (G. parvifolia, Cham.)
- S G. set icea Walt. (not Benth.) Glabrous, widely branched; lvs. bristle-form, 1' and less; fis. mostly terminal on the filiform, bracted branchlets, large; ped. 2-4"; cal 1", teeth very acute, short; cor. 10", densely fringed. (1) Barrens, Pa., S. and W. 2f.
- 9 G. aphýlla N. Slender, angular, branched above; lvs. minute, setaceous, 1", or 0;
 ped. lateral and term., 1-3"; calyx 1", teeth obtuse; corolla 8" (1) Wet, S. 2-3f.

⁻d Lvs. linear, 1-2' long...Nos. 10-12

- 10 G. marítima Raf. St. angular, with short branches; lvs. linear, fleshy 6-8 cor. 7", some of the lobes fringed; ped. very short; cal. trunc. (1) Salt marshes. 4-10"
- 11 G. purpùrea L. St. angular, branched; leaves lincar, acute, rough-edged, 1-2'; ped. shorter than the calyx, tube truncate with setaceously acute teeth; corolla large (1'), smooth or downy. (1) Low grounds. 1-2-4f. Variable.
- 12 G. aspèra Doug. St. roughish, branched; lvs. narrowly linear, rough-hispid, 1; ped. 1-2 times as long as the cal. (3-6"), teeth lance-acute; cor. 1'. (1) W. 1-2f.

38. CASTILLÈJA, L. PAINTED CUP. Calyx tubular, 2–4-cleft. Cor. upper lip linear, very long, arched and keeled, enfolding the didynamous stamens, anth. oblong-linear, with unequal lobes, the exterior fixed by the middle, interior pendulous. 24 5 Leaves alternate, the floral often colored at the apex. Flowers subsessile, in terminal, leafy bracts.

- 1 C. coccínea Spreng. Lvs. sessile, pinnatifid with linear segments; bracts about 3-cleft, *scarlet* (sometimes *yellow*), exceeding the corolla; cal. 2-cleft, nearly equalling the cor., segments notched. 24 Wet meadows, E. (rare) and W. 8-12'. May, June
- 2 C. sessilifiora Ph. Hairy-downy; lvs. sessile, clasping, oblong-linear, mostly tri fid, not colored; calyx sessile, elongated; spikes dense; corolla long, exserted, arched, segments of the lower lip acuminate. 24 Prairies, N-W. 1f. May.
- 3 C. pállida Kunth. Lvs. linear, undivided, 3-veined, the upper lanceolate, the floral subovate, subdentate at the end, *whitish*; calyx with acute teeth, shorter than the corolla. 24 ? White Mountains, Green Mountains, and N-W. 1f. August.

39. SCHWÁLBEA, L. CHAFF-SEED. Calyx tube 10-ribbed, inflated, obliquely 4-cleft, upper division small, lower large, emarginate or 2-toothed. Cor. ringent, upper lip entire, arched, lower 3-lobed. Caps. o olong. Sds. ∞ , chaffy. 24 With alternate leaves and flowers in a terminal spike.

S. Americana L.—Sandy marshes, N. Y. to Fla. 1-2f, stout, simple, downy. Lvs lance-ovate, 3-veined, diminishing upward; corolla brown, 1-14 long. June.

40. PEDICULÀRIS, L. LOUSEWORT. Calyx inflated, 2–5-cleft, the segments leafy, or sometimes obliquely truncate. Cor. vaulted, upper lip compressed, emarginate, lower lip spreading, 3-lobed. Capsule 2-celled, oblique, mucronate. Seeds angular.—Herbs. Leaves often pinnatifid. Flowers spicate, vellowish.

- 1 P. Canadénsis L. Hairy, simple; lvs. alternate, petiolate, lance-oblong, pinna tifid with toothed segments; spike short, dense, leafy; cor. abruptly incurved, with 2 setaceous teeth; capsule ensiform-beaked. 24 Pastures, copses. 1f. May-July.
- 2 P. lanceolàta Mx. Smoothish, branching; lvs. subopposite, lance-oblong, doubly cut-crenate; spike elongated, loose at base; corolla upper lip larger and covering the lower; capsule short, ovoid 2 Shady banks, N.Y. to Va. and Wis. 1-2f. Sept.

41. RHINÁNTHUS, L. YELLOW RATTLE. Calyx 4-toothed, ventricous. Cor. tube cylindrical, as long as the calyx, limb ringent, galea appendaged, compressed, lip broader, deeply divided into 3 obtuse segments. Caps. 2-valved, compressed, obtuse. (1) Erect, with opposite leaves.

B. Crista-galli L. Mostly glabrous; lvs. oblong or lanceolate; cor. $\frac{1}{2}$ longer than the calyx; appendages of the galea (upper lip) transversely ovate, broader than long; seeds winged, rattling when ripe. Plymouth, Mass., Lake Superior, and N. 1f.

42. EUPHRASIA, L. EVEBRIGHT. Calyx 4-cleft. Upper lip of the

cor. galeate, concave, apex 2-lobed, the lobes broad and spreading, lower lip spreading, trifid, palate not folded. Sta. unequal, ascending beneath the galea. Capsule oblong, compressed, ∞ -seeded.—Herbs with opposite leaves and the flowers in spikes.

E. officinalis L. Lvs. ovate or oblong, the cauline obtuse, crenate, bracts acute, cut serrate with cuspidate teeth; calyx lobes subequal; corolla light-blue, lower lobes deeply notched. (1) White Mountains, Lake Superior. 2-6'. Leaves 1-3''.

43. MELAMPYRUM, L. Cow WHEAT. Calyx 4-cleft. Upper lip of the corolla compressed, the margin folded back, lower lip grooved, trifid. Caps. 2-celled, oblique, opening laterally. Seeds 1—4, cylindric-ob long, smooth.—Herbs with opposite lvs. Fls. solitary in the upper axils.

M. praténse, β. Americanum (Benth.) Leaves linear-lanceolate, petiolate, glabrous, the upper broader and toothed at base; fls. axillary, distinct; cal. teeth slender, half as long as the yellowish corolla. ① Woods: common. 6-10', branched. Jn.-Sept.

ORDER LXXXIX. ACANTHACEÆ. ACANTHADS.

Herbs or shrubs with opposite, simple leaves and regular, bracted flowers. Calyx 5-parted, equal or unequal, imbricated in the bud. Corolla 5-merous, tubular below, limb more or less bilabiate, convolute in bud. Stamens didynamous or diandrous, inserted on the tube of the corolla. Fruit a 2-celled, 4-12-seeded capsule. Seeds supported by hooks or cup-shaped processes of the placentæ, exalbuminous.

§	Seeds destitute of hooked supports(a)	
	a Corolla regular. Seeds few, resting on little cups. VinesTHUNBERGIA.	
	a Corolla bilabiate. Seeds many, with no supportsELYTRARIA.	2
ç	Seeds resting on hooks proceeding from the placentæ(h)	
	b Corolla funnel-form, subregular. Stamens 4, unequal RUELLIA.	3
	b Corolla bilabiate, ringent. Stamens 4. Pod terete	. 4
	b Corolla labiate, the upper lip wanting. Stamens 4. + RareACANTHUS moll	is
	b Corolla bilabiate Stamens 2c Corolla inverted, upper lip 3-toothedDICLIFTERA.	5
	-c Corolla straight, lower lip 3-lobedDIANTHERA.	6
	- Corolla straight, lower lip 3-parted	7

THUNBÉRGIA, L. Calyx short, toothed or truncate, with 2 large bractlets at base. Cor. funnel-bell-form, limb 5-lobed, nearly regular. Sta 4, unequal, included. Caps. beaked, 3-4-seeded. 5 b Fls. showy, axillary
 ALÀTA. A climbing vine, silky-hairy, with cordate-sagittate lvs. on winged pet. fls. 14' deep and broad, purple, with a yellow, buff, orange or white border. E. Africa

2. ELYTRÀRIA, Vahl. Calyx with 4 or 5 unequal segments. Cor bilabiate, lower lip of 3 bifid segments. Sta. 2 fertile, 2 sterile, included. Caps. 8-seeded.—Herbs acaulescent, with (oblong) leaves at base and clasping bracts on the scapes, and the small flowers in a terminal spike.

E. virgàta Mx. Scapes several, glabrous, covered with the bracts, which are ovate, cuspidate, ciliate, the upper subtending the white flowers; calyx with 2 linear bract lets at base, ciliate. 24 Wet plains, S. Car. to Fla. 1f. August.

3. RUÉLLIA, L. Calyx 5-parted into slender segments. Cor. funnel form, limb spreading, subequally 5-lobed. Sta. 4, included, didynamous

Caps. narrow. Seeds 4-16, resting on hooks. 24 Low, with tumid joints, opposite leaves, and showy axillary blue, purple, or white flowers.

§ DEPTERACÁNTHUS. Anthers pointless. Style bifid. Seeds 8-12......Nos. 1-8

- **1 R. strepens** L. Erect, smoothish, with obovate to oblong-petiolate lvs.; ped. very short, 1-4-flowered; bractlets as long as the narrow sepals, little shorter than the slender corolla tube. Dry soils, W. and S. 9-16'. Leaves 2-5'. June, July.
- 2 R. ciliòsa Ph. Erect, white-hairy, with lvs. obovate to oblong, abrupt at base and subsessile; bractlets and sepals not half as long as the tube of the corolla. Rich soils, W. and S. 1f or more. Leaves 1-2'. Flowers 2-2½'. June-September.
 β. hýbridus. Low, decumbent, and very hairy. Georgia (Dr. Feay).
- **3 R. tubifiora** Le Conte. Downy; leaves oblong to lanceolate, sessile; fis. solitary, sep. lance-linear, 1 as long as the long tube of the white cor. Ga., Fla. June-Aug.
- **4 R. oblongifòlia** Mx. Very downy; lvs. obovate to oval, snbsessile; fls. 1–3 to gether, bractlets and sepals as long as tube of the spotted corolla. Dry, Ga., Fla.
- 5 R. ripària (Chapm.) Smoothish, simple; lvs. oblong, petiolate; flowers clustered, small (6'), white, bractlets, sepals, and corolla tube equal. Mid. Fla. 12–18'.
- 6 R. humistràta Mx. Smooth; lvs. oblong-oval, petiolate; flowers 1-3 together, bractlets shorter than the setaceous sepals. Rich soils, S. Car. to Fla.
- 7 **R. lineàris T.** & G. Small, rough-downy; leaves linear-oblong, imbricated, the bractlets similar; capsule 4-angled, with 2-4 seeds. S. Fla.

4. HYGRÓPHILA, R. Br. Calyx half-5-cleft, with narrow segments Cor. ringent, lower lip trifid. Sta. 4, unequal, cells of the anth. divergentsagittate, violet. Stig. subulate. Caps. terete, ∞ -seeded. 24 m Stoloniferous, 4-angled. Flowers clustered in the axils. (See Addenda.)

H. lacústris Nees. Erect, simple, smooth; leaves lance-oblong, sessile (3-4'); fls. sessile, appearing whorled, white. Borders of lakes. New Orleans. 1-2f.

5. DICLIPTERA, Juss. Fls. in bracted heads. Cal. 5-parted. Cor. bilabiate, inverted, upper lip 3-toothed, sta. 2, anth. cells equal, one placed above the other. Caps. 4-seeded, the partitions and valves separating. 2f

- 1 D. brachiàta Spr. Smooth; st. 6-angled, brachiately branched; leaves lanceolate, long-petiolate, acuminate; heads few-flowered, the upper approximate, sessile, lower often pedunculate; flowers purple, 5-6". River banks, S. 1-2f. June--Aug.
- 2 D. Hàlei Riddell. St. downy, mostly simple; leaves lance-ovate, petiolate; bractlets and sepals fringed with long hairs; corolla 5" long. Fla. to La. 1-2f. Jn.-Aug
- 3 D. assúrgens Juss., with scarlet (1') corollas in 1-sided spikes, grows in S. Fla.

6. DIANTHÈRA, Gron. (Rhytiglóssa, Nees, and C-B.) Cal. 5-parted. Cor. bilabiate, upper lip notched, lower 3-lobed. Stamens 2, anth. cells unequa., one placed above the other. Capsule flattened, 4-seeded above the middle. 24 Jaw Lys. smooth, entire. Flowers in bracted spikes or heads.

- 1 D. Americàna L. Erect, angular, tall; leaves long-lanceolate, wavy, as long (3-4') as the peduncles; bracts and sepals lanceolate, 3", the ringent corolla 6", violet-purple. Banks, N. Y., W. and S. 2-3f. June, July.
- 2 D. ensifórmis Wood. Erect from a creeping base, slender; leaves linear, oblique or ensiform, thick, shorter (3-4') than the peduncles; flowers spicate; calyx 6"; corolla purple, 1. Fla. April. (D. crassifolia Chapm.)

- **3 D. ovàta** Walt. St. square, ascending, 4-8'; leaves lance-ovate, acute, longer than the 3-4-flowered peduncles; corolla pale-purple, 3-4". S. Car. to Fla.
- 4 D. hàmilis Wood. Erect, square, 1-14f; leaves lance-elliptical, shorter than the ∞ -flowered, 1-sided spikes; corolla 5", purple. Fla. to La. (Justicia Mx.)

7. CYRTANTHÈRA, Nees Corolla ringent, upper lip falcate, lower in 3 narrow segments. Sta. 2, anth. nodding. Caps. 4-seeded ? 4 Brazil C. CARNEA. Stem tall, stout, with ample ovate to oblong leaves, and large, showy, ter minal spikes of many flesh-colored dowers. In the greenhouse.

ORDER XC. VERBENACEÆ. VERVAINS.

Herbs (or generally shrubs and trees) with opposite, exstipulate leaves. Flowers with a bilabiate or more or less irregular monopetalous corolla. Stamens 4, didynamous, rarely equal, sometimes only 2. Style 1. Fruit dry or drupaceous, 2-4-celled (1-celled in Phryma), forming as many 1 seeded nutlets. Seeds erect or pendulous, with little or no albumen.

§ Herbs. Fruit dry, consisting of-		
a 4 one-seeded nutlets. Stame	ens 4. Corolla 5-lobedVERBENA.	1

1. **VERBENA**, L. VERVAIN. Calyx 5-toothed, with one of the teeth often shorter. Cor. funnel-form, limb somewhat unequally 5-lobed, lobes emarginate. Sta. 4, included, the upper pair sometimes abortive. Drupe splitting into 4, 1-seeded, indehiscent carpels.—Herbs or undershrubs Leaves opposite. Flowers sessile, mostly in spikes or heads.

- § Corymbed; the open corollas of the spike forming a corymb. Stems weak...(a)
 a Leaves 3-cleft or pinnatifid, the lobes cut-serrate or toothed......Nos. 1-3
 a Leaves merely serrate or toothed, somewhat incised.....Nos. 4-7
 § Spicate; the open corollas lateral, in slender spikes...(b)
 - b Stem simple (mostly), bearing a single spike. Leaves oblong......Nos. 8, 9
 b Stem branched, with many spikes.—c Leaves mostly simple......Nos. 10-12
 —c Leaves much divided......Nos. 13-15
- 1 V. Aublètia L. Lvs. ovate-oblong in outline, 3-parted, cut, acute and petiolate at base; spikes pedunculate; bracts half as long as the cylindrical calyx. Dry soils, Va. to Ill., and S 1f. Flowers lilac, varying in the gardens to purple. April, May.
- 2 V. INCÌSA. Leaves oblong to deltoid, rugous, cut-lobed and serrate, abrupt at base, petiolate; bracts ovate, a fourth as long as the glandular calyx; corolla rose-purple.
 24 Brazil. Stems some shrubby, ascending.
- 3 V. MULTÍFIDA. Small, creeping, branched; leaves multifid into narrow, acute segments; bracts subulate, shorter than calyx. (1) Brazil. Red to white.

- 4 V. VENDEA. Nearly simple, with rigid, oblong-sessile, cut-serrate leaves; bracts sub ulate, longer than the calyx, both colored; corolla lilac to blue. 2 Brazil.
- 5 V. CHAMÆDRIFÒLIA. Leaves oblong-ovate, short-petiolate; bracts subulate, not half the length of the long calyx; corollas scarlet to crimson. 24 Buenos Ayres.
- 6 V. PHLOGIFLÒRA. With many erect branches, and long-petioled, lance-deltoid eaves; bracts lanceolate, half as long as the calyx. Flowers large, red to blue.
- 7 V. TEUGRIOIDES has very hairy, wrinkled, ovate-triangular, crenate leaves on short stalks, with large white to roseate sweet-scented flowers. 24 Brazil.
- S V. angustifàlia Mx. Leaves oblong-linear, tapering to base, serrate, with furrowed veins; spikes 1 or few, slender; corolla deep-blue, bracts as long as the calyx (1"). 24 Rocks and hills, N. Y. to Va., and W. 1f. Leaves 2-3". July.
- 9 V. Caroliniàna L. Leaves oblong-obovate to oblong, crenate-toothed, sessile; spike loose; corolla large, roseate, bracts minute. 21 Dry soils, S. 1-21. June.
- 10 V. hastata L. Common Vervain. Lvs. lanceolate, acuminate, cut-serrate, petiolate, the lower lobed or hastate; spikes panicled, dense, slender, erect and parallel; flowers blue. 24 Waysides: common. 3-6f. § Europe. July-September. Hy brids occur, with cleft leaves and loose-flowered spikes.
- 11 V. urticæfòlia L. Leaves ovate to lance-ovate, servate, acute, petiolate; spikes axillary and terminal, filiform, lax; bracts shorter than the calyx. 24 A homely weed, in waste grounds. 3f. Flowers minute, white. § Europe. July, August.
- 12 V. strícta Vent. Mullein V. Hairy and hoary, rigidly erect; leaves oval to obovate, unequally dentate, sessile, rugous; spikes dense. 2 Dry fields, W. 1-3f. Very leafy, rather handsome. Corolla blue, 4" broad. July.
- 13 V. bracteòsa Mx. Hairy, divaricately branched, leaves laciniate; bracts lancelinear, squarrous on the peduncle and spikes, longer than the small blue flowers. 24 Dry fields, roadsides, N. Y., W. and S. 8-16'. June-September. (V. canescens.)
- 14 V. officinàlis L. Smoothish, erect; leaves lanceolate to oblong, pinnately lobed or toothed, subsessile; spikes slender, panieled; bracts not longer than the calyx; flowers purple, small. 24 Waysides, Conn. to Ga. 2-3f. (V. spuria L.)
- 15 V. strigòsa Hook. Hoary, rough-downy, rigid ; leaves oblong, 3-parted, incisea, sessile; spikes strict, lax-flowered bracts long as calyx; corolla large. N. Orl. 2-3f.

2. LÍPPIA, L. FOG-FRUIT. Cal. 2-parted. Cor. funnel-shaped, limb sublabiate, upper limb entire or emarginate, lower 3-lobed. Sta. didynamous, included. Drupe dry, thin, enclosed in the calyx, 2-seeded. 5 2 Leaves opposite or whorled. Flowers small, whitish, in heads or spikes.

- 1 L. nodifiòra Mx. St. 4-angled, geniculate, simple, creeping; lvs. lanceolate to oblanceolate, cuncate at base, petiolate, shorter than the ped. Banks, Pa. to Ill., and S.
- 2 L. (ALOYSIA) CITRIODÒRA. Lemon Verbena. Shrub smooth; leaves in 3's, lance-linear, punctate beneath, straight-veined, delightfully fragrant. 3f.

3 PHRYMA, L. LOP-SEED. Cal. cylindric, bilabiate, upper lip longer, 3-cleft, lower lip 2-toothed. Corolla bilabiate, upper lip emarginate, much smaller than the 3-lobed lower one. Stamens included. Fruit dry, oblong, striate, 1-celled, 1-seeded. 24 With opposite leaves. Flowers opposite, spicate, deflexed in fruit.

P. leptostáchya L.-Rocky woods. 2-3f. Leaves large (3-6'), thin, coarselytoothed; flowers small, light-purple, in very slender spikes. July.

4. CALLICARPA, L. FRENCH MULBERRY. Calyx 4-toothed, bellshaped. Corolla short-bell-shaped, limb of 4 obtuse segments. Sta. 4, unequal, exserted. Stig. capitate, 2-lobed. Drupe juicy, enclosing 4 nutlets. 5 With opposite leaves and axillary cymes. C. Americàna L. Pubescent; lvs. ovate, acuminate at each end, crenate-dentate, smooth above; clusters shorter than the petioles; fruit forming dense verticils Light soils, S. Shrub much branched, 3-6f, with purple flowers and fruit.

5. LANTÀNA, L. Cal. minute, obsoletely 4-toothed. Corolla funi elrm, the tube long-exserted, limb oblique, upper lip bifid or entire, lower rifid. Sta. 4, didynamous, included. Drupe fleshy, double, the parts sep arable, 1-seeded. 5 3-6f. Tropical, with square stems, opposite petiotate leaves, and capitate, handsome flowers, often fragrant.

- * Corollas white or yellow, changing to saffron, scarlet, crimson, &c.....Nos. 4, 5
- 1 L. NÍVEA. Branches with reversed prickles; lvs. ovate to elliptic, crenate-serrate, as long as the peduncles; no involucre; flowers white, turning to blue. Brazil.
- 2 L. SELLOWIÀNA. Branches strigous; lvs. rhombic to oblong, coarse-serrate, shorter than the peduncles; heads some involucrate; flowers reddish lilac. Brazil.
- 3 L. involucràta L. Whitish-downy; lvs. obovate to roundish, crenulate, as long as the peduncles; heads involucrate with the outer ovate bracts, lilac. S. Fla.
- 4 L. MIXTA. Prickles reversed or 0; lvs. ovate, crenate, abrupt at base, shorter than the peduncles; bracts as long as the corollas, which are white at first, then changing to yellow, then orange, and lastly red. Brazil.
- 5 L. Cómara L. Often prickly; lvs. as in No. 4, but equalling the peduncles; bracts half as long as the corollas, which are successively yellow, orange, red. Ga., Fla.

6. VITEX, L. CHASTE-TREE. Calyx 5-toothed. Cor. cup-shaped, 5lobed, somewhat 2-lipped. Stamens 4, unequal, exserted. Drupe entire, 4celled, 4-seeded. 5 With opposite, digitate leaves and paniculate cymes.

- 1 V. AGNUS-CÁSTUS. Leaflets 5 or 7, lanceolate, entire, pointed both ways; panicles white-tomentous, terminal, interrupted; corolla purplish. Hardy. S.
- 2 V. NEGÚNDO. Leaflets 3 or 5, oblong, serrate, acuminate. Mauritius.
- 3 V. INCISA. Leaflets 5 or 7, incisely pinnatifid, acuminate. China.

ORDER XCI. LABIATÆ. LABIATE PLANTS.

Herbs with square stems, and opposite, aromatic, exstipulate leaves. Flowers axillary, in verticillasters, sometimes as if spiked or in heads. Corolla labiate (rarely regular), upper lip external in the bud. Stamens 4, didynamous, or only 2. Ovary free, deeply 4-lobed, the single style arising from between the lobes. Fruit composed of 4 (or by abortion fewer) sep arable 1-seeded nuts or achenia. Figs. 23, 69, 96, 281, 292, 318, 384.

Stamens 2, perfect,-p	ascending beneath the galea ; anthers 1-celled.	(Tribe IV.)
-----------------------	---	-------------

1. OCIMUM, L. SWEET BASIL. Upper lip of calyx orbicular, lower 4-fid. Cor. resupinate, one lip 4-cleft, the other undivided. Stam. 4, declined, the lower pair longer, the upper often with a process at their base. Verticils 6-flowered, in terminal, interrupted racemes.

O. basílicum L. Lvs. smooth, ovate-oblong, subdentate, petiolate; cal. ciliate **(1)** Plant 6-12'. in the kitchen-gardens. Very fragrant.

2. CÒLEUS, Lour. Cal. deflexed in fruit, unequally 5-toothed. Cor. decurved, upper lip obtusely 3-4-cleft, lower longer, entire, concave, in volving the 4 stamens. (1) Verticils $6-\infty$ -flowered. Asia.

C. BLÙMEI. Leaves large, ovate, bluntly serrate; verticillasters distinct, Offlowered.
 2f. Tender, cultivated for its splendid leaves, which are marked with crimson, green.
 and bronze. Flowers inconspicuous.

3. HÝPTIS, L. Calyx 5-toothed, teeth acute or subulate. Cor. tube cylindric, limb 5-lobed, the lower abruptly deflexed, contracted at its base, the 4 others flat, erect or spreading. Stam. 4, declinate. Ach. ovoid or oblong.—In our species the flowers are in involucrate heads. Summer.

H. radiàta Willd. Erect, glabrous; leaves lance-ovate to lance-linear, unequally and bluntly serrate, tapering to the petiole; heads opposite, pedanculate, at length globular, bracts seeming radiate. 2 Damp, S. 2-3f.

4. LAVANDULA, L. LAVENDER. Cal. ovoid-cylindric, with 5 short teeth, the upper one often largest. Cor. upper lip 2-lobed, lower 3-lobed, lobes all nearly equal, tube exserted, stamens included. 5

L. SPICA. Leaves hoary, linear-oblanceolate to linear-lanceolate, rolled at edge, sessile, in the interrupted spike bract-like; flowers small, lilac. Very fragrant, and yielding the well-known *Oil-of-Lavender*. 12-18'. July.

5. AMETHÝSTEA, L. Flowers as in Teucrium, but the stamens are only 2. (1) From Siberia.

A. CCERÙLEA.—A branching, smooth herb, 1f high, with the leaves 3-parted and incised, and blue (to white) corollas little exceeding the calyx. July—Oct.

6. **TEUCRIUM**, L. GERMANDER. Cal. subcampanulate and subregular, in 5 acute segments. Cor. with the 4 upper lobes nearly equal, the lowest largest, roundish. Stam. 4, exserted from the deep cleft in the upper side of the tube.

T. Canadénse L. Plant erect, hoary-pubescent; lvs. ovate-lanceolate, acute, serrate, petiolate; bracts linear-lanceolate, about as long as the calyx; spike long, of many crowded verticils of odd-looking purplish flowers. 24 Damp grounds. 2f. July.

7. TRICHOSTÈMA, Lin. BLUE CURLS. Calyx very oblique, veiny, lower lip of 2 short teeth, upper twice as long, of 3, all acute. Cor. tube slender, limb obliquely 5-lobed. Filam. 4, very long, exserted and curved. (1) Cymes loose, panicled. Corolla blue.

1 T. dichótom a L. Lvs. oblong-lanceolate, attenuate at base, obtuse, entire pubeecent, as well as the stem and branches. Dry soils, Mass., and S. 1f. August.

2 T. lineàre N. Leaves near, nearly smooth; stem and branches puberulent. Drv soils, N. Y. (at Salem), and S. 1f. Flowers as in the other, 4". July, Aug.

8. ISÁNTHUS, Mx. FALSE PENNYROYAL. Calyx equally 5-toothed, throat naked. Cor. 5-parted, tube straight and narrow, segm. ovate and equal. Stam. subequal, incurved, ascending, longer than the corolla. 24 Viscid, pubescent, with entire leaves acute at each end. Flowers axillary.

I. coerùleus Mx.—Dry fields, N. and W. 1—14f. Branching and leafy, resembling Pennyroyal. Leaves lance-elliptic, 3-veined. Flowers 1—2 in each axil, blue. July. 9. PERÍLLA, L. Calyx subequally 5-toothed, in fruit becoming gibbous and 2-lipped. Cor. bell-form, 5-cleft, lower lobe a little longer. Sta 4, erect, distant, included.—Asia.

P. OCIMOIDES, β. NANKINÉNSIS, is the PURPLE PERÍLLA, a fine leaf-plant, 2f high, with large bronze-purple, ovate, cut-fringed leaves. (β. crispa Benth.) ①

10. MENTHA, L. MINT. Cal. equally 5-toothed. Cor. nearly regular, tube scarcely exserted, border 4-cleft, the broadest segment emarginate. Stam. 4, straight, distant, anth. cells parallel, fil naked. 24 Strong-scented herbs. Flowers in dense verticils, pale purple. Summer.

- * Leaves sessile. Verticils in a slender, terminal spike......Nos. 1-3
- M. víridis L. Spearmint. Smoothish; lvs. lance-oblong, acute, cut-serrate; spikes interrupted, attenuate above. Damp soils. 1-2f. § Europe.
- 2 M. rotundifòlia L. Whitish-downy; lvs. roundish to broad-ovate, sharp-serrate; spikes cylindric, nearly continuous. N. J., Pa. (at Easton, Prof. Porter). Ascending 2-3f. Spikes 2-3'. § Europe.
- 3 M. sylvéstris L. Woolly-tomentous; lvs. lance-ovate, canescent, finely serrate; spikes conic-cylindric. Delaware Co., Pa. (A. H. Smith).
- 4 M. piperita L. Peppermint. Smooth; lvs. ovate to lanceolate, serrate; spikes 1', oblong to cylindric; calyx smooth. Wet. 2f. § Europe.
- 5 M. aquática L. Stem reflex-hairy : leaves ovate, serrate, hairy or smoothish; spike globular or oblong, calyx villous. Muddy. §
- 6 M. sativa L. Stem reflex-hairy, erect, branched; leaves ovate, canescent beneath; calyx teeth subulate-awned. Lancaster, Pa. (Porter). § Europe.
- 7 M. arvénsis L. Smoothish, ascending; leaves ovate, serrate above, entire and acute at base; calyx teeth acute. Fields, M. and W.: rare. §
- 8 M. Canadénsis L. *Horsemint*. Upright, hoary-public scent with spreading hairs; leaves lanceolate, very acute both ways; cymes shorter than the petioles; stamens exserted. Damp. Can. to Pa. and Ky.

β. borealis. Plant nearly smooth, with narrower leaves.

11. LÝCOPUS, L. WATER HOARHOUND. Cal. tubular, 4-5-cleft. Cor. subregular, 4-cleft, the tube as long as the calyx, upper segment broadest, emarginate. Stam. 2, distant, diverging, simple. 24 Bog herbs, with the very small flowers in axillary, dense clusters.

- L. Virgínicus L. Bugle Weed. Lvs. broad lanceolate, serrate, tapering and entire at both ends; calyx teeth 4, obtuse, spineless, shorter than the achenia. Common. 1-11f. Plant often purple, and often with long slender runners. July, August.
- 2 L. Europæus L. Lvs. lance-ovate to lance-oblong, petiolate, acute, sinuate-toothed or lobed, the lower incised; calyx teeth 5, acuminate-spinescent, longer than the smooth achenia. Common, and very variable. 1-2f. August.
 - β. rubéllus, with creeping stolons, and downy toothed lvs. (L. rubellus Mœnch.)
 - y. sinuatus, with smooth sinuate-dentate leaves-no runners. (L. sinuatus Ell.) .
 - δ. exaltatus. Tall, with smooth leaves cut into linear teeth. (L. exaltatus Ell.)
 - E. angustifolius. Leaves narrow, slightly toothed or subentire. (L. angust. N.)
 - 5. sessilifolius. Lvs. oblong, sessile or clasping, remotely toothed. N. J. (Porter).

12. CUNILA, L. DITTANY. Cal. 10-ribbed, equally 5-toothed, throat densely villous; upper lip of corolla flat, emarginate. Stam. 2, erect, exserted, distant.—Flowers numerous, pale red.

C. Mariàna L. Lvs. ovate, serrate, subsessile, 1'; cymes pedunculate, corymbous, axillary and terminal. 24 Rocky woods, N. Y. to Ga. and Ark. 1-2f. July, Aug.

13. HEDEOMA, Pers. AMERICAN PENNYROYAL. Calyx 13-striate, gibbous at base, bilabiate, throat hairy, upper lip 3-toothed, lower 2-cleft. Cor. bilabiate, upper lip erect, flat, emarginate, lower spreading, 3-lobed. Stam. 2, fertile, ascending.—Low, fragrant herbs.

- **i H. pulegioides** Pers. Lvs. oblong, few-toothed, petiolate, narrowed to each end; verticils axillary, 6-flowered; corolla equalling the calyx. (1) Dry pastures. 6-12'. June-Aug. A small herb of pungent fragrance and taste, common and much used.
- 2 H. híspida Ph. Hairy, branching, with sessile, linear, obtuse leaves and verticils 6-flowered; corolla scarcely exceeding the calyx. ① Banks, W. 2-5'. July.

14. COLLINSONIA, L. HORSE BALM. Cal. ovoid, 10-striate, upper lip truncate, 3-toothed, lower 2-cleft. Cor. exserted, bell-ringent, upper lip in 4 subequal lobes, lower longer, declined, fringed. Stam. 2 or 4, much exserted, divergent. 24 Coarse, strong scented, with large, ovate, serrate, petiolate lys. and yellowish fls., in a terminal, leafless panicle or raceme.

- * Stamens 2, perfect,—a the upper pair of filaments mere points......Nos. 3, 4
 - -a the upper pair of filaments capitate. South............No. 5
- C. verticillàta Baldw. Viscid-downy above; lvs. broad-oval, 6-8', acute, petioles 1-2'; racemes long, naked; flowers in whorls, 9"; lower lip strongly fringed. Lookout Mt., Tenn., and Middle Ga. 1-2f. Raceme 1f. May, June.
- 2 C. anisàta Ph. Viscid-downy; lvs. cordate, acuminate, crenate, 5-7', petiole 1'; panicle 3-6', bracts ovate, flowers 5-6''. Ga., Fla., Ala. 1-2f. July-Sept.
- 3 C. Canadénsis L. Sparsely downy; leaves mucronate-serrate, acuminate, abrupt at base, 4-7'; lower petioles slender; panicle 5-8', loose, bracts ovate; flowers 5-6". Damp shades, Can. to La. (Hale). 3-4f. Summer.
- 4 C. scabriúscula Ait. Leaves scabrous above, small (11-2'), acuminate, acute at base, petioles slender, 1'; panicle leafy, fis. 4-5", calyx 1". Woods, S. 2f. Sept.
- 5 C. punctàta Ell. Pubescent; lvs. 4-7', lance-ovate, pointed, acute at base, resinous-punctate beneath; panicle leafy below, flowers 5''. Woods, S. 2-6f. Sept. +

15. HYSSOPUS, L. HYSSOP. Calyx tubular, 15-striate, equally 5toothed. Upper lip of the corolla erect, flat, emarginate, lower 3-parted, the middle segment largest, tube about as long as the calyx. Stamens 4.

H. officinàlis L.—Native of Europe and Asia, occasionally cultivated for its medicinal properties. A bushy herb, 2f, with oblong-lanceolate leaves, and bright blue fis. in 1-sided verticils approximate in a terminal spike. St. exserted, diverging. §

16. **PYCNÁNTHEMUM**, Mx. BASIL. Calyx tubular, 10–13-striate, 5-toothed, teeth equal or subbilabiate, throat naked within. Upper lip of corolla nearly entire, lower trifid, middle lobe longest, all ovate, obtuse, stam. 4, distant, subequal, anth. with parallel cells. 24 Erect, rigid branching herbs, all N. American. Verticils dense, many-flowered. Aug., Sept.

§ Calyx 2-lipped, in flat or loose cymes. Leaves petiolate, subserrate...(a)

- S Calyx subregular, in roundish dense heads...(b)
 - a Teeth of the calyx ovate, acute, awnless......No. 1
 - a Teeth of the calyx tipped with bearded awnsNos. 2-4 b Calyx teeth and bracts with naked awns as long as the corolla....Nos. 5, 6
 - b Calyx teeth awnless, shorter than the corolla...(c)

- **1 P. albéscens** T. & G. Leaves lance-ovate, acute, whitened beneath, the **upper** whitened both sides; flowers in little secund racemes. Ala. to La. 2-3f.
- **P. Túllia** Benth. Villous-pubescent; leaves ovate to lanceolate, acute or pointed; the floral whitened; inflorescence as in No. 1. Mountains, S.
- **3 P. incanum** Mx. *Wild Basil.* Whitish, with a soft down; leaves ovate, rounded at base, slightly acuminate; the floral whitened both sides; cymes 1' and less broad not racemed; corolla pale red, dotted. Rocky woods, N. and W. 2-4f.
- 4 P. clinopodioides T. & G. Villous-canescent; leaves lanceolate, acute both ways; cymes small, dense, terminal and subterminal. Dry soils, N. Y., N. J., and W. 2-3f. Plant not whitened. Heads 6" diameter.
- 5 P. aristàtum Mx. Smoothish; leaves ovate-oblong, acute, subservate, rounded at base, petiolate; bracts rigid; heads few, 6-9" diam. Barrens, N. J., and S. 1-2f.
- 6 P. hyssopifolium Benth. Smoothish; leaves linear-oblong, obtuse, nearly see sile and entirc; heads few, large, 1' diameter. Barrens, Va. to Fla. 1-2f.
- 7 P. Tórreyi Benth. Slightly pubescent; lvs. lin.-lanceolate, acute, subentire; bracts and subulate calyx teeth white-pubescent. Dry hills, New York Island, N. J.: rare.
- **5 P. pilòsum** N. Hoary with soft, spreading hairs; leaves lanceolate, acute at each end, subentire, subsessile; calyx teeth ovate-lanceolate, and with the bracts white-tomentous. Prairies, W. States, to Ga. 2f. Cymes dense, 6-9".
- 9 P. mùticum Pers. Minutely white-downy at top; leaves ovate to lance-ovate, acute, rounded or subcordate at base; calyx teeth short, merelyacute. In dry woods. 2-3f. Heads roundish, dense, 4-6".
- 10 P. lanceolàtum Ph. Leaves linear-lanceolate, entire, acute, rigid, abrupt at base, sessile; calyx teeth short, hairy; heads small (3-5"). Dry woods, Mass. to Car., and W. 1-2f. Handsome, fragrant, nearly smooth.
- 11 P. linifòlium Ph. Glabrous; leaves linear, attenuated both ways; heads compact, corymbed; calyx teeth pungently awn-pointed. Dry soils. 1-2f.
- 12 P. nudum N. Glabrous, pale, subsimple; leaves few and small, ovate-oblong, obtuse, entire, sessile; calyx teeth acute, pubescent. Mts., N. Car. to Ga. 1-2f.
- 13 P. montanum Mx. Glabrous except the villous-ciliate ovate and linear bracts leaves lanceolate, serrate, acute; heads involucrate. Mountains, Va. and Car. 1-2f. Resembles a Monarda. Fragrant.

17. SATUREJA, L. SUMMER SAVORY. Calyx tubular, 10-ribbed, throat not hairy. Segments of the bilabiate corolla not equal. Stamens diverging, scarcely exserted.—Herbs with small leaves and purplish fls.

S. horténsis L. St. branching; lvs. linear-oblong, entire, acute at the end; ped. axillary, cymous. (1) River banks, W., escaped from gardens: rare. §

18. DICERANDRA, Benth. Calyx 13-striate, tubular, upper lip subentire, lower bifid, throat hairy. Cor. tube exserted, straight, strongly 2lipped, the upper erect, emarginate, the lower spreading. Sta. 4, exserted, distant, anther cells divaricate, each with a little horn. ① Branching, smooth, with loose cymes.

- 1 D. linearifòlia B. Stem and branches strict; lvs. linear, or linear-oblong; cymes stalked, of 1-5 showy pink flowers, forming slender panicles. Dry woods, Prince Edward County, Va. (Dr. Mettauer), to Fla. (Miss Keen). 1f. October.
- 2 D. densifiòra B. Leaves lance-ob'ong; cymes sessile, 5-10-flowered. E. Fla.

19. ORIGANUM, L MARJORAM. Calyx tube 10-striate, 5-toothed,

hairy in throat. Corolla tube scarcely exserted, upper lip erect, flat, emar ginate, lower with 3 nearly equal segments. Stamens 4, ascending, distant. 4 Leaves subentire. Fls. in dense oblong spikes, with imbricated bracts.

- 1 O. vulgàre L. Wild M. Leaves ovate, petiolate, hairy; spikes corymbed; bracts ovate, purplish; calyx teeth equal. Fields: rare. 1f. June, July.
- 2 O. MARJORÀNA. Sweet M. Leaves oval or obovate, obtuse, petiolate, hoary-pubescent; bracts roundish; calyx tube split below. 1f. A kitchen vegetable.

20. THÝMUS, L. THYME. Cal. 2-lipped, ovoid, 13-veined, upper lip of 3, the lower of 2 subulate teeth, throat hairy. Cor. moderately 2-lipped. Sta. straight, exserted, distant. 5 Leaves small, entire, strongly veined. Bracts minute. Flowers purple. European culinary herbs.

- **1 T. Serpýllum L.** Wild T. Stems creeping and ascending, leafy, each terminated with a small, dense, oblong head of flowers grateful to bees. + §. June.
- 2 T. VULGÀRIS. Stems erect from the decumbent base; lvs. oblong-ovate to lanceolate, the sides revolute; fls. in term., leafy spikes. Much branched. 6-10' high. Jn., Jl.

21. CALAMINTHA, Mœnch. CALAMINTH. Cal. tubular, 13-nerved, throat mostly hairy, upper lip 3-cleft, lower 2-cleft. Corolla tube straight, exserted, throat inflated, limb bilabiate, upper lip erect, entire or emarginate, lower spreading, its middle lobe largest. Stamens 4, the lower pair longer, usually ascending. 24

- § Herbs hairy. Cymes dense, capitate, bracted. Calyx tube curved, 2-lipped..No. 1
- § Herbs hairy. Cymes loose, pedunculate. Calyx tube straight, 2-lipped...... No. 2

- 1 C. Clinopòdium Benth. *Wild Basil.* Plant clothed with whitish hairs; leaves ovate, subserrate; fis. purplish, in dense verticils or heads, with many subulate bracts. Low woods, N. and W. 1-2f. Heads near 1' wide. June-August.
- 2 C. Népeta Link. Branched below, soft-villous; leaves small, broad-ovate, obtuse; cymes few-flowered, becoming some racemed; corolla white, 3-4"; calyx 1". Va., Tenn., to Ga. Roadsides, &c. 2f. Strongly aromatic. July, August. § Europe.
- 3 C. glabélla B. Smooth, decumbent at base, diffusely branched; leaves narrowly oblong, tapering to base; verticils 6-10-flowered. Rocks, O. to Ark. 18'. Cor. 4-5", pale violet. Fragrant like Pennyroyal. Often produces runners, and runs into β. diversifolia. Flowering stems nearly erect, the barren prostrate like rurners, bearing small ovate leaves (3-4"). Rocks, Niagara, and N-W. 10'.
- 4 C. Caroliniàna Sw. Smooth, simple; lvs. ovate, obtuse, crenate-serrate; bracts similar; cy. few-flwd., on short stalks; cor. rose-purp., 7-9". Dry woods, S. 15'. Jl.
- 5 C. coccinea B. Shrub with virgate branches; lvs. narrowly ovate-oblong; verticils of 2-6 ample scar. fls.; cor. 15-18", gland.-pubescent. Sandy shores, Fla. 2f.
- 6 C. canéscens T. & G. Low shrub, minutely canescent-downy; leaves linear, with rolled edges, obtuse, crowded; fis. sol., opp., 8", rose-red. Sandy shores, F'a 8-12".
- 7 C. dentata Chapm. Tomentous; lvs. wedge-obovate, 2-4-toothed at apex. Fla. 2f.

22. MELISSA, Tourn. BALM. Calyx 13 ribbed, the upper lip 3toothed, flattened and dilated, lower bifid. Cor. tube recurved-ascending upper lip erect, flattish, lower spreading, 3-lobed, the middle lobe mostly broadest. Stamens ascending.

M officinalis L. Pubescent; st. erect, branching: fls. in loose, axillary cymos-

leaves ovate, crenate-serrate, petiolate; bracts similar; corolla 7'', yellowish. Gardens, whence it has escaped into the fields and woods. 1-3f. July, August.

23. SÁLVIA, L. SAGE. Cal. striate, bilabiate, upper lip 3-toothed or entire, lower bifid, throat naked. Corolla ringent, tube equal, upper lip straight or falcate, lower spreading or pendent, 3-lobed. Stamens 2, connectile transverse on the filament, supporting at each end a cell of the halved anther. 5 24 Figs. 96, 281.

- **1 S. azùrea** Lam. Smoothish, branching; lvs. linear-oblong and linear, subentire, acutish; racemes slender; verticils 2-6-flowered; corolla pubescent, tube barely ex serted; limb azure blue. 24 S. Car. to Fla. and La. 1-3f. Summer.
- 2 S. longifòlia N.? Tall, branched, puberulent; leaves oblong-lanceolate, serrate; racemes slender; corolla 8-9", tube twice longer than calyx. 2f Ga. to Ark. 3-6f.
- 3 S. urticifòlia L. Thinly pubescent; leaves rhomb-ovate, acute, serrate, decurrent on the petiole; verticils 4-10-flowered, distant in the raceme; corolla smooth, tube little longer than the calyx. 24 Hilly woods, Va., and S. 18'. May.
- **1 S. lyràta** L. Lvs. radical, lyrate, erose-dentate, many, stem lvs. about 1 pair, linear spatulate, bract-like; fls. in whorls, racemed at top of the square scape. 24 In woods 6–15'. Flowers 1', violet-purple. April-June.
- 5 S. obovàta Ell. L^{*}s. broad-obovate, entire, the floral ovate; verticils remote in the raceme; corolla blue, 8", calyx 3". 24 Ga. to La. 1-2f. June, July.
- 6 S. Claytòni Ell. Lvs. cordate- to lance-ovate, sinuate-pinnatifid, and toothed, rugous, bracts ovate, pointed. 24 Sandy fields, S. Car.
- 7 S. Sclàrea L. Lvs. ample, rugous, broad-cordate, doubly crenate; bracts colored; corolla pale purple, upper lip high-arched. (2) Gardens, § in Penn.
- 8 S. OFFICINÀLIS. Garden Sage. Shrubby; leaves lance-oblong, crenulate, rugous; corolla upper lip vaulted, equalling the lower. From S. Europe. 1f. July.
- 9 S. PATENS. Hispid and hairy; leaves ovate-deltoid or ovate-hastate, crenate; flowers very large; calyx bell-form, 7"; corolla blue, 2' long; stamen exserted. Mexico. 3f
- 10 S. ARGÉNTEA. Leaves white with wool, large, ovate, sinuate-lobed, the floral concave; flowers 18'', racemed, the upper lip long-falcate. S. Europe.
- 11 S. CHIONÁNTHA, with large white-woolly, linear-lanceolate leaves and very large (2') white flowers with arched galea, is from Asia Minor.
- 12 S. AÙREA. Shrub 3-4f, with roundish ovate whitened leaves, the splendid yellow flowers 24', calyx 1', in dense racemes. From Africa.
- 13 S. coccíneA. Stem and ovate-cordate leaves beneath hoary-downy; verticils of 6-10 red smooth flowers (8") in a raceme; cal. 2-colored, 4". 24 Cuba, § in Ga., &c. 1-2f.
- 14 S. PSEUDO-COCCÍNEA, 3f high, is hispid with long spreading hairs, has ovate leaves rounded at base. Otherwise like No. 14. 24
- 15 S. FULGENS. Plant branching, weak-stemmed, public event, with lance-ovate, subcordate leaves, the corollas 2', bright red, opposite, in terminal racemes. Moxico.
- 16 S. SPLENDENS. Plant erect, smooth, with ovate lvs. and opposite pubescent flowers; calyx 1', scarlet as well as the 2' corollas. The commonest species. Mexico. 3f.

24. ROSMARINUS, L. ROSEMARY. Calyx upper lip entire, lower bifid. Cor. upper lip 2-parted, lower lip reflexed, in 3 divisions, of which the middle is the largest. Fil. 2, fertile, elongated, ascending toward the upper lip, having a tooth on the side. b S. Europe.

R. officinàlis. Shrub evergreen with opposite, linear-oblong, obtuse, shining leaves Flowers axillary and terminal, bright blue, fragrant of camphor. 4f.

25. MONÁRDA, L. MOUNTAIN MINT. Calyx elongated, cylindric, striate, subequally 5-toothed. Cor. ringent, tubular, upper lip linear, lower lip reflexed, 3-lobed, the middle lobe narrowest. Sta. 2, fertile, ascending beneath the upper lip, and mostly exserted, anth. cells divaricate at base, connate at apex. 24 Verticils few, dense, many-flwd., bracted. Jl.—Sept.

- * Calyx densely hairy in the throat. Corolla purple or whitish......Nos. 1, 2
- * Calyx naked in the throat. Corolla scarlet or yellow......Nos. 3, 4
- 1 M. fistulòsa L. Horsemint. Wild Bergamot. Lvs. ovate to lanceolate, pointed, serrate or subentire, petiolate; flowers in large terminal heads; corollas 1', exserted, greenish white, pale lilac, or blue. Thickets, W. Vt., W. and S. 2-4f. Variable.
- 2 M. Bradburiàna N. Lvs. ovate to lanceolate, acute, rounded at base, subsessile; cal. curved, teeth spinescent (as in No. 1); bracts and corolla purple. Prairies, W. 3t.
- 3 M. punctata L. Lvs. lance-oblong, tapering to the petiole; bracts leafy, colored, longer than the pale yellow, brown-spotted corollas. Barrens, N. J., S. and W. 2-3f.
- 4 M. dídyma L. St. branching, acutely 4-angled; lvs. broad-ovate, pointed, shortpetiolate; heads terminal and subterminal, with large (15") showy crimson corollas, and bracts stained with the same hue. Swamps: rare. Often cultivated. 2f.

26. BLEPHÍLIA, Raf. Calyx 13-veined, upper lip 3-toothed, lower lip shorter, 2-toothed, the teeth setaceous. Cor. upper lip short, erect, oblong, obtuse, entire, lower lip of 3 unequal, spreading lobes, the lateral ones orbicular. Stam. 2, fertile, ascending, exserted. 24 Verticils dense, approximate in a spike.

- 1 B. hirsùta Benth. Hirsute all over, wide-branched; lvs. ov. lanceolate, pointed, serrate, petiolate; bracts oblong, acuminate, colored, shorter than the pale, purple-spotted flowers; cor. 5". Damp woods, N. Eng., W. Pa., and W. 1-2f. June, July.
- 2 B. ciliàta Raf. Thinly hirsute, simple; lvs. lance-oblong, distant, subseesile; verticils 3-5, the ovate bracts long as the calyx. Barrens, Pa., S. and W. 2-4f. Jl.-Sept.

27. LOPHÁNTHUS, Benth. HEDGE HYSSOP. Cal. 15-ribbed, oblique, 5-cleft, upper segments longer. Cor. upper lip bifidly emarginate, lower lip 3-lobed, the middle lobe broader and crenate. Stam. diverging. 24 Tall, erect. Verticils spicate.

- 1 L. nepetoides B. Stem smooth, stout, angles sharp; lvs. ovate, pointed, serrate; calyx teeth ovate, obtusish, green, in spikes 2-3' long; corollas inconspicuous, greenish white. Fence-rows, &c., M. and W. 3-6f. July, Aug.
- 2 L. scrophularifòlius B. Stem pubescent, angles obtuse; leaves ovate, crenatoserrate; calyx teeth lanceolate, acute, colored; corolla pale purple. Borders of fields, M. and W. 3-4f. July, Aug. Closely resembles No. 1.
- 3 L. anisàtus B. Smooth; leaves ovate, &c., whitened beneath; calyx teeth as it. No.2; corolla azure-blue, fragrant of anise. Wis. to Dak. (Dr Matthews.)

28. NÉPETA, L. CATMINT. GROUND IVY. Cal. tubular, 5-toothed; Cor. tube slender below, dilated and naked in the throat, upper lip emarginate, lower 3-lobed, the middle lobe largest and crenate, margin of the orifice reflected. Sta. ascending, anther cells divergent. Figs. 318, 384. 1 N. catària L. Catnip. Erect, hoary-tomentous; lvs. petiolate, cordate, deltoid-

- ovate, coarsely crenate-serrate; flowers spiked, the whorls slightly peduncled. 24
 About old buildings, &c. 2-3f. July. §. The delight of cats.
 2 N. Glechòma B. Gill-over-the-Ground. Leaves reniform, crenate; corolla 3 times
- 2 N. Glechoma B. Gui-over-the-Ground. Leaves reniform, crenate; corolla 3 times longer than the calyx (10'), bluish purple, anthers forming 2 little crosses. 24 Creeping in grass, about walls, &c. 3'-1f. May. § Europe.

29. DRACOCÉPHALUM, L. DRAGON-HEAD. Calyx subequal, oblique, 5-cleft, upper segment larger. Cor. bilabiate, upper lip vaulted, emarginate, throat inflated, lower lip spreading, 8-cleft, middle lobe much larger, rounded or subdivided. Sta. 4, distinct, ascending, the upper pair longer. (2)

D. parviflorum N. Plant some downy, slender; leaves petiolate, lanceolate, deeply serrate; flowers small, bluish, spicate. N. New York, and W.: rare. 18'. July.

30. CEDRONÉLLA, Mœnch. Cal. subcampanulate, 5-toothed. Cor tube exserted, throat dilated, upper lip straight, flattish, emarginate or cleft lower 3-fid, middle lobe largest. Stam. 4, ascending, the upper longer, anther-cells parallel. Flowers spicate, bracted. Summer.

- 1 C. cordàta N. Pubescent, producing runners; leaves cordate, petiolate, bluntly crenate; spikes unilateral, corolla pale blue, 1'. 24 Rocks, O., Va.: rare. 1f. June.
- 2 C. MEXICÀNA. Erect, with cordate-lanceolate, dentate leaves; flowers in a spike of close whorls, purple, large. Mexico. 2-3f. (Gardoquia (Lind.))

31. BRUNÉLLA, Tourn. SELF-HEAL. BLUE-CURLS. Cal. about 10ribbed, upper lip dilated, truncate, with 3 short teeth, lower lip with 2 lan ceolate teeth. Filam. forked, one point of the fork bearing the anther. 24

B. vulgàris L. Stem simple; leaves oblong-ovate, toothed, petiolate; flowers blue, in a large oblong-ovoid spike of dense verticils with reniform bracts. Low grounds, very common, varying from 8' to 2f. All Summer.

32. SCUTELLARIA, L. SKULL-CAP. Cal. campanulate, lips entire, upper one appendaged on the back and closed after flowering. Cor. upper lip vaulted, lower dilated, convex, tube much exserted, ascending, throat dilated. Stam. ascending beneath the upper lip, anthers approximate in pairs, achenia tubercular. 24

- § Flowers large (7 to 13" long), racemed at top of the stem, with bracts...(a)
 - α Bracts ovate, abrupt at base. Lips of corolla short. Petioles long...Nos. 1, 2, 3 α Bracts lance-oblong, acute at base. Leaves notched, petiolate...(b)
 - b Galea of the corolla longer than the lower lip......Nos. 4, 5
 - b Galea of the corolla not longer than the lip.....Nos. 6, 7 a Bracts leaf-like, longer than the calyx. Leaves entire, subsessile .. Nos. 8–10

Flowers large or small, opposite, solitary, in the axils of the leaves....Nos. 11-13 Flowers small (3" long), in slender, axillary, one-sided racemes......No. 14

- **1 S. versícolor** N. Glandular-hairy, erect, branched; leaves broad-ovate, cordate, crenate, veiny; racemes long, many-flowered; bracts ovate, entire, subsessile; corolla 6-7", lips blue, subequal, lateral lobes distinct. Pa., and W. States. 14-4f.
- **2 S. rugòsa** Wood. Hairs and leaves as in No. 1, but the stem is weak, ascending, bracts petiolate, and the lower lip of the (8'') corolla pendent and twice lor.ger that the upper. Rocky shores, Harper's Ferry, Va., and S-W. 18'.

- **3 S. saxatills** Rid. Smoothish and not glandular, weak, ascending; leaves as in Nos 1, 2; bracts as in No. 2; corolla 8", lips equal, upper 3-lobed. Del., Va., and W. 2f.
- **4 S. canéscens** N. Erect, pubescent; leaves ovate to oblong, lower cordate; rac. terminal and axillary; bracts lance-linear; corolla 8", canescent, upper lip arched, remote from the lower. Dry soils, M. and W.: common. 1-3f. (S. arguta Bkly.)
- 5 S. villòsa Ell.? Slender, erect, stem finely tomentous; leaves lanceolate, acute both ways, servate; flowers paniculate, bracts lance-linear; corolla 9^{''}, tube slender, galea strongly arched, 5 times longer than lip. Ga. (Dr. Feay). 2-3f.
- 6 S. serràta Andr. Erect, subsimple, green, smoothish; leaves ovate, pointed both ways, serrate; rac. few-flwd.; cor. 13", lips subequal. Woods, E. Pa., Ill., and S. 2-3f.
- 7 S. pilòsa Mx. Erect, subsimple, pubescent; leaves rhomb-ovate or oval, obtuse, remote, crenate-serr.; racemes terminal; corolla 9-12", lips distant. Pa. to Ga. 2f.
- 8 S. integrifòlia L. Erect, subsimple, tomentous or downy; leaves ovate to lancelinear, obtuse, entire, or the lower crenate; flowers 9", much enlarged above, the lips subequal, in a terminal raceme. Dry soils, M. and S. 9'-2f.
- 9 S. Floridàna Chapm. Slender, branching; leaves all linear, obtuse, entire, with rolled edges, lowest minute; corolla 1', enlarged above, lips subequal. W. Fla. 1f.
- 10 S. MACRÁNTHA (or Japonica). In gardens, 1f, smooth (except the hairy calyx); lvs. clasping, lance-linear; flowers 1', blue, with subequal lips, handsome. China.
- 11 S. nervósa Ph. Slender, erect, producing runners; leaves sessile, broad-cordate, crenate-serr., 3-5-veined; fls. few, 4", with small floral lvs. Rocks, M. and W. 8-15'.
- 12 S. párvula Mx. Root a string of tubers, stem erect, 3-9'; lvs. ovate to oblong, obtuse, small (6''), sessile, entire; fis. 3", exceeding the lvs., blue. Fields, M. and W.
- 13 S. galericul.ta L. Common S. Erect, branched, smoothish or downy; leaves nearly sessile, cordate-oblong or lanceolate, obscurely crenate, acute; flowers few, large (9-12"), sessile, axillary. Low meadows, Can. to Penn. 12-18'.
- 14 S. lateriflora L. Mad-dog S. Smoothish, subsimple; lvs. petiolate, lanceolate, serrate; fls. 4"; rac. axillary, secund, equalling the lvs. Ditches, N., W., M. 1-2f

33. MACBRIDEA, Ell. Calyx 3-lobed, upper lobe oblong, narrow, lower rounded. Cor. tube long-exserted, throat inflated, upper lip erect, concave, lower short, spreading, the middle lobe rounded, broadest. Sta. ascending under the upper lip, anthers approximate by pairs. 24 Erect, subsimple, with large purple-white flowers in heads.

1 RT. púlchra Ell. Lvs. wedge-lanceolate, acute, serrulate, the floral ovate; corolla 18", streaked with purple and white. Wet pine-barrens, S. 12-18'. Aug., Sept.

2 M. alba Chapm. Lvs. wedge-oblong, obtuse, dentate; the floral roundish; corolls white; lower lobes of the calyx notched. Pine-barrens, W. Fla. 12-18'. July, Aug.

34. SYNÁNDRA, N. Cal. 4-cleft, segm. unequal, subulate, converg ing to one side. Upper lip of corolla entire, vaulted, the lower obtusely and unequally 3-lobed, throat inflated. Sta. ascending beneath the galea upper pair of anth. cohering, having the contiguous cells empty. (2) Flow ers solitary, axillary, somewhat spicate above. Figs. 69, 292.

S. grandifiòra N.-Woods, O. to Tenn. 6-18'. Stem simple. Lvs. cordate-ovate acuminate, petiolate. Cor. white, 1', with large lobes, purple-striate. June.

35. PHYSOSTÈGIA, Benth. LION-HEART. Cal. bell-form, 5-toothed Cor. much exserted, throat inflated, upper lip concave, entire, lower of a broad-spreading lobes. Sta. 4, separate, ascending beneath the upper lip. 4 Smooth, with lanc., serrate lys. and term. spikes of showy rose-white fls. **P. Virginiàna B.** Stems mostly simple; lys. oblong to narrow-lanceolate, sessile. thick; spikes 4-rowed, ∞ -flowered; corolla 8-15", spotted inside. Wet banks, M... W., and S. Often cultivated. 1-4f. August, September.-Variable.

36. LAMIUM, L. HENBIT. Cal. 5-veined, with 5 subequal, subulate teeth. Cor. dilated at throat, upper lip vaulted, galeate, lower lip broad, emarginate, lateral lobes truncate, often toothed on each side near the margin of the dilated throat. Stamens 4, ascending. May—November.

* Weeds in waste grounds, with roundish leaves and small purple flowers... Nos. 1. 2

* Lvs. cordate, ovate. Fls. larger (1'), hairy in throat, side-lobes toothed... Nos. 3, 4

1 L. amplexicaùle L. Leaves cut-crenate, petiolate, the floral sessile-clasping; corolla slender (6"), galea entire, side-lobes not toothed, throat spotted. (1) 6-10'.

2 L. purpùreum L. Lvs. roundish to ovate, crenate, all petiolate; corolla slender, 6", hairy within, side-lobes with a subulate tooth, galea entire. ① Penn., &c.: rare.

- 3 L. alba L. Lvs. hairy, petiolate; cor. white, curved, a hairy ring within, and the side-lobes with a tooth. Waysides: rare. Flowers in whorls. Cultivated.
- 4 L. MACULÀTUM (or rugòsum). Leaves hairy, rugous, petiolate, marked with a white oblong spot along the midvein. Flowers as in No. 3, but purplish. Cultivated.

37. PHLOMIS, L. JERUSALEM SAGE. Calyx truncately 5-toothed. Cor. galea broad, keeled, lower lip spreading, 3-fid. Stamens ascending beneath the galea, the upper pair appendaged at base. Leaves rugous. Verticils showy, axillary.

P. tuberòsa. Tall, smoothish, with large ovate-cordate, crenate leaves; fls. 30-40 in a whorl, purple, hairy inside. Scarce in gardens and waste grounds.

38. BALLOTA, L. BLACK HOARHOUND. Cal. funnel-form, 10-veined, 5-toothed. Cor. tube cylindrical, as long as the calyx, upper lip concave, crenate, lower lip 3-cleft, middle segment largest, emarginate. Sta. 4, ascending, exserted. Achenia ovoid-triangular. 24

B. nìgra L. Lvs. ovate, subcordate, serrate ; bracts linear-subulate ; cal. throat di lated, teeth spreading, acuminate. Waste places, N. Eng. : rare. July. § Europe.

39. MOLUCCÉLLA, L. MOLUCCA BALM. SHELL FLOWER. Calyx campanulate, very large, the margin expanding, often repand-spinous. Corolla tube included, limb bilabiate. Stamens 4, ascending. (1)

NI. LÆVIS. A curious plant, noted for its ample calyx, much larger than its small, yellowish corolla. Stem smooth, 2f; leaves round-ovate, cut-crenate. Syria.

40. GALEÓPSIS, L. HEMP NETTLE. Cal. 5-cleft, spinescent. Upper lip of the corolla vaulted, subcrenate, lower lip with 3 unequal lobes, having 2 teeth on its upper side, middle lobe largest, cleft and crenate. Sta. exserted, anth. cells transverse. (1) Vert. distant, many-flwd. § Eur.

i G.Tetràhit L. St. hispid, the internodes thickened upward; leaves ovate, hispid, serrate; cor. twice as long as the calyx, upper lip nearly straight, concave; corolla white-purple. A common weed in fields and waste grounds, N. States. 1-3f. Jn., Jl.

2 G.Ládanum L. Internodes equal; lvs. lanceolate, subserrate, pubescent; npper lip of the corolla slightly crenate; corolla roseate. Waste soils: rare. 1f. August.

41. STACHYS, L. HEDGE NETTLE. Cal. tube angular, bell-form, 5or 10-ribbed, with 5 acute or pungent teeth. Cor. upper lip erect-spreading or some vaulted, lower spreading, 3-lobed, mid-lobe largest. Stamens as cending, lower pair longer, anthers approximating by pairs. Verticils 2-10-flowered, approximating in a terminal raceme.

Our species are much alike, yet easily distinguished. They have stems mostly hispid, leaves elliptic-lanceolate, crenate-serrate, narrowed to an abrupt base, and corolla palepurple with deeper spots. Summer.

- * Plants 24, leaves smooth. Calyx teeth divaricately spreading......Nos. 1, 2
- * Plants hispid or hairy.-a 24 Calyx teeth spinescent. Lvs. subsessile.... Nos. 3, 4
- -a Calyx teeth acute. Leaves petiolate......Nos. 5, 6 **1 S. hyssopifòlia** Mx. Leaves sessile, linear-lanceolate, serrulate, small $(1-\mathcal{X})$;
- calyx teeth half as long as the 7" corolla. Mass. to Mo., and S. 6-12'.
 2 S. glàbra Rid. Leaves all petiolate, serrate; calyx teeth much spreading, as long as the corolla tube. Woods, N. Y. to Mich., and S. 15'-3f. Racemes 3-7'.
- 3 S. palústris L. Stout, hirsute; leaves some pointed, large, hoary beneath; corolla twice longer (7-8') than the calyx teeth. Moist shades, Can. to Car. 1-4f.
- **4 S. áspera** Mx. Slender, hispid; leaves pointed, sharp-serrate; calyx glabrous. teeth hispid, equalling the corolla tube. Damp soils; common. 2f. Not leafy.
- 5 S. cordàta Rid. Stout, with large, pointed leaves, crenate-dentate; calyx teeth triangular, much shorter than the corolla. 24 Shady banks, W. 2-5f.
- 6 S. arvénsis L. Weak, diffuse; lvs. ovate-cordate, obtuse; bracts very short; cal. teeth lanceolate; corolla tube included, lips short. ① Waste grounds, N.: rare. §

42. BETÓNICA, Tourn. BETONY. Calyx tubular-bell-form, with 5 awn-like teeth. Cor. as in Stachys, but beardless inside. Stam. ascending parallel beneath the galea. Style bifid. Lower leaves long petioled, cordate, all crenate. Verticils large, dense, in a terminal spike.

- **1 B. officinàlis L.** Wood B. Spike interrupted at base; flowers purple, cor. twice longer than calyx (7"), galea entire. Gardens, and escaped. 1f. Rare. § Europe.
- 2 B. GRANDIFLÒRA. Villous; floral leaves clasping; verticils separate; corolla violet, large (15"), handsome, galea obcordate, glabrous. Gardens. 2f. Siberian.

43. LEONÙRUS, L. MOTHER-WORT. Calyx 5-10-striate, 5-toothed, teeth subspinescent. Upper lip of the corolla entire, hairy, concave, erect, lower lip 3-lobed, the middle lobe obcordate. Stam. 4, ascending beneath the upper lip. Mostly 24. Verticils axillary. Flowers purplish. Summer.

- 1 L. Cardiaca L. Lvs. palmate-lobed, 3-fid, to lanceolate; corolla longer than the calyx, a hairy ring within. About dwellings. 3-5f. § Asia.
- 2 L. marrubiástrum L. Leaves oblong-ovate, coarsely cut-serrate; cor. shorter than the calyx teeth, naked within. Waste grounds. 2-4f. § Europe.

44. MARRÜBIUM, L. HOARHOUND. Cal. tubular, 5-10-striate, with 5 or 10 subequal teeth. Cor. upper lip erect, flattish or concave, entire or bifid, lower lip spreading, 3-lobed, middle lobe broadest, emarginate, tube included. Stam. included in the tube. 24 Fls. in dense verticils, white.

M. vulgare L. Hoary-pubescent; lvs. roundish, ovate, crenate-dentate, downy canescent beneath; cal. of 10 setaceous, hooked teeth. Fields, &c. 1-2f. Jn., Jl. § Eur.

45. LEONÒTIS, Br. LION'S-EARS. Calyx 10-veined, apex incurved, throat oblique, sub-10-toothed, upper tooth largest. Cor. tube exserted, upper lip concave, erect, entire, lower short, spreading, trifid. Sta. 4, under the galea, anth. in pairs.—Vert. dense, with numerous lin.-subulate bracts. L. nepetæfòlia Br. Erect, stout; lvs. thin, ovate, crenate, on slender petioles; cal.

tceth 8, spinescent; whorls very large; cor. scarlet, 10". 1 Fields, S. 4-7f. § Afr.

ORDER XCII. BORRAGINACEÆ. BORRAGEWORTS.

Herbs (shrubs or trees), with round stems and branches, not aromatic Leaves alternate, generally rough, with stiff hairs. Stipules none. Flowers seldom yellow, generally in a coiled (scorpoid) inflorescence. Sepals 5. Petals 5, united below, regular, very rarely irregular. Stamens 5, inserted in the tube. Ovary 4-lobed, or entire, forming in fruit 4 separate, 1-seedes: achenia in the bottom of the persistent calyx. Figs. 141, 455.

I. EHRETIEÆ. Ovary entire, style terminal. Fruit 4-seeded, fleshy. Shrubs(a)
a Calyx 4-5-toothed, in heads. Corolla funnel-form, white. Fla. and †CORDIA bullata.
a Calyx 4-5-toothed, in corymbs. Corolla funnel-form, white. Fla

▲. TOURNEFORTIA, L. SUMMER HELIOTROPE. Cal. 5-parted. Cor. salver-form, throat naked. Sta. 5, included. Sty. short. Fr. 2-carpelled, 4-celled and 4-seeded. 5 5 With entire leaves and secund spikes.

- **1** T. HELIOTROPOIDES Hook. Shrubby at base, erect, hairy, with oval obtuse wavy-edged leaves; ped. terminal, 2 or 3 times forked, with numerous small inodorous, pale-lilac, pretty flowers. Buencs Ayres.
- 2 T. gnaphaloides 11 white-silky, and T. volùbilis, climbing; in S. Fla.

2. HELIOTROPIUM, Tournef. HELIOTROPE. Calyx 5-parted. Cor. salver-form, throat open, folded between the lobes. Anth. sessile. Sty. short, stigma conical, the achenia cohering at base, at length separable. 2¢ 5 Fls. white or purple, in 1-sided, scorpoid spikes. Summer.

§ Flowers white, in forked terminal spikes, or single lateral ones...... Nos. 1, 2

§ Flowers white-purple, in a cluster of terminal spikes. Cultivated......Nos. 3, 4

- i H. Europæum L. Erect, pubescent; lvs. oval, veiny, obtuse, petiolate; calyx spreading in fruit, hairy. (1) Rocky banks, moist fields, Va., and N.: rare. 8-12'.
- 2 H. Curassávicum L. Glabrous, ascending; leaves linear-oblong to spa:Late, obtuse, tapering to base, veinless and glaucous. ① Shores, W. and S. 1f.
- **3 H.** PERUVLÀNUM. Shrubby, erect, pubescent; leaves rugous, lance-ovate, short-petio late; corolla twice longer than the calyx, peculiarly fragrant. Peru.
- **4 III.** CORYMBÒSUM. Pubescent, with lance-oblong leaves tapering both ways; flowers deep purple, less fragrant, but larger than in No. 3.

3. **HELIÓPHYTUM**, DC. Calyx 5-parted. Cor. salver-form, throat constricted, 5-rayed. Anth. included. Sty. very short. Nuts 2, each 2-celled (sometimes with 2 additional empty cells).—Herbs with habit of Heliotrope.

H. Indicum DC. Erect, branching, hairy; lvs. ovate, erose-serrulate, acute, veiny. rugous, abrupt or subcordate at base; spike terminal, single (rarely forked); corolla much exserted; fruit with four empty cells. ① Fields, W. and S. 1-2f. §

4. ÉCHIUM, Tourn. VIPER'S BUGLOSS. Calyx 5-parted, segm. subulate, erect. Cor. campanulate, obliquely and unequally lobed, with a short tube and naked throat. Stigma cleft. Achenia tuberculate, base flat. Flowers irregular, in spicate, panicled racemes. Summer.

E. vulgàre L. Plant rough with bristles and tubercles; lvs. lanceolate; fls. large, handsome, violet-blue, many and crowded. 1 Fields, Pa. to Va. 14f.

5. LYCÓPSIS, L. WILD BUGLOSS. Calyx 5-cleft. Cor. funnel-form, tube incurved, throat closed with ovate, converging scales. Ach. perforated at base, ovoid, angular. (1) Distinguished mainly by the curved cor. tube.

L. arvénsis L. Plant hispid, erect, branched above, with lanceolate, repand-denticulate leaves; flowers small, sky-blue with white scales, the bent tube longer than the calyx, in leafy racemes. Fields and waysides. 1f. § S. Europe.

6. ECHINOSPÉRMUM, Swartz. BURR-SEED. Calyx 5-parted. Cor. hypocrateriform, throat closed with concave scales. Ach. erect, bearing 1-3 rows of echinate prickles, smooth between, compressed or angular, fixed to a central column.—Herbs with bracted racemes and small blue fis.

E. Láppula Lehm. Branched above; lvs. hairy, lanceolate to linear; corolla longer than calyx, border concave; ach. with prickles in two rows. (1) Dry soils. 1f. July.

7. CYNOGLÓSSUM, Tourn. HOUND'S TONGUE. Cal. 5-parted. Cor. short, funnel-form, concave, throat closed by 5 converging, convex scales. Ach. covered with echinate prickles, depressed, forming a broad pyramidal fruit, each fixed laterally to the style. Lvs. large. Cor. blue, purple or white.

§ Racemes without bracts, or nearly so......Nos. 1, 2

- 1 C. officinàlis L. Common H. Silky-publicent, leafy to the top; leaves oblonglanceolate, the upper sessile; naked racemes panicled; corolla dull purple. 24 Pastures, &c. 1-2f. Plant dull green, ill-scented. July. § Europe.
- 2 C. Virginicum L. Plant hairy, leafless above, with oblong-oval lvs. below, and a terminal cluster of short spikes of pale-purple flowers. 24 Woods, Va., N. and W.
- 3 C. Morrisoni DC. Beggar-ticks. Rough-pubescent, widely-branched; leaves acu minate; racemes forked; flowers very small, white; fruit with doubly barbed prickles adhering to all that pass. (1) Rocky places. 2-3f. July.

8. BORRAGO, Tourn BORRAGE. Cal. 5-parted. Cor. rotate, with acute segments, a scale at base of each. Sta. converging. Ach. ovoid, muricate, excavated at base, inserted lengthwise into an excavated recep.—Eur.

B. OFFICINÀLIS. Rough-haired, branching; leaves ovate; flowers sky-blue, showy, in terminal, loose racemes. (2) In old gardens, sowing itself. 1-2f. All Summer.

9. OMPHALODES, Tourn. NAVELWORT. Calyx deeply 5-parted.

Cor. rotate, tube shorter than the calyx tube, throat closed. Sta. included Achenia cup-form, toothed at the edges.—Oriental herbs.

- 1 O. LINIFÒLIA. Erect, smooth, glaucous; leaves obovate to linear-lanceolate; corolla white, twice longer than calyx. (1) Spain. 1f. June-August.
- 2 O. VERNA. Runners creeping; leaves cordate to ovate, puberulent; racemes in pairs, few-flowered; flowers bright blue. 2 S. Europe. 6'. April, May.

10. SÝMPHYTUM, Tourn. COMFREY. Cal. 5-parted. Cor. tubularcampanulate, orifice closed with 5, subulate scales, converging into a cone Ach. smooth, ovoid, fixed by an excavated base. 24 Oriental herbs.

S. officinàle L. Stem hairy, winged with the decurrent, lance-ovate leaves; fls. white or pink, in revolute racemes. Gardens and fields. 2-4f. Summer.

11. ANCHÙSA, L. BUGLOSS. Cal. 5-parted. Cor. funnel-form, throat closed with 5 scales. Sta. included. Achenia excavated at base.—Europe.

A. ITÁLICA. Plant bristly-hispid, with lanceolate leaves and panicled racemes of numerous bright-blue, small mellifluous flowers. A hardy biennial. Summer.

12. ONOSMODIUM, Mx. Cal. deeply 5-parted, with linear segments. Cor. cylindrical, having a ventricous, half 5-cleft limb, with the segments converging and the throat open. Anth. sessile, included. Style much exserted. Achenia whitish, shining. 4 North American. Racemes terminal, subspicate, one-sided. Flowers white. Summer.

- 1 O. Virginiànum A. DC. Very rough with appressed, stiff bristles; lvs. oblong, sessile, 5-veined; cor. hispid, $\frac{1}{2}$ longer than the lance-linear sepals, the segm. lance-subulate; anthers arrow-shaped. Dry soils. 15-30'. Corolla 4-5".
- 2 O. Caroliniànum DC. Shaggy with long, spreading, rusty-white bristles; leaves lance-oblong, 7-veined; flowers shaggy-bristly; corolla near twice longer than sepals, the segments ovate, obtuse. By streams, M., W., S. 2-4f.
- 3 O. molle Mx. Hoary with soft appressed hairs; lvs. oblong-ovate; corolla hirsute. lobes triangular, pointed. Dry soils, W. 2-3f.

13. MYOSÒTIS, Dill. FORGET-ME-NOT. Cal. 5-cleft. Cor. salver- or funnel-form, tube about equalling the calyx, the 5 lobes convolute in bud, throat closed with short, concave scales. Ach. ovate, smooth, with a small cavity at base.—Herbs slightly villous. Racemes bractless, or with a few small leaves at the base. Flowers never axillary. May—Aug. Fig. 455.

§ Racemes one-sided. Calyx clothed with minute, appressed hairs, if any.....No. 1
§ Rac. two-sided. Calyx beset with spreading, minutely-hooked bristles...Nos. 2. 4

- M. palústris Roth. Roughish-downy, or nearly smooth, branching; leaves lance-oblong, obtuse; ped. spreading, longer (2-3") than the equal cal.; cor. 2-3" broad, blue, with a yellow centre. 2 Gardens; from Europe, also escaped in fields, &c. β. laxa, taller (1f), very slender; lvs. lin.-obl.; ped. 4-6" long. Swamps, ditches.
- 2 M. arvénsis L. Rough with tubercled hairs, branched; leaves oblong-lanceolate, acute; rac. loose, naked; ped. twice as long as the open, equal cal. (2) Fields. 6-15'.
- 3 MI. verna N. (stricta Link.) Rough-bristly, with spatulate to lin.-oblong lvs.; ped. ascending, as long as the closed, bilabiate calyx; racemes leafy at base. (1) Dry hills.
- 1 M. versicolor Pers. Stem very slender, hispid-villous; leaves oblong; racemes leafless; pedicels shorter than the deeply and equally 5-cleft calyx; flowers yellow, varying to blue. Del. (Canby, Porter). § Europe. The true Forget-me-not.

14. LITHOSPÉRMUM, L. GROMWELL. PUCCOON. Cor. funnel- or

salver-form, limb 5-lobed, orifice open, with or without appen lages, anth included. Stig. obtuse, bifid. Ach. bony, rugous or smooth, flat at base. —Herbaceous or suffruticous, generally with a thick, reddish root. Flow ers spiked or racemed, bracted, white or yellow. (See Addenda.)

Achenia rugous-tubercled. Corolla throat open, not appendaged, white.....No. 1
 Achenia smooth and white. Corolla throat appendaged.—a Fls. white...Nos. 2—4
 —a Fls. yellow..Nos. 5—7

- 1 L. arvénse L. Wheat-thief. Leaves linear-lanceolate, obtuse, hairy; calyx nearly equal to the corolla, with spreading segments. (1) A rough weed in fields. 1f--18'. Root reddish. Fls. small, solitary in the upper axils. May, June. § Europe.
- 2 L. officinale L. Erect, very branching above; lvs. lanceolate, acute, veiny; calyx nearly equal to the tube of the corolla. 24 Dry soils, N. and M. 1-2f. Flowers small, pedicellate, in recurved, leafy racemes. July. § Europe.
- 3 L. latifolium Mx. Rough, erect, subsimple; leaves ovate, sessile, pointed both ways; racemes leafy, sepals lance-linear. 24 Thickets, N. Y. to Va., and W. 2f.
- 4 L. angustifolium Mx. Ascending, much branched; leaves linear, rigid; flowers scattered; corolla hardly exserted. 24 Sandy banks, W. 6-15'. Leaves 1'.
- 5 L. canéscens Lehm. Puccoon. Erect, subsimple, soft-villous; leaves oblong or linear-oblong, obtuse; stem revolute at top, with the showy orange-yellow flowers axiHary. 24 Fields, prairies, N. Y., W. and S. 8-12'. June, July.
- 6 L. hirtum Lehm. Erect, simple, rough-haired; lvs. lance-linear, the floral lanceovate; corolla twice longer than the linear sepals. 24 Pa., W. and S. 8-15'. May.
- 7 L. longifiòrum Spr. Slender, simple, cinereous-strigous; leaves linear; corolla tube 4 times longer than the calyx (9-12'). Plains, W. 10-15'. July.

15. **MERTÉNSIA**, Roth. SMOOTH LUNGWORT. Calyx short, 5-cleft. Cor. tube cylindric, limb subcampanulate, 5-cleft, throat open, often with 5 folds or ridges between the insertion of the stamens. Sta. inserted at top of the tube. Ach. smooth or reticulated. 24 St. and lvs. usually glabrous, pellucid-punctate, the radical many-veined, cauline sessile. Rac. terminal.

- M. Virgínica DC. Ascending, very smooth; root leaves large, obovate to ovate, stem leaves sessile, lance-oblong, all entire, obtuse; fis. somewhat trumpet-shaped pendent, 10", blue to lilac, very handsome. Rich soils, N. Y., S. & W. 1-11f. May. 1
- 2 M. marítima Don. Glabrous, weak; lvs. ovate, obtuse, fleshy, glaucous; corolla twice longer than calyx, blue-purple. Sea-shore, N. H., and N.: rare.
- 3 M. paniculàta Don. Scabrous, erect; lvs. acuminate, cordate-ovate to oblong · corolla thrice longer than calyx, blue to white. Lake Superior, and N. †

ORDER XCIII. HYDROPHYLLACE Æ. HYDROPHYLLS.

Herbs mostly, with alternate-lobed leaves and regular bluish flowers. Calyx 5-cleft, usually with appendages at the clefts, persistent, free. Corolla 5-lobed, often with 10 honey scales or furrows near the base. Stamens 5, inserted into the corolla, with a deeply bifid style. Ovary entire, evoid, free, 1-celled, with 2 parietal, several-seeded placentæ. Fruit 2-valved, filled by the placentæ. Seeds reticulated, albuminous.

1. HYDROPHYLLUM, Tourn. WATEB-LEAF. BURR-FLOWER. Sepals slightly united at base. Corolla bell-form, convolute in bud, with 5 double folds (nectaries) inside. Sta. exserted. Caps. globous, 1-celled, 2-valved, 4-seeded, 3 of the seeds mostly abortive. Placentæ 2, fleshy, free except at the base and apex. 24 Leaves large, long-stalked, pinnately or palmately veined, cauline alternate. Cymes scorpoid, bractless.

\$ Calyx appendaged between the sepals at base. Stamens as long as the cor...No. 1
 \$ Calyx not appendaged. Filaments much exserted......Nos. 2-4

- 1 **H. appendiculàtum** Mx. Hairy; lvs. palmately 5-lobed, the lower pinnately divided, lobes pointed and toothed; sta. often included; appendages deflexed, much shorter (1'') than sep. (4-5''); cor. blue. Woods, N. Y. to Wis., & Va. 1-14f. May.
- 2 H. Virginicum L. Nearly smooth; leaves pinnatifid; segments oval-lanceolate, pointed, incised, the upper 3 confluent; petioles long; ped. still longer, bearing a roundish tuft of pale flowers with hirsute calyxes. Moist woods. 1f. June.
- **3 H. Canadénse L.** Lvs. smoothish, palmate, roundish, with 5-7 shallow lobes, unequally dentate, teeth obtuse-mucronate; fls. in crowded fascicles; ped. shorter than the forked petioles; cor. white or purplish. Alpine woods. 1-14f. June, Jl.
- 4 **H. macrophýllum** N. Whitish, with reversed hairs; leaves oblong-oval in outline, pinnatifid, and cut into blunt-mucronate teeth; cymes dense, globous, on long peduncles; corolla white, 6"; stamens 10". Rocky woods, W. and S. 1f. June.

2. NEMOPHILA, N. Cal. 5-parted, the sinuses with reflexed appendages. Cor. wheel-bell-form, lobes rounded, convolute in bud, tube with 5 pairs of folds within. Sta. included. Ov. and caps. as in Hydrophyllum, the placentæ each 2–12-ovuled. ① Tender and fragile, with pinnately-parted leaves and solitary, showy flowers.

- * Leaves all opposite. Flowers spotted with blue or brown......Nos. 3, 4
- 1 N. microcàlyx F. & M. Smooth; leaves triangular, 5-3-cleft, with rounded, mucronate teeth; ped. and petioles slender; corolla 1-2", white, calyx still smaller; seeds 1 or 2. Damp woods, S. 3-12', very weak. April.
- 2 N. INSÍGNIS. LVS. oblong, with 7-9 ovate, acute lobes, shorter than peduncles; fis. 1' or more broad, the border pure blue with a white centre. California.
- 3 N. MACULÀTA. Leaves 3-7-lobed, tapering and entire at base; flowers on long ped., 14' broad, white, with a violet spot on the apex of each lobe. California.
- 4 N. ATOMÀRIA. Leaves and peduncles nearly as in the last; flowers white, 10-12", sprinkled all over with small brown spots. Sierra Mountains.

3. ELLÍSIA, L. Cal. 5-parted, equalling the tubular-bell-form corolla, enlarged in fruit. Cor. tube minutely appendaged within. Sta. included. Caps. 2-valved, 4-2-seeded. Leaves pinnatifid, flowers white, May-July.

E. Nyctelæa L. Weak, slender; lvs. petiolate, the upper alternate, lobes 9-11, lin. oblong; ped. :-flowered, with calyx larger than corolla. Woods, Pa., W and S. 1f

4. COSMÁNTIIUS, Nolte. MIAMI MIST. Cal. 5-parted. Cor. wheelbell-form, tube not appendaged, lobes delicately fringe-toothed, as long as the stamens. Ovary hairy. Capsule 2-valved, 4-seeded. ① Delicate, with alternate leaves and small pale flowers in long, bractless racemes.

- C. Púrshii Wood. Nearly smooth. erect; lvs. pinnatifid, the upper sessile, lobes 5-7, oblong, acute; rac. 9-15-flowered; pedicels longer than the lance-linear, ciliate sepals; fls. light blue, 5-6". River bottoms, Ill., Ky., to Ga. 8-12'. May, June.
- 2 C. timbriàtus Mx. Pubescent; stems clustered, assurgent; leaves pinnate, with 5—" roundish or oblong-obtuse lobes; pedicels as long as the oblong-spatulate, obtuse sepals; corolla white, 4—5". Mountains, Tenn., Va., to Ga. May.

5. **PHACÈLIA**, L. Cal. not appendaged. Corolla tubular-bell-form, lobes entire, imbricate in bud, tube appendaged within. Sta. 5, generally exserted. Ov. and caps. hispid, ovoid, $4 - \infty$ -seeded.—Herbs hispid, with alternate leaves and 1-sided racemes. May, June.

§ Capsule 4-seeded. Corolla tube evidently appendaged within.....Nos. 1-3

- 1 P. bipinnatifida Mx. Stem hairy, subcrect, much branched; lvs. cut-pinnatifid, long-petioled, segm. again incised; rac. forked or simple, loose; corolla twice longer than calyx, 6", blue. (2) Hilly woods, Ill. to N. C. and Ala. 1-2f.
- 2 P. TANACETIFÒLIA. Hispid or hairy, tall, with pinnatisect leaves, long, delse racemes, corollas blue, and long, exserted stamens. California. 1-2f.
- 3 P. CONGÉSTA. Hoary-publicscent; lvs. pinnate with very unequal alternate-cut lfts, racemes loose, spicate; flowers small, blue; stamens little exserted. California. 1f.
- 4 P. parvifiòra Ph. Stems smoothish, weak; lvs. all petiolate, pinnatifid or 3-fid. lobes distant, small; fls. 4", pale; sep. smoothish. (2) Shady banks, Pa., and S. 9.
- 5 P. maculàta Wood. Erect, branched, sparingly hirsute; lvs. pinnatifid, 5-7-lobed, lower petiolate, upper sessile; its. 7", violet-blue, 10-spotted around the yellow throat; sepals bristly-ciliate, linear-oblong. (2) Stone Mountain, Ga., and W. 6-12'.
- 6 P. pusílla Buckley. Pubescent; leaves sessile, pinnatifid, lobes abruptly pointed; fis. pale-blue or white; sepals linear-oblong; stamens exserted. Prairies, Ala.
- 7 P. Franklinii Gray. Soft-hairy, erect; lvs. bipinnatifid with crowded lobes; racemes short, dense, crowded, with blue fis. Isl. Royal (Porter) to Oreg.! Cultivated.
- 8 P. viscida. Viscid with glandular hairs, ovate, coarsely-toothed leaves, and long, revolute racemes, uncoiling as the large (9'') purple-blue flowers expand. Cal. 1f.
- 9 P. MENZIÈSH. Lvs. lincar, entire, or the lower with few linear-oblong lobes; flowers sessile, light-blue, in short spikes. Oregon.

6. WHITLÀVIA, Harvey. Cal. 5-parted. Cor. tubular-campanulate, the 5 lobes abruptly spreading, throat slightly contracted. Sta. exserted. Capsule φ-seeded. (1) From Texas and California.

W. GRANDIFLÒRA. Some viscid, with broad, ovate, petiolate, coarsely-toothed leaves, loose racemes of large (1') deep-blue (or white) bell-shaped flowers. June-October.

7. HYDROLEA, L. Sep. 5. Cor. rotate-campanulate, 5-lobed, bearing the 5 stamens. Styles 2, distinct. Capsule 2-celled, 2-valved, the placentæ large, with ∞ minute seeds.—Herbs with entire leaves and cymes of blue flowers. July—September.

1 H. corymbòsa Macbride. Not spiny, some hairy above; lvs. lance-ovate, sessile; branchlets corymbed, each with a terminal, showy, azure flower. Ponds, S. 1-21. 2 H. quadriválvis Walt. Spiny, hispid; leaves lanceolate, petiolate; cymes 4-4 flowercd; cor azure-blue, 5-6" broad; sep. ovate. Slow waters, S. C., and W. 2f.

8. WIGANDIA, H. B. K. Cor. funnel-form.—Herbs with large leaves.

W. CARACASÀNA. Half-shrubby, with ovate-cordate, doubly-crenate, variegated, ample leaves, stinging hairs, and revolute spikes of small flowers. S. Am. Greenhouse.

ORDER XCIV. POLEMONIACEÆ. PHLOXWORTS.

Herbs with alternate or opposite leaves and 5-parted, regular, showy flowers. Corolla monopetalous, the lobes convolute, rarely imbricate in æstivation. Stamens 5, adherent to the corolla tube, and alternate with its lobes. Ovary 3-celled. Stigma 3-cleft. Capsule 3-celled, 3-valved, loculicidal. Seeds few or many, albuminous, attached to a permanent columella. Fig. 46.

I. POLEMONIE A. Sepals united at base. Lobes of the corolla convolute in bud(a)
II. DIAPENSIEÆ. Sepals distinct, oval. Lobes of the corolla imbricated in budDIAPENSIA. 7

- 1 Panicle of cymes corymbed, level-topped, flowers fewer...(2)

 - 2 Plants hairy. Calyx teeth attenuated, longer than the tube...(3)
 - 2 Leaves narrow, linear, or nearly so.....Nos. 5, 6

3 Leaves broad, ovate or lanceolate, &c.....Nos. 7, 8β, 9

- * Lobes of corolla notched or bifid at the end.—4 Leaves distant......Nos. 8, 10
 - -4 Leaves imbricated.... No. 11
- P. paniculàta L. Smooth, erect; leaves oblong- or ovate-lanceolate, pointed at each end; fls. numerous, in a terminal panicle, pink-purple, varying to white; calyx teeth setaceous-pointed. 24 Shady banks, Penn., W. and S. 2—3f. July-Scpt. † β. acuminata. Lvs. ovate-acuminate, downy beneath; stem hairy.
- 2 P. maculàta L. Stem roughish, purple-spotted, upright; leaves thickish, lanceolate, the upper ovate-cordate; fls. many, purple, in an oblong panicle; calyx teeth lanceolate, acute. 24 Moist fields, Penn. to Car., and W. 2-3f. June-August.
 β. gracilior. Tall, slender, rough; leaves lance-linear and linear. Ga. (Feay).
 γ. suardolens. Smooth; flowers white, sweet-scented. Gardens.
- S P. Carolina L. Ascending, often branched; leaves lanceolate, rounded at base, pointed; fis. rose-purple, in small, dense cymes. 24 Prairies, woods, Pa., W and S 9'-2f. May-July.-β. oväta has roughish stems and ovate leaves.

- 4 P. glabérrima L. Slender, erect; leaves oblong- to lance-linear, taper-pointed, thick, with rolled margins; calyx teeth sharp-pointed; corollas pale-pink, few. 24 Prairies and barrens, Wis. to Ga. 1-3f. June, July.
- **5 P. pilòsa** L. Ascending, slender, glandular-hairy above; lvs. lanceolate to linear, attenuate to an acute apex; corymbs loose; calyx teeth bristle-pointed, much longer than the tube; corolla small. 24 Wis. to N. J., and S. May, June.

β. Floridana. Leaves oblong-lanceolate; calyx teeth lance-setaceous. Fla.

- **6 P. involucràta** Wood. Hoary-pubescent, branched and ascending at base; lvs. linear-oblong, rather obtuse, clasping, flat, the floral similar and closely subtending the dense corymbs as if *involucrate*; calyx teeth linear or subulate-spatulate; flowers purple to carmine. 24 Dry soils, S. 6-12'. May, June.
- 7 P. reptans Mx. Assurgent, with creeping stolons; lvs. obovate to ovate, obtuse, fis. few; sep. linear-subulate; cor. blue-purple. 24 Hills, Ind. to Pa., and S. 9'. Jn.
- 8 P. divaricàta L. Low, diffuse, downy; lvs. ovate to lance-oblong, acute; flowers grayish-blue, lobes notched; sep. lin.-subulate. 24 N.Y. to Wis., and S. 1f. Apr., May. B. Laphamii. Leaves ovate; corolla lobes obtuse, entire. Wis. (Lapham).
- 9 P. Drummóndii Hook. Upright, forking, glandular-hairy; lvs. lanceolate to oblong, mostly alternate; sepals lance-setaceous, revolute; flowers in dense cocymbs, all shades in the gardens, white to purple, with a star. (1) Ga.! to Texas.
- 10 P. bífida Beck. Low, assurgent, diffuse; lvs. lance-ovate to lance-linear; fis. few, sepals linear, petals deeply bifid, purple. 24 Ill. to Mo.: rare. 6'. April.
- 11 P. subulata L. Moss Pink. Procumbent, much branched and very leafy, in tufts; leaves rigid, linear to subulate, fascicled; flowers pink to white, covering the tufts in May. 5-8'. Penn., S. and W., and in gardens.

2. COLLOMIA COCCÍNEA. (1) From Chili, has bright carmine-red fis in heads subtended by broad bracts. Leaves ovate-lanceolate, often 3-cleft at apex, alternate. Pods 3-seeded. 10-15'. June, July.

3. FÉNZLIA DIANTHOIDES. (1) California. A small pink-like herb, 3-6', with exquisitely beautiful flowers, 1', solitary, pink with 5 purple dots around a yellow eye, and the 5 lobes evenly notched at the end. Leaves linear, opposite.

4. GÍLIA, R. & P. Cal. teeth acute. Cor. funnel-form, the tube short or long, bearing the equal sta. more or less exserted and not declined. Pet. entire. Pod ∞ -seeded.—Herbs with elegant, showy flowers.

§ IPOMÓPSIS. Corolla tube long exserted, in thyrse-like racemes. Tall......No. 1
 § LEPTOSÌPHON. Corolla tube long, slender, in involucrate heads. Low......No. 2
 § EUGÍLIA. Corolla tube included in the calyx, scattered or capitate......Nos. 3, 4

- 1 G. coronopitòlia Pers. Standing Cypress. A splendid herb 2-4f, plume-like in form, closely beset with delicate pinnatifid lvs. and bearing at top a long (1f) thyrse of bright red flowers (15"). (2) Sandy banks, S. C. to Fla., and W. July-Sept. †
- 2 G. ANDROSÀCEA. Strict, simple, downy; lvs. opp., digitately 5-9-cleft into very narrow segments; cor. 1' or more long, lilac, purple or white. ① Cal. 6-12'. May, Jn.
- **3 G.** TRÍCOLOR. Diffusely branched; lvs. 2-3-pinnatifid; flowers many, 3-colored, limb lilac, throat purple, tube yellow. A great favorite, from California.
- 4 G. CAPITÀTA, with the blue 6" flowers at length in round dense heads. Cal. and Oreg.

5. POLEMONIUM, L. GREEK VALERIAN. Calyx and corolla bellform, with suberect segments. Stamens equally inserted, declined, hairy at base. Capsules 3-valved, 3-celled.—Herbs weak, with alternate pinnatelydivided leaves and terminal cymes, blue to white.

1 P. reptans L. Diffusely branched; leaves 7-11-foliate, leaflets acute; fis. nodding pod cells 2- or 3-seeded. 24 Damp uplands, N.Y. to Wis., and S. 1-11f. May.

2 P. coerùleum. Tall, with erect branches ; leaflets 11-17, pointed ; fls. erect ; seeds
 ∞. Swamps, Vt., N. Y., N. J. (Dr. Howe, Prof. Porter). 2-3f. Often cultivated.

6. COBÆA SCANDENS. Calyx large and leaf-like. Cor. large, throat ample, limb spreading, dull purple. Leaves pinnatisect, ending in a tendril. Coarse climbers, from Mexico. The lower leaf-segments resemble stipules.

7. **DIAPÉNSIA**, L. Cal. of 5 oval sepals, closely subtended by bracts. Corolla bell-form, imbricated in the bud. Fil. flat, arising from the sinuses of the corolla, anth. cells diverging at base and the dehiscence transverse. Caps. 3-celled, ∞ -seeded. \mid , Prostrate, with densely imbricated, entire leaves and solitary terminal flowers.

§ DIAPÉNSIA proper. Anthers without awns. Flowers pedicellate......No. 1 § PYXIDÁNTHERA. Anthers with the lower valve awned. Flowers sessile......No. 2

1 D. Lappónica L. A little tufted shrublet, with fleshy, evergreen, obtuse leaves, and the tiny white fls. raised on pedicels 1' long. White Mountains. 2-3'. July.

2 D. barbulàta Ell. Prostrate, creeping, forming dense beds, with short branches flowers terminal, sessile; anth. short-awned at base. Barrens, N. J., and S. 3-6'. Jn.

ORDER XCV. CONVOLVULACEÆ. BINDWEEDS.

Chiefly twining or trailing *herbs*, sometimes parasitic, sometimes shrubby. Leaves (or scales when leafless) alternate. Flowers regular, pentamerous and 5-androus. Sepals imbricated. Corolla monopetalous, 5-plaited or lobed, convolute in bud. Ovary free, 2-(rarely 3-)celled or falsely 4-celled, or of 2 distinct, 1-ovuled pistils. Capsule 2-6-seeded. Embryo large, coiled in mucilaginous albumen. Figs. 48, 65, 81, 82, 209-10, 262.

1. QUÁMOCLIT, Tourn. CYPRESS-VINE. Sep. 5, mostly mucronate. Cor. tubular-cylindric, with a salver-form border. Sta. exserted. Style 1, stigma capitate, 2-lobed. Ov. 4-celled, cells 1-seeded. > From Tropical Am.

- 1 Q. vulgàris Choisy. Cypress-vine. Lvs. pinnatifid to the midvein, 4egm. linear, parallel, acute; ped. 1-fiwd.; sep. ovate-lanceolate; cor. scarlet. (1) An exceedingly delicate vine, in gardens, and often escaped S. July, Aug. §
- 2 Q. coccínea Mœnch. Leaves cordate, acuminate, entire or angular at base; pod. ciongated, about 5-flowered; calyx awned; flowers light scarlet, limb nearly entire "" broad. (1) Along rivers, S. and W. June-Aug. § †

2. BATATAS, Rumph. SWEET POTATO. Cal. of 5 sepals. Cor. campanulate, with a spreading limb. Stam. 5, included. Style simple, stigma capitate, 2-lobed. Capsule 4-celled, 4-valved, with 4 erect seeds. b Herbs, or shrubby, with milky juice.

- **1 B. littoràlis** Chois. Creeping, sending out runners; lvs. smooth, thick, sinuate with 3-5 rounded lobes and cordate at base; ped. 1-flowered, as long as the leaf; sep. abrupt-pointed; seeds tomentous; corolla white. 24 Coast sands, S. Aug.-Oct.
- 2 B. macrorhiza Wood. Creeping or twining; lvs. cordate, lobed or entire, softdowny beneath; ped. 1-5-flowered, shorter than the leaves; cor. purple; seeds villous. 24 Sands, S. C. to Fla. Root very large. (Ipomœa Michauxii Swt.)
- 3 B. édulis. Sweet Potato. Lvs. 3-5-lobed or angled, lobes acute; ped. 3-5-flowerec as long as the petioles. 24 W. Indies. Extensively cult. for its sweet tubers. Purple.

3. FHÁRBITIS, Chois. MORNING GLORY. Calyx 5-sepalled. Cor. bellfunnel-form. Sty. single, stig. capitate, granulate. Ov. 3-(rarely 4-)celled, cells 2-seeded. b Beautiful, cultivated and spontaneous.

- 1 P. purpurea Wood. Twining stem clothed with reversed hairs; lvs. cordate, entire; ped. 2-5-flowered; corolla large, dark purple, varying to blue, flesh-color, &c, appearing _2 long succession, in fields and gardens. June, July. §
- 2 P. Nil Chois. Some hairy; leaves cordate, 3-lobed; ped. 1-3-flowered, shorten than the petioles; sepals ovate, long-pointed, corolla tube white, border indigo (nil) blue. Gardens, and in fields. July, Aug. §
- 3 P. HEDERÀCEA, from S. Am., differs from P. Nil in the middle lobe of its lvs., which is ovate, and contracted at base; ped. 1-flwd.; cor. 2' or more broad, varying in purple and blue, blue and white, pink and white, &c.—The hybrid P. LIMBÀTA has a purple star with a white border and leaves scarcely lobed. (1)
- 4 P. LEÀRH, from Mexico, has ped. longer than the cordate, velvet-silky leaves, each bearing a cluster of magenta-blue-red flowers. Greenhouse. 21. 10-15f.

4. IPOMCEA, L. Cal. 5-sepalled. Cor. bell-funnel-form. Sta. included. Style 1, stigma capitate. Ov. and capsule 2-celled, cells 2-seeded.—Herbs, shrubs, or trees. Our species are herbs creeping or climbing.

- * Flowers capitate, involucrate, small, blue. Sepals hairy......No. 1
- Flowers separate.—a Sepals bristly ciliate, capsules somewhat hairy.....Nos. 2, 3
 —a Sepals glabrous.—b Flowers purple. Maritime.....Nos. 4, 5

-b Flowers white, rarely yellow...Nos. 6-8

- 1 1. tamnifòlia L. Hairy; leaves ovate, cordate, acuminate, large, equalling the peduncles; fis. crowded, 9", with linear bracts and sepals. ① Ga. to La. Jl.—Sept.
- 2 I. commutata R. & S. Smoothish; lvs. cordate, entire or 3-lobed; ped. as long as the peticles; flowers 2-5, purple to pink, 18"; sep. 5". ① Fields, S. July-Oct.
- **3 1. Iacunòsa** L. Puberulent; lvs. cordate, entire or angular-lobed; ped. $\frac{1}{4}$ as long as the petioles; flowers 1--3, white, with a purplish rim, 1', sepals $\frac{1}{4}$ as long. (1) Dry fields and hills, Penn. to Ill., and S. 2--6f. August, September.
- 4 I. Pes-Caprae Sw. Roughish; leaves roundish, emarginate or 2-lobed, thick; ped. as long as the petioles; fls. 1-5, purple, 3' long. Coasts of Ga. and Fla. June+.
- 5 I. sagittifòlia (Mx.) Glabrous; lvs. cordate-sagittate; ped. as long as the petiole, much shorter than the one large (3') purple flower. 2t Marshes, S. June+.
- 6 I. sinuàta Ort. Lvs. palmately 7-cleft, varying to sinuate-lobed; segments pinnatifid; ped. 1- or 2-flowered; corolla white, 1'. 2t Ga., Fla. 20f. July-October.
- 7 I. ciliolàta Pers. Leaves cordate, entire, acuminate; ped. 1-flowered, 2-bracted above; corolla large, yellow; sepals 8" long. 24 N. Car. and Tenn.
- 8 I. panduràta Meyer. Wild Potato. Leaves broad-cordate to panduriform; ped.

1-5-flowered, longer than the petioles; sepals $\frac{1}{4}$ as long as the corolla; corolla $\frac{3}{2}$ white with a purple centre. 2 N. Y. to Ill., and S. July, August.

5. CALONÝCTION SPECIÒSUM (or Ipomœa Bona-nox), GOOD-NIGHT, is a tall climber of the W. Indies and S. Fla., often cultivated in the greenhouse. Flowers 4-7 on each long peduncle, very large, funnel-form, white.

6. CONVÓLVULUS, L. BINDWEED. Sep. 5. Cor. bell-form. Style 1. Stigmas 2, thread-form, often revolute. Ovary and capsule 2-celled, 4seeded.—Herbs or shrubs, twining or erect.

- 1 C. arvénsis L. Prostrate or climbing; leaves arrow-shaped to ear-shaped; ped. bearing 1 small rose-white flower and 2 bracts. 24 Fields: rare. June. §
- 2 C. TRÍCOLOR. Stem weak, 1-3f high ; leaves lance-obovate, sessile, shorter than the 1-flowered ped. ; corolla yellow in centre, white next, border blue. ① Europe.

7. CALYSTÈGIA, Br. Calyx 5-parted, included in 2 leaf-like bracts. Cor. bell-form, 5-plicate. Style 1. Stigmas 2, obtuse. Capsule 1-celled, 4seeded.—Herbs, with the flowers solitary.

- 1 C. spithamæa Br. Erect or assurgent, 6-8' (a span) high; leaves lance-oblong, as long as the peduncles; flowers white. 24 Can. to Penn., and W. June.
- 2 C. Sèpium Br. Rutland Beauty. Glabrous, twining; lvs. cordate-sagittate, lobes truncate; bracts cordate; flowers many, large, white with a reddish tinge. 24 Hedges, thickets, Can. to Fla. 6–10f. May–July.

β. Catesbeiana. Pubescent, with small leaves and short peduncles. S.

y.? paradóxa. Tomentous; bracts linear, remote from the flowers. (Pursh.)

8. EVÓLVULUS, L. Sep. 5. Cor. bell-, funnel-, or wheel-form. Sty. 2, each bifid. Ovary and capsule 2-celled, 4-seeded.—Herbs diffuse.

E. seríceus Swtz. Stem dividing at base into simple, filiform, procumbent branches; leaves lance-linear, sessile, 3-veined, silky beneath, 9"; ped. 1-2", 1-flowered; corolla wheel-form, 5", white. 2 Prairies, Ga., Fla., to La. 1f.

9. STYLISMA, Raf. Sepals 5, equal. Corolla bell-form. Stamens included. Styles 2, rarely 3. Stig. capitate. 24 Slender creepers.

- S. humistràta (and aquática) Walt. Hairy or smoothish; leaves oval, oblong, or linear, obtuse or retuse both ways, on short petioles; ped. longer than the leaves, 3 (1-5-)flowered; bracts minute; styles less than 1 united; corolla 6-9", white. Sandy soils, Va. to O., and S. 2-5f. Lvs. 12-18". (S. evolvuloides Choisy.) Jn.-Sept.
- 2 S. Pickeríngii (Torr.) Leaves linear, narrowed to subsessile base; bracts leafy, equalling the flower; styles more than $\frac{1}{2}$ united, otherwise as No.1. N. J. to N. C.

10. DICHÓNDRA, Forst. Sep. 5, obtuse. Corolla bell-form, 5-cleft. Pistils 2, distinct. Capsules 2, utricular, 1-seeded. 24 Prostrate.

D. repens Forst. Lvs. round-cordate or reniform, the petiole longer than the blade or the 1-flowered peduncles; calyx villous, larger (3') than the whitish corolla (2"). Wet grounds, S. 3-12'. March-May.

CUSCÙTA, Tourn. DODDER. Fls. 5-(rarely 4-)parted. Corolla globular-bell-form. Sta. appendaged with scales or fringes at base. Styles
 Caps. 2-celled, 4-seeded. ① Stems yellow to orange, thread-form, with minute scales for leaves, twining against the sun and living on other plants.

§ Stigmas filiform as well as the styles. Capsule regularly circumscissile. .No 1

- 1 C. Epilinum Weih. Flax D. Fls. sessile in small, dense, remote heads; calyx 5parted, scarcely shorter than the globular corolla or capsule. Flax fields. Jn. § Eur.
- 2 C. glomeràta Choisy. Fls. in compact masses surrounding the foster stem while its own filiform stems decay; sepals 1", with many squarrous bracts; corolla white, 2", tube-bell-form, 5-lobed. On the Compositæ, &c., W. and S.
- 3 C. compácta Juss. Fls. in large (1-2') masses, with thick stems; sep. and 3-5 bracts minute (4''); cor. slender, with 5 oblong lobes. N. Y., W. and S., on shrubs.
- 4 C. tenuiflora Eng. Pale, much branched, on high plants; fls. short-pedicelled; cor. tube slender, twice longer than the calyx or its own short obtuse lobes; capsule often but 1- or 2-seeded. Wet grounds, N. J., Pa., to Ill., and W.
- 5 C. infléxa Eng. Fls. pedicelled, mostly 4-parted; cor. fleshy, its lobes erect and inflexed, margins crenulate; capsule brown, capped with the dead corolla. Prairies and open woods, Ill. to Va. and Ga. On Hazel, Rhus, &c.
- 6 C. decòra Chois. Fls. pedicellate, 5-parted, large (14'/), fleshy, white; cor. broadbell-form, lobes acute; capsule enveloped by the dead corolla. Wet, Ill. to Fla.
- 7 C. chlorocárpa Eng. Low, branching, orange; fls. 4-parted, short-pedicelled, 1", bell-form, the lobes of cal. and cor. acute; caps. large, greenish. Wis. to Del., & S.
- 8 C. arvénsis Beyr. On low plants; flowers small (\$"), 5-parted, pedicellate; corolla tube shorter than its pointed lobes, or the rounded sepals. N. Y. to Ill., and S. Jn., Jl.
- 9 C. obtusifiora H. B. K. Low, bright orange; fls. pedicell., dotted with red glands (β. glandulosa); sep. round-obtuse; caps. 1^μ". Mostly on Polygonum. Ga., S. and W.
- 10 C. Gronòvii Willd. Stems thick, often high-climbing; fis. mostly 5-parted, a: length densely panicled; corolla tube bell-form, longer than the calyx, its lobes ob tuse, entire, spreading. Common in all the country. Flowers 1¹/.
- 11 C. rostràta Shutt. Fls. large (2-3"), in loose cymes; corolla deeply bell-form. lobes obtuse; capsule 2-3", with a 2-pointed beak. Mountains, Md. to S. Car.

ORDER XCVI. SOLANACEÆ. NIGHTSHADES.

Plants herbaceous, rarely shrubby, with a colorless juice and alternate leaves often in pairs. Flowers mostly regular, often extra-axillary, 5-parted, on bractless pedicels. Corolla valvate or plicate in the bud, and often convolute. Calyx persistent. Stamens 5, adherent to the corolla tube, alternate with its lobes; anthers 2-celled. Fruit a 2-(rarely 3- or more)celled capsule or berry. Seeds ∞ , with a curved embryo in fleshy albumen. Figs. 66, 113, 168, 260, 483-4.

NOLANE Ovaries few or ∞ , distinct, simple. Corolla funnel-bell-form NOLANA.	1

- 1 S. tuberòsum L. Common Potato. Subterranean branches bearing tubers; leaves pinnatifid unequally and interruptedly; corolla 5-angled, ped. jointed. S. America. Cultivated since the 17th century. Many varieties.
- 2 S. nigrum L. Nightshade. Smoothish; leaves ovate, toothed, wavy, or entire; umbels lateral, drooping, flowers small (2-3'), whitish; berries black, as large as a peppercorn. Weed in old fields. 2-3f. Summer. § Europe.
- **3 S. Dulcamàra** L. *Bittersweet.* Stems shrubby, slender, climbing; leaves cordate, entire or with 1 or 2 pairs of lobes at base; clusters terminal and lateral, corolla purp.e, with 5 green spots; fruit red. July. § Europe.
- 4 S. JASMINOIDES. Climbing high, smooth, lvs. ovate, entire; clusters blue-wh. Brazil.
- 5 S. PSEUDO-CÁPSICUM. Jerusalem Cherry. Erect, like a dwarf tree; leaves oblonglanceolate, smooth, shining; flowers solitary, white, berries scarlet, as large as cherries. Mauritius. 2-4f. Handsome.
- 6 S. LACINIÀTUM. Shrub erect, smooth; lvs. pinnatifid; fls. blue; fr. orange. Australia.

- 7 S. Carolinénse L. Horse Nettle. Prickles large, yellow, scattered on the stem, petioles. and veins; leaves angular-lobed, acute; flowers white, 10-15", racemed; berries yellow. Roadsides, N. Y., S. and W. 1--2f. June.
- 8 S. Virginianum L. Hairy and prickly; leaves deeply pinnatifid with angular sinuate lobes; flowers pale-violet, 15", in leafy racemes. Va., and S. July.
- 9 S. mammosum L. Apple-of-Sodom. Villous and with scattered spines; leaves roundish-ovate, subcordate, lobed; berries inversely pear-shaped. (1) Waste grounds, Ga., Fla., and W. Flowers violet, 15". Fruit yellow. 10 S. ROSTRATUM. Hoary-tomentous and very prickly; leaves doubly sinuate lobed.
- flowers yellow, 12-15"; fruit closed in the burr-like calyx. (1) Kansas
- 11 S. HETERODÓXUM. Very hairy and prickly; leaves doubly pinnatifid, lobes runcinate; flowers violet-blue. 1) From Texas. Fruit black.
- 12 S. MELÓNGENA (or esculentum). Egg Plant. Prickly; lvs. ovate, wavy or sinuste; flowers violet; fruit very large, glossy-purple, prized as a great delicacy. E. India.-A variety has white fruit exactly imitating a goose-egg.
- 13 S. TEXANUM. With scarlet fruit depressed-globous and lobed. From Tex. Mex.

4. CAPSICUM, Tourn. PEPPER. Calyx erect, 5-cleft. Cor. rotate, tube very short, limb plaited, 5-lobed. Anth. connivent. Fr. capsular, dry, inflated, 2-3-celled. Seeds flat, very acrid.-Herbs or shrubs, with hot and acrid taste. Leaves often in pairs. Ped. axillary, solitary.

C. ÁNNUUM. Red or Cauenne P. Herb with angular, branching stem, smooth ovate entire leaves and large roundish or lance-form red fruit. (1) Many varieties.

5. NICANDRA, Adans. APPLE OF PERU. Cal. 5-cleft, 5-angled, the angles compressed, sepals sagittate. Cor. campanulate. Sta. 5, incurved. Berry enveloped in the persistent calyx. (1) Peruvian. Summer.

N. physaloides Adans. Herb smooth, with ample ovate-oblong, sinuate-angled lvs.; flowers solitary, axillary, white, with blue spots. Gardens and fields. 2-5f. §

6. PHÝSALIS, L. GROUND CHERRY. Calyx 5-cleft, persistent, at length inflated. Cor. bell-rotate, tube very short, limb obscurely 5-lobed. Sta. 5, connivent. Berry globous, enclosed within the 5-angled calyx.-Herbs (rarely shrubs) with angular branches. Leaves alternate or unequally twin. Flowers solitary, nodding, extra-axillary, all Summer.

- § Anthers yellow. Ped. elongated. Fruit edible, not filling the calyx...(a)
- § Anthers blue or violet. Ped. shorter than the petioles...(b)b Peduncles near 1' long. Berry not filling the closed calyx.....Nos. 6-8
- 1 P. viscosa L. Viscid-pubescent, diffuse; leaves ovate to oblong, mostly abrupt at base and bluntly toothed; corolla 8-10"; fruiting-caryx 11. 24 Dry soils. 1f.
- 2 P. Pennsylvánica L. Puberulent, decumbent; leaves ovate to lanceolate, repand-toothed or entire, base obtuse or acute; corolla slightly spotted, 6--8"; fruitcalyx rounded, 1'. 2 Dry soils, Penn., S. and W. 6-15'. *B. lanceolata*. Pubescent; leaves tapering and acute both ways. S.

- 3 P. angustifòlia N. Glabrous; leaves lance-linear, entire, thickish; fruit-calyx wing-angled, 1'; corolla 10-12". 24 Wet sands, Fla. 6-12'.
- 4 P. nyctaginea Dun. Pubescent; leaves small, elliptic-ovate, bunt-toothed; calyx hairy; corolla small (5-6"), wholly yellow. South. 6-12'.
- 5 P. Alkekéngi L. Strawberry Tomato. Pubescent, erect; leaves deltoid-ovate, acuminate, repand; calyx reddening in fruit. 24 Gardens and fields. 1-2f.

- 8 P. pubéscens L. Viscid-tomentous, decumbent; leaves ovate or cordate, base un equal, repand; corolla spotted, 6"; fruit-calyx 5-angled. (1) Damp. S. and W. 9-18'.
- 7 P. angulàta L. Smooth, erect; lvs. ovate to oblong, acutely toothed; cor. small (3-6"); fruit-calyx ovoid-conic, longer than its stalk. (1) Dry fields.
- 8 P. Linkiàna Nees. Smooth, diffuse, 2f or more; leaves lance-oblong, attenuate both ways, subulate-toothed; corolla 6"; fruit-calyx 14. ① S. C., Ga. (Dr. Feay).
- 9 P. Philadélphica Lam. Smoothish, erect; lvs. obliquely ovate, pointed, angular-repand; corolla 9", spotted and striped; berry large, red. ① M. and W. +

7. ATROPA, L. DEADLY NIGHTSHADE. Calyx 5-parted. Cor. campanulate, limb 5-cleft, valvate-plicate in bud. Stam. 5, distant, included. Berry globous, 2-celled, sitting on the enlarged calyx. 24 Herbs of lurid colors. Leaves often twin.

A. BELLADÓNNA.—Europe. Leaves ovate, entire, large. Berries dark-purple, handsome but poisonous, like the whole plant. Medicinal.

8. HYOSCYAMUS, Tourn. HENBANE. Calyx tubular, 5-cleft. Cor. funnel-form, one of the 5 obtuse lobes larger. Sta. 5, declinate. Stigma capitate. Capsule ovoid, 2-celled, opening with a lid near the summit.— Coarse herbs, native in Eastern countries.

H. niger L. Branched, very leafy, viscid-hairy and fætid; leaves sinuate-lobed, clasping; corolla straw-color, netted with purple, in one-sided spikes. (2) In old fields, and rubbish. 2f. Poisonous-medicinal. July.

9. **PETUNIA**, Juss. Cal. segments oblong-spatulate. Cor. funnel- or salver-form, tube cylindric, limb spreading, slightly unequal. Sta. 5, inserted in the middle of the tube, unequal, included. Caps. 2-celled. Seeds minute. South American herbs. Leaves alternate, entire, the floral twin. Flowers solitary, large, all Summer. Fig. 66.

- 1 P. NYCTAGINIFLÒBA. Erect, diffusely branched, viscid-hairy; flowers white, tube slender, thrice longer than the calyx, limb spreading 11-3'. 24
- 2 P. VIOLÀGRA. Prostrate at base, then erect, viscid-hairy; flowers violet-purple, tube inflated, twice longer than the calyx. By admixture numerous varieties, single. double, striped, &c., are raised.

10. NIEREMBÉRGIA, Ruiz & Pav. Cal. curved, 5-cleft. Cor. funnel-form, tube long and slender, limb ample, spreading, plicate, slightly unequal. Sta. 5, inserted in the throat, unequal, connivent, anth. hid beneath the stigma. Capsule 2-celled, ∞ -seeded.—South American, chiefly herbs, creeping, with elegant, solitary, extra-axillary flowers.

N. GRÁCILIS. Stems very slender and much branched; lvs. linear to spatulate; flowers 1' or more, white, lilac, purple, with a yellow eye.

11. LÝCIUM, L. MATRIMONY VINE. Cal. 2-5-cleft. Cor. tubular, bell- or funnel-form, 4- or 5-lobed. Sta. 4 or 5, exserted. Berry 2-celled, seeds several. 55 Often spiny. Leaves alternate, entire, often clustered. Flowers small, solitary or in pairs.

L. Bárbarum L. Branches spiny, slender, pendulous or climbing; leaves lanceolate; corolla greenish-purple, 5-parted; calyx 3- or 4-toothed; berries small, orange red. From Barbary. Planted for arbors, walls, &c. 2 L. Caroliniànum Mx. Branches rigid, spiny, upright; 1vs. flcshy, club-shaped, clustered; flowers small, 4-parted, purple. Salt marshes, S. 3f.

12. DATURA, L. THORN APPLE. Calyx large, tubular, inflated, deciduous, or spathe-form. Cor. funnel-form, limb plicate in bud, with 5 on 10 cuspidate angles. Sta. 5. Caps. 2-celled, 4-valved, cells 2-parted. ①5 Coarse, fœtid, poisonous, with large, often handsome flowers. Fig. 168.

- 1 S. chloroides Ph. Simple or forked; flowers 1-5, *pedunculate*, 20"; petals oblanceolate, 10"; sepals linear-spatulate, 6"; leaves lanceolate to oblong. Wet grounds, Plymouth, Mass., R. I., and S. 1-2f. +
- 2 S. gentianoides Ell. Strict, subsimple; leaves linear, exceeding the internodes; flowers sessile, 2-bracted, solitary, or several together; petals obovate, 10"; sepals lance-subulate, 4". Wet barrens, Ga., Fla., and W. 1-2f.

β. Boykinii (Gray). Leaves lance-oblong, at least the lower. Ga.

- **3 S. calycèsa** Ph. Rigid, divaricately-forked; flowers few, distant; sepals oblanceolate (5-8"), as long as the petals; leaves oblong, 3-veined. Va., and S. 1f.
- 4 S. paniculàta Ph. Stem much branched, terete, with 4 thread-like riages · branches mostly opposite; leaves small, oval, oblong to linear; panicle diffuse; se pals subulate, 3"; petals 6". Low grounds, Va., and S. 1-2f.

β. Ellióttii. Branches alternate; leaves mostly linear: petals 7 or 8".

- **5 S. lanceolàta** (Walt.) Corymbously-branched and 4-angled above; leaves ovate to lanceolate, 3-5-veined; flowers 6-parted, 1' broad. Barrens, N. J. to Fla. 2f.
- 6 S. macrophýlla Hook. Stem terete throughout, corymbed at top; leaves erect, thick, ovate, acuminate, 3-5-veined; flowers small (½' broad). Fla., La.
- 7 S. angulàris Ph. Stem with 4 winged angles. corymbous-panicled; leaves ovate, 5-veined, clasping; flowers 15-18' broad, with a greenish star. Wet meadows, N. Y. to Ill., and S. 10-18'.
- 8 S. brachiàta Ell. Stem obtusely 4-angled, panicled ; leaves lance-linear to linear

towest ovate; flowers 15", the star purple, bordered with green; petals oblong-obovate, obtuse. Prairies, Ind. to Va., and S. 1f.

- 8 S. grácilis Salisb. Very slender, diffuse ; leaves oblong to linear-filiform ; flowers distant; pet. elliptic, obtuse, 5"; sep. filiform, 4". Wet, Mass. to Fla., and La. 2f. β. stellaris. Subject, the flowers larger (13" broad), the star yellow.
- 10 S. CAMPÉSTRIS. Low (6-10'), erect; lvs. ovate to oblong; fis. few, 15" broad, the star yellow; calyx tube 5-winged; sepals as long as the broad petals. La.

2. EÙSTOMA, Don. Calyx 5- or 6-parted, with subulate segments. Cor. wheel-funnel-form, 5-6-parted. Sta. shorter than the style.—Herbs glaucous, with few large splendid blue flowers.

- 1 E. RUSSELLIÀNUM. Stem 1-2f, forked; lvs. ovate, cuspidate, subconnate; fls. longstalked, expanding 3-4', petals oval. (1) Ark. (Mr. Robertson).
- 2 E. exaltatum, taller, with flowers 2' broad, grows in S. Fla. (Chapman).

3. ERYTHRÆA, Renealm. Calyx 5-4-parted, angular. Cor. funnelform, 5-4-parted, tube slender. Anth. 5-4, exserted, spirally twisted. Style slender. (1) Stem squarish, 3-10'. Leaves connate at base.

- E. ramosíssima, β. Muhlenbérgii (Griseb.) Stem 1-3-times-forked into a loose cyme; leaves ovate-oblong; flowers *pedicellate*, bright purple, 4". L. Is. to Va.: rare.
- 2 E. spicata Pers. Stem forking, erect; leaves oval to lanceolate; fis. sessile, 8", spicate on the long branches, rose-white. Nantucket to Md. § Europe.
- 3 E. Centaùrium Pers. Erect; lvs. oblong, acutish at each end; flowers subsessile in the loosely corymbed cymes, rose-purple, 6". Oswego, N.Y. August. §

4. GENTIÀNA, Tourn. GENTIAN. Calyx 5- or 4-parted or entire. Cor. tubular, limb 5- or 4-cleft, closed or open. Sta. 5 or 4. Stig. 2, style 0 or very short. Capsule oblong, 1-celled, seeds numerous and minute.— Herbs with showy flowers in August to October.

- § Fls. 4-parted, fringed, sky-blue; no crown or folds. (1.... Nos. 1, .
- § Fls. 5-parted, blue, pedicellate, clustered; no fringe or folds. (1).....No. 3 § Fls. 5-parted, corolla with folded appendages between the lobes. 24...(a)
 - - - - -b blue; the corolla open or expanding...No. 8-10
- 1 G. crinita Frœl. Fringed G. Stem and branches erect; leaves lanceolate, acute; petals obovate, finely fringed at margin. (1) Moist soils, Can. to Ga., and W. 1f. A beautiful and interesting plant.
- 2 G. detónsa L. Stem and few branches strict; leaves lance-linear; flowers solitary, long-stalked, petals crenate-ciliate. (1) N. Y. to Wis. 1f.
- 3 G. quinqueflòra L. St. 4-angled; lvs. ovate to lanceolate, acute; fis. 7--8", pedicellate, clustered; sepals subulate, very short, or (in β. parviflora) lance-linear, 4'; corolla segments bristle-pointed. (2) Fields and woods. 1f.
- 4 G. angustifòlia Mx. Slender, erect; fl. 18-20" long; lvs. linear; sepals linear, 7-10"; corolla blue, lobes ovate, the cleft folds much shorter. N. J. to Fla. 1f.
 β. viridiffora. Flower nearly sessile, 15", greenish white, folds very short. S.
- 5 G. ochroleùca Frœl. Lvs. smoothish, oval to elliptical, acutish both ends; calyz segments lance-linear, nearly equalling the 20" corolla. Pa. (Prof. Porter) to Fla. 1f.
- 6 G. alba Muhl. Very smooth, stout; lvs. lanceolate, the broad base clasping; fis.
 2' long, calyx segments ovate, very short. Woods, prairies, M. and W. 11-2f.
- 7 G. Andréwsii Griseb. Closed Blue G. Simple, smooth : leaves oval-lanceolate

cluster dense, terminal; calyx segments ovate-oblong, 3-4"; corolla 18", inflated, never opening, folds as long as segments. Woods, N. Eng. to Fla. 2f.

- 8 G. Saponària L. Subsimple, stout, smooth; leaves oblanceolate to lance-oblong, 3-veined; calyx segments linear, 6-8"; corolla 2', folds much shorter than the open erect lobes. N. J., Pa., to Ill., and S. 2f. Leaves 2-3'.
- 9 G. lineàris Wood. Simple, slender; lvs. lance-linear to linear, 1-(rarely 3-)veined; calyx segments subulate, 4-7"; corolla folds subentire, much shorter than the erect or spreading lobes. N. Eng. (rare) to Iowa and Ky. 1-14f. July-Sept.
- 10 G. pubérula Mx. Slender, rough or puberulent; leaves 1', oval to ovate, very rough-edged, clasping, acute; calyx segm. lanceolate, 5"; corolla subcampanulate, 15". lobes very acute, folds short, cleft. Prairies, W. and S. 9-18'.

5. BARTÒNIA, Muhl. SCREW-STEM. Fls. 4-parted, persistent. Cor. subcampanulate, pet. slightly united. Stig. thick, some bifid. Sds. very ∞ and minute. 24 Slender, erect, with scale-like lvs. and small white fls.

1 B. verna Muhl. Low, simple, 3-5', clustered; ped. 1-flowered, petals 3", oblong, obtuse, sepals 1", acute. Bogs and barrens, Va. to Fla. March.

2 B. tenélla Muhl. Branched above, very slender, 5-12'; ped. opposite, erect, sub-equal, 4"; petals pointed, 1", sepals nearly as long. Wet. Mass. to Fla. August β. brachiata. Pedicels bent outward and upward, some alternate. S.

6. FRÀSERA, Walt. COLUMBO. Fls. mostly 4-parted. Pet. united at base, oval, spreading, each with 1 or 2 bearded glands in the middle. Sty. 1, stig. 2, distinct. Caps. compressed, 1-celled. Seeds few, large, elliptic, margined. 2 Showy and tall, with opposite or verticillate leaves.

F. Carolinénsis Walt. Smooth, 4—9f high ! paniculate above ; lvs. oblong, sessile, in 4's—6's ; petals greenish with blue dots, and a large purple gland. Rich soils, N. Y., S. and W. A stately plant, and a good tonic. June, July.

7. HALENIA, Borkh. FELWORT. Flowers 4-parted, broad bell-form. Each petal prolonged at base into a spur, which is glandular at the end Stigmas 2, sessile.—Flowers panicled.

H. defléxa Griseb. Erect, branched, lower leaves oblanceolate, upper lance-ovate, 3-5-veined; spurs slender, curved outward, half as long as the 4" greenish-yellow petals.
(2) N. Eng. (rare) to Wis. 18'. August.

8. OBOLARIA, L. PENNYWORT. Calyx of 2 wedge-oblong sepals. Corolla tube-bell-form, 4-cleft. Sta. on the corolla. Stigma sessile, bifid. Seeds ∞ , very minute. 24 Flowers sessile, pale.

• Virgínica L.-Woods, N. J., W. and S. Stem 4-8', subsimple. Leaves roundish, sessile, thick, crowded above, sepals similar. April, May.

9. MENYÁNTHES, Tourn. BUCK BEAN. Cal. 5-parted. Cor. rotate or funnel-form, limb spreading, 5-lobed, villous within, no glands at the base. Stamens 5. Style 1, stigma bifid. Capsule 1-celled.—Bitter herbs, actively medicinal. Leaves trifoliate, nearly radical.

M. trifoliàta L.—In muddy places, Pénn. to Cal., and N. 8—12'. Petioles long and round. Scapes bearing racemes of handsome, flesh-colored flowers. May.

10. LIMNÁNTHEMUM, Gmel. FLOATING HEART. Cal. 5-parted Cor. rotate, each seg with a glandular scale at base. Sty. short or 0, stig 2-lobed. Caps. opening by decay. *m* Stagnant water. Pet. long, bearing an umbel of small white fis. below the roundish leaf-blade, also oblong tubers.

- 1 L. lacunòsum Griseb. Leaves small (1-2'), smooth, round-reniform; seeds smooth and shining. N. Eng. to Fla. (Villarsia lacunosa Vent.)
- 2 L. trachyspérmum Gray. Lvs. large (3-5'), dotted and pitted beneath; seeds muricate about the margins. Md. to Fla. and La. (Menyanthes, Mx.)

ORDER XCVIII. LOGANIACEÆ.

Herós or shrubs with opposite leaves, stipules between the petioles or at least a ridge, and with 4- or 5-parted regular gamopetalous flowers. Ovary superior, stigmas as many as the cells. Fruit a 2-celled capsule, or a 1-2-seeded drupe. Seeds winged or peltate, with albumen. Fig. 47.

1. **GELSEMIUM**, Juss. YELLOW JESSAMINE. Cor. bell-funnel-form with 5 short rounded lobes. Sta. 5, now longer and now shorter than the style (*dimorphous*). Caps. flattened, twin, cells each with 4—6 winged sds b Very slender, with numerous flowers. The stipules a mere ridge.

G. sempérvirens Ait.—Woods and banks, Va., and S., overrunning bushes and low trees. Leaves thick, shining, lanceolate. Flowers 1'. March—May.

2. SPIGELIA, L. PINK-ROOT. Calyx seg. linear-subulate Cor. narrowly funnel-form, limb 5-cleft. Anth. 5, convergent. Caps. twin-lobed, few-seeded.—Herbs, with the flowers sessile in terminal spikes. Fig. 47.

S. Marilándica L. Stem square, erect, simple; leaves sessile, ovate-lanceolate; spike scorpoid, uncoiling as the 3-8 handsome flowers expand; corolla 14-2' long 2 Thickets, Pa. to Ill., and S. June. Medicinal.

3. MITREOLA, L. Corolla tubular, short, 5-cleft, hairy in the throat. Sta. 5, included. Ovary 2-celled, styles 2, united only at top with 1 stigma. Capsule 2-horned, ∞ -seeded. (1) Flowers in several scorpoid spikes at top of a long terminal peduncle. June—August,

- 1 M. petiolàta T. & G. Branching; leaves ovate to lanceolate, tapering at base to a petiole; raceme loose-flowered. Va., and S. 1-2f.
- 2 M. sessilifòlia T. & G. Nearly simple; leaves oval to elliptical, sessile, shorter than the internodes; raceme close-flowered. S. C. to Fla. 10-18'.

4. POLYPREMUM, L. Calyx seg. 4, subulate. Corolla broad bell form, lobes a little unequal, obtuse, throat bearded. Stamens 4, included Stigma subsessile. Capsule ovoid. ① Smooth, diffusely branched from base, with linear-subulate leaves. Flowers sessile.

P. procumbens L.-Dry fields, Va., and S. 6-12'. In dense patches. May-Sept.

ORDER XCIX. APOCYNACE Æ. DOG-BANES.

Plant with an acrid, milky juice, entire, exstipulate, mostly opposite lvs.

Flowers 5-parted, regular, the calyx persistent, the corolla twisted in æstivation. Stamens 5, with distinct filaments, anthers filled with granular pollen. Ovaries 2, distinct, but their stigmas blended into a head-shaped mass Fruit 1-2 follicles, or capsular or baccate, with albuminous seeds.

§ Herbs erect, native.—a Corolla bell-form, whitish. Leaves opposite	NUM. 1
-a Corolla salver-form, blue. Leaves alternate	IIA. 2

§ Half-shrubby, cultivated, trailing or erect. Corolla wide-spread	4
§ Shrubs twining b Cultivated. Flowers large, white ECHITE	s. 5
\$ Shrubs erectc Leaves opposite or in 4's, Corolla yellowALLAN	IANDA. 6
-c Leaves opposite or in 3's. Corolla roseate	м. 7
-c Leaves alternate. Flowers 3". Fruit a drupe. S. Fla	SIA.

1. APÓCYNUM, Tourn. Dog's-BANE. Cor. bell-form with short lobes. Sta. included, alternating with 5 glandular teeth on the base of the corolla. Ovaries 2. Stigma connate. Follicles slender, distinct. Seeds comous. 24 Leaves entire, mucronate, opposite. Flowers pale, in cymes, June—Aug.

- **1 A. androsæmifòlium** L. Leaves ovate; cymes terminal and lateral; cor. 3", with red stripes, tube longer than the calyx, lobes spreading. Hedges and fields. 3f. A handsome plant, smooth or downy.
- 2 A. cannabinum L. Leaves oval to lance-oblong, often downy beneath; cymes terminal; corolla 1", tube not longer than the calyx, lobes erect. In shades. 2-4f Pods 3' long. (A. hypericifolium Ait.)

2. AMSÒNIA, Walt. Calyx segment pointed. Cor. tube hispid, funnel-form, limb in 5 linear segments twisted in bud. Style 1. Ovaries 2, connate at base, follicles 2, erect, slender. Seeds not comous. 24 Leaves alternate, entire. Clusters terminal, blue.

- 1 A. Tabernæmontàna Walt. Leaves ovate-lanceolate, acuminate; sepals lanceacuminate; corolla 8", livid blue. Damp grounds, W. and S. 2f. May, June.-Varies with leaves lance-elliptic, and sepals acute.
- 2 A. cillàta Walt. Leaves more or less crowded, linear or filiform, the margins ciliate; cluster long-stalked, corymbed, or soon panicled; corolla glabrous outside. Sands, S.: common. 1-2f. April, May.

3. FORSTERÒNIA, Meyer. Corolla funnel-form, deeply 5-cleft, twisted in bud. Anthers adherent to the stigma. Stigma 2-lobed. Follicles 2, spreading, seeds comous. ⁵ Leaves opposite.

F. diffórmis DC. Climbing; leaves round oval to lance-oval, cuspidate-pointed; cymes axillary and terminal, stalked; calyx segments ovate, long-pointed; corolla 3-4", pale yellow. Swamps, Va., and S. May-August.

4. VINCA, L. PERIWINKLE. Cor. funnel- or salver-form, convolute, with the 5 lobes oblique, orifice 5-angled. Two glands at base of the ovary. Follicles 2, erect, slender. \downarrow , b Lvs. opposite. Flowers solitary, axillary.

- **1 V**, MINOR. Procumient; leaves elliptic-lanceolate, not ciliate; sepals lanceolate; fivers scentless, violet, purple, or white. May, June. Europe.
- 2 V. MAJOR. Decumbent; leaves ovate, ciliate at edges; sepals long, bristle-pointed. In shades, forming loose masses, leaves often silver-edged. Europe.
- 3 V. ROSEA. Erect, soft-downy; leaves oval, obtuse; flowers large, roseate, often white or white-edged, perpetual. From Madagascar.

5. ECHITES, Br. Cor. funnel- or salver-form, not appendaged, lobes convolute, bearing the subsessile anthers in the throat; 5 glands at base of ovaries. Foll. 2, slender. Sds. comous. 5 5 Lvs. opp. (Mandevilla, Lindl.) E. SUAVÈOLENS. Climbing; leaves cordate-ovate, acuminate, shorter than the axillary

or terminal racemes; flowers fragrant, 2'. S. America.

E. umbellàta Jacq. and E. Andréwsii Chapm. are indigenous in S. Fla.

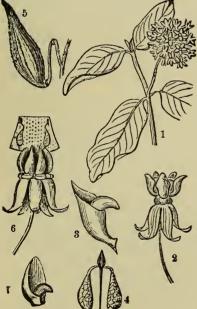

6. ALLAMÁNDA CATHÁRTICA. Shrub from Guyana, with slender oranches, oblong thin-pointed leaves, and bright-yellow flowers 24-3'. Cor. funnel-bell-form, lobes 5, rounded, throat appendaged. Ova. 1, becomir.g a prickly, 1-celled capsule.

7. NÈRIUM, L. OLEANDER. Corolla salver-form, convolute, throat crowned with 5 cleft scales. Anth. arrow-shaped, tipped with a long hairy bristle. 5 Lvs. lanceolate, acute both ways, thick and leathery, in 2's or 3's.

- 1 N. OLEÁNDER. Leaves lanceolate; scales of the crown each of 3 or 4 pointed unequl teeth; fls. clustered, inodorous, often double, 2. Palestine. 5-10f, very handsome.
- 2 N. ODÒRUM. Leaves linear-lanceolate; scales of the crown each 4-7-cleft; appendages of the anthers exserted; flowers fragrant. India.

ORDER C. ASCLEPIADACE Æ. ASCLEPIADS.

Plants (chiefly herbs in the United States) with a milky juice, often

twining. Leaves opposite (rarely whorled or scattered), without stipules, entire. *Flowers* generally umbellate, 5-parted, regular, the *sepals* and also the *petals* united at base, both valvate in æstivation. *Stamens* united, adherent to and covering the fleshy mass of the two united stigmas. *Pollen* cohering in masses. *Ovaries* 2, forming follicles in fruit.

FIG. 530.—1. Asclepias cornuti. 2. A flower, the petals and sepals reflexed, and the corona erect. 3. One of the segments of the corona with the horn bent inwardly. 4. A pair of pollen masses suspended from the glands. 5. A mature follicle. 6. Vertical section of P. phytolaccoides showing the two ovaries. 7. Lobe and horn of the corona

- 2 A. Sullivántii Eng. Leaves ovate-oblong, smooth both sides, nearly sessile, hoods obovate; horns blunt; flowers 9". Ohio to Ill. July.
- **3 A. purpuráscens L.** Simple; leaves ovate to *elliptical*, acute mucronate; um bels subsolitary, terminal; peduncle 1-2'; pedicels 1'; horns horizontal. N. Eng to N. Car., and W. 3-4f. Flowers large (6''), dark purple. Hoods lance-ovate.
- 4 A. incarnàta L. Branching above; leaves lanceolate; umbels many or few, some what panicled; flowers small (3"); ped. 1-2". Wet places. 3-5f: common.
 β. puichra. Hairy; leaves lance-oblong or -ovate. Very handsome. †
- 5 A. ovalifòlia Desn. Low, downy; lvs. ovate, acutish; umbels subsessile, 10-15-flwd.; pet. oval; hoods yellowish, obtuse, longer than the horns. W. (A. Vaseyi C-B.)
- 6 A. perennis Walt. Branched at base, half-shrubby, smooth; leaves thin, lanceolate, pointed both ways, long-stalked, exceeding the small white umbels; hoods shorter than the horns. Low grounds. W. and S. 2f. (A. parviflora C-B.)
- 7 A. quadrifòlia Ph. Simple, smooth; leaves ovate, acuminate, some of them in whorls of 4; umbels few, loose-flowered, long-stalked. Dry woods. 2f.
- 8 A. variegàta L. Simple, smoothish; leaves oval to lance-oval, short-pointed, acute at base; umbels densely Φ-flowered. small (1'-18" diam.); hoods orbicular.
 β. nicea. Lvs. elliptical, pointed both ways; umb. 10-15-flwd. N. J., W. & S. 1-3f.
- 9 A. phytolaccoides Ph. Tall, simple; leaves broadly ovate, pointed both ways, glaucous; nmbels lateral, with about 20 drooping fis.; peduncles and pedicels 1-3' long; hoods truncate, with 4 unequal teeth; horns exserted. Damp shades. 4-5f.
- 10 A. tomentòsa Ell. Woolly, stout ; leaves lance-oblong, wavy, cuspidate ; umbele lateral. with many large flowers : hoods obovate. truncate. Barrens. S

- 11 A. obovàta Ell. Tomentous; leaves obovate, obtuse, mucronate; umbels 10-14 flowered, lateral; fls. large, yellowish-green: hoods elongated. Gravels, Ga., Fla.
- 12 A. rubra L. Simple, glabrous; lvs. ovate, long and acutely pointed, subsessile; umbels panicled above, few; flowers red-purple; hoods acute, some longer than the slender exserted horns. Barrens, N. J., and S. 2-3f. Leaves 3-5'.
- 13 A. obtusitòlia Mx. Simple, smooth; leaves oblong to oblong-ovate, subcordate, obtuse-mucronate; umbels 1-3, terminal, pedunculate, 15-25-flowered; hoods ti un cate, shorter than the sickle-shaped horn; flowers 6", red-green. M., W., S. 3f.
- **! A. amplexicaùlis** Mx. Simple, flexuous, glaucous; lvs. ovate, cordate-clasping, obtuse, *not mucronate*; ped. lateral and terminal, with ∞ dull-purplish flowers; pedicels slender; hoods ovate, including the horns. Copses, S. 1-2f.
- 15 A. tuberòsa L. Butterfly-weed. Stem ascending, hairy, umbellate branched; leaves sessile. alternate, lance-oblong; umbels many, erect; flowers bright orangered; hoods oblong; horns suberect. Dry fields. Root tuberous. Stem 2f. +
- 16 A. paupércula Mx. Smooth and virgate; leaves linear and oblong-linear, 4-6' long; umbels with few large yellow-red flowers at the naked summit. N. J., and S.
- 17 A. Curassávica L. Half-shrubby and branching at base; branches terete, leafy to the top; leaves lance-linear; umbels with few large scarlet flowers. S. Fla. Cult.
- 18 A. cinèrea Walt. Stem wiry, simple, naked above; leaves linear-filiform, 1--3', erect; umbels terminal, several, bracteolate, 3-5-flowered; peduncles 4--6''; pedicels 6--8''; corolla ashy-purple, 3--4''. Damp barrens, S. C. to Fla. 2--3f.
- 19 A. virídula Chapm. Stem and leaves as in No. 18; umbels 6-12-flowered, yellowish green, shorter than the leaves. Fla.
- 20 A. Michaùxii Desn. Stems diffuse; leaves linear, 3-4', scattered; umbels ∞ -flowered, often panicled, mostly shorter than the lvs.; fls. 3'', fragrant. Sands, S. 1f.
- 21 A. verticillàta Ell. Simple, slender, erect; leaves linear, very narrow, generally *verticillate*; umbels small, many, lateral, 1' diameter, pedunculate. Swamps. 2t.

2. ACERATES, Ell. Hoods of the crown destitute of a horn. Other wise nearly as in Asclepias. 24 Flowers greenish. June—August.

- § ACERÀTES proper. Umb. lateral; pet. reflexed; crown adnate to anth...Nos. 1-3 § ANÁNTHERIX. Umbels terminal; pet. spreading; crown free from anth.. Nos. 4, 5
- 1 A. viridifièra Ell. Stout, whitish-downy; leaves thick, oval, obtuse, petiolate, varying to elliptic-lanceolate, or even to orbicular (Ga., Prof. Pond); umbels small, dense, subsessile. Sands. 2f. Leaves exceedingly variable.
- 2 A. longifòlia Ell. Rough-puberulent, simple; leaves alternate, lance-linear to linear; umbels lateral, pedunculate, densely many-flowered; flowers small, 3", crown stipitate. Prairies, W. 2-3f. Peduncles 1'.
- 3 A. lanuginòsa Desn. Low, stout, hairy; leaves lanceolate; umbel 1, on the naked summit of the stem, dense; crown sessile. Prairies, Wis. 1f.
- 4 A. connivens Dcsn. Strict, half-shrubby; leaves oval-oblong; umbels 7-12-flwd., along the naked summit of the stem; pet. 5", oval, with a short cusp; hoods connivent over the anthers. Barrens, Ga., Fla. 2f. Leaves 20-30".
- 5 A. paniculàta Desfn. St. angular; lvs. lance-oblong, obtuse; umbels clustered at the leafy top, 5-9-flowered; pet. large, half-erect, 7"; pods glabrous, seeds with long silky tufts. Ga. to Ill. and Kan. (Rev. J. H. Carruth.)

3. **PODOSTIGMA**, Ell. Cor. seg. 5, erect, oblong. Crown *stipitate*, hoods without horns. Follicles 2, long, slender, smooth. 24 Low and simple, with opposite leaves and supra-axillary few-flowered umbels.

- P. pubéscens Ell.—Wet grounds, S. A curious plant, with linear-oblong leaves and 3-5 umbels of yellowish-green flowers, in May, June. 1f.
 - 4. ENSLENIA, Nutt. Cor. 5-parted, segments crect; hoods or scales

of the crown 5, free, each terminated by 2 filiform, flexuous lobes. Pollinia oblong, pendulous. Stig. 5-angled, conical. Follicles cylindraceous, smooth. \triangleright A twining herb, with opposite, cordate leaves, and creamwhite flowers in small lateral corymbs.

E. álbida N.-W. and S.: common. 6-10f. Clusters 5-8-flwd., fragrant. July, Ang.

5. METASTÉLMA, Br. Cor. somewhat bell-form, segments incurved at apex. Crown of 5 distinct scales. Stigma flat. Pods smooth, slender, seeds comous. \ddagger Lvs. cuspidate, smooth. Umb. of few small flowers.

M. Fràseri Dcsn. Leaves oval; umbels sessile; pet. ovate, ciliate, as .ong as the linear crown-scales. In Carolina (Fraser, in DC.).

M. Schlectendahlii and other species grow in S. Fla. (Dr. Chapman.)

6. SEUTERA, Reich. Sepals 5, lanceolate. Cor. rotate, segm. acute. Crown on the base of the sessile anthers, of 5 retuse segments. Pollinia ovoid, pendulous. Stigma bifid. Pods smooth, seeds comous. 2 Leaves linear, fleshy. Umbels few-flowered.

S. marítima Dcsn.—Salt marshes, S., twining on the rushes, &c. Leaves opposite.
 1'. Umbels 7-10-flowered. Pet. greenish, crown short, white. June—October.

7. VINCETÓXICUM, Mœnch. Calyx and cor. 5-parted, wheel-form. Urown a fleshy, 5-10-lobed disk. Anth. tipped with a membrane. Pollinia and fruit as in Asclepias. 24 b Flowers small, in dense clusters.

- **1 V. nigrum** Mœnch. Herb somewhat twining, with lance-ovate, attenuately-acute leaves and small blackish clusters in the axils. Gardens and fields: rare.
- 2 V. scopàrium (N.) Shrubby at base, much branched; leaves thin, linear, 1'; clus ters short-stalked, downy, with few green flowers; pods slender, 1'. Fla.

8. GONOLOBUS, Mx. Corolla subrotate, 5-parted, convolute in bud. Crown a small, fleshy, undulate-lobed ring, attached to the throat of the corolla. Anth. opening *transversely* beneath the stigma. Pollinia 5 pairs, horizontal. Pods turgid, seeds comous. 5 Leaves cordate. Umbels fewflowered, short, extra-axillary. Flowers brownish.

* GONÓLOBUS proper. Cor. rotate, flat, lobes linear to oblong, smoothish...Nos. 1-3

- * CHTHAMÀLIA. Corolla bell-form, small (woolly), lobes ovate, 1" longNo. 4
- 1 G. macrophýllus (and lævis) Mx Smooth, or with minute down and scattered hairs; leaves short-pointed, base-lobes open; umbels 5-flowered, buds conic-pointed; pet. linear-subulate, 4"; pod smooth, ribbed. Shady banks, Va. to Ky., and S. 3-5f.
- 2 G. obliquus Br. Hirsute with spreading, unequal hairs; leaves acuminate, basekness closed and some oblique; umbels 2-5-flowered, buds oblong, pet. linear-oblong 6"; pod muricate, ribless. Banks, O. to Pa. and Ga. 3-5f.
- **3** G. hirsùtus Mx. Hirsute; leaves acuminate; umbels 5-8-flowered, buds ovoid. petals oblong, 3", yellow, downy; pod muricate. Woods, South. 4-8f.
- 4 G. prostràtus Ell. Branches from base, prostrate, 6—12'; leaves small (1'), reniform-cordate; umbels sessile, 3-5-flowered; corolla segments ovate, 1'', very woolly inside, dark purple. Sands, Ga. (Dr. Feay). (Chthamalia pubera Dcsn.)

9. PERIPLOCA, L. Cor. rotate, flat, 5-parted. Crown 5-cleft, tipped with 5 filiform awns. Filaments distinct, anthers cohering. Pollinia 5, each 4-lobed, single. Follicles 2, smooth, divaricate. Seeds comous. 5 **P**. Græca L. Leaves ovate, acuminate, 3-4'; flowers panicled on a long peduncle; petals very hairy, linear, obtuse, purple. Gardens, &c. 10-15f. August. §

10. STEPHANÒTIS, Pet.-Th. Sepals distinct. Cor. salver-form, limb 5-lobed, convolute in bud, tube including the 5-leaved crown in its enlarged base. 5 Leaves thick, very smooth.

S. FLORIBÚNDA. Leaves oval; flowers 5-8 on each peduncle, white and fragrant, tube 1', limb 1¹/₄ broad. Greenhouse plant, from Madagascar.

11. HOYA, Br. WAX-PLANT. Sepals 5. Corolla rotate, flat, valvate in bud. Crown of 5 depressed, spreading segm. Pollinia fixed by the base connivent. Pods smooth, seeds comous. 2 Smooth, fleshy.

H. CARNÒSA. Branchlets puberulent; leaves oval-oblong; flowers in dense umbels, pink-colored, wax-like. Greenhouse plant, from E. India.

12. STAPÈLIA, L. CARRION-FLOWER. Calyx 5-parted. Cor. rotate, fleshy, 5-cleft. Crown double, of 2 rings entire or lobed. Pollinia erect. Pods erect, smooth.—Fleshy, leafless, cactus-like plants, from S. Africa, with large, dark-red *fatid* flowers, in the greenhouse.

S. HURSÙTA, with erect, dull-green 4-sided branches, toothed on the angles, and flowers 3-4' broad, with purple, ciliate, lance-ovate petals.

ORDER CI. OLEACEÆ. OLIVEWORTS.

Trees and shrubs, with opposite, simple or compound leaves, and regular 4-8-parted diandrous flowers. Corolla rarely wanting, its divisions more in number than the stamens. Ovary free, 2-celled, with 2 (rarely 1 or ∞ ovules in each cell. Fig. 16.

[. JASMINEÆ. Corolla 5-8-parted. Ovary cells each with 1 croct ovulcJASMINUM.	1
II OLEACE # proper. Corolla valvate, 4-parted or 0. Ovary cells 2- or co-ovaled(*)	
* Flowers perfect, corolla present. Leaves simple(a)	
* Flowers imperfect, inconspicuous, often apetalous(c)	
a Flowers yellow. Ovary with many ovules in each cell	2
a Flowers white, or lilac. Ovary cells 2-ovuled(b)	
b Stamens exserted. Fruit a fleshy drupe or berryOLEA.	3
b Stamens included.—x Corolla salver@form, tube longer than lobesSyringa.	4

e Leaves pinnate. Corolla 0, or present. Fruit a winged samaraFRAXINUS.	S

1. JASMINUM, L. JESSAMINE. Calyx 5-8-lobed. Cor. salver-form, limb 5-8-cleft, convolute in bud. Sta. included. Berry double, 2-seeded. 5 5 Petioles jointed.

§ Leaves opposite, unifoliate.	Flowers white, 8-10-parted	Nos. 1, 2
	Flowers white, 5-parted	
§ Leaves alternate, 3-7-foliate.	Flowers yellow, 5-parted	Nos. 6, 7
J. SAMBAC. Scarcely climbing	; leaves ovate; petals 8, rounded, fragran	t. India.
J. LAURIFÒLIUM. Climbing; l	eaves lanceolate; pet. 9 or 10, linear, fragra	ant. India.
J. AZÓRICUM. Diffuse; leaflet	s 3, ovate, shining; flowers very fragrant.	Azores.

123

4 J. OFFICINÀLE. Climbing; lfts. 7, lanceolate; sep. linear, equaling cor. tube. Asia.

5 J. GRANDIFLÒRUM. Climbing; leaflets 9, oval, some confluent, the odd one pointed, sepals thrice shorter than the corolla tube; petals oval. India.

6 J. REVOLÙTUM. Not climbing; lfts. ovate, pointed; pet. roundish, recurved. Asia.

7 J. ODORATÍSSIMUM. Climbing; lfts. oval, obtuse; fls. less fragrant than No. 6. Azores

2. FORSYTHIA, Vahl. Calyx very short, deciduous. Cor. subcampanulate, lobes long, twisted in bud. Sta. inserted in the base of the tube, included. Seeds ∞ in the 2-celled pod. 5 Leaves opposite or in 3's, appearing after the yellow flowers.

1 F. VIRIDÍSSIMA. Branches erect, strict, covered with flowers in early Spring, each flower separate, pedicellate, lateral; leaves lanceolate. China.

2 F. SUSPÉNSA. Branches weak, pendulous; leaves ovate; flowers scattered. Japan.

3. SYRÍNGA, L. LILAC. Calyx small, persistent, many times shorter than the tube of the salver-form corolla. Sta. included. Pod 2-celled, valves bearing the septum in the middle, seeds 4. 5 Leaves opposite.

- **1** S. VULGÀRIS. Common L. Leaves cordate-ovate, entire, glabrous; flowers *lilac* to lilac-purple, in a dense thyrse, very fragrant. A beautiful shrub, from Hungary; varying with flowers *bluish*, or *white*. April—June.
- 2 S. PÉRSICA. Persian L. Leaves lanceolate, acute, smooth, often pinnately cleft; thyrse loose, smaller, white, or lilac-blue. Persia.

3 S. VILLÒSA. Chinese L. Leaves elliptic, acute, hairy beneath. N. China.

4. OLEA, Tourn. OLIVE. Calyx short. Corolla tube short, limb 4 parted, spreading. Stamens 2, inserted in the base of the tube, exserted. Ovary with 4 suspended ovules, ripening only 1 or 2 seeds. Drupe fleshy, oily. 5, 5 Leaves opposite. Flowers white.

- * Racemes axillary, shorter than the coriaceous leaves......Nos. 1-3
- * Racemes in a large terminal panicle. (Visiania paniculata C-B)....No. 4
- 1 0. Americana L. Leaves oblanceolate to elliptic, entire, smooth, shining, attenuated to a petiole; raceme compound, scarce longer than the petiole; flowers diæcious; drupes globular. Swamps, N. J. to Fla. 15-20f.
- 2 O. EUROPÆA. Leaves kanceolate, mucronate; racemes longer than the petioles; drupes oval. Europe. Cultivated in California, rarely far South. 20-40f.
- **3 O.** FRÀGRANS. Shrub; leaves lance-oblong, *serrate*; flowers small, white, very fragrant, in axillary corymbs, white-red; *styles* 2. China. (Osmanthus.)
- 4 O. CLAVÀTA. Shrub with ovate entire leaves and many small flowers in large panicles; style 1, club-shaped, exserted like the stamens. China. Hardy S.

5. LIGUSTRUM, L. PRIVET. PRIM. Cal. minutely toothed. Cor. funnel-form, 4-lobed. Sta. subincluded. Sty. very short. Berry 2-celled, 2-4-seeded. Sds. angular. 5 With simple lvs. and term. panicles of white the

L. vulgare L. Leaves lanceolate to obovate, 1-2', obtuse or acute, thick but deciduous; flowers small, in small thyrses; anthers partly exserted, but shorter than the ovate corolla lobes. Planted in hedges. May, June. § Europe.

6. CHIONÁNTHUS, L. FRINGE TREE. Cal. short, 4-parted. Cor. tube very short, including the 2 stamens, the limb of 4 linear lobes. Style very short. Drupe fleshy, with a bony 1-seeded nut. 55 With opposite leaves and white flowers in panicles.

C. Virgínicus L. Leaves oval to oblong; panicle with filiform branches and pedicels:

petals very narrow, drooping, 10". A highly ornamental shrub or small tree, in woods, S. Penn., and S. April-June.

7. FORESTIÈRA, Poir. Diœcious, apetalous; buds ∞ -flowered. \circ Flowers sessile, crowded, each flower a pair of stamens surrounded by a calyx of 4 sepals. \circ Flowers pedicellate, umbellate, no calyx, an ovary tipped with a slender style and capitate stigma, cells 2, ovules 4. Drupe 1-seeded. 5 5 Leaves opposite, simple. Flowers minute.

- **I F. acuminàta** Poir. Glabrous; leaves lance-elliptic, pointed both ways, serru late, petiolate; drupe linear-oblong, pointed. Streams, Ill. to Ga. 15f.
- 2 F. ligustrina Poir. Some downy; leaves ovate to oblong, obtuse, attenuate to a petiole, serrulate; drupe oval-oblong. Banks, Ga., Fla.
- **3 F. porulòsa** Poir. Smooth; leaves lance-oblong, obtuse, sessile, dotted and rusty beneath; drupe round-ovoid. Coast of E. Ga. and Fla.

8. FRÁXINUS, Tourn. ASH. Fls. 5 § 9 or 5 9. Cal. 4-toothed, rarely 0. Cor. of 2 or 4 oblong or linear petals, or 0. Sta. 2. Stig. bifid. Samara 2-celled, flattened, winged at apex, 4-ovuled, but 2-seeded. 5 5 Leaves opposite, odd-pinnate, petiolate. Flowers racemed or panicled Wood valuable for timber. April, May. Fig. 16.

- § Native species, all directious and apetalous, in woods, &c...(a)
- - a Calyx persistent at the narrow, flattened base of the samara......Nos. 4–6
- **1** F. ORNUS. *Flowering Ash.* Lfts. 7-9, lanceolate, serrate above; buds pubescent; panicles dense; petals 2 or 4, linear-oblong, white; fruit lance-linear. Farks.
- 2 F. EXCÉLSIOR. European Ash. Leaflets 11-13, lance-oblong, serrate; racemes short, dense; fruit linear-oblong, notched at end; pet. and calyx 0. A tall tree, in parks, &c. β. PÉNDULA, the Weeping Ash, is one of its varieties.
- **3 F. Americàna** L. White Ash. Leaflets 7-9, ovate, acuminate, subentire, shining; panicles loose; fruit calyculate, the seed portion terete, half as long as the oblong wing. A forest tree 40-80f. Timber excellent.
- 4 F. pubéscens Walt. *Red Ash.* Leaflets 7-9, lance-ovate, acuminate, subservate, petioles and branchlets velvety-pubescent; fruit calyculate at the acute base, gradually widened into the oblanceolate wing. Wet woods. 30-60f.
- 5 F. víridis Mx. f. Green Ash. Lfts. 7-9, lance-ovate, serrate, long-pointed, bright green, and, with the petioles and branchlets, glabrous; fruit calyculate, spatulare, obtuse, the seed portion as long as the wing. Woods, W. and S. 15-25f.
- 6 F. platycárpa Mx. Leaflets 5–7, elliptical, acute, obscurely serrate, some downy; fruits broadly-spatulate, attenuate to the calyculate base, some of them (especially in β . tripter(4) with 3 angles winged! Va., and S.
- 7 F quadrangulàta Mx. Blue Ash. Leaflets 7-9, short-petiolulate, lance-ovate, acciminate, sharply serrate; branchlets square or acutely 4-angled; buds velvety; fruit oblong, winged to the base. Woods, W. 60-80f.
- 8 F. sambucifòlia Lam. Black Ash. Leaflets 7-11, lance-ovate, sessile, serrulate, pointed; fruit oblong with equal ends, notched at apex. Swamps, Can. to Pa. and Ky. 40-70f. Wood used for hoops, baskets, &c.

COHORT 3. APETALÆ,

OR MONOCHLAMYDEOUS EXOGENS. Plants with no corolla, the calyx or perianth green or colored, consisting of a single series of similar organs, or often wholly wanting.

ORDER CII. ARISTOLOCHIACEÆ. BIRTHWORTS.

Low herbs or climbing shrubs, with alternate leaves and perfect flowers. Perianth tube adherent to the ovary, brown or dull, valvate in the bud. Stamens 6 to 12, epigynous and adherent to the base of the styles. Ovary 6-celled, becoming a 6-celled, many-seeded capsule or berry. Seed albuminous, embryo minute. Figs. 24, 333.

1. ASÀRUM, Tourn. WILD GINGER. Calyx bell-form, regular, 3cleft. Sta. 12, placed upon the ovary, anth. adnate to the middle or summit of the filaments. Style very short, stigma 6-rayed. Fruit fleshy, 6-celled, crowned with the calyx. 24 Acaulescent, with creeping rhizomes and 1 or 2 leaves on each branch. Flowers solitary.

§ Leaves in pairs. Calyx lobes pointed, reflexed. Ovary wholly adherent.....No. 1
§ Leaves solitary. Calyx lobes obtuse, suberect. Ovary partly free...... Nos. 2, 2

- 1 A. Canadénse L. Lvs. 2, broad-reniform, on long, opposite, radical petioles with the flower between : sepals greenish-purple, pointed, reflexed ; filaments extended above the anthers. Rich shades. The root is a popular remedy. May, June.
- 2 A. Virginicum L. Leaf orbicular-ovate, glabrous, coriaceous, deeply cordate, entire, obtuse; flowers subsessile; calyx short, smooth outside; segments obtuse, dull purple. Rocky soils, Va., Ky., and S. April.
- **3 A. arifòlium** Mx. Leaf broadly hastate with a deep sinus; fl. 7–9", tubular, soon urceolate, lobes short and obtuse. Rich soils, Va., and S. March-May.

2. ARISTOLOCHIA, Tourn. BIRTHWORT. Calyx tubular, tube variously bent and inflected above the ovary, limb irregular. Anth. 6, subsessile on the style. Stig. 6-lobed. Caps. 6-celled, ∞ -seeded. 24 Caulescent, with alternate leaves and lateral lurid purple flowers.

§ Stem erect. Calyx tube sigmoid (i. e., twice bent like the letter S)......Nos. 1, 2 § Stem climbing, woody. Calyx tube recurved, once bent upward. May, Jn.. Nos. 3, 4

- 1 A. serpentària L. Virginia Snake-root. Stem flexuous; lvs. petiolate, oblong or ovate, thin, cordate, acuminate; ped. radical, many bracted; cal. tube smoothish, contracted in the midst. Thickets, Pa., S. and W. 8–13'. June, July.
 - 8. hastata. Leaves narrowly oblong, auricled at base, short-stalked. S.
- 2 A. reticulata N. St. very flexuous; lvs. oval, cordate-clasping, with decussating lobes, strongly reticulated; flowers radical, small (5[']). La. 1f.
- 3 A. Sipho L'Her. Dutchman's Pipe. Lvs. glabrous, ample, round-reniform; ped.
 1-flowered, with 1 clasping bract; flowers 1¹/₄, bent like a siphon or tobacco-pipe, limb spreading. A vigorous climber, 30-40f, in hilly woods, Pa. to Ky., and S. +
- 4 A. tomentòsa Sims. Leaves downy or hairy beneath, round-cordate, very veiny; ped. solitary, 1-flowered, bractless; flowers 20", tube yellowish, limb purple, reflexed. throat nearly closed. Banks, Ill., and S. 30-40f. May.

ORDER CIII. NYCTAGINACEÆ. MARVELWORTS.

Herbs (shrubs or trees) with tumid joints, entire and opposite leaves *Flowers* generally surrounded with an involuce (calyx-like when the flower is solitary). *Calyx* a delicate, colored, funnel-form or tubular perianth, deciduous above the 1-celled, 1-seeded ovary, leaving its persistent base to harden and envelop the fruit (achenium) as a kind of pericarp. *Stamens* 1 to several, definite, slender, hypogynous, exserted, unequal. *Embryo* coiled around the copious white albumen. Figs. 143, 207.

§ Involucre just like a calyx, including one flower	MIRABILIS.	1
§ Involucre 5-leaved, including many flowers in an umbel-like head	ABRONIA.	2
§ Involucre 5-lobed, including 3-5 flowers	OXYEAPHUS.	3
§ Involucre 0x Herbs, with minute flowers in little clusters.	. BOERHAAVIA.	. 4
-x Shrubs. Flowers diæcious, cymous. S. Fla	. PISONIA.	

1. MIRÁBILIS, L. MARVEL OF PERU. FOUR-O'CLOCK. Involucre calyx-like, 5-lobed, 1-flowered, lobes acuminate. Perianth (calyx) tubularfunnel-form, limb spreading. Sta. 5, and style more or less exserted. Fruit (as in all the genera) an achenium invested in the permanent base of the calyx. 24 Cultivated. Leaves oyate, more or less cordate, acuminate.

- 1 M. JALÀPA. Erect, glabrous; flowers 3-6 in each terminal fascicle, short-stalked opening at about 4 o'clock P. M., and remaining in bloom all night, infinitely various in color. Peru. 2f. Summer.
- 2 M. DICHÓTOMA. Erect, glabrous; flowers sessile, mostly yellow, smaller than in M Jalapa; limb 6". Mexico. 2f. Summer.
- 3 M. LONGIFLÒRA. Weak, diffuse, viscid-pubescent; lower leaves long-petioled; flowers sessile, tube 6' long, hairy, border 1', white. Mexico.

2. ABRONIA, Juss. Involucre 5-leaved, surrounding an umbel-like head of many small flowers on a long peduncle. Perianth salver-form, limb 5-lobed, corolla-like, deciduous. Sta. 5, and style included. ¥ Fleshy

- 1 A. UMBELLÀTA. St. prostrate; lvs. ovate, long-petioled; umbellate heads compact; fis rosy-lilac or pink, the lobes obcordate. Sandy sea-coasts, California. 1-2f.
- 2 A. FRAGRANS. Stem ascending; leaves lance-ovate, long-stalked; umbels loose, fls. and involucre white, tubes near 1'. Dalles, Oregon.

3. OXÝBAPHUS, Vahl. Invol. 5-cleft, containing 3-5 fls., persistent. Perianth tube very short, limb bell-form, plicate, deciduous. Sta. 3, and style exserted. Fruit obovoid, ribbed. 24 Flowers small, purple.

- 1 **O. nyctagineus** Sweet. Smoothish, erect, forked; lvs. broad-ovate to lanceolate, subcordate, acute; ped. solitary; involucre 3-5-flowered. Banks, W. June-Aug.
- 2 0. angustifolius Sweet. Bushy, with alternate branches; lvs. lanceolate, acute both ways, subsessile, 1-2'; ped. 1-1', axillary; involucre cup-shaped, hispid, 3 flowered; ovary hispid. Dry soils, S. 2-3f. June-July.
- **3 O. albidus** Sweet. Stem with strict slender branches, or simple; leaves linear oblong, petiolate, the upper often bract-like; ped. half as long (6"-1") as the leaves, **mvolucre** hairy, 3-flowered. S. 1-2f. May.

4. BOERHAÀVIA, L. Involucre 0, bractlets deciduous. Perianth funnel- or bell-form, colored, 5-lobed, upper half deciduous, lower persist ent. Sta. 1—4. Fruit 5-ribbed, truncate at apex, 1-seeded. (1) Leaves petiolate. Flowers very small.

B. erécta L. Glabrous; lvs. ovate, wavy, pale beneath; clusters 3-6-flwd., distant in a strict panicle with filiform branchlets. Sands, S. 2-4f. June-Sept.

R. hirsùta, and B. viscòsa, grow in S. Fla., according to Dr. Chapman.

ORDER CIV. POLYGONACEÆ. SORRELWORTS.

Herbs (rarely shrubs) with alternate leaves and mostly sheathing stipules (ochreæ) surrounding the stem above each tumid joint. Flowers mostly perfect. Perianth (or calyx) 3-6-cleft, mostly colored, imbricated in bud and persistent. Stamens 4—15. Ovary 1-celled, free, with a single, erect ovule. Styles or stigmas 2 or 3. Fruit a 3-angled achenium enclosed in the calyx. Seed erect, albuminous, with a curved embryo. Figs. 147, 151-4, 286, 304, 313, 337, 521.

§	Ochreæ,	or sheathing	stipules,	present at	each joint(b)
---	---------	--------------	-----------	------------	--------------	---

1. ERIÓGONUM, Mx. Fls. many in each common 5-toothed involu ere. Cal. deeply 5-cleft. Sta. 9, sty. 3. Ach. 3-angled or 3-lobed.—Herbs clothed with down or wool. Lvs. alternate, exstipulate, mostly at the base of-the stem, the upper bract-like, often whorled at the forks of the umbel late inflorescence. Very abundant in the Pacific States. June—Aug.

1 E. tomentòsum Mx. Lower lvs. crowded, oblong-obovate, rusty-white beneath. the upper whorled in 3's; involucre sessile; calyx colored. 24 Dry soils, S. 2-3f.

2 E. longifòlium N. Lower lvs. crowded, oblong-linear, white beneath, the upper scattered; involucre pcdunculate; calyx green, woolly. Fla., and W. 2-4f.

2. BRUNNICHIA, Banks. Calyx colored, 5-parted, lobes oblong, at length increased and closed on the obscurely 3-angled achenium. Fil. 8, capillary, styles 3, slender, stigmas entire. 5 Tendrils from the ends of the branches. Flowers racemed, greenish.

B. cirrhòsa Banks.—A smooth, shrubby vine, 10-20f, on river banks, Car. to Fla., and W. Leaves cordate to ovate, entire. Sheaths obsolete. May.

3. OXÝRIA, R. Br. MOUNTAIN SORREL. Cal. herbaceous, 4-sepalled, the 2 inner sepals erect, larger, the 2 outer reflexed. Ach. lens-shaped, thin, girt with a broad, membranous wing. Sta. 6, equal. Stig. 2, sessile, penicillate. 24 Low, nearly acaulescent, alpine plants.

0. renifòrmis Hook (or digyna Camp.) Root leaves on long stalks, reniform; onter sepals **i** as long as the inner; fruit orbicular. White Mountains, and N. 3-4'. June

6

4. RHEUM, L. RHUBARB. Calyx colored, 6-sepalled, persistent. Sta
9. Sty. 3, very short, spreading, stig. multifid, reflexed. Ach. 3-angled, the angles margined. 24 Flowers fasciculate in racemous panicles.

R. RHAPÓNTICUM L. *Pie-plant*. Leaves smooth, cordate-ovate, very large (1-2f), the petioles juicy and pleasantly acid, of equal length; stems nollow, 3-4f, panicles bursting from large white bracts. Siberia.

5. RUMEX, L. DOCK. SORREL. Calyx of 6 sepals nearly distinct, the 3 inner (valves) larger, petaloid, connivent over the achenium, 1 or more of them usually bearing a tubercle or grain on the back, the 3 outer green. Sta. 6. Styles 3, short, stigmas penicillate-fringed. Ach. and seed 3-angled, embryo lateral.—Weed-like herbs with small, greenish flowers often whorled, in racemes or panicles. May—July. (See Addenda.)

- § Docks. Flowers all or mostly perfect. Valves bearing grains on the back...(*)

- 8 R. obtusifòlius L. Lower leaves ovate-cordate, obtuse, upper narrow, acute; panicle leafy, whorls distant; valves hastate-ovate, one chiefly grain-bearing, all with some bristle-shaped lateral teeth. 24 Fields, &c. 2-3f. § Europe.
- 9 R. marítimus L. Golden D. Low (1f); leaves lance-linear, the lowest cordate.
 wavy; whorls crowded; valves rhomb-ovate, pointed, each with 4 lateral awns and a large grain, yellowish. (1) Brackish waters, Mass. to Car.
- 10 R. pulcher L. Lower lvs. cordate, some fiddle-shaped, upper lanceolate; whorls distant, leafy; valves strongly toothed, unequally grain-bearing. S. §
- 11 R. Acetosélla L. Sheep Sorrel. Leaves oblanceolate, the base lobes conspicuous; valves not increasing in fruit. A common weed. 6'-1f
- 12 R. hastulatus Baldw. Leaves with small auricles or none, glancous; valves in creasing to round-cordate in fruit; ped. jointed. Mo. to Ga. rare.

6. THYSANÉLLA, Gray. Fls. 5 ¥ ♀. Cal. colored, 5-parted, lobes all erect, the 2 outer cordate, the 3 inner smaller, pectinate-fringed. Sta.
8. Styles 3. Achenia 3-angled, acuminate.—A smooth, erect herb, with the habit of Polygonella. (Polygonum, Ell.)

T. fimbriàta Gr.—Pine-barrens, Ga., Fla. Stem branched, 2—3f. Sheaths bristlefringed. Lvs. linear, 1-2'. Fls. rose-white, in crowded, panicled spikes. July-Oct.

7. POLYGONÉLLA, Mx. Calyx colored, 5-sepalled, persistent. Sta. 8, included. Styles 3 or almost 0. Ach. 3-cornered, naked or enclosed in the 3 inner sepals enlarged and become scarious valves. Embryo straight. —Herbs or delicate shrubs, with very narrow leaves and the small flowers solitary in each ochrea.

§ Fls. diæcious. Pedicel 1". Filaments all filiform. Stig. nearly sessile...Nos. 1-3
 § Fls. all Ø. Pedicel 2". The 3 inner filaments dilated. Styles manifest...Nos. 4, 5

- 1 P. parvifòlia Mx. Shrubby, branches strict, leafless above; lvs. linear-cuneate, panicle oblong; inner sepals equalling the acute achenia. S. 1-2f.
- **2 P. grácile** N. Annual, glaucons; branches filiform; leaves spatulate; **3** inner sepals exceeding the pointed achenia. Dry sands, S. 2-3f.
- **3 P. Croomia** Chapm. Shrubby; branches slender; leaves linear (2-3"); **3 valvee** unequal, 2 roundish, 1 oblong, exceeding the achenia. Uplands, S.
- 4 P. Meisneriàna Shutt. Shrubby, very leafy, leaves linear, filiform, 6-10", evergreen, ochrca tipped with a white membrane; 2 outer sepals reflexed. Uplands, Ga., Ala., Fla. 1-2f. A delicate bushy shrub.
- 5 P. articulàta Meisn. Annual, strict, with erect branches, which are soon nearly naked; leaves linear, caducous from the tops of the truncate sheaths; sepals flesh-colored, expanding. Dry. N. J., and W.: rare.

8. POLYGONUM, L. KNOT-GRASS. Calyx of 5 sepals, rarely fewer, colored or greenish, similar, imbricated in bud, at length all connivent, persistent. Sta. 8, rarely fewer. Sty. 2 or 3, mostly 3, short filiform. Ach. 3-cornered or lens-shaped, enclosed in the dry, withered calyx. Embryo curved, lateral, lying in a groove at one angle of the albumen. Herbs with ochreate-jointed stems and small, white, red, or greenish fis. June—Sept.

\$ Stems armed with retrorse prickles. Lvs. cordate-sagit. ECHINOCAULON..Nos. 21, 22

P. aviculare L. Bird's K. Doorweed. Procumbent, diffuse; leaves lance-ellip

tic, acutish, 1'; flowers 2 or 3 together, subsessile, reddish; achenia striate, dull, enclosed; stamens 5-8. (1) A common weed, 6-16'. In rich shady soils it arises to β . eréctum, with larger oval leaves and pedicellate flowers.

- **2** P. ténue Mx. Slender, rigid, erect, with long simple-angular branches; lvs. linear, erect; sheaths bristle-fringed; flowers solitary; achenia shining. Dry. 4-1f.
- **3 P. marítimum L.** Prostrate, diffuse, glaucous, with very short joints and swelling torn sheaths; lvs. fleshy, oblong, 1-6"; fls. sessile, at length spicate; fruit little exserted, smooth and shining. (1) Sandy coasts, Mass. to Ga. 1-1f.
- 4 P. ramosíssimum Mx. Erect or ascending, much branched, striate; lvs. linear oblong, 1-2'; flowers greenish, pedicellate; fruit ½ exserted, olive-green, shining, 14". (1) Sandy shores, R. I. to Mich. and Md. 2-3f.
- 5 P. hirsùtum Walt. Densely hirsute with spreading tawny hairs, erect; lvs. lanceolate; sheaths fringed; flowers white, in 2 or 3 slender spikes. (2) S. 2-3f.
- 6 P. hydropiperoides Mx. *Mild Water-pepper*. Stem smooth, slender, sheaths long, close, fringed and hispid; lvs. linear-lanceolate, not acrid; spikes erect, slender, loose at base; calyx glandless, achenia shining.
 - β. setacea the leaves and stem above are more or less hispid. 24 Wet. 1-3f.
- 7 P. acre H. B. K. Water Smartweed. Glabrous, virgate, slender; sheath loose, bristle-fringed; lvs. lanceolate, acrid; spikes filiform, erect; flowers reddish-green, dotted like the leaves; fruit shining. ① Wet places. S. and W. 2-5f.
- 8 P. TINCTÒRIUM. Madder. Lvs. oval; spikes oblong, dense, roseate. China. 1-2f.
- **9 P. Hydropiper** L. Water Pepper. Glabrous; sheaths bristly-ciliate; lvs. lanceolate, very acrid, finely punctate; spikes nodding, loose, slender. greenish; calyx punctate; stamens mostly 6; achenia roughened, black. (1) Damp. 1-2f. §
- 10 P. Càreyi Olney. Stem erect, 3-5f, bristly and much branched; leaves lanceo late, some hispid; stipules tubular-truncate, ciliate; spikes dense, purplish, nodding on long hairy peduncles. (1) Swamps, N. Eng. to Penn. (See p. 447.)
- 11 P. Persicària L. Smart-weed. Glabrous, erect; leaves lanceolate, usually marked with a brown spot; sheaths fringed; spikes dense, erect, oblong; stamens 6; style 2-cleft; achenia shining. ① Waste grounds: common. 1-2f. §
- 12 P. Pennsylvánicum L. Branches above and pedicels glandular-hispid; leaves lanceolate; spikes erect, oblong, crowded, rose-colored, showy; achenia lens-shaped, with flat sides. ① Margins of waters. 2-4ť.

β. densifiorum. Smooth; racemes slender; achenia truly lens-shaped. South.

- 13 P. incarnatum Ell. Smoothish; leaves lanceolate; branches and ped. glandu lar-dotted; spikes linear, nodding, becoming long; achenia lens-shaped, with con cave sides. (1) Ditches and pools, W. and S. 2-3f.
- 14 P. amphibium L. Stem prostrate and rooting below, ascending; leaves thick smooth, lance-oblong, variable; spikes oblong, ovoid or dense; stamens 5; style 2-cleft. Pools and swamps. 3-4f. Spike 1' or more.
 - β . terrestre. Plant more or less hirsute; spikes elongated.
- 15 P. vivíparum L. Low, simple, erect from a creeping rhizome; leaves lance linear, with rolled edges; spike 1, linear. 24 White Mountains, and N.
- 16 P. orientále L. Prince's Feather. Tall, erect, branched; leaves large, with hairy salver-form sheaths; stamens 7; styles 2; spikes large, red, nodding, showy.
 (1) Fields and gardens. 3-8f. §
- 17 P. Virginiànum L. Stem simple; leaves lance-ovate, acuminate; flowers re mote, 1 from each sheath, in a slender raceme, greenish. 24 Shades. 3-4f.
- 18 P. convólvulus L. Knot Bindweed. Prostrate or climbing, ronghish, sheathe naked; leaves hastate, pointed; flowers in axillary fascicles or in interrupted racemes; fruit exserted, dull, blackish. (1) Fields. 2-4f. §
- **19 P. cilinode** Mx. Climbing; sheaths *ciliate* at base; leaves deeply **cordate**, pointed; racemes paniculate, loose; achenia shining. Hedges. 3–8f.
- 20 P. dumetorum L. Hedge Bindweed. Climbing high ; joints not ciliate ; loavos

cordate-hastate, with acute lobes ; outer sepal keeled and winged on the back ; fruit smooth, black. Thickets. 3-12f. §.—A native form,

 β . scandens, has the raceme panicled and the sepals with very broad wings.

- **21 P. sagittàtum L.** Scratch-grass. Climbing, 3-5f, rough backwards; leaves lance-sagittate; flowers in small heads, whitish; stamens 8; style 3. (1) Wet.
- 22 P. arifòlium L. Rough with reversed prickles, 3-5f; leaves hastate, apex and lobes pointed; flowers racemed; stamens 6; styles 2. Wet.

9. FAGOPÝRUM, Tourn. BUCKWHEAT. Calyx colored, equally 5pærted, persistent, unchanged. Stamens 8, alternate with 8 honey-glands. Styles 3, with capitate stigmas. Ach. 3-angled, much exceeding the calyx.
(1) Leaves cordate-hastate. Flowers rose-white, in panicled racemes.

- **1 F. esculéntum** Mœnch. Smoothish; leaves with obtuse lobes; flowers showy, numerous, sought by bees; achenia ovoid-triangular, wingless, black. Fields. 2-4f. §
- 2 F. TARTÁRICUM. India Wheat. Glabrous; leaves broader than long, lobes acutish; racemes axillary and terminal, scarcely panicled; achenia lance-triangular, angles sinuate-dentate, rather obtuse; calyx minute. Tartary. Cultivated.

ORDER CV. PHYTOLACCACEÆ. POKEWORTS

Herbs with alternate, entire leaves and perfect, 5-parted flowers. Calya free. Stamens 5—30, alternate with the sepals when of the same number Orary of 1 to several carpels, each 1-ovuled. Styles and stigmas as many as carpels Fruit baccate or acheniate. Seeds erect, with the embryc could around the albumen.

1. PHYTOLÁCCA, Tourn. POKE. GARGET-WEED. Calyx 5-parted. Stamens 5-25. Styles 5-12. Berry depressed-globular, with as many seeds as styles.—Herbaceous. Racemes terminal, soon opposite the leaves.

P. decándra L. Stem stout, purplish, tall; leaves ovate; flowers with 10 stamens and 10 styles; berries black, full of crimson juice. Hedges. 5-8f. July+.

2. RIVINA, Plum. Calyx 4-parted, 3-bracted. Sta. 4 or 8. Berry at last dry, 1-seeded, embryo a vertical ring. Shrubby, with racemes terminal, soon lateral.

R. lævis L. Branching, smooth, 6-Sf; lvs. ovate; fls. rose-white, in long racemes stamens 4. Fla., and W. Herbage bright-green.

3. **PETIVÈRIA** ALLIÀCEA L. Half-shrubby, 2-3f, with obovate-ob tube leaves and spicate flowers. Grows in S. Car. (Michaux), and S. to the tropics.

ORDER CVI. CHENOPODIACE Æ. CHENOPODS OR GOOSE-FOOTS.

Herbs chiefly weed-like and homely, more or less fleshy, with alternate exstipulate leaves. Bracts not scarious. Flowers greenish, regular. Calyz imbricated in bud. Stamens as many as, and opposite to the calyx lobes, or fewer. Ovary 2-styled, 1-celled, becoming a 1-seeded, thin utricle or caryopsis. Embryo coiled or spiral.

1. Flower of Chenopodium album. 2. Calvx, &c., removed, showing the ovary and 2 stamens. 3. Seed cut across, showing the coiled embryo. 4. Branch of Salicornia herbacea. 5. Two joints magnified. 6. Ovary of a flower.

§ Leaves flat, neither fleshy nor spiny. Embryo a ring around copious albumen(a)	
§ Leaves none, or linear and fleshy or spinescent. Embryo a spiral or folio. Albumen $0(y)$	
a Stems twining and climbing. Flowers white, in racemes	1
a Stems erect. Flowers greenish, all similar and perfect(b)	
a Stems erect. Flowers greenish, of two sorts, monæcious or diæcious(x)	
b Seed horizontal.—c Pericarp rough and corky. Calyx ribbedBETA.	2

1. BOUSSINGAÚLTIA, Kunth. MEXICAN VINE. Cal. corolla-like, open, 5- or 6-parted, with several imbricated bracts. Stig. 3, club-shaped. Pericarp thin. > Twining to the right. Leaves thick, petiolate. Flowers in many spike-like racemes. S. America.

B. BASELLOIDES. Leaves broadly cordate-ovate, acuminate. 24 Arbors. 15f.

2. BETA, Tourn. BEET. Cal. 5-cleft, persistent. Sta. 5. Ovary halfadherent. Stig. 2. Utricle depressed, corky, enclosed in and consolidated with the ribbed calyx.—Herbs with fleshy roots, furrowed stems, alternate leaves, and greenish, spicate flowers.

B. vulgàris. Glabrous; leaves large, wavy, acute both ways; spikes in a large pani cle the second year. (2) S. Eur. Cultivated for its root, which is commonly red.
β. Cicla. Scarcity. Leaves roughish; root slender, whitish; flowers in 3's.
γ. Rapa. Turnip Beet. Root napiform, white or red, very sweet.
δ. Mangel-wurtzel. Root very large, mostly white. Cultivated for stock.

3. CYCLOLOMA, Moquin. Calyx 5-cleft, lobes strongly keeled, at length appendaged outside with a circular membranous border or crown. Sta. 5, styles 3. Utricle depressed, enclosed. (1) With furrowed stems, alternate lobed leaves, and small sessile flowers.

C. platyphýllum Moq.—Banks of the Mississippi, Ill., and W. 1—14f, white-downy above. Leaves lance-oblong, sinuate-toothed or lobed, 2'. Flowers at length in smal panicles. July—Sept.

4. CHENOPODIUM, Tourn. PIGWEED. GOOSEFOOT. Calyx bractless, 5-cleft, lobes often keeled, never appendaged, more or less enclosing the fruit. Sta. 5, styles 2. Utricle depressed, membranous, seed mostly horizontal, lenticular. Weeds often glaucous or glandular, with alternate often rhombic lvs., and the minute fis. in panicled spikes. June-Aug.

- § Plants ill-scented, smooth, never glandular. Embryo a complete ring...(*)
- § Plants glandular-puberulent, green, aromatic. Embryo a half ring...(b)
 - * Herbage glaucous or whitish, covered with mealiness......Nos. 1-4
 - * Herbage green, rarely purplish, not glaucous or mealy...(a)
 - - b Flowers cymous, innumerable, in long raceme-like panicles.....No. 10
- **1 C. glaucum** L. Prostrate or ascending, branched; leaves ovate to oblong, obtuse, sinuate-angled or -dentate; racemes simple; seed partly enclosed. (i) Mass. to Pa rare. 1f. Leaves 1-2', whitish beneath. § Europe.
- 2 C. album L. Common P. Erect, loosely branched, striate; lvs. rhombic ovate, sinnate-toothed to subentire; racemes some panicled; seed wholly enclosed. (1) The commonest of weeds, 2-7f, often striped with purple.
- 3 C. Boscianum Moq. Erect, branched; lvs. small, lance-linear, entire, canescent beneath; seed partly enclosed. (1) Shades, Pa. (Prof. Porter), and S. 2f.
- 4 C. polyspérmum L. Ascending, branched from base; lvs. ovate to oblong, entire, bright green; racemes spike-like, strict; fruit partly enclosed. Rare. § Eur.
- 5 C. hýbridum L. Leaves ample, subcordate, deeply sinuate-angled, with pointed lobes; racemes leafless; seed rugous, dull. ① Common, 2-4f. § Europe.
- 6 C. murale L. Ascending; leaves ovate-rhombic, acute at base, unequally and acutely toothed; seed acute-edged, dull-rugous. ① Rare. 12-18'. §
- 7 C. úrbicum L. Erect; leaves as in No. 6, but slightly mealy; racemes strict, dense, in an erect narrow panicle; seed blunt-edged, shining. (1) 2-4f. §
- 8 C. ambrosioides L. Mexican Tea. Branched; leaves oblong to lance-linear, attenuate both ways, sinuate-toothed to entire; spikes dense, leafy, seed shining, obtuse-edged; fruit wholly enclosed. (1) 1-2f. § Mexico.
- 9 C. anthelmínticum L. Worm-seed. Subsimple; leaves ovate-oblong, deeply sinuate-serrate or pinnatifid; racemes spike-like, long; styles mostly 3; fruit as in No. 8. 24 Waste grounds. 1-3f. § Mexico.
- 10 C. Botrys L. Oak-of-Jerusalem. Leaves oblong, obtuse, sinuate-subpinnatifid; branches strict, panicles slender, spirally twisted. (1) Sands, &c. 1-2f. Plants strongly aromatic of turpentine.

5. ROUBLEVA, Moq. Calyx 5-toothed. Sta. 5. Styles and stig. 3. Seed lens-shaped, quite vertical, enclosed in the veiny rugous calyx. 24 Pubescent, much branched. Leaves pinnatifid.

R. multifida Moq.—Roadsides about New York. Prostrate and ascending. 1–2f. Flowers minute, in numerous panicled racemes. Leaves 1'. § S. America.

6. BLITUM, Tourn. BLITE. Calyx 3-5-sepalled, mostly becoming juicy and berry-like in fruit, enclosing the utricle. Sta. 1-5. Styles 2. (1) Leaves petiolate. Flowers glomerate.

§ Heads forming a dense terminal spike. Calyx dry......No. 1
§ Heads axillary, some spicate above. Calyx thickened......Nos. 2, 3

- 1 B. Bonus-Henricus Reich. Good King Henry. Subsimple, ascending, mealy; leaves triangular-hastate; stamens 5. Waysides, N.: rare. § Europe.
- 2 B. marítimum N. Much branched; leaves lanceolate, attenuate to both ends stamen 1; seed shining. Marshes, R. I., N. Y., and N. J. 1-2f. August.
- **3 B. capitàtum L.** Strawberry B. Branched; leaves triangular-hastate glomer ate fruit reddened like strawberries, insipid. Va., and N. 1--2f. June.

7. ATRIPLEX, Gært & Bractless. Calyx 3-5-sepalled. Sta. 3-5. 9 Ovary 2-styled, with no stam., enclosed between 2 leaf-like bracts, with or without a calyx.—Herbs or shrubs, often mealy or scurfy, with opposite or alternate hastate leaves and glomerate-spiked green flowers.

- 1 A. hastàta L. Slender, weak, green : leaves petiolate, hastate, remotely-toothed; flowers single in the slender spikes, bracts triangular-ovate, denticulate. N. Eng. to S. Car., coastward. 1-3f.-β. Purshiana is scurfy.
- S. Car., coastward. 1-3f.-β. Purshiana is scurfy.
 2 A. littoràlis L. Erect with many strict branches; leaves short-stalked, lanceolate to linear, subentire; flowers glomerate, forming interrupted spikes; bracts hispid, triangular-hastate, denticulate. Lake shores, N-W.
- 3 A. ròsea L. Canescent, ascending, branched; lvs. ovate to oblong, sinuate-toothed; glomerules axillary, bracts rhombie, toothed. Albany, N.Y. (Prof. Porter). 2f. § Eur.
- 4 A. HORTÉNSIS. Garden Orache. Erect, branched; lvs. triangular-hastate or -oblong, subentire, bright green; bracts roundish, entire. Asia.
- 5 A. arenària N. Sand Orache. Mealy-canescent, branched; leaves oval to oblong, entire, short-petioled; bracts broad-cuneate, united, denticulate. (1) Sea-beaches, Mass. to Fla. (Obione, C-B.) 6-12'. July-Sept.

9. SPINÀCIA, Tourn. SPINAGE. Diœcious, bractless. & Cal. 3-5sepalled. Sta. 4 or 5, exserted. Q Calyx tubular, 2- or 4-toothed, soon hardening and enclosing the compressed achenium. Styles 4. (1) Leaves petiolate. Flowers green, axillary. June, July.

S. OLERÀCEA. Leaves hastate-lanceolate to arrow-shaped; fruit-calyx solitary, 3-angled' armed with 2 or 4 slender prickles, or unarmed. ① Gardens. 1-2f.

10. CORISPÉRMUM, Juss. Calyx 1-2-sepalled or 0. Stam. 1-5.
Styles 2, short. Pericarp oval, flat and thin, adnate to the seed, vertical.
(1) With narrow, sessile leaves, and sessile, solitary, axillary flowers.

C. hyssopifolium L. Hairy or glabrous, much branched; flowers in many bracted spikes, bracts ovate, subulate-pointed; leaves 1' and less; fruit a pellucid disk. Sandy lake-shores, Buffalo, and W. §

11. SALICÓRNIA, Tourn. SALTWORT. SAMPHIRE. Flowers 2 or 3 together, sunk in the cavities of the jointed stem. Calyx bladder-like, denticulate, enclosing the compressed vertical fruit. Stamens 1 or 2. Styles 2. Embryo folded.—Seaside, jointed, fleshy herbs almost leafless, with opposite branches.

- 1 S. herbàcea L. Suberect; spikes elongated, green; joints truncate and bractless; middle flower largest. (1) Salt marshes. 8-12'. August.
- 2 S. Virgínica L. Erect; spikes short, soon red; joints short, tipped with 2 acute bracts; flowers all alike. 24 Salt marshes. 6-9'. Sept. (S. mucronata C-B.)
- 3 S. fruticòsa L. Prostrate, with ascending branches; spikes slender, joints tipped with 2 obtuse bracts. 24 Sandy beaches. (S. ambigua C-B.)

12. CHENOPODINA, Moq. GLASSWORT. Calyx bracteolate, cupshaped, 5-parted, fleshy in fruit with the seed horizontal. Sta. 5. Stigma seesile. Embryo a flat spiral.—Smooth seaside fleshy plants, with alternate sessile leaves and axillary flowers. (Suæda, Forsk.) C. maritima Moq. Diffusely branched; lvs. linear, 2' and less, semitcrete; flower: minute, green, clustered, sessile; seed black, shining. ① Marshes. August.

 SÁLSOLA, Gært. SALTWORT. Fls. § sessile. Sep. 5, transverselywinged on the back. Wings enlarged and scarious in fruit. Sta. 5. Styles
 Utricle depressed, horizontal. Embryo cochleate.—Seaside fleshy plants, with terete leaves and axillary, whitish flowers.

S. Kali L. Branches diffuse on the sand, rigid, with crowded subulate leaves, each tipped with a spine; flowers solitary, wings purplish; seed with a thin testa and green embryo coiled like a snail-shell. ①

ORDER CVII. AMARANTACEÆ. AMARANTHS.

Herbs similar to the last Order, but with an imbricated involucre of 3 dry, scarious bracts added to the flowers. Sepals 3-5 (rarely but 1), persistent and often colored, unchanged in fruit. Stamens 3-5. Ovary com pressed, 1-celled, $1-\infty$ -ovuled. Style 1. Fruit a utricle, caryopsis or berry. Seed vertical, albuminous. Embryo annular.

§	Anthers 2-celled.	Ovary with many	ovules.	Cultivated			Celosia.	1

- 2 A. paniculatus Mon. Prince's F. Pubescent. pale-green; leaves lance-ovate

spikes slender, acutish, crowded, all nearly equal, reddish-green, or in B. sanguíneus, crimson ; bracts short-awned. Fields and gardens. 2-3f. § Mexico.

- 8 A. retrofféxus L. Pubescent, erect, stout; leaves ovate or subrhombic, obtuse. pointed; panicle of thick, crowded, dense spikes; bracts awned, longer than calyx. A common weed in gardens and fields. 2-4f. Plant green or glaucous. §
- 4 A. hýbridus L. Erect, glabrous, green; leaves ovate, bright green; panicle loose; spikes terete, obtuse; calyx shorter than the awned bracts. § Mexico.
- 5 A. albus L. White Pigweed. Whitish, diffusely spreading; leaves long-petioled. rhomb-ovate, very obtuse: glomerules remote, in pairs, 4- or 5-flowered: common. §
- 6 A. melanchólicus. Love-lies-bleeding. Erect, usually dark-purple ; leaves lanceoblong, obtuse, emarginate; glomerules dark-purple. Asia. 2-4f. B. tricolor. Leaves variegated with purple, green, and yellow.
- 7 A. spinòsus L. Much branched; leaves rhomb-ovate, obtuse, with 2 spines in each axil; spikes panicled, erect, acute; bracts equalling the sepals; utricle falling without opening. Waysides, Penn. to Fla., and W. § 8 A. lívidus Moq. Erect, smooth, livid-purplish; lvs. elliptic, obtuse, emarginate;
- spikes slender, rigid, acute; sepals thrice longer than bracts; fruit rugous. §
- 9 A. defléxus L. Ascending, ashy-green, branches deflexed; leaves rhomb-lanceolate, obtuse; spikes thick, obtuse; sepals longer than bracts; fruit smooth. §
- 10 A. víridis L. Erect; livid-purple; leaves long-petioled, ovate; spikes panicled, rather loose and long; sepals twice longer than the bracts. Waste grounds, S.
- 11 A. pùmilus Raf. Diffuse or prostrate; leaves subsessile, obovate; flowers in axillary, sessile glomerules; fruit twice longer than the calyx. Sandy sea-coasts.

3. ACNIDA, L. WATER HEMP. Fls. 3 9, 3-bracted. 3 Calyx of 5 equal, erect sepals. Stamens 5, anth. 2-celled. Q Cal. 0. Ovary 1-ovuled, with 3-5 stig. Utricle 1-seeded, naked. (1) Glabrous, tall, branched, with long-stalked, entire leaves and fis. small, green, in slender spikes. Jl.-Oct.

§ MONTÈLIA. Utricle circumscissile, shorter than its stigmas......No. 2

- 1 A. cannabina L. Leaves lanceolate to linear, pointed, 2-8'; & spikes numerous, rather dense, 2-4'; 2 spikes interrupted; panicle leafy; fr. 11', obovoid, bracts 1 as long. Salt marshes 3-8f. The two sorts quite dissimilar.
- 2 A. tamaríscina. Leaves lance-oval, 1-5'; spikes interrupted and leafy at base, or throughout; 2 bracts longer than the ovary. Wet shores, E. and W. 1-6f. The 3 plant scarcely differs from 3 No. 1.

4. IRESINE, Br. Fls. & Q or Q, 3-bracted. Calyx of 5 erect sepals. Sta. 5, anth. 1-celled. Stigmas 2 or 3. Utricle valveless, included in the calyx.--Leaves opposite, petiolate. Flowers minute, scarious, white, in dense spikes or heads. September, October.

I. celosioides L. Branches opposite, strict; leaves ovate-lanceolate; flowers in numerous delicate panicled spikes. (1) Banks, W. and S-W. 2-4f.

5. GOMPHRÈNA, L. GLOBE AMARANTH. Fls. 3-bracted. Cal. 5sepalled, erect. Fil. 5, 3-cleft at apex, middle tooth bearing the 1-celled anth. Stig. capitate. Fr. as in Iresine. Tropical plants. Lvs. opposite. Flowers in heads.

- G. GLOBÒSA. Trichotomously much branched; leaves oblong, entire; flowers fadeless bright purple, in heads 1' diameter. (1) E. India. 1-2f.
 - 6. TELANTHÈRA, Br. Fls. 3-bracted. Cal. of 5 sepals. Stamens 5,

with 5 intervening sterile filaments, anth. 1-celled. Stig. capitate. Fr. at in Iresine. Leaves opposite. Heads axillary and terminal.

T. polygonoides Moq. Procumbent, diffuse, hairy; leaves oval, obtuse, attenuate to a winged petiole; flowers silvery whitish. 24 Waste grounds, S.

7. FRCELICHIA, Mœnch. Fls. 3-bracted. Calyx tubular, 5-cleft at apex. Sta. 5, connate into a tube, with 5 sterile filaments. Anth. 1-celled. Stigmas capitate or tufted. Utricle enclosed in the hardened calyx. (1) Hairy or woolly stems, long-jointed.

F. Floridàna Moq. Nearly simple, strictly erect; leaves linear; flowers in short dense, cottony spikes. River banks, W. and S. 1-3f. July, August.

ORDER CVIII. LAURACEÆ. LAURELS.

Trees and shrubs aromatic, mostly with alternate, simple, punctate leaves. Flowers with a colored perianth of 4-6 slightly united, strongly imbricated sepals. Anthers 2- or 4-celled, opening upward by as many recurved, lid-like valves. Ovary 1-celled, 1-ovuled, free, in fruit a berry or a drupe. Seed without albumen.

5	§ Flowers perfect. Stamens 12, th	he 3 inner sterile.— a Evergreen tree	sPersea. 1
		-a Leafless vines.	S. FlaCASSYTA.
S	\$ Flowers diœcious. Stamens 9, a	Il fertile. Leaves deciduous(*)	
	* Involucre none. Anthe	rs 4-celled, 4-valved. Leaves lobed.	SASSAFRAS. 2
	* Involucre 4-leaved. And	thers 2-celled, 2-valved. Leaves ent	ireBENZOIN. 3
	* Involucre 4-leaved. An	thers 4-celled, 4-valved. Leaves ent	ireTETRANTHERA. 4

1. **PÉRSEA**, Gært. RED BAY. BAY GALLS. Fls. ξ , umbellate, with no involucre. Cal. of 6 sepals. Sta. 12, the 3 inner sterile, reduced to mere glands, anth. 4-celled (2 cells above and 2 below). Drupe oval, seated on the persistent calyx, containing 1 large seed. 5

P. Carolinénsis Mx. Tree 30-40f, often but a shrub, with lance-oblong, entire, firm leaves, 6'; umbels small, on ped. 1-2'; drupe oval, blue. Swamps, Va. to Fla. Bark deep-furrowed; wood fine, rose-colored. April, May.

2. SÁSSAFRAS, Nees. SASSAFRAS. Fls. & Q. Calyx 6-parted, deciduous. & Sta. 9, the 3 inner with a pair of glands at base, anth. 4-celled. Q Sta. 6, all sterile. Ov., style, and stig. 1. Drupes ovoid, blue, on thick red pedicels. 5 Flowers yellow, appearing before the leaves in Mar.—Jn.

S. officinale Nees. Shrub or small tree, 10-20f; leaves of two forms-ovate and entire, or 3-lobed, cuncate at base; flowers handsome, in racemes or corymbs. Fields and woods. Bark pleasantly aromatic.

3. BENZOIN, Nees. SPICE WOOD. Flowers & 2, with 4 involucrate scales. Cal. 5- or 6-parted. & Sta. 9, the inner 3 glandular at base, anth. 2-celled. & Sta. 15—18 rudiments. Drupe obovoid, red. 5 5 Lvs. entire. Fls. yellow, in small lateral clusters before the leaves. (Lindera, Thunb.)

1 B. odoríferum Nece. Shrub 6-12f; leaves lance-obovate, acute at base; buds and pedicels smooth. Moist woods: common. May.

2 B. melissæfölium Nees. Shrub 2-3f; leaves lance-oblong, abrupt or cordate at base; buds and pedicels villous. Swamps, S. February, March

4. TETRANTHÈRA, Jacq. POND SPICE. Fls. as in Benzoin, but the anthers are 4-celled and 4-valved as in Sassafras. Drupe globular (red). 5 Flowers yellow, precocious. February, March.

F. geniculèta Nees. Shrub 8-15f, with branches and branchlets very crooked and divaricate. Leaves small, oval to oblong. Swamps, S.

ORDER CIX. LORANTHACEÆ. LORANTHS.

Shrubby plants, parasitic on trees, with thick, opposite, exstipulate leaves. Flowers mostly diclinous, an adherent calyx of 2-8 lobes, with stamens of the same number, opposite the calyx lobes. Ovary 1-celled, becoming a fleshy fruit with one albuminous seed. (See Addenda.)

PHORODENDRON, N. MISTLETOE. Fls. $\sharp \$, in jointed spikes, mostly 3-lobed. \sharp Anth. sessile on the base of each lobe, the 2 cells divergent. \Im Stig. sessile (no stamens). Fr. a pulpy, viscous berry.—Herbage yellowish-green. Stems brittle, woody, firmly engrafted on the limbs of oaks, elms, &c.

P. flavéscens N. Stems much branched, 1-11f; leaves wedge-obovate, thick, entire, as long as the spikes; berry white, pellucid, sticking to the limb which it touches until it takes root.

ORDER CX. SANTALACEÆ. SANDALWORTS.

Trees, shrubs, and *herbs,* with alternate, undivided leaves, with the *calya* tube adherent to the ovary, limb 4-5-cleft, valvate. *Stamens* as many as the sepals, and opposite to them. *Ovary* 1-celled, with a free central placenta bearing at top 2-4 suspended ovules, but in *fruit* drupaceous, 1-seeded, crowned with the persistent calyx.

1. COMÁNDRA, N. BASTARD TOADFLAX. Calyx tube adherent, limb 4- or 5-parted. Anth. 4 or 5, connected as above mentioned. Fil. on a 5-lobed perigynous disk.—Smooth plants, with herbaceous branches and whitish flowers in small umbels.

- 1 C. umbellàta N. Flowers perfect; branches strict, corymbed above; leaves oblanceolate, subsessile; umbels 3-flowered, exceeding the leaves; connecting hairs yellow. Rocky woods. 1f. Leaves scattered, 9". June.
- 2 C. Darbya A. DC. Flowers diccious; branches short, leafy; leaves elliptical, mostly opposite; umbels 5-flowered, shorter than the leaves; connecting hairs white. Woods, S.: rare. 1-2f. The fertile plant unknown.

2. BUCKLÉYA, Torr. Fls. 5 2, the 2 with a double calyx, the inner (corolla) caducous, and without stamens. Sty. 4-lobed. 5 Calyx single, 4-lobed, with 4 stam. Fruit oblong, 10-furrowed, 1-seeded. 5 Leaves subsessile, entire. Sterile flowers clustered, fertile solitary. **B. distychophýlla** Torr.-Mountains of E. Tenn. Shrub 10-20f; leaves ovate acuminate; fruit 8-9" long, resembling that of Forestiera.

3. PYRULARIA, Mx. OIL-NUT. Fls. $\mathfrak{s} \mathfrak{P}$. Calyx 5-cleft, half-adherent by the 5-toothed disk. Style 1, stigmas 2 or 3. Drupe pear-shaped, 1-seeded, with the albumen very oily. \mathfrak{H}

P. pùbera Mx. Shrub 4-6f, spineless, with oval-oblong leaves and small greenish flowers in terminal racemes; drupe 7-9". Mountain streams. Pa., and S. May.

ORDER CXI. THYMELACEÆ. DAPHNADS.

Shrubs with a very tough, acrid bark, entire leaves and perfect flowers, with the calyx tubular, colored, the limb 4-(4- or 5-)parted, regular, the tube bearing the *stamens*, as many or usually twice as many as its lobes, and free from the *ovary*, which is 1-celled, 1-ovuled, the suspended seed with little or no albumen.

1. DIRCA, L. LEATHERWOOD. Cal. colored, tubular, limb obscurely 4-toothed. Sta. 8, exserted. Style 1. Berry 1-seeded. 5 Fls. opening before the oblong-obovate, alternate leaves, 3 from each bud.

D. palústris L. Shrub 3-5f, along streams, with very tough bark; flowers 4", yellowish, in April, May; berry oval, small, red.

2. DAPHNE, L. Cal. colored, funnel-form, limb spreading, 4-parted. Anthers 8, subincluded. Stigmas capitate. Berry fleshy, 1-seeded. 5 Native of the Old World.

- **1 D.** MEZÈREUM. Shrub 1-3f, with very smooth lanceolate leaves appearing later than the lateral clusters of rose-purple, sweet-scented flowers.
- 2 D. ODORA. Shrub 2-3f; leaves lance-oblong, evergreen; clusters terminal, roseate, very fragrant. Greenhouse.
- **3 D.** LAURÈOLA. Shrub 1-5f, hardy, with large oblanceolate, shining, evergreen leaves and axillary clusters of greenish flowers.

ORDER CXII. ELÆAGNACEÆ. OLEASTERS.

Shrubs or trees usually with the leaves covered with a silvery scurf, enture. *Flowers* mostly directions, the calyx free, entire, persistent, becoming in *fruit* pulpy and berry-like, enclosing the 1-celled, 1-seeded achenium Embryo straight, with little albumen.

- * Flowers dioccious. Stamens 8. Leaves opposite, after the flowers......Shephesdik. 3

1. ELÆÁGNUS, L. OLEASTER. Cal. 4-cleft, colored within. Sta. 4, alternate with the sepals. Achenium enclosed in the mealy, 8-furrowed calyx tube. 55 With silvery foliage.

- 1 E. ARGÉNTEA Ph. Silverberry. Shrub 8--12f; leaves broadly or narrowly elliptical, acute, 1-2'; flowers axillary, deflexed, canescent. Dakota, and W.
- 2 E. HORTÉNSIS. Tree with narrow-lanceolate, acute leaves; flowers axillary, erect.-Also, E. LATIFÒLIA, with overgreen leaves, is cultivated.

2. SHEPHÉRDIA, N. Fls. & Q. Cal. 4-cleft. Sta. 8, with 8 glands.
Q Calyx tube closely investing the ovary, limb 4-lobed. Sty. and stig. 1.
Berry globular, fleshy. 5 Spinescent.

- 1 S. Canadénsis N. Shrub 6-8f; leaves elliptic-ovate, clothed beneath with stellate hairs and rusty scales, nearly smooth above. Banks of streams, N. Clusters subsessile. Berry sweetish.
- **2 S.** ARGÉNTEA N. Buffalo Berry. Tree 12-18f; leaves oblong-ovate, obtuse, both surfaces smooth and covered with silvery scales. Fruit the size of a currant, scarlet, well-flavored. Missouri.

3. HIPPOPHÆ RHAMNOIDES. Shrub with lance-linear leaves, silvery white beneath, and a crowd of yellow, acid drupes. Europe.

ORDER CXIII. EUPHORBIACEÆ. SPURGEWORTS.

Herbs, shrubs, or trees, usually with a milky, acrid juice. Flowers diclinous, sometimes enclosed in a cup-shaped involucre. Calyx inferior, sometumes wanting. Corolla scale-like or colored, often wanting. Ovary free, sessile or stipitate, 2-, 3-(or more)-carpelled; styles distinct or united. Fruit of 2, 3 (or more) 1-2-seeded carpels (rarely of 1 carpel) united to a common axis, at length separating. Embryo in fleshy albumen. Fig. 142.

547. Head or capitulum of Euphor bia corollata. 8 The involucre tube (cut open, showing the monandrous, staminate flowers surrounding the pistillate. 9. One of the 3 flowers,

with a toothed bract at base. 50 Cross-section of the ovary, showing the 3 one-seeded cells or carpels.

- E. corollàta L. Flowering S. Erect, glabrous, or subglabrous; umbel 3-7-rayed, rays 3- and 2-forked; lvs. oblong to oblong-linear, obtuse, those of the umbel whorled or opposite; involucre glands obovate, petaloid. 24 Dry fields, 1-2f. July, Aug. β. angustifolia. Leaves oblong-linear; umbel becoming irregular. S.
- 2 E. Curtísii Eng. Smooth, slender, branched from base, divisions about 3-forked, then 2-forked; leaves opposite or in 3's, linear-oblong or linear; heads minute; involucre glands narrowly white-bordered. 24 Barrens, S. 1f. (E. discoidalis Chapm.)
- **3 E. pubentissima** Mx. Hairy, 2 or 3 times forked; leaves oval or ovate-oblong, petiolate or subsessile, scattered, the floral much smaller; heads minute; involuce glands minutely white-margined, entire. Dry. S. 1f. (E. paniculata Ell.)
- 4 E. mercurialina Mx. Stem naked below, leafy, and 3- or 2-forked above, pubescent; leaves oval or ovate, petiolate, mostly opposite; involucre *lobes crenulate*, white. Tenn.: rare. 8-10'. Too near to the preceding.
- 5 E. marginàta Ph. Leaves lance-oblong, sessile, the floral crowded, and with a broad white margin; umbel 3-rayed, capitate. (1) Ky., and W. 1f. †
- 6 E. Cyparissias L. Lvs. linear, much crowded, the floral broad-cordate, all sessile; umbel of many simple rays; glands lunate. 24 Fields and gardens. 1f. §
- 7 E. Esula L. Lvs. lance-linear, the floral broadly cordate; umbel of many forked rays, and scattered branches below; glands 2-horned. Fields: rare. §
- **S E. Peplus L.** Leaves round-cuneate, the floral ovate; umbel of 3 (rarely 5) forked rays; carpels doubly wing-keeled on the back. Fields, N. Eng.: rare. § Europe.
- 9 E. Ohiótica Steud. Smooth, erect from a decumbeut branching base; lvs. mostly floral, reniform, sessile, the pairs appearing orbicular; carpels not winged; glands 2 horned. 2t Woods, Ohio, W. and S. 1f. (E. commutata Eng.)

- 10 E. tetrápora Eng. Leaves linear-spatulate, the floral larger, transversely ovate; umbel 3-rayed; seeds 4-pitted on the inner face. (1) Ga. to La. 10'.
- 11 E. Lathyris L. Caper S. Stout, 2 or 3f high; leaves sessile, lance-linear, all opposite; umbel 4-rayed, then forked; glands horned. Gardens, and §.
- 12 E. heterophýlla Mx. Stem with scattered branches, 1-3f; leaves ovate, or sinuate-lobed, or panduriform, all petiolate and scattered, the upper stained red on the margins; gland 1, sessile. Iowa to Ga. June, July.
- 13 E. dentàta Mx. Stem 8'-2f, hairy, with opposite branches; leaves opposite, ovate, *dentate*, petiolate; heads subsessile; seed tubercled, round and black; gland 1 or more, stalked. (1) Shades, Penn. to Iowa and La.
- 14 E. Ipecacuánhæ L. Root long, stems clustered, slender, diffusely forked; lvs. opposite, all oblong to linear, obtuse, sessile; heads on filiform pedicels; seed white, compressed, pitted. 24 Sands, coastward. 8-12'. (E. gracilis Ell.)
- 15 E. nudicaùlis Chapm. Slender, forking above; leaves minute ($\frac{1}{4}$), obovate, the upper opposite; heads minute, glands margined, greenish. 24 Fla.
- 16 E. Helioscòpia L. Stout; umbel 5-rayed, rays trifid, and forked; lvs. cuneate to obovate, whorled above; glands round, stalked. ① Waysides, N. §
- 17 E. dictyospérma F. & M. Slender; umb. once or twice 3-forked, then 2-forked; floral leaves roundish-ovate, subcordate, cauline oblong-spatulate to obovate; fruit warty, sceds reticulated. (1) Ky., and S-W. (E. Arkansana C-B.)
- 18 E. Darlingtònii Gray. Tall (2-8f); umbel 5-8-rayed, rays forked or trifid; leaves entire, oblanceolate, the floral oval. 24 Woods, Penn., and S.
- 19 E. platyphýlla L. Erect, 8-16'; umbel 5-rayed; leaves lance-oblong, subcordate, serrulate, the floral triangular-ovate. (1) Lake shores, N. §
- 20 E. obtusàta Ph. Erect, 1-2f; umbel 3-rayed, rays trifid or forked; leaves all sessile, serrulate, obtuse, the floral roundish-cordate, the lower oblanceolate; fruit very warty. (1) Woods, Va., and W.
- 21 E. inundàta Torr. Smooth, erect; umbel 3-rayed, and forked; leaves entire, sessile, lanceolate to oblong-ovate; glands round, entire; seeds globous. 24 Wet barrens, Fla. 6-12. Heads on slender peduncles. Root woody.
- 22 E. sphærospérma Shutt. (E. Floridana Chapm.) Lvs. lance-linear to cordateovate; heads green, glands crenate. Otherwise like No. 21. 24 Dry. Fla. 1-2f.
- 23 E. telephioides Chapm. Plant some fleshy, 2-5' high; lvs. ovate, large on the stem, small on the umbel. Otherwise like No. 22. 24 West Fla. May, June.
- 24 E. hypericifòlia L. St. 1-2f; lvs. 6-12", oval-oblong, serrate all around; sds. oval, obtusely 4-angled, wrinkled and tubercled, black. (1) Fields: common.
- 25 E. glyptospérma Eng. St. 5–10'; lvs. 4–6", linear-oblong, serulate toward the apex; stip. fringed; sds. ovoid, obtuse-angled, wrinkled, amber-color. Wis., and S-W.
- 26 E. maculàta L. Hairy; leaves oblong, serrulate, often with a brown spot; stip minute; seeds sharply angled, obscurely wrinkled, reddish. Sandy fields: common.
- 27 E. humistràta Eng. Hairy; lvs. elliptic-obovate, serrulate at apex, rarely spotted; stipules fringed; seeds obtuse-angled, oval, roughened, brownish. Banks, W.
- 28 E. serpyllifòlia Pers. Smooth; lvs. obovate-oblong, serrulate at apex, seldom spotted; stipules fringed; seeds acutely 4-angled, cross-wrinkled. Banks, W.
- 29 E. polygonifòlia L. Lvs. oblong-linear; glands of invol. not appendaged; seeds large (1" long), ovoid, smooth and whitish. Sandy sea and lake coasts.
- **30 E. Geyeri** Eng. Leaves oblong-obovate; glands with narrow appendages; seeds small ($\frac{1}{2}$), ovoid, acute, obtusely 3-angled, ash-colored. Sandy soils, N-W.
- **31 E. serpens** H. B. K. Lvs. round-ovate, very small (1-2"); stip. triangular; glands scarcely appendaged; pod acutely keeled, seeds ovoid-3-angled. Ill. to La.
- 32 E. cordifòlia Ell. Lvs. 4-6", cordate-oval; glands conspicuously white-appendaged; pods and seeds as in No. 31. Fields, South. Spreading 1f.
- **33 E.** SPLENDENS. Shrubby and fleshy, thorny; lvs. ovate, acute both ways; ped. ax illary; floral leaves in pairs, broader than long, scarlet. Madagascar.

- **34 E.** FULGENS. Not spiny; lvs. lanceolate, pointed both ways, floral lvs. scon falling, lobes and appendages of the involucre red and purple. Mexico.
- **35 E.** PULCHÉRRIMA (or Poinsettia). Floral leaves lanceolate, of a brilliant red, lower leaves wedge-oblong, often fiddle-shaped, all pointed. Mexico.

2. STILLÍNGIA, Gard. Fls. 8, in a terminal, dense spike, apetalous & Calyx cup-form, lobed and crenulate. Sta. 2 or 3. Fil. exserted, with short, 2-lobed anthers. Q Calyx 3-lobed. Style trifid, with 3 diverging, simple stigmas. Capsule 3-lobed, 3-celled, 3-seeded.—Plants smooth, erect, with alternate leaves. Fertile flowers at the base of the sterile spike. Bracts of the spike biglandular at base. May—Sept.

- **1 S. sylvática** L. Herbaceous; stems clustered; leaves subsessile, lance-linear to lance-oblong, and obtuse to acuminate, crenate-serrulate; spikes yellowish, longer than the leaves; glands cup-shaped. 24 S. 1-3f.
- 2 S. aquática Chapm. Shrubby; stem single; lvs. short-stalked, lanceolate, acute, sharply serrulate; spikes shorter than the leaves; glands peltate. Fla. 3-6f.
- **3 S. ligustrina** Mx. Shrubby; leaves lence-ovate, petiolate, entire; stipules ovate; spikes shorter than the leaves; sta. 3. Swamps, S. 6-12f. (Sebastiania, Muller.)
- **4 S. sebífera** L. *Tallow Tree*. Tree 30-40f; lvs. long-petioled, rhomboidal, acuminate, entire; fruit rough, blackish, seeds white. S. §. (Excœcaria, Mul.)

3. TRÁGIA, Plum. Fls. 8. Cor. 0. & Calyx 3-parted. Sta. 2 or 3, distinct. Q Calyx 5- to 6- to 8-parted, persistent. Style 3-cleft. Stig. 3. Fruit 3-lobed, 3-celled, separating into 3 bivalve, 1-seeded nutlets. 24 b Homely weeds. Lvs. mostly alternate, pubescent, stipulate. Fls. small, racemed. May—August.

- 1 T. macrocárpa Willd. Slender summits of the branches twining; lvs. cordateovate, acuminate, serrate; rac. long (3-4'); fr. 5-6". Copses, Ky., and S. 2-4f.
- 2 T. urticæfòlia Mx. Erect, hairy, sparingly branched; leaves deltoid-lanceolate, truncate at base, sharp-serrate; fruit very hairy. Dry. S. 1-2f.
- **3 T. innócua** Walt. Erect, branched, puberulent; leaves ovate-oblong, varying to linear, coarsely few-toothed or entire. Dry. S. 1f. (T. urens L., but it does not sting as Linnæus supposed.)

4. JÁTROPHA, L. SPURGE NETTLE. Fls. ϑ , in forked cymes; the fertile generally in the forks. Calyx colored, imbricate in bud. Corolla present or not. Sta. 10-30, monadelphous. Styles 3, forked. Prd 3-car pelled. 24 Leaves palmi-veined, stipulate.

J. urens, β. stimulosa Mul. Low, hispid with bristly stings; leaves half 3-5-lobed, cordate, lobes lanceolate, serrate; sepals white, oval, spreading; corolla 0. Sandy woods, S.: common. Stings white, ½ long. March-July. (Cnidoscolus, Pohl.)

5. ACALYPHA, L. THREE-SEEDED MERCURY. Fls. ϑ , in short clusters or little spikes, surrounded by a large cut-toothed bract. Cor. 0. ϑ Calyx 4-parted. Sta. 8—12, monadelphous, with halved anthers. φ Calyx 3-parted. Styles 3, each 2- ∞ -eleft. Fr. 3 nutlets. (1) Weeds resembling Nettles, with stalked alternate leaves (and 5 tropical). Summer.

- **1 A. Virgínica** L. Leaves lance-ovate, obtusely pointed, obscurely serrate, equal ling their petioles (1-2'); sterile spikes hardly exserted. Dry. 10-20'.
 - S. gracillénta. Leaves narrower, on shorter stalks ; & spikes exserted

2 A. Caroliniàna Walt. Lvs. ovate, cordate, closely and strongly serrate; a spikes axillary, 2 terminal, fruit soft-echinate, bracts with linear lobes. W. and S.

6. MERCURIÀLIS, Tourn. Fls. 8, apetalous, axillary, in bractless spikes or fascicles. Calyx 3-parted. Sta. 10-20, anth. 2-celled, extrorse. Fruit 2-carpelled, 2-seeded.—Herbs with opposite, petiolate leaves.

M. ánnua Willd. Lvs. lanceolate, &c., thrice longer than the stalks; branches opposite; & spikes long, interrupted, seeds oval, pitted. ① Waysides, S.: rate. §

7. RÍCINUS, Tourn. CASTOR OIL PLANT. Fls. ϑ , apetalous. Calyx 3-5-parted, valvate in the bud. ϑ Sta. ∞ , with irregularly united filaments. ϑ Style short, stigmas 3, 2-parted, plumous, colored. Capsule echinate, 3-lobed, 3-celled, 3-seeded.—Herbs or shrubs.

R. COMMÙNIS L.—A stout (1) herb with peltate, palmi-lobed leaves, 4—12', divided into lance-shaped lobes. Southward it becomes a shrub, or tree 10—20f. Cult. for its seeds, yielding the *castor oil*, or for the ornament of its splendid foliage. E. India.

8. CROTON, L. Fls. 8. Calyx 4-8-parted. Petals hypogynous, 4-8, mostly minute, often (especially in the 9) wanting. 8 Disk with 4--6 lobes. Sta. 5 or more, anthers inflexed in the bud. 9 Ovary 3-celled, styles 3, 1-3-times forked. Fruit 3-carpelled, 3-seeded.—Plants glandular, clothed with scurf or stellate hairs. Leaves alternate.

§ Downy. Fertile calyx 5-parted, with 2 styles, and pendulous......No. 1
§ Hairy or scaly. Fertile calyx 5-parted, with 3 styles, each 2- or 3-cleftNos. 2-4
§ Densely woolly. Fertile calyx 8-parted. Styles 3, each twice 2-cleft.....Nos. 5, 6

- 1 C. monanthógynus Mx. Stellate-downy, di- and tri-chotomously branched; lvs. ovate or subcordate, silvery beneath, fls. in the forks. (1) Prairies, Ill., and S. 1f.
- 2 C. glandulosus L. Hispid, tri-(or 4)chotomously branched; lvs. clustered at the forks, lance- to linear-oblong, serrate, with 2 concave glands at base; fis. in clusters, the sterile 4-parted, 8-androus. (1) A straggling weed, W. and S. 1-2f.
- 3 C. argyranthemus Mx. Clothed with silvery glandular scales, branched at base; lvs. oval to oblong; fls. in, a hd. or spike, silvery all over, all 5-parted. 24 Ga., Fla. 1f.
- 4 C. marítimus Walt. Half-shrubby, bushy, trichotomously branched, tomentous; lvs. broad-oval, silvery beneath; flowers in dense heads on long stalks; stam. about 10; stigmas 18-20. Drifting sands, sea-coast, S. 2-3f. July-Oct.
- 5 C. capitàtus Mx. Lvs. ovate to oblong, long-petioled, obtuse; \$ cal. large (?')
 7-8-cleft; styles 3, each 4-parted to base; seed double-convex. W. and S.
- 6 C. Ellióttii Chapmn. Lvs. lance-oblong, short-petiolate, acutish; \$ cal. 6" diam.
 5-8-cleft; styles 3, each 4-cleft to the middle; seeds plano-convex. (1) S. 2-3f.

9. CROTONÓPSIS, Mx. Fls. 8, minute, in spikes. Calyx 5-parted.
8 Petals 5, spatulate. Sta. 5, distinct. \$ Petals 0, 5 scales instead. Stig.
8, each bifid. Ovary and pod 1-celled, 1-seeded. (1) Slender, silvery-scurfy with small, alternate leaves. Upper flowers sterile.

C. lineàris Mx.—Sandy swamps, N. J. to Ill., and S. Stems as slender as Flax, repeatedly trifid and forked, 1-2f. Leaves linear-oblong, 6-10". June-Sept.

10. PHYLLÁNTHUS, L. Flowers ϑ , axillary. Calyx in 5 or 6 segments. Petals 0. Stam. 3, very short. Styles 3, bifid. Ovules and seeds 2 in each 2-valved carpel.—Leaves alternate, in 2 ranks.

P. Carolinénsis Walt. St. slender, with alternate branches; lvs. oval, 6-10", the ramial much smaller; flowers subsolitary. (1) Pa. to Ill., and S. 6-18". June-Aug

11. PACHYSÁNDRA, Mx. Flowers 8, apetalous, in bracted spikes Calyx 4-parted. 5 Filaments 4, long-exserted, flat. 2 Styles 3, recurved Capsulé 3-horned, 3-celled, cells 2-seeded. 24 Procumbent stems from long creeping root-stocks. Leaves alternate.

P. procúmbens Mx. Lvs. ovate to obovate, coarsely toothed, clustered above the spikes, which are all near the base of the stem. Va. to Ky., and S. March-May.

12. BUXUS, L. BOXWOOD. Flowers \mathscr{S} , axillary. \mathscr{S} Calyx 3-leaved, petals 2. Sta. 4. \mathcal{Q} Cal. 4-sepalled. Pet. 3. Sty. 3. Caps. with 3 beaks and 3 cells. Seeds 6. 55 Leaves opposite, ovate, entire, smooth.

B. SEMPÉRVIRENS. A tree of slow growth, fine-grained wood, in Europe. The dwarfed varieties are planted in gardens for edgings.

ORDER CXIV. URTICACEÆ. NETTLEWORTS.

Plants of various habit, with stipules (which are often early deciduous) and with small inconspicuous, mostly diclinous flowers. Calyx regular, free from the 1-celled ovary. Stamens as many as the calyx lobes and opposite to them. Fruit a 1-seeded samara, drupe or achenium, separate or aggregated. The following groups have usually been regarded as Orders

Ş 1	ULMACE Æ. Trees with colorless innoxious juice. Flowers habitually perfect, not	
	in aments. Fruits separate. No albumen. (Figs. 181, 256, 295, 316, 382, 509)(a)	
68	ARTOCARPEÆ. Trees with milky poisonous juice. Flowers diclinous, in aments	
	or heads. Fruits aggregated. Seed albuminous. (Figs. 195-6, 298, 349)(b)	
5 86	URTICE &. Herbs. Flowers diclinous, not in aments. Filaments crenulate.	
	Fertile calvx 3-5-parted. Embryo straight. (Fig. 503)(c)	
386	S CANNABINE E. Herbs. Flowers diclinous. Filaments straight. Fertile calyx	
.01	of 1 sepal, spathe-like. Embryo curved or coiled. (Fig. 213)(d)	
	a Flowers appearing before the leaves. Fruit a samara winged all aroundULMUS.	1
	a Flowers with the leaves. Fruit wingless,-x a dry nut from a 1-celled ovaryPLANERA.	2

	-o Flowers in involucrate clusters	12
	d Herbs twining. Fruit in an imbricate strobile-like ament	13
	d Herbs erect. Fruit a 2-valved caryopsis in axillary pairsCANNABINUM.	14

1. ULMUS, L. ELM. Fls. &. Calyx 4-9-cleft. Stam. 4-9, fil. long and slender. Styles 2. Ovary 2-celled. Samara flat, 1-seeded. 5 Fls. vellowish, or reddish, in precocious clusters. Figs. 181, 256, 295.

* Samara fringed with hairs, hanging on slender ped., 2-beakedNos. 1-3

1 U Americàna L. White Elm. Lvs. oval, acuminate, doubly serrate; flowers in .oose, umbel-like clusters; fruit oval, 6", its 2 beaks with points incurved and meeting. A majestic tree, with ascending branches and often long pendulous "weeping" branchlets. Native, and everywhere cultivated.

- 2 U. racemòsa Thomas. Cork Elm. Smaller tree, with rigid branches, branchlete downy, often with wing-like corky ridges; *flowers* 2-4 in each fascicle, which **are** arranged in racemes. N. H. to Wis., and S. 20-30f.
- **3 U. Floridàna** Chapm. Tree 30-40f, with brittle branches, smooth lvs. thick, ac: te; fruit orbicular, 2-3", its teeth broad and erect. W. Fla.
- 4 U. alàta Mx. Winged Elm. Whahoo. Tree, with its branchlets here and there winged with 2 corky ridges; leaves lance-oblong, acute, 1-24; flowers racemed fruit downy all over, with its 2 beaks slender. Ill. to Va., and S.
- 5 U. fulva L. Red Elm. Slippery Elm. Tree 20-40f; buds covered with fulvons down; leaves oblong-ovate, acuminate; flowers reddish, 7-parted, sessile; fruit orbicular. Low grounds. Valued for its very mucilaginous liber.
- 6 U. CAMPÉSTRIS. English Elm. A stately tree, 50-70f, with rigid branches and dense foliage; leaves small, ovate; stamens 5; fruit nearly orbicular. Europe.
 β. SUBERÒSA. Branchlets with thick corky wings; stamens mostly 4. Europe.
- 7 U. MONTÀNA. Scotch Elm. Witch Elm. Large tree, with ample obovate, cuspidate leaves, rough above, downy beneath; flowers 5-parted; fruit oblong, 1'. Europe.

2. PLÁNERA, Gmel. Fls. & ¥ ♀. Cal. lobes and sta. 4 or 5. Stig. 2, oblong, diverging; ova. 1-celled, fruit 1-seeded, wingless, indehiscent. 5

P. aquática Gm. Tree 30-40f, elm-like, with small smooth, ovate, acute, serrate leaves and axillary flowers in clusters of 2-5; nut roughened. Swamps, S.

3. CELTIS, Tourn. NETTLE TREE. SUGAR-BERRY. Fls. $\delta \notin \varphi$, the δ 6-parted and the \notin 5-parted. Sty. 2, elongated, spreading. Drupe globular. 55 Leaves mostly oblique at base. Flowers subsolitary. Fig. 316.

1 C. occidentàlis L. Tree 30-70f, with wide-spread branches; lvs. ovate, subcordate, acuminate, serrate, rough-hairy beneath; ped. longer than the petiole; sepals triangular-ovate, erect, white; drupe 3", dark purple. Woods, &c.

 β . crassifolia. Leaves cordate, thick, mottled with dark and light green.

- y. integrifolia. Leaves smooth, subentire; bark smooth. W. and S.
- 2 C. pimila Ph. A straggling shrub. 3-10f, with broad-ovate, acute, smooth, serrate leaves; calyx of 6 oblong-linear spreading segments, 2". Woods, S.

4. FICUS, Tourn. FIG. BANIAN. Fls. 8, minute, fixed upon the inner surface of a hollow receptacle. 3 Calyx 3-parted, sta. 3. 2 Calyx 5-parted, ovary 1, seed 1. Fruit (syconus) composed of the enlarged, fleshy receptacle enclosing the numerous dry, imbedded achenia. Fig. 195.

- 1 F. CÁRICA. Common Fig. Leaves cordate, 3-5-lobed, repand-dentate, rough and downy; fig pear-shaped. From Asia. A shrub in our conservatories, a small tree S.
- 2 F. ELÁSTICA. India-rubber Tree, in the greenhouse, with a straight, simple trunk, and very large (S-10'), shining, thick, oblong leaves. E. India.
- 3 F. REPENS. Creeping on walls, &c., with ovate, cordate, acute, serrate lvs. E. India 4 F. INDICA, the *Banian* (§ 207), with many trunks, may grow South.

5. MACLURA, N. OSAGE ORANGE. Flowers & Q, the & racemous, calyx 4-parted. Q Flowers in a dense globular head. Calyx 4-sepalled, fleshy, finally embracing the obconic achenium, all ripening into a globular soresis, resembling an orange. Style terminal. 5 Juice milky. Leaves alternate, entire. Branches with sharp spines. Fig. 298.

M. aurantiaca. Lvs. shining, ovate-oblong, thickish, pointed; fruit yellow wnen ripe, lactescent, pendulous. Arkansas. Planted for hedges. May, June.

6. BROUSSONETIA L'Her. PAPER MULBERRY. Fls. & 2 in aments.

the \mathfrak{F} cylindric, the \mathfrak{P} globular, style lateral, ovary becoming a fleshy club shaped 1-seeded fr. protruding from the tubular, 3- or 4-toothed calyx. \mathfrak{F}

B. PAPYRÍFERA. Tree with a low bushy head, of rapid growth, with rough and downy leaves, ovate or variously lobed; fruit dark red, hispid. Japan. Fig. 349.

7. MORUS, Tourn. MULBERRY. Fls. ϑ , in aments, the ϑ loose, the ϑ dense and spike-like. Cal. 4-parted, sta. 4, sty. 2. Achenium compressed, enclosed in the fleshy calyx, the whole spike thus constituting a compound berry (sorosis). 5 Leaves alternate, broad, often palmately lobed. Fig. 196.

1 M. rubra L. Tree or shrub, 15-60f; roots yellow; leaves rough and downy, subcordate, serrate; fertile spikes cylindric; fruit dark red, very sweet.

- 2 M. ALBA. Chinese M. Shrubs (here), with smooth and shining, cordate, unequally serrate leaves; fruit whitish. Introduced for silkworms.
- 3 MI. NIGRA. Tree for ornament and shade, from Persia, with rough, ovate or lobe⁴ leaves; fertile spikes oval; fruit reddish-black, acid.

8. URTICA, Tourn. NETTLE. Fls. 8, sometimes 5 9. 5 Calyx 4 sepalled. Ovary a cup-shaped rudiment. Sta. 4. 9 Sepals 4, the outer pair minute, the inner at length surrounding the shining, compressed achenium. Stig. 1, sessile.—Herbs with stinging hairs. Leaves opposite. Fls. green, in axillary or subterminal clusters or racemes. Summer. Fig. 503.

§ Clusters compound, longer than the petioles. Perennials...... Nos. 1, 2

§ Clusters simple, shorter, or not longer than the petioles. Annuals.......Nos. 3, 4

- 1 U. pròcera Willd. Stem tall (3-6f), slightly hispid, with few stings; leaves lance ovate, 5-veined, uncinate-serrate; spikes panicled above. Waste places: common.
- 2 U. dioica L. St. 1-3f, very hispid and stinging; leaves ovate, deeply serrate, the slender point entire; spikes clustered in the axils. Wastes: common. §
- 3 U. urens L. Low (1f), hairy; lvs. broadly ovate, coarsely serrate, 5-veined; clus ters pedunculate, loose, by pairs in each axil. Waste grounds, E. §
- 4 U. chamædrioides Ph. St. 1–2f, with scattered bristles; leaves ovate, crenate serrate; clusters capitate, 1 or 2 in each axil, spiked above. Ky., and S.

9. LAPORTEA, Gaudich. WOOD NETTLE. Fls. in axillary panicles, the & calyx 5-parted, the & of 4 sepals, the 2 inner larger. Sta. 5. Stig. subulate. Achenium flat, ovate, very oblique. 24 Hairs stinging. Lvs. ample, ovate, petiolate.

L. Canadénsis Gaud. Leaves 3-5', acuminate, serrate; flowers minute, green, in panicles, 1-2', the lower sterile. Damp woods. 2-6f.

10. PILEA, Lindl. RICHWEED. Fls. in dense axillary clusters, the 4 with 3 or 4 sep. and sta. \Im Sepals 3, unequal, oblong. Sta. 3 rudimerts Achenia roughened, erect, ovate. (1) Smooth, stingless. Stipules united.

P. pùmila Gray. Stem succulent, weak; leaves rhomb-ovate, crenate-serrate. long-stalked; flowers green, in short clusters. Moist shades. 3-18'. July, Aug.

11. BCEHMÈRIA, Jacc FALSE NETTLE. & Calyx 4-parted, with lanceolate, acute segments. Stamens 4. & Calyx tubular, truncate, or 4toothed, persistent and closely investing the ovate, pointed achenium.— Herbs or shrubs, stingless. Flowers minute.

B. cylindrica Willd. Erect, simple; leaves generally opposite, on long petioles

ovate, acuminate, dentate; upper spikes interrupted, leafy at top, sterile, lower dense, fertile. 24 A coarse weed in swamps. 2-3f. Spikes 1-6'. July, August. β. laterifiora has narrower leaves, shorter stalks, all alternate.

12. PARIETARIA, Tourn. PELLITORY. Fls. polygamous, in clusters, surrounded by a many-bracted involuce. & Cal. 4-sepalled. Sta. 4, at first incurved, elastically expanding. \Im Stigma tufted. Ach. polished, enclosed within the persistent, 4-lobed calyx.—Herbs weed-like, with alternate leaves. Clusters of green flowers axillary.

1 P. Pennsylvánica Muhl. Lvs. oblong-lanceolate, veiny, tapering to an obtase point, entire; involucre longer than the flowers. (1) Rocky shades. 6–12'.

• 2 P. Floridàna N. Leaves round-ovate, obtuse, entire, on long petioles; flowers as long as the involucre. (1) Damp sands, S. 10'. (P. debilis Forst.?)

13. HÙMULUS, L. HOP. Fls. $\delta \$, the $\delta \$ panicled, with 5 sep. and sta. Anth. with 2 terminal pores. $\$ Aments with large imbricated, entire, 1-flowered bracts. Cal. of 1 sepal, investing the achenium. Styles 2 Embryo coiled. $\$ Dimining with the sun. Leaves opposite. Fig. 213.

H. lùpulus L.—Rich alluvion, along streams, and extensively cultivated. Stems 10-20f. Leaves cordate, 3-5-lobed, rough, on long stalks. Bitter, narcotic. July.

14. CÁNNABIS, Tourn. HEMP. Flowers & ?, the & with 5 sep. and sta., in panicles. ? In spikes. Cal. a single spathe-like sepal enfolding the 2-valved cariopsis. Embryo curved. ① Leaves opposite, digitate.

C. satìva L.—Fields, waste grounds. Tall, erect, 4—8f. Leaves petiolate, regularly formed of 5—7 lanceolate-serrate leaflets. Cultivated S-W. June. §

ORDER CXV. SAURURACEÆ. SAURURADS.

Herbs with jointed stems, alternate, entire leaves furnished with stipules. Flowers in spikes, perfect, naked, having neither corolla nor calyx. Stamens definite. Ovaries 3-5, more or less united. Fig. 15.

SAURURUS, L. LIZARD-TAIL. Inflorescence a terminal spike of 1flowered scales. Sta. 6, 7, 8 or more. Ovaries 4. Berries 4, 1-seeded. 24 Stem angular. Leaves cordate, acuminate, petiolate.

S. cérnuus Willd.—Common in marshes, 1—2f. Leaves 4—6'. Spikes slender, recurved at the more slender top, its flowers whitish. July, August.

ORDER CXVI. CALLITRICHACEÆ. STARWORTS.

Herbs aquatic, small, with opposite, simple, entire leaves. Flowers axilary, solitary, very minute, polygamous, achlamydeous, with 2 colored bracts. Stamen 1, rarely 2; filament slender; anther 1-celled, 2-valved. reniform. Ovary 4-celled, 4-lobed; ovules solitary. Styles 2; stigmas simple points. Fruit 1-celled, 4-seeded, indehiscent. Seeds albuminous.

CALLITRICHE, L. Character the same as that of the order.

- * Stems short (6"- 2'), spreading on moist grounds. Leaves reniform.....Nos. 1, 2
- * Stems (3-16') growing in water. Fruit sessile.-x Leaves of two kinds... Nos. 3, 4

- 1 C. Austínii Eng. Lvs. obovate, 1-2"; fruit depressed, 4-lobed all around, its pedicel and stig. Learly as long, lobes narrowly winged. N. J. (Porter), N. Y., and W.
- 2 C. peploides N. Lvs. elliptical, 1"; fruit roundish, 4-lobed above, sessile, its stigmas twice as long, lobes not winged. Tenn. to La. (Hale). 1-2'.
- **3 C. verna** L. Floating lvs. 3", rosulate, obovate, narrowed below, the submersed leaves 6", oblong-linear; fruit oval, emarginate, longer than its stigmas. Pools.
- 4 C. heterophýlla Ph. Floating leaves spatulate, attenuate below, 4-6", the submersed linear, 6-9"; fruit globous, obcordate, its stigmas rather longer. Pools.
- 5 C. autumnàlis L. Leaves all submersed, 3-5". linear, obtuse at both ends; fruit rounded, its lobes slightly united, winged; styles slender. Lakes and rivers.

ORDER CXVII. PODOSTEMIACEÆ. THREADFOOTS.

Herbs aquatic, with the habit of seaweeds, with alternate, dissected *leaves*, with *flowers* minute, perfect, naked or with 3 sepals. Stamens 1 or many, hypogynous. Ovary compound, 2-3-celled, with as many stigmas, and numerous ovules. Fruit a many-seeded capsule, ribbed and somewhat pedicelled. Albumen none.

PODOSTÈMUM, L. C. Rich. THREADFOOT. RIVER WEED. Fls. axillary, solitary. Sta. 2, fil. united below. Ovary oblong-ovoid. Stig. 2, sessile, recurved. Caps. 2-celled. Seeds minute.—Small, submersed *xx*, adhering to stones and pebbles.

P. ceratophýllum Mx. Leaves alternate, repeatedly forking into linear, threadform segments; stem a few inches long, in running water: common.

ORDER CXVIII. CERATOPHYLLACEÆ. HORNWORTS.

Herbs aquatic, with whorled, dichotomously dissected leaves. Flowers 8, sessile, axillary, minute, with neither calyx nor corolla. Involuce 8-12-cleft. Anthers (12-24) sessile. Fertile flower a simple 1-celled ovary with one ovule. Cotyledons 4.

CERATOPHÝLLUM, L. HORNWORT. Character that of the order. C. demérsum L. Stem floating or prostrate, 8-16', with numerous branches and whorls; leaf-segment filiform, sharply toothed. Pools.

ORDER CXIX. EMPETRACEÆ. CROWBERRIES.

Heath-like *shrubs*, with evergreen, linear, exstipulate *leaves*, and small, imperfect *flowers*. Calyx of 4—6 hypogynous, imbricated scales, the inner often colored and petal-like. Stamens 2—4, with compound pollen. Ovary free, 2–9-celled, 2–9-ovuled. Fruit fleshy, with as many seeds. In Batis the drupes are consolidated.

Stamens 3.	Stigmas 6-9-rayed. Berry 6-9-seeded	EMPETRUM.	1
• Stamens 3.	Stigmas 3 or 4. Style slender. Drupe 3- or 4-seeded	COREMA.	2
Stamens 2.	Stigmas 4. Berry 2-seeded. Shrub erect	CERATIOLA.	3
Stamens 4.	Stigma 1. Berry 4-seeded. Prostrate	BATIS.	4

⁻x Leaves all linear.....No. 5

1. ÉMPETRUM, Tourn. CROWBERRY. Fls. & 9. Perianth consisting of 2 series of scales, the 3 inner petaloid & Sta. 3, anth. pendulous on long filaments. 9 Stig. subsessile, 6-9-rayed. Drupe globular, with 6--9 seed-like nutlets. 5 Alpine.

E. nigrum L. A small prostrate shrub, 1-4f; branches closely beset with oblong linear leaves with rolled edges, 2-3"; berries black, eatable. High mountains of N. Eng., N. Y. May, June.

2. COREMA, Don. Perianth of 5 or 6 bractlets, the 3 inner sepaloid δ Sta. 3, exserted. \Diamond Ovary 3- or 4-celled. Style filiform, 3- or 4-cleft, with narrow stigmas. Drupe globular, minute, with 3 or 4 seeds. b

Conradii Torr. Shrublets diffusely branched, 6-12', with narrowly linear leaves, 2-3"; flowers in terminal clusters, with brownish scales and purple stamens. Sandy barrens, N. J. and N-E., forming blackish tufts. April.

3. **CERATIOLA**, Mx. SAND-HILL ROSEMARY. Fls. 8, of 6-8 imbricated, concave, fimbriate scales, the 2 or 4 inner membranous. 3 Sta. 2, exserted, anth. 2-celled, roundish. 9 Ovary 2-celled. Style short. Stig. 4 or 6, spreading, toothed. Drupe 2-seeded. 5 Branches whorled, erect.

C. ericoides Mx.-Sandy places, Ga., Fla. 3-6f. Leaves whorled, crowded, linearterete, 5-6". Flowers reddish, followed by yellowish drupes. March, April.

4. BATIS, P. Br. Fls. $\delta \, \varphi$, in cone-like spikes. δ Calyx of 2 unequal, united sepals. Pet. 4, clawed. Sta. 4, anthers introrse, exserted. φ A mass of 4-celled ovaries only, becoming a sorosis of 4-seeded drupes. β

B. marítima L.—Salt marshes, Fla. Stems prostrate, 2—3f; leaves club-shaped fleshy, 1'. Spikes 5", fleshy. Petals white. June—September.

ORDER CXX. PLATANACEÆ. SYCAMORES.

Trees with a watery juice, alternate, palmate *leaves*, and sheathing, scarious stipules. Flowers monoccious, in globular aments, destitute of both calyx and corolla. Sterile.—Stamens single, with only small scales intermixed. Anthers 2-celled, linear. Fertile.—Ovary terminated by a thick style with one side stigmatic. Nut clavate, tipped with the persistent, re curved style. Seed solitary, albuminous. Fig. 288.

PLÁTANUS, L. PLANE TREE. BUTTON WOOD. SYCAMORE. Char acter of the genus the same as that of the order. The *z* and *q* flowers in separate aments.

P occidentalis L. Tree in hard, gravelly soil, 50-80f. The trunk grows to great size, and hollow; bark whitish; leaves large, angula:ly lobed and toothed; stipules polique; balls pendulous, solitary. May.

ORDER CXXI. JUGLANDACEÆ. WALNUTS.

Trees with alternate, pinnate, exstipulate *leaves* and monoccious *flowers*. Sterile flowers in aments, with an irregular perianth. Fertile, solitary or clustered. \bigcirc Calyx regular, 3-5-lobed, tube adherent to the partly 2-4celled ovary. Fruit a tryma (§ 157), with a fibrous epicarp (shuck) and a bony endocarp (*shell*). Seed large, orthotropous, exalbuminous, with lobed, often sinuous, oily cotyledons.

- Sterile aments solitary, simple. Epicarp persistent on the tryma......JUGLANS. 1
 Sterile aments shattend lateral. Epicarp 4 related and amendia.

1. JUGLANS, L. WALNUT. & Fl. a calyx, scale-like, 5- or 6-parted, with about 20 stamens. ? Fls. terminal, 4-parted, with 4 greenish petals and 2 fringed stigmas. Tryma with a spongy epicarp closely investing the very rough endocarp. 5 Leaflets many. Pith in transverse plates.

- 1 J. cinèrea L. White W. Butternut. Tree 40-50f, with a large but short trunk, and wide-spread branches; leaflets 15-17, lanceolate; fruit oblong-ovate, viscidhairy. Good for its fruit and handsome wood. April, May.
- 2 J. nigra L. Black W. Tree 60-90f, with a long, straight trunk; leaflets 15-21, larce-ovate, subcordate; fruit globous, glabrous, uneven, the kernel edible. The wood is dark-purple, used in cabinet-work. April, May.
- **3** J. RÈGIA, from Persia, but called *English* walnut, has 7-11 leaflets, and a smoothisn endocarp (shell) with a rich kernel. Rarely cultivated.

2. CARYA, N. HICKORY. & Calyx scale-like, 3-parted, with 4-6 stamens. Q Calyx 4-cleft, no petals. Stig. 2-lobed, lobes bifid. Epicarp 4-valved, disclosing a smooth, even nut. 5 Timber very strong. Leaves and both kinds of flowers from same bud, in March—May.

- § Leaflets 13-15, scythe-shaped. Nut oblong, thin-shelled, very sweet......No. 1
- § Leaflets 7-11. Nut with a tender shell and very bitter kernel.... Nos. 2, 3
- § Leaflets 5-9. Nut roundish, hard-shelled, sweet and eatable...(*)
 - * Valves of the epicarp distinct to the base. Bark with loose plates....Nos. 4, 5
 * Valves of the epicarp united below. Bark continuous, firm......Nos. 6–8
- t C. olivæfórmis N. Pecan Nut. Tree 60-90f; leaflets falcate, 5-6'; s aments separate to base; nut with its kernel loose in the thin, oblong shell. River bottoms, Ind., Ill., and S. Bark at length shaggy.
- 2 C. amara N. Bitter Nut. Tree 20-40f; leaflets about 9, ovate-oblong, sharply serrate; fruit roundish, valves half-united; nut white. Moist.
- **3 C. aquática** N. Tree 30-40f; leaflets about 11, lanceolate, oblique, subentire; fruit pedunculate, ovate, with a thin, reddish shell. Swamps, S.
- 4 C. alba N. Shagbark. Tree 40-50f, with a rough, shaggy bark; leaflets 5, the two lower much smaller; fruit and nut roundish, squarish, with a thin shell and very sweet meat: common. Fruit and timber excellent.
- 5 C. sulcàta N. Thick-shellbark. Tree 40-80f, with shaggy bark; leaflets 7 or 9, the odd one subsessile; fruit large, oval, 4-furrowed; nut pointed at each end, 11-2' long, with thick shell. Common West.
- 6 C. tomentòsa N. Mocker Nut. Tree 40-60f; bark rugged, but not shaggy; leaflets 7-9, odd one stalked, all and the petiole rough-downy; aments hairy; nut with a very thick shell and small kernel.
- 7 C porcina N. Pignut. Tree 60-100f; leaflets 5 or 7, nearly glabrous; fruit ovate to pyriform, with a bitterish kernel: common. (C. glabra Torr.)
- 8 C. microcárpa N. Tree 60-80f; leaflets 5 or 7, glabrous; aments glabrous; fruit roundish-ovoid, as small as a nutmeg. Woods, N. Y., and S.

ORDER CXXII. CUPULIFERÆ. MASTWORTS.

Trees or shrubs. Leaves alternate, simple, straight-veined, with decidu ous stipules. Flowers ϑ , the sterile in aments which are racemed or capi-

tate. & Calyx scale-like or regular, with 5-20 stamens inserted at its base. Quality adherent to the 2-3-celled, 2-6-ovuled ovary. Fruit a 1-celled, 1-seeded nut, solitary or several together, invested by an *involucre* which forms a scaly or echinate cupule. Seed destitute of albumen, filled by the embryo with its large cotyledons. Figs. 1-4, 182, 256, 277, 218-22, 338-40, 381, 386, 435, 507, 511.

1. QUERCUS, L. OAK. & Fls. in loose aments. Calyx mostly 5cleft. Sta. 5—10. \Im Fls. in clusters or scattered. Ov. 3-celled, 6-ovuled (Fig. 162), with 3 stig., but in fruit a 1-seeded nut (acorn) seated in a scaly cup or involucre. 55 A noble genus. In many oaks the fruit is (2), that is, 2 years in ripening, known by its occupying the old wood below the leaves of the season.

- § Leaves mostly entire, the ends subequal, petioles very short...(*)
 - * Peduncle longer than the oblong acorn. Leaves evergreen. Fruit (1).... No 1
 - * Peduncle shorter than the acorn. Fruit (2).—x Lvs. downy beneath...Nos. 2, 3 —x Lvs. smooth both sides...No. 4
- § Leaves 3-lobed and dilated above, awnless when mature. Fruit (2...... Nos. 5, 6
- § Leaves 3-9-lobed or pinnatifid, broad, lobes setaceously awned. Fruit (2)...(*)
 - * Lvs. at base cuneate, short-pet., 3- or 5-lobed. Shrubs or small trees. Nos. 7-9
 - * Leaves at base abrupt or truncate, mostly long-petioled, 7-9-lobed...(a)
 - a Nut one-third immersed in the saucer-shaped, fine-scaled cup...Nos. 10, 11
 - a Nut near half immersed in the hemispherical, coarse-scaled $\sup \dots (b)$
 - b Leaves cinereous-downy beneath, acorn also downy......No. 12
 b Leaves (except when young) glabrous both sides....Nos. 13, 14

\$ Lvs. 5-9-lobed, divisions obtuse, never bristle-awned. Fr. (1), sessile...Nos. 15-18

- Lvs. 9-25-toothed, downy beneath, awnless. Acorn (1), sweet, eatable...Nos. 19, 20
- **Q. virens** Ait. *Live Oak.* Tree 40-50f, often much smaller, very valuable for timber; leaves small, firm, elliptic-oblong, obtuse, downy and pale beneath, rarely a few
- sharp teeth; nut oblong-obovoid; ped. 1'. Va., and S.
 2 Q. cinèrea Ph. Upland Willow O. Shrub 4-20f; lvs. as in No. 1, but more downy beneath; nut roundish, in a saucer-shaped cup. Barrens, Va. to Fla.
- 3 Q. imbricària Mx. Laurel O. Shingle O. (Fig. 338.) Tree beautiful, 40-50f, with dense dark-green foliage; lvs. 3-5', lance-oblong, wavy, shining above; nut roundish, in a shallow cup. Common W. and S. Makes poor shingles.
- 4 Q. Phellos L. Willow O. Tree 30-60f, with poor timber; lvs. linear-lanceolate, entire, 3-4', glabrous; acorn roundish, 6", in a shallow cup. Borders of swamps, N. J. to Ky. and Fla. Young shoots with toothed leaves.
 - β . laurifolia. A large handsome tree; lvs. 3-5', often with a few teeth. S. \uparrow
- 5 Q. aquática Mx. Water O. Tree 20-40f, of rounded form and dense, shining foliage; leaves wedge-obovate, entire or obscurely 3-lobed above, attenuate to base, short-petioled; nut round-ovoid. Swamps, Md. to Fla., and cultivated.
- 6 Q. nigra L. Black-Jack. Barren O. Iron O. Tree small and gnarled, with dark massy foliage; leaves short-petioled, wedge-form, mostly with 3 subequal rounded lobes at apex. subcordate at base, rust-downy beneath. N. Y., W. and S.

- 7 Q. tríloba Mx. Downy Black-Jack. Tree of rapid growth, 20-30f; leaves oblong cuneiform, acute at base, rusty-tomentons beneath; lobes at apex often toothed bristle-pointed; nut depressed. Barrens, N. J. to Fla.
- 8 Q. Catesbæi Mx. *Turkey 0*. Tree 20-25f; leaves large, very irregular, glabrous, cuneate at base, lobes deep, narrow, with bristle-pointed, divaricate teeth; cup large, half covering the ovoid, mealy nut. Barrens, South.
- 9 Q. Ilicifòlia Wang. Scrub O. Bear O. Shrub 3-7f, straggling; lvs. petiolate, obo vate, angularly 5-(3-7-)lobed, 3-4', whitish-downy beneath; acorn small (5-6'), cup very shallow. Barren tracts: common. Animals feed on the acorns.
- β. Georgiana. Leaves smaller and smoother, of the same form, on Stone Mt.! **10 Q. rubra** L. Red O. Tree 50-70f, wide and high; leaves long-stalked, glabrous
- sinuses rounded, shallow, lobes 7–9, with bristle-pointed teeth; acorn 1', ellipsoid immersed in the shallow cup. Wood reddish, coarse : common.
- 11 Q. palústris Mx. *Pin 0*. (Figs. 1-4.) Sinuses deep and broad, lobes oftener 5 petioles long (1-2'), toothed as in Q. rubra; acorns 7-8"; nut **}** immersed in the cup. Tree 60-80f, with a light open foliage, in wet, cool soils.
- 12 Q. falcàta L. Spanish O. Tree 60-70f; lvs. long-stalked, obtuse at base, ashytomentous beneath, lobes 5-7, narrow, simple or toothed, more or less *falcate*; acorn globular, 4-5", in a shallow subsessile cup. Va. to Fla.
- L3 Q. coccinea Wang. Scarlet O. Trees very large (80f); lvs. much like Q. rubra, but changing to scarlet in Autumn, while that becomes red-brown; acorn 7-8", nut
 immersed in the cup. In young shoots the leaves almost lose their lobes and teeth, but keep their bristles. Not rare.

β. tinctoria. Black O. Leaves oftener obovate in outline; bark black and bitter.

- 14 Q. Leàna N. Lea's O. Leaves oblong, blunt at base, margin with a few angular, very irregular lobes: acorn roundish, in a hemispherical cup. Rare. Ohio (Clark), Ill. (Wolf). A hybrid? but very constant.
- 15 Q. alba L. White O. (Fig. 339.) Lvs. short-petioled, acute at base, oblong, sinu ate-pinnatifid, lobes subequal, obtuse; acorn sessile; nut oblong-ovoid, **‡** immersed in the tubercled cup. Timber very useful.
- 16 Q. obtusíloba Mx. Iron O. Post O. Tree middle size, wide-spreading; leaves cuneiform at base, downy beneath, deeply sinuate, the 3 upper lobes dilated, each 2-lobed; nut oval, half immersed, sweet. Timber good.
- 17 Q. macrocárpa Mx. Moss-cup O. (Figs. 340, 435.) Leaves deeply and lyrately sinuate-lobed (most deeply in the middle); cup very deep, fringed with the pointed scales, nut $\frac{1}{2}$ or more immersed, 1'. Common. W. and S.
- 18 Q. lyràta Walt. Over-cup O. Tree large; leaves acute at base, whitish beneath, with 7-9 triangular acute lobes; cup rugged with the scales, nearly or quite including the round nut. Swamps, S.
- 19 Q. bicolor Willd. Swamp White O. Tree handsome, 70f; leaves obovate, acute and entire at base, white-downy beneath, with 9 or more obtuse teeth or lobes; acorns in pairs on long (1-2') peduncles. Low woods.
- 20 Q. Prinus L. Swamp Chestnut O. Tree 50-70f, with large (1') sweet acorns; leaves 4-7', obovate, crenate-undulate, downy beneath, with straight, strong veins; fruit ped. shorter than the petioles; nut 1 immersed. (Q. monticola.)
 - β. acuminata. Leaves oblanceolate, pointed, teeth sharp; fruit subsessile.
 - y. prinoides. Shrub 3-4f; fruit crowded, sessile; leaves small.

2. CASTANEA, Tourn. CHESTNUT. Sterile flowers in long, slender aments, fertile fls. few, 3 together, in an involucre. Cal. 6-lobed or parted. Sta. 8-20. \Im Ovary 3-6-celled, with as many stigmas. Fr. a prickly involucre (burr), 4-valved, enclosing 1-3 coriaceous 1-seeded nuts. 55 Leaves acuminate, expanding before the flowers. Fig. 381.

1 C. vesca L. Tree 50-80f, with a large straight trunk. Lvs. 6-9' long, lance-obiong,

serrate, smooth; nuts mostly 2 or 3 together; aments 6-9, yellowish, in July, the brown nuts ripe in October. In woods.

2 C. pùmila Mx. Chinquapin. Shrub 6-12f, much branched; leaves obovate to oblong-ovate, downy beneath; nut solitary. N. J., W. and S.

3. FAGUS, Tourn. BEECH. Sterile flowers in capitate aments, suspended by a slender peduncle, fertile 2 within an involucre. Calyx 5- or 6-cleft or lobed. Stam. 5—12. 9 Ovary 3-celled with 3 stigmas. Fruit a pair of 1-seeded, sharply 3-angled nuts in a prickly involucre. 5 Leaves plicate in bud. May. Figs. 182, 256, B.

- 1 F. ferruginea Ait. Tree 50-80f, with a smoothish ash-colored bark; lvs. ovato to oval, short-petioled, pointed, regularly and remotely toothed, hairy when young. Timber fine-grained. Hardly distinct from
- 2 F. SYLVÁTICA, the European Beech, which has broader leaves, and is occasionally cultivated, especially the variety with *purple leaves*.

4. CÓRYLUS, Tourn. HAZEL-NUT. Sterile flowers in a cylindrical ament, fertile flowers in a capitate one. Calyx represented by 2 scales in the axil of a bract. Stam. 8, with half-anthers. 2 Ovary adherent, 2ovuled, 2-styled. Nut bony, roundish, 1-seeded, enclosed in a many-cleft involucre. 5 Leaves acuminate, expanding after the flowers. May.

- 1 C. Americàna Walt. Shrab 5-10f; leaves roundish, cordate; involucre bell-form, much wider than the nut, coarsely toothed. Thickets: common.
- 2 C. rostràta Ait. Shrub 3-6f; leaves ovate to oval; involucre bottle-shaped, longer than the nut, 2-parted, with toothed segments. Thickets.
- 3 C. AVELLÀNA. Filbert. Shrub 3-10f; leaves as in No. 1; invc!ucre not larger than the large rounded nut. From Europe, rarely cultivated.

5. OSTRYA, Michl. LEVER-WOOD. HOP HORNBEAM. & Aments cylindrical, hairy. Calyx a scale, with 8 1-celled bearded anthers. & Aments loose, flowers in pairs under each deciduous scale; ovary with 2 stigmas, enclosed in a sac (involucre), which in the *hop-like* fruit is inflated, ovoid, and much larger than the nut. 5 Wood very hard and strong.

O. Virgínica Willd. Small tree 20-30f; leaves elliptical, acuminate, serrate; buds acute; fertile ament oblong, pendulous, 2[']. Woods. April, May.

6. CARPINUS, L. HORNBEAM. IRON-WOOD. & Aments long, cylindric. Calyx a roundish ciliate scale, with 8—14 stamens, slightly bearded.
Aments loose, with large oblong 3-lobed bracts, each 1-3-flowered. Calyx
6-toothed. Stigmas 2. Nut ribbed. 5 April, May.

C. Americàna L. Tree small, 12-20f; leaves ovate-oblong, acuminate, serrate: bracts of the fertile aments becoming leaf-like, 1' long. In woods.

ORDER CXXIII. BETULACEÆ. BIRCHWORTS.

Trees or shrubs with bark in thin layers, leaves alternate, simple, straight veined, and with deciduous stipules. Flowers s, 3 together, in the axil of each 3-lobed bract of the ament. Calyx 0. s Stamens distinct, definite. Anthers 2-celled. 2 Ovary 2-celled, 2-ovuled, becoming in fruit a thin, 1-celled, 1-seeded nut. Figs. 163-4, 283, 296, 307, 312, 437.

1. BÉTULA, Tourn. BIRCH. & Fls. in clustered, drooping, slender aments, bracts peltate, deeply 3-parted. *Calyx a scale*, sta. 4. ? Aments oblong-ovoid, bracts 3-lobed, 3-flowered. *Calyx* 0. Ovary tipped with 2 styles. Nut flattened, winged. 5 5 Buds sessile. Flowers yellow, precocious, in Spring. Figs. 163-4, 437.

- * Trees with a yellowish bark, smoothish leaves, and short, erect, 2 aments.....No. 1
- * Trees with a reddish-brown bark and ovate-oblong, subcrect, 2 aments.....Nos. 2, 3
- * Trees with a white bark, long-stalked leaves, and drooping 2 aments......Nos. 4, 5
- * Shrubs with brownish bark, roundish leaves, and short, erect, 2 aments....Nos. 6,7
- **1 B.** lùtea Mx. f. Yellow B. A forest tree 40-80f, known at sight by its silver-yellow bark; leaves ovate, deeply and doubly serrate; *z* aments 2-4', drooping, the *z* ovoid-oblong, 1', erect. Can. to N. Car. (B. excelsa C-B. not of Ait. ?)
- 2 B. lenta L. Black, Sweet, or Cherry B. A noble tree, about 60f; lvs. cordate-oval, acuminate, sharply serrulate; s aments 3-4', s aments erect, pedunculate, much shorter. Woods, Can. to Ga. Timber rose-colored. Cambium (§ 418) sweet and spicy.
- 3 B. nigra Ait. Red B. Tree 30-50f, the bark loose and torn; leaves rhomb-ovate, acute both ends, repand and serrulate, small, petioles hairy; 3 aments 2-3', drooping, 9 oval, sessile, erect, 6''. Swamps, Mass. to Fla. Twigs very slender.
- 4 B. populifòlia Ait. White B. Tree 30-40f, trunk white, twigs brown; leaves deltoid (Fig. 307), lobed and serrulate, acuminate. Thickets, Me. to Pa.
- 5 B. papyràcea Ait. Paper, or Canoe B. Tree 50-70f, trunk white. branches brown; lvs. ovate, acuminate, doubly serrate; \circ aments 1' long. Mt. woods, Can. to Pa.
- β. minor. Shrub 6-9f, with smaller and merely acute leaves. White Mountains.
 6 B. pùmila L. Dwarf B. Shrub 2-7f, branches (not glandular) and young leaves downy; lvs. rounded to obovate, serrate, 6-16^{''}. Swamps, Ct. to Pa. (Prof. Porter).
- 7 B. glandulòsa Mx. Shrub 1-4f, upright, branches glabrous, dotted with wart like glands; leaves round-obovate, glabrous, crenate, 9". Mts., N. and N-W.
 β. roundifolia. Shrublet prostrate, 6-12'; lvs. orbic. White Mts. (B. nana C-B.)

2. ALNUS, Tourn. ALDER. & Flowers in cylindric, drooping aments, bracts peltate, with 5 scales and several flowers beneath. Calyx 4-parted, sta. 4, anth. 2-celled. Q Aments ovoid, bracts cuncate, truncate, thick, 2-flowered. Calyx of 4 scales, persistent. 55 Buds peduncled.

- * Fls. developed before the lvs. in early Spring. Fruit almost wingless Nos. 1, 2
- * Fls. developed with or after the leaves. Fruit winged, No. 3,..... wingless, No. 4
- 1 A. incàna Willd. Speckled, or Black A. Stems 8-20f; leaves obtuse at base, broad oval or ovate, sharp-serrate and some lobed, glaucous-downy beneath; stipules lance oblong. Thickets by streams, N. Eng. to Wis. and Can.
- 2 A. serrulàta Ait. Smooth A. Stems in clumps, straightish, 10-15f; lvs. obovate, pointed, doubly serrulate, smooth; stipules elliptical, obtuse. Swamps.
- **3 A. víridis** DC. *Mountain A.* Shrub 3-4f; lvs. oval, acute, clammy; stip. broadovate; fertile aments on long stalks, oval. Streams in mountains, northward.
- **4 A. marítima** Muhl. Tree 20f; leaves glabrous, ovate to obovate, cuneate, serrulate; fertile aments ovoid-oblong, 1'. River banks, Del., and S.

ORDER CXXIV. MYRICACEÆ. GALEWORTS.

Shrubs with alternate, resinous-dotted, often fragrant leaves, with the *flowers* monœcious or diæcious, both kinds in scaly *aments*, and destitute of corolla or calyx. & Stamens 2-8. & Ovary 1-celled, with 1 erect ovule. Stig. filiform. Fr. dry or drupaceous, indehiscent. Seed with no albumen.

1. MYRÌCA, L. CANDLEBERRY MYRTLE. Fls. $\delta \,$, the δ in cylin drical aments; anth. 4—10 in each scale, large, 2-celled. \Im Aments ovoid, ovary 1 to each bract, in a cup of 3—5 scales, stigmas 1—4, spreading. Drupes covered with wax or resinous dots. 5 Leaves undivided.

* Stigmas 2 or 4. Fruit small (1-3'/), ovoid......Nos. 1-3

* Stigma solitary. Fruit large (6"), oblong (Leitneria, Chapm.).....No. 4
1 M. cerífera L. Bayberry. Shrub 3-4f; lvs. 1-2', oblong to oblanceolate, entire or a few remote teeth above; stam. about 6; aments 6-9"; drupe oval, 2", covered

with white wax (bayberry tallow). Coasts, Can. to Fla. β . Carolinénsis. Lvs. large (3-5'), evergreen, tapering to the petiole. M. and S.

y. pimila. Leaves linear-oblanceolate, acute at each end. 1-3f. S.

- 2 M. Gale L. Sweet Gale. Shrub 3-4f; leaves wedge-oblong, obtuse and serulate at apex, 1-14'; aments 4-8"; nuts crowded, 1", reddish. Shores.
- 3 M. inodòra Bartr. Shrub 6—16f, with whitish bark; lvs. thick, evergreen, 1-2', oblong, obtuse, entire, with rolled edges; drupe 3'', ovoid, black. Fla.
- 4 M. Floridàna (Chapm.) Shrub 2-6f, with brown bark; lvs. oblanceolate, acuté. entire, long-stalked, deciduous; drupe oblong, greenish, 6". Mid. Fla. !

2. COMPTONIA, Sol. SWEET FERN. Fls. 8, the 5 in cylindric aments, with reniform pointed bracts and 3-6 stamens. 9 Aments globular. Ovary surrounded by 6 linear scales longer than the bracts. Nut ovoid. 5 Leaves pinnatifid, narrow, fern-like, stipulate.

C. asplenifolia Ait.-Dry hills, Can. to Va. Shrub 2f, with brown twigs, the very fragrant leaves 3-5' long, with 20-30 wing-like lobes. Stipules pointed.

ORDER CXXV. SALICACEÆ. WILLOW-WORTS.

Trees or shrubs with alternate, simple *leaves* and deciduous or persistent stipules. Flowers $\mathfrak{s} \mathfrak{P}$, both kinds in aments, one under each bract of the ament. Calyx none or cup-form and entire. Ovary 1-2-celled, with 2 short styles. Fruit a capsule, 2-valved, ∞ -seeded. Seeds with a tuft of hairs coma) and no albumen. Figs. 17-20, 200, 287.

1. SALIX, Tourn. WILLOW. OSHER. Aments cylindric, *bracts* imbricated, *entire*, 1-flowered, no calyx, but a little nectariferous gland instead. 3 Sta. 2—7. 2 Ovary ovoid-acuminate, stigmas 2, short. Caps. 1-celled, the valves revolute when open. Seeds ∞ . 555 Branches mostly long and slender. Leaves mostly narrow and pointed, and with stipules. Nos. 4, 10, and 21 are used in basket-making.

§ Stamens 3-10. Aments with the leaves, scales green-yellow, caducous.....Nos. 1--3 Stamens 9, the flamenta united Amenta pressions caches black

- § Stamens 2, the filaments united. Aments precocious, scales black......No. 4
- § Stamens 2, rarely 3 (1 in No. 13), the filaments distinct...(*)
 - * Scales yellow-green. Am. with the lvs.—a Ov. subsessile, glabrous. Trees....5-? —a Ovaries stalked. Shrubs.....Nos. 8, 9

Scales of the 2 aments brownish or blackish, persistent...(b)
 Covaries and pods sessile. Shrubs......Nos. 10, 11
 Ovaries and pods stalked, and glabrous. Aments with the lvs....Nos. 12, 13

- **b** Ovaries and pods stalked, and downy or silky...(c)
 - c Aments appearing with the leaves. Shrubs......Nos. 14-10

- 1 S. lùcida Muhl. Shining W. Tree small, handsome, 5-15f; branches green; lys, smooth and shining, lance-ovate, acuminate with a long point; stip. serrate; stam mostly 5. Along streams, especially northward and northwest. Often cultivated.
- 2 S. PENTÁNDRA. Bay W. Tree 20-40f, very elegant, in shrubberies; lvs. lance-ovate. cuspidate-pointed, shining; twigs reddened; aments yellow; sta. 5+. Europe.
- 3 S. nigra Marshall. Black W. Shrub 10-20f; leaves linear-lanceolate, attenuate to both ends; stip. small, caducous; branches pale yellow; stamens 3-5. Common.
- 4 S. purpurea L. Shrub 6-10f, with long, slender, olive-colored twigs; leaves very smooth, oblanceolate; 1 filament with 2 anthers. Low grounds +
- 5 S. frágilis L. Crack W. Bedford W. Trees call (60-S0f), of quick growth, with greenish divergent twigs brittle at base (like many other species); leaves lanceolate; stigules cadacous; stamens 2, rarely 3. Often planted in parks. § Europe. β. decipiens. A smaller tree, with red polished twigs and upper leaves obovate.
 - y. Russelliana, has long-pointed, serrate, bright lvs. with conspicuous stipules.
- 6 S. alba L. White W. Yellow W. Large trees, with straight branches and yellowisk tough twigs; lvs. lanceolate with a straight point, and silky-whitish, especially be neath; stigmas subsessile, 2-lobed. Common, of rapid growth. §
 - β. ritelling, has shining, yellow branches, with narrower leaves.
 - y. carulea, leaves bluish, nearly or quite smooth bencath. By rivers.
- 7 S. BABYLONICA L. Weeping W. Tree of large size, with long, slender, pendent branches ; lvs. linear-lanceolate, acuminate ; stipules roundish ; ? aments 1--2' long, the ε unknown in U. S.- β . ANNULÀRIS, leaves curled into a ring. Not drooping.
- 8 S. longifolia Muhl. Shrub diffuse, 2-10f, with whitish twigs; lvs. long, linear, pointed both ways, remotely toothed, hairy. River banks, N. Eng., and W.
- 9 S. myrtilloides L. Shrub low, erect, glabrous; lvs. elliptic-oblong, entire, acute or obtuse. Mountain bogs, N. and N-W. (S. pedicéllaris Ph.)
- 10 S. viminalis L. Basket Oster. Stems long, straight, slender, 10-12f; lvs. lancelinear, long, pointed, silky-canescent beneath; aments precocious. Wet.
- 11 S. herbàcea L. Arctic W. Low, creeping, 1-2' high; lvs. round-oval, cordate, serrate, glabrous; aments few-flowered, terminal. Summits of White Mountains.
- 12 S. cordata Muhl. Shrub 6-8f, with smooth, green branches; lvs. lance-oblong cordate, acuminate, smooth; stipules large, serrate. Wet grounds. β . myricoides. Leaves not cordate, with 2 glands at base, glaucous beneath. y. angustata. Leaves lanceolate, acute at base; stipules much smaller.
- 13 S. Cútleri Tuckm. Low, prostrate; lvs. elliptic to obovate, shining above; sta
- men single; aments pedunculate, dense. White Mountains. (S. uva-ursi C-B.) 14 S. vagans, β . rostrata (Andersson). Shrub 3-12f, with straight, erect, yellowish branches; leaves lance-ovate to lance-obovate, acute, subentire, glaucous-downy beneath; stip. toothed; fertile aments becoming long and loose; ovaries long-pointed (rostrate). Dry grounds, Penn., N. and W. (S. livida Wahl.)
- 15 S. argyrocárpa And. Shrub low, creeping; leaves lance-oblong or -linear, glaucous beneath with appressed silvery hairs; pod short-conical, silvery-silky, style slender. White Mountains. Young plants all silvery. (S. repens C-B.)
- 16 S. chlorophýlla And. Shrub low, spreading; lvs. glabrous, glaucous beneath lanceolate to oblanceolate, subentire; fruit very short-stalked; style very long, stigma entire; stipules 0. White Mountains, and N. (S. phylicifolia C-B.)
- 17 S. tristis Ait. Sage W. Small downy shrub with a profusion of small naked aments; leaves lance-linear to oblanceolate; stipules minute, caducous. Dry fields.
- 18 S. hùmilis Massh. Shrub 4-8f, with brown twigs; lvs. oblanceolate; stip. lunate, subdentate, shorter than the distinct petioles. Dry. (S. Muhlenberghiana Barr.)
- 19 S. cándida Willd. Shrub 4-6f, handsome, all whitish; eaves linear-lanceolate, very long; stipules lanceolate, as long as the petioles. In da woods. Common.
- 20 S. díscolor Muhl. Shrub 7-15f; branches greenish-brow ; leaves lance-oblong remotely toothed, glaucous beneath; stipules lunate, toothed or entire; ov. conical, densely silky; stigmas long, linear. Swamps. (S. eriocephalus Mx.)

- 21 S. petiolàris Sm. Shrub 4—15f, twigs long, slender, tough, purplish or yellowish; lvs. linear-lanceolate, smooth, glaucous beneath; stipules lunate, dentate: ovaries ovoid, densely silky, *stigmas very short*. Sandy banks of streams.
 - β. sericea. Lvs. grayish-silky beneath; stigma sessile; stipules deciduous.

2. PÓPULUS, Tourn. POPLAR. ASPEN. Aments cylindric, scales lacerate-fringed. Cal. an oblique, disk-like cup, its margin entire. & Sta 8-30. Q Ova. free, stig. very large, 2-lobed. Caps. 2-valved, 2-celled. Large trees, with soft, light wood. Leaves broad, on long, often compressed petioles. Aments lateral, before the leaves.

- § Buds not viscid. Leaves round-ovate, soon glabrous and green.....Nos. 2-4
- **1 P.** ALBA. Abele P. Silver-leaf P. Tree rapidly growing, and spreading by the roots; leaves cordate, lobed, dark green above, very white beneath. Europe.
- 2 P. tremuloides Mx. American Aspen. Tree 25-40f; bark smooth, greenish; lvs. roundish-cordate, abruptly pointed, dent-serrate; petioles compressed, rendering the leaves *tremulous* in the slightest breeze. Woods: common.
- **3 P. heterophýlla** L. *Cotton-wood*. Tree 40-60f, with smooth greenish bark; lvs. roundish, cordate or ovate, serrate, white-downy when young: buds very downy, short, obtuse; stamens very many; seed with much *cotton*. Wet woods.
- 4 P. grandidentàta Mx. Tree some 40f. with smoothish gray bark; lvs. roundovate, acute, with large unequal sinuate teeth, villous when young; buds subpubescent; petioles compressed. Woods. Common northward.
- 5 P. balsamífera L. Balsam P. Tacmehac. Tree 40-80f, with rough bark; lvs. ovate, acuminate, with appressed servatures; buds very fragrant. Wet. N.
- 6 P. cándicans Ait. Balm-of-Gilead. Tree 30-50f; lvs. ovate, cordate, acuminate, serrate; petiole hairy; buds full of fragrant resin. Woods, and cultivated.
- 7 P. angulàta Ait. Western Cotton-wood. Tree 40-80f, branches acutely angular or winged; leaves deltoid-ovate, or broad-cordate: buds little viscid. S. and W.
- 8 P. Canadénsis Desf. Necklace Cotton-wood. Tree 40-80f; young branchlets an gular; lvs. deltoid to oval, acuminate, erose-denticulate, subcordate; ament scales not hairy. By rivers and lakes, N. and W. (P. monilifera Ait.)
- 9 P. nigra, β. betulifolia. Black P. Tree with an ovoid form, 30-40f; young branches and lvs. pubes.; lvs. deltoid-rhombic, pointed, crenate-serrate. N. Y.: rare. † γ. dilatata. Lombardy P. Tree very tall, pyramidal in form; lvs. deltoid. Com.

CLASS II. GYMNOSPERMÆ.

Pistils none, or represented by open scales, with ovules in their axils. Stigma none, but the pollen applied directly to the ovules, which become naked seeds, destitute of a true pericarp. Flowers always diclinous. Cotyledons often more than 2. (§ 510.)

COHORT 4. CONOIDEÆ. Equivalent to the Class. (§ 515.)

ORDER CXXVI. CYCADACE Æ. CYCADS.

Trees of low stature, simple trunks with their internodes undeveloped and the surface scarred with the fallen leaves. Leaves pinnate, parallelveined, circinnate. Flowers directious, naked, in cones, & anther covering the under surface of the connectile. Q Scales peltate, bearing naked ovules dorsal or marginal.

1. CYCAS REVOLÙTA, from Japan, hardy South, has a short thick trunk, crowned with numerons pinnate leaves, 4-5f long, with innumerable linear 1-veined leaflets rolled at the edges. Fruit in an oblong spadix.

2. ZAMIA INTEGRIFÒLIA. COONTIE. FLORIDA ARROW-ROOT. Stem corm-like, abounding in starch. Leaves 3-5f long, leaflets 3-5', lance-oblong, *jointed* to the rachis, entire, ∞ -veined; fruit in a large oblong cone. S. Fla.

ORDER CXXVII. CONIFERÆ. CONIFERS.

Trees or shrubs mostly evergreen, abounding with a resinous juice. Leaves scattered or fascicled, mostly linear, parallel or fork-veined. Flowers 3 9 or 8, destitute of corolla or calyx, in aments and cones. 5 Stamen 1, or several united. 9 Ovary, style, and stigma wanting. Ovules 1— ∞ at the base of the carpellary scale. Fruit a strobile (cone) with the scales woody and distinct, or baccate with the scales fleshy and coherent. Figs. 107, 166, 194, 216, 256, 293, 299, 352–3, 473–4, 491. See Hoopes' Book of Evergreens.

§	ABIETINE Æ. Scales of the cone each with a bract beneath it. Seeds 2, winged(*)	
59	CUPRESSINE.E. Scales bractless. Seeds 1-9, mostly with 2 wings(**)

P. strobus L. White Pi	ne. A majestic tree, 100-170f, in the	e forests ; lvs. needle.

1 P. strobus L. White Pine. A majestic tree, 100–170f, in the forests; lvs. needleshaped, 4–5', not rigid; cones oblong, 5–7', pendulous. Woods, Penn., N. and N-W Timber of great value in architecture.

2 P. EXCÉLSA. Bhotan P. LVS. glaucous, 5-7'; cones cylindric, 6-9'; nuts winged. Asia

- 3 P. CEMBRA. Stone P. Leaves 2-3'; cones ovate, erect; seeds hard, wingless. Alpa
- 4 P. ARISTÀTA. Colorado P. Leaves 1-11, crowded; cones oval, 21. Tree 40-50f.
- 5 P. austràlis Mx. Long-leaved P. Tree 60-100f, very resinous; leaves 10-15', crowded; cones lance-oblong, nearly as long as the leaves. Stands in extensive forests, South. Very valuable for turpentine, timber, or fuel.
- 6 P. Tæda L. Loblolly P. Tree 50-90f; leaves 6-10', with long sheaths; cones do flexed, half as long as the leaves, with small but strong spines. S.
- **7 P. seròtina** Mx. *Pond P.* Tree 30-50f; leaves 5-8', rigid; cones broadly ovoid, polished, nearly spineless, as large as a goose-egg. Wet lands, S.
- 8 P. rígida Mill. Pitch P. Tree 30-70f, with very rough bark; leaves rigid, 4-6', with short sheaths; cones clustered, ovoid-conic, 2-3'. Sandy barrens.
- 9 P. FONDERÔSA. Tree 50-100f in California, with sturdy trunk, smoothish bark, heavy wood; leaves 9-12'; cones 34', conical, with short strong spines.
- -10 P. mitis Mx. Yellow P. Spruce P. Tree of slow growth, 30-60f; lvs. covering the branchlets, some of them in 3's, mostly in pairs, 3-5', slender; cones 11-2', ovoid-conic, clustered. In dry lands. Timber very valuable.
 - 11 P. pungens Mx. Tree with crooked branches, 20-30f; leaves stout, crowded, about 2'; cones ovoid, 3', with stout spines 3'' long. Mountains, Penn., and S.
 - 12 P. inops Ait. Jersey P. Scrub P. Tree 15-25f, rough and crooked; lvs. rigid, obtuse, 2-3'; cones ovoid-oblong, 2-3', with straightish prickles. Barrens.
- ~13 P. resinosa Ait. Norway P. Red P. Tree 60f, bark smoothish; lvs. slender, 5-6', sheaths 6-12''; cones conic with a rounded base, half as long as the leaves. Dry woods, Penn. to Wis., and N. Timber compact, moderately resinous.
 - 14 P. Hudsònica Poir. (P. Banksiana Lamb.) A straggling pine 5-25f; lvs. rigid. curved, 1', the cones longer (1-2'), recurved, smooth. Rocks, Me., W. and N.
 - 15 P. LÁRICO. Corsican Pine. A large tree of rapid growth, very handsome in parks; leaves slender, bright green, wavy, 4--6'; cones 2--3'. Branches whorled.
 β. AUSTRÌACA. Austrian P. Leaves more rigid, of a rich dark-green color.
 - 16 P. SYLVÉSTRIS. Scolch P. Tree of rapid growth, perfectly hardy; lvs. 2-4', twisted, rigid, bluish green; cones ovoid-conic, 2-3'. Common in Europe.

2. ABIES, Tourn. SPRUCE. FIR. HEMLOCK. & Aments clustered with the old lvs. ? Am. solitary, cones with thin, flat, spineless scales, per sistent one year. Seeds winged. Cotyledons 3-9. 5 Lvs. solitary, not sheathed, scattered over the branches, linear, short, mostly petioled.

- \checkmark § Fir. Cones erect, the scales deciduous. Lvs. flat, spreading two ways...(x)
 - § Spruce. Cones nodding. Lvs. 4-sided or ensiform, pointing all around...(a)
 - § Hemlock. Cones hanging. Leaves flat, mostly spreading two ways......Nos. 1-3
 - a Cones oval, 1-2' long, the scales nearly entire. Native. †.....Nos. 4, 5
 a Cones oblong, 3-8' long, the scales erose-dentate. Cultivated.....Nos. 6, 7
 x Bracts conspicuously exserted, much longer than the scales.....Nos. 8-10
 x Bracts shorter than the scales or rarely a little exserted.....Nos. 11-13
 - 1 A. Canadénsis Mx. Common H. Tree 50-80f, very beautiful when young; lva short-linear (6-8"), glaucous beneath; cones ovoid, terminal, as long as the leaves, scales concealing the bracts. Rocky woods: common N.
 - 2 A. WILLIAMSONII (or Pattoniana). Large tree in Oregon, very fine and hardy here, but rare; leaves yellowish, 6-8", the cones three times longer, bracts concealed.
 - 3 A. DOUGLÁSSII. A huge tree in Oregon, handsome; cones with long, 3-forked bracts.
 - 4 A. nigra Mx. Double S. Tree pyramidal, 60-80f; leaves 6-7", dark green; cones ovoid, 1-2, scales erose-denticulate. Damp mountain woods, northward.
 - **5 A. alba** Mx. Single S. Tree 30-80f, subpyramidal; leaves 6-9", glaucous; cones deciduous, cylindrical, 2', with the scales entire. Rocky woods: common.
 - 6 A. PICEA (or excelsa). Norway S. A stately tree with dense dark-green foliage; lys. 9-12"; cones 5-8' long, light brown, scales notched. Very common.

- 7 A. MENZIÈSH. Tree 50-70f in Oregon; lvs. ¥, silvery-glaucous; cones 3-4, many.
- 8 A. BRACTEÀTA. Tree 100f in California; leaves 2-3', silvery-glaucous beneath; concs
 4', bracts_3-lobed, middle lobe much exceeding the scale, and recurved.
- 9 A. PECTINÀTA. Tree from Europe, 80f; leaves 9", obtuse, glaucous beneath; conez 1-7", brown when ripe, bracts fringed, the cuspidate point spreading.
 - β. CEPHALÓNICA, from Greece, bracts linear-oblong, toothed, reflexed.
 - y. NORDMÁNNIA, from Crimea, bracts with an entire recurved point.
- 10 A. Fràseri Ph. Double Balsam F. Tree small (15-30f); bark smooth, blistered as in the next; leaves 8-10", seeming 3-veined beneath; cones 1-2", oblong; bracts denticulate, long-pointed, reflexed. White Mountains 1 and Alleghanies.
- 11 A. balsàmea Marsh. Balsam F. Tree 30-50f, with smooth bark filled with blisters (reservoirs) of balsam; leaves 8-10", obtuse, silvery beneath; cones cylindri cal, $3-4' \times 1'$, bracts concealed or slightly exserted. Damp woods. Cultivated.
- 12 A. SIBÍRICA (or Pichta). Small tree from Asia; leaves 1'; cones ovoid-conic, 3-4'. 13 A. GRANDIS. Tree 200f in Oreg.; lvs. 1'-18'', bifd, silvery beneath; cones oblong, 4'.

3. CÈDRUS, Link. \diamond Am. solitary, terminal. \Diamond Cones persistent two or three years; scales persistent, close-pressed; bracts concealed adnate to the scales. 5 Leaves sessile, fascicled as in Larix, rigid, evergreen.

- 1 C. LIBÀNI. Cedar of Lebanon. Tree with wide-spread branches; leaves 9-15", dark green, acute; cones oval, obtuse, brown, $3 \times 2'$, scales very many.
- 2 C. DEÓDARA. Huge tree in the Himalayas; lvs. 1-2', light glaucous; cones ovoid, 4'.

4. LARIX, Tourn. LARCH. TAMARACK. & Anthers 2-celled, cells opening lengthwise, with simple pollen grains. & Cones erect, oval or roundish, scales colored, persistent. Seeds with a proper wing. 5 Leaves deciduous, acerous, soft, scattered, and in axillary, many-leaved fascicles.

- L. Americàna Mx. A splendid tree 70-100f, with straight axis and horizontal branches; leaves filiform, very slender, 1-2', in bunches of 12-20; cones deep pur ple, 6-10", scales few, with inflexed edges. Woods northward. Common in cult. β. péndula. Branchlets slender and drooping. Exquisitely beautiful.
- 2 L. EUROPÆA. Large tree; lvs. flattened, linear-spatulate; cones 1-11' long.

5. JUNÍPERUS, L. JUNIPER. Fls. 5 2, aments very small, roundish. 5 Scales peltate, each with 4—7 anther-cells beneath. 2 Scales few, united at base, 1–2-ovuled, forming a sort of berry in fruit. Cotyledons 2. 55 Leaves subulate or scale-like, pungent, opposite or whorled.

- § Lvs. scale-form, opp., 4-rowed, and subulate in 3's, not jointed, nerveless...Nos. 1-3
- § Lvs. all subulate and in 3's, divaricate, jointed to the stem, 1-nerved Nos. 4---.
- 1 J. Virginiàna L. Red Cedar. Tree of middle size, dark green; early lvs. very slender, 3-4", little divergent, in 3's, later ones 1-2", scale-form, 4-rowed, opposite, appressed; cones or berries small, blue-white, on short branchlets. Rocky soils.
- 2 J. sabina, β. procúmbens Ph. Shrub tralling; lvs. opposite, obtuse, a gland in the middle, imbricated in 4 rows; fruit larger (3"), nodding, dark purple. Rocks, N.
- 3 J. Bermudiàna L. Late branchlets very slender, covered with scale-form. pungent lvs. in 4 rows, divergent, 1"; fr. brown, no bloom, 2", subsessile. Fla. 15-20f.
- 4 J. communis L. Common J. (Fig. 353.) Tree or shrub; leaves in 3's, crowded, pungent-acuminate, 6-8", fruit small (2"), subsessile, dark-purple, sweetish. Woods. β. alpina. Shrub trailing; leaves more crowded, less spreading, curved. N.
 - y. OBLÓNGA. Branchlets drooping; leaves lance-linear, glaucous; fruit clustered.
- 5 J. RIGIDA. Weeping J. Branchlets drooping; lvs. channelled on the upper side. Japan.
- 6 J. OXYCEDRUS. Shrub 10-12f, from Eur., is known by its red-brown berries 3-4" long.
- 7 J. DRUPAGEA. Shrub from Syria, 8-12f, with berries dark-purple, as large as a plum

6. CUNNINGHÀMIA SINÉNSIS. Tree from China, 30-40f, very anique. Leaves 1-1#, lance-linear, stiff and pungent, in 2 rows. Cones ovoid, 1¥, with toothed and pointed scales (or bracts ?) each 3-seeded.

7. THÚYA, Tourn. ARBOR VITÆ. Fls. 8, on different branches, terminal. 8 Anther-cells 4 on each imbricated scale. 9 Scales few, in pairs, opposite, imbricated, each 2-6-ovuled. Seeds winged. 55 Leaves scaleform, opposite, imbricated in 4 rows.

- 1 T. occidentàlis L. Tree branched from base to summit; leaves rhombic-ovate, tubercled on the back; cones oblong, scales not reflexed, each 2-seeded. On rocky banks, common N., now very frequent in cultivation. Many varieties.
- 2 T. (THUYOPSIS) DOLABRÀTA. Tree from Japan, 40-60f, with ovate scale-form lvs., not appressed; cones small, roundish, each scale 5-seeded. Rare.
- 8 T. (BIOTA) ORIENTÀLIS. Shrub light green, or yellowish; ramifications vertical; cones broad, with thick scales and horn-like reflexed points. China.

8. CUPRÉSSUS, Tourn. Aments ϑ , small, roundish. \updownarrow Scales each with 2— ∞ erect ovules. Cone globular, the scales angular, peltate, valvately closed until ripe. 5 Leaves scale-form, flat, imbricated as in Thuya, often with a tubercle on the back. CYPRESS.

- 1 C. SEMPÉRVIRENS. Cone large, oval, 1', scales ∞ -seeded; lvs. minute, ovate, obtuse. very closely imbricated. Cultivated South. Tree strict, conical, 20-40f.
- 2 C. thyoides L. White Cedar. Tree pyramidal, filiform branchlets square; leaves minute, lance-ovate, close, the tubercle manifest. Swamps. Cones small as peas.
- 3 C. LAWSONI. Splendid tree from Oregon; branchlets flattened, feather-like, blnishgreen; leaves lance-ovate, tubercled; cones 11¹¹. Becoming common.

9. TAXODIUM, Rich. BALD CYPRESS. Fls. ϑ , sessile, small, roundish, the ϑ in spikes, ϑ in pairs below. Cone globular, the scales peltate, angular, thick, firmly closed till ripe, with 2 angular seeds at base. Cotyledons 6—9. Ξ With deciduous, linear, 2-rowed leaves.

T. dístichum Rich. Tree 100-125f, trunk 6-9f diam.; large conical excrescences grow up from the roots; lvs. light-green, scattered, in 2 rows on the slender branchlets. Swamps, Va., and S. Timber valuable.

10. SEQUÓYA, Endl. RED-WOOD. Cones roundish, with peltate trapezoid, 5-seeded scales, valvately closed. Seeds winged both sides. 5 Immense, Californian. Leaves linear or subulate, alternate.

- 1 S. SEMPÉRVIRENS, Tree 200f, with a diam. of 10f; bark blackish, with rose-purple wood almost imperishable; cones globular, 1'; leaves of 2 kinds.
- 2 S. GIGÁNTEA. Tree 300f, with a diam. of 20f (often larger !); bark cinnamon color, wood dull red; cones oval, near 2'; leaves mostly subulate. Rarely planted.

ORDER CXXVIII. TAXACEÆ. YEWS.

Trees or *shrubs*, with the general habit of the Pines, but with no cones, nor even the carpellary scale. *Flowers* consisting simply of anthers or an ovule involucrate with bracts. *Fruit* a nut-like seed, naked, or in a cup form dry or pulpy disk. *Cotyledons* 2. Fig. 166.

1 Leaves lance-linear. Anthers 4. Seed fleshy-coated or dry, Lot in a cup......TORREYA. 2 Leaves linear to ovate, 1-veined. Anthers 2. Seed inverted, in a shallow cup......PODOCARPUS. 3 Leaves flabelliform, fork-veined. Anthers 2. Seed erect, in a deep cup......SALISBURIA. 4

1. TAXUS, Tourn. YEW. Flowers axillary, the 3 in aments. Stam. or bracts peltate, 5-8-lobed, with 5-8 anther-cells. 9 Flower solitary. Ovule erect, becoming a nut-like seed, sitting in a deep fleshy cup-shaped disk. 55 Leaves rigid, alternate, in 2 rows.

1 T. Canadénsis L. Dwarf Y. (Fig. 166.) Shrub low or prostrate, branches as cending: lys. mucronate, revolute-edged, 9-12"; stam. with 5 anther-cells: fruit depressed-globous, a black seed in an amber-colored cup. Rocky soils, northward.

- 2 T. BACCÀTA. English Y. Tree of low stature, widely spreading; lvs. falcate, acute, flat, 10-12"; stam. with 6-8 anther-cells; fruit oblong-bell-form. Europe.
- 3 T. brevifolia N. Tree 15-50f, branches ascending; lvs. 7-10", very narrow; sta. with 6 anther-cells; fruit oval. Fla.? and Oreg. The species are all closely related.

2. TORRÈYA, Arn. Flowers axillary, the & many in the ament, bracts in 4 rows. Stamens with 4 anther-cells. 9 Oyule with few bracts. becoming drupe-like, at length a dry ovoid bony nut or seed. 55 Leaves rigid, alternate, 2-rowed, pungent, lance-linear.

T. taxifolia Arn. Tree 15-30f, with erect strict form, dark green; lys, 1-14' long, 2-ranked as well as the branchlets; fruit smooth, glaucous, ovoid, 9-11". Fla. +

3. PODOCARPUS, L'Her., contains some rare evergreens with remarkably large leaves (2-3' long). As yet very sparingly cultivated.

4. SALISBURIA ADIANTIFÒLIA (or Ginkgo biloba). Tree 40-80f, from Japan, strict and pyramidal. Lvs. fan-shaped, 2-lobed, fork-veined and petiolate, in structure much like the Maidenhair Fern. The flowers and fruit are seldom seen.

PROVINCE, ENDOGENS,

THE MONOCOTYLEDONOUS PLANTS. Stems without the distinction of bark, wood, and pith, endogenous in growth (§ 421). Leaves mostly parallel-veined and alternate. Flowers 3-parted (rarely \checkmark). Embryo with one cotyledon. (Prov. Acrogens, 360.)

- PETALIFERÆ. Endogenous plants having CLASS III. flowers either with a whorled perianth or without one, but never glumaceous. (Class IV. GLUMIFERÆ. Page 355.)
 - COHORT 5. SPADICIFLORÆ. Flowers crowded on a thickened or club-shaped rachis (spadix), mostly naked rarely with a scale-like perianth. (Cohort 6, p. 322.)

ORDER CXXIX. PALMACEÆ. PALMS.

Trees or shrubs, chiefly with unbranched trunks growing by the terminal bud. Leaves large, plaited, on sheathing petioles, collected in one terminal cluster. Flowers perfect or polygamous, on a branching spadix bursting from a spathe. Perianth double, 3-merous, hexandrous, ovaries (and styles) 3, distinct or commonly united into 1, each 1-ovuled. Fruit fleshy, 1-3-seeded. Fig. 508.

Flowers all perfect. Ovaries and styles united into l. Berry single......SABAL. 1
 Flowers perfect and staminate. Ovaries and styles distinct. Drupes 3......CHAMEROPS. 2

1. SABAL, Adans. PALMETTO. Fls. \checkmark , sessile, complete. Sepals 3 united, petals 3, subdistinct. Sta. 6, fil. distinct. Ovaries 3, soon united, Sty. 1. Fr. a dryish 3-seeded berry. 55 Caudex (§ 227) procumbent or erect, beset with the persistent bases of the petioles. Lvs. palmately fanshaped, many-cleft. Flowers small, greenish. June—Aug.

- **1 S. Palmétto** Loddig. Caudex erect, 20-50f, usually enlarged above; the majestic lvs. are 6-10f long, all from one terminal bud; spadix much shorter than the leaves, spathe double; berry globular. Along the coast, Fla. to S. C.
- 2 S. Adansòni Guern. Caudex prostrate; lvs. rigid, longer than the *even*-edged petioles; spadix slender, much branched, as high (3-4f) as the leaves; style thick, obtuse; berry depressed. Along the coast, in low grounds, S.
- **3 S. serrulàta** R. & S. Caudex creeping; petioles *aculeate-serrate*; spadix thick. 2-3f; style subulate; berry oblong-ovoid. Barrens, S. C. to Fla.

β. minima. Every way smaller; leaves about 7-cleft. E. Fla.

2. CHAMÆROPS, L. BLUE PALMETTO. Fls. § and §. Perianth as in Sabal. Sta. 6 or 9, connate at base. Ovaries 3, distinct, stig. sessile. Berries 3, 1-seeded. Palms acaulescent. Petioles aculeate. Spadix denseflowered, flowers yellowish. June—Aug.

C. Hystrix Fraser. Caudex low, making offsets at base; leaves 3-4f, the petioles spiny in the axils; drupes ovoid, hairy, in masses. Clay soils, Ga., Fla.

ORDER CXXX. ARACEÆ. AROIDS.

Herbs with a creeping rhizome or corm, an acrid or pungent juice, leaves often veiny, and the *flowers* mostly diclinous and naked. Inflorescence a spadix, dense-flowered, naked or mostly surrounded with a large spathe. *Perianth* none, or of 4-6 scales. Anthers extrorse. Ovary free, stigma sessile. Fruit baccate or dry, seeds albuminous. Figs. 432, 436.

1. PÍSTIA, L. Spathe tubular at base, spreading above. Fls. s, few, the upper s in an involuce, of 3—8 anther-cells. s Fl. solitary, r a 1-celled ovary and thick style. Berry several-seeded.

P. spathulàta Mx. Floating free in still water; leaves 1-2', obovate-spatulate, rosulate, the veins lamellated beneath; spathe white. E. Fla.

2. ARISÈMA, Mart. DRAGON-ROOT. INDIAN TURNIP. Spathe convolute at base. Spadix with a long naked summit, flower-bearing at base. & Fls. above the fertile, each merely a cluster of 4 or more stamens. & Ovary 1-celled, stig. flat. Berry red, 1- or few-seeded. 24 Root tuberous. Scape sheathed with the petioles.

- 1 A. triphýllum Torr. Jack-in-the-pulpit. Stem a large corm fiercely acrid; scape round, thick, 8-12'; leaves 2, trifoliate; leaflets oval, pointed, sessile; spathe striped, inflected over the club-shaped spadix. Rocky woods. April+.
- 2 A. quinàtum Wood. Leaves 1 or 2, with very long sheaths, one or both quinate; leaflets oval to lance-oval, acute, or obtuse, cuspidate, narrowed to a petiolule. Ga. to Car., in hilly woods. 1-2f. (A. polymorphum Buckley.)
- 3 A. Dracóntium Schott. Green Dragon. Leaf mostly 1, pedate, with 7-11 lance oblong leaflets; spadix subulate, longer than the spathe. Bogs. 2f.

3. **PELTANDRA**, Raf. Spathe convolute. Spadix staminate above, pistillate below. Anth.-cells 8—12, opening at top, adnate to a thickened peltate connectile. Berries $1-\infty$ -seeded. 24 Leaves sagittate, the long petioles sheathing the scape. May, June.

- 1 P. Virgínica Raf. Leaves sagittate-hastate, the base lobes long and turned outward; spathe green, 4-6' long; berries green, 1-3-seeded. Marshes. 9-18'.
- 2 P. glauca Feay. Leaves sagittate-cordate, lobes rounded; spathe white and open at the top, 3'; berries ∞ -seeded, red. Coastward, S. (Xanthosoma, Sch.)

4. CALLA, L. Spathe ovate, spreading, white. Spadix covered with the naked fis. Perianth 0. Fil. 6, slender, with 2-celled anthers. Berry red, depressed, 3-6-seeded. 24 m Rhizome creeping. Leaves cordate.

C. palústris L.-Shallow waters, Pa., and N. Scape 4-6'. Leaves 2-3'. July.

5. SYMPLOCÁRPUS, Salisb. SKUNK CABBAGE. Spathe shell-form, thick, close to the ground in early Spring, preceding the leaves, incurved at base and apex. Spadix oval, covered with the dull purple, perfect fls. Perianth 4-parted. Berries 1-seeded. 24 m Leaves all radical, very large.

S. foetidus Salisb.-Swamps, meadows: common. Leaves cordate-oval, 12-20'.

6. ORÓNTIUM, L. GOLDEN CLUB. Spathe 0. Spadix cylindrical, yello w, crowning the naked scape. Perianth 4-6-sepalled. Sta. 4-6. Fr. dry stricle, 1-seeded. 24 m Leaves lanceolate, all radical.

0. aquáticum L.—Pools and brooks. 1f. Very smooth. Scape thickened upward, green at base, white above, the summit (flowers) golden yellow. June.

7. ACORUS, L. SWEET FLAG. Spathe 0. Spadix cylindric, sessile, issuing from the side of a leaf-like scape. Perianth 6-sepalled. Sta. 6. Ova and fruit 3-celled, capsular, ∞ -seeded. 24 Rhizome thick, aromatic. Lvs all radical, linear-ensiform like the scape A. Cálamus L. Scape ensiform, continued long and leaf-like above the green, dense flowered spadix. In wet soils. 2-3f. Root tastes warmly pungent. June, July.

8. COLOCÀSIA ANTIQUÔRUM, from Egypt, &c., has large (2—3f) ovatesagittate, peltate, repand leaves, on petioles longer than the scape. Spathe erect, much longer than the spadix. Cultivated for food, and for ornament.

9. PHYLLODÉNDRON GRANDIFÒLIUM. Stems rooting, running or climbing. Leaves very large (2-4f), opaque, strongly veined, cordate-sagittate, acute, entire. Petioles terete, red-spotted. Spathe yellowish. S. America.

10. RICHARDIA AFRICANA (Kunth, Calla Æthiopica L.). Known everywhere as the Ægyptian Calla, but native of the Cape of Good Hope: is a grand house-plant, 2-4f, with large hastate-cordate leaves, round scapes, a large milk-white spathe rolled in at base and back at apex, surrounding a yellow cylindric spadix.

11. CALÀDIUM BÍCOLOR. Roots tuberous. Lvs. radical, peltate, hastate-cordate, short-pointed, variegated with crimson or purple at the centre, or pellucid at base, or white-spotted. A splendid leaf-plant. Panama!

ORDER CXXXI. LEMNACEÆ. DUCKMEATS.

Herbs minute, stemless, floating free upon the water, and consisting of a leaf-like frond, or a tuft of leaves, with one or more fibrous roots. *Flowers* bursting from the substance of the frond, or axillary, enclosed in a spathe, the sterile consisting of 1 or 2 stamens, the fertile of a 1-celled ovary. *Fruit* a utricle, with 1 or more seeds. *Emb.* straight, in fleshy albumen. Fig. 516

1. LEMNA, L. DUCKMEAT. Fls. from a chink in the edge of the frond, 2 sterile, each a single recurved stamen, with 1 fertile,—an ovary with style and stigma. Ovules and seeds 1-7. (1) 24 Fronds 1-7'' long Roots hair-like. Flowers rarely seen.

§ Ovule solitary. Frond with a single root. (LEMNA proper)......Nos. 1-3
 § Ovules 2. Frond many-rooted. (Spirodela, Schleiden).....No. 4

- 1 L. trisúlca L. Fronds oblong, as long (2-3") as their stalks, proliferous from their sides, thin, obtuse. Pools of clear water, in patches.
- 2 L. perpusílla Torr. Fronds thin, 3-veined, round-obovate, 1-2", in groups of 3-7; style slender; seed round-oblong, erect. Ponds, N. Y., W. and S. August.
- 3 L. minor L. Fronds thick, veinless, obovate or roundish, 1-2", single or in groups of 2-4; style short; seed ovoid, half-erect. Stagnant waters: common.
- 4 L. polyrrhiza L. Fronds oval, 2-3", thickish, 5-7-veined, purplish beneath, cach with a bundle of black roots beneath. Stagnant waters: rare.

2. WÓLFFIA, Horkel. Fls. from the centre of the minute frond, **2** only; δ flower a stamen with a 1-celled anther. \Im Ovary with a very short style, ovule and seed 1. (1) Fronds $\frac{1}{\delta} - \frac{1}{\delta}$, rootless, separate.

W. Columbiàna Karsten. Frond round-oval. Floating, with Lemna, seeming mere specks of green—the least of all flowering plants. Not rare.

ORDER CXXXII. TYPHACEÆ. TYPHADS.

Herbs growing in marshes and ditches, with rigid, ensiform, sessile leaves Flowers monœcious, arranged on a spadix or in heads, with no spathe **Perianth** of a few scales, or a tuft of hairs, or 0. Stamens 1-4, with long slender filaments. Ovary with 1 pendulous ovule. Seed albuminous, with an axial embryo. Fig. 211.

1. TYPHA, L. CAT-TAIL. REED-MACE. Spadix long, cylindric, dense, sterile above. & Sta. 3 together, united into a common filament. ? Ova. pedicellate, surrounded at base by a hair-like pappus or calyx. 24 Fls. very numerous, packed solid in the large brown terminal spadix.

- **T. latifòlia** L. Leaves linear, flat, exceeding the stem; spadix cylindric, the sterile and fertile contiguous. Tall and smooth, 3-5f, in swamps.
- **2 T. angustifòlia** L. Leaves linear, channelled, exceeding the stem; spadix cylin dric, the sterile some remote from the fertile. Swamps. 2–4f.

2. SPARGANIUM, L. BURR REED. Spadices or globular heads many, the lower fertile, consisting of sessile pistils, each with 3-6 sepals, and forming 1-seeded nuts. Sterile heads a mass of stamens with scales intermixed. \mathcal{U} and \mathcal{U} August.

- * Stigmas mostly 2. Stems of the inflorescence branching, erect......No, 1
- * Stigma always single. Stem subsimple, erect or floating......Nos. 2, 3
- 1 S. eurycárpum Eng. Stout, 1-3f; lvs. very long, carinate beneath; fruit heads 1', nuts large, obpyramidal, truncate, sessile; sterile heads numerous. Borders of rivers and ponds, N Eng. to Pa., and W. (S. ramosum C-B.)
- 2 S. simplex Huds. Erect, slender, 1-2f; leaves triangular at base, long and narrow; sepals spatulate, denticulate; nuts beaked and stiped; heads 6-8" broad, the s more than the \$\$\$. Ponds and bogs, N. and W.
 - β. natans. Leaves floating, flat; stigma shorter than the style; heads few.
- 3 S. mínimum Bauhin. Slender, weak, simple, erect or floating; leaves narrow, flat; heads few, axillary, small (3-4"); fruit scarcely beaked, sessile. Streams, N Eng., and W. (S. angustifolium C-B.)

ORDER CXXXIII. NAIADACEÆ. NAIADS.

Water plants with jointed stems, and sheathing stipules, or sheathing petioles. Flowers perfect or diclinous, naked or with a 2-4-parted perianth. Stamens definite. Ovaries free, sessile, 1-ovuled. Stigma simple, often sessile. Fruit indehiscent. Seed without albumen, with a straight or curved embryo.

- Flowers axillary, sessile. the staminate reduced to a single stamen...(a)
- Flowers spadaceous, or 2-20, sessile on a spadix or spike...(b)
 - b Flowers monœcious, seated in 2 rows on the side of a linear, flat spadixZOSTERA.
 - b Flowers perfect, naked, 2-5, 4-merous. Fruit raised on slender stipes..........RUPPIA. 4
 - b Flowers perfect. Perianth 4-sepalled. Stamens 4. Pistils and achenia 4......POTAMOGRTON. 5

1. NAJAS, L. WATER NYMPH. & Fl. a solitary stamen, in a little hooded spathe. ? Fl. a naked pistil with 2-4 subulate stigmas. Fr. a httle 1-seeded, drupe-like nutlet. A Entirely submersed. Lvs. opposite, linear, broader at base, toothed. Flowers axillary.

1 N. major All. Stem frail and slender, 1-3f; leaves 1' and less, crowded above with conspicuous spinulous teeth; nutlets ovoid, 14" long. N. Y. (Clinton).

- **2 N. Indica** Cham., β . gracillima. Stems filiform, forking; leaves opposite and in 3's, very narrowly linear, remotely spinulous-servate. N. Y. and Pa. (Porter).
- 3 N. fléxilis Rostk. Leaves narrowly linear, in 3's, 4's, and 6's, minutely serrulate, at well as their abruptly-widened sheathing base, 3-12". Ponds: common.

2. ZANNICHÉLLIA, Micheli. HORN PONDWEED. Fls. 8, both kinds together in the same axil. 3 Sta. 1, with a slender fil. 9 Cal. of 1 sepal, cor. 0. Ova. 4 or more, each with a style and stig. Fr. 4 or more oblique achenia. I Submersed, with filiform branches, and linear, entire leaves.

Z. palústris L. Stems round, leafy, 1-2f; leaves opposite, grass-like, 2-3'; anther 4-celled; achenia 4-6, toothed on the back. Pools and ditches: rare.

3. ZÓSTERA, L. SEA WRACK. Spadix linear, leaf-like, bearing the *s* fls. in 2 rows on one side. Perianth 0. *s* Anther ovoid, sessile, opening lengthwise, with hair-like pollen. *Q* Ova. as long as the anther, style bifid. Utricle 1-seeded. 24 m Stipules united into a sheath. Leaves grass-like.

Z. marina L. Rhizome creeping, sending up long simple stems; lvs. alternate, ribbon-like, 1-5f long; spadix 2', in a spathe at base of a leaf. Grows in the sea, along shore, Me. to Ga., and is washed up by the waves.

4. RUPPIA, L. DITCH-GRASS. Fls. \notin , 2 together on a spadix arising from the sheath of a leaf. Perianth 0. Anthers 2, large, sessile, 2-celled. Ovaries 4, fruit 2—4 dry drupes on pedicels. 24 ar A grass-like plant, all submersed but the flowers. Flower-stalk at length very long.

R. marítima L. Stems filiform, branched, 2-5f; leaves linear-setaceous, 2-6', on inflated sheaths; flowers arising to the surface. Seas, and lakes (Hankenson), **E**.

5. POTAMOGÈTON, Tourn. POND-WEED. Fls. § on a spadix arising from a spathe. Cal. 4-sepalled. Anth. 4, alternate with sepals. Ova. 4. Ach. 4, sessile, flattened on one or two sides. Seeds curved or coiled. # Mostly 24, only the spadix with its 3—10 small green fls. arising to the surface of the water. Lvs. stipulate, the upper often opposite. Fr. July, Aug.

§ Leaves of two kinds, the floating oval-elliptical, coriaceous, petiolate;

stipules free from the petiole, connate; submersed leaves thin. . . (*)

- * Submersed leaves lanceolate, rarely lance-linear......Nos. 5-8
- Leaves all similar, submersed, mostly thin and membranous...(a)
 - a Leaves lanceolate or lance-oblong, petiolate or merely sessile......Nos. 9, 10 a Leaves oval or oblong, broad and clasping at base.....Nos. 11-13
 - a Leaves linear or setaceous.—x Stipules 0, or adnate to the leaf......Nos. 14, 15
 - - -y Stems filiform.....Nos. 18-20

P. natans L. Subsimple; floating lvs. 2-3', lance-oblong, narrowly obtuse, on slender (2-6') petioles; stipules long, linear; lower lvs. few, linear, 2-6'; spikes 1-2', on thick peduncles much longer; fruit turgid, 3-keeled. Ponds and ditches.

- 2 P. Claytòni Tuckm. Simple; floating leaves lance-oblong, about 15-veined, 1-1¼, longer than their petioles, opposite; lower lvs. linear, 3-veined, 3-6'×1", spikes and their peduncles near 1'; fruit orbicular, 3-keeled. Streams and ponds: common.
 β. heterophýllus. Petioles and peduncles longer than the leaves (2-3'). Mass.
- 8 P. hýbridus Mx. Stems branching, filiform; floating lvs. oval, 5-7-veined, 7-16" their petioles shorter, subopposite; spikes and their stalks 4-6"; lower lvs. linear setaceous, 1-3', many; fruit minute, dentate. Common.

5. diversifolius. Leaves nearly all floating, oval, the lower few and short.

- 4 P. Spirillus Tuckm. Very delicate, branched; floating lvs. oval to lanceolate, 5-9 veined, 7-10", on short broad petioles; lower leaves narrowly linear, obtuse, 1-2, submersed ped. 1-2-flowered; embryo a little *spiral*. Streams: rare.
- **5 P. gramíneus** L. Stem much branched, terete; floating lvs. long-stalked, ovate to oblong, acutish, 13-veined; lower leaves lanceolate to lance-linear, pointed, stip. obtuse; fruit small, obtuse-angled. Common, and very variable.
- 6 P. fluitans Roth. Lvs. long-stalked, the floating thinnish, opposite, elliptic-oblong, the submersed linear-oblong, all acute both ways, 11-21-veined; fruit acutely 3-keeled on the back. In ponds and rivers. (P. lonchitis Tuckm.)
- 7 P. pulcher Tuckm. Stem simple; floating leaves ovate, subcordate, 25-35-veined, *i*-5', alternate; upper submersed lvs. lanceolate, long-acuminate, undulate, the lower oval-oblong; fruit 3-keeled. Penn., N. J. (Prof. Porter), N. and W. Rare.
- S P. amplifolius Tuckm. Stems simple; floating leaves oval to elliptical, 24-4/ 35-45-veined, on long, opposite stalks; submersed lvs. larger than the floating, 5-7' lanceolate, short-stalked, or sessile. Ponds. (P. fluitans C-B.)
- **9 P. lucens L.** Leaves large, often *shining*, lance-oval, $3-5' \times 1'$, pointed and *mucro* nate, on short stalks; spike 2'; fruit roundish, slightly keeled. Rivers and lakes.
- 10 P. obrùtus Wood. Stem simple : leaves all submersed, narrow-lanceolate, 3', ob scurely 7-veined, subsessile, acute ; spike 1', the stalk 2' ; fruit inflated, acutely keeled, conspicuously umbilicate both sides. Slow waters. No floating leaves.
- 11 P. prælóngus Wulf. St. very long, branched; lvs. lance-ovate to lanceolate, obtuse, half-clasping, often large; peduncle very long (3-5'); fruit sharp-keeled. Rivers.
- 12 P. perfoliatus L. Stem branched; lvs. cordate-clasping, roundish to ovate, obtuse; ped. short, few-flowered; fruit not keeled. Ponds and slow waters: common.
- 13 P. crispus L. Branched below; leaves 3-veined, half-clasping, narrow-oblong. obtuse, 1-2', crisp-wavy; fruit acuminate-beaked. Penn., and E. (Prof. Porter).
- 14 P. pectinatus L. Stem flexuous, repeatedly forking; leaves linear-setaceous, 2-3'; spike interrupted, on a long filiform peduncle; fruit large (2"), rough. E. and N.
- 15 P. Robbinsii Oakes. Stem very branching; leaves lance-linear, crowded, sheathing the stem with their bases; spikes on short peduncles. N. and W.
- **16 P. compréssus** L. St. branching, flattened; lvs. linear, ∞ -veined, $2-4' \times 1-2''$; stip. obtuse; spike 12-15-flowered, much shorter than the peduncle. Ponds.
- 17 P. obtusifolius Mert. and Ktch. St. branching, flattened; lvs. linear, 3-veined; stip. obtuse; spike 6-8-flowered, as long as the peduncle. Pa., and N-W.
- 18 P. paucifiorus Ph. St. slightly flattened, much forked; lvs: linear, 1-3"×1-1"; flowers few (3-12) in the spike; fruit distinctly crested. Rivers, &c.
- 19 P. pusíllus L. Stem filiform, branched; leaves linear, varying to capillary, 1-3veined; spikes 3-5-flowered, long-stalked; fruit not keeled. Shallow waters.
- 20 P. Tuckermani Robbins. Very slender and delicate, forked; lvs. capillary and confervoid; spike 6-9-flowered, on a very long peduncle (5'). Ponds, Pa., and N.

COHORT 6. FLORIDEÆ.

ENDOGENOUS PLANTS with the flowers usually perfect and complete, the perianth double, 3-parted, the outer often, and sometimes both, green.

ORDER CXXXIV. ALISMACEÆ. WATER PLANTAINS.

Marsh herbs, with parallel-veined, petiolate leaves and branching peduncles. Flowers perfect or monoccious, with a regular double perianth Sepals 3, green. Petals 3, colored or green. Stamens hypogynous. Ovaries 3 or more, separating into as many distinct fruits.

\$ BUTTOMEÆ. Petals colored. Carpels 6-20, each with 00 ovules	ROCLEIS. 1
JUNCAGINE Æ. Petals green. Carpels 3, each 1-3-seeded(y)

" Anthers linear. Carnels 2-3-seeded. Leaves cauline	UCHZERIA 6

1. HYDRÓCLEIS HUMBÓLDTII (or Limnocharis), from Brazil, grows in pools, like Sagittaria, with long-stalked, oval, 7-veined leaves and large (2-3') orangeyellow flowers. Sepals small. Stamens 18-24. Ovaries 6.

2. ALÍSMA, L. WATER PLANTAIN. Sepals persistent. Petals involute in the bud. Ovaries and styles arranged in a circle, forming many flattened achenia. 24 Acaulescent.

A. Plantàgo L. β. Americanum. Lvs. 5-7-veined, ovate or oval, subcordate, pointed; scape many-flowered, fls. whorled, small, rose-white. Pools. 1-2f. July, Aug.

3. ECHINODÒRUS, Rich. Sepals persistent. Petals imbricate in bud. Sta. $6 - \infty$. Ovaries and styles ∞ , imbricated, forming many flattened, beaked achenia. In Scape creeping or erect. Fls. small, white, whorled.

- 1 E. radicans Eng. Leaves large (5-12), 7-veined, cordate, ovate, on long petioles; scape prostrate, running and rooting; flowers clustered at the nodes, white; stam. 18-24; ovaries very many. 24 Swamps, Ill. to Ga. June, July.
- 2 E. rostràtus Eng. Leaves 1-3', ovate, cordate, on long petioles; scapes erect, sharply angled; stamens 12; carpels ∞ , strongly ribbed and beaked. (1) West.
- 3 E. párvulus Eng. Leaves lance-elliptic, as long as the petioles (1'); scapes 3-6 flowered; stamens 9; carpels about 20, beakless; flowers about 3". (1) E. and W.

4. SAGITTÀRIA, L. ARROWHEAD. Fls. ϑ or $\vartheta \vartheta$, in whorls of 3 on the scape, the lower fertile. Petals white, larger than the sepals, imbricated in bud. Sta. ∞ . Ovaries very ∞ , crowded in a head. Achenia flattened, margined, and beaked. \implies Juice milky. Leaves on long radical stalks, sagittate to linear. Summer.

- * Leaves mostly arrow-shaped. Filaments slender, elongated Nos. 1, 2
- Leaves lanceolate to linear, very rarely with narrow, base lobes...(a)
 a Filaments as long as the anthers. Pedicels all subequal......No. 3
 a Filaments thick, shorter than anthers.—x Fertile pedicels very short....No. 4

-x Pedicels subequal.....Nos. 5, 6

 S. variábilis Eng. Scape 1-2f, 12-angled; sterile pedicels twice longer than the fortile; filaments much *longer* than the anthers; achenia with a conspicuous averted beak. Waters: common. Flowers about 1' broad. Varies exceedingly

a, Leaves lanceolate, with lance-linear lobes of the same length.

p. obtùsa. Leaves ample (6-10'), broad-ovate, obtuse. Fls. 3 : M., W., and S.
 y. latifolia. Leaves ample, ovate, acute, their lobes ovate, pointed.

δ. grácilis. Leaves and their spreading lobes long, linear, acute.

- E. pubéscens. Plant pubescent all over; leaves and lobes ovate.
- 2 S. calycina Eng. Scape soon procumbent; pedicels all subequal; bracts roundish; calyx closed on the fruit; filaments as long as the anthers. Waters. Leaves as in No. 1, but sometimes all linear and floating.

- **3 S. lanceolàta** L. Leaves lance-oblong, rarely linear, tapering to the long petione, scape branched; 2-3f; achenia obovate-falcate. Swamps, Va. to Fla.
- 4 S. heterophýlla Ph. Leaves linear-lanceolate, rarely some of them with 1 or 2 base lobes; scape simple, weak; achenia narrow, long-beaked. Common S. and W.
- 5 S. gramínea Mx. Scape erect, slender, 5-20'; leaves lance-ovate to linear, rarely sagittate; pedicels all equally slender; achenia beakless; flowers 8-9" diameter.
 β. platyphýlla. Leaves lance-ovate; flowers larger, 1' broad. South
- 6 S. pusilla N. Scape shorter than the leaves (2-4'); leaves linear, shorter than the petioles; flowers few, the fertile but one, deflexed; stamens about 7. N. J., and S.
- 7 S. natans Mx. Scape mostly erect, 3-6'; leaves oval-lanceolate, floating, obtuse, 3 veined; lower pedicels longest; achenia angular, short-beaked. South.

5. TRIGLÒCHIN, L. ARROW-GRASS. Sepals and petals concave, deciduous (green). Sta. 6, very short, anth. large, extrorse. Ova. 1-ovuled, 3-6, united and indehiscent in fruit. 24 Leaves all radical, grass-like Scape jointless, and bractless. Flowers small. July.

- 1 T. marítimum L. Fruit ovate-oblong, grooved, of 6 united carpels; scape longer (9-18') than the leaves. Salt marshes and Lake shores, northward.
- 2 T. palústre L. Fruit nearly linear, of 3 united carpels; scape scarcely longer than the numerous and very narrow leaves. Marshes, N. Y., and N. 6-12.

6. SCHEUCHZÈRIA, L. Sep. and pet. oblong, acute, persistent. Sta. 6, with linear anthers. Ovaries 1-2-ovuled, becoming flattened inflated capsules. 24 Leaves cauline, sheathing at base, linear.

S. palústris L.—A rush-like plant, in swamps, Vt. to Ill. (J. Wolf). Root-stock horizontal, fleshy. Stem 1f. Leaves semicylindric, 4—8'. Flowers yellowish green, in a bracted raceme. Stamens large, exserted. July.

ORDER CXXXV. HYDROCHARIDACEÆ. FROGBITS.

Aquatic herbs, with parallel-veined leaves and diclinous flowers solitary of spicate. Perianth regular, 3-6-parted, the inner segments petaloid. Stamens 3-12. Ovary adherent, 1-9-celled, with 3, 6, or 9 stigmas. Fruit dry or juicy, ∞ -seeded, indehiscent.

* Leaves all radical, roundish, floating in stagnant waters.LIMNOBIUM. 1

1. LIMNÒBIUM, Rich. FROG'S-BIT. Fls. 8. Spathes subsessile, the \$ 1-leaved, about 3-flwd., the \$ 2-leaved, 1-flwd. Perianth showy, white. Sta. 6-12 (mere rudiments in \$). Ov. 6-9-celled, becoming a co-seeded berry. 24 M Stoloniferous. Lvs. on long stalks, subcordate. July, Aug. L. Spóngla Rich.-Lake Ont. (rare), and S. Lvs. 1-14, purplish and spongy beneath

2. ANÁCHARIS, Rich. DITCH MOSS. Fls. $\delta \notin \hat{\varphi}$, solitary. Spathe axillary, bifid. Perianth 6-parted, colored, small, the fertile excessively produced above the adherent ovary into a capillary tube. Style capillary, with 3 large stigmas. Fruit few-seeded. \mathcal{U} Wholly submersed. Aug.

A. Canadénsis Planc. Stems filiform, long, forking; very leafy; leaves linear-ob long, servulate, 5–10ⁱ; tube of the dingy-white fils. 2–10ⁱ long! Streams and bogs

3. VALLISNÈRIA, Mich. EEL-GRASS. Fls. & ?. Spathe ovate, 2-4-parted. & Spadix or spike covered with minute naked fls. ? Fl. solitary, a slender perianth with linear segm. and 3 bifid stig. Fr. cylindrical, ∞ -seeded. 24 m Fertile flowers on long spiral scapes. July, Aug.

V. spiràlis L. Lvs. 1-2f long, obtuse, 1' wide, scapes of the sterile plants short, of the fertile filiform, tortuous, 2-4f, bearing the single white fl. at or near the surface.

ORDER CXXXVI. BURMANNIACEÆ.

Small annual herbs, with naked or scaly stems and scale-like tufted leaves. Flowers perfect. Perianth tubular, 6-toothed, adherent. Stamens 3 or 6. Capsule 1- or 3-celled. Seeds ∞ , minute, in a loose testa.

 APTÈRIA, N. Perianth tube longer than the slender teeth, which are alternately narrower. Caps. globular, 1-celled. (1) Apparently leafless.
 A. setàcea N. Erect, very slender, 4-6f, with remote subulate scales, and bearing above 1 or 2 racemes; flowers 3-4", purplish, distant. Woods, Fla., and W.

2. **BURMANNIA**, L. Perianth tube scarcely produced above the ovary, often 3-winged below, limb with the 3 inner teeth much shorter. Capsule prismatic, often 3-winged, 3-celled. (1) Leafless.

- 1 B. biftòra L. Stems capillary. simple, 2-3', with scarcely perceptible bracts, and 1 or 2 (rarely more) light-blue flowers, 2-3'' long at top. Swamps, Va., and S. Oct.
- 2 B. capitàta (L). Stem setaceous, 6-8', simple, bearing at top a dense cluster of white flowers, and a few subulate bracts. Uplands, S.: less common. Sept.

ORDER CXXXVII. ORCHIDACEÆ. ORCHIDS.

Herbs perennial with fleshy roots, simple, entire, parallel-veined leaves. Flowers very irregular, with an adherent, ringent perianth of 6 parts. Sepals 3, usually colored. Petals 3, odd one (lowest by the twisting of the ovary), called the lip, diverse in form from the others, sometimes lobed, often spurred. Stamens 3, gynandrous (consolidated with the style), some of them abortive, pollen powdery or waxy. Ovary inferior, 1-celled, capsule 3-valved. Seeds innumerable. Figs. 71, 105, 240, 247, b. 263, 291, 435.

5 CYPRIPEDIEÆ. Anthers, the 2 lateral fertile, the terminal petaloid(a)		
a Lip a large, inflated, spurless sac. Petals and sepals spreading	CYPRIPEDIUM.	1
• OPHRYDEÆ, &c. Anthers, only the upper one fertile, 2-celled(b)		
b Lip a large inflated sac, 2-spurred under the apex. Leaf 1	CALYPSO.	1
b Lip produced behind into a spur, which is free from the ovary(c)		
b Lip spurless, or the spur adheres to the ovary (except in No. 13)(d)		
c Anther fixed ; pollen-masses 2, club-shaped, in 2 separate cells	ORCHIS.	3
c Anther lid-like, on the end of the stigma ; pollen-masses 4	TIPULARIA	4
d Plants brown and leafless, rarely with radical leaves(e)		
d Plants green and (except No. 16) furnished with leaves(m)		
e Lip hooded, i. e., its margins involute. Perianth spreading	BLETIA.	8
e Lip concave, sessile, often with an adnate spur	CORALLORHIEA	đ
e Lip concave, raised on a claw. Plant with 1 late leaf	APLECTRUM.	7
m Lip flat. Flowers obscure, in racemes, nearly bractless(n)		
m Lip flat, expanded and lobed, tubercled at base. Flowers showy	ONCIDIUM.	9
m Lip channelled, reflexed. Flowers whitish, in bracted spikes(o)		
m Lip bearded or 3-lobed. Stamen lid-like. Flowers showy(2)		

n Tin optime dilated Column minute (Test 2)	
n Lip entire, dilated. Column minute. (Leaf 1)	5
n Lip sagittate or cordate. Column elongated. Leaves 2LIPPARIS.	10
n Lip 2-lobed or cleft at apex. Leaves 2 cauline, oppositeLISTERA.	11
o Lip with 2 lateral callosities, not at all saccateSPIRANTHES.	12

x Flowers purplish. Lip anterior (as in most Orchids)(y)	
y Column free from the lip. Calyx spreadingPogoNIA.	14
y Column adnate to the lip below. Calyx erect. Leaves 0ARETHUSA.	17
y Column adherent to the lip. Calyx spreading. On trees, SouthEPIDENDRUM.	I.

1. CYPRIPÉDIUM, L. LADY'S SLIPPER. The 2 lower sepals united int: 1 leaf, or rarely distinct. Pet. spreading. Lip inflated, saccate, obtuse. Column terminated by a petaloid lobe (barren stamen), and bearing a 2-celled anther under each wing. 24 With large plaited leaves and large showy flowers. May, June. Fig. 71.

a Stem a leafless scape, 2-leaved at base. Flower rose-colored......No. 2 a Stem leafy.—x Flowers solitary or several, white or rose-colored.....Nos. 3, 4 —x Flowers 1—3, mostly 1, yellow. Plant pubescent.....Nos. 5, 6

1 C. arietinum Ait. Ram's Head. Stems usually clustered, 8-12', each 1- or 2flwd.; leaves elliptical; upper sep. oblong-ovate, the lateral sep. and pet. lin.-lanceolate, lip obconic, as long as the pet. Damp woods, N. Eng. to Wis., and N. Curious.

- 2 C. acaùle Ait. Scape 10-14', bearing a single large (2') flower; lvs. elliptic-oblong; pet. lanceolate, shorter than the large boat-shaped lip. In damp woods. Beautiful.
- 3 C. spectabile Sw. Stem leafy, 2f, hairy; lvs. lance-ovate, acuminate; sep. broadovate, obtuse, the lower (double) one smaller; lip 2', white-purple. Swamps. Superb.
- 4 C. candidum Willd. St. leafy, 1f; lvs. oblong-lanceolate, acute; fl. 1; sep. subequal; lip 1', compressed, white, shorter than the (2') pet. Woods and prairies.
- 5 C. parviflorum Salisb. St. very leafy, 8-12'; lvs. lanceolate, acuminate; sepals ovate to lance-ovate; lip depressed, shorter than the petals. Low woods and prairies.
- 6 C. pubéscens Sw. Large Yellow L. Stems usually clustered, 1f or more; leaves broadly lanceolate, acuminate; sepals lanceolate; lip compressed laterally, moccasinshaped, shorter than the linear, twisted petals. Woods, meadows, and prairies.

2. CALYPSO, Salisb. Sep. and pet. subequal, ascending. Lip large, inflated, with 2 spurs dependent beneath near the apex. Column petaloid. Pollinia 4. \mathcal{L} Scape 1-leafed at base, 1-flwd. above, arising from a corm.

C. boreàlis Salisb.—Old mossy woods, Vt., N. Y., W. to Oregon! Scape 6-8'; leaf broad-ovate, 1-2'; flowers purple and yellow, 14'. Rare eastward. May.

3. ORCHIS, L. Sepals and pet. similar, some of them ascending and arching over the column. Lip turned downward, produced at base into a spur which is free from the twisted ovary. Sta. 1, anth. 2-celled, a pollenmass in each cell.—Fls. racemed on the stem or scape. June—August. (Includes Habenaria, Gymnadenia, and Platanthera.)

*	Leaves only 2,—a ovate, nearly as long as scape. Flowers rose-whiteNo. 1
	-a roundish, the scape much longer. Flowers greenishNos. 2, 3
*	Leaf only 1. Flowers greenish-white. Lip entire or 3-lobedNos. 4, 5
۰	Leaves several, clothing the stem more or less (b)
	b Lip undivided,—c entire, white or greenishNos. 6, 7

-c crenulate or wavy, white or yellow Nos. 8, 9
-c 3-toothed. Flowers yellowish or greenish Nos. 10-12
-c fringed. Flowers bright yellow or white Nos. 13-15
Lip 3-parted, $-x$ segments fringed. Flowers white or greenish Nos. 16, 17
-x segments fringed. Flowers purple
-x segments merely toothed. Flowers violet-purpleNo. 20
-x segments entire, long, linear-setaceous,, Nos. 21, 22

1 O. spectábilis L. Lvs. rarely more than 2, 3-6'; scape 4-6', bearing 1 or 2 lanceolate bracts and 3-5 showy flowers above; spur clavate. Rocky thickets. Pretty.

b

- **2 0. orbiculàta** Ph. Lvs. 2, roundish, 3-6', fleshy; scape bracted, 1-2f; upper sepals round, the lateral ovate, half as long as the lip (9-12'). Woods, E. and W.
- **3 0. Hookeri** Wood. Lvs. 2, round-oval, fleshy, 4-5'; scape naked, 8-12'; upper sepals ovate, erect, the lateral deflexed and meeting behind; spur 1'. Woods, N.
- 4 0. obtusata Ph. Leaf oblong-ovate, obtuse, 2-3', near the base of the stem; lip linear, entire, with 2 tubercles at base, as long as the spur. In mud, N.
- 5 0. rotundifòlia Ph. Leaf round-ovate, radical; scape few-flowered; lip 3-lobed, obcordate, side lobes falcate; spur as long as the lip. Penn., and N.
- 6 **O. hyperborea** Willd. Lvs. very erect, lanceolate; spike long: bracts longer than the greenish flowers; petals and lip linear, subequal. Shades, northward. 1-4f.
- 7 0. dilatàta Ph. Slender, 8'-2f; lvs. lance-linear and linear; spike virgate; bracte short; flowers white; lip linear, *dilated-rhombic* at base. Swamps, N.
- 8 O. nivea Baldw. Very slender, 1-2f; lowest leaf linear, 6-8', the others subulate, bract-like; flowers white, in an obiong spike; lips oblong. South.
- 9 0. integra N. Stem leafy, flexuous, 12-15'; lvs. narrow-lanceolate; spike dense, oval; flowers orange-yellow; lip ovate, longer than sepals. Swamps, N. J., and S.
- 10 0. tridentàta Willd. St. slender, 12-18'; lowest leaf linear-oblong, obtuse, 6', the others few, small and bract-like; fls. few, greenish; lip 3-toothed at e.d. Woods.
- 11 0. bracteàta Muhl. St. leafy; lvs. oblong, obtuse or acutish; bracts 2-3 times longer than the small green fls.; lip 3-(or 2-)toothed at end, lin.-cuneate. Shades. 6-9'.
- 12 0. flava L. St. leafy; lvs. oblong to lanceolate; bracts longer than the yellowishbrown flowers; lip oblong, obtuse, a tooth each side at base, and a tubercle in the palate; spur shorter than the ovary. Alluvial soils. (O. virescens Muhl.)
- 13 O. cristàta Mx. Slender, 1¹-2f; leaves lance-linear to linear; flowers numerous, small, yellow; sep. and pet. roundish, 1-2"; spur ¹/₄ as long as ovary. N. J., and S.
- 14 O. ciliàris L. Yellow Fringed Orchis. Stem 2f; leaves lanceolate; flowers large. numerous, orange-colored: lip 4" long, twice longer than the linear, notched petals; spur 1'. Swamps. Delicately beautiful.
- 15 0. Blephariglóttis Willd. White Fringed Orchis. Stem 1-2f; leaves lanceolate; flowers pure white; lip fringed in the middle, 2" long, lanceolate; spur much longer (1'). Swamps, N. Y. to Car., and westward.
- **16 O. lácera** Mx. Ragged O. St. smooth, slender, 1-2f; leaves oblong to linear, bracts longer than the flowers; sepals retuse; petals emarginate; flowers ∞ ; lip segments capillaceous-multifid; spur as long as the ovary. Meadows.
- 17 0. leucophæa N. White Prairie O. Lvs. lanceolate, tapering to a narrow obtuse point; bracts shorter than the ovaries; fls. about 12; spur yellowish, curved, twice longer than the ovary; petals white. Wet prairies.
- **18 O. Psýcodes** L. *Purple Fringed O.* Leaves lanceolate; lip segments cuneiform, scarcely longer than the ovate, crenulate, slightly fringed petals; spur longer than the ovary. Meadows. 11-21f. Flowers light purple.
- 19 0. grandifiòra Bw. Large Fringed O. Tall, 2-3f; lvs. oval, oblong, and linear, obtuse; lip segments dependent. fan-shaped, twice longer than the fringed pet als. Wet meadows, Penn., and N. Superb. (O. fimbriata.)
- 20 0. peramdena (Gr.) Tall, leafy; leaves lanceolate to lance-linear; sepals roundovate; petals denticulate; lip middle segment 2-lobed, all merely toothed; spur onger than the ovary. Pa. to Ind., and S. Flowers 20-50, large.

- 21 O. Michaùxii (N:) Very leafy; leaves elliptic-oval, the upper reduced; flowers few, white; petals 2-parted, the lower divisions linear-setaceous, like those of the lip; spur twice as long as the ovary; flcwers white. South.
- 22 O. repens (N.) Stem very leafy from a creeping rhizome; leaves all lance-linear, long; flowers greenish-yellow, dense in the spike, much smaller than in No. 21, but otherwise similar. Pine-barrens, S. August, September.

4. TIPULÀRIA, N Sepals spatulate, spreading. Petals lance-linear. Lip sessile, 3-lobed, middle .obe linear. Spur filiform, very long. Column free. Anth. opening by a lid, with 4 pollen-masses. 24 Corms several, connected by a thick fibre. Leaf 1. Flowers bractless.

T. discolor N.—Pine woods, Vt. to Ga. Leaf ovate, petiolate, 2—3'. Scape 10—15'; raceme with many small, greenish, nodding flowers. July.

5. BLETIA, R. & P. Pet. and sep. subequal, distinct. Lip hooded at end (spurless in our species). Column free. Pollinia 8, in pairs, waxy, each pair pedicellate. 24 Flowers racemed, showy.

- **1 B. aphýlla** N. Leafless; scape 15-30', with few bracts; racemes long and loose; flowers purplish and yellowish-brown; lip 3-lobed. Swamps, S. August.
- 2 B. verecinda H. K. Leaves all radical, broad-lanceolate; scape 2-3f; flowers purple, large and showy; lip broad and crisp at the end. Ga., Fla. July.

6. CORALLORHIZA, Br. CORAL-ROOT. Sepals and petals subequal, converging. Lip produced behind into a spur, which is adnate to the ovary or obsolete. Pollinia 4. 21 Plants leafless, brown, arising from coralline roots, sheathed with bracts. Flowers racemed. Fig. 240.

-x Lip entire, slightly toothed near the base.....Nos. 3, 4

- 1 C. multifiòra N. Scape 10-15', all brownish-purple, bearing 15-20 fis. in a long rac.; lip 3-lobed, white, spotted, 3-4"; caps. elliptical, pendulous. Woods, M., N. Jl.
- 2 C. odontorhiza N. Scape 9-14', all brownish-purple, bearing 10-20 fis. in a long spike; lip undivided, oval, obtuse, spotted? caps. roundish, reflexed. Old woods. J.
- 3 C. innàta Br. Scape 5-10-fiwd.; lip oblong, angularly 2-toothed toward the base, spotless, white; caps. elliptic-obovoid, reflexed. Damp woods, N.: rare. 5-8'. Jr
- 4 C. Macriei Gr. Scape 15-20-fiwd., fis. large; lip oval, obtuse, obscurely auriculate at base; caps. oval, 6", reflexed; sepals and petals 6". N. H., N. and W. 10-16'.

7. APLÉCTRUM, N. ADAM-AND-EVE. PUTTY-ROOT. Sepals and petals distinct, subequal, converging. Lip unguiculate, 3-lobed, middle lobe crenulate. Spur 0. Column free, anth. a little below the apex, pollinia 4, lens-shaped. 24 Root a globous corm. Leaf 1, large, biennial. Scape after the leaf, bracted, racemed, and brown, as in Corallorhiza. Fig. 263.

A. hyemale N.-Woods: rare. Corm near 1' diam., a new one each year. Leaf elliptic-ovate, 3-5', green all Winter. Scape 12--18', with a dozen brownish flowers.

8. ONCIDIUM, Sw. Lip expanded, lobed, tubercled at base. Perianth expanding. Sepals sometimes but 2. Column winged. Pollen masses 2, each 2-lobed. 24 Splendid flowers, tropical, of easy culture in the greenhouse. Flowers large, in open racemes, olive, yellow, &c.

- 1 O. FLEXUdsum. Scape panicled, arising from the base of a bulb; leaves lanceolate; lip 2-lobed, spotted, much longer than the other petals. Brazil.
- 2 O. LÙRIDUM. Scape erect, branched; leaves elliptical; lip reniform, not longer than the wavy, retuse petals; flowers large, olive-colored. From S. America. 2f.
- 3 0. PAPÍLIO, has one spotted ovate leaf and large yellow-red butterfly-shaped flowers.

9. MICROSTYLIS, N. Sepals spreading, petals filiform or linear, lip concave, sessile. Column minute, with 2 teeth or lobes at tip. Pollinia 4 4 Root tuberous, with 1 or 2 leaves and small racemed flowers.

1 M ophioglossoides N. St. 5-9', with a single ovate (2') leaf near the middle, rac. short (1'), ped. much longer than the minute whitish flowers. Woods, N. June.

2 M. monophýllus Lindl. St. 2--6', 3-angled, with a single ovate leaf; rac. elongated, 20-40-flowered; pedicels about as long as the flowers (2"). Woods, N.: rare. Jl.

10. LIPPARIS, Rich. TWAY-BLADE. Sep. and pet. very narrow. Lip spreading, flat. Column winged. Pollinia 4, parallel with each other, without pedicels or glands. 24 Root tuberous, with 2 lys. and a rac. of greenish fls.

- 1 L. Iilifòlia Rich. Scape about 6'; leaves 2, radical, lance-ovate, 3-4'; petals filiform, reflexed; lip purple, 6", abruptly cuspidate; pedicels 1'. Damp woods. June.
 - 2 L. Lœsélii Rich. Scape 3-5', about 6-flowered; pedicels 2''; lip 2'', oblong, mu cronate, incurved, wavy; sepals and petals linear. Fields, Can. to Penn. June.

11. LISTERA, Br. TWAY-BLADE. Sep. and pet. subequal, lip pendulous, 2-lobed or 2-cleft. Column wingless, anth. dorsal, pollen powdery. 24 Root fibrous. Stem (4-9') with 2 opposite leaves above the middle. Flowers small, racemed. May-July, in damp woods.

- 1 L. cordata Br. Lvs. roundish, subcordate, acute; fis. 10-15, in a short raceme; pedicels length of the ovary; lip-segment linear, length of the sepals. Penn., and N.
- 2 L. austràlis Lindl. Lvs. ovate; fls. in a loose raceme; ped. 3-4 times longer than the ovary; lip-segment linear-setaceous, twice the length of the sepals. N. J., and S.
- **3 L. convallarioides** Hook. Lvs. round-oval; fis. few, loose, on slender pedicels; lip twice the length of the sepals (4''), 2-lobed at the dilated apex. Ga., and N.

12. SPIRANTHES, Rich. LADIES' TRESSES. Spike spiral. Perianth ringent, the 3 upper pieces ascending and connivent, lip oblong, recurved, channelled, the base embracing the column, and with 2 callous processes. Stigma ovate, beaked, 2-toothed at tip. Anthers dorsal, pollinia 2, each 2-lobed, powdery. 24 Stem nearly naked, bearing many white flowers, bent to a horizontal position.

- * Spike dense, with the flowers on all sides. Lvs. present with the flowers.. Nos. 1-3
- * Spike slender, flowers all in 1 straight or spiral row.-x Lvs. permanent....Nos. 4-6

-x Lvs. evanescent....Nos. 7, 8

- **1 S. cérnua** Rich. Leaves lance-linear, the upper bract-like; spike oblong to cylindric, 2-4'; lip very obtuse, crenulate-wavy, conduplicate and recurved; sepals and petals not connivent, 4-5". Wet. 9-20'. Aug.-Oct.
- 2 S. Romanzoviàna Cham. Lvs. lance-oblong to linear; spike dense, 1-3'; lip much recurved, ovate-oblong, crenulate-wavy; sepals and petals all connivent above into a galea. Bogs, Me. (Miss Towle) to Lake Superior (Prof. Porter). July, Aug.
- 8 S. latifòlia Torr. Leaves nearly radical, 3-5-veined, lance-oblong; scape bracted.
 4-8'; flowers small (2-3'); plant glabrous. Meadows, Penn., and N. June, July.
- **4 S. odoràta** N. St. stout, 1-2f; lvs. lance-oblong; fls. yellowish, fragrant, 6", in a spiral row, with leafy bracts; lip 2-toothed at base. Muddy streams, S. October.

- 5 S. graminea Lindl. Lvs. below lance-linear to linear, the cauline mere sheaths; spike dense, much twisted; flowers white, 3-5", pubescent, scarcely ringent; liv oblong-ovate, crisped, obtuse. Wet meadows. June-Aug. (S. tortilis C-B.)
- **6 S. brevifòlia** Chapm. Lowest leaves elliptical, evanescent, cauline bract-like: flowers 5-15, in a nearly straight row, ringent, 3-4"; lip entire. S.
- 7 S. grácilis Bigel. Lvs. all radical, ovate to oblong, fugacious; scape very slender, 8-18', with a few bracts; flowers 3-4", in a nearly straight row, pure white; root fasciculate; plant glabrous. Woods: common. July, Aug.
- 8 S. simplex Gr. Lvs. all radical, fugacious; scape 5-9', flowers very small (1-2') in a thin 1-sided spike; inp obovate-oblong. Dry, N. J. (Porter), and S.

13. GOODYÉRA, Br. RATTLESNAKE PLANTAIN. Spike and perianth as in Spiranthes. Lip sessile, concave or sack-like or even spur-like at pase, contracted at the end to a reflexed, channelled point. 24 Root-stock creeping, branching. Leaves ovate, on sheathing petioles.

* Leaves radical, generally netted with white veins. Lip not spurred Nos. 1, 2

- * Leaves cauline, uniformly green. Lip spurred at the base behind No. 3
- 1 G. Menzièsii Lindl. Lip concave at base, gradually narrowed and folded at apex; leaves elliptic-ovate; scape 9-12'; spike loose-flowered; flowers pubescent (as are Nos. 2 and 3), *suberect*. Woods, N. Y. to Mich. (Dr. Leidy) and Oreg. 1 July, Aug.
- 2 G. repens Br. Lip saccate-inflated at base; leaves ovate, beautifully netted; scape 6-12'; flowers ovoid, nodding, in 1 row, which is more or less spiral; perianth greenish, about 2" long and nearly as wide. Woods. June, July. (G. pubescens Br.)
- 3 G. quercícola Lindl. Rooting on the bark of Oaks, &c.; stem leafy; lvs. lance-ovate, thin; spike glabrous, dense, 6-20"; sheaths and bracts membranous; lip ovate at apex, the spur pouch-like, half as long as the ovary. Fla. to La. 6-12'.

14. **PONTHIEVA**, Br. Lip on the upper or inner side, ovate, spreading, and with the other petals inserted into the middle of the column. Anthers with 4 pollinia. Otherwise like Spiranthes.

P. glandulòsa Br. Lvs. radical, oblong-oval; root fasciculate; scape 1f, bracted, with a spike of many greenish pubescent fls. Woods, S. Sept., Oct. (Cranichis N.)

15. CALOPÒGON, Br. GRASS PINK. Sepals and petals similar, distinct. Lip on the upper (inner) side (the ovary not twisted), unguiculate, bearded. Column free, winged at the summit. 24 Corm bearing a grasslike leaf, and a scape with several showy flowers.

C. pulchéllus Br. Leaf linear, 8-12' by 6", veined; fls. 3-8, large, purple; lip spat ulate, crested with colored hairs, erect over the column. Wet meadows. June, July.

16. POGÒNIA, Juss. Perianth irregular, its pieces distinct. Lip sessile or unguiculate, hooded, bearded inside. Column wingless, free. Anth. terminal, lid-form, with 2 pollinia. 24

§ Sepals about equal, and similar to the petals, light purple. Lip scarcely lobed..Nos. 1, 9
§ Sepals much longer than, and unlike the petals, dark brown. Lip 3-lobed ..Nos. 3, 4

- 1 P. ophioglossoides N. Root fibrous; stem 9-16', with an oval-lanceolate leaf near the middle, and a leaf-like bract near the single large pale-purple flower; lip crested and fringed, as long as the sepals and petals. Swamps. June, July.
- 2 P. péndula Lindl. Three-birds. Root tuberous; stem 4-8', with 4-8 small scattered leaves and 3 (1-4) drooping bird-like flowers 1' long. Woods: rare. August.
- **3** P. divaricàta Br. Stem 1-2f, erect, with 2 linear-oblong lvs. and 1 terminal large flower; sepals linear, recurved at apex, 14' long; petals lanceolate, pink-colored, acuminate, 1', lip a little longer. Swamps, Del. to Fla. April, May.

330

4 P. verticillàta N. Stem 8-12', bracted at base, bearing 4 or 5 oval lvs. in a whorl at the top, with a curious flower; sepals linear, 2 or 3 times longer than the lanceolate, obtuse petals, which are about 9" long. Swamps. June, July.

17. ARETHÜSA, Gron. Fl. ringent. Sep. and pet. similar, cohering at base and connivent above. Lip adnate to the column at base, recurved and dilated at apex. Anthers terminal, 2-celled, with 4 pollinia. 21 Stem low, with sheathing bracts. Flowers purple, beautiful.

1. oulbosa L. Flower single, 1-2', erect, with 2 small bracts at its base; lip crenulate-wavy, bearded along the middle. Root a corm. Bogs. 6-12/. June.

18. EPIDENDRUM, Swtz. TREE ORCHIS. Sep. and pet. spreading. Lip united with the column forming a tube which is sometimes decurrent on the ovary. Anth. terminal, opercular, 4-celled. Pollinia 4. 24 Grows on the rough bark of trees. Stems many-flowered.

E. conópseum H. K. Stems clustered, 5-8', each with a pair of opposite, lancelinear, coriaceous leaves below, and 3-7 purplish fls. 6" broad. Low lands, S Aug.

ORDER CXXXVIII. SCITAMINEÆ. GINGERWORTS.

Tropical herbs. Leaves parallel-veined, with the veins diverging from the midvein. Flowers irregular and unsymmetrical, with perianth 3-6 parted and adherent to the 3-celled ovary. Stamens 3-6, some of them abortive. Styles united. Fruit dry or fleshy. Seeds albuminous. Here belong the Cardamoms, Gingers, Bananas, and Arrow-roots.

- \$ MUSACE Æ. Anthers 5, each 2-celled. Fruit many-seeded. Filaments 6...(x)
- \$ ZINGIBERE Æ. Anther 1, 2-celled. Filaments 3, not petaloid. Fruit 00-seeded...(y)
- § MARANTEÆ. Anther 1, with 1 cell. Filaments 3, petaloid. Capsules 1-3-seeded...(z) x Perianth of 2 unequal leaves or lips, the lower 5-toothed. Berry oblong......MUSA. 2 y Perianth tube slender, lower petal lip-like. Stamens and style long-exserted. HEDYCHIUM. 3 y Perianth short, in spikes, with large bracts. Stamens and style included ALPINIA. 4 5 z Pistil petaloid, stigma flat, linear. Flowers red, showy. Caps. 3-seeded......CANNA. 6
 - z Pistil short, twisted, with a large gaping stigma. Fls. small. Caps. 1-seeded.... THALIA. 7

1. MUSA SAPIÉNTUM. BANANA. Scape 7-20f, sheathed below by the stalks of the majestic leaves, the summit a nodding spike of pink-colored flowers, becoming a huge cluster of delicious fruits in which the seeds are abortive.

2. STRELITZIA REGINE. Scape 5-8f, with sheathing bracts, upper bract spathe-like, horizontal, with a cluster of splendid flowers. Senals lanceolate, 3-4', yellow. Petals hastate, light blue, enclosing the stamens and style. S. Africa.

3. HEDYCHIUM ANGUSTIFÒLIUM. Stem 5f, very leafy. Leaves linenr-lanceolate. Sepals and pet. linear, the .ip .blorg, all scarlet, in a dense cluster. III, CARNEUM has similar leaves, with pink-colored flowers in a loose cluster. E. India.

4. ALPINIA MAGNÍFICA, from Mauritius, 10f high, has the flowers in a head with many large rose-colored bracts, which are bordered with a white line. A. NU-TANS, still taller, from E. India, has a drooping raceme of pink-colored bracts and flowers, with curled and curved petals. Very splendid.

5. MARANTA BÍCOLOR, from Brazil, is cultivated for the large ovate leaves, which are beautifully feather-marked with light-green above and purple beneath

6. CANNA, L. INDIAN SHOT. Sepals 3, persistent on the tubercled fruit. Petals 6, the innermost 2- or 3-lobed at the end. Stamen petaloid, with a half anther on one edge. Stigma petaloid, flat, obtuse. 24 Handsome evergreen herbs, with tall stems and large smooth leaves.

§ CORYTHIUM. Corolla tube manifest. Petals dilated. Anther wholly adnate.. No. 1 § CANNA proper. Cor. tube short or 0. Petals narrow. Anther free above.. Nos. 2-4

1 C. fláccida Rosc. Stem 3-4f; lvs. lanceolate, 2f, pointed both ways; sep. erect, not i the length of the tube of the funnel-form corolla; petals and filaments obovate, thin, *flaccid*, wavy, yellow, spirally arranged; stig. spatulate. Ponds, South.

- 2 C. INDICA. Stem 3-6f, leafy; lvs. ovate, pointed, 1-2f, abrupt at base; sep. green, 6"; 3 outer pet. erect, green-tipped, the 3 inner recurved or reflexed, the 5th double (2-lobed at end), the stamens and style similar (2'), all scarlet. W. Indies.
- 3 C. DÍSCOLOR. Stem 6-10f; lvs. very large, green and purple; fls. in pairs, crimson.
- 4 C. IRIDIFLORA. From Peru. Downy; sheaths colored at edge; fls. drooping, 3', red.

7. THÀLIA, L. Flowers in a 2-leaved spathe. Cal. 3-sepalled, small. Cor. 6-parted, 3 inner pet. very unequal. Sta. 2-parted, the inner segment slender, bearing the $\frac{1}{2}$ anther. Caps. thin. 24 are Scape sheathed at base by the petioles, tall, paniculate above. Flowers small, purple.

1 T. dealbàta Rosc. Plant 4f, covered with a white powder; lvs. cordate-ovate, on long petioles; panicles dense, erect, the branches as short as the lanceolate bracts. S.

2 T. divaricàta Chapm. Plant not powdery, 7f; lvs. lauce-ovate, rounded at base; panicle open, divaricate, branches zigzag, much longer than the linear bracts. Fla

ORDER CXXXIX. AMARYLLIDACEÆ. AMARYLLIDS.

Herbs perennial, chiefly bulbous, with linear *leaves* not scurfy nor woolly. Flowers showy, mostly regular and on scapes, with an adherent, 6-parted perianth. Stamens 6, anthers introrse. Ovary 3-celled, with styles united into 1. Fruit a 3-celled capsule or berry. Seeds 1 to ∞ , with fleshy albumen. Figs. 58, 86, 486, 495.

5	Porianth crowned with a firm cup containing the stamens (§§ 78, 79)NARCISSUS.	1
ş	Perianth crowned with a thin membrane connecting the stamensPANCRATIUM.	2

	x Perianth regular.—y Sepals all white, larger than the petals	9
	-y Sepals green-tipped, as large as the petals LEU(CJUM.	10
	-y Sepals and petals equal, yellow	11

1. NARCÍSSUS, L. Perianth regular, 6-parted, bearing a bell- or cup-form crown on the throat. Sta. 6, inserted in the tube, and concealed within the crown. 24 Stems bulbous, scapes bearing a long deciduous spathe with 1 or more yellow or white fragrant flowers. Leaves linear.

§ Crown shorter than the tube, --x its border crenated. Flowers 1-5.....Nos. 3-5 --x its border 6-lobed. Flowers 1-3.....No. 6 --x its border entire. Flowers 5-20.....Nos. 7, 8
1 N. PSEUDO-NARCÍSSUS. Daffodil. Scape 2-edged, 1f; lvs. linear, 1f; fl. large, ylw.; crown bell-form, serrate-crenate, as long as the pet. Often double: com. Apr., May.
2 N. BULBOCÒDIUM. Hoop-petticoat. Fl. ylw.; cr. much larger than perianth. Apr., May.
3 N. JONQUÍLLA. Jonquils. Fls. 2-5, yellow, frag., small; crown saucer-shaped. much shorter than the petals; scape terete; lvs. half round, 1f. From Spain. May, June
4 N. BIFLÒRUS. Primrose-peerless. Fls. generally 2, cream-wh., crown cup-shaped, ylw.
5 N. PoÉTICUS. Poet's N. Fl. 1, white, crown flattish, very small, pale-yellow, edged with crimson, throat yellow. Fl. often double. Scape 1f. Lvs. flat. June. S. Eur.
6 N. odòRUS. Great Jonquil. Fl. mostly solitary, yellow, powerfully fragrant, crown bell-form, 6", the lobes entire; limb 1' long, tube slender, 9". S. Europe. 1f. May.
7 N. TAZÉTTA. Crown yellow, bell-form, half as long as the white or yellow petals, the border truncate; leaves glaucous, flat. Spain. May, June. Numerous varieties.

8 N. POLYÁNTHUS. Crown white, thrice shorter than the ovate white petals, border nearly entire; leaves green, flat. Spain. Beautiful, but too tender north.

2. PANCRATIUM, L. Perianth tube produced above the (sessile) ovary, long and slender, the 6 segm. long and narrow. Stam. 6, adnate to the crown, exserted; anth. versatile. 21 Bulb coated, scape solid, 2-edged, bearing a bracted umbel of large (white) flowers. (Leaves linear.)

§ Crown adnate below to the dilated throat and segment of the perianthNos. 1, 2 § Crown free, funnel-form, throat of perianth not dilated. Tube straight....Nos. 3, 4

- 1 P. marítimum L. Plant glaucous; lvs. longer than scape; tube 3-4', longer than the lin.-lanceolate segm.; crown half-adherent, 12-toothed. Marshes, S. July-Sept.
- 2 P. nutans Gawl. Plant green; lvs. very long (2f); fls. nodding, with a green curved tube 2', seg. nearly 3'; sta. incurved; crown slightly adherent. S. Car. (Herbert.)
- **3 P. rotàtum** Gawl. Plant glaucous, 1-2f; lvs. long, strap-shaped, obtuse; tube 3', green, shorter than the linear segments; crown irregularly toothed. S. April, May.
- 4 P. coronàrium Leconte. Plant green, 2f; lvs. lance-linear, obtuse; tube 3-4', seg. as long; crown funnel-form, 14', jagged at edge; sta. 24'. Wet or dry. South.

3. CRINUM, L. Flowers nearly as in Pancratium, but destitute of a crown. 4 Bulb coated. Leaves in many rows. Scape solid.

- 1 C. Americanum L. Lvs. lin.-oblong; ova. sessile, 3-4 in the umbel: tube green and lance-lin., white segm. about equal (4'); caps. 1-6-seeded. Swamps, Fla., and W.
- 2 C. AMÁBILE. Bulb stem-like; lvs. broad-linear; scape flattened, 3-4f, bearing an umbel of 20-30 purple fragrant flowers 9' long; pet. ligulate, recurved. E. India.
- 3 C. ORNÀTUM. Bulb globular; lvs. undulate; scape 3f, 10-20-flowered; fls. white to roseate, very large; segments lance-oblong. E. India. Many varieties.

4. AMARÝLLIS, L. Perianth tube long or short, expanding upward; limb regular or nearly so. Sta. free, anth. versatile. Style long, declinate 4 Bulb coated. Leaves narrow. Scape 1-few-flowered.

- 1 A. Atamásco L. Atamasco Lily. Scape 1-flwd.; perianth bell-form, erect, 3', pink white; tube slender below, 1'; filaments included. An attractive flower, in wet clay soils, Va. to Fla. Scape terete, 6-12'. Lvs. linear, 1f. Mar.-May. (Zephyranthus Herb.)
- 2 A. VITTÀTA. Per. 3-4', nodding, white, red striped inside, margins crisped. S. Am.
- 3 A. REGINÆ. Per. nodding, scarlet with a green star, throat fringed; fls. 2-4. S. Am.
- 4 A. SPECIÒSA. Fls. 2-4, blood-red, erect, 3' long, funnel-form. S. Afr. (Vallota, Hb.)

5, AGAVE, L. AMERICAN ALOE. Perianth funnel-form, 6-parted. Sta.

6, exserted, anth. soon versatile. Caps. obtusely 3-angled, ∞ -seeded. 24 Monocarpic herbs (§ 42). Crown-root with thick fibres, a dense clump of thick, rigid, often spiny lvs. Scape bracted, with numerous flowers. July

1 A. Virgínica L. Lvs. lin.-lanceolate, spine-pointed, denticulate; scape simple, 4-6f, loosely spicate above; fls. greenish-yellow, 1', sessile, fragrant. Rocks, Va., and S.

2 A. AMERICÀNA. Century Plant. Lvs. glaucous, striped with cream-color in some varieties, lanceolate, spine-pointed and toothed, very thick and stout, 3-8f; scape pro duced bit once, after 50-100 years, tree-like, with innumerable flowers. Mexico.

6. POLYANTHES (or Polianthes), L. TU-BER-OSE. Perianth funnelform, with a curved tube. Fil. inserted into the throat, included. Ovary at the bottom of the tube, its summit free. 24 Root an upright rhizome.

P. TUBERÒSA. Stem simple, slender, leafy-bracted, 3f, with a spike of rose-white flowcrs, 1¹/, subregular, of exquisite fragrance. From Ceylon. Aug., Sept.

7. ALSTRCEMÈRIA, L. Perianth funnel-form, some irregular, of 6 leaves distinct to the ovary. Sta. diclinate. Stig. 3-cleft. 24 Root a rhizome, bearing tubers. Stems leafy, umbellate at top.

1 A. PSITTACÌNA. Erect, 1-2f, with remote, lanceolate, sessile leaves; fls. 6-8, in a leafy cluster, pedicellate, 1¹/₂; segments spatulate, red, spotted with green. Brazil.

2 A. PELEGLINA. Lvs. sessile, lance-linear, twisted; fls. 2-6, pink-white, purp.-spotted.

3 A. VERSÍCOLOR. Perianth nearly regular, yellow, with purple spots. Chili.

8. SPREKÈLIA, Endl. JACOBÆA LILY. Perianth bilabiate, segments distinct to the ovary, the upper 3 spreading. Sta. epigynous, unequal, and with the style declinate, the ends incurved. 24 Bulbous. Scape hollow. 1-flowered. Leaves linear, erect.

S. FORMOSÍSSIMA.-A splendid flower from S. America. Scape 1f. Flower dark red.

9. GALANTHUS, L. SNOW-DROP. Petals shorter than the sepals, notched or lobed. Sta. epigynous, erect, included, shorter than the straight style. 24 Bulb coated, acrid. Scape 2-edged, solid. Flowers white, pen dulous. Pods maturing under ground.

G. NIVÀLIS. Scape 6', 2-leaved; flower 1, as white as snow, in early Spring. Europe.

10. LEUCÒJUM, L. SNOW-FLAKE. Sep. and pet. subequal, often thickened at apex. Sta. epigynous, included, and style erect. Stig. entire, obtuse. 24 Bulb coated. Scape 2-edged, hollow. Flowers drooping.

1 L. VERNUM. Lvs. linear; scape 1-2-flwd.; sep. white, tipped with green or yellow with divergent veins; spathe 1-leaved; seeds straw-color. March, April.

2 L. ÆSTÌVUM. Lvs. linear; scape 4-8-flwd., umbellate, 6-10'; sepals 6-8", pure white with green tips; spathe 1-leaved; seeds black. May, June. Europe.

11. HYPÓXIS, L. STAR-GRASS. Spathe 2-leaved. Perianth regular, rotate. Seeds ∞ , black. 24 Small, bulbous, grass-like, with yellow flowers on filiform scapes. Meadows and copses.

- 1 **H. erécta** L. Hairy; scape about 4-flowered, shorter than the linear leaves, which are 3-5" wide; flowers greenish without, yellow within. June.
- 2 III. filifòlia Ell. Smoothish; scape 2-flowered, shorter than the filiform leaves which are not ±" wide. Dry soils, S. Flowers rather larger (9-11").

ORDER CXL. BROMELIACEÆ. BROMELIADS.

Herbs hard, dry, rigid, and often scurfy, with regular double perianths, nearly or quite free from the ovary. Stamens 6, anthers introrse. Ovary 3-celled. Seeds numerous, with mealy albumen. All tropical, and capable of living in air alone.

1. TILLÁNDSIA, L. Sepals 3, membranous, convolute. Pet. 3, petaloid, imbricate, spreading above. Sta. hypogynous. Ovary free. Caps. with 3 double cartilaginous valves. Seeds slender, on comous stipes. 24 Scurfy air plants, with perennial 2-ranked narrow leaves.

* Stems rigidly erect. Lvs. linear-filiform. Fls. in bracted spikes, blue Nos. 2-4

- *1 T. asneoides L. Long Moss. Stems filiform, pendulous, branched; lvs. linearfiliform, curled, 1-2'; fls. solitary, green or gray. Low lands, Va.. and S. Hangs im gray festoons from the branches of every true. Used in upholstery.
- 2 T. Bartrámii Ell. Stems slender, 1f; lvs. shorter, smooth; spike branched, 3-4', loose-flowered; pet. spreading at apex, as long as the bracts. Ga., Fla.
- **3 T. cæspitòsa** Leconte. Stems in dense clusters, 3-6'; leaves scurfy, much longer, erect; spike 3- or 4-flowered, 1-2'; pet. recurved, longer than the bracts. E. Fla.
- 4 T. recurvàta Willd. Scapes filiform, 2-flowered, 6'; lvs. scurfy, recurved. E. Fla.

2. ANANASSA SATÌVA. PINEAPPLE. Raised in hothouses for its well-known fruit, which consists of a consolidated abortive flower-spike. From S. Am

ORDER CXLI. HÆMODORACEÆ. BLOODWORTS.

Herbs perennial, with fibrous roots, equitant or rosulate leaves, and perfect flowers. Perianth regular, 6-parted, scurfy or woolly outside, more or less adherent. Stamens 6 or 3, and opposite the petals, anthers introrse. Ovary 3-celled, 1-styled. Capsule covered with the withered perianth. Seeds with cartilaginous albumen.

 § Ovary wholly adherent. Stamens 3, exserted. Perianth woolly outside......LACNANTHES. 1
 § Ovary half free. Stamens 6, included.—x Corymbed perianths woolly all over.....LOPHIOLA. 2 —x Racemed perianths rugous-scurfy......ALETRIS. 3

 LACNÁNTHES, Ell. RED-ROOT. Fls. woolly outside, oblong. Sep. linear. Sta. 3, and style filiform, exserted. Caps. ∞-seeded. 24 Roots fibrous, red. Lvs. ensiform, equitant. Fls. in a dense corymb. July—Sept
 L. tinctòria Ell.—Swamps, R. I. to Fla. Stem strictly erect, 14-2f; leaves mostly radical, 3-4" wide by 9', or more; flowers 4-5", glabrous and yellow inside

2. LOPHIOLA, Ker. CREST-FLOWER. Fls. woolly outside and in side, oval. Sepals oblong. Sta. 6, glabrous, not exserted. Styles separable, conical with the 1 stigma. Seeds white. 24 Root creeping. Stem flexuous, corymbous above, densely clothed with soft white wool. Jl., Aug.

L. aùrea Ker.—Sandy swamps, N. J. to Fla. Stem 1-2¹/₄f; leaves mostly radical shorter than the stem; flowers yellowish under the white wool, 2". (Conostylis, Ph.)

3. ALETRIS, L. STAR-GRASS. COLIC-ROOT. Perianths rugous, as if scurfy or mealy, tubular, 6-cleft, arranged in a slender raccme. Styles

scarcely united. Ovary adherent at base only, opening at top, ∞ -seeded 24 Smooth, intensely bitter. Leaves all radical, lin.-lanceolate. Jl., Aug

 A. farinòsa L. Lvs. rosulate, very acute, many-veined, 3-6'; scape 2-3f, simple: rac. about 9'; fls. white, 4-5", on very short ped., oblong bell-form. Low grounds.
 A. aùrea Walt. Fls. yellow. Otherwise scarcely diff. Both plants dry, yellowish.

ORDER CXLII. IRIDACEÆ. IRIDS.

Herbs with corms, bulbs, or rhizomes, equitant, 2-ranked leaves and spathaceous bracts. Perianth tube adherent to the ovary. Segments in 2 sets, often unequal and convolute in bud. Stamens 3, alternate with the petals, anthers extrorse. Style 1, stigmas 3, often petaloid. Capsule 3-valved, 3celled, loculicidal. Seeds many, with hard, fleshy albumen. Figs. 85, 169, 170, 267-8, 282, 351.

5	Flowers irregular, somewhat bilabiate, nodding	GLADIOLUS.	9
Ş	Flowers regular and equilateral, mostly erect(*)		
	* Sepals similar to the petals in form, size, and position(a)		
	a Stamens monadelphons. Flowers small, blue. Plant grass-like	SISYRINCHIUM.	7
	a Stamens distinctx Flowers radical, with a very long tube	CROCUS.	6
	x Flowers cauline. Style 3-parted at top	PARDANTHJS.	5
	-x Flowers cauline. Style deeply 3 parted	SCHIZOSTYLIS.	4
	• Sepals larger than the petals, and otherwise dissimilar(b)		
	b Stamens monadelphous. Petals spreading, panduriform	TIGRIDIA.	3
	b Stamens distinct,-z stigmas slender, on a slender style	NEMASTYLIS.	2
	-z stigmas petaloid, on a very short style	IRIS.	1

1. IRIS, L. FLOWER-DE-LUCE. Sepals 3, reflexed, larger than the 3 erect petals. Sta. distinct. Style short or 0. Stig. petaloid, covering the stamens. 24 Mostly from tuberous, horizontal rhizomes, with ensiform leaves and large, showy flowers.

Species growing wild, all (except Nos. 6, 7) in wet meadows or swamps. Apr.—Jn. (§)
 § Stems leafy, tall (1-3f). Tube short; sepals beardless and crestless...(a)

- a Leaves linear, grass-like. Ovary and pod 2-grooved on the sides......No. 1
- a Leaves sword-shaped. Fls. blue. Sepals much larger than the petals... Nos. 2-4
- a Leaves sword-shaped. Fls. tawny or copper-colored. Petals reflexed...No. 5

	o bopaio boardiceb and crossicost and and south and are the second south and the second south	·
	b Sepals beardless, but crested with 3 longitudinal foldsNos. 7, 8	3
*	Species cultivated for ornament, mostly from Europe (x)	

- 2 I. versícolor L. Blue Flag. Stem flexuous, 2-3f; pet. as long as the stigmas; ovary triangular, with concave sides and rounded angles. Common. June.
- **3 I. hexágona** Walt. Lvs. longer than the flexuous stem; tube longer than the 6sided ovary; sepals larger than the petals, blue-purple, crested. S., coastward.
- **4 1. tripétala** Walt. Lvs. shorter than the slender stem; tube shorter than the **3**sided ovary; sepals many times larger than the petals. S.: rare. Purple.
- 5 1. cùprea Ph. Tall and flexuous, 2-3f; petals twice longer than the linear stig mas; capsules sharply 6-angled, shorter than the tube. S. and W. April-July

- 6 I. verna L. Scape 1-flowered, 3-5', shorter than the rigid leaves; tube, sep., and pet. subequa. (2'); stigmas deeply 2-cleft; fls. blue, with some yellow. Mar., Apr.
- 7 I. cristata Ait. Scape compressed, and, with the lvs., 3-5'; tube longer than the sepals (2'), which are distinctly crested along the middle. Barrens, Va. to Ga. April.
- 8 I. lacústris N. Like No. 7, but the sep. are longer than the tube, &c. L. Huron.
 9 I. PÙMILA. Dwarf I. Fls. large, blue-purple; pet. larger than sepals. In Spring. 3,
 10 I. GERMÁNICA. Flowers many, deep blue, the spathe also colored. Common.
- 11 I. SAMBUCINA. Fleur-de-lis. Flowers ∞ , blue-white; segmen s notched. Common.
- 12 I. SUZIÀNA. Flower 1, very large. purple and spotted ; petals reflexed.
- 13 I. FLORENTINA. Orris-root. With broad leaves and large white flowers.
- 14 I. GRAMÍNEA. Linear leaves much longer than the 1f, 2-flowered scape. Blue.
- 15 I. PSEUD-ÁCORUS. Flowers yellow ; petals smaller than the stigmas, 3f. June.
- 16 I. XIPHIUM. Spanish I. Lvs. subulate; 2 fls.; pet. narrow as stig. All colors. 1-2f.
- 17 I. XIPHIOIDES. English I. Leaves subulate; fls. 2; petals broader than the stigmas.
- **18 I.** PÉRSICA. *Persian I.* Lvs. linear; scape very short; petals smaller than the blue sepals.—All the above are hardy, except this, which is a house-plant.

2. NEMÁSTYLIS, N. No tube above the ovary. Sepals spreading, targer than the ascending, cucultate petals. Filam. shorter than the anth. Style enlarged above, and parted into 6 radiating, subulate stigmas. 24 Bulb ovoid. Lvs. lance-linear. St. very slender, with 1 or 2 bright-blue fis.

N. coelestina N. Leaves very veiny, 1f; stem 15-20', few-leaved; spathe 2-leaved sepals obovate. 1', # larger than the hooded petals. Swamps, Fla. to La.

3. TIGRÍDIA, L. TIGER-FLOWER. Spathe 2-leaved. Perianth regular, the 3 sepals larger than the 3 petals. Stamens monadelphous, filaments united into a long tube. 24 Bulbous.

T. PAVONIA. St. simple, flexuous; leaves ensiform, veined; fls. inodorous, 5-6' broad. ephemeral, several in succession, yellow, with crimson spots. Mexico.

4. SCHIZÓSTYLIS COCCÍNEA. Stem 3f. Leaves channelled, lancelinear. Flowers concave, regular, 2' broad, in long spikes, crimson to scarlet, the styles slender and nearly distinct. Lately introduced from S. Africa.

5. PARDANTHUS, Ker. BLACKBERRY LILY. Sepals and pet. subequal, oblanceolate, spreading. Fil. slender. Style clavate, 3-parted, with 3 stigmas. Caps. oblong. Seeds black, attached to the column, and resembling a blackberry after the valves have fallen. 24 Root a rhizome. Stem branching, leafy. July, August. (Ixia, L.)

P. Chinénsis Ker.—Leaves ensiform, as in Iris; flowers 14' broad, many, orangeyellow, crimson-spotted. Stems 3—4f. Escaped from cultivation.

6. CROCUS, L. Lvs. radical. Fls. nearly sessile on the bulb. Tube very long and slender, bearing the funnel-form perianth above the ground. Stigmas 3-cleft.

- 1 C. VERNUS. Spring C. Stigmas short, wedge-shaped; leaves linear. The beautiful flowers are white, blue, and variegated,—the earliest in the garden.
- 2 C. SUZIÀNUS, is golden yellow, with the 3 sepals revolute. Turkey.
- 3 C. SATÌVUS. Saffron. Fall C. Stigmas slender, reflexed; segments purple. Europo.

7. SISYRÍNCHIUM, L. BLUE-EYED GRASS. Spathe 2-leaved. Segments of the perianth flat, equal. Sta. monadelphous Stig. 3-cleft. 24 Grass-like plants, with compressed, winged or ancipital scapes, from fibrous roots. June, July.

8. Bermudiàna L. In tufts; lvs. linear, erect, about as long as the scapes; spathe 2-5-flowered, valves unequal; flowers small, blue; segments obovate, notched and mucronate; pedicels slender; pods globular, 8-12'.

a. anceps. Scapes winged, so as to resemble the leaves.

 β . mucronatum. Scapes barely 2-edged, filiform; spatne pointed.

8. GLADIOLUS, L. CORN-FLAG. Spathe 2-leaved. Perianth irregular 6-parted, somewhat 2-lipped. Stamens 3, distinct, ascending. Stig. 3, broader above. Seeds winged. 24 A large genus of bulbous plants, chiefly from S. Africa. Fls. large and splendid. The species are badly confused.

1 G. PSITTACINUS. Spike 8-10-flowered; flowers scarlet and yellow, spotted, the tube as long as the segments. From this is derived many hybrids, as

β. GANDAVÉNSIS, variegated with orange, scarlet, and yellow. Common.

- 2 G. CARDINÀLIS. Spikes few-flowered, the flowers crimson, with a white stripe in the lower 3 segments; stem branched above, 2f. Not hardy.
- 3 G. FLORIBÚNDUS. Flowers very large, nearly erect, upper segments broader, pink varying to white; spike long and crowded. Very delicate.

ORDER CXLIII. DIOSCOREACE Æ. YAM-ROOTS.

Plants shrubby, twining, arising from tuberous rhizomes, with broad, net-veined leaves. Flowers diccious, regular, hexandrous, tube adherent, *iimb* 6-parted. Ovary 3-celled, 3-6-ovuled, 3-styled. & Stamens 6, perigynous. Fruit a capsule, 3- or (by abortion) 1-celled, or a berry. Seeds compressed, albuminous.

DIOSCÒREA, L. YAM-ROOT. Flowers & Q. Styles of the fertile 3. Cells of the caps. 2-seeded. Sds. membranaceously margined. \Rightarrow Slender, twining with the sun. Lvs. simple, palmately-veined or divided. Flowers green, inconspicuous, in axillary spikes or panicles.

- 1 D. villòsa L. Wild Yam. Leaves broadly ovate, cordate, acuminate, 9-11-veined, the lower opposite or in 4's, upper alternate, petioles long, under surface downy, (never villous); stem slender, climbing 5-15f, over bushes, &c. June, July.
- 2 D. SATÌVA. Yanı. Leaves round-ovate, long-cuspidate, sinuate, cordate, all alternate, smooth; stems sometimes prickly. Root large and sweet. S.

ORDER CXLIV. SMILACEÆ. SARSAPARILLAS.

Herbs or shrubs, often climbing. Leaves reticulate-veined. Flowers diacious. Perianth free from the ovary, 6-parted, regular. Stamens 6, inserted into the base of the segments. Anthers 1-celled (2-lamellate). Ovary 3-celled, cells 1- or 2-ovuled. Style 1 or none. Stigmas 3. Berry roundish. Seeds orthotropous, albuminous. Fig. 396.

SMILAX, L. GREEN-BRIER. SARSAPARILLA. Character nearly as above. 5 b Lvs. palmately-veined, entire, petiolate, with a pair of stipular (§ 325, Fig. 396) tendrils. Flowers green or yellowish, small, in stalked, axillary umbels.

- **9 Herbs spineless.** Lvs. and fætid umbels long-stalked. Berries bluish.. Nos. 12-14 **9 Shrubby vines.** Leaves short-stalked. Berries 1-3-seeded...(a)
 - a Pubescent, prostrate, spineless. Leaves cordate, evergreen. South....No. 11 a Glabrous, climbing, and more or less prickly (except Nos. 5, 6)...(δ)
 - δ Lvs. acute at the base, 3-5-veined. Ped. shorter than the pet....Nos. 8-10 δ Leaves abrupt or cordate at base, 5-9-veined...(c)
 - c Leaves panduriform, or some hastate. Peduncles elongated......No. 7

-x Prickly.-z Leaves glaucousNo. 4

-z Leaves green.....Nos. 1-3

- **1 S. rotundifòlia** L. Common G. Vine green, strong, and thorny, some 4-angled; leaves round-ovate, 5-7-veined, cusp.-pointed; ped. a little longer (6-7") than the petioles; berries glaucous-black. Common in thickets. 10-30f. June, July.
- 2 S. hispida Muhl. Vine terete, hispid below, with weak, slender prickles, nearly unarmed above; leaves thin, deciduous, ovate, cuspidate; ped. twice as long (1') as the petioles; berries black. Thickets, N. J., and N. 8-12f. June.
- **3 S. Walteri** Ph. Vine unarmed, or prickly at base; lvs. cordate-ovate, 3-5-veined; ped. as long as the petioles; berries red, 1-3-seeded. N. J., and S. April-June.
- 4 S. glauca Walt. Vine more or less prickly above, angular; lvs. broad-ovate, glaucous at least beneath; ped. twice longer than the petiole; berries black, with a bloom; flowers yellowish white. Thickets, L. Isl. to Ga., W. to Ky. March-June.
- 5 S. Pseudo-China L. Root-stock tuberous; vine terete; leaves cordate-ovate to oblong, 5-veined; ped. flat, nearly as long as the lvs.; fr. black. N. J. to Ky., and S. Jn.
- 6 S. sarsaparílla L. Root-stock creeping, long; branchlets 4-angled; leaves thin, oblong-ovate; ped. flat, a little longer than the petioles; fruit *red*, 1-seeded. S-W.
- 7 S. tamnoides L. Vine terete; branches 4-angular, aculeate; leaves ovate-cordate to fiddle-form, and hastate, cusp.-pointed, rough-edged. N. J., W. and S.
- 8 S. auriculàta Walt. Vine prickly; branchlets angular, unarmed; leaves lancoauriculate-hastate, thick, small, smooth-edged, evergreen; berries finally black; flowers sweet-scented. S., near the coast. June. (S. maritima C-B.)
- 9 S. laurifòlia L. Vine prickly; branchlets unarmed, zigzag; leaves thick, evergreen, lance-oblong, obtuse, mucronate, 3-veined; fr. black, 1-seeded. N. J., and S.
- 10 S. lanceolàta L. Like No. 9, but the lvs. are thin, and berr. 3-seeded. Va., and S. 11 S. pùmila Walt. Lvs. shining above, soft-downy beneath; ped. as long as the
- **11 S. pumila** Walt. Lvs. shining above, soft-downy beneath; ped. as long as the petiole (6'); berries red, 1-3-seeded. Shady, rich soils, S. 1-3f. October.
- 12 S. herbàcea L. Carrion-flower. Stem erect or reclined, terete; leaves publication beneath, or nearly glaucous, ovate-oblong, 7-veined, with or without tendrils; ped. longer than the long petioles (3-4'), 8-20-flowered. Low grounds. 2-Sf. June.
 β. peduncularis. Ped. very stout and long (6-8'), 30-50-flowered.
- 13 S. lasioneùron Hook. Vine climbing, glabrous; lvs. all with tendrils, cordate, ovate-oblong; ped. little longer than the petioles (3-4'). Thickets, W. 10f. June.
- 14 S. tamnifòlia Mx. Erect or climbing, glabrous; lvs. 5-veined, cordate-hastate. tapering to the obtuse apex; ped. longer than petioles; fr. blue-black. N. J., and S

ORDER CXLV. ROXBURGHIACEÆ.

Herbs or shrubby vines, with many-veined netted leaves and perfect flowers. Perianth 4-parted, petaloid, persistent. Stamens 4, hypogynous. Ovary free, 1-celled. Capsule 2-valved. Seeds several, on hairy stalks, albuminous.

CROÒMIA, Torr. Fis. very small and few, axillary. Perianth seg. in pairs (2 sepals and 2 petals), oval. Ovules 4—6, suspended. Seeds 1---3. **24** Rhizome creeping. Leaves lance-ovate, cordate.

C. paucifiòra Torr.-Woods, Ga., Fla., Ala. Stem simple, 1f. Leaves about 6, thin, glabrous, pedately arranged, 7-9-veined. Ped. 1'. Flowers 2" wide when open. Apri.

ORDER CXLVI. TRILLIACEÆ. TRILLIADS.

Herbs with simple stems, tuberous roots, and verticillate, net-veined leaves. Flowers terminal, 1 or few, perfect, mostly 3-parted. Calyx herbaceous, corolla more or less colored. Stamens 6-10. Ovary free, 3-5-celled, bearing in fruit a juicy, ∞ -seeded pod. Figs. 115, 259, 294.

1. TRILLIUM, L. WAKE-ROBIN. Perianth deeply 6-parted, in 2 dis tinct series, outer of 3 sepals, inner of 3 colored pet. Sta. 6, anth. longer than the filaments. Stig. sessile. Berry purple, 3-celled, ∞ -seeded. 24 St. simple. Leaves 3, whorled at the top of the stem, palmi-net-veined. Flowers solitary, terminal. In Spring.

- § Flowers sessile. Petals dark purple, erect......Nos. 1, 2
- § Flowers on a peduncle raised above the leaves...(*)
- Leaves petiolate, ovate, rounded at the base. Petals thin, delicate....Nos. 3, 4
 Leaves sessile, rhomboidal, nearly as broad as long. Petals thickish...Nos. 5, 6
- 1 T. séssile L. Leaves sessile, roundish-ovate to rhomb-ovate, acute, mottled with dark purple; petals sessile, some spreading, dull purple. Pa., W. and S. 6-12'.
- 2 T. recurvatum Beck. Lvs. ovate to obovate, narrowed to a petiole; sepals re flexed, green; pet. erect, narrowed at base to a claw, purple, 1'. Woods, W. 8-10'
- **3 T. nivale** Rid. Stem 2-4'; lvs. oval to ovate, distinctly petiolate; fl. erect, 7-8" long; petals ovate-spatulate, white, half longer than the sepals. Penn. to Wis.
- 4 T. erythrocárpum Mx. Smiling W. Lvs. ovate, rounded at base, acuminate; petals lance-ovate, recurved, twice longer than the sepals, wavy, white, beautifully pencilled at base with purple. Woods, Can. to Ga. 8-12'.
- 5 T. grandiflorum Salisb. Lvs. rhomb-obovate, sessile, conspicuously acuminate; petals spatulate-obovate, much longer (14-2') than the sepals, white, varying to rose-color. Damp, rocky woods, M., S., and W. 8-12'.
 - **T.** eréctum L. Bath Flower. Leaves roundish-rhombie, short-pointed, almost petiolate, about as broad as long; ped. scarcely erect; flower nodding; petals ovalovate, much broader than the sepals, dark purple, ill-scented. Woods.
 - β. album. Petals white or greenish; ped. inclined. N. Y. (Hankenson), and W. **T. cérnuum** L. Leaves nearly as in No. 6; ped. more than half the length of the leaves, twice that of the flower; petals flat, not reflexed, white, little larger than the sepals; stigmas as long as the anthers. Woods, M., S., and W. 1-14f.
- 3 T. stylòsum N. Leaves petiolate, ovate, oval, or elliptic; ped. not longer than the flower, decurved; petals recurved, much larger than the sepals, white; styles united, as long as the stigmas, shorter than the recurved anthers. South. 10-20'.

2. MEDÈOLA, Gronov. INDIAN CUCUMBER-ROOT. Perianth deeply parted into 6 petaloid, revolute segments. Sta. 6, with slender filaments. Stigmas 3, divaricate, united at base. Berry 3-celled, cells 3-6-seeded. 24 Stem simple, arising from a white, tuberous rhizome (which is thought to resemble the cucumber in flavor) bearing 2 whorls of lvs. and 1-3 term. fls.

M. Virgínica L.-Damp woods. Slender, erect, 1-2f, with cottony wool. Lower whorl of 6-8, upper of 3 leaves. Flowers pendulous, yellowish. July. (Fig. 294.)

ORDER_CXLVII. LILIACEÆ. LILYWORTS.

Herbs with bulbous or tuberous stems, parallel-veined, sessile leaves, and perfect, regular flowers, with the perianth uniformly colored and free from the ovary. Stamens 6 (4 in Majanthemum), perigynous. Anthers introrse (except in Uvularia). Styles wholly or partly united. Fruit a capsule or berry. Seeds albuminous.

§ LILIACE # proper. Stylc entire. Fruit a dry capsule. Plants with a scaly or coated bulb(*)	
§ ASPHODELEÆ. Style entire (or 0). Fr. a dry capsule. With a caudex, root-crown, or rhiz(**)	
& CONVALLARINE Æ. Style entire. Fr. a colored berry. Plants with a rhiz. or fibrous roots(***	
§ UVULARIEÆ. Style 3-cleft or 3-parted. Fruit a dry capsule. Plants with a rhizeme(****)

1. ERYTHRÒNIUM, L. Perianth campanulate. Seg. recurved, the	

1. ERVTHRONIOM, L. Perlanth campanulate. Seg. recurved, the **3** inner ones (petals) usually with a callous tooth attached to each side at base, and a groove in the middle. Style long. Caps. somewhat stipitate, seeds ovate. 24 Lvs. 2, subradical. Scape $1 - \infty$ -flwd. Flowers nodding.

1 E. Americànum Sm. Yellow E. Bulb deep in the ground, sending up a scape which bears 2 unequal, lanceolate, mottled leaves at the surface of the ground, and a handsome drooping yellow flower at top. Woods. 3-5'. April, May.

 β . bracteatum. Leaves very unequal; scape with a bract near the flower. Vt.

2 E. álbidum N. White E. Scape naked, bearing a white drooping flower; petass without teeth, narrowed to the base. Wet meadows, N. Y. to Wis. May, June.

2. TULIPA, Tourn. TULIP. Perianth campanulate. Sta. short, subu-

late, anth. broad-linear, deeply emarginate at base. Style very short, stug. thick. Caps. oblong, triangular. 24 Herbs acaulescent, with coated bulbs, sessile leaves, and a simple scape bearing a solitary, erect flower.

T. GENNERIÀNA. Plant smooth; leaves ovate-lanceolate, near the ground; segments very obtuse, endlessly variegated with red, yellow, and white. Persia. May, June.

3. LILIUM, L. LILY. Perianth bell-form, colored. Sep. 6, gradually spreading or recurved, each with a longitudinal honey-groove within from middle to base. Sta. shorter than the style, anth. versatile. Style clavate, stig. 3-lobed. Caps. subtriangular. Seeds 2-rowed in each cell. 24 Bulbs scaly. Stems leafy. Flowers large, showy. June—August.

- * Native wild Lilies, with yellow, orange, or red, spotted,—x nodding fls..Nos. 1-3 -x crect fls.....Nos. 4, 5
- * Exotic Lilies, cultivated, mostly hardy. Fls. nodding (except Nos. 6, 14)...(a)
 a Stems bearing bulblets in the axils. Flowers orange-colored....... Nos. 6, 7
 a Stems never bulbiferous.—y Fls. white. Lvs. lanceolate, scattered...Nos. 8—10

-y Fls. wh., varieg. and spotted, sweet....Nos. 11-13

-y Fls. yellow or straw-colored......Nos. 14-16

-y Fls. red or purple......Nos. 17-19

- 1 L. Canadense L. Yellow L. Leaves mostly in whorls, lanceolate, the veins beneath hairy; ped. terminal, mostly in 3's; sepals gradually spreading, yellow to orange, with purple spots inside. Meadows, mostly N. 2-5f.
- 2 L. supérbum f.. Turk's-cap. Leaves linear-lanceolate, acuminate, the lower whorled, upper scattered; flowers often numerous, orange to red, spotted, the sepals revolute. Wet soils. 4-6f. Flowers 3-30. Plant splendid.
- **3 L. Caroliniànum** Mx. Lvs. 1-veined, oblanccolate, acuminate, tapering to the base, the upper whorled, the lower scattered; sepals lance-linear, recurved (not revolute), deep yellow spotted with purple. Swamps, S. 11-31. Flowers 1-3.
- 4 L. Philadélphicum L. Lvs. lance-linear, the upper whorled, lower scattered; fls. 1-3; sepals erect-spreading, lance-ovate, obtuse or barcly acute, clawed, orange red, spotted at base, 2½ long. Dry pastures and copses. 15-20'.
- 5 L. Catesbæi Walt. Lvs. all scattered, lance-oblong to linear; flower solitary; sepals lanceolate, wavy, 3-4', the long claws yellow, lamina and long, thickened acu mination scarlet, spotted with purple. Damp barrens, Md., and S. 2-3f.

6 L. BULBÍFERUM. Fls. erect, rough inside, 21'; sep. sessile; lvs. 3-vcined. 4f. Italy.

7 L. TIGRÌNUM. Fls. nodding, spotted ; sep. sessile, 31/, rev. ; lvs. 5-veined. 6f. China

8 L. CÁNDIDUM. Fls. campanulate, several, smooth inside. From Persia. 3-4f.

- 9 L. JAPÓNICUM. Fl. solitary, campanulate; sep. revolute at apex. Japan. 2-3f.
- 10 L. LONGIFLÒRUM. Fls. solitary, tubular-bell-form; sep. 5-6'. From Japan. 1f
- 11 L. GIGÁNTEUM. Tall (8f); fls. spicate, trumpet-form, white, with carmine lines
- 12 L. SPECIÒSUM. Stem 2-3f; leaves lance-ovate, scattered; fis. 1-3, fragrant; sepals 5', revolute, white to roseate, with purple warty spots inside. Japan. Splendid.
- **13 L.** AURÀTUM. Stem 1-2f; leaves lanceolate, scattered; fis. 1-3, fragrant; sepals 6-7', spreading, white, with a yellow band and purple spots. Japan. "Glorious."

14 L. CRÒCEUM. Lvs. some in 3's, lin.-falcate ; fls. erect, often umbellate, rough inside.

15 L. TESTÀCEUM. LVS. whorled ? lanceolate, many; fls. several, large, straw-col. 6f.

16 L. CÓLCHICUM. Lvs. crowded, lance-lin.; fls. sev., funnel-form; sep. recurved. 2f.

17 L. POMPONIUM. Lvs. lin. to subulate, crowded; fis. small, scarlet; sep. rough, revol.

18 L. MÁRTAGON. Lvs. lance-oblong, whorled; fls. panicled, purple to roseatc, revolute, spottad. From Europe. 5f. [not spotted; sepals reflexed. Palestine. 3f.

19 L. CHALCEDÓNICUM. Lvs. lance-linear, crowded, erect, rough-edged ; fis. bright red,

4. FRITILLÀRIA, Tourn. CHEQUERED LILY. Perianth campanu-

late, with a broad base and nectariferous cavity above the claw of each segment. Stamens as long as the petals. Stig. trifid. Caps. coriaceous, 3-celled, septifragal. 24 With coated bulbs, simple, leafy stems, bearing 1 or more nodding flowers in Spring.

- **1 F.** IMPERIÀLIS. Crown Imperial. Stem 3f, at base invested with long, narrow lvs., the middle naked, the summit bearing a raceme of large drooping red flowers beneath a crown of bracts. Var. FLAVA has yellow flowers. Persia.
- 2 F. MELEÀGRIS. Chequered L. Stem 1-flowered, with alternate, linear, channelled leaves; flower large, nodding, chequered with purple and yellow. Europe. 1f.
- 3 F. PÉRSICA. Fls. brownish-purple, in a pyramidal, naked raceme. Persia. 3f.

5. CALOCHÓRTUS, Ph. Perianth twisted in æstivation. Sepals 3, smaller than the 3 petals, which are bearded within except a central glabrous spot. Style very short, anth. recurved. Seeds 1-rowed in each cell of the capsule. 24 Californian, bulbous. Leaves narrow. Stem erect.

- C. SPLENDENS. Stem with 3-5 large, open, lilac flowers; pet. each with a brown-yellow eye in the middle. 1-2f. June.-A splendid flower, yet rare in cultivation.
- C. PULCHÉLLUS and C. ALBUS, with the petals connivent into pendent globes, the onc golden yellow, the other satin white, are very beautiful.

6. NOLÌNA, Rich. Perianth small, of 6 equal ovate spreading parts, longer than the 6 stamens. Stigmas 3, recurved, with a very short style. Caps. 3-winged, 3-(or 1-3-)seeded. 24 Bulb coated. Scape widely branched. Flowers racemed, white, nearly bractless.

N. Georgiàna Mx.-Sand hills, S. Car. to Fla. Scape 2-3f, from a large bulb. Leaves long, narrow, all radical, recurved and channelled, rough-edged.

7. SCILLA, L. SQUILL. Sepals and petals similar, spreading (blue or purple). Filaments 6, slender, style thread-club-shaped. Caps. 3-angled, 3-celled, cells with 1 or several black seeds. 24 Bulb coated, bearing sev eral linear leaves and a scape with a raceme.

- 1 S. esculénta Ker. Quamash. Lvs. keeled, flaccid, shorter than the scape; bracts subulate, longer than the pedicels; filaments filiform; stigmas 3-toothed; sepals widely spreading, pale blue. Bottoms, W. 1-2f. May. (Camassia, Lindl.)
- 2 S. PERUVIÀNA. Leaves ciliate on the edges, longer than the scape; flowers stellate, in a dense conical corymb, violet-blue, rarely white. Spain.

8. ORNITHÓGALUM, L. STAR OF BETHLEHEM. Stem a coated bulb. Sep. and pet. similar, white, spreading, 3-7-veined. Fil. 6, subulate. Style slender, stigma 3-angled. Caps. roundish, 3-angled. Sds. few, black.
24 Scape with a corymb of bracted flowers, and linear leaves.

0. umbellàtum L. Leaves channelled, as long as the scape (1f); flowers few, on long pedicels, the white sepals each with a green band outside. June. § Europe.

9. ÁLLIUM, L. GARLIC. ONION. Flowers in a dense umbel, with a membranous 2-(1-4-)leaved spathe. Perianth deeply 6-parted. Seg. mostly spreading, ovate, the 3 inner somewhat smaller. Ovary angular, stigma acute. Caps. 3-lobed. Seeds few, black. Strong-scented, bulbous plants Leaves mostly radical.

§ Leaves (none at flowering-time) flat, lanceolate. Ovary only 3-ovuled......No. 1

§ Leaves present, flat.—a Ovary 6-ovuled, often with a 6-toothed crest...(y)

-a Ovary ∞ -ovuled, not crested. Leaves linear.....No. 5 § Leaves terete and hollow.—x Scape or stem siender, not inflated.....Nos. 8, 9 —x Scape inflated in the midst. Cultivated....Nos. 10, 11 y Wild native species. Leaves linear and very narrow......Nos. 2-4

y Exotics cultivated. Leaves lance-linear or broadly linear......Nos. 6, 7

- 1 A. tricóceum Ait. Lvs. 5-8', fugacious, mostly gone in June, when the scape, with its rounded umbel of 10-12 white fis., appears. Woods, N. Eng. to N. C., and W. 1f.
- 2 A. cérnuum Roth. Lvs. very long; umbel cernuous, with 12-20 bright roseate fls.; sepals oblong-obovate, acute; filam. filiform, exserted. N. Y., W. and S. 1-2f. Jl. β. stellatum. Umbel mostly erect; stam. not exserted. Dry, Ill., and W. 1-1f.
- 3 A. Canadénse Kalm. Scape terete; leaves shorter than the scape; unbel erect, capitate, consisting of both (whitish) fis. and bulblets mixed. Shades. 1f. June.
- 4 A. mutábile Mx. Lvs. lin.-filiform, thin, shorter than the terete scape; umb. 20-40-fiwd., erect; spathe 3-leaved, purplish; sep. ovate-lanceolate, longer than the sta., white or roseate; capsule 3-lobed, 3-seeded. Woods, S. 1-1; f. March-May.
- 5 A. striatum Jacq. Lvs. linear, nearly equalling the teretish scape; spathe 2-lvd.; fs. 3-7, sep. lance-ovate, green-striped outside; not garlic-scented. W. and B. 8-12'.
- 6 A. SATÌVUM. Common Garlic. Bulb consisting of many small ones in a common sheath; stem leafy to the middle; umbel bulb-bearing; flowers white. Sicily. July.
- 7 A. PORRUM. Leek. St. compressed, sheathed at base by the channelled leaves; umb. globous, white; stamens a little longer than the rough-keeled sepals. Europe. July.
- 8 A. vineàle L. Crow Garlic. Stem and few fistulous lvs. very slender; amb. bulbbearing; stamens alternately 3-cuspidate. Fields, June. It spoils the cows' milk.
- 9 A. schænopràsum L. Cives. Scape equalling the terete, filiform, fistulous lvs.; umb. capitate; sep. longer than the simple stamens, rose-purple. Lake shores, N. ‡
- 10 A. FISTULÒSUM. Welsh Onion. Scape inflated in the midst, not taller than the fistulous leaves; umbel dense, globular; stamens exserted. Asia. 18'. ‡
- 11 A. CEPA. Common O. Scape inflated near the base, much taller than the fistulous leaves. (2) Universally cultivated, and of many varieties.

β. PROLÍFERUM. Top O. Umbel producing bulblets instead of flowers.

10. HYACÍNTHUS, L. HYACINTH. Perianth tubular-be.l-form, segment spreading-recurved. Stam. straight, perigynous. Ovary free. Seeds few. 24 Bulb coated. Scape racemous.

H. ORIENTÀLIS. Lvs. thick, lance-linear, half as long as the scape; flowers many, half
 6-cleft, tumid at the base, blue, varying to purple, red, white, &c.; stamens deeply
 included. Levant. March, April. Fine for the bulb-glass.

11. MUSCARI, Tourn. GRAPE HYACINTH. Perianth-tube ventricous, ovoid, globular or urceolate, limb of 6 very short blunt teeth. Otherwise as in Hyacinthus.

- 1 M. botryoides L. Fls. scentless, globular, nodding, blue (&c.), 2"; lvs. broad-lin., obtuse, longer than the scapes (10'). Gardens and fields. May. § Europe.
- 2 M. MOSCHÀTUM. Fls. musk-scented, oval, nodding, 3", greenish-blue, or livid, with a little 6-toothed crown in the throat; leaves lance-linear, *erect*. Europe. April.
- 3 M. RACEMOSUM. Flowers fragrant, nodding, dense, ovoid-cylindric, blue with a white limb; leaves linear, flaccid, channelled, *recurved*. Rare in gardens.
- 4 M. comosum occurs in gardens as a monstrosity, with the tall (1f) raceme changed to a sterile, diffuse, feathery panicle of blue filaments. Showy.

12. SCHCENOLÍRION, Torr. Stem a tuberous rhizome. Perianth

yellow, &c. Caps. obovoid, obscurely 3-lobed. Flowers racemed. 24 Otherwise as in Ornithogalum, and too near it. April, May.

5. cròceum (Mx.) Lvs. narrowly linear, longer than the scape, which is very slender, 15-20'; flowers small, about 15 in the raceme, yellow; sepals ovate, 2". Damp. S.

13. YUCCA, L. BEAR'S-GRASS. SPANISH DAGGERS. Perianth persistent and withering, of 6 sepals, the 6 stamens shorter. Stigmas 3, sessile. Caps. oblong, 6-sided, the 3 cells partly divided each into 2 by a false partition. Seeds ∞ . 24 Stem subterranean, or arising into a caudex (§ 227), with linear or sword-shaped perennial leaves and a terminal panicle of white, handsome flowers.

- 1 **Y. filamentòsa** L. *Bear's-thread*. Acaulescent or nearly so; leaves lance linear, rigid, sharp-pointed, the margin *filamentous*, i. e., bearing thread-like fibres; scape 5-8f; flowers numerous, cup-form, 1¹/₄. Sands, S. June. †
- 2 Y. gloriòsa L. Caulescent; caudex some 3f; leaves clustered at top, lanceolate, stiff, margins very entire; flowers cup-form, very ∞ . S. June, July.
- **3 Y. aloefòlia** Walt. Spanish Daggers. Caudex some 10f, often branched, naked and scarred; leaves clustered at top, stout and sharp, serrulate; flowers white, with violet spots; sepals oblong. Thickets near the coast, S. June-Aug.

14. TRITÒMA, Ker. Perianth *tubular*, regular, 6-toothed. Stamens straight, hypogynous, alternately longer, and with the style exserted. Caps. ∞ -seeded. 24 Leaves linear, keeled. Scape racemed.

T. UVÀRIA. Lvs. in a dense radical crown; scape 3-5f, with a long raceme of innumerable soon-pendent, red, orange, and flame-colored flowers. S. Africa. Aug.-Oct.

15. AGAPÁNTHUS, L'Her. Perianth tubular at base, funnel-form, free from the ovary, regular. Stam. and filiform style upcurved at the end. Caps. 3-angled. Seeds ∞ . 24 Root tuberous. Leaves flat, linear. Scape bearing a 2-leaved umbel. Blue. July.

A. UMBELLÀTUS. Scape 2f, with the thick radical leaves as long; flowers many, large, the pedicels equalling the perianth. S. Africa. A fine parlor plant.

16. FUNKIA, Spreng. Perianth funnel-form, deciduous. Stam. 6, hypogynous, and with the style declinate-curved. Caps. elongated, 3-angled. Seeds ∞ , winged at end. 24 Root fasciculate. Leaves all radical, ovate or oblong, veined, petiolate. Scape racemed. Japan.

- 1 F. SUBCORDÀTA. White Day Lily. Lvs. large. ovate, subcordate, veins strongly impressed; fls. white, fragrant, horizontal, 5' long, tube longer than the limb. 24f. Aug.
- 2 F. ovàta Spr. Blue Day Lily. Lvs. broad-ovate, acuminate; rac. many-flowered fis. funnel-form, 2', blue or violet, nodding, tube shorter than the limb. Ohio, §. †
 8 ALBO-MARGINÀTA. Has its leaves irregularly margined with white.

8 ALBO-MARGINATA. Has its leaves integularly margined with white.

17. HEMEROCALLIS, L. DAY LILY. Perianth funnel-shaped, regular, ephemeral, limb spreading. Stam. 6, inserted in the throat, curved upward. Style slender, curved like the stamens and longer. Caps. with 3 few-seeded cells. 24 Root fasciculate. Scapes branched. Leaves linear. Flowers large, xanthic, solitary, or racemed. July.

- 1 **H.** FULVA. LVS. channelled; pet. obtuse, wavy; veins of sep. branched. An old garden plant, with large tawny flowers, lasting but a day. 3f. § Levant.
- 2 H. FLAVA. Lvs. channelled ; sep. acute, bright yellow, veins undivided. Siberia. 11

18. POLYGONATUM, Tourn. TRUE SOLOMON'S SEAL. Perianth tubular, limb short, 6-lobed, erect. Stamens 6, inserted near and above the middle of the tube, and with the slender style included. Berry globular, black or blue, 3-6-seeded. 4 Rhizome horizontal, thick. St. leafy above. (Lvs. alternate.) Fls. axillary, pendent, greenish-white. Fig. 258.

P. biflòrum Ell. Stem recurved, smooth ; lvs. lanceolate to elliptic, sessile, obscurely many-veined, glaucous-pale and more or less public beneath ; filaments roughened, inserted near the middle of the tube. Woods. 1-3f. April-June.

β. gigánteum. Plant all smooth, tall; lvs. clasping; ped. 2-6-flwd. 3-7f.

y. latifolium. Plant pubescent above ; leaves ovate, some stalked.

19. CONVALLÀRIA, L. LILY OF THE VALLEY. Perianth campanulate, of 6 united segments, lobes of the limb recurved. Stam. 6, included, perigynous. Ovary 3-celled, 1-styled, cells 4-6-ovuled. Berry (red) fewseeded. 24 Rhizome creeping, slender. Lvs. radical, and scape very smooth, low, bearing a raceme of white, drooping, sweet-scented flowers.

C. majàlis L.—Mountain woods, Va. to Ga. Common in gardens. 6—10'. Lvs. ovate elliptic, 2 or 3 with each scape. Flowers in an open raceme, 3—4". May, June.

20. CLINTONIA, Raf. Perianth campanulate, of 6 equal, distinct seg ments. Stam. 6, hypogynous, anth. linear-oblong. Ovary oblong, 2-(rarely 3-)celled. Style elongated. Berry (blue) 2-celled, cells 2-10-seeded. 2 Rhizome creeping. Lvs. few, broad. Scape naked, bearing an umbel.

- 1 C. boreàlis Raf. Lvs. broad-oval-lanceolate; flowers 2-5 in the bractless umbel, cernuous; berry-cells many-seeded. Mountainous or hilly woods. June. 8-13'. A smooth and elegant plant. (See Fig. No. 715 in the Class-Book.)
- 2 C. umbellata Torr. Lvs. lance-oblong; umbel many-(12-30-)flwd., bracted; fls. white, speckled, 4-5"; berry-cells 2-seeded. Woods, W. N-Y., and S. along the mts.

21. SMILACINA, Desf. FALSE SOLOMON'S SEAL. Perianth of 6 equal, spreading segm., united at base. Stam. 6, slender, perigynous, anth. short. Ova. globous, 3-celled, with 2 ovules in each cell. Sty. short, thick. Berry globous, pulpy, 1–3-seeded. 24 Rhizome creeping, thick or slender. Stem leafy, bearing a terminal cluster of white flowers in April—June.

- § Raceme compound. Stamens longer than the perianth. Ovules collateral.....No. 1
- § Raceme simple. Stam. shorter than perianth. Ovules one above the other.. Nos. 2, 3
- 1 S. racemòsa Desf. Stem recurved; leaves oval, strongly veined, acuminate, subsessile; raceme compound. Copses: common. Berries red-dotted. 2f.
- 2 S. stellàta Desf. St. erect; lvs. many, lanceolate, acute, amplexicaul; fls. few, in a simple raceme; berries dark red. Along rivers, N. and W. 10-20'.
- § 9, trifoliàta Desf. Erect; lvs. 3 or 4, oval-lanceolate, tapering to both ends, amplexicaul; rac. terminal, simple; berries red. Mountain swamps, N. and W. 3-6'.

22. MAJANTHEMUM, Mœnch. Two-LEAVED SOLOMON'S SEAL. Perianth of 4 ovate, obtuse, spreading segments, united at base. Stam. 4. Ovary 2-celled. Otherwise as in Smilacina.

M. bifòlium DC.—Common in open woods. Stem with 2 (rarely 3) ovate, subcordate leaves and a simple raceme of small white flowers, 3—6'. May.—In Oregon, the same plant becomes stout, 2f high, with petiolate, strongly cordate leaves !

23. ASPÁRAGUS, L. Perianth 6-parted, segm. erect, slight-spreading above. Sta. 6, perigynous. Sty. very short, stig. 3. Berry 3-celled, cells 2-seeded. 24 Rts. fibrous, matted. Stems with filiform branchlets for leaves in the axils of scales.

A. officinàlis L. Stem herbaceous, very branching, erect; lvs. fasciculate; flowers axillary; berries red. Long cultivated, and § in rocky shores.

24. STRÉPTOPUS, Mx. TWIST-FOOT. Perianth bell-form, of 6 dis tinct, recurved sepals. Anth. longer than the filaments. Style elongated, stigmas 3-lobed. Berry globous, red, ∞ -seeded. 2 Stem fork-branched. Flowers axillary, solitary, on a *geniculate* or curved pedicel. June.

- 1 S. ròseus Mx. Lvs. oblong-ovate, clasping, margin finely citiate; pedicels oftener merely recurved; anth. short, 2-horned at apex; stigma trifid. Damp woods, northward. 1f-15'. Flowers reddish, spotted, under the leaves.
- 2 S. amplexifòlius DC. Leaves oblong-ovate, strongly clasping, margin smooth and entire; pedicels abruptly bent in the middle; anthers and stigmas entire at the apex; sepals long-pointed, reflexed. Woods, Penn., and N. 2f.

25. PROSARTES, Don. Perianth as in Uvularia. Fil. 6, perigynous, included, much longer than the linear-oblong anth. Style elongated, trifid. Berry red, ovoid or oblong, 3-6-seeded. 2f Stem erect, branched. Flowers few, greenish, terminal, drooping. May.

P. lanuginòsa Don. Lvs. ovate-oblong, pointed, clasping, downy beneath; pedicels in pairs; flowers spreading-bell-form; sep. 5-6" long. Mountains, N. Y. to Car.

26. UVULÀRIA, L. BELLWORT. Perianth of 6 linear-oblong, connivent sepals, each nectariferous at base. Fila. much shorter than the long, linear, included anth. Style trifid. Caps. 3-celled, few-seeded. 24 Stem forking. Leaves alternate. Flowers yellowish, drooping.

§ Leaves perfoliate near the base. Capsule obovoid-triangular, truncate....Nos. 1-3

§ Leaves sessile or half-clasping. Capsule ovoid or oval-triangular......Nos. 4-6

- 1 U. grandiflora Sm. Sepals acuminate, smooth within and without, greenish yellow, 14' long; anthers obtuse (4'). Woods, 1-2f. May.
- 2 U. perfoliàta L. Mealy B. Sepals acute, 1¹/₂, twisted, covered inside with shining grains, pale yellow; anthers cuspidate. Woods. 10-14'. May.
- 3 U. flava Sm. Lvs. obtuse; sepals smooth both sides, yellow. 1'. N. J. to Va.
- 4 U. sessilifòlia L. Wild Oats. Lvs. lance-oval, glaucous beneath; capsule stiped; style 3-cleft, nearly as long as the (9") sepals. Glades: common. 6-10'. May.
- 5 U. Floridàna Chapm. Leaves oblong, glaucous beneath; style 3-cleft, half as long as the acuminate (8") sepals. Woods, Fla. 4-6'. March.
- **6 U. pubérula** Mx. Leaves puberulent, oval, green both sides; capsule sessile (no stipe); style 3-parted to near the base, not exceeding the arthers. Mountains, S

ORDER CXLVIII. MELANTHACEÆ. MELANTHS.

Horbs perennial, sometimes bulbous, often poisonous, with parallel-veined leaves. Perianth double, regular, persistent, of 6 consimilar, green or colored segments. Stamens 6, with extrorse anthers, 3 distinct styles or sessile stigmas, and a free, 3-celled ovary. Capsule 3-celled, 3-partible or septicidal, and seeds few or many, with a thin seed-coat.—Very near the Lilyworts, but the divided pistils afford a practical distinction.

5	Perianth 6-parted, tube very long, radical, like the Crocus	1
Ş	Perianth 6-sepalled, wheel-form, on a scape or stem, with leaves(*)	
	* Anthers 1-celled, extrorse, cordate, becoming peltate by opening(a)	
	* Anthers 2-celled, extrorse. Capsule loculicidal. Flowers racemous(c)	
	• Anthers 2-celled, introrse. Capsule septicidal. Flowers racemous(d)	
	a Inflorescence racemous, with white flowers. Sta. scarce longer than sep ANIANTHIUM.	3
	a Inflorescence spicate, with green flowers. Sta. twice longer than sepalsSCHENOCAULON.	3
	a Inflorescence paniculate, or a raceme somewhat branched at base(b)	
	b Sepals glandular at base inside, clawed. Stamens perigynous	4
	b Sepals glandular at base inside, clawed. Stamens hypogynousZIGADENUS.	5
	b Sepals not gland-bearing. Stamens perigynousVERATRUM.	6
	e Flowers perfect. Filaments dilated at base. Ovary cells 2-ovuledZEROPHYLLEM.	7
	c Flowers perfect. Filaments filiform. Ovary cells O-ovuled	8
	c Flowers directious, white. Stem leafy	9
	d Stamens 6. Flowers greenish or yellowish, 9–40Tofieldia.	16
	d Stamens 9-12. Flowers deep yellow, 6-9, mostly 6PLEEA.	11

1. COLCHICUM AUTUMNÀLE. A plant of curious habit, from Europe. The 1-3 long-(5-8'-)tubed, lilac-colored, 6-parted flower arises directly from the new tuber in the Autumn, followed in the succeeding Spring by a stem bearing the leaves and fruit.

2. AMIANTHIUM, Gray. FLY-POISON. Fls. §. Sep. sessile, spreading, glandless, shorter than the stamens. Anth. reniform. Caps. 3-horned, 3-partible into 1–4-seeded follicles. 24 St. bulbous at base, scape-like. Lvs. grass-like. Fls. on slender pedicels, turning green with age. May—July.

1 A. muscætóxicum Gr. Bulb conspicuous; lvs. broad-linear, obtuse, many; rac. dense; sep. oblong; seeds ovate, red and fleshy. Shades, N. J., W. and S. 1-2f.

2 A. angustifòlium Gr. Tall, slender, scarcely bulbous; lvs. linear, acute; sepals oval, changing to brown; rac. very dense; seeds linear, dry. Damp woods, S. 2-3f.

 SCHÆNOCAÙLON, Gray. Fls. §. Sep. green, linear-oblong, half as long as the hypogynous stam. Ova. 6-8-ovuled, carpels slightly cohering.
 Scape bulbous, rush-like. Lvs. sedge-like. Spike slender. Apr., May.
 grácile Gr.—Sandy soils, Ga., Fla. Scape 2-3f, lvs. half as long. Fruit unknown

4. MELANTHIUM, Gronov. Fls. $\delta \notin \varphi$. Sep. spreading, unguiculate, with 2 glands at base, the claws bearing the short stamens. Ova. often abortive. Caps. 3-lobed, 3-pointed with the persistent styles. 24 St. thickened at base. Racemes panicled. Flowers yellowish. July, Aug.

M. Virginicum L.-Wet meadows, N. Y., W. and S. Stem 3-4f, leafy. Lvs. lanceolate to linear, 6''--2' wide, subclasping. Flowers 8'', in a large panicle.

5. ZIGADÈNUS, Mx. ZIGADENE. Segm. colored, spreading, at base united, contracted and 2-glanded. Sta. hypogynous, nearly as long as the segm. Ovary adherent at base or free. Seeds ∞ , scarcely winged. 2 Smooth and glaucous. Leaves linear. Flowers greenish, panicled.

1 Z. glabérrimus Mx. Rhizome creeping; lvs. channelled, recurved; panicle conical; fis. 1' broad; sepals lance-ovate, with 2 round glands. Swamps, S. 2f. June.

2 Z. glaucus N. Stem bulbous, nearly naked; lvs. flat, much shorter than the stem; sepals obtuse, 3", each with 1 obcordate gland. Sandy shores, N.Y. to Dakota. 11f

3 Z. leimanthoides Gr. Root fibrous; lvs. flat; panicle slender; segm. obovate, the glandular spot obscure. Swamps, N. J., and S. 2-4f. Flowers white.

6. VERATRUM, Tourn. FALSE HELLEBORE. Fls. $\sigma \notin \varphi$. Sep. spreading, sessile and without glands. Sta. shorter than the perianth and inserted

on its base. Ovary 3, united at base, often abortive. Capsule 3-partible. Seeds few, flat, broadly winged. 24 Flowers in panicles. July.

§ STENÁNTHIUM. Sepals at base united and adherent to base of ovary No. 1

- § VERATRUM proper. Sepals distinct to base and free from the ovary. Nos. 2-4 1 V. angustifòlium Ph. Lvs. long-linear; stem slender, 2-4f; panicle 14f, narrow;
- segm. green-white, subulate, 2"; flowers sessile, the upper fertile. Pa., W. and S. 2 V, viride Ait. Stem stout and very leafy, 2-4f; leaves lance-oval, ample, strongly plaited; flowers innumerable, green; sepals lanceolate, 6". Wet meadows.
- & V. parviflorum Mx. Leaves nearly all radical, oval-elliptic, petiolate, slightly plaited ; stem slender, scape-like, long-paniculate ; sepals spatulate-unguiculate, 2-3", half as long as the pedicels, dingy green. S. 2-5f.
- 4 V. Woódii Robbins, Leaves lance-elliptic to lance-linear, the lower long-petioled, plicate; stem rather stout, 4-6f; panicle long and narrow; sepals oblanceolate to obovate, 4", almost black, as long as the pedicels. Ind., and W.

7. XEROPHYLLUM, Mx. Fls. &. Sep. oval, spreading, sessile, and without glands. Fila, dilated and contiguous at base. Styles linear, revotute. Caps. 3-lobed, cells 2-seeded. 24 Lvs. numerous, dry, setaceous, the lower longer, rosulately reclined. Rac. simple, with white, showy flowers. X. asphodeloides N .- Sandy plains, N. J. to N. C. 3-5f. Per. 5" wide. Ped. 1". Jn.

8. HELONIAS, L. Fls. ¥. Sep. sessile, spreading, glandless, shorter than the filiform stamens. Anth. blue. Caps. 3-horned, 3-styled. Seeds ∞ , linear. 24 Scape thickish, hollow, with many radical, narrow-oblanceolate leaves, and a short, dense raceme of purple flowers.

H. bullàta L.-N. J. to Va. Rare. 10-18'. Lvs. nearly as long as the scape. May.

9. CHAMÆLIRIUM, Walt. Fls. & Q. Sepals linear-spatulate, persistent, white, shorter than the filiform stamens. Anthers yellow. Styles club-form. Caps. ovoid, entire. Seeds ∞ , winged at each end. 24 Root Stem strict. Racemes slender, dense, nodding at top. premorse.

C. lùteum (L.) Blazing Star.-Damp grounds. Apr.-Jn. 12-30'. Root lys, lanceobovate, stem lvs. lanceolate, more on the taller 2 plant. Racemes 3-12'. Spring.

10. TOFIELDIA, Hudson. Fls. &, 3-bracteolate at base. Sep. spreading, sessile, oblong. Caps. 3-lobed, 3-partible. Seeds ∞ , oblong. 24 Lys. equitant, grass-like, from fibrous roots. Scapes clustered, bearing spikes or narrow, close, greenish racemes. June-August.

* Glabrous. Pedicels separate, very short. Rac. simple, short, spicate..... Nos. 1, 2

* Glandular, Pedicels in 3's (1's-4's), short. Bracteoles united......Nos. 3, 4

- 1 T. glutinosa N. Lvs. glabrous, linear-ensiform, ‡ as long as the rough-glutinous stem; rac. short (1-11/), spicate; sep. oblanc., 2", pod 4". Woods, O. to Wis. 15'.
- 2 T. pubens Dryand. Leaves nearly } the length of the glandular-puberulent stem : rac. of alternate, remotish fascicles, slender, 6-8' long, 30-40-flowered; pod scarcely longer than the perianth. Barrens, Del. to Fla. Slender. 2-3f.
- 3 T. palústris Huds. Lvs. 3-5-veined, acute; scape filiform; spike ovoid, length. ened in fruit; bractlets only at the base of the pedicels. Shores of L. Sup., and N. **4 T. glabra N.** Leaves radical, a few on the stem; rac. 2-5' long, dense, 20-30-fiow-
- ered; bractlets united near the flower, as in Nos. 1 and 2. Barrens, S. 1-2f.

11. PLEPA, L. C. Rich. Sep. wide-spread, lanceolate, sessile, longer

than the 9–12 stamens. Styles subulate. Capsules 3-lobed. Seeds ∞ bristle-pointed. 24 Rush-like stem and leaves dry and rigid.

P. tonuifòlia Rich.—Bogs, S. 1—2f. Sept., Oct. Leaves perennial, erect, very nar row, 1f, and bracts sheathing. Rac. loose, of few light-yellow, star-like flowers (1').

ORDER CXLIX. PONTEDERIACEÆ. PONTEDERIADS.

Plants aquatic, with the leaves parallel-veined, mostly dilated at base Flowers spathaceous. Perianth tubular, colored, 6-parted, often irregular. ⁱStamens 3 or 6, unequal, perigynous. Ovary free, 3-celled. Style 1. Stigma simple. Capsule 3-(sometimes 1-)celled, 3-valved, with loculicidal dehiscence. Seeds numerous (sometimes solitary), attached to a central axis Albumen mealy.

1. PONTEDÈRIA, L. PICKEREL WEED. Perianth bilabiate, under side of the tube split with 3 longitudinal clefts (the 2 lower sepals free), circinate after flowering and persistent. Sta. unequally inserted, 3 near the base and 3 at the summit of the tube. Utricle 1-seeded. 24 *m* Leaves radical, long-petioled. Stem 1-leaved, bearing a spike of blue flowers. Jl.

1 P. cordàta L. Lvs. ovate to oblong-deltoid, cordate, with rounded lobes; petiole shorter than the peduncle; spike cylindrical, pubescent, 2' long. In slow waters: com. A fine, showy plant, its blue spikes and smooth leaves 1-2f above the water.

2 P. lancifòlia Muhl. Lvs. lance-oblong to lance-lin. ; fls. as above. S. Apr., May.

2. HETERANTHERA, R. & P. Tube of the perianth long and slender, limb 6-parted, equal. Stamens 3, lower anther oblong-sagittate, on a longer filament. Capsule 3-celled, ∞ -seeded. 24 ... Leaves mostly reniform, long-petioled. July, August.

1 **H. renifórmis** R. &. P. St. prostrate or floating; lvs. roundish, reniform or auriculate at base; spathe acuminate, 3-5-flowered; flowers white. N. Y., Pa., and W.

2 H. limòsa Vahl. Leaves ovate-oblong, both ends obtuse; spathe 1-flowered, longmucronate; flowers blue. S. and W. (Carruth). Lvs. 1-14, the stalks thrice longer.

3. SCHOLLERA, Schreber. Tube of the perianth very long and slender, limb 6-parted, equal. Sta. 3, with similar anthers. Caps. 1-celled, ∞ - seeded. 24 cm Leaves sheathing at base, grass-like, submersed. Stem floating, rooting at the lower joints.

5. gramínea Willd.—A grass-like aquatic, in flowing water, N. 1—3f long. Leaves 1—2" wide. Flower solitary, 2½ long, spathe half as long. July, August.

ORDER CL. JUNCACEÆ. RUSHES.

Grass-like or rush-like *herbs*, with small, dry, greenish *flowers.* Perianth liliaceous in form, more or less glume-like, regular, 6-leaved, in 2 series, persistent. Stamens 6, rarely 3, hypogynous. Anthers 2-celled, introrse. Style 1. Capsule 3- or 1-celled, 3-valved. Albumen fleshy. Figs. 144, 467.

ORDER 150.—JUNCACEÆ.

* Periantn yellow (greenish outside). Stigma 1. Capsule co-seeded	. 1
• Perianth green or brownish. Stigmas 3x Capsule 3-seededLUZULA.	2
$-x$ Capsule ∞ -seededJuncus.	3

1. NARTHÈCIUM, Mœhr. Sepals spreading, yellowish inside. Fil. hairy. Caps. prismatic, 3-celled, tipped with the single style and stigma. Seeds ∞ , bristle-tipped at each end. 24 Root creeping. Lvs. linear, equitant. Scape bracted, simple, racemous. July, August.

N. ossífragum Huds.—Pine-barrens, N. J. Scape terete, 8—12', the leaves much shorter. Sepals lance-linear, 2". Pedicels 3—5", bracteolate. Capsule yellowish, 4". (N. Americanum Ker.)

2. LÙZULA, DC. WOOD RUSH. Perianth persistent, with 2 bractlets at base. Stamens 6. Capsule 1-celled, 3-seeded. 24 Stem jointed, .eafy. Lvs. grass-like, on entire sheaths. Fls. terminal, green or brownish.

* Flowers separate, pedicellate, in umbels or paniculate cymes	Nos. 1.	2
--	---------	---

- 1 J. setàceus Rostk. Scape weak, slender, (not *setaceous*), 1-2f; lvs. shorter; panicle small, 20-30-flwd., flowers separate; sepals very acute, pod globous. Sea-coast, S.
- 2 J. Remerianus Scheele. Scape stout. rigid, 2-4f, and leaves pungent; panicle compound; flowers capitate; sep. sharp-pointed; pod turgid, a little shorter; heads 5-8-flowered, dark brown. Marshes, Va. to Fla. (J. maritimus C-B.)
- **3 J. effusus L.** Soft R. Scapes straight, not rigid; panicle decompound, often dif fuse; flowers green, sep. as long as the obovoid, obtuse pod. Wet: common. 2-31
- **1 J. filifórmis** L. Scapes very slender, weak, the subsimple panicle near the mid die; sepals longer than the obtuse, mucronate pod. Me. to Mich. 1-2f.
- **5 J. Smíthii** Engelm. Scapes slender, rather rigid, 2–3f; cyme few-flwd.; flowere brown, 1"; pod round-ovoid, mucronate, exserted. Broad Mountain, Pa. (Porter).
- 6 J. Bálticus Dethard. Scapes in dense rows on the rhizome, rigid, pungent; pan. near the top, brown; sep. erect, very acute, equalling the elliptical, mucronate pod (1¹/₂). Sandy shores, Me. to Penn. and Wis. 1-3f.
- 7 J. trífidus L. Stems tufted, 5-S', wiry, sheathed at base, 3-leaved at top, and with a sessile head of 3 blackish flowers; capsule globular. Mountains, N. H., N. Y.
- 8 J. Stýgius L. Stems few-leaved at base, leafless at top, 7-12'; heads 1-3, about 3flowered; sepals shorter than the elliptic pod; seeds large, tailed. Me., N.Y.
- 9 J. repens Mx. Stems low, tufted, 2-6'; leaves linear, opposite, fascicled; sepals subulate, awn-pointed, 3-4", the slender pod 2". (1) Md. to Fla. May.
- 10 J. marginàtus Rostk. Stem compressed; leaves linear, flat; cyme compound, heads many, 2-9-flowered, chestnut-brown; pod globular. 1-3f.
 β. bitlorus. Heads very numerous, 2-3-flowered, nearly black. S.
- 11 J. buffonius L. Toad R. Slender, 3-8', tufted : leaves 1-2'; branches 2, flower bearing the whole length; flowers remote, green; the 3 outer sep. longer. Common
- 12 J. ténuis Willd. Stems wiry, 8-24'; leaves flat-filiform, 3-8'; bracts longer than the loose panicle; sepals green, longer than the roundish pod. Common.
 β. secúndus. Flowers 1-rowed on the branchlets; bracts shorter than the panicle
- 13 J. dichótomus Ell. Stem wiry, 1-2f; lvs. terete-filiform, channelled, on long sheaths; panicle forked or dense; pod roundish, long as sepals. S. Too near No. 12.
- 14 J. Gerárdi Loisel. Black Grass. Sts. wiry, leafy, 1-2f; lvs. thread-ensiform, 3-8': pan. longer than the bracts; style conspicuous; pod blackish, long as sepals. Marshes.
- 15 J. Greénii Oakes & Tuckm. Wiry scapes and filiform lvs. rigid; bract filiform, twice longer (4') than the small panicle; flowers secund, straw-brown; sepals ovate, shorter than the ovoid pod. Coasts of N. Eng. and Mich. 1-2f.
- 16 J. Vaseyi Engelm. Sepals lanceolate, as long as the oval pod; bract scarcely longer than the panicle. Otherwise like No. 15. Mich. (Prof. Porter).
- 17 J. asper Engelm. Sts. rigid, 2-3f; lvs. rigid and *rough*, 3-10'; hds. scattered, 3-5 flwd., sep. 2¹/₄'', strongly veined, subequal! shorter than the pointed brown pod. N. J
- 18 J. caudàtus Chapm. Sts. rigid, 2-3f; lvs. 3, rigid, erect; panicle large, erect, hds. 2-4-flwd.; sep. 2", unequal; pod 3", finally black; sds. with long white tails. S.
- 19 J. Canadénsis Gay. Sts. terete, with 2 or 3 erect, smooth lvs.; fls. in Aug. and Sept., 3-50 in a head, paniculate, brownish; sepals lanceolate, 3 outer shorter, none longer than the oblong-triangular pod; stamens 3. Common and very variable.
 - a. coarctatus. Heads 2-5-flwd., in a contracted panicle; pod brown, exserted. β. brachycephalus. Hds. 3-5-flwd., in a spreading panicle; pod brown, exserted.
 - y. subcaudatus. Slender; heads 8-29-flwd., remote; seeds with short white tails.
 - S. longicaudatus. Stouter; hds. 8-50-flwd., approximate; sds. slender, long-tailed.
- 20 J. pelocárpus Meyr. Sts. slender, 2-3-lvd., 10-20'; panicle much branched; fis in pairs or solitary, scattered, reddish; pod obleng, pointed with the slender style, longer than the oblong sepals. Wis. to Me. and Fla. (J. Conradi Tuckm.)
- 21 J. articulàtus L. Stems 1f, with 1-2 leaves; heads 3-8-flowered, crowded in a spreading panicle; sepals brownish, oblong; pod deep brown, oblong, exserted N

β. obtushta. Heads 5-flowered; sepals and pod green, obtuse, mucronate. Phila
 γ. insignis. Panicle erect, few-flowered; outer sepals cuspidate, inner obtuse.

- 22 J. militàris Bw. *Bayonet R.* Stem stout, 2-3f, bearing a single terete leaf near the middle, which overtops the panicle; heads 5-15-flowered; sepals brownish, acute as long as the acuminate capsule. Bogs, coastward, N. Eng. to Del.
- 23 J. nodòsus L. Stem slender, 2- or 3-lvd.; lvs. slender, the upper (bracts) overtop ping the cluster; heads few (1--9), approximate, 5-50-flowered; sepals brown, lancesubulate, shorter than the beaked capsule. Wet sands, Can. to Car.

β. megacéphalus. Stout, 3f, upper leaf and bract exceeding the simple cluster; heads 50-80-flowered, green; outer sepals subulate-awned, as long as the pod.

24 J. acuminàtus Mx. Stems 2- or 3-leaved; hds. 3-15-flowered, in a loose spreading panicle exceeding the bract; sepals lance-subulate, nearly equalling the shortpointed brown pod; seeds minute, acute at both ends. May, June.

β. debilis. Slender or stout; hds. 3-7-flwd.; pod exserted. N. J., Ky., and S. 9'-3f.

y. legitimus. Heads 8-15-flowered; pods scarcely exserted. (J. Pondii C-B.)

- 25 J. Ellióttii Chapm. Stem, leaves, and panicle very erect, 1-2f; hds. 5-8-flwd., fls.
 1"; sepals lanceolate, as long as the turgid-ovoid, blackish pod; seeds acute. April.
- 26 J. brachycárpus Eng. Strict, rigid, 1¹/₄-2¹/₄f; leaves 2-3; bract short; hds. round, dense, 50-flwd., pale, few (2-10); 3 onter sepals awned, much longer than pod. W.
 β. ? Wolfii. Pan. spreading; pod ovoid, blunt, little shorter than the sep. Ill. (Wolf).
- 27 J. scirpoides Lam. Rigid, 2f; heads and bract as in the last; style usually exserted; sepals pungent-awned, equalling the taper-pointed pod. N. Y. to Ga.

β. polycéphalus. Stout, 3f; heads 60-90-flwd., brownish, distant; lvs. flattened.

ORDER CLI. COMMELYNACEÆ. SPIDERWORTS.

Herbs with flat, narrow leaves, sheathing at base. Sepals 3, green, petass 3, colored. Stamens 6, some of them usually deformed or abortive. Styles and stigmas united into one. Capsule 2- or 3-valved. Seeds 3 or more.

1. COMMELYNA, Dill. Fls. irregular, 3 of the stamens sterile, with glands for anthers. Caps. 3-celled, one of the cells abortive or 1-seeded.— Leaves contracted to the sheathing base. Floral leaf or spathe erect in flower, recurved before and after. Petals blue, open but a few hours.

- 1 C. communis L. Procumbent and much branched; lvs. lance-ovate, rounded at base; spathe lateral, 2-6-flowered; odd petal reniform. Wet soils, S. June-Nov.
- 2 C. Cayennénsis Rich. Procumbent, glabrous, with small (14-24') ovate-oblong, obtuse leaves; spathe lateral, 3-4-flowered; odd petal round-ovate. Banks, Ill. to La.
- 3 C. Virgínica L. Stem weak, ascending; lvs. lanceolate to linear; spathe broadcordate when open; odd petal very small, raised on a claw. Dry. M., S., W. Jl., Aug.
- **C. erécta** L. Erect, pubescent, sheaths hairy; leaves lanceolate; spathe hawk-bill shaped, its base-lobes united; petals nearly equal. Woods, Pa., W. and S. Jl., Aug

2. TRADESCANTIA, L. SPIDERWORT. Fls. regular. Sep. persistent, pet. large, roundish, spreading. Fil. clothed with jointed hairs, anth. reniform. Caps. 3-celled. 24 Fls. in terminal, close umbels. Juice viscid.

T. Virgínica L. Umbels sessile, terminal and axillary, with leafy bracts; ped. soon reflexed; flowers ephemeral, of a rich deep blue; leaves linear, channelled; stom thick, jointed, 2--3f. Damp. M., S., W Cultivated.

- 2 T. pilòsa Lehm. Umbels sessile, terminal and axillary; leaves lanceolate, harry both sides; flowers small, bluish purple. Banks, Pl. to O., and S. 2f.
- 3 T. rose a Mx. Umbels terminal, *pedarculate*, with subulate bracts; leaves linear; petals rose-colored, twice longer than the smooth calyx. May. 1f.
- 4 T. CRASSIFÒLIA. From Mexico, a trailing leaf-plant, in vases and baskets, with thick ovate leaves, variegated with purple, green, and white. Flowers roseate.

3. MAYACA, Aubl. Stamens 3, opposite the sepals. Caps. 1-celled. Seeds several, attached to the middle of the valves. In Moss-like, creeping, branching, beset with narrow, linear leaves. Peduncles solitary, axillary, 1-flowered. Resembles a Sphagnum.

M. Michaùxii Schott. & Endl. Ped. longer than the lvs. (which are 2-3"), reflexed in fruit; pod 9-12-seeded; petals white. Shallow waters, Va. to Fla. July.

ORDER CLII. XYRIDACEÆ. XYRIDS.

Herbs sedge-like, with equitant leaves and a scape bearing a head of regular triandrous *flowers*. Perianth of 3 glumaceous sepals and 3 colored *petals*. Fertile stamens on the claws of the petals. Style 3-cleft. Capsule 3-valved, ∞ -seeded.

XYRIS, L. YELLOW-EYED GRASS. Head of flowers ovoid-cylindrical, invested with an armor of cartilaginous scales. One sepal membranous, involving the yellow corolla in bud, the 2 lateral strongly keeled, persistent. Pet. crenulate, on claws, caducous. 3 sterile sta. alternately with the 3 fertile. 24 Lvs. radical, linear, sheathing the base of the slender scape. Jn.-Aug.

- * Scape 2-edged above (except No. 6). Lvs. long, linear, flat, often twisted...(x)
- * Scape teretish, its lvs. shorter than its sheath (No. 9) or longer, and filiform...No. 8 x Sepals exceeding the bract, and fringed on the winged keel.....Nos. 6, 7 x Sepals (the 2 lateral) included,—y winged and ciliate on the keel.....Nos. 3–5 —y wingless or very nearly so......Nos. 1, 2
- 1 X. flexuòsa Muhl. Common X. Scape 6-18', often bulbous at base; lvs.narrowly linear, 3-9', often twisted; head round-ovoid, 3-4''; sepals minutely bearded at the tip, lance-oblong, quite wingless on the keel. N. Eng. to Ill. and Ga.
- 2 X. ambígua Beyr. Scape 2-3f; lvs. broad-linear, rough-edged, 6-12'; hd. lanceoblong, 9-15"; sepals lanceolate, slightly winged; petals large (f''). Barrens, S.
- 3 X. Caroliniàna Walt. Scape 1-24f, the broad-linear lvs. more than half as long; hd. yellowish-brown, 6-9"; sep. obscurely fringed; pet. 4-5". Swamps, Mass. to Fla
- 4 X. Ellióttii Chapm. Scape 2-edged throughout, 1-14f; lvs. narrow-lin., 4 as long; hd. obovoid, 4-5"; sep. cut-fringed on the wing; pet. 3". Wet barrens, S. Car. to Fla
- **5** X. platýlepis Chapm. Scape 2-3f, twisted, as well as the broad-linear lvs.; hd. 9-18", pale; sepals fringed at the apex, wing narrow; petals 2-3". Sands, S. Car. to Fla.
- Storta Sm. Bulbous; terete scape and rigid lvs. twisted; hd. oval to oblong, 5-9"; sepal fringe exserted; petals large, roundish, 8". Sand, N. J. to Fla. (X. bulbosa K.)
- 7 X. fimbriata Ell. Scape rough, 2-3f, the broad-linear lvs. nearly as long; hd. large, ovoid, 9-12"; sepals much fringed and exserted; petals small (3-4"). N. J. to Fla.
- 8 X. Baldwiniàna R. & S. Scape 6-18', twice longer than the filiform bristle-pointed leaves; head oval, 2-4"; sep. falcate, keel winged, ciliolate. Fla. (X. filifolia Ch.)
- 9 X. brevifòlia Mx. Scape 4-12'; lvs. linear to subulate, 1-2', spreading two ways; head oval, 2-3''; sep. wingless; pet. 2''. Wet places, S. (X. flabelliformis Chapm.)

354

ORDER CLIII. ERIOCAULONACEÆ. PIPEWORTS.

Herbs perennial, aquatic, with linear, cellular, spongy *leaves* sheathing the base of the slender *scapes*, which bear a dense head of minute imperfect *flowers* at top. *Perianth* 2–6-parted or 0. *Stamens* 6, some of them generally abortive. *Ovary* 2- or 3-celled, cells 1-seeded.

Stamens (4 or 6) twice as many as the petals. (Scape 7-12-ribbed)......ERIOCAULON.

Stamens 3, as many as the petals. (Scape 5-ribbed, puberulent)......P&PALANTHUS. 2

* Stamens 3, and no petals. Scape 5-ribbed, short, hairy..........LACHNOCAULON 3

1. ERIOCAÙLON, L. PIPEWORT. Fls. 8, in a compact head, with an involucre, the marginal fertile. Sepals 3. 8 Petals 2 or 3, black-tipped, united, sta. 4 or 6. 9 Pet. 2 or 3, distinct, sta. 0. Style 1, stigmas 2 or 3. 24 Lvs. grass-like. Scape fluted. Chaff and fls. white-woolly at tip. Jn.-Aug.

- 1 E. decangulàre L. Scape tall (2-3f), 10-12-ribbed; leaves linear-ensiform, suberect, near 4 as long as the scapes; head 3-5"; chaff pointed. Swamps, Va. to Fla.
- 2 E. gnaphalòdes Mx. Scape tall (1-24f), 10-ribbed; leaves ensiform-subulate, 2-4'; bracts and chaff obtuse, densely white-fringed. Swamps, N. J. to Fla.
- **3 E. septangulàre** Wth. Scape very slender, 7-ribbed, 3-6', or in water several feet according to its depth; leaves linear-setaceous, 1-3'; heads globular. N. J. to Mich.

2. **PÆPALÁNTHUS**, Mart. Flowers 3-parted. Stamens in the sterile flowers 3. Stigmas in the fertile flowers 3. Capsule 3-seeded. Otherwise nearly as in Eriocaulon.

P. flávidus Kunth. In tufts; scapes 5-ribbed, minutely downy, 6-9'; leaves linear setaceous, 1-2'; head finally globular, bracts obtuse, straw-colored. Va. to Fla.

3. LACHNOCAULON, Kunth. & Calyx 3-sepalled. Cor. 0. Sta. 3, ar th. 1-celled, filaments united below. Q Cal. 3-sepalled. Cor. reduced tc a ruft of hairs surrounding the 3-seeded caps. Otherwise as in Eriocaulon

L. Michaùxii K. Scapes 1-5', clustered, 5-ribbed, villous, 2-8' (1f, Chapman); lvs ensiform-subulate 1-2'; head g obular, 1-2'', brownish. Sands, Va. to Fla

CLASS IV. GLUMIFERÆ,

Or GLUMACEOUS ENDOGENS. Plants having their flowers invested with one or more alternate imbricated glumes (chaff or husk) instead of petals and sepals, and collected into spikelets, spikes, or heads. The Class is equivalent to

COHORT 7. GRAMINOIDEÆ, the GRAMINOIDS or grasslike plants.

ORDER CLIV. CYPERACEÆ. THE SEDGES.

These are grass-like or rush-like herbs, with fibrous roots and solid culms. Leaves generally 3-ranked, linear, channelled, based on entire or tubular sheaths. Flowers spiked, perfect or imperfect, one in the axil of each glume. Perianth none, or represented by a few hypogynous bristles called setæ, or a cup-shaped or bottle-shaped perigynium. Stamens definite, generally 3 (1-12). Anthers fixed by their base, 2-celled. Ovary 1-celled, 1-ovuled. Style 2- or 3-cleft and the achenium 2-sided or 3-sided.

The Sedges abound in marshes, meadows, and swamps.

* Inflorescence axillary. Perigynium or perianth of 6-10 setæDulichium.	1
* Inflorescence terminal. Perigynium nonea Spikes 2 - 00 - floweredCYPERUS. 2	2
-a Spikes 1-flowered, capitate	3
** Perianth of 3 ovate clawed petals and (often) of 3 setæ. Glumes awnedFUIRENA.	4
** Perianth of 2 oblong sessile scales (pales) and no setæ. Spikes OLIPOCARPHA.	5
** Perianth of 1 minute double scale and no setæ. Spikes 2, lateral	3
** Perianth of setæ only, $3 - \infty$. No scales or petals(b)	
** Perianth none at all(d)	
b Achenium crowned with a tubercle. Spike solitary, terminalELEOCHARIS. 7	7
b Achenium not tubercled.—c Setæ 3—6, short, or else tawny. (CHÆTOSPORA, 18)SCIRPUS. 8	3
-c Setæ 🗙 (-6), long, cottony, white or reddish ERIOPHORUM. 9	9
d Style 2-cleft. Spikes 5-10, terminal (capitate in Gen. 13)FIMBRISTYLIS. 10)
d Style 3-cleft. Achenium 3-angled	l
*** Achenia crowned with the persistent style or its bulbous base (a tubercle)(s)	
*** Achenia not tuberculate,-x brown like the scales. Setæ none	3

1 C. diándrus Torr. (Fig. 1.) Slender, 4-10'; umbel of 2-5 very short unequal rays; spikes (Fig. 2) flat, oblong, obtusish, 4-8",

fascicled; glumes (Fig. 3) 12-24, brown, with a green keel; stamens (Fig. 4) mostly 2; nut dull. (1) August. Pretty.

β. castàneus. Glumes numerous, and of a dark chestnut-brown.

y. pauciflorus. Glumes only 5-9, edged with yellow, 2-3", crowded.

2 C. Nuttállii Torr. Culm erect, 4-12'; rays few and short; spike lance-linear, very acute, ∞-flwd., crowded; glumes acute, yellowish-brown; stamens 2; ach. dull. (1) β minimus. Very slender, 3-4', hds. few or several, 2-5-flwd.; sta. 1. N. J., Pa.

- 3 C. microdóntus Torr. Culm and lvs. slender; spk. numerous, crowded, linear acute; glumes acute, close; stamens 2; achenia oblong, grey, dotted. ① South.
 β. Gatesii. Culm and leaves filiform; spikes fewer, loose in the umbel. S-W.
- 4 C. flavésceus L. Culm and leaves 4-10'; rays 2-4, short, the linear obtusc spikes clustered at the end; glumes obtuse, straw-yellow; achenia shining. ① E.
- 5 C. flavicomus Mx. Culm 1-3f; involucre 3-5-leaved, very long; umbel some compound; spikes numerous, linear, 12-30-flowered, spreading; glumes very obtuse, brownish-yellow, 3-veined, white-edged; achenia obovate. blackish. Va., and South,
- 6 C. articulatus L. Culm 2-6f, the joints internal, leaves 0 or mere sheaths; umbel compound, involucre short; spk. subulate; gls. 14-20, scarious. Swamps, S.
- 7 C. erythrorhizos Muhl. Culm 2-3f; umbel compound, each ray with several sessile clusters; spikes very many, 6", teretish; glumes 15-30, yellow-brown; inner scales very narrow; achenia 3-angled, light colored, minute. (1) Pa., S. and W.
- 8 C. infléxus Muhl. Culms clustered, 1-3', leaves setaceous; hds, 1-3; spk. ver, short (1-2"), crowded; gls. 8-10, with a recurved bristle-point. (1) Shores. Com.
- 9 C. acuminàtus Torr. Culm filiform or slender, 3-12'; hds. 1-7, each of ∞ flat obl.-ovate obtuse spikes 2-3" long; glumes whitish, recurved at tip. ① Ill. to La.
- 10 C. virens Mx. Culm sharply rough-angled, 1-4f; leaves keeled, 1-3f; heads ∞, of ∞ ovate 15-flwd. spikes; gls. greenish, merely acute; ach. linear. 24 Va., and S. β. vegètus, has smooth culms and spikes very densely packed. S.
- 11 C. Drummóndii Torr. Culm very rough, 6—15′, obtuse-angled; hds. ∞, dense, spike oblong-linear, 40-50-flowered, yellowish; glumes ovate, acute. Swamps. Fla.
- 12 C. Haspan L. β. leptos. Culm 1-2f, leaves shorter, involucre 2-leaved, shorter than the compound umbel; spikes linear, acnte, 6", 3-5 in a cluster; glumes minute, 20-40, mucronate, tawny-brown; achenia very minute, white, tumid. Swampe. S.
- 13 C. dentàtus Torr. Much like C. Haspan, but the involucre is 3- or 4-leaved, and longer than the umbel; glumes fewer (7-20), larger, the upper often long-pointed.
- 14 C. Lecóntii Torr. Culm and leaves 1-2f; umbel much compounded, with about 3 oblong, obtuse, flat silvery spikes on each peduncle; glumes 20-40, obtuse, very closely imbricated. 2f Sandy coasts, Fla. A handsome sedge.
- 15 C. fuscus L. Culms 3-6', leaves flat; spk. lance-linear, 1-3'', dark-red or brown, densely fascicled in many heads; glumes round-ovate, closely imbricate. Phila. §
- 16 C. compréssus L. Culm tumid at base, 4-10', lvs. shorter; spikes lance-linear, in loose hds; gls. 12-40, ov.-acuminate, acutely keeled and close-pressed. Pa., and S.
- 17 C. divérgens Kunth. Tufts 2-3', leaves longer; spikes lance-ovate, flat, acute, 1'', 6-flowered, white, all in a single somewhat compound head. Fla.
- 18 C. filicúlmis Vahl. Culm tuberous, very slender, 6-12'; leaves very narrow, keeled; spk. lance-lin., in 1-4 dense hds.; gls. loose, 3-8, ovate; ach. gray. 24 Dry.
- 19 C. Grayii Torr. Differs from No.18 only in the *looser* heads of 6-8 *linear* spikes, the glumes less scarious and less veiny. 24 Mass. to N. J.
- 20 C. Schweinítzii Torr. Culm rough-3-angled, 1-2f; leaves shorter; umbel simple, rays 4--6, erect; fls. large, in little spikes arranged close into cylindric-oblong compound spikes, with setaceous bractlets. 2f Shores, N. Y. to Ark.
- 21 C. rotúndus L. β. Hydra. Nut Grass. Culm 6'-2f, the leaves shorter; umbel simple, rays 3 or 4, nearly equaling the invol.; spikes in two rows on the rachis; gls. 14-24, veinless, purple-brown. 24 Va., and S. A rank and troublesome weed.
- 22 C. ESCULÉNTUS. Root producing ovoid tubers as large as chestnuts, eatable when roasted (those of No. 23 very small); glumes veiny, yellow-brown. 24 Eur. Cult.
- 23 C. phymatòdes Muhl. Culm 1-2f, with long lvs. and invol.; umhel simple or compound; spk. linear, obtuse; gls. veiny, 12-20, yellowish. 24 Root creeping.
- 24 C. strigòsus L. Culm 1-3f; leaves broad-linear; umbel dense, large, some compound; rays 1-5'; spikes crowded, flattened, acute; glumes 8-18, tawny, ovate, acute, veined, much longer than the achenia. 24 Damp. Common.
- 25 C. stenólepis Torr. Culm 11-3f, smooth; leaves stiff, rough; rays 3-8; spikes crowdcd, 6-7"; glumes 5-8, lance-linear, spreading; seed slender, dull. 24 S.

- 26 C. dissitifiorus Tor. Culm slender, 1-2f, longer than the narrow leaves; invol.
 3-leaved; rays 3-5; spike very slender and pointed, 6-9", separate on the rachis; glumes 5-7, lance-oblong, acute; achenia brown, 3-angled. 2f Tenn. to La.
- 27 C. Michauxiànus Schlt. Culm sharply 3-angled, 6-20'; umbel 6-10-rayed, simple or compound; spikes crowded in oblong clusters, 3", tawny; glumes 5-10, oblong, overlapping, appressed; achenia ovoid, 3-angled. 24 Swamps, M. and S.
- 28 C. Engolmánni Steud. Spikes very slender, with the 5-12 glumes remote, and the achenia oblong-linear. Otherwise like No. 27. 24 Sandy swamps, W. and S.
- 29 C. tetrágonus Ell. Culm acutely rough-3-angled. leaves rough-edged; spik 4-angled, oblong, 2-3"; glumes 5-7, ovate, veiny; rays 6-12, slender. 24 Dry. S.
- 30 C. echinàtus (Ell.) Culm 10'-2f, the leaves st'll longer, involucre 5-6-leaved, very long: umbel simple, rays 8-12, each with a globular *cluster*; spikes 3'', about 3-flowered, subulate, radiant; glumes veiny, oblong, acute; ach. obovoid. 24 Dry. S.
- **31 C. ovulàris** (Vahl.) Culm 6-16', leaves shorter; umbel simple; rays 3''-3', each with a *dense oval head*; spikes 1¹/', 1-3-flowered, very many. 24 Bogs. M., W., S.
- **32 C. Lancastriensis** Porter. Culm 1-2ff; leaves linear, long: heads 5-9, oval, on as many slender rays; spikes subulate, 4-6", soon deflexed, glumes about 5, veiny, obtuse, tawny, very acute, with about 3 linear achenia. 2t Lancaster Co., Pa.
- 33 C. retrofráctus (Vahl.) Culm 2-3f, leaves shorter, broad; rays 1-6', each with 1 obovate, dense head; spikes 3", subulate, 1-flowered, soon deflexed. 24 N_J., and S.
- **34 C. uniflorus** Torr. & Hook. Has hds. oblong, 1' long, spks, closely deflexed. La.
- 35 C. ALTERNIFÒLIUS. Greenhouse species from Madagascar. Culm, and leaves, and many-leaved involucre striped with white and green, like *Ribbon Grass*.

3. KYLLÍNGIA, L. Spikes compressed. Scales about 4, the two lowest short and empty, the third only usually with a fertile flower. Sta. 1—3. Style long, 2-cleft. Achenia lenticular. Culms triangular, leafy at base. Heads sessile, solitary or aggregated, involucrate, odorous. Aug.

- K. pùmila Mx. In tufts, 2-12' high, very slender; heads solitary, rarely triple, sessile, oval to oblong; invol. 3-lvd., 1-2'; spk. very ∞, 1-flwd., green. (i) W. and S.
- 2 K. sesquiflora Torr. Root creeping; culms 6-12'; heads mostly triple, oval to oblong, the lateral quite small; spk. densely packed, white; invol. deflexed. 24 Fla

4. FUIRENA, Rotboll. CLOT-GRASS. Glumes imbricated on all sides into a spike, awned below the apex. Petaloid scales 3, cordate, awned, unguiculate, investing the *stipitate* achenium. 24 Stems angular, leafy. Spikes solitary or in heads, pedunculate, (brown).

- 1 F. squarrosa Mx. Culm 1-2f, with several joints and sheathing flat lvs.; spks. ovoid, squarrous with the long recurved awns, 4-7 together in each head. Bogs.
- β. hispida. Taller, with sheaths and leaves, hispid with white spreading hairs.
 2 F. scirpoidea Mx. Culm slender, 1-2f, leafless but with several sheaths; spikes 1-3, ovoid, 3-5", not squarrous, the short awns erect. Wet, Ga., Fla.

5. ELEÓCHARIS, R. Br. SPIKED RUSH Spikes terete. Glumes mbricated all around. Bristles of the perianth (setæ) mostly 6 (3 to 12); rigid, persistent. Style 2-3-cleft, articulated to the ovary. Achenium crowned with a tubercle which is the persistent bulbous base of the style Mostly 24, *m*. Stems leafless. Spike solitary, terminal.

- Spike terete, cylindrical, not thicker than the tall (2-4f) culm...(a)
- § Spike terete (glumes spirally imbricated), thicker than the culm...(b)
- § Spikes flat, glumes few, in 2 or 3 rows, often proliferous. Culm capillary...(2)

 z Culms never proliferous, only 2-6' highNos. 23, 24
- 1 E. equisetoides Torr. Culm terete, many jointed, 2-3f, as thick as the spike; sheath at base obtuse; spike 1', acute, glumes very obtuse; setæ 6; style 3-cleft; ach. smooth, brown. Bogs, R. I., W. and S.
- 2 E. quadrangulata Br. Culm 2-4f, jointless, acutely 4-angled with the sides unequal; spike 1-2'; glumes obtuse; ach. dull white, obovoid, tipped with the distinct tubercle; setæ 6. Bogs, N. Y., W. and S. Rare.
- 3 E. cellulòsa Torr. Culm 2f, obtusely 3-angled below, jointless; spike 1', glumes round; setæ 6; ach. broad-obovate, deeply pitted. Marshes, Fla. to La.
- 4 E. Robbinsii Oakes. Culms slender, 9'-2f, sharply 3-angled, many of them abor tive and splitting into hair-like fibres in the water; spikes 6-9", spindle-form, 5-8flowered; ach. 1", half as long as the 6 setw. Ponds. Rare.
- 5 E. elongata Chapm. Culms floating, very long and slender, with many hair-like abortive ones; spike 12-20-flowered; ach. and setæ as in No. 4. Ponds, S.
- 6 E. capitàta Br. Culms tufted, 3-6', striate; spike ovate, 1-2"; glumes 10-15, whitish-scarious, oblong, deciduous; ach. black, shining; setæ 6. Ga., Fla.
- 7 E. álbida Torr. Culm and whitish spike much like E. capitata, but the glumes be come 10-20, the style 3-cleft and achenium tumid, brown. Ga., Fla., La.
- 8 E. tuberculòsa Br. Culms angular, wiry, 10-15'; spike 3-5", lance-ovate; gls.
 ∞, very obtuse; ach. scarcely larger than its arrow-shaped tubercle. Swamps.
- 9 E. palástris Br. Rhizome creeping; culms 9'-2f, with a long sheath; spike lance-oblong, 3-6-9"; glumes reddish-brown, very numerous, oblong-ovate; with a broad scarious margin; ach. obovate, yellowish; setæ 4. Common.
 - β . calva. Bristles wanting; culms filiform. Watertown, N. Y.
- 10 E. compressa Sull. Culms tufted, very erect, narrow-linear, 1-14f; spike oblong-ovoid, 3-5"; gls. 10-30, ov.-lanceolate. brown; ach. yellow; setæ 0. M., W.
- 11 E. obtùsa Schultes. Culm 6-16'; spike ovoid, very obtuse, 2-4"; gls. ovate, very many and close, red-brown, white-edged; setæ 6; style often 3-cleft. Common.
- 12 E. olivàcea Torr. Culms 2-4', densely tufted, spreading, flattened and striated; spike ovate, acutish, 2-3''; glumes 20-30, green-brown; ach. olive. Sands.
- 13 E. ovàta Br. Culms tufted, 6-10', finely striate; spike exactly ovoid, 2-3", glumes 20-30, rounded, tawny, with 2 white striæ; ach. ivory-white, pyriform-compressed, capped with a *brown* tubercle; setæ 7, long. E. Penn. (*H. Jackson.*)
- 14 E. simplex Torr. Culm acute-angled, filiform, 12-18'; spk 2-3", ovoid; glumes ovate, white-edged, few; ach. olive-green, much larger than its tubercle. Md., and S.
- 15 E. rostellàta Torr. Culm 12-20', sulcate, rigid, very slender; spike lance-ovate, acute, 3-4"; glumes 12-20; ach. olive-brown, tubercle a mere *beak*. E. and N.

16 E. intermèdia Schultes. Wiry setaceous culms 3-8', spreading, in dense tufts; spk. oblong-ovate, acute, 1-3"; gls. oblong, obtuse, 12-25, with 2 brown lines; ach smooth, obovoid, light-brown, with a distinct conical brown tubercle. In wet banks

17 E. melanocárpa Torr. Culm flat, striate, wiry, erect. 12-18'; spike lanco

oblong, 4-6"; glumes 20-40, ovate; ach. blackish when ripe, covered by a broad tubercle which is abruptly-pointed; setæ 3, purple. Sandy bogs, E. and S.

- 18 E. ténuis Schultes. Culms filiform or wiry, 4-angled, tufted, 8-18'; spk. elliptical or oval 2-3"; gls. dark-purple, obtuse, 20 +; ach. roughish, the tubercle broaddepressed, setæ 2 or 3, very short. A variety has the culms *capillary*. Wet places: com.
- 19 E. tricostàta Torr. Culm flattened, slender, 1-2f; spike oblong-cylindrical, 6-9'; glumes obtuse, rusty-brown, crowded; setæ 0; ach. sharply 3-angled, roughish, tubercle conical. N. J., and S. A variety has smaller spikes. (Dr. Feay.)
- 30 E. arenícola Torr. Culms flattish, erect, 6-12', wiry; spk. ovate, obtuse; gls. dark-brown, with broad white margins; ach. yellowish, tubercle distinct. Sands, S.
- 21 E. Baldwinii Torr. Culms 4-14', capillary, 4-angled, densely tufted; spike 1", ovate, flat, often proliferous; gls. 5-10, in 2 rows; ach. strongly 3-angled. Ga., Fla.
- 22 E. prolífera Torr. Culms filiform, flattened, erect or diffuse, 10-20'; spike 3", lance-ov., acute, often proliferous; gls. 10-15, pale; ach. ribbed, tubercle distinct. S.
- 23 E. aciculàris Br. Culms hair-like, 2-6'; spike elliptic-ovate, 1", acute; glumes 4-8; ach. ovoid-triangular, longitudinally striate. Muddy places.
- 24 E. pusillus (Vahl.) Culms bristleform, 1-5', compressed; spk. ovate; gls. 3-6, mostly empty; ach. acutely triangular, smooth. Coasts. (E. pigmæa.)

6. SCIRPUS, L. CLUB-RUSH. BULLRUSH. Glumes imbricated on all sides. Perianth of 3—6 setæ, persistent. Sty. 2–3-cleft, not tuberculate at base, deciduous. Achenium biconvex or triangular. 24 Stems mostly triquetrous, simple, rarely leafless. Spikes solitary, conglomerated, or corymbous, usually rust-colored.

- \$ TRICÓPHORUM. Setæ 6, not barbed, tawny, tortuous, much longer than the achenium and exserted. Culm leafy. Cyme decompoundNos. 19, 20
 \$ Scírpus. Setæ downwardly barbellate, about equalling the achenium....(*)

- 1 S. paucifiòrus Lightfoot. Culm filiform or capillary, erect, 3-8', leafless; involucre 0; spk. oval. 1-2''; gls. brown, 5-9; ach. 3-angled, netted, beaked but not tubercled. Otherwise an Eleocharis. Western N. Y. (Hankenson) to Ill. (Porter).
- 2 S. cæspitòsus L. Culm round, wiry, 3-10', sneathed below with rudiments of leaves; spike ovate, 2-3", with an involucral bract same length; setæ 6, long' than the achenium. High Mountains, N. and S. In tufts. Leaves 3-6".
- 5 S. Clintonii Gr. Culm acutely 3-angled, 1f, very slender, base sheathed, with short bristle-shaped leaves; bract subulate, shorter than the ovate chestnut-brown spike (3-5"); glumes pointless. N. Y. (Clinton. Porter.)
- **4** S. planifòlius Muhl. Culms 1f, 3-angled, threadform, with several linear flat leaves; bract as long as the oblong (2") spikes; gls. pointed. N. Eng., N. Y. to Del.
- **5** S. subterminalls Torr. Culm 1-3f, filiform, with several long capillary floating leaves: bract 1-2', exceeding the oblong (3'') spike, continuous with the culm. N.
- **6 S. débilis** Ph. Culm roundish, furrowed, in tufts, 9-16', with a few subulate lva at base or 0; spk. 1-7, ovoid, crowded, 3", tawny, the culm-leaf above them 2-4' at length reflexed; bristles 4-6, inversely barbed; ach. smooth. Muddy shs.Ct.to Car

- 7 S. Smithii Gr. Culm slender, 3-12'; sheath often with a short blade; spk. 1-3. ovoid, greenish, 2-3", sessile about halfway up; setæ 0-1; ach. smooth, lenticular; culm-leaf always erect Shores, Penn. (Porter) Sodus Bay (Hankenson.)
- 8 S. válidus Vahl. Culm cylindric, smooth, 5-8f, its sheath with or without a short blade; panicle cymous, overtopping the short pungent culm-leaf; spk. ovoid, brown, 2", numerous; gls. mucronate, ciliate; setæ 3 or 6. Our stoutest Bullrush. Shores
- 9 S. pungens Vahl. Culm 1-4f, 3-angled, 1-3-leaved; lvs. 3-12', also 3-angled; spk. 1-6, crowded, sessile, ovate, obtuse, 3-5' below the summit; gls. notched and mucronate; anth. ciliolate at apex; style 2-cleft; setæ 2-6. Ponds and marshes.
- 10 S. Tórreyi Olney. Culm 2-3f, 3-angled; lvs. 1-3 at base, 1-14f, 3-angled; spk. 1-4, oblong, sessile, 2-4' below the summit; gls. ovate; sty 3-cleft; ach. triq obovate, pointed, shorter than the setæ. Borders of ponds, N E. to N. J., and W.
- 11 S. Ólneyi Gr. Culms triquetrous-winged, 2-7f, leafless, or with 1 very short leaf at base; spk. 6-12, in a sessile head an inch or so below the summit; gls. roundovate, mucronate; setæ 6; style 2-cleft. Salt marshes, E. and S.
- 12 S. leptólepis Chapm. Culms 3-angled, 2-5f; leaves 1-3, slender, channelled, sheathing at base; spikes loosely umbelled, single, oblong, 4-6", ∞ -flowered; invol. of several small bracts besides the long culm-leaf; gls. lance-ovate, acute; style 3-cleft; setæ 6, equalling the 3-sided ach. Md. (*Porter*), and S. (S. Canbyi Gr.)
- 13 S. marítimus L. Culm acutely 3-angled, leafy, 1-3f; lvs. broad-linear, chan nelled, 1-3f; spk. 3-12", oblong, 6-10 in each cluster; clusters 1-9, sessile and on short rays; invol. of 2 or 3 very long leaves; setæ 1-4, deciduous, short; achenium plano-convex. Salt marshes.
- 14 S. fluviátilis Gr. Culm triquetrous-winged, leafy, 2-4f; lvs. as in No. 13; spk 6-10", oblong, 1-5 in a cluster; clusters sessile and on rays; setæ 6; ach. 3-angled Shores, Eastern, Middle, and Western States.
- 15 S. atrovirens Muhl. Culm obtusely 3-angled, leafy, 2f; invol. of 3 long leaves, spk. ovate, 1¹/₄, 10-20 in the round dense heads; hds. 4" in a compound cyme; dark olive-green; setre 4, as long as the smooth white ach. Con. in swales. N., M., & W.
- 16 S. sylváticus L. Culm 3f, leafy; invol. of 3 leaves, hardly equalling the thrice compounded cyme; spk. 1", olive-gren, 1-3-9 in the small heads; hds. on slender pedicels; gls. acute; setæ 6, straight, as long as the pale 3-angled ach. Mts. N. H., & N
- 17 S. polyphýllus Vahl. Culm 2-3f, leafy; invol. of 3 leaves; cyme decompound spk. yellow-ferruginous, 1", 3-6 in the clusters; gls. obtuse; ach. yellowish-white 3-angled, twice shorter than the 4-5 tortuous setæ. Margins of waters. Rare. North
- 18 S. divaricàtus Ell. Culm 3-4f, very leafy; cyme large, loose, decompound spk. all separate, 2-3", oblong, pendulous, ferruginous; setæ tortuous.Wet barrens.S.
- 19 S. Erióphorum Mx. Culm teretish, 3-5ť, lvs. 2f; invol. 4-5-lvd., longer than the large loose decompound cyme; spk. very numerous, 1-3", pedicellate; setæ 6 hair-like, curled, conspicuous, 5 or 6 times longer than the white ach. Swamps. Com.
- 20 S. linearis Mx. Culm 3-angled, 2-3f, very leafy; cymes term. and axillary, de compound, at length nodding; invol. 1-3-bracted, much shorter than the cyme; setas as long as the glumes, hardly at maturity exserted. Swamps. Common. S.

7. ERIOPHORUM, L. COTTON GRASS. Glumes imbricated all around into a spike. Ach. invested with many (rarely but 6) very long, woolly or cottony hairs. 24 Culms with or without leaves. Spikes showy after the long setæ have grown. June—August.

S	Setæ 6, crisped, woolly. Spike sirgle. Culms scape-like, nakedNo. 1
ş	Setæ numerous, straight, cottony. Culm jointed, 1-3-leaved(a)
	a Spike single. Culm bearing 2 sheaths instead of leaves
	a Spikes several, collected into a subsessile, capitate clusterNo. 3

- 1 F. alpinum L. Culms jointless, slender, 8-16', form a creeping rhizome; lvs. radical. short, subulate; spk. 2", the white hairs at length 7-9" long. Bogs, N., M.
- 2 E. vaginatum L. Rigid, tufted, 1-2f, culm with 1 or 2 inflated sheaths; leaves radical, filiform; spk. 6-8', blackish, hairs 1', white, glossy, 30-40 in each flower. N. Eng. to Mich., and N. Pocono Mt. in Penn. (*Prof. Porter.*)
- 3 E. Virginicum L. Culm strict. firm, slender, 2-3f, lvs. shorter, narrowly linear; invol. 2-4-lvd.; spk. ovoid, 3", many, glomerate with very short ped. forming a capitate cluster; setæ 70-200, pale-cinnamon, 6-8" long. Bogs.
- B. confertissimum. Setæ white, in a large and compact tuft. N. H., N. Y., & Can
 E. polystáchyon L. Culms 1-2f, with 2 or 3 cauline broad linear lvs.; invol 2-leaved; spk. about 10, on long drooping peduncles; setæ 30-40 to each flower, 6-8", white. Very conspicuous in meadows and swamps.
- E. grácile Koch. Culm 14-21; lvs. triquetrous, channelled above, scarce 1" wide; spk. 3-8, on roughish ped. which are 1"-4' long; setæ white, 8-10"..

8. HEMICARPHA, Nees. Spike many-flowered. Glumes imbracated all around. Interior scale 1, embracing the flower and fruit; setæ 0. Sta. 1. Style 2-cleft, not bulbous at base, deciduous. Ach. compressed, oblong, subterete. (1) Low, tufted, with setaceous culms and leaves.

H. subsquarròsa Nees. Culms 2-3', curved, the lvs. shorter; spk. 2 or 3, nearly 2", ovoid, sessile together; invol. 2-lvd., 1 continuing the stem; gls. subsquarrous. Sandy shores.-β. Drummóndii. Sts. 1-2', spk. only 1. Fulton Co. Ill. (J. Wolf.)

9. LIPOCÁRPHA, Brown. Spikes many-flowered; glumes spatulate, imbricated all around; interior scales 2, thin, subequal, involving the flower and coating the fruit. Perianth none. Sta. 1. Style 2- or 3-fid; achenium coated with the scales. ① Culms leafy at base. Spikes numerous, collected into an involucrate, terminal head.

L. maculàta Torr. Culm 3-8', the linear-filiform lvs. shorter; invol. of 2 long lvs. and 1 short; spk. 3-4, ovoid; glumes very ∞, scarious, marked with red dots and a green midvein; ach. oblong. Wet grounds, Phila. (Leidy), and S.

FIMBRÍSTYLIS, Vahl. Glumes imbricated on all sides; bristles
 Style compressed, 2-cleft, bulbous at base, deciduous, *ciliate-fringed* (as the name indicates.)—With the habit of Scirpus. Lvs. mostly radical.

- F. spadicea Vahl. Culms 1-3f, hard and rigid; lvs. semiterete, rigid, channelled; rays few, exceeding the 2 or 3 invol. bracts; spk. ovate-oblong, 3-6" by 2", rust-colored to brown; sta. 2-3; ach. whitish, minutely netted. 24 Salt marshes.
- 2 F. Iaxa Vahl. Culm 3-12', lax, flattened, striate; lvs. flat, linear, glaucous, rough edged; rays few, shorter than 1 of the invol. bracts; spk. ovoid, 3", brown; sta. 1; ach. whitish, with 6-8 prominent ribs. ① Clay soils, Pa. to Ill., and S.
- **3 F. argéntea** Vahl. Glaucous, tufted; culms 2-6', setaceous, flattish, like the leaves; spk. straw-colored, 6-9 in a dense head; invol. lvs. 4, longer than the culm, gls. lance-ovate, pointed; sta. 1. (1) Philad. (A. H. Smith), and S. (F. congesta Torr.)

11. TRICHELÓSTYLIS, Lestib. Glumes in 4 to 8 ranks, carinate: bristles none; style 3-cleft, deciduous below the bulb (if any) at the base achenium triangular. (1) 24. Sts. leafy at the base, tufted. Spikes in a terminal head, or umbel, or solitary.

§ Spikes rusty-brown, in a cymous umbel, the glumes 6—15, in 4 rows.....Nos. 1—3
§ Spikes greenish—x both capitate and umbellate, with linear lvs. and bracts..No. 4
—x all capitate in a single head ; bracts dilated at base...Nos. 5, 6
—x one only on each culm, or rarely 2 or 3, bracted..... Nos. 7, 8

- 1 T. autumnàlis (L.) (Fig. 5.) Culm flattened, 2-edged, very slender, 3-10'; iva, narrow-linear, flat, much shorter; spikes (Fig. 6) lance-oblong, very acute, 4-rowez 2", 1-3 together, many in the cyme; glumes sharppointed, brown; stamens 2; achenium (Fig. 7) white smooth. (1) Wet banks, &c.
- 2 T. ciliatifolia (Ell.) Culm setaceous, angular, 3-12'; leaves setaceous, with long brown hairs on the sheaths: cyme 5-9-rayed, often overtopped by 1 bract; spike 1-2", mostly single; glumes acute, 4-rowed, 6-12; stamens 2; achenium white. (1) Dry, S.

 β . coarctata. Cyme contracted; spks 2-3", often 2--3 clustered together.

- 3 T. capillaris (L.) Culm capillary, angular, 3-8'; leaves setaceous, much shorter, entirely smooth; spk. 2-4 in the simple cyme; gls. 8-12, strongly keeled, 4-rowed; stamens 2; ach. white, equally 3-sided. (1) Sandy fields. (Fig. 8, a flower.)
- 4 T. boreàlis Wood. Culm filiform, angular, 2-4'; lvs. lincar, flat, 1-2'; bracts similar, as long as the neaves; spikes capitate and in cymes, 1-5 together, ovoid, green, 1"; glumes pointed; sta. 1; ach. white, 3-angled; sty. bulbous at base. (1) Ill. Banks of the Miss. R., Ill. (J. Wolf.) Shores of Lake Sup., Mich. (Mr. Perkins.)
- 5 T. stenophýlla (Ell.) Culm setaceous, grooved, 2-4'; leaves setaceous, 2-3'; bracts many, 3-4 times longer than the dense head; ach. (Fig. 9) blackish. S.
 6 T. Wàrei (Torr.) Culm filiform, 1f, 3-angled; lys.

- and bracts setaccous, silky-fringed at base, the latter twice longer than the head of 8-12 ovate spikes. Fla.
- 7 T. carinàta (Hook. and Arn.) Culm flattened-setaceous, 3-6', with 1 short setaceous leaf at base; spk. ovoid, near the top; gls. 5-8, broad-ovate, acuminate. S-W.
- 5 T. LEPTÀLEA (Schultes?) Culms filiform, bright green, flaccid, 6-12", sheathed at base, with a short setaceous leaf or 0; spk. ovate, whitish, as long as its bract (3"); sta. 3; ach. 3-angled, shining. Cult. in conservatories. From S. Eur.

12. PSILOCARYA, Torr. Fls. \nexists . Gls. ∞ , imbricated all around, all rertile. Setæ 0. Stam. 2, long, persistent. Style 2-cleft, dilated or tuberculate at base. Ach. biconvex, crowned with the persistent style. (1) Culms leafy. Spikes lateral and terminal, cymous, brown.

- 1 P. scirpoides Torr. Culm 3-sided, slender, 5-9'; lvs. linear, 3-5', about 2 on the culm, a cyme in each axil; spike ovoid, 2-3"; ach. 20-30, smoothish (slightly rugous), tippid with the long 2-cleft style. Ponds, R. I., and N.
- P. nitens (Vahl.) Culm 11-2f, flattened, with several long linear leaves; cymcs loose, spike lance-ovoid, 2", all pedicellate; ach. 8-10, conspicuously rugous, tipped with the entire-part of the style, blackish when ripe. S.

13. DICHRÓMENA, Rich. Spikes flattened, in a terminal head Gls. imbricated all around, many empty. Perianth 0. Sta. 3. Sty. 2-cleft. Ach. lens-shaped, crowned with the broad tubercular base of the style. Culms leafy. Bracts discolored.

1 **D. lencocéphala** Mx. Culm 3-angled, 1-2f; leaves narrow-linear; invol. of 6-f narrow leaves, which are whitened at base as well as the spikes; ach. rugrlous, trup cate, the tubercle not decurrent. Barrens, N. J., and S 2 D. latifòlia Baldw. Culm teretish, 2-3f; leaves long, linear; bracts 8-10, lance linear, reddish white, long-pointed; ach. roundish, roughened, dull, the tubercle decurrent on its 2 edges. Ponds, S.

14. RHYNCHOSPORA, Vahl. Fls. \checkmark or $\diamond \checkmark \diamondsuit$, few in each spike. Glumes flattish, loosely imbricated, the lowest small and empty. Perianth of 6—12 setæ. Sta. 8 to 12. Style bifid. Achenium lens-shaped or globular, crowned with a tubercle—the distinct, bulbous base of the style. 24 Stems leafy, 3-sided. Inflor. terminal and axillary, mostly tawny to brown.

- **R. plumòsa** Ell. Culm and leaves filiform-wiry, erect, 10-18'; spikelets
 1-flwd., 1", in small fascicles forming a loose spike at top, often another below it shorter than the bracts; setæ 6, as long as the tumid, rugous ach. Dry, N. J. to Fia.
 β. minor. Every way smaller, 5-10'; fascicles 2 or 3; setæ feathery below. S.
- 2 R. semiplumòsa Gr. Culm and leaves rigid, wiry, erect; spike 1-2", in a capitate corymb at top, often a smaller one below; ach. solitary, tumid, rugous with a broad tubercle; setæ 6, feathery below. Barrens, S. 1-2f.
- **3 R. oligántha** Gr. Culm and leaves filiform-capillary, erect, 8-14'; spikes 1-3 only, fusiform, 3", with 1 long bract; ach. obovoid; setæ 6, densely feathery. S.
- **4 R. cymòsa** N. Culm acutely 3-angled, 1-2f; leaves linear; spike fascicled, in several crowded cymes; ach. broad-obovate, twice longer than the 6 setæ, 4 times longer than the depressed-conical tubercle. N. J., Pa., and S.
- **5 R. Torreyàna** Gr. Culm teretish, 1<u>4</u>-2f; leaves setaceous; cymes small, several, the lateral on capillary peduncles; ach. oblong-obovate, twice longer than the setæ, thrice longer than the broad tubercle. N. J., and S.
- 6 R. rariflòra Ell. Culms tufted, 6-16', filiform, the setaceous leaves much shortor; spikes 2'', scattered in very loose paniculate cymes; ach. round-obovate, strongly rugous, tubercle very short. Barrens, S.
- 8 R. inexpánsa Vahl. Culm slender, erect 14-3f; leaves narrow-linear, flat; spikes lanceolate, 2-4-flowered, 3", in several rather large recurved-drooping panicles: ach. oblong, half as long as the setæ; tubercle short. Wet barrens, S.

- 9 R. decúrrens Chapm. Culm, leaves, and cymes as in the last; spike 1"; ach obovate, as long as the setæ, the tubercle *decurrent* on its 2 edges. Marshes, Fla.
- 10 R. miliàcea (Lam.) Culm slender, 3-angled, 2-4f; leaves linear, flat, 6-8' by 3-4''; spikes obovate, all pedicellate, in diffusely spreading cymous panicles; ach. round-obovate, little shorter than the setæ. Wet barrens, S.
- 11 R. cadùca Ell. Culm acutely 3-angled, 1-3f; leaves linear, 2-3" broad; spikes ovate, large, 4-5", sessile or stalked, in several rather close erect cymous panicles; glumes *caducous*; ach. roundish, $\frac{1}{2}$ as long as the setæ. Wet, S.
- 12 **it.** schœuoides (Ell.) Culm 3-angled, 2-3f; leaves linear, 2" wide; spikes (2") small and numerous, subsessile, clustered, in several paniculate cymes; setæ twice as long as the obovate flat achenium and small tubercle. Bogs, S.
- 13 R. pátula Gr. Culm 3-angled, thick and stout at base, 2-3f; leaves linear. short; spikes ovate, 2", in several spreading loose panicles; ach. strongly rugous, with a large tubercle, some shorter than the setæ. Ga., Fla.
- 14 R. Ellióttii Gr. Culm solitary, 2-3f; leaves shining, rigid; corymbs 3 or 4, few-flowered, subsimple; spikes large; ach. minutely rugous, with a very short tubercle, little shorter than the setæ. Pine barrens, S. (R. distans Ell.)
- 15 R. punctàta Ell. Culm 3-angled, 1-2f; leaves lance-linear; corymbs of fasci cles; ach. rugous-netted, with rows of impressed dots. Marshes, Ga., Fla.
- 16 R. microcárpa Baldw. Culm 2f, teretish; leaves narrowly-linear, setaceous at end; spike turgid-ovate, 1-2"; ach. ovate, flat, minute. Wet, S.
- 17 R. pusilla Chapm. Corymbs 2-3, distant, of minute, scattered ovate, 3-flowered spikes; ach. lens-shaped, oblong-ovate, white. Woods, S. Car. to Fla. 1f.
- 18 R. Chapmànii Curtis. Corymb capitate, terminal, dense; spikes with 5 scales and 1 flower; ach. oval, polished; stamens 1 or 2. S. Car. to Fla. 14f.
- 19 R. alba Vahl. (Fig. 10.) Culm 10-20', very slender; leaves linear-setaceous; spikes (Fig. 11) whitish, lanceolate, in stalked, corymbous fascicles; setæ 9-12, as long as the ach. (Fig. 12) and tubercle. Common in wet shady grounds. July-Sep.
- 20 R. Knieskérnii Carey. In tufts 6-16', filiform; spikes 1", brown, in 3-5 dense, sessile, remote fascicles; setæ 6, as long as the ach. Iron soils, N. J.: rare.
- 21 R. capillàcea Torr. In tufts, 6-10', setaceons, 3-angled; clusters of brown spikes mostly 2, few-flowered; setæ 6, much longer than the ach. Swamps, M., W.
- 22 R. glomeràta Vahl. Culms 1f, leaves linear; fascicles brown, remote, in sev eral pairs; spikes lanceolate, 2"; ach. obovate, as long as its tubercle, which equals the 6 setæ. In bogs, Can. to Fla. July, Aug.
- 23 R. cephalántha Torr. Culms 2-3f, stout; leaves linear; heads globular, dense, remote, sessile, solitary in the axil or terminal, dark-brown; ach. round-ovoid, obtuse, half as long as the 6 setæ. Barrens, N. J.
- 24 R. Baldwínii Gray. Culms slender, 2-3f; leaves linear; spikes ovate, in a dense terminal corymb of fascicles; setæ 12; stamens 6. Pine barrens, Ga.
- 25 R. dodecándra Baldw. Culms rigid, stout, 1-3f; leaves rigid, linear, erect; spikes 4", ovate, in 4 or 5 loose, stalked cymes; stamens 12; setæ 6-12, long as the large (14"), roundish, smooth achenium. Bogs, S. (R. megalocarpa.)
- 26 R. fasciculàris Nutt. Culm teretish, wiry, 1-2f; leaves short, narrowly linear; spikes small (14') in several dense fascicles mostly terminal; setæ 4-6, shorter or longer than the obovoid brown ach. Wet, S.
- 27 R. distans N. Like No. 26, but every way smaller; spikes 1" long, in a dense terminal and often a *distant* lateral fascicle; setæ about equalling the ach. S.
- 28 R. ciliata Vahl. Glaucous, 8'-2f; leaves short, linear, obtuse, *ciliate* on the edges; spikes all in a dense terminal fascicle; setæ 6, half the length of the ach. S.
- 29 R. pállida M. A. Curtis. Culm firmly erect, 1-2f, 3-angled; spikes pale-tawny, (like R. alba) in a dense terminal head with often a lateral head on a long pedurcle; ach. roundish, tubercle minute, setæ 0-3, minute. Bogs, N. J. to N. C.
- 30 R. fusca R. & S. Culm (6-12') and leaves setaceous; spikes ovate-oblong, 2"

366

dark-brown, in 1 or 2 small fascicles; ach. half the length of the setæ which equa. the pointed serulate tubercle. Maine to N. J., and W. Rare. Europe.

21 R. gracilenta Gr. Tufts 1-2f; culm and leaves threadform, curved; spikes 1", brown, in 2-3 fascicles; ach. oval, as long as its awl-shaped, serrulate tubercle, shorter than the 6 setæ. Low grounds, N. Y. to Fla. (R. filifolia Torr.)

15. CERATOSCHOENUS, Nees. Spikelets 2-5-flwd., one flower §, the rest §. Glumes loosely imbricated, somewhat in 2 rows, lower ones empty. Perianth of 5 or 6 rigid, hispid, or scabrous setæ. Stamene 3. Style simple, very long, persistent as a beak on the smooth, compressed achenium. 24 Stems leafy, 3-angled, 2-4f. Cymes compound, brown.

- 1 C. longiróstris (Ell.) 3-5f; leaves flat, 4-6"; spikes in loose fascicles, 9"; ach. 2", beak 7", setæ 5"; cymes diffuse, terminal and axillary. Penn., W. and S.
- 2 C. macrostáchyus Torr. Leaves 2-4" wide; spikes 1", in dense fascicles; ach. and beak 8", setæ 2-3", culm 2-3f. Hardly distinct. Mass., and South.
- 3 C. capitàtus Chapm. Spikes densely clustered in a few heads; beak only 2", ach. 1", setæ 2", culm teretish, 2-3f, leaves 2-4" wide. W. Fla.

16. CLADIUM, Browne. Flowers & $\forall \ \hat{v}$. Glumes imbricated somewhat in 3 rows, lower ones empty. Setæ 0. Stamens 2. Style 2-3-cleft, deciduous. Achenium subglobous, the pericarp hard, thickened and corky above. 24 Stem leafy. Cymes terminal and axillary, brown.

- 1 C. mariscoides (Muhl.) Bog Rush. Culm terete, rigid, 20-30'; leaves narrowly linear, much shorter than culm; spikes 3", in pedunculate or sessile heads, forming small cymes; ach. ovoid, scarcely beaked. Bogs, N. Eng., and West.
- 2 C. effusum (Swtz.) Saw Grass. Culm obtusely 3-angled, 6-10f, leaves 3-10f1 sharply serrate-barbed on the edges; cymes diffuse, decompound, forming a large panicle. A coarse, rank Sedge in ponds, N. Car. to La.

17. SCLÈRIA, L. NUT SEDGE. Flowers ϑ , staminate spikes intermixed, fertile spikelets 1-flowered, glumes fasciculate. Perianth cup-shaped or 0. Achenium globous, ovoid or triangular, with a thick, bony pericarp. Style 3-cleft, deciduous. 24 Culms 3-angled, leafy. Spikes in fascicles Nuts white. In bogs. Summer.

- § SCLERIA. Achenium ovoid or globous, base invested with a short perigynium...(*)
 - * Achenium smooth, ovoid. Perianth annular, subentire. Stamens 3.. Nos. 1, 2
 - * Achenium rugous-warty, globular. Perianth 6- or 3-lobed Nos. 3, 4
 - * Achenium reticulated or hispid-rugous, globular. Perianth 3-lobed....Nos. 5, 6
- § IIYPOPORUM. Achenium ovoid-triangular, base fluted. Perigynium none...(a)
 a Fascicles 4 to 7, interruptedly spiked. Achenium smooth or rugous..Nos. 7, 8
 a Fascicles single, terminal. Achenium ribbed or smooth......Nos. 9, 10
- 1 S. triglomeràta Mx. Whip Grass. Culm crect, rough, 3-4f; leaves broadlinear, rough-edged; fascicles few, composed of triple clusters of green-brown (5") spikes; ach. white and polished, more than 1" in diameter. Common.
- 2 S. leptocúlmis W. Culm very slender, 2f, nearly naked; lvs. smooth, narrowly linear; compound spikes loose, the lateral on a long filiform peduncle; spikes 3-4"; ach. pol.shed, ovoid, minutely corrugated. S. (S. oligantha Ell.?)
- **3 S. ciliàta** Mx. Culm scabrous above, 2f; leaves 2, pubescent, bracts ciliatofringed; ach. beset with unequal warts, disk 3-lobed. Pine barrens, S.
- 4 S. panciflora Muhl. Smoothish or hairy; leaves and bracts exceeding the culm;

fascicles few-flows.ed, the lateral, if any, pedunculate; ach. small, rough, the disk 6-lobed. Rare northward, common South. 10-16'.

β. glabra. Smoothish, slender, 1f; lateral fascicles 1-flowered, or 0. Ms. to Ohio. γ. C. conniàna. Scabrous-hirsute, slender; leaves much exceeding the culm. S.

8. E.lióllii. Stout, 2-3f, denticulate-ciliate; lateral spikes pedunculate. S.

- 5 S. reticulàris Mx. Slender, 1f, leaves shorter than culm; fascicles 2-5, distant, subsessile; ach. dead-white, $\frac{1}{2}$, conspicuously netted and pitted. R. I. to Fla.
- 6 S. laxa Torr. Slender, weak, diffuse, 1-2f; lvs. flat, 2" wide; fascicles very remote,
- spks. distant, in pairs; ach. 1", with transverse ridges and brown pits. N. J. to Fla.
 s. verticillàta Muhl. Glabrous, 6-12', slender; fascicles 4-6, smooth, purple,
- sessile, 8"-1' apart; ach. globular, about 1", rugous. N. Y. to Ohio, and South.
- 8 S. interrúpta Mx. Sparingly hirsute, 12-30'; leaves 2" wide; fascicles 5-7, rusty-brown, sessile, ciliate, 4-9" apart; ach. smooth, $\frac{3}{4}$ " diameter. South.
- 9 S. grácilis Ell. Filiform, smooth, 1-2f; spikes few (1-5 pairs), 3", in a terminal fascicle; bract erect; ach. ovid-triangular, ribbed lengthwise. South.
- 10 S. Baldwinii (Torr.) Culm scape-like, 2-3f, leaves all radical, long; spikes 5ⁿ long, 3-5 pairs in a terminal fascicle, brown-purple, with 3 bracts, middle bract erect; ach. dull-white, 2ⁿ long, even. In Georgia and Florida.

18. CHAETOSPORA, R. Br. Spikes 1–5-flowered, fls. ǎ, glumes in two rows, the lower empty. Setæ 3–6. Stam. 3.

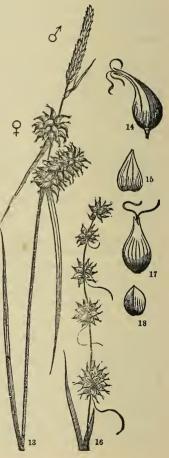

Style 3-fid, deciduous. Achenium triangular. 24 Culm leafy only at base. Fls. capitate, chestnut-brown.

C. nígricans K. Culm 1f, erect, teretish, longer than the narrow crect leaves; spikes 4" long, in one fascicle, bract erect, 1-3'; achenium $\frac{1}{2}$ " diameter, white. Fla., Eur.

19. CAREX, L. Flowers diclinous. Spks. 1 or more, either with both staminate and pistillate flowers (androgynous), or with the two kinds in separate spikes on the same plant (monæcious), or rarely on separate plants (diæcious). Glumes single, imbricated, each 1-flwd. 5 Stamens 3. 9 Stigmas 2 or 3. Nut (achenium) 2-edged or 3-angled, enclosed in a sac (perigynium) composed of 2 united glumes. 24 Culms triangular, in tufts, with grass-like leaves and usually with axillary as well as terminal spikes.

The following enumeration of our Carices is reduced from the excellent monograph by the lamented Prof. C. Dewey, contained in the Class-book of Botany, and revised with the assistance of friends before mentioned, and whose names appear below.

Fig. 13, C. flava. 14, One of its perigynia (magnified): 15, a glume. Fig. 16, C. rosea. 17, A perigynium: 18, a glume.

Peduncles very short.....Nos. 167-170 -horizontal or deflexed.....Nos. 171, 172 I C. capità:a L. Spike capitate or nearly globous; perigynium roundish-ovate, convex-concave, glabrous, pointed, longer than the ovate obtuse glume. 6-10'. Wht.Mts

- 2 C. gynócrates Wormesk. 2 Spike oblong, rather loose-flowercd; perigynium oblong, short-beaked, longer than the ovate, acute, colored glume. N. Y., Mich.
- 3 C. exilis Dew. Spk. cylindrical, 1', dense, \$\$ below, or wholly \$\$ or \$\$; perig. ser rulate on the margin, some longer than the ovate-lanceolate glume. Culm and leaves filiform, stiffly erect, 12-20'. Ms. to N. Y. and N. J.

 β . andrógyna. One or more small φ spikes below the terminal. N. Y.

- 4 C. scirpoidea Mx. Spk. oblong-cylindric (9-12"); perig. oval, pubescent, longer than the ovate dark-purple glume. Leaves flat. 4-10'. N. H. to Mich.
- 5 C. polytrichoides Muhl. Spk. oblong, small (3"); perig. 3-8, erect, smooth twice longer than the ovate obtuse glume. Setaceous, 4-20". Ms. to Wis.
- 6 C. panciflora Ltf. Spk. with about 4 slender *reflexed* 2 fls. and 1 or 2 3 above twice longer than the lanceolate glume. Erect, 3-8'. N. England, New York.
- 7 C. Boottiàna Benth. Culm 6-12'; spk. oblong-cylindric, diœcious; perig, hairy, obovate, smaller than the dark-purple glume. Ala. to La.
- 8 C. Willdenòvii Schk. Peduncles radical, filiform, 2-6'; spk. small, & gls. above, 4--8, \$\$ perig. 5-9, scabrous, pointed, the glumes oftener long and bract-like, Leaves 1-2f, grassy. Dry grounds : common.
- 9 C. Steudèlii K. Peduncle radical, 1-8'; spk. with 10-15 & glumes above and 2 or 3 inflated pointed perigynia with long leafy glumes. N. Y., Pa., and W.
- 10 C. Báckii Boott. Ped. radical, ¹/₄-3f, stiff ; & fls. about 3, above, \$\$\$\$ perig. 2-4, glabrous, round-ovate, enclosed in the long leafy glumes. N. Y., O., and N.
- C. Fràseri Sims. Culm 4-10', lvs. 6-12' by 1', flat and thick; spk. oblong,
 \$\overline\$-flowered, perig. ovoid, longer than the hyaline, obtuse glume. Wytheville, Va. (Shriver) and Mts. of N. C. A curious and peculiar Carex. Leaves very large.

- 12 C. stérilis Willd. Culm (and lvs.) slender, erect, 1-2f; oftener diœcious; spks.
 3-6, roundish, approximate, spikes oblong; perig. radiating, ovate, subrostrate,
 2-toothed, about equaling the ovate acutish glume. Common in wet places.
- 13 C. bromoides Schk. Slender, weak, 1-2f; spikes 4-6, distinct, lanceolate; perig. lanceolate, erect, acuminate, longer than the lanceolate gls. Bogs: common.
- 14 C. siccata Dew. Erect, 1-2f; spks. 3-7, oval to oblong, \$ above, or the middle all \$; perig. lance-ovate, beaked, as long as the brownish gls. Sands, N. Eng. to Ill.
- 15 C. disticha Huds. (C. Sartwellii Dew.) Erect, 2-3f; spks. 12-20, the lower some remote, all ovoid and compact, stam. mostly above; perig. ovate, lanceolate, pointed, equaling the ovate pointed glume. Seneca Co., N. Y. (*Sartwell*), and W.
- 16 C. decompósita Muhl. Culm erect, 18-36'; spikes very many, in a large crowded panicle; perig. round-obovate with a very short beak, biconvex, about equaling the ovate glume. N. Y. to Mich., and S.
- 17 C. prairea Dew. Culm 2-3f; spikes many, in a dense short (3-4') panicle; perig. erect, lance-ovate, smaller than the glume. N. Eng., and W.
- 18 C. teretiúscula Good. Spikelets roundish, dense, in a cylindrical compound spike 1-2'; perig. brown, corky, ovate, biconvex, short-beaked, diverging; culm 14-3f; leaves narrowly linear. Common in wet places, northward.
- 19 C. vulpinoidea Mx. Spikelets very many, dense, ovoid, in a large (2-3') com pound spike; perig yellowish, very small (4''), ovate, acuminate, diverging, scarcel as long as the pointed glume; culms stout, 2-3f. Common.

β. seticcea. Perig. narrower, erect, in a more slender compound spike.

y. scabrior (Sartwell). Spikes distinct or remote, glume strongly serrulate,

- 20 C. conjúncta Boott. Spikelets in a long (3') subsimple spike; perig. ovate, subcordate and corky at base, short-beaked; style bulbous at base; nut orbicular; culm weak, 1-2f, flattened. Ohio, and westward. (C. vulpina C-B.)
- 21 C. alopecoidea Tuckm. Spikelets 8–12, in an oblong 1–2' spike; perig. ovate, nerveless, brown, 1", subrostrate; culm 3-angled, 2–3f. N. Y., Pa., and W.
- 22 C. stipàta Muhl. Spike often decompound, 2-3', spikelets ∞. oblong; perig

lance-ovate, $1\frac{1}{4}$, twice longer than the glume; culm acutely 3-angled with concave sides, leaves nearly as long (2-3f). Marshes: common.

- 23 C. Crus-Corvi Shuttl. Spike decompound or sub-panicled, 3-6': perig. shortovate, very long-beaked (3''), spreading; glume 1"; culm 2-3f; lvs. linear, flat, many and long. River swamps, Wis. to O., and Fla.
- 24 C. cephalóphora Willd. Head 6-12" long, dense; perig. broad-ovate, shortbeaked, scarcely longer than the ovate-acuminate glume; style very short, bulbous at the base; lvs. copious, equaling the slender culm (1f). (C. Leavenworthii Dew.)
- 25 C. Muhlenbérgii Schk. Head ovoid-oblong, 1'; perig. broad-ovate, short beaked, strongly nerved, twice larger (14'') than in No. 24; nut orbicular, style short, bulbous; culm 1-2f, lvs. shorter, bracts setaceous. In fields, not abundant.
- 26 C. chordorhiza Ehrh. Head ovoid, 9-15", perig. ovate, nerved, turgid, at length brown, few and large (2"), beakless but minutely pointed; rhizome creeping; leaves short and narrow, culms 9-15'. Marshes, N. Y. to Wis., and N.
- 27 C. cephaloidea Dew. Spikelets very short, spike 1-11'; perig. brown (at ma turity), acuminate, nerveless, ovate, shorter than the thin cuspidate glume. Culm 2-4f. Leaves elongated. Fields, hedges, N. Y. (Penn Yan, Sartwell), and W.
- 28 C. muricata L. Spikelets ovoid, often a little remote; perig. ovate-lanceolate, nerveless, wingless, some longer than the ovate-lanceolate gl. Ms. to N. J., and W. §
- 29 C. sparganioides Muhl. Spikelets 7-10, ovate; perig. ovate-acuminate, nearly twice longer than the glumes, all green. Culm and leaves 2f. In fields: common.
 β. ramea, is a luxuriant form, with the spike large (3-4'), panicled.
 - γ . minor, is a small and delicate form, with the spike 1-2' long.
- 30 C. ròsea Schk. (Fig. 16) Spkl. 5-8, remote, 8-10-flwd.; perig. (Fig. 17) lance-oblong, diverging or reflexed, twice as long as the ovate obtuse glume (Fig. 18). 8-16'. Com. β. minor. Spkl. 4-6, quite remote; perig. fewer and suberect. γ. radiata. Spkl. about 3-flwd., perig. oblong, acute. Stem and leaves setaceous.
- 31 C. retrofléxa Muhl. Spkl. 3-5, bracteate, stellate at maturity; perig. 3-6, ovate, acutish, spreading or reflexed, about equaling the acute glume. Woods. 1f.
- 32 C. tenélla Schk. Spkl. 3 or 4, near, erect; perig. 1-3, mostly 2, ovate-obtuse, minutely pointed, brown, smooth, little exceeding the hyaline, ovate, acute.gl. In tufts, very slender and flexile, 5-12'. Woods, N.Eng. to Pa., and W. (C.disperma Dew.)
- **33 C. stellulàta** L. Culm stiffly erect, 8-24'; spikelets 4-6, ovate, sessile, the spike nearly 2', turning brown; perig. broad-ovate, short-beaked, a little longer than the ovate, obtuse glume. Wet places, N.
- 34 C. scirpoides Schk. Culm very slender, 6-12'; spkl. 3-4, contiguous, spk. 1', light green; perig. ovate-lanceolate, near twice longer than the ovate-lanceolate. acute glume. Wet. Common. Stam. mostly below the upper spikelet.
- **35 C. trispérma** Dew. Very slender, 1f; spikelets 1-3, with long setaceous bracts, about 3-flwd.; perig. oblong, pointed, little longer than the glume. Pa., N. and W.
- **36 C. Déweyi** Schk. Slender, leafy, 1-2f; spikelets 3-5, 3-9-flwd., the upper approximate; perig. oblong-lanceolate, rostrate, 2-toothed, mostly longer than the ovate-lanceolate awned hyaline glume. Woods, N. Eng. to Wis., and Canada.
- 37 C. canéscens L. Erect, 2f, glaucous; spkl. 5-7, ovate-oblong, remote below, 12-20-flwd.; perig. round-ovate, toothless, eq. the glume, Wet. Com. (C. curta Good)
- **38 C. vítilis** Fries. Slender, flexuous, 1-3f; spkl. 3-5, separate, short-ovoid, 5-10 flwd.; perig. lance-ovate, pointed, longer than the glume. N. Eng., W. and N.
- 39 C. Norvègica Schk. Yellowish, 6-12', erect; spkl. about 3, 5-12-flwd., the upper often all \$; perig. oval, biconvex, veiny, brown, eq. the obtuse glume. Me. (Blake.)
- **40 C. Liddòni** Boott. Spike 1-2', of 5-7 oblong spikelets; perig. and gl. lanceovate, brownish, equal, the latter white-edged; culm strict, 1-2f. Mich. (*Cooley*), & N.
- 41 C. tenuiflora Wahl. Spike capitate, ‡', of 2 or 3 roundish, about 5-flwd. spkls; perig. oblong-ovate, plano-convex, acute, equaling the oblong glume. Swamps, N.
- **42 C. sychnocéphala** Carey. Spkl. ovoid, in a dense head with long leafy bracts perig. 2t'', lance-linear, gradually long-beaked, the gl. nearly as long. N. Y.: rare.

- **43** C. árida Schw. and Torr. Spkl. oblong-oval, large, close and dense, dry and chaff-like in aspect; perig. lance-linear, 4", clearly bidentate, gl. **1** as long. W. com.
- **44 C. scopària** Schk. Spkl. 5-8, ovate, approximate, or often crowded in a head perig. 3", lanceolate, longer than the lanceolate glume; culm 18-24' high, leafy be low. A very common sedge, in meadows everywhere.
- **45 C. lagopodioides** Schk. Spkl. 8-20, ovoid-clavate or globular with a clubshaped base, approximate or crowded; perig. lanceolate, nearly twice as long as the ovate-lanceolate glume. Piant 2f, light green. Common.
- 46 C. cristàta Schw. Spkl. 6-12, ovoid-globular, crowded into an oblong head; perig. spreading, lance-ovate, pointed both ways, twice longer than the small lanccolate glume. Culm 2-3f, stout. Fields and meadows : common.
- 47 C. mirábilis Dew. Spkl. as in C. cristata; perig. broadly ovate, rounded at base, acuminate at top, a little longer and broader than the gl. Rigid, 2f. Borders of fields. (C. festucacea β. Carey. C. straminea β. Tuckm. C. cristata Boott.)
- **48 C. stramínea** Schk. Spkl. about 6 (3-12), ovoid to oval or clavate-ovate, remote or contiguous; perig. oval or round-ovate, very flat, broadly winged, abruptly beaked, equaling or exceeding the much narrower glume. Common and variable.
 - a. typica. Spkl. 3-6, roundish; perig. spreading, brownish; gl. much smaller
 - β. ténera. Slender, with 3-6 ovate brownish remote spikes attenuate below.
 - 7. aperta. Spkl. 4-S, tawny, drooping; perig. long-beaked, thrice longer than gl.
 - δ. festucacea. Spkl. 5-8, club-obovate, longer beaked, prominent, brownish.
 c. hyalina. Spkl. about 6, large, pale; perig. twice longer than the glume. W.
 ζ. monilifórmis. Slender; spkl. about 4, remote, whitish, acute at both ends. E
- **49 C. silicea** Olney. Spkl. 2-10, pale or silvery-yellow, distant, ovate; perig. orbicular, broadly winged all around. short-beaked, usually longer and broader than the lanceolate glume. Lvs. involute. 8-20'. Sea shore, Maine to Delaware (*Canby*).
- 50 C. adústa Boott. Spkl. globular with an acute base, large, silvery-green, close or remote; perig. ovate to oval, veined, narrowly winged, acuminate, equaling the glume in length and breadth. N. J., Penn. and N. (C. argyrantha, more delicate.)
- 51 C. foena Willd. Spkl. 4-8, pale, oval-oblong, acute, approximate; perig. oval to obovate, appressed, broadly-winged, short-beaked, a little longer than the ovate-lanceolate glume. Plant glaucous, 2-3f. Marshes, R. I. to Pa.
- 52 C. alàta Torr. Spkl. 4-8, ovate, large, close; perig. roundish or obovate, close, abruptly short-beaked, 3-veined on the back, broad winged, some longer than the lanceolate white glume. Pale green, 3-4f. N. Y. to Fla.
- 53 C. Washingtònia Dew. Culm 6-18'; lvs. flat: \$ spk. 1-4, oblong-cylindric 6"-1', the lowest stalked; gls. black, oval, covering the oval apiculate nerved perig. lower bract often elongated. White Mts., and N. (C. rigida β.? Bigelovii Gr.)
- 54 C. rotundàta Wahl. Culm 1f, slender; lvs. cbanneled; \$ spk. 1-2, oval or roundish; perig. ovate, acuminate, equaling the lanceolate brownish gl.; bracts sur passing the culm; \$ spk. very slender, 1'. Moosehead L., Me. (Smith).
- 55 C. Floridàna Schw. Culms 2-10', slender, lvs. often longer; 3 spk. short. sessile, 9 spk. ovoid, 1-3, crowded; glumes oval, acute, *edged with brown*, covering the obovate, short-beaked perig. Often with solitary 9 spikes on radical ped. S.
- 56 C. lenticulàris Mx. Culm 8-18'; lvs. flat; \$\$ spk. 1', \$\$ spk. 2-5, \$\frac{1}{2}-1'\$, with long bracts; perig. ovate-oval, yellowish, nerved, longer than the obtuse glume. Spikes cylindric. Gravelly shores, Me., N. H., N. Y., and northward.
- 67 C. aùrea Nutt. & Spk. short (6''), \$\$ spk. 3 or 4, \$-1', loose-flowered, spreading;
 perig. oval, obtuse, yellow-brown, separate, exceeding the hyaline gl. Culm slender,
 8-16'; leaves flat, bracts exserted, leafy. Wet. N. Eng., and W.
- 58 C. Mitchelliàna Curtis. 3 Spk. often 9 in the middle; 9 spk. 2-3, cylindric, slender, loose; perig. ovate, acute, short-beaked, eq. the gl. 15-20'. Wet. N. Car.
- 59 C. torta Boott. Spikes cylindric, slender, 2-5'; spikelets 2 or 3, loose below, recurved; perig. lanceolate, the beak recurved or *contorted*, equaling the black banded obtuse lanceolate glume. Very smooth, 2-3f. Wet places.

- 60 C. vulgàris Fries. 5 Spikes cylindric, 1-2', 2 cylind.-oblong, 1', 5 at top; gl6 black, ovate, obtuse, shorter than the oval, obtuse perig.; culm slender, 6-14'; lvs. flat, bract equaling the culm. Wet, N. Eng., W. and N. (C. cæspitosa C-B.)
- 61 C. stricta Lam. Spk. cylindric, 11-2', erect; glumes lanceolate, acutish, striped, some longer than the ovate-acute perigynia. 2f. Bogs; common.
 - β. strictior. Glumes, especially the upper, a little shorter than the perigynia.
- 62 C. xerocárpa S. H. Wright. Differs from C. stricta in its extremely slender habit; lvs. rolled and rush-like; s spk. almost filiform; gl. shorter than perig. N. Y.
- 63 C. apérta Boott. Spk. cylindric, erect, 12-15"; perig. brown, round-ovate, shorter than the lance-acuminate glume; culm 1-2f, rough-edged above; lvs. channeled, bracts leafy. Wet meadows, N. Eng., W. and N.
- 64 C. aquátilis Wahl. Spk. 2-3', dense, erect, acute, subclavate, the \$ 2 or 3, \$ 3-5, with bracts exceeding the culm; gl. lanceolate, usually longer than the roundish, nerveless, reddish, apiculate perigynia. 2-3f. Shores, N.
- 65 C. crinita Lam. Spk. pedunculate, long (2-4'), nodding, s mostly but 1, a about 4; perig. round-ovate, apiculate, glume with its long serrulate awn thrice longer-all light brown. Wet meadows: common. 2-3f. Leafy.
- β. gynaindra. Spk. shorter (1-2'), \$\$ about 3, perig. inflated, awns spreading, &c.
 66 C. marítima Vahl. Spk. 1-2' long, pendulous or spreading, on peduncles, the \$3-5; perig. orbicular, much shorter than the long-awned green glume; culm
- 10-20'. erect, with broad, flat, smooth leaves. Salt marshes, Mass., and N.
- 67 C. salina Wahl. Spk. cylindric, erect on included stalks, the 2 2-4; bracts long; perig. elliptical, apiculate, little shorter than the dark-brown, short-awned glume; culm 8-16', rough above. Salt marshes, Mass., and N.

- **68 C. pedunculàta** Muhl. Spk. 3-7, remote, on filiform stalks; perig. obovate, triquetrous, recurved at tip, few, equaling the brown, oblong, obovate glume. Culm 4-12', leaves longer, glabrous. Woods. Flowers in early spring.
- 69 C. Baltzéllii Chapm. Spk. cylindric, 1-2', ? 1-4, s at top, on long cauline or subradical peduncles; perig. and gl. oblong-obovate, subequal, the perig. veiny and puberulent. Culm 6-10', leaves flat, thrice longer. Florida.
- 70 C. squarrosa L. Spk. 2-4, cylindric-oblong, thick (1' by 6"), straw-color, stalked, squarrous with the long beaks of the globous perig. which conceal the short glumes. Wet places : common. Large and fine, spike showy.
- 71 C. viréscens Muhl. Spk. 2-4, erect, 6-12"; perig. ovate, *pubescent*, ribbed, longer than the ovate pointed glume or about equal to it. Culm slender, 1-2f, bracte exceeding the culm. Whole plant pubescent and light green. Copses.
- 72 C. hirshta Willd. Spk. oval-oblong, 4-9", erect, near, dense; perig. ovoid-triquetrous. downy, at length only scabrous, longer than the glumes. Culm 1-2f. bracts exceeding it, all public or scabrous. Upland Meadows. (C. Triceps Mx.)
- **73 C. Smithii** Porter. Spikelets 3, oval and oblong, near; perig. globular; achenia broadly obovate with reflexed styles; culm slender; whole plant glabrous, bright green, 2f. Del. Co., Penn. (A. H. Smith.) Also in N.J. (See Olney's Carices Am.)
- **54** C. acstivalis Curtis. Spk. 3-5, slender, 1-2', loose, subject on short stalks; perig. elliptic, pointed both ways, longer than the glume. Tufts 16-24' high, with flat downy leaves, and bracts exceeding the culm. Mts., Mass. to N. Car.
- 75 C. Shortiàna Dew. Spk. 4 or 5, cylindric, dense, 1', erect on naked stalks, tawny in maturity; perig. round-obovate, scarce longer than the ovate glume. Erect, 12-30', leafy, smooth, handsome. Wet grounds, Penn. to Ill., and S.
- **76 C. oxýlepis** Torr. Spk. 3-6, cylindric, 1-2', erect on naked ped.; perig. oblong, pointed both ways, little longer than the cuspidate white-edged glume. Fla. to La.
- 77 C. Buxbaúmii Wahl. Spk. 4, ovoid, sessile, near; lower bract equaling the culm; perig. elliptic, nerveless, rounded on the back, shorter than the pointed black banded glume. Culm 10-18'. Common in wet places.

- **78 C. alpina** Swtz. Spk. 3 or 4, small, oval, close; bract longer than the culm; perig. round-obovate, longer than the black glume. Leaves radical. L. Superior.
- **79 C. atràta** L. Spk. 3-6, oblong-ovate, nodding, the lower stalked; perig. round-ovate, shorter than the dark oval glume. Bract long. White Mountains.
- 80 C. gracillima Schw. Spk.3-4, slender, 12-20", rather loose, drooping on long filiform remote stalks; bract short; perig. oblong, longer than the oblong short awned glume. 2f. Meadows.
- **\$1 C. formòsa** Dew. Spk. 3-4, oblong, 8-12", on long, distant recurved peduncles; perig. oblong, inflated, twice longer than the ovate acute grame. Culm 2-3f, bract shorter than the culm. Wet meadows.
- 82 C. glabra Boott. ? Spk. short-cylindric (1'), spreading on capillary peduncles; perig. elliptic-oblong, acute at both ends, nerved, twice longer (2") than the ovate brown-edged glume. Very slender, erect, 18'. N. J., N. Y., Penn.
 83 C. Davísii Torr. Spk. 4, 10-15" long, rather loose, long-stalked, drooping when
- 83 C. Davísli Torr. Spk. 4, 10-15" long, rather loose, long-stalked, drooping when ripe; bracts much longer; perig. oblong-ovate, nerved, acute, scarce equaling the awned glume. Mass. to Wis., and S.
- 84 C. pracox Jacq. ♂ Spk. clavate, erect; ♀ spk. abont 2, ovate-oblong, 6-?"; perig. 6-12, round-ovate, downy, nearly equal to the ovate colored glume (which is brown, edged with white). Culm 3-6', leafy at base. Rocky hills, E. Mass.
- 85 C. Richardsònii R. Br. & Spk. clavate-oblong, erect; & about 2, oblong, near, subsessile; glumes wholly brown; perig. ovoid-triquetrous, obtuse, nearly beakless, shorter than the green-midveined glume. 4-10'. Woods, N. Y. to Ill., and N.
- S6 C. vestita Willd. Spk. all sessile, 9", \$ cylindric, \$ 2, ovoid-oblong; perig.
 ovate, short-beaked, hairy, exceeding the rusty acutish glume. Culm 12-30', sharp-angled, leafy below. Common in wet places.
- 87 C. pubéscens Muhl. Spk. oblong, 8-12", rather loose, the lowest on a short stalk; perig. lance-ovate, beaked, hairy, exceeding the carinate, mucronate glume. Culm 10-20"; leaves downy, flat, 5-10". Meadows.
- 88 C. nigro-marginàta Schw. is probably a mere variety of No. 55, having the glumes more extensively colored and the stigmas oftener 3. Hills, Pa., and S.
- 89 C. umbellàta Schk. Dwarf; *s* spk. erect, 2-3", *♀* ovoid, 2-4, each on a sub radical peduncle, green; perig. 5-8, round-ovate, beaked, nearly equaling the lance-acuminate glume. Leaves 3-5', far longer than the spike. North.
- **90 C. Emmónsii** Dew. Spikes all sessile, green, \sharp 4-5", \sharp 2-3, ovoid; perig. about 5, globous, beaked, equal to the pointed glumes. Culm filiform, 6-12', with very narrow leaves. Fields and hills: common.
- 91 C. Pennsylvánica Lam. Spikes tawny-red, \$ 1' long, pedunculate, the \$ small, round, sessile, crowded, about2; perig. round-ovoid, 5-7, downy, short-beaked, equaling the acuminate glume. Culm 4-12', erect, leaves long. Copses.
- 92 C. Novæ-Angliæ Schw. Spk. purplish, sessile, \$ 3-4", \$ 2-4, small, near, (except the lowest), with bracts exceeding the culm; perig. 3-7, pyriform, shortbeaked, larger than the ovate glume. Slender, 4-12'. Open woods.
- 93 C. vària Muhl. Spikes rusty-green, scssile, oval, 1-3. separated, the 3 slender, (10'') and stalked, bracts very short; perig. about 7, round-oval, abruptly beaked, about equaling the pointed rusty-edged glume. Erect, 8-18, leafy at base. Dry woods.
- **94 C. flava** L. 2 Spk. oval, approximate, 2-4; perig. crowded, ovate, ribbed, reflexed with a long curved beak, longer than the lance-ovate glume. Plant 10-20', yellowish green. Cold, wet soils : common.
- **95 C. (Ederi** Ehrh. ? Spk. 3-5, oblong, small (3-5"), close, nearly sessile; perig. globous, diverging with a short abrupt beak; plant yellowish, 8-16', leaves and bracts erect. Shores, N. Eng., and West. (C. viridula Mx.)
- **96 C. folliculàta** L. ? Spk. 2-4, capitate, dense, distant, the lower peduncle exserted; perigynia 4", lanceolate, nerved, tapering into a long beak, diverging, twice longer than the long-awned glumes; leaves lance-linear. Wet.

- 97 C. rostràta Mx. ? Spikes 1-3, capitete, near; perigynia 3", suberect, lance olate, long-rostrate, twice longer than the acutish glume; leaves few, rolled, subulate; culm 1f. Mountain bogs, N. Y., N. H., and North.
- 98 C. Ellióttii Schw. & Spike slender, 1'; ? ? or 3, globous to oval, distant; perigynia 10-20, ovoid, veined, rostrate, 3"; glume ovate, 1"; culm slender, rigid, 1-2f, the narrow leaves longer. N. Car. to Fla.
- **99 C. subulàta** Mx. & Spike short, subsessile; φ spikes 3-5, capitate, distant, 3-7-flowered; perigynia *subulate*, 6", long-rostrate, divaricate and with 2 divaricate teeth. Slender, smooth, light-green, 1-2f. Can. to N. J.
- **100 C. turgéscens** Torr. & Spike slender, 1½'; 2 spikes 2 to 3, capitate to oval, loose, the lowest pedunculate, exserted; perigynia 9-12, inflated, striate, conicrostrate, 6"; glume ovate, acute, 3". Culm 2-3f, slender; leaves long. Swamps, S.
- 101 C. intuméscens Rudge. & Spike long-stalked, slender; \$ 1-3, on very short stalks, capitate; perigynia 5-8, very large (6-7"), acuminate-beaked; glume ovate-cuspidate, 2"; calm 1f; bracts very long. Wet.
- 102 C. Gràyii Carey. \circ Spikes 1 or 2, large, capitate, dense; perigynia 15-30, radiating, very large (7-8"), with a long, slender, smooth beak; glume inconspicuous. River bottoms, N. Y., and West.
- **103 C. lupulina** Muhl. ? Spikes 2-4, large, 1-2' by 9-12", the lower on exserted stalks; perigynia *ascending*, 6¹/₂-7", ovoid and long-beaked, bicuspidate; glume 3", lance-acuminate. Plant stont, leafy, 2-3f. 'Wet grounds.

β. pedunculata. Spikes all on long peduncles. z Glumes linear-awned as in α γ. androg yna. z Spikes staminate at apex. Approaching No. 172.

- **104 C. Inpulifórmis** Sartwell. ? Spikes 4-5, very large (2-3'); perigynta ascending, 7-8", the long beak roughish, bicuspidate; glumes long-awned, ovate, 3"; nut as broad as long, the angles knobbed. Swamps: common.
- 105 C. tentaculàta Mnhl. 2 Spikes 2 or 3, dense, 1¹/₄-2' by 7 or 8", near, on short pedancles; perigynia 4", ovate, long-beaked, diverging, orifice obliquely 2-toothed; glumes linear-awned, 2". Stout, leafy, 1-2f. Bogs: common.
 - B. altior. Spikes 3-4, larger (10" thick), beak subequally toothed. 2f.
- 106 C. stenólepis Torr. & Spike small (1') rarely 0; 2 1-5, very dense, 1-1;, often & at base; perigynia globous, abruptly beaked, recurved, shorter than the long slender-awned glumes. Related to C. squarròsa. Penn. to Ill., and South.
- 107 C. plantaginea Lam. & Spike clavate, glumes acute; ? spikes 3-5, erect, remote, loose; perigynium 5-10, the point recurved, twice longer than the glume; bracts purple, shorter than the spikes; leaves 6-10" broad. Woods. March-May.
- 108 C. Careyàna Torr. ♂ Spike oblong, erect; glumes obtuse; ♀ spikes 2-3, remote, loose; perigynium 3-7, large (2¼"), the point oblique, twice longer than the glume; bracts green, much longer than the spikelets; leaves 6-12" wide. Woods, N. Y., Pa., and W.
- 109 C. platyphýlla Carey. & Spike clavate, glume acute; ? spikes 2-3, very romote, small; perigynia 3-6, small (1¹/₂); glume cuspidate, 1"; bracts as in C. Careyàna; leaves 6-10" wide, mostly shorter than the culms. Shades, N. States.
- 110 C. laxifiòra Lam. \$ Spike linear, glumes lance-oblong, acute; \$ spikes 3, slender, 1', loose, remote; perigynia 10-15, elliptic-triq., 2", the point oblique; gl. oblong, mucronate, 1¼"; leaves 1-veined, 2-4" wide, bracts long. Shades: common.
 β. patulifolia. Root leaves 6-12" wide, bracts also wide. Otherwise as in α.
 - y. latifolia. Leaves and bracts very broad; perigynia broad, point conspicuous.
 - δ. blanda. Bracts very long, δ spike small; ♀ spikes dense; perigynia obovoid.
 - ε . intermèdia. Leaves narrow, ε spike on a slender stalk; perigynia as in α .
 - ζ. styloftéxa. Slender, 1-2f, spike small, on long filiform peduncles, 4-6-flowered.
- 111 C. retrocúrva Dew. Spikes small (5-8"), all on long capillary peduncles, the φ 3, loose; perigynia broad-ovate-triquetrous, scarcely oblique-pcinted; glumes awned; culms weak, 1f, leaves radical, wide (4"), flat, glaucous. Open woods: rare.
- 112 C. digitàlis Willd. 3 Spike slender, 1', stalked; 2 spikes 3, loose, 6-12", ro

mote, recurved; perigynia 4-10, ovoid-triquetrous, obtuse, longer than the lanceovate glume; leaves and bracts 1-2'' wide, exceeding the 4-12' culm. Open woods.

- 113 C. xanthospérma Dew. & Spike small, sessile; ? spikes 4, distant, cylindric, 1', dense, on long slender peduncles; perigynia oval-oblong, obtuse, 2", striate, yellowish when ripe; glumes 1", pointed. Yellowish, 1f. N. J., and South.
- 114 C. conoidea Schk. Spikes all short-peduncled, 2 2 or 3, oblong, dense, erect, 6-10"; perigynia oblong-conic, obtusish; glumes ovate, awned. 1f. Uplands: com.
- 115 C. grísea Wahl. & Spike sessile; ? spikes 4, oblong, remote, 6"; perigynia oblong, some longer than the ovate, awned glumes (24", glumes 2"); leaves light-green, 2-3" broad. Culm 14f. Woods and meadows.
- 116 C. glaucòdea Tuckm. Spikes short-stalked, 6—12^{''}, 3 clavate, 9 3—4, cylindric, dense; perigynia 10—20, ovoid, obtuse, twice longer than the cuspidate glumes. Plant glaucous, 6—10[']; leaves 2—4^{''} wide. Mass. to Pa.
- 117 C. granulàris Muhl. & Spike linear, sessile, 1'; \$2-4, cylindric, 1-11', the lower peduncle long; perigynia close, round-ovate, the point oblique, much longer than the ovate-acuminate glumes. Glaucous, 8-20'. Moist soils: common.
 B. recta, has the perigynia ovoid, and with a straight point. Ill. to La.
- 118 C. júncea Willd. Spikes slender, on filiform stalks, glumes obtuse; z short, spikes 2-3, loose; perigynia lanceolate, longer than the glumes; culm 1-14f, slender, longer than the slender rush-like leaves. Roan Mt., N. C.
- **119 C. ebúrnea** Boott. Delicate, erect, 4-10', the setaceous leaves much shorter; spikes 2-3, very small (2-3"), with white, leafless sheaths, the \$ higher than the \$; perigynia 3-6, obovoid, beaked, nerveless, \$". Rocks, Vt., and West.
- 120 C. panícea L. Spikes 2-4, 1', oblong-cylindric, stalked, tawny; perigynia turgid-ovoid, the very short point oblique, longer than the obtuse glume. Light green, 1f; bracts short. Mass. (*Oakes*). Wis. (*Lapham*). Pa. (*Porter*).
- 121 C. lívida Willd. Spikes 2-4, oblong-cylindric, pale, 8-10", the *s* and lower **s** stalked; bracts short; perigynia oval, straight at the obtuse end, longer than the obtuse glumes. Glaucous, 6-16'. Swamps, N. Y., N. J., and North.
- 122 C. tetánica Schk. Spikes 2-4, oblong-cylindric, loose, 1', the \$ and lower \$ long-pedunculate; perigynia ovoid to obovoid, apex oblique, longer than the submucronate glumes. Light green, 8-16'; bracts rather short. Wet uplands: rare.
 β. Woodii, \$\$ spikes about 2, very loose; glumes with broad scarious margins.
- 123 C. Meadii Dew. & Spike slender, 1', & oblong-cylindric, loose, 8-10", all pedunculate; perigynia oval, scarce equaling the tawny-edged, ovate-acuminate glumes. Pale, erect, 8-16', the leaves and bracts short. Wet, O. to Ill., and North.
- 124 C. Crawei Dew. Spikes dense, 8-10', erect, \$ stalked, compound at base, \$ 2-5, remote, the lowest often iong-stalked; perigynia ovoid, acute, twice longer than the ovate glumes. Erect, 6-15'. Spikes dusky green. N. Y., and West. Rare.
- 125 C. oligocárpa Schk. 3 Spike erect, 9", linear, stalked; 2 3, remote, shortstalked, 3- or 4-flowered; perigynium obovoid, *short-beaked*, brown, equaling the **awn** of the pale glume. Pale, 6-12', bracts long. Open woods and hedges; rare.
- 126 C. Hitchcockiana Dew. Spike erect, linear, stalked; \$3, remote, shortstalked, 5-10-flowered; perigynia oval, brown, acute below, the beak bent back, scarce equaling the awn of the whitish glume. Subpubescent, 1-2f. N. Eng., and West.
- 127 C. exténsa Good. Spike subsessile, 6-9"; \$ 3, oval to oblong, very dense, the lower remote, stalked; perigynia spreading, the short straight beak 2-toothed, gl. much shorter. Rush-like, 1-2^t, leaves and bracts rolled. Sands, L. I., Staten I.
- 128 C. débilis Mx. Spikes about 2', very slender; 2 3-5, nodding; perigynia 12-20, lance-linear, acuminate-beaked, twice longer than the oblong silvery glumes. Bright green, 1-2f; bracts equal the culm. Moist woods and meadows: common. β.? pubera. Perig. pubescent, strongly veined, slightly bent. Pa. (Porter), and S.

129 C. arctàta Boott. Like C. débilis, but with shorter bracts, longer staks, the perigynium ovoid, taper-beaked, $\frac{1}{2}$ longer than the ovate-pointed glume. Common.

130 C. Sullivantii Boott. Spikes cylindric, 9-15", erect, 4 approximate, or a 5th,

if any, remote; perigynium elliptic, rough-hairy, scarcely longer than the ovate-cuspt date glume. Borders of woods, Columbus, Ohio. 2f.

- 131 C. Kneiskérnii Dew. Spikes rather loose, 1-14, with recurved pedunclesperigynia ovate-oblong, glabrous, nerved. Otherwise as in C. Sullivántii. Woods, Oriskany and Rome, N. Y., and Cleveland, O.
- 132 C. vaginàta Tausch. & Spike nodding in flower, stalked; 2 2 or 3, remote, loose; bracts short with long sheaths; perig. 5-10, brown-black, globular-ovate, the beak terete, short, bent, exceeding the obtuse gl. Weak, 1-2f. N. Y. (rare), L. Sup.
- **133 C. capillàris L.** Spikes minute, 3-4, oblong, tawny, peduncle *capillary*, perigynia 4-6, oval, nerveless, the short beak exceeding the obtuse rusty glume Pale, delicate, 4-7', leaves long, bracts short. White Mts., N. H.
- 134 C. fléxilis Rudge. Spikes 3-5, ≵ clavate, ♀ oblong, on *flexile* nodding peduncles; bracts bristle- or scale-form; perigynia ovoid-lanceolate, 2-toothed, scarce .onger than the obtusish rusty glumes. Soft-hairy. 1-1[‡]f. Ct., N. Y.: rare.
- 135 C. lævigàta Sm. Like C. fléxilis, but with perigynia nerved, bicuspidate, the glumes awn-pointed, and the whole plant smooth. Near Boston. §
- 136 C. fulva Good. Culm 1f, rough; spikes 3-4, all erect, 2 ovoid-oblong; perig. ovoid, twice longer than the dark-brown acutish glumes. Near Boston. §
- 137 C. venústa Dew. Spikes 3 or 4, \$ linear, 1'-16", rusty, stalked; \$ loose, 6-16", brown-green; perigynia lance-oblong, 24", conic-beaked, nerved, roughhairy, twice longer than the glumes; leaves 1f, culm 2-3f. S. Car. to Fla.
- 138 C. tenax Chapm. Spikes 2-4, *s* slender, 1', *q* oblong, <u>1</u>-1', dense, subsessile; bracts longer; perigynia oval, short-beaked, finely-veined, pubescent, twice longer than the ovate glumes; culm 1f; leaves rolled. Ga., Fla.
- 139 C. dasycárpa Muhl. Spikes 3-4, subsessile, 6-10", \$ linear, \$ oblong, hoary, bracts exserted; perigynia oblong-ovate, tomentous, short-beaked, longer than the ovate-acuminate glumes. 1f. Dry fields, South.
- 140 C. Tórreyi Tuckm. Spikes subsessile, erect, the *z* oblong, the *z* ovoid, 2 or 3; perigynia obovoid, very obtuse, scarcely beaked, strongly nerved, longer than the ovate glumes; culm, leaves, and short bracts downy. Penn., and North. Rare.
- 141 C. Barráttii Schw. & Torr. Spikes cylindric, 6-12", dark-purple, short-pedunculate, the 2 or 3; perigynium ovoid, little exceeding the ovate glume; culm 1-21, sharp-angled, leaves much shorter, bracts short. Marshes, N. J. to Car.
- 142 C. palléscens L. Spikes approximate, 3 or 4, short-stalked, pale, 5 oblong, 6";
 9 ovoid, 4-5", bract a little exserted; perigynia ovoid, nerveless, scarce longer than the glumes. Plant pale, 6-15', leaves as long. Dry meadows.
 8. undulata. Lower bracts wavy-rugous at base; leaves longer.
- 143 C. limòsa L. Spikes pedunculate, with dark-purple glumes, \sharp linear, erect; \Im 1-2, oblong, drooping; bracts shorter than the culm; perigynia ovate, scarce equaling the broad, mucronate glumes. Glaucous, 8-16'. Marshes: common.
- 144 C. rarifiòra Sm. Like C. limòsa, but smaller (4-10'), 2 spikes 1-2. linear, loosely 5-10-flwd.; perig. involved in the glume. Mountains, N. H.. Me., and N.
- 145 C. 1rrígua Sm. ? Spk. 2-4, ovoid-oblong; bract exceeding the culm; perig. oval, much shorter than the long-pointed dark-purple glume, 8-20'. Leaves linear flat. Spikes drooping as in C. limòsa. Bogs, Pa. to Wis., and N.
- 146 C. miliàcea Muhl. Spikes cylindric, slender, 1¹/₁-2['], & erect, & nodding, loose below; perig. ovoid-triquetrous, short-beaked, as long as the white-edged awned glume. Culm 1-2f, leaves rather broad. Wet meadows: common.
- 147 C. scabràta Schw. Spikes 3-6, cylindric, 11-2', suberect, dense, the lower on long peduncles; bracts long; perig. ovoid-triquetrous, *rough*, the slender beak equaling the acuminate glume. Culm 1-2f, leaves broad. Swamps, Can. to Car.
- 148 C. hystricina Willd. & Spk. linear, stalked, 1', 2 3, oblong-cylindric, dense, 12-18", near, nodding; perig. ovoid, inflated, nerved, diverging, the long slender beak bifid, longer than the awned glume. 1-2f, very leafy. Swales: common.
 B. Cooleyi. Slender; 2 spikes ovoid, the lowest long-pedunculate.

- 149 C. pseudo-cypèrus L. 3 Spk. linear, 14', 2 3-5, cylindric, thick, 1-2', pedunculate, recurved; perig. horizontal or deflexed, lanceolate, with 2 subcrect teeth, equaling the lance-aristate glume. Ponds and ditches, Can. to Pa.
- 150 C. comòsa Boott. & Spike lin.-cylindric, 2-3'; 2 3, long (2-3'), cylindric, thick, dense-curved, on recurved ped.; perig. lance-linear, deflexed, the slender beak with 2 long spreading cusps. Stout, 2-3f. Wet.
- 151 C. trichocárpa Muhl. Spikes erect, \$ about 3, clustered, \$ 3, oblong-cylindric. thick but rather loose, 11-2'; perig. conic-ovoid, 4", ascending, veined, the beak slender, forked, exceeding the hyaline gl. Puberulent, 15-30'. Marshes: common. β. turbinata. Spk. \$ ovoid-oblong, dense; perig. more diverging.
- 152 C. verrucòsa Ell. & Spk. 2, often 1, erect, \Im 3-7, remote, all cylindric, dense, heavy, 2-3', bracts long, on long sheaths; perig. ovate-triquetrous, shorter than the awn of the oblong glume. Culm and leaves 2-3f. Wet grounds, S.

β. glaucéscens. & Single, & sterile at apex; perig. broader or obovoid. South.

- **153 C. lanuginòsa** Mx. *s* Spk. 1-3, linear, 1-2', the upper stalked, *s* mostly 2, nearly sessile, oblong-cylindric, 9-15''; leaves and bracts flat; perig. ovoid, with 2 sharp teeth, equaling the lanceolate awned glume. 1-2f. Wet places: common.
- 154 C. filifórmis L. Muchlike the last, but the leaves and bracts are convolute and rush-like, and the 2 glumes ovate, acute. Pale. Marshes: common.
- 155 C. striàta Mx. & Spk. 1-4, erect, the lower sessile; \$ 1-2, remote, cylindric, erect, dense; perigynia ovoid, acuminate, 2-toothed, twice longer than the ovate acute glumes. Stiffly erect, 1-1if, leaves and bracts rolled at the ends. Pa., and S.
- 156 C. Houghtònii Torr. & Spikes 1-3, 2 2-3, cylindric, thick (12-15"×4"), near, subsessile, erect; perigynia ovoid-inflated, bifurcate, much longer than the ovate cuspidate glume. Stout, 2-3f, leaves and bracts flat. Me. to Wis.
- 157 C. polymórpha Muhl. Spikes oblong, erect; glume obtuse; \$1-2, 1', the lower remote, exsert-pedunculate; bracts and leaves short; perigynia oval-ovate, beak short, purple, exceeding the ovate purplish gl. Erect, 5-20'. Sands, Pa., and N.
- 158 C. paludòsa Good. Spikes erect, cylindric, 15-20", dense, near; glnme cuspidate; ? spikes about 3; bracts long, sheathless; perigynia ovate, short-beaked, equaling the narrow glumes. Erect, 11-2f; leaves channeled. Marshes, Mass.
- 159 C. ripària Curtis. Spikes erect, cylindric, 2-3', \$ 2-5, \$ 2-3, nearly sessile; bracts and leaves long; perigynia conic-lanceolate, with 2 slender teeth, some longer than the narrow-awned glumes. Stout, 2-4f. Shores. (C. lacústris.)
- 160 C. Cherokeénsis Schw. & Spikes lance-linear, 6-12", & cylindric, 1-1¥, 2-7, the lower nodding, on exserted peduncles; perigynia lance-ovate, much longer than the ovate glume. Slender, 2f, light green. Ga., Fla., and West.
- 161 C. ampullàcea Good. & Spikes often bracted, linear; 2 3-4, cylindric, thick, 2-3' by $\frac{1}{2}$, very dense, near, subcrect; perigynia ovoid, more or less *abruptly* beaked, bifurcate, larger than the pointed glumes. Stout, 2-3f, the flat leaves longer. Swamps, N. Eng. to Pa., and West. (C. utriculàta, Bt.)
- 162 C. monile Tuckm. *s* Spikes slender, 2-4; *♀* 2, rarely 1 or 3, cyl., 1-2′, rather loose, subcrect, short-ped.; perig. ovoid, polished, 2-3′′, the short slender beak bifur cate, twice longer than the lance-oblong glume. Bright green, 2f. N. Eng. to Ill (C.Vaseyi Dew. is the same plant. as shown by specimens from Dr. S. H. Wright.)
- 163 C. Tuckermàni Boott. Spikes very remote, short-stalked, cylindric-oblong, thick, 6-15" by 6-7"; perigynia very large (5" by 24"), globous-ovoid, shining; beak short, slender; glumes much shorter. 2f. Wet: common.
- 164 C. Olneyi Boott. & Spikes 2-3, like those of C. bullata; 2 spk. oftener but !, 1'-18" by 5"; ped. short; perig. 50-80, 24-3" long, 10-veined, turgid-ovoid, the short beak and 2 cusps rough-servulate; ach. like C. ampullacea. Culm 1-14f; lvs. taller, 1" wide. Wet grounds, R. I.
- 165 C. oligospérma Mx. & Spikes 1-2, slender; 2 1-2. Globular or oblong, subsessile; perigynia 4-12, turgid-ovoid, 24", beak short, 2-lobed, scarce exceeding the ovate glumes. Slender. 2f; leaves and bracts rolled. Pa., and North.

- 166 C. longiróstris Torr. & Spikes mostly 3; 2 mostly 3, cylindric, 1', loose, stalks filiform, recurved; perigynia roundish, the very slender beak 2 toothed longer than the scarious glumes. 2f. Rocky woods, North.
- 167 C. aristàta R. Br. & Spikes 2, very slender, remote; 2 2-4, cylindric, 1--2', erect; perigynia lanceolate, conspicuously nerved, glabrous, 2-awned; glumes awned, much shorter. 2f. Shores, N. Y., West and North. Akin to No. 151.
- 168 C. Schweinítzii Dew. 2 Spikes 2-4, near, ascending, cylindric, 1-2', more or less dense, straw-yellow; perigynia 50-150, ovoid, the long beak 2-toothed, much exceeding the subulate glumes. Very leafy, 1f. N. J., N. Y., and N. Eng.
- **(69 C. bullàta** Schk. & Spikes 1-3, linear, with lance-oblong, close glumes; **?** spikes 1-2, oblong, 1' by 8", short-stalked; perigynia turgid-ovoid, 5", beak 2-cus pidate, thrice longer than the obtusish glumes. 1-2f. Swamps, N. E., and S.: com
- 170 C. physèma Dew.? Resembles the last, but has very long leafy bracts, δ spk. 3 with loose glumes, and the single large oblong $\hat{\varphi}$ spike loose-flowered; perigynia radiating, brownish. A variety? Newark, N. Y. (*Hankenson*).
- 171 C. gigántea Rudge. & Spikes 1-3, glumes pointed; \$ 2-4, 18-30", loose, pedunculate, suberect, brownish; perigynium ovoid-acuminate, many(18)-nerved, the very long beak forked, two or three times longer than the lanceolate-avned glume. Stout, 2-3f; leaves 6" broad. Del. to Ky., and South. Allied to No. 103.
- 172 C. retrórsa Schw. \$ Spikes 1-3, often partly fertile; \$ 4-6, cylindric, thick, near, 1-2' by 7", spreading; perigynium ovoid, inflated, few(10)-nerved, the long beak forked, deflexed, far exceeding the glume. Bright green, 2f. Pools: common.
 β. Hartii. \$ Spikes loose, distant, the lower long-stalked. N. Y. (S. H. Wright).
 γ.? lupulus. \$ Spikes 2; \$ very large, short-stalked, straw-yellow; perigynia horizontal, much inflated, 10-nerved; glumes pointed. A fine Carex; 2-3f; allied both to Nos. 103, 171, and 172. N. Y. (E. L. Hankenson, H. B. Lord).

ORDER CLV. GRAMINEÆ. THE GRASSES.

Herbs (the Canes and Bamboos are woody and tree-like) with culms mostly hollow and jointed. The *leaves* are alternate, 2-ranked, on tubular sheaths split down to the base, and bearing a membranous *ligule* (of the nature of stipules) where the sheath and blade meet. *Flowers* in little spikelets of 1 or several, with the glumes in 2 rows, collected into spikes, racemes, or panicles. *Glumes* (the lower pair of scales in the spikelet) alternate, enclosing the flowers. *Pales* (or palæ, the outer pair of scales of each particular flower) alternate and unequal. *Perianth* 0 or represented by 2 minute hypogynous scales. *Stamens* 1—6, commonly 3, *anthers* versatile, 2-celled, bifid at both ends. *Ovary* simple, 1-ovuled, 1-styled, with 2 feathery stigmas. *Fruit* a caryopsis, with mealy *albumen*.

A vast and important Order, contributing largely to the sustenance of man and beast. Both herbage and seed are rich in sweet and nutritious matter. In temperate regions, the Grasses form a *turf*, soft, green, and compact, clothing the hills and plains, pastures and meadows. But in tropical regions this beautiful turf-carpet is unknown, the Grasses becoming larger, even trees (as the stately Bamboo), and stand more isolated, with broader leaves and larger panicles. To this Order belong the Cereal Grains, as the *Indian Corn*, Wreat, Rye, Oats, Barley, Rice, &c., as well as the Hay-grasses—*Timothy*, Red top, Blue-grass, Spear-grass, &c. Also the Sugar-Cane, and various kinds of Sorghum.

1. LEERSIA, Sol. CUT GRASS. FALSE RICE. Spikelets 1-flwd., flat, fls. §. Glumes 0. Pales boat-form, nearly equal, awnless, ciliate, enclosing the free flat grain (caryopsis). 24 Swampy grasses. Lvs. very rough backward. Fl. in secund panicled racemes. June, Aug.

- * Panicle compound, large, diffuse. Spike-
- lets nearly 3" long Nos. 1, 2
 * Panicle simple or nearly so. Spikelets
- 2 L. lenticulàris Mx. Catch-fly Grass. Spkl. roundoval (c) when closed, closely imbricated; stam. 2 (d); ovary ovate (e); plant smooth ist. Ponds and low grounds, Ill. to Va., and S.: rare. Fls. said to close on flies.
- **3 L. Virgínica** Willd. Spkl. small, closely appressed to the branchlet: stam. 2, pales white, with green veins, slightly ciliate. Wet shades. Aug.
- 4 L. hexándra Swtz. Panicle erect, narrow, exserted, 2-4'; spkl. loosely imbri cated, lance-oblong; stam. 6. Culms branched, 1-5f. Water. Fla.

2. ORYZA, L. RICE. Spikelets 1-flwd., § Glumes minute or obsolete, pales compressed-boat-shaped, the lower larger and usually awned. Stamens 6. Grain oblong, smooth, free in the pales. (1) Fls. paniculate.

(D. SATÌVA. Culm 2-4f, lvs. broadly linear, the ligule 1' long. A most important cereal, cultivated South in meadows and inundated grounds.

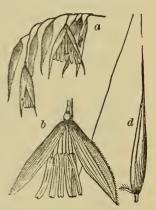

3. ZIZÀNIA, Gron. INDIAN RICE. Stout water-grasses, with large monocious panicles. Glumes 0. Pales 2, thin, narrow, the lower one with a straight awn in the \mathfrak{P} . Stam. 6 in the $\mathfrak{F}(b)$.

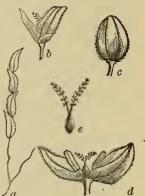

- Z. aquática L. Panicle ample, 1-2f, the lower branches spreading, sterile (a), upper fertile; awns (d) long (1¹/); grain slender, 6-8", very caducous, farinaceous. Marshes, Aug. Culm 5-8f. Lvs. broad.
- 2 Z. miliàcea Mx. Sterile and fertile fls. intermixed in the ample panicle; pales with short (1-3'') awns. Culm 6-10f. Leaves narrow. Ohio, and S.-

4. LUZIOLA, Juss. Spikelets and fls. as in Zizània, but the \mathfrak{F} and \mathfrak{P} in separate panicles on

the same root. Sta. 5—11, anth. very long. Grain ovoid. 24 Aquatic, with long narrow leaves.

L. Alabaménsis Chapm. Culms 4-6', 1-lvd., the leaf 1-2f long, its purple sheath enclosing the bract and peduncle; panicle few-flowered; spikelet lance-ovate, on erect jointed pedicels. Alabama: rare.

5. AGRÓSTIS, L. BENT GRASS. Spikelets 1-fiwd. Glumes 2, subequal, awnless, usually longer than the flower. Pales 2, thin, pointless, naked, the lower 3-5-veined, sometimes awned on the back, the upper often minute or wanting. (frain free. Mostly 24, cæspitous, with slender culms and open panicles.

- \$ AGRÓSTIS. Upper pale conspicuous. Panic'e rather dense......Nos. 1, 2
 \$ TRICHÒDIUM. Upper pale minute or wanting.
 - Panicle thin, capillary...(*)
 - * Lower palea with a long exserted awn on the back......Nos. 3, 4
- 1 A. vulgàris With. Red-top (a). Culm erect, 1-2f; pan. purple, oblong, with short branches; ligules very short; lower pale (b) 3-veined, twice longer than the upper, nearly awnless. A valuable grass: common.
- 2 A. alba L. Florin G. Culm decumbent and rooting at the lower joints, then as cending 1-3f, stoloniferous; ligules long (3-4''); pan. greenish-white, or purplish, contracted; pale 5-veined, awned or not. Common.
- 3 A. canina L. Dog's or Brown B. Derumbent and rooting at base, 1-2f; leaves setaceous-rolled; pan. brownish; lower pale and awn exserted. Wet meadows. E. § β. alpina. Culms low, in tufts, with wide panicles, and twisted awns. Mts.
- 4 A. arachnoides Ell. Erect, 5-8', pan. ½ its length; lvs. linear-setaceous; lower pare, *'', its awn as fine as a gossamer, twisted, 3-4'' long. S. C., Ga., and W. Apr.
- 5 A. scàbra Willd. Rough Hair G. Erect from a decumbent base, 1-2f, very slender, all scabrous-hispid; pan. large, capillary, spkl. purplish, (c, glumes, d, flower). The thin, airy panicles are at length driven before the wind. Fields and pasturer June-Aug.

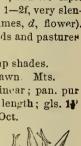

β. perénnans. Panicle pale-green, the branches shorter. In damp shades.

- y. oreophila. Pan. less diffuse; lower pale with a short twisted awn. Mts.
- 6 A. elàta Trin. Culms stoutish, simple, erect, 2-3f; lvs. broadly linear; pan. pur ple, with long suberect whorled branches dense-flowered half their length; gls. 14' long, lower pale 5-veined, 1". Swamps, N. J. to Ky., and S. Sept., Oct.

6. SPORÓBOLUS, Br. DROP-SEED GRASS. Spikelets 1-flwd. Gls. 2, the lower smaller. Fls. sessile. Pales 2, awnless, usually longer than the glumes. Sta. 2 or 3. Grain deciduous, free. 4 Tough, wiry, with rolled rigid leaves and contracted panicles often half-enclosed in the sheath.

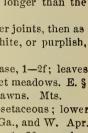

5 SFORÓBOLUS. Grain oval or globous, its pericarp often loose on the seed... (α)

- a Glumes very unequal, one of them as long as the purplish pales...........Nos. 4-6
- a Glumes equal or unequal, both shorter than the pales. Sheaths beardless...(b)
 b Fanicle contracted, spikeform, sheathed or exserted. Lvs. involute...Nos. 7, 8
 b Panicle capillary, open. Often a 2d flower or rudiment. Lvs. flat...Nos. 9, 10
- **I** S. vaginæftorus Torr. (a.) Culms in tufts, simple, ascending, 6-12'; lvs 2-4'; panicles lateral and terminal, mostly concealed in the tumid sheaths; grain $\frac{1}{2}$ snorter than the 2" pales. (1) Dry gravel. More common W. and S.

a

- 2 S. Virgínicus (L.) Like No. 1, but the root is 2t, the culms branched, often de cumbent, and the spikelets very small (1") and many. Coast, S. Sept., Oct.
- 3 S. cuspidàta (Torr.) Glumes very acute, the lower pale *cuspidate*; pan. terminal, slender, few-flowered; spikelet nearly 2". 24 Maine, and Canada.
- 4 S. cryptándrus (Torr.) Culm 2-3f; sheaths strongly bearded at the throat; terminal panicle pyramidal, exserted, the lateral concealed; pales equaling the upper glume (1"), twice longer than the lower. 24 Sandy coasts and shores. Aug.
- 5 S. júnceus (Mx.) Glaucous, erect, 1-2f; leaves erect, 2-6' by 1"; pan. open, stalked, narrow, loose; glumes ovate, obtuse, the upper 11", lower 11", anth. and stig. white. 24 Common in dry barrens, Penn., W., and S. No lateral pan. Aug.-Oct.
- 6 S. heterólepis (Gr.) Lowest lvs. as long as the culm, 1-2f; upper gl. 3", subulate, longer, lower cuspidate, shorter than the pales; panicle very thin, stalked, open; grain globular, 1". Dry places, Conn. to Wis. Aug.
- **7 S. asper** Kunth. (c) Lowest lvs. very long (1-3f), involute-filiform; culms 1-2f; panicle contracted, partly or wholly enclosed; glumes unequal, white, much shorter than the oblong obtuse pales (3"); grain oval. Sands. Sept.
- 8 S. Indicus Br. Erect, 2-3f; pan. long (1f), very narrow, its short branches appressed; glumes unequal; grain oval. Dry grounds, S.: common. May-Sept.
- 9 S. compréssus Kunth. Culm erect, 1-2t, leafy, much compressed, branched at base; pan. thin, 6-10'; gl. acute, $\frac{2}{3}$; pales 1", obtuse. Sandy bogs, N. J. Sept.
- 10 S. serótinus (Torr.) Culm filiform, compressed, 10-18', few-lvd.; pan. capillary, diffuse; glumes 1", ovate, obtuse; pales 1". Wet sands, Maine to N. J. Sept.

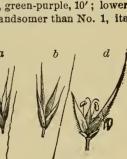

7. CINNA, L. SWEET REED-GRASS. Spkl. 1-flwd., flat. Gl. 2, subequal, awnless, the upper a little longer than the subequal pales, which are short-stiped. Lower pale with a short awn on the back. Sta. 1. Grain oblong, free. 24 Erect, tall and simple, with a large panicle, green or slightly purplish. July, Aug.

- 1 C. péndula Trin. (a) Culm 3-51; lvs. broad-linear, with conspicuous ligules; pan. pale-green, 1f, nodding, with its drooping branches in whorls of 4's or 5's; awn exserted. A fine grass in damp woods, much sought by cattle.
- 2 C. arundinàcea Willd. Bright green, 3-6f; pan. erect, green-purple, 10'; lower pale obtuse, its awn not exceeding its obtuse point. Handsomer than No. 1, its spikelets twice larger (24"). Shady woods.

8. MUHLENBERGIA, Schr. DROP-SEED GRASS. Spkl. 1-flwd. Glumes persistent, bristlepointed or acute, rarely obtuse. Pales sessile, usually hairy at base, deciduous with the enclosed grain, green, the lower awned or mucronate at apex. Sta. 2—3. Culms often branched. July—Sept.

- § TRICHÓCHLOA. Glumes small. Lower pale 3-veined. Panicle capillary......Nos. 3, 4

1 M. aristàta Pers. Erect, simple, 1-2f; lvs. broad-linear: pan. terminal, simple,

3-4'; spkl. large, few; lower pale 6" (12-18" with its awn), 5-veined; upper pale with an abortive pedicel in the groove of its back; sta. 2. 24 Rocky hills.

- 2 M. diffusa Schr. (d) Decumbent, diffuse, branching, 8-18', lvs. 2-3'; panicles very slender, terminal and lateral; spikelets 2'' (4" with its awn), white with green spots; glumes (g) extremely minute, white. Shady places: frequent.
- **3 M. capillàris** Kunth. *Hair G.* Erect, very slender, 11-3f, simple; pan. purple, large, diffuse, branches 1-4', as fine as hairs; pales long-awned. Dry soils.
- 4 M. trichópodes (Ell.) Panicle erect, oblong, not diffuse, green; lower pale tipped with a short awn. Culms 3f, leaves flat. Pine barrens, S. (Agrostis, Ell.)
- 5 M. glomeràta Trin. Glaucous, erect, subsimple, 14-3f, lvs. 3-5'; pan. spike-like, dense, interrupted, 2-3'; glumes 2", pales 1". Bogs, northward.
- 6 M. Mexicàna Trin. (a) Culms much branched, ascending 2-3-5f; leaves lance linear; pan. many, the lateral half-sheathed, dense, and narrow; glumes and pales subequal (1") or one glume longer. Damp shades: common.
- β. purpinea. Culms wiry, branched only at base; panicle purple. Ill. J. Wolf.
 7 M. sobolífera (Muhl.) (b) Like the last, but the panicles are more slender, or filiform, and the glumes shorter than the pales. Hardly distinct. Woods.

8 M. sylvática T. & G. (s) Culms ascending, branched, diffuse, 2-3f; pan. slender, rather dense; glnmes subequal, scarce shorter than the lower pale (1"), whose awn is 2-4". Rocky shades,

N. England to N. J., and W. (Agrostis, Muhl.)

- β.? vulpina. Very glaucous; pan. very dense, racemelike; glumes abruptly short-awned; pale about as long as its awn. N.Y. H. B. Lord.
- 9 M. Willdenòvii Trin. (w) Culm and leaves as in the last; pan. very slender, loose-flowered; glume bristle-pointed, # shorter than the pale, whose awn is 3-4 times as long as the spikelet. Rocky woods: com.

9. POLYPÒGON, Desf. POLYPOG G. Spkl. 1-flwd., densely panicled. Glumes subequal, sim-

ilarly awned, much longer than the flower (c). Lower pale usually awned near the tip. Stam. 3. Grain free.

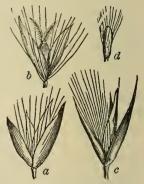

P. Monspeliénsis Desf. (a) Culm simple, 1f or more; lvs. lance-linear, 2-5'; pan spike-like, 2-3', pale; gl. (b) 1", their awns 2". N. England, and S.

10. CALAMAGRÓSTIS, Adans. Spkl. 1flwd. Glumes subequal, acute or pointed. Pales bearded at the base, lower one mucronate, mostly awned below the tip, upper often with an abortive rudiment of a second flower. 24 Culms simple, tall, paniculate, from creeping rhizomes.

- § CALAMAGRÓSTIS. No rudiment. Panicle expanding, loose. Pales awnless.Nos. 1, 2
- § DEYÉUXIA. Rudiment a hairy pedicel. Lower pale awned. Spikelet 2-3"...(a)
- § AMMÓPHILA. Rudiment plumous. Panicle spike-form. Spikelet 6".....No. 10
 - a Beard nearly equaling the pales. Panicle rather openNos. 3, 4

 - a Beard much shorter than the pales. Awn from near the base Nos. 8, 9

1 C. brevípilis (Torr.) Slender, 3-4f; leaves broad-linear, flat; pan. purple, with

capillary branches; gl. unequal, shorter than the pales; beard very short, not half the length of the pales. 24 Sandy swamps, N. J.: rare. Sept. 2 C. longifòlia Hook. Stout, 2-4f; lvs. rigid, involute, long-filiform-pointed; upper

- glume as long as the pales; hairs half as long. Shores of the great lakes. Aug.
- 8 C. Canadénsis Beauv. (c) Blue-joint. Rigidly erect, 3-5f; leaves flat; panicle oblong, its branches in 4's and 5's; gl. longer (11/) than the pales, purplish; awn from the middle of the pale, as fine as the long beard. A good grass : common N. July.
- 4 C. Langsdórfii Trin. Spikelets 21" long; awn stonter than the soft beard. Otherwise like No. 3. White Mts., N. H., Isle Royal, L. Sup. (Porter). August.
- 5 C. confinis Nutt. (a) Lvs. flat, panicle narrow, dense, reddish; gl. ovate, 2", equaling the flower (b); beard $\frac{1}{2}$ shorter than the pales; awn from below the middle, not exserted. Culm 2-5f. Penn. (Jackson), Penn Yan, N. Y. (Sartwell). July.
- 6 C. stricta Trin. Differs from No. 5 only in its rigid leaves rolled at the point, its awn from below the middle, its beard as long as the pales. Lakes, N. Aug.
- 7 C. Nuttalliàna Steud. Lvs. flat; pan. dense; glumes 3", long-pointed, # longer than the pales; awn from near the tip of the pale; beard some shorter than the pale. Swamps, Mass. to N. Car. (C. coarctàta Torr.) Aug.
- 8 C. purpuráscens Br. Culm 1-14f; pan. spike-like, 3-7', purplish; gls. rather obtuse, less than 2''; beard scanty, short, $\frac{1}{2}$ as long as the rudiment, $\frac{1}{4}$ as long as the pales; awn short, straight. White Mountains, N. H., Mt. Marcy, N. Y. (Peck.)
- 9 C. Pórteri Gr. Slender, 2-4f; lvs. flat; pan. very narrow, 4-6'; glumes fully 2", exceeding the pales; hairs few, short, almost none at the base of the lower pale; awn contorted. Huntingdon Co., Penn. (Porter). July.
- 10 C. arenària Roth. Sand Reed. Rhizomes creeping extensively, culms stout, erect, 2-4f; lvs. rolled and rush-like; pan. spike-form, with erect appressed branches 6-10'; spkl. very flat. Sandy beaches, northward. August.

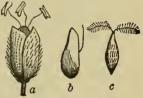

11. ALOPECURUS, L. FOX-TAIL G. Spikelets 1-flwd. Gl. flat-keeled, connate at base, subequal. Upper pale 0, lower flat-keeled, awned on the back below the middle. Sta. 3. Panicle contracted into a cylindric dense spike.

- 1 A. aristulàtus Mx. Wild F. Ascending from a bent base, 1-2f, glaucous; spike slender, 1-2' by $2\frac{1}{2}''$, grayish; glumes (a) and pale obtuse, equal; awn (b) scarcely
- exserted (c, ovary and stigmas). In wet places. June-August. 2 A. geniculatus L. Bent F. Ascending from a bent base, 1-2f; spike 2-21/; upper leaf scarce longer than its sheath; glumes pubescent, obtuse; awn geniculate far surpassing the culm. Wet meadows, East. §
- **3 A. pratense L.** Meadow F. Erect, stout, $1\frac{1}{2}-2\frac{1}{2}f$; spike about 2'; upper leaf shorter than its sheath; gl. ciliate; awn twisted, nearly thrice longer than its pale Fields and pastures, Northern States. A good grass. §

12. PHLEUM, L. CAT-TAIL G. Glumes equal, flat-keeled, mucronate or rostrate, longer than the truncate awnless pales. Compound spike cylindric and very dense. June, July.

- 1 P. pratense L. Timothy. Herd's G. (a) Erect, rigid, 2-4f; lvs. broad-linear, flat; glumes alike cuspidate, in a long dense terete green spike. A grass of the highest value for hay in the North, but will not flourish South.
- 2 P. alpinum L. Erect, If; lvs. shorter than the sheaths; spike oblong-ovoid, 4-5 long; awns as long as their glumes. White Mountains, and Arctic Am.

13. CRYPSIS, Ait. Compound spk. oblong, many-bracted and sheathed

at base. Glumes and pales awnless, subequal, of similar texture. Grain glabrous, free. Turfy grasses, none native. C. schenoides Lam. Tufted, glaucous, 3-12'; lvs. 2-3', long-

pntd.; spk. oblong. 1) Waste ground, E. Penn., Del., etc. § Eur.

14. ORYZÓPSIS, Mx. MOUNTAIN RICE. Spkl. 1-flwd. in a slender spicate panicle. Gl. membranous at edge, subequal, about equaling the oblong, terete, short-stiped flower. Lower pale coriaceous, involute, enclosing the grain, and tipped with a simple, jointed awn. 24

- 1 0. melanocárpa Muhl. Culm leafy to the top, 1-14f; leaves lance-linear; rachis flexuous; few-flwd.; gl. 5-6"; awn thrice longer (1') than its blackish pale. 24 Rocky woods and hills, Middle States, and northward. Aug.
- 2 O. asperefolia Mx. (a) Culm 10-20', its sheaths leafless; lvs. 1 or 2, subradical, erect, rigid, pungent, 1f; the simple pan. 2-4' long; gl. (b) whitish, 3"; awn crooked, 6" long, its pale and grain whitish. 24 Woods, N. States and Canada. May.

3 O. Canadénsis (Poir.) Culm slender, 9-18', naked above; lower sheaths bearing rigid, involute-filiform leaves; pan. 1-2'; awn short or 0. Rocks, N. May.

15. STIPA, L. FEATHER G. The flower deciduous from the glumes with its sharp and bearded stipe. Pales coriaceous, short, the lower embracing the upper and the slender grain, and bearing a long twisted or bent awn. 24 Leaves narrow. Pan. loose. (See Addenda.)

- 1 S. avenàcea L. Black Oat-G. (c) Culm naked above, 2-3f; lvs. mostly radical, setaceous; pan. 4-6' long, the capillary branches at length diffuse; gl. (a) equaling the blackish fruit; awn (b) 2-3' long, twisted below, bent: common. July.
- 2 S. júncea Pursh. Weather G. Culm 2-3f; leaves rolled-threadform, long; glume slender-pointed, twice longer than the fruit; awn contorted, bent, 4-6' long. The pungent stipe adheres like tick-seed. Prairies, Ill., Mo., and N. May-July.
- 3 S. PENNÀTA. Feather G. From Europe. Culm 2f; lvs. rolled threadform at apex; gl. awn-pointed, 1'; awn 8-16' long, twisted below, softly plumous above, and "worn (says Gerard) by sundry ladics instead of feathers." Cultivated.

16. ARISTIDA, L. BEARD G. POVERTY G. Panicle contracted and racemous. The flower stiped in the unequal glumes. Lower pale with 3 awns at the tip variously contorted.—Culms branching. Leaves narrow, often rolled. In sterile soils. Aug.-Oct.

- § Awns twisted and united below, jointed to the pale, very longNo. 1
- Awns distinct to the base and not jointed to the pale...(a)
 - a Awns very unequal, the 2 lateral 4 times a Awns unequal, the 2 lateral twice shorter
 - (6") and suberect, No. 4

a Awns about equal, spreading.—Lower gl. longer than the upper.....Nos. 5–1 —Glumes equal, or the lower shorter....Nos. 8, 9

- 1 A. tuberculòsa N. Culm rigid, 8-20', with *tubercles* in the axils of the numerous branches; pan. large and loose; glume linear, awned, 1'; triple awn (d) 2', united half-way up, thence involved and spreading. (1) Mountains, N. J., and W.
- 2 A. dichótoma Mx. (a) Culm 8-12', dichotomously branched; gl. 3-4"; lateral awns erect, minute, the middle awn (b) as long as the pale (3"), twice bent to the form of a bayonet. (1) Dry sandy fields: common.
- 3 A. ramosíssima Engelm. Culms diffusely branched; gl. 9-10", awn-pointed: lateral awns 2", middle awn 1', spreading. (1) Sands, Ill., Ky.
- 4 A. grácilis Ell. Very slender, $\frac{1}{2}$ -1 $\frac{1}{3}$ f; pan. virgate, 4-8'; glume and flower equal, (2 $\frac{1}{2}$ -3''); middle awn 9-10'', horizontal, the lateral erect. ① Sandy places.
 - β. virgata. Taller (2-3f), pan. 1f; gl. and fl. shorter (2"). S. (Chapman).
- 5 A. lanàta Poir. Culms 2-4f, stout, branched from base; lvs. flat, with woolly sheaths; pan. 1-2f, woolly in its axils; upper glume, lower (purplish) pale and lateral awns each 4--5", middle awn some longer. 24 Sandy soils, S.
- 6 A. spicifórmis Ell. Culms 1-3f, rigid, simple; lvs. rolled, rigid, smooth; pan. spike-form, dense; flower 1' long, awns as long, gl. much shorter. 2t Wet sands, S.
- 7 A. purpuráscens Poir. (c) Culms slender, 2-3f; lvs. scarcely rolled; pan. 1f long, loosely spicate; glume and fl. 4-5", purplish ' awns 1', spreading. 2f Sandy.
- **A. stricta** Mx. Culms 2-3f, strictly erect, with long rigid rolled lvs.; pan. loosely racemous, 1f; gl. 6-7", fl. 6", lateral awns 7-9", central 9-15". 2f Va., and S.
-) A. oligántha Mx. Culms 1—14f, in tufts; raceme few-flowered; glume and fl. 9" very slender, awns capillary, divaricate, 18—30" long. Prairies, W. and S.

17. PASPALUM, L. Spikelets plano-convex, in one-sided spikes. Glumes (apparently) 2, membranous, equal, ovate or orbicular, closely applied to the fertile flower. Grain coated with the smooth coriaceous pales. (But theoretically, the lower glume is obsolete, and its place supplied by the empty pale of an abortive flower. In Nos. 15—17 the lower glume appears, under a lens, as a mere rudiment.)—Spikes linear, the flowers in 2—4 rows.

- § PASPALUM. Spikelets round or round-oval, obtuse. Spikes alternate...(*)
- § DIGITARIA. Spikelets ovate to lanceolate, acute. Spikes often digitate...(**)
 - * Terminal spike mostly solitary, rarely 2, 1" wide, long-stalked No. 1
 - * Terminal spikes mostly 3 or 4, 2" wide. Spikelets in 2 rows......Nos. 2, 3
 - * Terminal spikes mostly 4 or 5. Spikelets close, in 3 or 4 rows...... Nos. 4-6
 - -Spikelets in remote pairs No.7
 - ** Rachis leaf-like, broader than the spikelets. Spikes alternateNos. 8, 9
 - ** Rachis narrower than the spikelets. Spikes digitate...(a)
 - α Glumes (gl. and pale) about equal, as long as the flower...(b)
 - a Gls. (both conspicuous) one or both very short. Spks. 4-9.....Nos. 16, 17
 - b Spikes spreading, always two in Nos. 10, 11; two-six in.....No. 12
 b Spikes erect.—Rachis flat, spikelets by 1's or 2's, close.....Nos. 13, 14
 - -Rachis filiform, spikelets by 3's, looseNo. 15

P. setaceum Mx. Culm slender, ascending, 1-2f, naked above; lvs. linear, flat,
 2-3" wide, soft, hairy; spikes very slender, 2-4', 1 or 2 on the long peduncle, often

a sheathed axillary one below; spikelets small, \sharp'' , in pairs, but seeming 2-rowed. very smooth \mathfrak{L} Drv or wet, Mass. to Ill., and S. Aug.

- 2 P. laeve Mx. (p) Culm erect, 14-3f; lvs. broad-linear, hairy at base or smooth; spikes 3-5; spikelets (a, b) single, contiguous, in 2 rows on the narrow straightish rachis, round and smooth, 14". 24 Grassy banks, Ct. to Ind., and S. Aug. β. altissimum. Strict, tall; sheaths flattened close on the spikes.
- 3 P. angustifòlium Le Cont. Cum. wiry, 2-3f; lvs. linear-filiform, compressed-carinate; spikes 2 or 3, 1-2"; rachis narrow, flexnous; spikelets round-oval, brown, 1", in 2 rows, Whole plant glabrous. 2t Wet places. Ga., Fla., La. [and S. β. tenne. Spikes 4 or 5, very slender, 3-rowed; lvs. and sheaths ciliate. N. J.,
- **1 P. praecox** Walt. Culm erect, 3-4f; lvs. long, narrow, smooth; sheaths purple, smooth or hairy; spikes 3-6, bearded at base, dense; rachis straight and flat; spkl. orbicular, in 3 rows, often brown. 24 Swamps, S. May, June.
- 5 P. dasyphýllum Ell. Culm rigid, erect, 2-3f; lvs. linear, and with the sheaths hairy all over; spikes 2--5, large, 2-4'; spkl. orbicular-oval, near 2", in 2 or 3 rows under the very flexuous rachis. 24 Dry fields, S. July-Oct.
 - β. Floridanum. Lvs. long and narrow; spikelets in 3 rows. Damp, S.
- 6 P. virgatum L. Culm 11-31; lvs. broad-linear, ciliate near the base; spikes 3-12, 2-4'; rachis broad, but narrower than the 3-4 rows of small (1") roundish spikelets; glume 3-veined. (1) Moist soils, S. July-Oct.
 - β. undulatum. Upper glume (pale) undulate-rugous at edge.
 - γ . latifolium. Lvs. very broad (6-9"); spikelets larger (1+").
- 7 P. racemulòsum N. Culm erect, firm, 2-3f; lvs. long, linear, soft-hairy; spikes 3-4, raceme-like, 2-6'; spkl. oval, in remote pairs, 1¼", the glume 5-veined, tawny. 24 Dry soils, S. (P. interruptum C-B.) Aug., Sept.
- 8 P. fluitans K. Culms floating or ascending, 12-20'; lvs. lance-linear, on open sheaths; spikes 20-50, 1-21', rachis 1" wide, flat, pointed, out-running the minute white spikelets beneath them. (1) River swamps, Ill. to Va., and S. Oct.
- 9 P. Walteriànum Schlt. Culm and lvs. as in P. fluitans. Spikes 3-5, 2-3', partly sheathed; rachis not out-running the white (1") spkl. Wet, N. J., and S. Jl. +
- 10 P. Digitària Poir. Assurgent, 1-24f; lvs. broad-linear, flat, on long sheaths; spikes slender, 3-5', a pair at top of the long ped. and some axillary sheathed below; spkl. lanceolate, rachis flattened vertically. 24 Woods, Va., and S. Jl.-Sept.
- 11 P. conjugàtum Berg. Erect, 1-2f; lvs. short (2-4'); spikes a pair at top, (rarely axillary), very slender, 3'; spikelets minute, white, ovate. ① N. Orl. §
- 12 P. glabrum (Gaud.) Culms decumbent, spreading, 8-15'; lvs. short; spikes 2-4, spreading, 1-2', slender; spkl. ovate, purple. *'', 2-rowed; upper gl. equaling the fl., lower minute. (1) Sandy fields, N. J., and S. § (P. ambiguum, DC.) Aug. +
- **3 P. distichum** L. Culms assurgent, 12-18'; lvs. broad-linear; spikes 2 or 3, erect, near the top, $1\frac{1}{2}-2\frac{1}{4}'$; rachis linear, narrower than the 2 or 3 rows of whitish ovate $1\frac{1}{4}''$ spikelets. 24 Wet grounds, S. States. Plant smoothish. July, Aug.
- 14 P. tristichum Le C. Culm ascending, 1-2f; peduncles from the upper joint, 1-3, filiform, each bearing 3 filiform subcreet spikes; spkl. whitish, lance-ovate, minute; rachis flexuous. Wet places. 2f Ga., Fla., to La. Aug.
- 15 P. filiforme Swtz. Culm filiform, erect, 1-1if; lvs. short; spikes 2-6, filiform, crect; rachis filiform; spkl. oblong, i'', in 3's; lower glume obsolete, upper as long as the flower. Dry soils, ① Ms. to Ky., and S.
- 16 P. serótinum Flgg. Decumbent, rooting, hairy-villous; lvs. short (1-2)', ance-linear; branches each with 3-5 filiform digitate spikes; rachis straight; spkl. .ance-ovate, striate, minute. 24 Sandy fields, S. C. to La. Sept., Oct.
- 17 P. sanguinale Lam. Crab or Finger G. (d) Erect, 1-2f, lvs. and sheaths oftener hairy; spikes 5-9, digitate, spreading, 4-6'; rachis flexuous; spkl. (c) oblong-lanceolate, 14'', upper gl. (c) as long as the flower, (e) lower one minute. Waste grounds Aug.-Oct. §

18. MÍLLIUM, L. MILLET G. Spikelets awnless, consisting of 2 coriaceous pales enclosed in apparently 2 glumes, which are longer. (But theoretically the glumes are as in Paspalum.) Sta. 3. Grain coated by the pales. Panicle open.

 M. effusum L. (a) Culm erect, 3-8f; lvs. flat, smooth; pan. diffuse, 6-9' long; spkl. oblong, (c) scattered, acute, 1". Woods, Can. to Ill. and Pa. Summer.

19. AMPHICÁRPUM, Kunth. Spikelets apparently 1-flwd., and perfect as in Millium, but of two kinds; the terminal deciduous and sterile, the radical under ground, and fertile. Gl. and pales sub-equal, lanceolate, acute. Panicle strict, erect. Radical fis. larger, solitary.

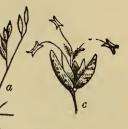

A. Púrshii K. (f) Culm 1f, erect; lvs. erect, hairy; sheaths hairy, the upper leafless; pan. on a long exserted ped.; & spike-lets 1¼" long, the ♀ radical, 2¼", the grain terete, same_length. Barrens, N. J., and S. Aug.

20. PÁNICUM, L. PANIC G. Glumes 2, unequal, awnless, the lower much smaller. Fls. 2, dissimilar, the lower of 1 or 2 pales, neutral or ϑ ; the upper \forall of 2

equal cartilaginous polished, concave, awnless pales coating the gram Sta. 3. Stig. 2, plumous, purple. Spikelets in simple or compound panicles.

- **9 P. autumnàle** Bosc. Culm slender, 10-20'; lvs. short, soon rolled, and with the long sheaths glabrous; pan. diffuse, bearded in the axils; ped. long (2-4'), capillary; spkl. lance-oblong; lower gl. minute. Ill. to Car.
- 3 P. proliferum Lam. Glabrous, 2-3f; lvs. broad-linear, on tumid sheaths; pan. terminal and lateral, pyramidal, ped. sheathed; spkl. elliptic, 1"; lower gl. ¹/₄ ot ¹/₅ as long as the upper; \$\$ fl. pointed. Rich shady soils. Aug., Sept.

β. geniculatum. Culm thick, geniculate below; pan. dense. Marshes.

- **4 P. gymnocárpum** Ell. Culms 2-3f, stout, erect; lvs. lanceolate, 1' wide; pan. large, expanding; spkl. lanceolate, 2", in clusters of 3-5; glumes and neutral pales twice longer than the naked fertile fl. Banks, Ga., Fla., and W.
- 5 P. Mans Ell. Slender, glabrous, decumbent at base, 2f; lvs. narrow; pan. of slender racemes; spkl. 1/2, lower gl. 1 1 as long as the upper; both fls. coriaceous, divergent or gaping at apex. Damp barrens, S. Aug.—Oct.
- 6 P. agrostoides Muhl. (a) Culm 11-3f, compressed; lvs. long, rough-edged; pan. term. and lateral, pyramidal, purplish, of dense racemes; spkl. (b) 1", lance ovate; upper gl. 3-veined, 1 longer than the lower; neutral pales sub-equal. Jl. 4
- 7 P. anceps Mx. Culm and lvs. as in No. 6. Pan. very large and open; spkl. 14'', forked when ripe; upper gl. 5-veined, twice longer than the lower, shorter than the lower neutral pale, which is twice longer than the other pales. N. J., and S. Aug. +
- 8 P. vilfifórme Wood. Very glabrous; pan. at each joint, and term. of loose racemes; spkl. lance-ovate; up. gl. 9-veined, 1¹/₄", lower neutral pale a little longer, the other 3 pales a little shorter, lower gl. ¹/₄ as long. Meadows, E. Tenn. Aug.
- 9 P. gibbum Ell. Culm 2-3f, assurgent; lvs. broad-linear, glabrous; pan. 5-6', dense, spindle-form; spkl. tumid, near 2"; lower gl. very small, upper very large, 11-veined, gibbous at base; sterile fl. (\$, Chapm.) neutral. Wet. S. Jl.-Sept.
- 10 P. amàrum Ell. Culm terete, strict, 2-3f; lvs. rolled and rigid (*bitter* to taste), pan. 6-10', contracted, its smooth branches appressed-erect; spkl. lance-ovate; glumes pointed, the lower 1", upper nearly 2"; sterile fl. 14", anth. orange. Sands.
- 11 P. virgàtum L. Culm 3-5f, lvs. flat; pan. large, thin, at length diffuse, 10--20' long; spkl. scattered, ovate, pointed, purplish; upper gl. 2", sterile fl. 1¼", fertile fl. and lower gl. 1", all divergent when ripe; anth. purple. N. Y., S., and W. Aug. β. obtusum. Panicle contracted; spikelets smaller, not pointed, obtusish. N. J.
- 12 P. verrucosum Muhl. Slender, weak, decumbent below, 10-20'; lvs. lance-linear, short; pan. few-flowered; spikelets obovate, bluish, 1-1", beset with fine warty (verrucous) points. (1) Thickets and swamps, not rare. Aug.
- 13 P. villosum Ell. Villous with soft white hairs throughout, 10-20'; lvs. flat, short; pan. small (2-3' long), oblong, loose; spkl. oval, 1", green; upper gl. and 2 fls. equal, lower glume $\frac{1}{4}$ as long. Evergreen, damp. S. Apr., May.
- 14 P. ciliatifiòrum Wood. Fringed G. Erect, strict, 2-3f; lvs. narrow, rigid, flat, ciliate; pan. slender, strict, 3-4'; spkl. 1¼", oblong, silky-villous glume soli tary, equaling the lower staminate pale, 5-veined. Barrens, S. Sept. β. rufum. Lvs. glabrous, erect; sterile fl. neutral, hairs purple.
- 15 P. dichótomum L. Culm at first simple with one panicle, soon branched slender, 8-20'; lvs. lance-linear, short, 1-4' by 2-4"; terminal pan. oval, small (1-2'), stalked; spkl. few and small, \$", round-oval; lower gl. 1-4 as long as the up per. Common in fields. June-Sept.

Exotic, cultivated....No. 24

B. nitidum. Smooth, shining; lvs. narrow; ped. long; spkl. oval.

- y. sphærocarpum. Hairy; peduncle long; spkl. rounded, dark-purple.
- 8. barbulatum. Taller; nodes with a ring of deflexed hairs.
- E. lanuginosum. Woolly; lvs. larger; spikelets green; pan. larger.

ζ. spathaceum. Hairy and leafy to the top; panicles sessile.

16 P. depauperatum Muhl. Culm simple, strict, tufted, 6-12'; lvs. linear erect, the upper elongated; pan. simple, sessile or becoming long-stalked; spkl. oval, 1-1"; lower gl. 1 as long as the upper 7-veined one. Hills and woods, common. June. Varies with lvs. hairy or smoothish, and

 β , *involutum*, with lvs. involute, ending in a long stiff point.

- 17 P. pauciflorum Ell. (c) Culm assurgent, 1-2f; lvs. lanceolate, 3-5' by 5-7" hirsute below as well as the sheaths, faintly 9-veined; pan. open; spkl. (d, e) few, large $(1-1\frac{1}{2})$, oval; lower gl. $\frac{1}{2}$ as long as the upper. (x, neutral fl.) Damp shades.
- 18 P. pubéscens Lam. Culm slender, branched, 2-3f; lvs. lance-linear, 3-6' by 3-5'', 9-veined, retrorsely hirsute as well as the open sheaths; spkl. oval, 1+'', pubes cent, outer glume lanceolate, 1", inner 9-veined. Dry fields. June.
- 19 P. latifolium L. Erect, 1-2f; lvs. lanceolate, dilated and cordate-clasping at base, 3-5' by 1', smoothish, 11-13-veined; pan. exserted, 3' long; spkl. obovate, 1;"; lower gl. ovate, ;", upper gl. 9-veined; neutral pales sub-equal, usually with 3 stamens. In moist shady places: common. June, July.
- 20 P. xanthophysum Gr. Culm simple or branched below, 9-15'; lvs. lanceolate, 3-6' by 5-7", not dilated at the ciliate clasping base; pan. long-stalked, raceme-like; spkl. few, round-obovate, 11"; lower gl. ovate, 1 as long as the upper 9-nerved one; sterile fl. often &. Dry. N. Eng. to Wis. June.
- 21 P. viscidum Ell. Hoary with a dense viscid pubescence, 2-4f, stout; joints with a smooth brown ring; lvs. lance-linear, 3-6' by 6-16"; pan. 4-6', loose; spkl pale, oval, 1"; lower gl. and upper pale minute. Wet. N. J., and S. Aug.
- 22 P. clandestinum L. Culm rigid, leafy, 2-3f; lvs. 3-6' by 1', dilated and cor date at base; sheaths scabrous or rough-hairy, enclosing the lateral and often the terminal dense panicle; spkl. elliptical, 14". Moist woods. July, Aug.
- 23 P. microcárpon Muhl. Erect, simple, glabrous; lvs. lanceolate, broad and clasping at base, veiny, 6-10" wide; pan. long-stalked, diffuse; spkl. small (), oval numerous, purple; lower gl. minute. Pa., W., and S. July-Sept.
- 24 P. MILIACEUM. Millet. Lvs. lance-linear and sheaths hairy; pan. large, open, nod ding; spkl. ovate, solitary; glumes pointed, sub-equal. Turkey.

21. PENICILLÀRIA SPICÀTA. Erect, 4f, branching, with broad. flat leaves. Panicle cylindric-oblong, 1f in length, compact, consisting of innumerable simple branches, each with 2 or 1 spikelets at the cnd, and clothed with spreading hairs Each spikelet bears at length a white ripened grain. (1) E. India.

22. OPLISMENUS, Beauv. Cock-spur G. Spikelets in dense, spike-like, panicled racemes. Glumes and lower pale of the sterile fl. roughpointed or awned. Otherwise as in Panicum.

1 O. crus-galli L. (a) Culm terete, 3-4f; lvs. lancelinear, rough-edged, ligule none; pan. with its spikeform branches alternate or in pairs; rachis rough-hairy; glumes bristly, scarcely awned; awn of the pale (b) 6-18" long, very rough. Sheaths generally smooth. Waste grounds : com. Aug., Sept. § [merely pointed.

B. muticus. (c) Awns very short, or the hispid pale y. hispidus Sheaths very bristly; awns very long. A very coarse variety,

- 2 0. Wálteri (Ell). Culms slender, 2f; lvs. narrow and sheaths glabrous; spikes one-sided, $\frac{1}{2}-1'$ long, alternate; glumes hispid, pointed; the fis. somewhat pointed, the sterile with 3 stamens. Low grounds, Car. to Fla., and La. July.
- **3 O. hirtéllus** R. & S. Decumbent, branched, ciliate; lvs. lanceolate, 1-2' by 4-6"; spikes erect, remote, one-sided, 4' long, few in the perfectly simple panicle; vale long-awned, glumes short-awned. Woods, South. Aug.-Oct.

23. SETÀRIA, Beauv. BRISTLY FOXTAIL. Fls. n cylindric spikes or spike-like panicles. Spikelets each subtended by a cluster of awn-like bristies (abortive pedicels) forming a bristly involucre. Otherwise as in Panicum. July, Aug.

- § Bristles rough backward, in pairs, short......No. 1
- § Bristles rough upward....(a)

a 4-10 in each involucre.....Nos. 2-4 a 1-3 in each involucre.....Nos. 5-7

- 1 S. verticillàta Beauv. Spicate pan. 2-3', composed of short divided branchlets seeming in many verticils; bristles little longer than the spikelets; fruit-pales rough-punctate. Culm 2f. (1) N. Éng. to Car., and W. §
- S. glauca Beauv. Bottle G. Spike cylindric, yellowish, 2-4', nearly simple; m vol. of 6-10 bristles much longer than the spikelets; fruit rugous crosswise, somewhat triquetrous, blackish. Culm 2-3f. (1) Fields, gardens: common. §
- **3 S. víridis** Beauv. Wild Timothy. (a) Spike cylindric, 1-3', compound, green; invol. of 4-10 bristles much longer than the spikelets (b, c); fruit-pales striate lengthwise and dotted (under a lens). Culm 1-2f. (1) Cultivated grounds, N. §
- 4 S. Germánica Beauv. Millet. Bengal G. Spike flattened, oblong-cylindric, compound, 3-5' by 9"; rachis bristly; invol. of 4-8 bristles, little longer than the spikelets, yellowish; & pales dull-rugous. Culm 3-4f. (1) Fields. §
- 5 S. Itálica K. Spicate pan. 6-18' long by 1-2' thick; invol. yellowish, of 2 or 2 bristles 8-10 times longer than the spikelets and half-concealing them; 3 pales smooth, polished, shining. Culm 4-6f. (1) Swamps, S.
- 6 S. corrugàta Schul. Spicate pan. 3-6', cylindric, dense above; bristles 1 to each spikelet and thrice as long; & pales strongly corrugated. Fla., Ga.
- 7 S. compósita K. Spicate pan. loose, its lower clusters separated; bristles 1 or 2 under each spkl. and 5 times longer; \$ flower acute, smoothish. Fla.

24. CENCHRUS L. BURR G. Fls. racemed or spicate. Involuce a burr (a) beset with spines, becoming hard and pungent in fruit, and enclosing several (1—3) spikelets (b). Glumes and flowers as in Panicum, the sterile flowe \mathfrak{F} . Culms branched. Aug.

C. tribuloides L. Culms 1-2f, tufted, decumbent, spreading; lvs. as short as their open compressed sheaths; spikes several, 1-2' long; burrs adhering by their rough spines to everything passing. Sandy shores, N. J. to Ill., and N. (See Addenda.)

25. PHÁLARIS, L. CANARY G. Spikelets 1-(theoretically 3)-flowered. Gl. 2, subequal, carinate, longer than the two shining pales of the \forall fl., all awnless. Neutral rudiments at base of the \forall fl. merely 2 single pales or hairy pedicels (b, c). Grain coated. Handsome flat-leaved grasses.

1 P. arundinàcea L. Ribbon G. A showy but not valuable grass, 2-5f; lvs. lance-linear; pan. contracted, dense, 3-6' long; glumes (a) 24" pointed; rudiments

2, hatry, at the base of the ovate pales (δ). 24 Ditches and swamps, Can. to Car., and Ky. July, August.
β. picta. Striped G. Lvs. endlessly variegated with white and green. Cultivated.

2 P. Canariénsis L. Canary G. Bird-seed. Culm terete, erect, 1-2f; lvs. lance-linear; pan. spicate, ovoid, 1-2'; gl. winged on the keel (c); rudiments smooth. (1) Introduced into fields and gardens from Isle Fortunatus.

26. ANTHOXÁNTHUM, L. SWEET VERNAL G. Spikelets (d) 3-flowered, the central fl. \notin , the two lateral neuter, each of 1 bearded pale. Gl. 2, unequal. Pales 2, short, awnless. Sta. 2.

A. odoràtum L. Slender, erect, 10-18'; lvs. short; panicle spicate, 1<u>1</u>-3'; neutral pales ciliate (e), one with a bent awn from near the base, the other with a straightawn from the back above. Fls. in May and June ill-scented, but when cut as hay it is very fragrant. § (x, the § fl.)

27. HIEROCHLOA, Gmel. SENECA G. Spkl. 3-flwd. Gl. 2, scarious. Lateral fls. *&* triandrous, central fl. *&*, with 2 (or 3) stamens. Inflor. paniculate. Sweet-scented.

> 1 H. boreális R. & S. (f) Very smooth; simple, erect, 15-30'; root lvs. as long as the culm, cauline lvs. lanceolate, short; pan. open,

few-flwd., 2-3'; spkl. (g) broad, subcordate, colored, awnless. 24 Wet meadows, Va., and North. May.

2 H. alpina R. & S. Smooth; culm erect, 6-8', stout; lvs. lance-linear; pan. ovoid,

1-2'; spkl. purple, longer than their branchlets; lower fl. with an awn on the back as long as the pales. 24 High Mts., N. Eng., N. Y. June.

28. HOLCUS, L. SOFT G. Spkl. 2-flwd., paniculate. Gl. herbaceous, boat-shaped, mucronate. Fls. pedicellate, the lower \notin , awnless; the upper f or neutral, awned on the back. July.

> H. lanàtus L. (h) Hoarypubescent, 11-2f; lvs. lance-

> > linear; pan. oblong, dense, purplish-white; fis. (i) shorter than the glumes (k); awn of the sterile fl curved, included. \mathfrak{A} Wet meadows. A beautiful grass.

29. AIRA, L. Spkl. 2-flwd. without abortive or sterile ones. Gl. 2, thin, shining, subequal. One of the fis. pedicellate. Pales subequal, hairy at base, the lower truncate at apex, and awned on the back. Fls. in an open pan., silvery-purplish. § Glumes longer than the fis. Pale entire......No. 1 § Gl. about equaling the fis. Pale lacerated.. Nos. 2, 8

- 1 A. atropurpurea Wahl. In tufts, 1f, very slender; lvs. flat; pan. thin; awn stout, twice as long as the pale. 2 High Mts., N. Eng. and N. Y. August.
- 2 A. flexuòsa L. (l) In large tufts, smooth, 1-2f; lvs. setaceous, mostly radical; pan. loose, with long flexuous spreading branches; awn geniculate, twice longer than the pale (m). 2 Dry hills: common. June.
- 3 A. cæspitòsa L. (n) Tufted, glabrous, 18-30'; lvs. narrow-linear, flat; pan. oblong, finally diffuse; awn straight, as long as the pale, which is longer than the blu ish glumes. (o, spikelet, p, fl.) 24 Swamps, northward. May.

30. DANTHONIA, DC. Spkl. 2–7-flwd. Gl. 2, subequal, cuspidate, longer than the whole spikelet of fls. Pales hairy at base, lower one bidentate and awned at apex, upper obtuse, entire. Awn flattened and twisted at base. 24 Fls. racemous.

I D. spicata R. & S. (a) Lvs. narrowly-linear, shorter than the internodes; culm 1-2f, slender; spkl. few (about 6), in a subsimple raceme; gl. 4-5"; fls. (b) about 7, pubescent. Lvs. mostly radical in little tufts. Dry hills: com June-Ang

cal, in little tufts. Dry hills; com. June—Ang. **B.** compréssa. Lvs. longer than the internodes; spkl. about 4 in the simple raceme; gl. twice longer than the spikelet. Onondaga Co., N.Y. (S. N. Cowles). (D. compressa, Austin?) These characters are not constant.

2 D. sericea Nutt. Taller (2-24f); lvs. and sheaths silky-hirsute; spkl. 9-17, evidently paniculate; gl. 8-9"; fis. about 7, densely clothed with silvery-silky hairs; awns brown at base (as in No. 1), very long. Rare N., common S. June.

31. AVENA, L. OAT. OAT G. Spkl. 2–5-flwd. Gl. 2, loose, thin, awnless, large. Pales 2, becoming coriaceous, the lower bifid, bearing (mostly) a bent or twisted awn on the back; upper pale coating the oblong grain. Fls. paniculate.

- § AIRÓPSIS. Gl. subequal, 2-flwd., both flowers §, no rudiment. Dwarf......Nos. 2, 3
- § Avèna. Gl. equal, longer than the 2 perfect flowers, strongly striate......Nos. 4, 5
- A. elàtior L. (a. f) Culm erect, 2-4f; lvs. lance-linear; pan. narrow, 7-10', nodding; upper gl. (g) and pales 4", lower gl. 2"; awn bent, twice longer than the pale. 2t A tall handsome grass. § Eur. (Arrhenatherum avenaceum Br.) May-July.
- 2 A. præcox Beauv. (d) Culms tufted, erect, 2-5'; lvs. setaceous; pan. dense, oblong, 1-1'; gl. (b) equaling the fis. (c); awns bent, twice longer. 24 N.Y. to Va. Jn.
- **3 A. caryophýlla L.** Culms 5-10'; lvs. very narrow; *pan. loose, open*; glumes silvery-purple, scarce 1", pales shorter, awns exserted. Dry fields, M. § Eur.
- **4** A. SATÌVA. Common Oat. Culm terete, crect, 2-4f; lvs. lance-linear; pan. loose, pyramidal; spkl. large, pendulous; both fls. ¢, 7", the lower mostly awned; both pales coating the nutritious grain. Cultivated, common. June.
 - β. nigra. Black Oats. Pales dark brown, almost black, without awns.
 - y. secúnda. Horse-mane Oat. Panicle one-sided, nodding; awns short.
- 5 A. STÉRILIS. Animated O. Spkl. 5-flwd., 2 lower fls. each with hairy pales and a long bent awn which is so sensitive to moisture as to be kept in motion by the ordinary changes in the air. From Europe. Cult. as a curiosity. (1) 4f. July, August.

32. TRISETUM, L. Spkl. 2-5-flwd. Glumes **2**, shorter than the fls. Lower pale with two bristles at the apex and a soft flexuous awn from above the middle of the back. Grain coated, furrowed. \mathcal{U} Fls. paniculate.

- T. purpuráscens Torr. Spkl. (p) about 4-flwd., 6-S", few (6-9) in the very simple purple panicle; fls. (d) separate, bearded at base; gl. (g) unequal; lvs. narrow-linear; culm erect, 2-3f. Mountain bogs, N. June.
- 2 'T. palústre (Mx.) Spkl. (a, b) 3-flwd. 2¹/₄", the upper fl. abortive; middle fl. with a bent awn its own length; pan. narrow, 4-6'; lvs. very short (2-3'); culm slender, 2f. Plant smooth. Wet meadows. May-July. (c, pale.)
- **3 T. molle** (Mx.) Spikelets 2-flwd., 3"; upper fl. with a bent awn its own length; g. lance-linear; panicle as in No. 2; lvs. broader and longer; plant 2f, minutely downy. Rocky hills, N. July.

33. BROMUS, L. BROME G. Spikelets $5-\infty$ -flwd. Gl. unequally veined. Lower pale 5-9-veined, awned from below the mostly bifid tip. Upper pale ciliate on its 2 keels, adhering to the linear grain. Coarse grasses, with flat leaves, and large, nodding, panicled spikelets. June, July.

- § Glumes narrow, the lower 1-veined, upper 3-veined. Lower pale keeled...(b)
- § Glumes veiny, the lower 3-5, upper 5-7-veined. Lower pale convex...(a)
 - α Awn much shorter than its pale. Pan
 - icle spreading......Nos. 1, 2
 - a Awn as long as its pale. Panicle erect, contracted in fruit.....Nos. 3, 4
 b Lower pale compressed-carinate, awn very short......No. 5
 b Lower pale rounded on the back, the awn conspicuous......Nos. 6, 7
- 1 B. Kálmii Gr. Wild Chess. More or less hairy, 11-3f; spkl. drooping, closely 7-12-flwd., densely silky; lower pale .nuch the larger; pan. small. 24 Dry.
- 2 B. secalinus L. Cheat or Chess. (s) Nearly glabrous, 2-4f; spkl. ovate, turgid, glabrous, 7-10-flwd., fls. (a) soon diverging, blunt, awned or not; panicle nearly simple, 4-8' long, spikelets 8-10'' long. drooping. (1) Fields. § Eur.
- 3 B. racemòsus L. Erect Chess. Spkl. ovate-oblong, glabrous; closely 8-12-flwd., awns straight, 4"; pan. simple; plant slender, some hairy. (1) Fields. § Eur.
- 4 B. mollis L. Downy Chess. Plant downy, with spreading hairs; spkl. orate, about 6-flwd., fls. closely imbricated; awns straight, 3-4". (1) (2) Fields: rare.
- **5 B. unioloides** H. & K. Rescue G. Culm erect, 11-3f, smoothish; pau. nar row, 6-10', nodding; spkl. lance-oblong, compressed, 1', 8-12-flwd. (1) Cult. South.
- 6 B. ciliatus L. Pan. compound, 5-8', soon nodding; spkl. at first lance-fusiform (b), 7-11-flwd., the fls. soon separating; pale (c) compressed-carinate above, silkyhaired at edge, twice longer than its straight awn; culm 2-4f; lvs. some hairy. 24 Shady banks: common. July, August.
 - β. purgans. Plant finely and closely pubescent all over.
- **7 B. stérilis** L. Pan. compound, soon 1-sided and nodding; ped. capillary; spkl linear-oblong, about 5-flwd., puberulent; fls. linear-subulate, scarcely as long as the awn. (1) Banks, Pa., and N. Rare. §
- 8 B. BRIZOIDES. Culm 1f, erect; lvs. narrow, conduplicate, rigid; pan. erect, with a sow large, hanging, ovate, awned spikelets; pale dilated, ear-shaped above. Cult.

397

34. TRICÚSPIS, Beauv. Spkl. terete, or tumid, 3-9-flwd. Glumes unequal, awnless. Lower pale (n, c) conspicuously fringebearded on the 3 strong veins, tipped with 2 or 3 s teeth, and 1 or 3 short awns or cusps; upper pale much shorter, 2-toothed (n). Fls. paniculate. Sheaths hairy at throat. Aug., Sept.

- § WINDSÒRIA. Culm erect, simple. Lower pale 3-cusped.....Nos, 1, 2
 § URÁLEPIS. Culm spreading, branched. Lower
 - pale 1-cusped.....Nos. 3, 4
- T. seslerioides (Mx). False Red-top. (s, a, n, m) Culm 3-5f; lvs. linear, involute when dry; pan. open, loose, 8-12', the slender branches at length spreading; spkl.
 (a) oblong, 3'', 5- or 6-flwd., purple, shining. 24 Beautiful.
 β. nexuosa. Branches of the panicle flexuous; spkl. 3-5-flwd., 2". Pa.

- 2 T. ambígua (Ell.) Culm 2-3f, wiry; lvs. narrow and rolled; pan. small (3-5'), few-flwd.; spkl. ovate, the 5-7 fls. divaricate. 2f Pine-barrens, S.
- 3 T. purpùrea (Walt.) (b) Culm bearded at the nodes, 10-18'; lvs. subulate, short; panicles more or less sheathed; spkl. (b) 3-flwd., awn scarcely exceeding the eroded segments of its pale. (1) Coast sands, Mass. to Fla. (c, lower pale.)
- 4 T. cornùta (Ell.) Culm 2f; lvs. and sheaths hairy; awn of the lower pale plu mous, much longer than the lateral teeth, recurved. Dry sands, S.

35. ARUNDO DONAX. A gigantic ornamental grass from Italy, where it is cult. for vine-poles, fence-wood, fishing-rods, etc. Culm 10-15f high; lvs. broad, flat, smooth, and shining; pan. diffusely branched; gl. as long as the 3 fls.; rachis beset with long hairs; lower pale with a short awn in the cleft at apex. 24

β. VERSÍCOLOR. Gardener's Garters. Leaves striped with white.

36. GRAPHEPHORUM, Desv. Spkl. of 2-5 remote fls. with sub equal glumes. Fls. bearded at base. Gls. and pales thin, lanceolate, awn-less, convex, not keeled. 24 Erect, glabrous. Lvs. flat. Panicle simple

G. melicoides Beauv. Culm slender, 1-2f, with 2 or 3 short erect linear lvs.; pan. loose, 3-4' long; spkl. 2-3-flwd., 3-4'' long. Upper Mich. (C. E. and A. H. Smith).
β.? triflorum (Aira trif. Ell.) "Fls. somewhat woolly at base, not villous." Ga.

37. GYNERIUM ARGÉNTEUM. PAMPAS GRASS. A magnificent reed from S. Am., becoming common. (2) Leaves in a dense, radical cluster, recurved, narrow, channeled. Culms 10-18f, clustered, bearing dense, hairy panicles, which are 11-2f, silvery white, with innumerable flowers and their long, silky

hairs. Some of the panicles are fruitful (x), others barren (z).

38. DÁCTYLIS, L. ORCHARD G. Spkl. 3-5-flwd. compressed. Glumes unequal, shorter than the fls Pales subequal, lance-acuminate, the lower (and glumes) carinate, awn-pointed. Lvs. channeled. Panicle composed of dense 1-sided clusters. June.

D. glomeràta L. Culm 2-4f high; lvs. broad, glaucous; stipules lacerate; spkl. loose-flwd.; gl. very unequal. 24 Shady fields. A good grass for hay or pasturage. §

39. KOELERIA, Pers. Spkl. 2-7-flwd., compressed; gl. subequa acute. scarcely shorter than the fls.; upper fl. pedicellate; lower palc

(and gl.) carinate, often bristle-pointed. 24 Culms tufted, erect, simple, with dense, narrow panicles.

K. cristàta Sm. Culm 20-30', leafy below; lvs. flat, erect, pubescent, narrow, 2-3' by 1-2"; pan. spike-like, 3-5'; spkl. (a) 2", silvery, about 2-flwd., with an abortive pedicel. (b, a flower.) Mid., W., and N. β. grácilis. Slender and delicate, with a simple pan. (K. nitida, N.)

40. DIARRHÈNA, Raf. Panicle simple, racemous. Glumes 2, very unequal, rigid, acuminate-mucronate, 2–5flwd. (*d*) Pales (*e*) cartilaginous, lower cuspidate, 3", upper much smaller, emarginate. Grain large, loose in its pericarp. Stam. 2. 24 Culm rigidly erect, 15—30'. Lvs. mostly radical, broad-linear.

D. Americana Beauv.-Woods and river-banks, O. to Ill. Aug. (Festuca, Mx.)

41. FESTÙCA, L. FESCUE G. Spkl. $3-\infty$ -flwd. Glumes unequal, mostly carinate. Pales firm, the lower rounded

(not carinate) on the back, obscurely veined, awned from the tip, or awnless. Sta. 1—3. Grain mostly & adhering to the upper pale. Spkl. panicled or racemed, the fls. remote, not webbed at base.

- § Flowers lanceolate to oblong, awnless. Culms
- tall, leaves flat.....Nos. 5-7 § Flowers subulate, awned at the tip. Leaves
 - **m**ostly involute...(x) x Awn much shorter than the flower. 24....Nos. 3, 4
 - x Awn as long as the fl. or much longer. (1.. Nos. 1, 2
- **1 F. Myùrus L.** Culm 5-12'; lvs. subulate, 2-3'; glumes minute, equal, 4-6-flwd.; awn 6", twice longer than the pale; panicle slender. M., S. §
- 2 F. tenélla Willd. Slender F. (a, b) Culm wiry-filiform, often in tufts, 6-12'; lvs. linear-setaceous; pan. simple, narrow, 2-3'; spkl. 6-9-fiwd., 4-6" long; flower puberulent, brown; awn about as long (2"). Sandy. June, July.
- S F. ovina. L. Sheep's F. Culm erect, 6-10'; lvs. numerous below, very nar row, 2-4'; pan. simple, narrow, 2-4'; spkl. ovate, 3-5-flwd.; fls. lance-oblong, 14' the awn 1-1 as long. 24 Pastures and fields. A valuable grass. June. Europe. β. vivipara. Spikelets transformed to leafy tufts. Mountains, N.
- 4 F. duriúscula L. Hard F. Culm erect, 12-18'; lvs. linear, flattish; pan. ob long, spreading, 3-5'; spkl. 5-8-flwd., teretish before flowering; fls. lance-subulate, 24", the awn 1" or less; pales equal. 24 Valuable. Common. June, July.

β. rubra. Spikelets 7-9-flwd., fls. pubescent; the herbage reddish. N.
5 F. praténsis Huds. Meadow F. Culm erect, 2-3f; lvs. lance-linear; pan. 4-6

- .ong, narrow, with short branches; spkl. few (10-25) and large, teretish before flow 2.ring, 6-9" long, 6-9-flwd.; pales 3", barely pointed. 24 A fine grass. June.
- P. elatior L. Culm 2-4f, erect; lvs. lance-linear; pan. diffuse, nodding, compound, branches branched, and floriferous above, naked below; spkl. numerous, 3-5-flwd., 2-3" long; fis. oblong, 1¼", acute; lower gl. 3-veined. 24 Fields.
- **7 F. nutans** Willd. Nodding F. (c, d) Culm slender, 2-4f, about 2-jointed; lvs, linear; pan. very open, with few long drooping branches floriferous at the end: spkl. 3", lance-ovate (c) 4-6-flwd.; fls. (d) smooth, nearly veinless. 24 Rocks. **β. pal**ústris. Panicle less diffuse, spkl. 3-5-flwd. Between Nos. 6 and 7.

42. EATÒNIA, Raf. Spkl. mostly 2-flowered, numerous, panicled, silvery. Glumes unlike, the lower linear, 1-veined, the upper broadly obovate, rounded and 3-veined on the back. Pales obtuse, chartaceous, awnless. Grain oblong. 24 Delicate grasses with simple culms.

a

- 1 E. obtusata (Mx.) Panicle narrow, dense, 3-5' by 1-1'; branches short, appressed; spkl. (a, b) 11'' long, 2-flwd., tumid; pales (c) scarious at tip, a little longer than the very obtuse upper glume. Dry. Penn. to Wis., and S. June, July. 2f.
- 2 E. Pennsylvánica (DC.) Panicle 5-10', slender, open and loose; spkl. 14''; upper gl. abruptly short-pointed, or obtuse; upper flower exserted half its length. Shady rocks and meadows. Elegant. Summer. 2f.

43. MELICA, L. MELIC G. Glumes unequal, obtuse, 2-5-flowered. Fls. exserted, the upper incomplete. Fales truncate, veiny as well as the glumes. Grain free. 24 Lvs. flat; spkl. pedicellate, in a subsimple panicle.

M. mitica Walt. Culm 3-4f; lvs. linear, flat; pan. few-flwd., inclined to one side; spkl. (e) 4-6" long, with 2 fertile fls., and the third upper one contorted; pales (f) unequal, veined. Penn. to Wis., and S.

44. ERAGROSTIS, Beauv. Spkl. $2-\infty$ -flwd., membranous. Lower pale carinate, 3-veined, never webby at base, upper pale persistent on the flexuous rachis after the free grain and lower pale have fallen. Culm simple or branched. Leaves often rolled, bearded at the throat. Panicle with hairy axils.

- § Culms branched, prostrate; spikelets sub-sessile No. 1
- § Culms branched, ascending; panicles 1-3..... Nos. 2-7
- § Culms simple, erect, shorter than its lor se pan... Nos. 8-11
- t E. reptans Nees. Culms creeping and rooting, 6-12'; lvs. subulate, 1-2'; panicles many, small, dense; spkl. lance-linear; fls. 10-30, very acute. (1) Banks. August.
- 2 E. pozeoides Beauv. (a) Culms ascending, 1-2f; lvs. linear, flat; panicles oblong, dense, 2-6', compound; spkl. (b) ovate-oblong, 3-5'', 8-50-flwd., turning white; fls. (c) obtuse, 3-veined; (d, grain). (1) Handsome, but ill-scented. Fields. §
- 3 E. pilòsa L. Culms in tufts, ascending, 4-12'; lvs. linear, flat, tender; panicles oblong, loose; spkl. linear, bluish, about as long (2-4") as their pedicels; flowers 4-12, obtuse, with only the midvein apparent. (1) Dry, sandy places. July. §
- 4 E. Párshii Schr. Culms ascending, 6-12-20'; lvs. 1-3', very narrow; panicles long and loose; ped. capillary; spkl. linear-oblong, 2-4"; fis. 5-12, acute or acutish, 3-veined, purplish. (1) Dry fields, N. J., Penn., and S. Common. July, August.
- 5 E. erythrógona Nees. (E. Frankii Meyer.) Culms in tufts, much branched, ascending, 6-18', *joints red*; pan. narrow, beardless, 2-4'; spkl. about 1", their ped. much longer; gls. and pales very acute, obscurely 3-veined. (i) Dry. Pa. to Ill., and S.
- 6 E. ciliàris (L.) Culms decumbent and ascending, 6-12'; pan. cylindrical branches appressed, covered with the minute ($\frac{1}{2}$) ovate spikelets; fls. 5-7, mucro nate, upper pale ciliate-fringed. (1) Waste grounds, South.
- 7 E. conférta Trin. Culm stout, erect, 2-3f; lvs. broad-linear; pan. long (5-12'), narrow, branches erect, covered with iznumerable small (1-14') spikelets; fis. 7--11. hysline. obtuse, 3-veined, whitish. (1) River banks, S. Aug., Sept.

- 8 L. tenuis (Ell. Poa trichodes N.) Plant 1-3f high; pan. long (8-24'), loose, ca illary, bearded in the lower axils; spikelets 3(2-6)-flwd. (sometimes 7-9-flwd. G7 xy); pales and glumes lanceolate, hyaline, 3-veined, 11'' long. 24 Ill., and S.
- 9 E. capillàris (L.) Like E. tenuis, but the spikelets are minute (1-14"), the fls.
 2-4, acute, scabrous, with only the midvein apparent. 24 Sandy fields. Aug.
- 10 E. nítida (Ell.) Plant 2-4f, glabrous and polished (except the bearded throat of the long, rolled lvs.); pan. 14-3f long, narrow, branches some whorled; spkl. lance-linear, 3-4", 5-12-flwd., on capillary divaricate pedicels; gl. and pales acute, 3-veined, often purplish, 1" long. 24 Marshes, Ill. (J. Wolf), and South.
- 11 E. pectinàcea (Mx.) Gr. (E. hirsuta [Ell. etc.]). Culm 1-3f, rigid; sheather some hairy; pan. very large, branches rigid, the lower deflexed in fruit; spkl. (e, f) oblong, purple, 2-3"; fls. 5-15, oval, acutish, strongly 3-veined. 24 Sandy fields July, Ang. (Poa spectabilis Ph.) A showy grass, sport of the winds when dry.

45. POA, L. SPEAR G. MEADOW G. Spikelets 2-5(rarely -9)-flwd., compressed. Glumes subequal, pointless, shorter than the contiguous fls. Pales herbaceous, soft, awnless, the lower compressed-carinate, 5-veined, usually clothed at base with a cobweb-like wool. Grain free. Smooth grasses, with soft flat leaves, and panicled flowers.

- 2 G. distans Wahl. Culm 1-2f, terete, firm; lvs. flat; pan. spreading, the branches fascicled in 3's-5's; spkl. oblong, sessile, 3(3-6)-flowered. 2 N.Y.
- 3 G. fluitans (L.) Culm flattened, 3-5f; lvs. broad-linear; ligule very large; pan. secund, virgate; spkl. linear, 8-10"; fls. 7-12, obtuse. Wet. June.
- 4 G. acutifiòra Torr. Culm flattened, 1-2f; lvs. narrow; pan. long, raceme-like, spkl. linear, 9-12"; fis. 4-6, distant, acute. 24 Wet places, Penn., and N. June.
- G. aquática (L.) (g) Stout, leafy, 3-5f; lvs. broad, soft; pan. diffuse, with spreading, flexuous branches in 3's—5's; spikelets (h) purple, 2–3", with 6–8 ovate, obtuse flowers (k). 24 Wet places. Pa., and N. A handsome grass.
- 6 G. pállida Trin. Weak, ascending, 1-24f; lvs. flat, with long ligules; pan, capillary, spreading; spkl. few, 3"; fls. 5-9; lower pale 5-toothed at apex, upper 2-toothed; the veins conspicuous. 24 Swamps, Va., and N. June.
- 7 G. nervata Trin. Culm 3-4f; lvs. broad-linear, ligules torn; pan. large, diffuse, branches in 2's and 3's, capillary, pendulous in fruit; fis. about 5, in the ovate. oblong spikelet, conspicuously veined. 24 Wet, N. June.
- 8 G. elongàta Trin. Culm terete, erect, 3f; lvs. narrow, ligule very short; pan, raceme-like. nodding, 8-10'; branches solitary or in 2's, appressed; spkl. tumid, of about 2 obtuse, 5-veined fls. Meadows, N., M., and W. July.
- 9 G. obtùsa (Muhl.) Pan. dense, oblong, erect, 3-4'; spkl. ovate, acute, thick, of 5-7 ovate, obtuse fis. ; lower pale obscurely 7-veined; culm 2-3f, lvs. often longer, dark green. 24 Swamps, Penn., and N. Aug., Sept.
- 10 G. Canadénsis Trin. (m) Panicle large, 6-8' long, branches flexuous, in halfwhorls, spreading or recurved; spkl. (n) broad-ovate, 6-8-flwd.; upper pale (o) very obtuse, lower acute and longer. 24 3-4f. Shady, N. July.

48. BRIZA, L. QUAKING G. Spikelets cordate, 6-9-flowered. Glumes 2, unequal, roundish. Pales ventricous, lower one cordate, embracing the shorter roundish upper one. Grain beaked. Paniculate, spkl. large, drooping on slender pedicels.

- 1 B. mèdia L. Pan. erect, spreading; spkl. soon cordate, of 5-9 flowers; gl. smaller than the greenish-purple veinless flowers. 24 Meadows. coastward, N. Eng. to Penn. May. (b. c)
- 2 B. MÁXIMA. Pan. nodding at top; spikelets oblong-cordate, of 13-17 flowers. (1) Gardens. Cultivated for the curious spikes, which are light-browr, hyaline, #' in length. From Europe.
- 3 B. MINOR. Pan. erect, diffuse: spkl. triangular, 5-7-flwd.; glumes larger than the flowers. (1) From Europe. Small and pretty.

49. UNIOLA, L. UNION G. Spkl. compressed, and two-edged, 3-20-flwd. Lower fl. or fls. neutral, Ju of 1 pale, similar to the 2 carinate gls. Pales awnless, the lower wing-keeled, upper doubly so. Sta. 1 or 3. Grain free. 24 Smooth, erect, often branching.

\$ Spikelets 6-16" long, in large open panicles. drooping......Nos. 1, 2 § Spikelets 2-6", subsessile, in slender, spikelike panicles......Nos. 3, 4

1 U. latifolia Mx. (a) Culm 2-4f; lvs. very broad, 1-1' wide; spikelets oblong-ovate, 9-12", flat, 9-13-flowered, drooping on slender pedicels; glumes (c) unequal, much smaller than the fis. (b) Sta. 1. 2 Dry woods, M., W. Elegant. August.

- 2 U. paniculàta L. Sea-side Oats. Culm 4-8f; lvs. long, narrow, rolled, tringed at throat, spikelets ovate, short-pedicelled, 12-20-flwd.; lower pale obtuse, 9 veined; stamens 3. 24 Sand-hills, coastward, Va. to Fla. July.
- 3 U. nítida Baldw. Culm wiry, 2-3f; lvs. narrow, flat; pan. simple; spkl. subsessile, broad, with about 7 long-pointed fls. Sta. 1. 24 Ga. to La.
- 4 U. grácilis Mx. (d) Slender, 3-4f; lvs. broad-linear, flat; pan. long, simple, branches solitary, appressed; spkl. (e) 2", 3-4-flwd. Sea-coast, N. Y., and South.

50. PHRAGMITES, Trin. REED. Fls. 3-6, the lowest sterile and monandrous; rachis beset with long silky hairs. Gl. acute, keeled, very unequal. Lower pale subulate, silky villous at base. Sta. 3. Grain free. 24 Tall; lvs. broad and flat; panicle diffuse.

P. communis Trin. Culm erect, 6-12f, near 1' thick; lvs. a 1-2' broad; pan. effuse, spkl. (a) 4-5-flwd., erect; fls. (b) colored, as long as the white bairs. Ponds. July.

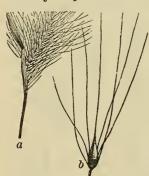

51. ARUNDINÀRIA, Rich. CANE. Spkl. flat-

drous, remote. Gl. (a) small. Lower pale lanceovate, rounded, awn-pointed. Stigmas (b) 3. Grain 5.5 Tall, branching, leafy. Flowers in (c) free. spikes or panicles.

- A. macrospérma Mx. (a) Culm woody, from strong running root-stocks, 10-25f high, with fascicled branches; lvs. lanceolate, 1f and less; spkl. 1-24' long, subsessile on leafless axillary or radical branches (from the rhizome) Swamps, Va. to Ky., and S., forming the brakes.
 - β. tecta. Culm 2-10f; lvs. lance-linear; spikes mostly radical.

52, LEPTURUS, Br. Spikelet 1 on each joint of the filiform rachis impressed into a cavity, 1- or 2-flwd. Gl. coriaceous, acute, subulate. Pales acute, subequal. Stam. 3. Grain linear, free. (1) Culm branching, leaves very narrow. Spikes solitary or panicled.

L. paniculàtus N. (c) Culm ascend-Nd. ing, 10-18'; lvs. near the base, filiform-subulate, short: rachis § of the" culm, the slender spikes 2', alternate, remote; spkl. 2", gls. lateral, shorter than the pales. Illinois to Louisiana.

53. HORDEUM, L. BARLEY. Spkl. 3 at each joint of the rachis, 2-flowered, the lateral imperfect or abortive. Gl. 2, subulate, awned, collateral, all 6 in front of the cluster Lower pale long-awned, both adhering to grain.

1 H. jubàtum L. Squirrel-tail G. (a) Culm terete, 2f; lvs. broad-linear; spike 2-3' long; spkl. (b) with the lateral fis. neuter, the 7 awns 6 times (2') as long as the flowers. (2) Marshes, N. Eng. to Mo., and N. June.

- 405
- 2 II. pusillum N. Culm ascending, 4-12'; lateral fis. awnless; centra. fl. 1 with 3 subequal awns (7"); spike linear, 1-2' long. (2) Ohio, and W. May.
- 3 H. VULGÀRE. Four-rowed B. Culm 2-4f; lvs. broad, auricled at base; spike thick.
 2-4': fls. all fertile, fruit in 4 rows. (1) Cultivated. May.
- 4 III. DISTICHUM. Two-rowed B. Culm and leaves as above. Lateral fis. abortive ; fruit arranged in two rows. (1) More common in cultivation. June.

54. ÉLYMUS, L. LYME G. WILD RYE. Spikelets 2-4 at each joint of the rachis, 2-6-flwd. Gl. 2, subulate, placed on the outer side of their spikelet, forming an involucre to the group, sometimes minute, or obsolete. Pales coriaceous, involving the grain, the lower acute or awned. (See Addenda.)

- § ELYMUS proper. Involuce present, consisting of the conspicuous glumes...(a)
- § GYMNÓSTICHUM. Invol. glumes small or minute, or obsolete......No. 6

 b Spikelets glabrous, merely rough, 2- or 3-flowered.......Nos. 1, 2
 b Spikelets hispid with hairs, 1-3- or 2-5-flowered......Nos. 3, 4
- E. Virgínicus L. Culm erect, 3-4f, smooth; lvs. broad, flat, scabrous; spike 3-5' long, thick, erect, often sheathed at base; gl. lance-linear, strongly veined, tipped (as well as the 2 or 3 fls.) with short (6-10'') awus. 24 Banks. August.
 β. arcui lus. (a) Glumes thickened and connate-arcuate at the base. S.
- 2 E. Europæus L. Culm erect, 3-5f; lvs. broad, flat, scabrous; spike suberect, 6-8', exserted; spkl. in 3's, 2-flowered, scabrous, each with 4 loug (11-2') straight awns; glumes linear, 5-veiued. 24 River banks, South.
- **3 E. Canadénsis** L. (b) Spikes 4-8' long, rather loose, modding, hairy; spikelets (b) in 2's and 3's, 3-6-flwd.; awns of the flowers (c) usually curved, longer than (7-13") those of the lance-linear glumes; culm 3-5f. 24 Banks. August.
- 4 E. striatus Willd. Spike 3-4' long, dense, suberect; spikelets in pairs, 1-3-flwd., hispid-pubescent; awns subequal, 3 or 4 times longer than the flowers. 24 Banka and rocky woods. Culm slender, 2-3f. August.
 - β . *villosus*. Culm 3–4f, sheaths villous, and the glumes very hairy.
- 5 E. mollis Trin. Culm 2-4f, stout, soft-pubescent above, as well as the erect 5-8 spike; spikelets in pairs, about 7-flwd.; leaves and sheaths smooth. Shores, N-W.
- 6 E. Histrix L. Hedgehog G. Glabrous, tall (3-4f); spike erect, 4-6'; spikeleta remote on the flexuous rachis, widely divergent, 2- or 3-flwd.; fls. subulate, 4' long, their awns straight, 1' or more; glumes commonly rudimentary. Mr. J. Wolf sends specimen from Illinois with awn-like glumes 4-8" long. 24 Woods. July.

55. LOLIUM, L. DARNEL G. Spkl. ∞ flwd., sessile, remote, placed edgewise to the axis, the terminal one with 2 glumes, the lateral with but 1. Pales herbaceous, the lower awned or mucronate.

L. perenne L. Ray Darnel. (a) Smooth, simple, 1-2f: spike 5-8'; spkl. 15-20, oblong, 5-6", awnless, i-13-flowered, flowers exceeding the glume. 24 Fields. May, June. 6

- 2 L. temuléntum L. Poisonous D. Smooth, 2f, simple; lvs. rough-edged; spkl. 5-7-flwd., remote on the scabrous rachis, shorter or not longer than their glume; fla, twice shorter than their awn. (1) Fields. Pa., and N. Grain poison. (b, c)
 - B. Canadénse (Mx.) Fls. awnless ! or some of them short-awned; glume 1' long, much exceeding the flowers. Wayne Co., N. Y. E. L. Hankenson.

56. TRITICUM, L. WHEAT. Spikelets sessile in 2 rows on the teeth of the rachis, and sidewise to it, its upper fls. abortive. Gl. 2, equal, opposite, mucronate. Pales 2, the lower awned or mucronate. Spike simple, rarely branched.

§ AGROPYRUM. Glumes lanceolate, acute or awn-pointed . Nos. 1, 2 § TRÍTICUM. Glumes ovate-oval, obtuse or truncate.....Nos. 3, 4

1 T. repens L. Couch G. Quick G. (a) Culms trailing at base, then erect, 1-2f, from long creeping rhizomes (Fig. 257, p. 78); spike (a) erect, 3-5'; spikelet remote, lance-oblong, 5-7-flowered;

awns short or 0. 24 A vile weed, in gardens, etc. June, July. (b, a flower.)

- β. dasystachyum. Glaucous; spikelets hoary-pubescent. Lake shores, N-W. 2 T. violaceum Hornm. Erect, 2-3f; root fibrous; spike slender, dense, 2-4'; spkl. closely imbricated, 3-5-flwd.; awns 1-3" long, straight. Mts., Pa. (Porter), & N.
- 3 T. caninum L. Dog's Couch G. Ascending, 2-3f; rt. fibrous; sp. dense; spkl. 5-7-flwd.; awns (6'') twice longer than the pale, some recurved. 24 Fields, Del. to Wis.
- 4 T. VULGÀRE. Common Wheat. Culm firm, 3-5f; leaves broad-linear; spike somewhat 4-sided; spkl. crowded, broad, 4-flwd.; gl. blunt, round-convex; flowers often awned; grain free. (1) (2) Varies as Summer Wheat, with awns, and sown in spring; and Winter Wheat, without awns, sown in autumn.

57. SECALE, L. RYE. Spikelets single on the teeth of the rachis 2-3-flwd., the 2 lower fls. fertile, sessile opposite, the upper one abortive. Gl. 2, opposite, subulate. Pales 2, herbaceous, the lower awned.

S. CEREÀLE. Culm firm, 4-6f high; lvs. glaucous; spike linear, flattened, 3-6', nodding; lower pale and its long straight awn ciliate-scabrous. (1) (2) Said to be native in the steppes of Caucasus. Cultivated from earliest times.

58. LEPTOCHLOA, Beauv. Spkl. 3- 00-flwd., subsessile, in onesided, slender spikes. Gl. 2, keeled, awnless. Pales membranous, awnless or awned, the lower keeled, 3-veined. Lvs. flat and soft. Pan. composed of many long, slender spikes. Aug., Sept.

- § Spikelets 2-4-flowered. Lower pale simply § Spikelets 6-10-flowered. Lower pale mu-
- cronate and notched.....Nos. 3, 4 1 L. mucronata K. Culm ascending, 2-3f; leaves
- broad-linear; pan. 1f or more; spikes filiform, 3-4', floriferous from base; spikelet of fls. minute, shorter than the mucronate glumes. (1) Fields, Va. to Ill., & S.
- 2 L. filifórmis R. & S. (b) Tall, stout; pan. 1-2f; spikes filiform, straight, suberect, 5-8', very many; spk. of fls. (d) exceeding the acute glumes. (1)? S-W.

3 L. fasciculàris (Lam.) (a) Tall, stout; pan. oblong, dense, 9-15'; spikes 2-3'; spkl. (c) lance-oblong, 2-3'', short-pedicelled; lower pale strongly 3-veined, the veins excurrent into 2 teeth and a cusp between Marshes, N.Y. S and W.

406

4 L. Domingénsis Link. Culms simple, slender; lvs. linear-filiform; spikes few (6-12), distant; spikelets nearly as in No. 3. S. Fla. (*Chapman*). Oct.

59. GYMNOPÒGON, Beauv. Spikes setaceous, corymbously panicled. Spkl. remote, 1-flwd., with an awn-like rudi-

ment. Gl. 2, keeled, lance-linear. Lower pale with a straight awn near the tip. 24 Low, reed-like.

- G. racemòsum B. (a) Culm ascending, 1¹/₄-2f; lvs. lanceolate from a broad base, short; spikes erect but soon spreading, thread-form, 5-8', floriferous from base; gl. (b) pungent; fertile flower and abortive rudiment (c), both long-awned. Sands, N. J., and S.
- 2 G. brevifòlium Trin. (d) Culm 8-16'; lvs. 1-2'; spikes bristle-form, 4-6', flower-bearing only above the middle; fertile fl. awned (e), rudiment not. Md., and S.

60. MANISÙRUS, L. LIZARD-TAIL G. Spikes terminal and lateral, their short stalks involved in sheaths. Spkl. in pairs, 1-flwd., the lower ξ , the

upper neutral, consisting merely of 2 empty subequal glumes. \notin Glumes coriaceous, the lower rounded, concave. Pales hyaline, thin. (1)

M. granulàris Swtz. Culm 2-3f, branching; sheaths hairy; leaves flat; spikes ↓-1', colored; spkl. minute, the perfect globular, its gl. tessellated. Waysides, S. §

61. CYNODON, Rich. BERMUDA G. Sp. digitate, one-sided. Spkl. 1-flwd. (c), with a rudiment. Gl. 2 (d), persistent. Pales 2, membranous, the lower keeled. Rudiment an awn-like pedicel.

C. dáctylon Pers. (a) Diffusely creeping, sending up short branches; narrow lvs. and sheaths hairy; spikes (b) 4 or 5, 2-3' long, spreading. 24 Waste grounds. Evergreen. Pa., and S. §

62. CHLORIS, Swtz. (Eustachys, Desv.) Spikes digitate-fasciculate, rarely few. Spkl. sessile along one side of the rachis, 2-8-flwd., the lower 1 or 2 fls. \$, the rest neutral or \$. Gl. 2, persistent, acute or

short-awned. Lower pale keeled, mucronate or awned below the tip Culms flattened, often branched. Leaves obtuse.

- 1 C. petræa (Thunb.) Culms 1-2f; lvs. linear, 2-4', flat, on carinate sheaths; spikos 3-6, straight, erect; spkl. 2-flwd., brown, ciliate. bearded at base. 2f Brackish. S
- 2 C. glauca (Chapm.) Glaucous, stout, 3-5f; leaves 18-24' by 1'; spikes about 20 spkl. roundish, upper flower obovate; pales brown. (1) Marshes, Fla. Aug. +
- 8 C. Floridàna (Chapm.) Slender, 2f; lvs. glaucous, 2-4'; spikes 1 or 2: spkl. 3-flwd., light brown, middle flower 3, upper neutral, both smooth. Barrens, Fla., J. +
- 4 C. RADIÀTA. From E. Ind. Cultivated for ornament. Culms leafy at base, scapelike, bearing at top numerous long, slender, radiating spikes; spikelets 2-flowered, with 2 long awns, the fertile flower bearded at base, the sterile club-shaped.

63. ELEUSINE, Gaert. CRAB G. YARD G. Spikes digitate, uni lateral. Spikelet 5-7-flwd., sessile. Gl. obtuse, the lower smaller. Pales

awnless, lower carinate, upper bicarinate. Grain ovate-triquetrous, free, loose in its pericarp. Lvs. flat.

E. Índica L. Culms clustered, ascending, 3-6-12'; leaves linear; spikes (a) 2-4, rarely 1, linear. straight, spreading, 2-4' by 2''; spkl. (b) closely imbricated on the under side of the rachis, smooth; fruit brown. (1) Waysides: common M., S-W. August.

64. DACTYLOCTÈNIUM, Willd. EGYPTIAN G. Spikes several, digitate, unilateral. Spkl. $2-\infty$ -flwd. Gl. compressed-carinate, the upper awned. Pales boat-shaped, acute-mucronate. Grain roundish, free.

D. Egýpticum Willd. Culms creeping and ascending, 1-1if; lvs. ciliate at base; spikes commonly 4 (cruciate), pointed; spkl.3-flwd. (1) Fields: com. Va. to Fla. §

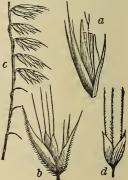

65. SPARTINA, Schreb. MARSH G. CORD G. Spkl. flat, 1-flwd., closely imbricated in a double row on one side of the triquetrous rachis, forming dense spikes. Glumes keeled, coriaceous. Pales awnless. Style very long. 24 Rigid marsh grasses.

- * Upper glume decidedly awned. Lower pale roughhispid on the keel No. 1

- **B. curtipéndula** (Mx.) (c) Culm ascending, 1-2f; leaves lance-lineat; sp.kes 20-40, near $\frac{1}{2}$ long, deflexed; spkl. (a) 2-flwd., abortive fl. 1-awned. 24 M., W. Jl.
- 2 B. hirsùta Lag. Culms tufted, 1f; leaves at base lance-linear, flat; spikes 1-3; glumes (b) glandular-hispid, shorter than the 3 awns of the smooth (d) sterile flower.
 (1) Sandy soils, Wis., and S.
- **3 B. oligostáchya** (N.) Culm filiform, 6-12'; lvs. at base subulate-setaceous; gl. and lower pale downy, equaling the 3 awns of the villous ster. fl. 24 Wis., and W.

67. CTÈNIUM, Panner. TOOTH-ACHE G-Spkl. (b) 4-5-flwd., closely imbricated on one side of a flat rachis, middle fl. &, the upper and lower sterile. Upper gl. exterior, with an awned tubercle on the back. Lower & pale awned near the apex, silky-fringed below. Spike solitary, recurved.

C. aromáticum (Ell.) Culm rigidly erect, 3-5f; leaves involute-setaceous above; scorpoid spike (α) 4-6', very dense, the short, stout, divar. awns arranged in 3 rows. 2 Sandy swamps, Va., and S. Curious. Herb. pung.

68. TRIPSACUM, L. SESAME G. Spikes & above, & below. Gl. coriaceous. & Spkl. 2-flwd., inner fl. neuter. & Spkl. 2-flwd., the lower abortive. Outer gl. covering the fls. in a cavity of the thick-jointed rachis, with an aperture each side at base.

- **T. dactyloides** L. Culm solid with pith, 4-6f, stout; lvs. broad and flat; spikes (5-8') 2 or 3 together at top, and solitary in the sheaths, sometimes, in
 - β. monostáchyon, solitary at the top also. 24 Banks and shores, Fenn. to Ill.

69. ZEA, L. INDIAN CORN. & Fls. awnless. & Fls. in a terminal panicle of racemes; spkl. (a) 2-flwd. & Fls. embedded in the thick axillary spadix (cob), which is enveloped in many bracts (husks); spikelets (b) 2-flowered, 1 fertile. Glumes roundish. Pistil thread-form (silk), very long, green. (1) Culm solid.

Z. Mays L. Culm stout, erect, 5—15f, smooth, with many ample lin.-lanceolate lvs. Native of S. Am. Cultivated in many varieties. Grain always in even 8—24 rows in the *ear*, golden yellow, varying to br.-purple or pearl-wh β. JAPÓNICA. Leaves variegated with MAC.

stripes of white and green. Gardens.

70. ROTTBOILLIA, Br. RAT-TAIL G. Spkl. in pairs at each joint of a terete spike, one sessile in a cavity of the rachis, 2 flwd., the other pedicelled, abortive. Lower fl. of the sessile spkl. abortive. Gl. 2, subequal, the outer concave, coriaceous. Pales hyaline. 24 Spikes pedunculate. Culm solid.

1 B. cylindrica (Mx.) Pedicellate spkl. a minute rudiment; & glume ovate acute, obscurely impressed-dotted in lines; spikes cylindric, slender, single.

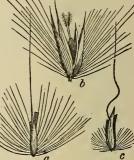

culm terete, slender, 2-4f, with very narrow involute-setaceous leaves. Dry bar rens, Fla. to La. July. + (R. campéstris N.)

- 2 R. rugòsa (N.) Pedicellate spkl. neutral; & gl. lanceolate, transversely *rugous*; spikes 2-3', terminal and axillary; culm compressed, 2-4f. Swamps, S. Sept.+
- **3 R.** corrugàta Baldw. (a) Pedicellate spkl. (d) staminate; s gl. (c) ovate, deeply reticulately pitted; spikes 3-6', colored; culm compressed, 2-4f. Low lands. S.

71. STENOTAPHRUM, Trin. Spike flattened. Spkl. 2-flwd., in pairs at each joint, embedded, one pedicelled and sterile, the other sessile and constructed like Panicum (p. 391). 24 Culm branched.

S. dimidiàtum (Thunb.) (a) Smooth, leafy, decumbent, 2-3f; leaves (b) lance-linear, flat; spikes single, lateral and terminal, 3' by 3', joints not separating. Low lands, S. June.+

72. ERIANTHUS, Rich. PLUME G. Spkl. all fertile, 2-flwd., in pairs at each joint of the slender rachis, one sessile, the other pedicelled, both involucrate at base with a tuft of hairs. Gl. subequal, exceeding the fls. Lower fl. neutral, of 1 hyaline pale, upper of 2, 1-awned. 24 Stout, erect grasses, with flat leaves and tawny silky panicles.

§ Hairs of the invol. much longer than the spkl..Nos. 1, 2 § Hairs of the involucre short or none.....Nos. 3, 4

E. alopecuroides Ell. Culm (6-10f !) and broadlys.
 silky-hirsute; panicle dense, oblong, 12-20'; hairs of the invol. twice longer than the (2¼') spkl., thrice shorter than the straight awn which is terminal on its pale. Wet pine-barrens, N. J., W. and S. (a, b)

- 2 E. contórtus Ell. Culm (4-6f), and broad-linear leaves glabrous; panicle oblong, 6--10'; hairs of the invol. thrice longer than the (3'') spkl., twice shorter than the contorted awn issuing from the base of the 2-cleft pale. Wet grounds, S.
- 2 E. brevibárbis Mx. Culm and leaves as in the last; panicle dense, 8-14'; hairs shorter than the (4") spkl.; awn some twisted, 8-10"; pale bifid. Low grounds, S. (c)
- 1 E. strictus Bald. Culm (4-7f) and long, narrow (3-5") leaves glabrous; panicle strict, spike-form, 10-20', reddish brown; awn straight; invol. almost 0. Banks, S.

73. SACCHARUM, L. SUGAR-CANE. Spkl. all fertile, awnless, in pairs, one sessile, the other pedicellate, 2-flwd., lower fl. neuter, of a single pale, upper fl. \notin of 2 pales. Gl. 2, subequal. Pales 2, hyaline. Sta. 1—3. 24 Gigantic tropical grasses with branching panicles. Spikelets cinctured at base with long silky hairs.

S. OFFICINÀRUM. Culm solid, short-jointed, erect, 8-20f; lvs. many, broad and hat, pan. 1-2f, of numerous racemes, richly clothed with the long, white, silky, involucrate hairs. Native of S. Asia. Cultivated far South.

74. ANDROPÒGON, L. BEARD G. Spkl. in pairs at each joint of a slender rachis (a), one on a plumous-bearded pedicel (d) imperfect, the other (e) sessile, 2-flwd. Lower flower of 1 empty pale, upper flower $\stackrel{\vee}{2}$ of 2 hyaline pales, the lower tipped with an awn. Sta. 1—3. 24 Culnus crect, branched, coarse. Flowers spiked.

- **J A. macroùrus** Mx. Culm erect, 2-3f, much branched; spkl. very delicate, in pairs, with a spathe, very many, forming a dense leafy, silky panicle; sterile spikelet only a pedicel; & awn a straight bristle, 8", hairs 4". Wet grounds, N. Y., and S. Sept.+
- 2 A. Virgínicus L. Culm triangular, tall (3--5f), the upper half loosely paniculate and nodding; spikes (like No. 1, light and feathery, 1', two from each spathe) scat-

- tered; sterile spikelet a mere pedicel; awns 9"; spathe 2'. Dry soils. Sept., Oct.
 3 A. argénteus Ell. Culm purplish, slender, 1-3f; branches 1 or 2 at each upper node, each with a pair of spikes 12-15" long at top; fls. concealed by the silvery-white hairs; awn 7-8". No spathe. Dry soils, Va., and S. Sept., Oct.
- 4 A. tetrástychus Ell. Culm erect, 2-3f; leaves and sheaths very hairy; branches 1 or 2 at each node, each with 4 (rarely 2) spikes at top; sterile spikelet an awnlike glume only; glume serrulate; awn 4 times its length. Low lands, S. Sept.
- **b A. furcatus** Muhl. Forked spike. Culm erect, 4-7f; lvs. and sheaths glabrous; spikes purplish, digitate, in 2's-5's, 3-5' long; spkl. appressed, the stalked one 3; awn of the & flower bent, 8-10" loug. Mcadows and prairies: common. August.
- 6 A. tener (Nees). Culms 2-3f, slender, rigid; leaves narrow, rigid; spikes erect, 2, slender; spkl. appressed; pedicellate fl. neuter; & awn bent, 4-6". Dry barrens.
- 7 A. ciliàtus (Nutt.) Culms 3--4f, with long linear lvs.; spikes 3--6', on long ped icels; hairs close-pressed, white; spkl. awnless, the stalked one &. Damp, S.
- **8** A. scoparius Mx. Broom G. (a) Culm 3f, erect, with erect, often fascicled branches; lvs. more or less hairy; spikes single on the filiform pedicels, loose, 6-12-flowered, hairs spreading nearly as long as the fls.; \forall awns 6" long, twisted; stalked flower (b) neuter, or (in β . *Halei*) (d) staminate. In dry fields, forming tufts.
- 9 A. melanocárpus (Muhl.) Culms 4-8f; lvs. glabrous; spikes numerous, clustered; spkl. many, large, each from a subulate spathe, the 2 lower spathes longest, glume-like 2 awn 3-4' long, twisted. Fields, Ga., Fl. Sept.+

75. SORGHUM, Pers. BROOM CORN. Spkl. in 2's and 3's, panicled, the middle spkl. complete, 2-flwd., lower fl. abortive. Lateral or lower spk sterile. Glumes coriaceous, pales membranous. Sta. 3. Otherwise like Andropogon. Culms simple.

- 1 S. nutans (L.) Indian G. Wood G. Culm 2-4f; pan. elongated, 10-20', narrow, nodding; spkl. all tawny, the sterile reduced to mere pedicels in contact with the \mathfrak{s} , all bristly ciliate; awn contorted, longer than the flower. 24 Dry: common.
- 2 S. SACCHARÀTUM. Broom Corn. Culm thick, solid, 6-10f; leaves broad, downy at base; panicle large, diffuse, with the slender branches whorled; a glumes hairy, persistent. (I) E. Indies.
- 3 S. VULGÀRE. Indian Millet. Culm erect, 6-12f, round. solid ; leaves broad, keeled pan. compact, erect, oval ; glumes and pales caducous, fruit naked. ① E. Ind.—The Sugar Sorghum is regarded as a variety of this species.

76. COIX LACRYMA. JOB'S TEARS. Culm 1—2f, solid, with erect, stender branches clustered in the upper sheaths; leaves lanceolate. Spikelets few in the short spikes, awnless, the lowest enclosed in an involucre which becomes ovoid, bony polisbed, and bluish-white, likened to a falling tear. D Gardens. From E. Indies.

SUBKINGDOM, CRYPTOGAMIA,

OR FLOWERLESS PLANTS. Vegetables destitute of true stamens and pistils, gradually descending to a mere cellular structure, with reproductive organs of 1 or 2 kinds, producing, instead of seeds, minute, dust-like bodies (spores) having neither integuments nor embryo.

PROVINCE, ACROGENS. Flowerless plants, having a regular stem or axis which grows by the extension of the apex only, without increasing in diameter, generally with leaves, and composed of cellular tissue and scalariform ducts. (Ferns, Mosses, Club-mosses, Horsetails, &c.)

ORDER CLVI. MARSILIACEÆ. PEPPERWORTS.

Herbs creeping or floating, with the leaves petiolate or sessile, circinate in vernation. Fruit (sporocarps) situated at the base of the leaves or leafstalks, containing the capsular sporanges of one kind with 2 kinds of spores, or of 2 kinds with the different spores separated.

1. MARSILIA, L. Sporocarps at the base of the leaf-stalks, of one kind, 2-celled, cells transversely many-celled, separating into two lobes at maturity. Sporangia inserted on each horizontal partition, of 2 kinds, some 1-spored, others ∞ -spored. 24 Stems creeping and rooting. Leaves petiolate, apparently radical, of 4 whorled leaflets, resembling clover.

- 1 M. quadrifòlia L. Lfts. round-cuneiform, as broad as long, glabrous; sporocarps oblong, smoothish, 1, 2, or 3 on each short peduncle, as large as a peppercorn. 24 Petioles 3-5' high. Margin of pond, Litchfield, Conn. (Prof. Eaton). Leaves floating.
- 2 M. vestita Hook & Grev. Lfts. cuneiform-obovate, longer than broad, glab.; sporecarps glob.-oval, 2¹/', hisp., 1 only on each short (3'') peduncle, 2-toothed on back. S-W.
- 3 M. uncinàta Braun. Lfts. cunciform-obovate, hispid, petioles 1-2/ high; sporocarps 2", subsessile at the base of the petioles, clothed with rust-colored wool. Iowa.

2. ISOETES, L. QUILLWORT. Sporocarps oval, 1-celled, of 2 kinds, sessile in the axils of the radica. .vs. and adhering to them. Spores in the outer sporangia larger, globular; in the inner minute, powdery. 21 Leaves linear, grass-like, clustered on the short corm.

- * Species growing under water, generally wholly submersed, in ponds, &c.. Nos. 1-8
- * Species growing in shallow water, or in damp grounds, emersed...... Nos. 4-7
- 1 I. lacústris L. Lvs. 2-6', subulate, rigid, erect-spreading; sporocarps round-ovate, unspotted, the larger spores with crested ridges. Varies with the leaves setaceous subulate and recurved, the sporocarps rarely a little spotted. N.

- 2 I. echinóspora Dur. Lvs. subulate, 3-10', red at base, 15-30 in number; sporocarps round-ovate, spotted, larger spores echinate with minute points. N. J., Pa., & N.
- **3 I. fláceida** Shutt. Lvs. *flaccid*, 1-2f long, almost filiform, yellowish green; sporocarps oblong-ovate; spores not netted, minutely roughened. Ponds and lakes. Fla.
- **4 I. ripària** Eng. Lvs. 10-30 in number, 4-S', lin.; sporocarps oblong, spotted; spores with a band of crested ridges, ash-colored; leaves emersed. Del. R. (Porter), and N
- 5 I. saccharàta Eng. Leaves few (7-15), subulate-filiform, 2-3', recurved; sporocarps ovate, spotless; spores minutely tubercled. Wicomico R., Md. (Canby, Porter).
- 6 I. melanópoda J. Gay. Leaves very slender, 8-10', carinate on the back, brown at base; sporocarps brown; spores smooth, smaller than in No. 5. Ill. (Prof. Porter).
- 7 I. Engelmánni Braun. Leaves 25-100, 10-20' long, filiform-linear, weak; spore carps oblong, spotless; spores honeycombed all over. Shallow waters, E. and W. β. grácilis. Leaves about 10, very flaccid, 1f. N. E. to Ill. (J. Wolf).

y. valida. Lvs. very numerous, 2f, from a stock 6"-1' thick. Del. & Pa. (Porter).

3. AZÓLLA, Lam. Small floating plants, with filiform stems and minute imbricated leaves or fronds. Sporocarps of 2 kinds, sessile on the under side of the branches, the smaller sterile, filled with *antheridia*, the larger fertile, thin, containing *sporangia* on stalks, each with several spores

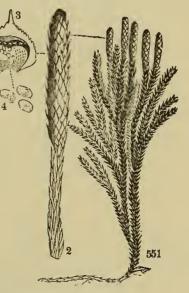

A. Caroliniàna Willd. Lvs. ovate-oblong, obtuse, fleshy, 4", reddish beneath; ster ile fruits 1 or 2 at the base of the fertile, and many times smaller. Still waters, N. & W

ORDER CLVII. LYCOPODIACEÆ. CLUB Mosses.

These are interesting evergreen creepers or runners, rarely erect, branching, abounding in ducts, with the *leaves* small, numerous, crowded, entire, lanceolate or subulate, i-nerved. *Fruits* sessile, axillary or crowded into a spike, 2-valved, containing tew rather large spores, or numerous minute ones appearing like powder.

551, Lycopodium dendroideum. 552, A single spike. 553, A scale with its axillary sporange bursting. 554, Spores.

1. LYCOPODIUM, L. CLUB Moss. Spore-cases all of one kind, 1-celled, reniform, opening transversely, 2-valved; spores numerous, minute, sulphur-yellow.—Leaves in 4, 8, or 16 ranks.

§ Fruit in pedunculated spikes (the fertile branches nearly leafless)...(c)

§ Fruit in sessile spikes (the branches leafy throughout)...(b)

§ Fruit scattered, axillary, forming no distinct spike	Nos.	1, 3
b Leaves of the spike bract-like, discolored	Nos.	3, 4
b Leaves of the spikes and stems all alike		
c Spikes several (2-6) on each peduncle	Nos. 9), 10
c Spike solitary on each peduncle		
L. Selàgo L. Fir Club Moss. Erect, 2-6', fastigiately branched ; lvs	. covering	the
branches, all alike, entire, acute and pungent, awnless. Tops of high n	nountains	N.

- 2 L. lucidulum Mx. Shining C. Ascending, forking, 8-16'; lvs. it 8 rows, hnear lanceolate, denticulate, shining, spreading or reflexed, pointed, large for the genue (3-4'), the fruitful ones like the rest, as in No. 1. Damp woods.
- **3 L. inundatum** L. Marsh C. Stem creeping, often submersed, the simple solitary ped. 1-3' (Conn., Mr. Bowles) or 4-7' (Mass., Dr. Ricard); leaves soft and fine, curving upward; spike solitary, 1-1¹/₄ long, leafy. Swamps, Can. to Car.
- 4 L. alopecuroides L. Sterile branches decumbent, shorter than the tall (7-20') erect fertile ones; leaves crowded, subnlate, awned; spikes leafy, 2-3' long. Swamps in pine-barrens, N. J. to Fla. and La.
- 5 L. annótinum L. Creeping, branches twice forked, ascending 6-8'; leaves in 5 rows, lance-linear, spreading, denticulate; spikes solitary. Woods, N.
- 6 L. dendroideum Mx. Tree C. Ground Pine. Erect, about 8', with its erect branches spirally arranged, forked and crowded; lvs. lance-linear, in 6 equal rows; spikes several but solitary, 1¼', yellow-brown. Woods. Very elegant.
 β. obscurum. Branches spreading; spikes 1 or 2, greenish brown.
- 7 L. Caroliniànum L. Stem and branches creeping and rooting; lvs. appearing 2ranked, the lateral spreading while the others are appressed. lanceolate; peduncles simple, 2-4', bearing each a single spike. Barrens, N. J., and S.
- 8 L. sabinæfòlium Willd. Ground Fir. Long, creeping; branches erect, short, with fastigiate branchlets; lvs. terete-subulate; ped. short. White Mts., and N.
- **9 L. complanatum** L. Festoon Ground Pine. Long, trailing; branches repeatedly forking, fan-shaped, spreading; leaves 4-ranked, the marginal connate, diverging, the others distinct, appressed; peduncles long, with 4--6 spikes. Woods.
- 10 L. clavàtum L. Common C. Extensively creeping, branches ascending; leaves scattered, incurved, bristly-acuminate; peduncles erect, remotely bracted, 3-5', bearing a pair of straight spikes 2' long. In shades: common.

2. SELAGINELLA, Spr. DWARF CLUB Moss. Fruits of two kinds, viz., antheridia, which are 1-celled, opening at apex; and oöphoridia, larger, containing 1—4 (rarely 6) globous-angular grains.—A large genus. The species are cultivated in every greenhouse. Spikes quadrangular, bracts in 4 rows. (Lycopodium L.)

- § Leaves of 2 kinds, in 4 rows, those of the 2 lateral rows larger and spread
 - ing, of the 2 intermediate rows superficial, small, appressed...(a)
 - a Slender rootlets produced along the stems.—x Leaves unequal-sided..Nos. 3-5—x Leaves equal-sided...Nos. 6-8
 - No rootlets, &c.-y Stems erect, frond-like, simple, stalk-like below..Nos. 9-11 -y Stems diffuse, branched from the base.....Nos. 12, 13
- S. rupéstre (L). Sts. ascending, 2-4', divided into numerous tufted, mossy branches; leaves crowded, fine, blue-green, ciliate; spike indistinct, 6''. Rocks.
- 2 S. selaginoides (L). Stem filiform, creeping, branches suberect, 3-6', the fertile simple, 1-spiked; leaves lanceolate, yellow-green, ciliate. Woods, N.
- S. apus Spr. Stem weak, loosely branched, with hair-like rootlets near the base;
 leaves ovate, slightly oblique, acutish, the smaller ones pointed. Damp. +
- S. STOLONÍFERA. Sts. producing long threadform rootlets below, 3-4-pinnately branched; branchlets 2-4" broad; lvs. imbricated, ovate, entire, obtuse, the smaller ones with a filiform straight point. The older stems become zigzag. 6-10'. Com. (S. Mertensii.)

 5 S. DENTICULÀTA (or Kraussiàna). Prostrate, delicate, remotely and somewhat 3-pinnately branched; ieaves 1", oblong-ovate, minutely denticulate, acute, distant on the stem, crowded on the branchlets; smaller leaves with reflexed points. Very common.
 B. VARIEGÀTA. Ends of the branchlets with their leaves white. Rootlets hair-like.

6 S, UNCINÀTA (or cæsia). Long-creeping, with hair-like rootlets, 2-3-pinnately branched.

branchlets crowded, short, 2" wide; leaves crowded, oblong, entire, obtuse, the smaller ones with an *uncinate* (reflexed) slender point.

- 7 S. SERPENS. Stems prostrate, with hair-like rootlets, 2-3-pinnate; branchlets short and crowded, 1" wide; lvs. crowded, round-ovate, cordate, obtuse, entire, the smaller acute.
- 8 S. DELICATÍSSIMA. Sts. creeping, 5-8', rooting, filiform, loosely 2-3-pinnate, 1" wide; leaves ovate, obtuse, ciliate, not crowded, the middle ones scarcely smaller, acute.
- 9 S. CAULÉSCENS. Glabrous, suberect, 12-18', 3-4-pinnately branched, fern-like, and lanceolate in outline; branchlets close, 14'' wide; leaves close, ovate, entire, very acute, the points turned upward; smaller leaves mucronate; stem straw-colored.
- 10 S. WILLDENÒVII. Like the last as to stems and branches, but they are finely pubescent, and the leaves are less crowded, ovate, and obtuse. 6-12', ovate in outline.
- 11 S. ERYTHROPUS. Stems red, with scattered, appressed leaves; frond wide-spread, somewhat palmate, with crowded branchlets and leaves, branchlets 1¹/['] wide; leaves ovate-oblong, oblique, obtuse, ciliate, the smaller with long straight points.
- 12 S. CUSPIDÀTA. Stem or frond 3-6', densely and somewhat dichotomously branched; branchlets 1" wide; leaves closely imbricated, all nearly alike, elliptical, ciliate, bristle-pointed, with the point inclined upward.—A variety (perhaps the fertile stems) are lanceolate in outline, 2-3-pinnately branched.
- 13 S. LEPIDOPHYLLA, Resurrection Moss, is a roundish ball when dry. In a cup of water it soon expands into a dense circle of dark-green, densely 2-3-pinnate fronds, with innumerable oval, obtuse, entire leaves. From Lower California.

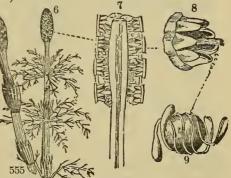

3. PSILOTUM, R. Br. Sporangia sessile, 3-celled, imperfectly 3-valved by terminal chinks, filled with farinaceous spores.—Stem fork-branched, with alternate, minute leaves, as if leafless.

P. tríquetrum Swtz. Stem erect, 8-10', many times forked, and, with the branches.
 ?angled; leaves remote, t''; fruit 3-lobed, sessile along the branches. E. Fla

Plants leafless simple stems, or with whorled branches. *Stems* striatesulcate, jointed, fistular between, and separable at, the joints. *Sheaths* dentate, crowning each internode. Fructification a dense, oblong-cylindric, terminal, and cone-like spike, composed of 6-sided, peltate scales, arranged spirally, bearing beneath 4-7 spore-cases, which open laterally. *Spores* globular, each with 4 *elaters* attached, involving them spirally, or open when discharged. (See Figures.)

EQUISÈTUM, L. SCOURING RUSH. Character the same as that of the order.—The sheaths may be regarded as a whorl of united lvs. The cuticle abounds in silex.

555, Equisetum arvense. 556, E. sylvaticum. 557, Section of the spike, enlarged. 558, A peltate scale with 7 sporanges beneath (or one compound sporange), magnified. 559, A spore with its elaters highly magnified.

§ Species fruiting in Spring and decaying before the following Winter...(a)
§ Species fruiting in Summer and lasting through the following Winter...(b)

- a Fertile stems never branching, the sterile with simple, whorled branches. Nos. 1.2
- a Fertile stems at length, like the sterile, with compound, whorled branches. Nos. 3. 4

 - b Stems mostly simple, large, 20-40-furrowed......Nos. 7-9

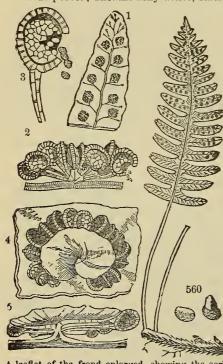

- 1 E. arvénse L. Fertile stems erect, 6-8', simple ; sterile 12-14-furrowed, with simple, ascending, 4-angled branches; sheath cut into long dark-brown teeth; spike 6-12", oblong. Can. to Va. and Ky. The sterile stems appear after the fertile. β. serotinum. Sterile plant also producing a late spike of fruit. Pa. (Porter)
- 2 E. Telmateia Ehr. Ivory H. Sterile stem 2-5f, white, about 30-furrowed, its 30 branches 4-angled; fertile stems simple; sheaths with subulate teeth. . L. Superior.
- 3 E. sylváticum L. Stems 12- or 13-furrowed, both kinds with compound, deflexed, angular branches, 9-16'. Woods and low grounds. North.
- 4 E. praténse Ehr. Stems 10-12-furrowed, both kinds soon producing simple, straight branches, in several whorls; branches 3-angled. N. W.
- 5 E. limosum L. Pipes. Stems 2-3f, smooth, erect, 15-20-striate, mostly with a few irregular, simple, 5-sided branches near the middle; sheaths white above, with 15-20 teeth, tipped with black. Shores and swamps.
- 6 E. palústre L. Sts. 1-14f, erect, with 6-8 prominent striæ; branches few, sheaths with as many pointed teeth as striæ. Marshes, N. Rare in the United States.
- 7 E. lævigatum Brann. Stems 2-3f, erect, simple or some branched; sheaths long (6-7'), close, green, with 20-25 black teeth; branch sheaths 8-toothed. Miss. River.
- 8 E. robústum Braun. Sts. 2-4f, very stout, some branched above; sheaths short (3-4"), close, with 40 (in the branches 11) decidnous teeth, and a black band near the base, rarely with another above. River banks, W. States to California!
- 9 E. hyemale L. Scouring Rush. Stems all simple, erect, 2f, very rough with sili cions points; sheaths ashy-white, black at base and summit, short (2-3"), with about

20 subulate, awned, deciduous teeth. Conspicnous in wet shades.

- 10 E. variegàtum Schleicher. Simple (branched from base), slender, straight, 6-12', 5-9-furrowed; sheaths very short, with brown bristle-tipped teeth. N. Rare.
- 11 E. scorpioides Mx. Sts. tufted, filiform, 4-8', recurved, 3-4-turrowed ; sheaths black, teeth 3 or 4, scarious and bristletipped. Woods, Penn., and N.

ORDER CLIX. FILICES. FERNS.

Stem a perennial, creeping, horizontal rhizome, or sometimes erect and tree-like. Fronds (fruit-bearing leaves) variously divided, rarely entire, with mostly forked veins and circinate vernation. Fruit occupying the back or margin of the fronds arising from the veins. Sporangia (spore-cases) of one kind, scattered, or clustered in sori, 1-celled, containing numerous minute spores.

A leaflet of the frond enlarged, showing the sori. 562. One of the sori enlarged, showing the sporan-gia. 563, One sporange further magnified, bursting and discharging its spores. 564, A sorus of Aspidium marginale covered with the indusium. 565. Side view of the same.

b Stems always simple, very slender, 3-9-furrowed......Nos. 10, 11

A large and interesting Order, distinguished for their elegant, plumelike foliage. They are usually a few inches to a few feet high, but some of the Tropical species, as the Cyatheæ, are 15 to 25 feet, vieing with the Palms in size and beauty.

The stipe is the stalk of the frond, and the rachis its continuation through it. The oinnæ (or pn.) are the first divisions of a divided frond (often called leaflets). Pinnulæ (or pnl.) are the first divisions of the pinnæ when further divided. Segments (seg.) are the final divisions, and the partial divisions of the segments are lobes, &c. The sori (fruitdots) are either naked, or covered with an indusium (see cut).

§ POLYPODIACE ... THE TRUE FERNS, with fronds mostly radical, circinate in bud. Sporangia in sori, pedicellate, with a vertical, elastic ring, opening transversely...(f)§ CYATHEACEÆ. THE TREE FERNS, with fronds on an erect trunk. Sporangia as in § 1 ... (e) § HYMENOPHYLLACEÆ. PELLUCID FERNS ; sporangia in a cup and on a thread...(d) § SCHIZÆCEÆ. Very slender vines or fronds. Sporangia with a ring-crown at apex...(c) SOSMUNDIACEÆ. Fronds stout, radical. Sporangia with no ring, 2-valved...(b) a Fruit in a spike. Frond entire, reticulate-veined.......OPHIOGLOSSUM. 1 e Fronds 3-parted, middle division sterile, the lateral paniculate......ANEIMIA. 6 d Fronds pellucid or opaque. Sporangia with a transverse ring......TRICHOMANES. 7 f Sporangia scattered singly all over the surface (not in sori), naked...(q) f Sporangia collected in dots (sori) growing from the veins...(h) g Fronds simple or pinnate. Pinnæ on short petiolules......ACROSTICHUM. 10 h Sori (fruit-dots) naked, having no covering of any kind...(k) h Sori involved (at first) in the rolled segments of the panicled fertile frond...(m) h Sori not involved, but invested with special coverings (called *indusia*)...(n) k Fronds smooth or scaly, never powdery. Sori distinct, roundish..... POLYPODIUM. 12 k Fronds powdery or scaly on the back (bipinnate). Sori in a marginal line......NOTHOLENA. 14 & Fronds linear, simple. Sori in a continuous line on the split margin. Fla...... VITTARIA lineata. m Fertile frond pinnate, pinnæ moniliform. Veins forking.....STRUTHIOPTERIS. 16 m Fertile fronds bipinnate, segments oblong, soon opening.....ALLOSURUS. 17 n Sori marginal, indusia only the reflexed altered margin of the frond...(o) n Sori marginal, indusium double-a scale combined with the margin...(p)n Sori dorsal, oblong or linear, indusium attached to the side of a vein...(q)Sori dorsal, round or roundish, indusium on the back or the tip of a vein...(x) o Fronds of 2 kinds, the fertile contracted. Sori continuous to apex...... LOMARIA. 18 o Fronds all similar, smooth. Indusia continuous all around. Stipe green or brown.. PTERIS. 19 o Fronds woolly, &c. Sori separate or continuous. Stipe brown, hairy.....CHEILANTHES. 20 o Fronds smooth. Sori separate. Stipe black and polished......ADIANTUM. 21 p Indusium a 2-lipped cup at the edge of the segments..... DICKSONIA. 22 p Indusium an entire cup or goblet at the edge of the segments...... DAVALLIA. 23 q Sori parallel to the mid-vein, the indusia opening toward it...(r) q Sori oblique to the mid-vein, borne laterally on the veinlets...(s) r Sori linear, in 1 double row, the whole length of the segment......BLECHNUM 26 r Sori oblong, in 1 short double central row. Frond finely cleft.ONYCHIUM. 27 • Industa double, regularly arranged. Frond simple...... SCOLOPENDRIUM 30

- x Indusium acodform, fixed by the base and 2 sides.....Cistopteris. 32
- x Indusium reniform, opening only toward the margin of the segm. Fla... NEPHROLEPIS exaltata.

x Indusium round-reniform, fixed in the midst, open all around......Aspidium. 33

1. OPHIOGLÓSSUM, L. ADDER'S TONGUE. Sporangia roundish, naked, opening transversely, arranged in two rows along the margins of the fertile, contracted, spike-like frond. Veins reticulated.

1 0. vulgatum L. Root of thick fibres; stem simple, bearing 1 oblong-ovate, entire, smooth frond, 2-3', with no mid-vein, and a terminal spike, 1-2'. A curious little plant, in low grounds. Vernation straight, as in all this section,-not circinate.

2 0. bulbòsum L. Root a globular corm; frond ovate to reniform, on the stem close to the ground. Wet pine-barrens, N. J., and S. Often 2 stems from 1 corm.

2. BOTRÝCHIUM, Swartz. MOONWORT. GRAPE FERN. Sporangia subglobous, 1-celled, 2-valved, distinct, coriaceous, smooth, adnate to the compound rachis of a racemous panicle. Valves opening transversely.

B. lunarioides Swtz. Scape 8-12', bearing a stalked frond near the base and a panicle of numerous little 2-ranked spikes at the top; frond in 3 bipinnatifid divisions; segment obliquely lanceolate, crenulate. Shady pastures and woods.
 β. disséctume. Frond more numerously dissected, almost tripinnatifid.

- 2 B. simplex Hitchcock. Frond simple, or 3-lobed or parted, segm. broad-wedge obovate, small, incised or subentire, unequal; spike compound, interrupted, small. Dry hills, Vt., Mass. Whole plant 3-6'. Frond 6-12", short-stalked, near the base.
- **3 B. negléctum** Wood. Frond 1-2', simply pinnate, with oval or ovate incised pinnæ, short-stalked, on upper part of stem, which is 5-8' high. Pan. 1-2'. N. H., Vt., to Pa.-Prof. Porter regards both this and No. 2 as var. of B. matricariæfolium Braun
- 4 B. lanceolatum Angst. Frond bipinnatifid, closely sessile, triangular in outline with lanceolate, incised segments; panicle 2- or 3-pinnate. N. J., Pa., to L. Sup. (O. B. Wheeler). Certainly distinct from No. 3.
- 5 B. Virginicum L. Rattlesnake Fern. Stem 1-2f, with the large (5-8') tripin., tri angular frond sess. at or above the middle; ultimate segm. obtuse, 3-5-toothed; pan. decompound, 3-6', reddish br. A beautiful Fern, in damp woods, not uncom. Jn., Jl.

3. OSMÚNDA, L. FLOWERING FERN. Sporangia globular, half 2valved, roughened on the surface somewhat in lines, pedicellate and clustered on the lower surface of the frond or a portion of it, which is more or less contracted into the form of a panicle. Spores green. Tall, handsome Ferns. Veins forked, straight. June.

§ Frond bipinnate with distinct pinnæ, the upper part contracted and fertile....No. 1
 § Frond pinnate with pinnatifid pinnæ, partially or separately fertile......Nos. 2, 3

- 1 O. regalis Mx. A large and beautiful Fern in meadows and swamps; fronds 3-4f, glabrous, bipinnate, fruiting above in an ample panicle; pinnæ with 6-9 pairs of distinct. oblong, serrulate, subsessile leaflets; fruit rust-colored.
- 2 O. cinnamome L. Sterile fronds pinnate, in clumps 3-5f; pinnæ pinnatifid with ovate-oblong, obtuse, entire segments; fertile frond bipinnate, pinnæ all contracted, panicled, clothed with cinnamon-colored wool.
- **3 O. Claytoniàna** L. Fronds ample, 2-3f, smooth, pinnate, the pinnæ lance-linear, pinnatifid, some of the intermediate ones fertile, contracted and raceme-like.

4. LYGODIUM, Swartz. CLIMBING FERN. Sporangia sessile, arranged in 2-ranked spikelets issuing from the margin of the contracted frond, opening on the inner side from the base to the summit. Indusium a scale-like veil covering each sporange. (Fig. 310.)

L. palmàtum Swtz. Smooth throughout; stem flexuous, thread-like or wire-like, climbing 3-5f; fronds palmately 5-7-lobed, 2 on each short stipe, lobes entire, obtuse; upper fronds contracted, fertile, each a cluster of spikelets. Abundant in a swamp in Windsor, Conn. (Dr. Wm. Wood); also rarely found in N. J., Ky., and S.

5. SCHIZÈA, Sm. Sporangia oval, crowned with a ring at top, sessile, opening laterally. Indusium continuous, formed of the inflexed margins of the lfts., which are contracted, spike-like, crowded at the top of the frond.

S. pusílla Ph. Fronds clustered, simple, linear-filiform, tortuous, 3-6', the fertile bearing a few little spikelets at top in two rows. Barrens, Quaker Bridge, N. J. Aug.

6. ANEÌMIA, Swtz. Sporangia sessile, crowned with a ring, in 1-sided panicled spikes, in partially or wholly fertile fronds. Indusium none. Fronds erect.

- 1 A. adiantifòlia Sw. Fronds 6-12′, on a slender stipe, 3-parted, the middle division sterile, 2- or 3-pinnate, the lateral ones fertile panicles on long stalks. S. Fla. †
- 2 A. MANDIOCCÀNA. Fronds 12-15', long-stiped, 3-parted like the other, but the sterile division simply pinnate with lance-oblong serrulate pinnæ. S. America.

7. TRICHOMANES, L. Sporangia with a transverse complete ring, and arranged on the base of a thread-like receptacle, which is *in* and exserted *from* a cup at the edge of the pellucid frond.

- 1 T. radicans Sw. Fronds thin and delicate, 6', lance-ovate, bipinnatifid, pinnæ triangular, obtuse, very oblique at base; receptacle exserted. South. Rare.
- 2 T. ÉLEGANS. Sterile frond pinnate, fertile, long-linear, edged and fringed all around with the thread-like receptacles and their cups. From S. America.

8. CYATHEA, Sm. Sori globular, on the veins, wholly enclosed in an indusium, which soon opens and remains cupform. Sporangia subsessile on an elevated receptacle. 5 With cylindrical trunks.

C. ARBÒREA. Trunk 10-20f, unarmed, simple, crowned with a spreading tuft of bipinnate fronds 6-8f long, gracefully arched; pinnulæ again pinnatifid or lobed, cups in 2 rows, smooth, round, entire. Grows near Panama! +

9. ALSOPHILA ÁSPERA. Another Tree Fern, from W. Indies, cult. by Mr. Buchanan, at Astoria, N. Y., under the name of *Hematelia horrida*. Trunk 6–10f, bearing a splendid crown of fronds 4–5f long, arched and spreading, tripinnate. Piul. deeply lobed, lobes obtuse, each with a double row of fruit-dots, which at first are covered with jagged scales, but finally naked. Stipe and rachis prickly.—A. PRUINÀTA, very elegant, with a trunk near 1f, clothed with light-brown woolly hairs, and a crown of lightgreen bipinnate fronds, 3f long, is growing with the other.

10. ACRÓSTICHUM, L. Fronds simple or pinnate. Sporangia scattered (not in sori), occupying the under surface of the whole or a part of the frond. Veins netted.

A. aùreum L. A noble Fern, 3-6f high, coriaceous, evergreen, pinnate, with alternate, lance-oblong, entire pinnæ. Swamps, Fla., and in conservatories.

11. PLATYCERIUM, Desv. STAG-HORN FERN. Fronds coriaceous, net-veined, forking at the summit. Sporangia in large patches on the under surface of the frond. From Africa, &c. **P.** ALCIGÓRNE. Sterile fronds roundish, lobed, spreading; fertile erect, 10-16', dark green above, pale beneath, fruiting on its 2-4 lanceolate segments. Curious.

12. POLYPODIUM, L. POLYPODY. Sori roundish, scattered on various parts of the under surface of the frond, with no indusium (cover or involucre).—Ferns of various habit.

- * Fronds pinnatifid or pinnate, with forking veinlets......Nos. 3- 9
- * Fronds bipinnatifid, the veinlets forked (PHLEGOPTERIS)......Nos. 7-9
- **1 P. Phyllitidis L.** Fronds lance-linear, 1-2f, pointed, thin and papery, with the fruit-dots arranged in a double row between the veinlets. Fla., and W. Indies. †
- 2 P. Língua. Fronds lance-ovate, 6-12, obtuse, smooth above, rusty-downy beneath, and there covered with the innumerable sori, in rows. China.
- **3 P. incànum** Ph. Fronds deeply pinnatifid, 3-6', thick, clothed with whitish scales beneath; pinnæ oblong-linear, the upper fruitful; sori distinct and separate; veins invisible. Grows on the mossy bark of trees, W. and S.
- 4 P. vulgare L. Fronds deeply pinnatifid, smooth, 6-12', pinnæ linear-oblong, alternate, sori large, in 2 rows, distinct, yellow-brown. On shady rocks.
- 5 P. PLUMULA Willd. Fronds lance-linear, $1f \times 1\frac{1}{4}$; pinnæ linear-oblong, very numerous, attached to the hairy rachis by a broad base. Fla., and cultivated.
- 6 P. ANGUSTIFÒLIA. Fronds lin.-lanceolate, $18' \times 2'$, bright green; pn. oblong ettached to the chaffy rachis by the mid-vein only, the base auriculed on the upper side.
- 7 P. Phlegópteris L. Beech P. Frond bipinnatifid, longer than wide (3-6'), the lower pinnæ curved, but scarcely larger than the middle ones; sori all marginal, about four on each segment; stipe hairy. Woods, Can. to Penn., and W.
- 8 P. hexagonópterum Mx. Frond bipinnatifid, broader than long, rachis peculiarly winged; lower panicle much enlarged, deflexed; sori partly marginal, many on each segment; stipe smooth. Woods. Rather common.
- **9 P. Dryópteris** L. *Ternate P.* Frond ternate, the divisions stalked and bi binnate, light green, thin and delicate; sori marginal. Woods, Penn., and N.'

β. calcareum. Divisions of the frond more rigid, erect. Northward.

13. GYMNOGRÁMMA, Desv. Fronds 2-3-pinnate, covered Leneato with a white or yellow farinaceous powder. Sori arranged in rows along the veins. A beautiful genus, much cultivated. Tropical America.

- * Silver Ferns,-the fronds white-powdery beneath, 2-pinnate...... No. 4
- 1 G. TRIANGULÀRIS. Stipes clustered, slender, 3-12, polished, ebony-brown; frond 5angled, 1-3, pedately pinnate; pinnæ triangular-oblong, finally the fertile covered with the russet sori beneath. Common in California. Very fine.
- ² G. SULPHÜREA. Stipe and rachis brown, at first powdery; frond 6-10', lanceolate, bipinnate; pinnæ lanceolate; segments cuneate, cut-lobed, crenate at the obtuse apex. From Jamaica (Rev. E. Wilson), and cultivated. Very delicate.
- **G.** CHRYSOPHYLLA. Frond triangular-lanceolate, bipinnate; pinnæ lanceolate, necrly contiguous; pinnæ cut-crenate-lobed. Golden yellow beneath.

β. MERTÉNSII. Pinnæ rather remote, narrow lanceolate, long-pointed.

1 G. CALOMÉLANOS. Frond 2-3f, lance-ovate, stipe and rachis brown, polished; seg ments entire or with a single tooth, cream-white beneath.

β. PERUVIÀNA has the lower segment hastate-lobed and very rich green.

14. NOTHOLÆNA, Br. Frond 1-2-pinnate, scattered, coriaceous, chaffy, or powdery beneath. Sori marginal, linear, continuous, naked Sporangia short-stalked.

- 1 N. NIVEA. Very delicate, 6-12', bright green above, covered with a dense white pow der beneath; frond bipinnate; pinnæ roundish, top one lobed; stipe black. Mex.
- 2 N. ECKLONIÀNA. Rare and beautiful, clothed in white wool-like scales, bipinnate. pinnæ ovate, remote, pinnulæ pinnatifid, oblong, segments roundish. South Africa.

15. ONOCLÈA, L. SENSITIVE FERN. Fronds scattered, net-veined, the sterile broad, the fertile contracted and panicled, its convolute segments berry-like, enclosing the sori, which are otherwise nearly naked.

- **0.** sensíbilis L. Fronds 1-2f, common in low grounds, very *sensitive* to frost. The fertile dark-brown in color. Sterile fronds deeply pinnatifid, with few oblong entire or lobed pinnæ, the upper confluent. July.
 - **β.** obtustloba. Fertile frond partially metamorphosed, the segments partly revolute on the fruit. Wendell, Mass. (Mrs. Piper), to N. Y. and Penn.

16. STRUTHIOPTERIS, Willd. OSTRICH FERN. Fronds clustered, the sterile bipinnatifid, fork-veined, fertile much contracted, brown, with the pinnæ revolute into a necklace form, enclosing the sori, which are otherwise destitute of an indusium.

5. Germánica Willd. Sterile fronds in a circular clump, 3-5f; pinnæ numerous, long and crowded, with numerous oblong segments; fertile fronds much smaller, their crowded pinnæ 1-2' long, appearing later in the season.

17. ALLOSÒRUS, Bernh. Fronds small, 2-3-pinnate, fork-veined; the fertile some contracted, margins of the leaflets reflexed and meeting over the confluent sori, but soon opening.

A. acrostichoides Spr. Fronds in tufts, bipinnate, 3--6', pale green with whitish stipes; seg. oblong, the sterile crenate, the fertile entire, petiolulate, 2--3'' long. Isle Royal, in L. Superior (Prof. Porter), W. to Washington Terr. (Rev. Mr. Gray).

18. LOMÀRIA, Willd. Fronds clustered, of 2 forms, the fruitful contracted. Sori marginal, linear, continuous; indusium linear, scarious, the reflexed edge of the frond, opening toward the mid-vein.

- 1 L. SPICANT. Fronds pinnate, long, and narrow, the fertile nearly solitary in the midst of the numerous sterile ones, and twice as tall (2-3f) as they; stipe purple, polished. Europe, Oregon. Very elegant. (Blechnum boreale.)
- 2 L. GIBBA. Fronds oblong-lanceolate, pinnate, pinnæ linear-falcate, 1-3', their broad bases almost confinent.
- **3 L.** CILIATÉLLA. Fronds oval to oblong; pinnæ oblong, slightly lobed, truncate at apex, ciliolate-spinescent with the projecting veins.

19. PTÈRIS, L. BRAKE. Sori borne on the ends of the veins forming a marginal line or band, covered with the membranous, reflected edge of the frond. Fronds once to thrice pinnate, or decompound.

§ **PTERIS** proper. Sori a mere line. Stipes greenish or pale...(x)

Sori forming a broad band. Stipes purple or brown...(y)
 x Frond triangular, twice or thrice pinnate, lowest pinnæ long-stalked......No. 1
 x Frond pedately pinnate, the pinnæ few and long......No. 2, 3
 x Frond pedately bipinnatifid. the pinnæ numerous.....No. 4
 x Frond simply pinnate, with numerons long pinnæ......No. 5
 y Frond pedate and pinnatifid, as broad as long, 5-angled. †.....No. 6
 y Fronds pinnate, pinnæ few, the lower again divided. Native......Nos. 7, 8
 y Fronds simply pinnate, or completely tripinnate Cultivated......Nos. 9-11

- P. aquilina L. Common Brake. Frond 3-parted, pranches bipinnate, segments oblong, obtuse, the terminal often elongated. Abundant everywhere. 2-6f.
 B. caudida. The terminal segment linear-oblong. Common South.
- **2 P. Crética** L. Pale-bright-green, 1-11f, smooth; pinnæ lin.-lanceolate, the lower
- ones 2-parted and petiolulate, serrulate; fertile longer, linear. Fla. Cultivated. β. albi-lineata. Pinnæ white-banded in the midst along the mid-vein.
- **3 P.** SERRULÀTA. Bright green, 1-1+f; pinnæ long-linear, decurrent on the rachis, cx. cept the lowest pair, which are 2- or 3-parted and short-stalked. China.
 - β . CRISTÀTA. Each segment expanded at apex into a fan-shaped blade.
- 4 P. QUADRIAURÌTA. Frond ample, ovate, 1-3f! smooth; pinnæ distinct, pinnatifid, lobes contiguous, oblong, obtuse, with the forked veins conspicuous. Jamaica. β. ARGYRIA. Pinnæ whitened in the midst along the mid-vein.
- **5 P. longitòlia** L. Tall, 2-3f, rigid ; pinnæ lance-linear petiolulate, obliquely trun cate at base ; stipe, rachis, and mid-veins chaffy-hairy. Fla., and cultivated.
- 6 P. PEDÀTA. Bright green, 4-6'. Frond 3-parted, as broad as long; lateral pinnæ 2parted, all deeply lobed, sorl in a broad band all around. From the W. Indies.
- 7 P. grácilis Mx. Delicate, smooth and shining, 4-6'; fronds lanceolate, the sterile bipinnatifid, fertile bipinnate with narrow segments. Rocks, Vt., and W.

8 P. atropurpurea L. Rock Brake. Coriaceous; rachis hairy; lower pn. ternate or pinnate; segments opposite, oblong, margins conspicuously revolute, with edges often meeting behind, as in Allosorus, 3-6-12'. On lime rocks, N. and S. B. Alabaménsis (Buckley). Taller (10-20'), bipin. below, some pn. 4-auriculate. S.

- 9 P. ROTUNDIFÒLIA. Stipe, rachis, and chaffy hairs purple, 1-1if; frond narrow, sim ply pinnate; segments small, round or oval, alternate. From New Zealand.
- 10 P. TRÉMULA. Bright green, 2-3f, tripinnate; pnl. or segments linear-oblong, ob tuse, serrulate, the lower ones again pinnatifid. From N. S. Wales.
- 11 P. HASTÀTA. Frond bipinnate, 12-18'; pinnæ cordate-hastate; segments ovate, the terminal ones much larger, oblong or hastate, or 3-lobed. Varies much. From S. Afr.

20. CHEILANTHES, Swtz. LIP FERN. Fronds small, mostly 2–3pinnate, chaffy or hairy, mid-vein central. Sori on the ends of the veinlets, distinct, or some confluent, covered by an interrupted or continuous indusium from the edge of the frond. Stipes brown.—Hardly distinct from the preceding genus.

- 1 C. vestita Sw. Indusia separate,—the reflexed, unchanged tips of the ovate segm.; fronds 5—12', bipinnate, lin.-oblong, hairy; pn. crenately lobed. Rocks, M. and S., rare.
- 2 C. tomentòsa Link. Indusia continuous,—the membranous margin of the small, obtuse segm.; fronds tripinnate, lance-oblong, rusty, 12—18'. N. C., and W.

21. ADIANTUM, L. MAIDEN-HAIR FERN. Sori oblong or roundish, marginal. Indusia membranaceous, formed from the reflexed margins of distinct portions of the frond, and opening inwardly. Stipe ebony-black, polished. Ultimate segments often dimidiate, the mid-vein on the lower margin.—A large and beautiful genus, much cultivated.

- * Fronds pedately divided, the divisions 1-3-pinnate; segments oblique....Nos. 1-4
- * Fronds pinnately divided 2-4 times; segments subequilateral......Nos. 5-8
- * Fronds simply pinnate, with very large opposite oblique segments No. 9
- 1 A. pedàtum L. Very smooth; branches of the regularly pedate frond pinnate; segments rhombic-oblong, 1', toothed on the upper side, obtuse at apex; sori oblonglunulate, 8-14'. Damp, rocky woods. Our most elegant nat: "e Fern.
- 2 A. PUBÉSCENS. Stipe rough-pubescent; pn. 5-7, irregularly pedate, hispid beneath.
 6-9' long; segments oblong, 6-8", contiguous; sori round, crowded N. Hol. If

- 3 A. TRAPEZIOFÓRME. Frond umple, decompound, glabrous, 2f; segments light green, large (12-18"×6-10"), trapezoidal, some of them fan-shaped; sori lunulate on 2 of the 4 margins; stipe jet-black. Superb! Jamaica (Rev. S. B. Wilson).
- 4 A. SANCTA-KATRINA, has large obliquely fan-shaped segments cut-lobed and toothed, with the veins uncommonly distinct. Cultivated in Bridgman's Garden, Astoria.
- **5 A. Capillus-Véneris** L. Delicate, bright green, 6–18', smooth, thrice pinnate at base; segments round-cuneate, lobed, or the sterile toothed; sori reniform, one on each lobe; stipe and branches *capillary*. Lime-rocks, S.: rare. Eur. Cultivated.
- **8** A. CUNEÀTUM. Very delicate, 1f, 4 times pinnate at base, bright green; segm. very numerous, sharply cuneate, 2-4-cut-lobed, 4-6"; sori round-reniform. Brazil.
- 7 A. ÆTHIÓPICUM, TINCTUM and CALLÓPODES, are greenhouse species or varieties, with roundish segments more or less oblique and lobed, 4--7", with rounded sori, 6-12'.
- 8 A. ALÀTUM, has the rachis narrowly winged, segm. sessile, obovate-long-wedge-shaped at base, coarsely toothed at apex. (Greenhouse of Bridgman & Wiegand.)
- **3** A. MACROPHÝLLUM. Stipe jet-black, simple, bearing about 3 pairs of large, opposite, thick leaflets, and an odd one; leaflets triang.-hastate, oblique; sori linear. Jamaica.

22. DICKSONIA, L'Her. DICKSON'S FERN. Sori marginal, roundish, distinct, terminating a vein. Indusium double, the proper one cupshaped, opening outward, the other formed of a reflected lobule of the margin, and opening inward.

- 1 D. pilosiúscula Willd. Frond bipinnate, lanceolate, 2-3f, with minute glandular hairs; pn. sessile, lanceolate; segm. finely pinnatifid, lobes toothed, each with a minute round sorns. Rocky pastures. Stipe yellowish.
- 2 D. (BALANTIUM) ANTÁRCTICA. A beautiful tree-fern from New Zealand, 3-20f, crowned with many long, heavy, dark-green, tripinnate fronds; pn. and pnl. sessile; segm. oval, 6-crenate; sori globular, with 2 distinct valves. (Buchanan's Conserv.)

23. DAVÁLLIA, Smith. Sori globous, marginal, on the end of a vein, in a goblet or pyxis, half of which is formed by the scarious indusium opening outward. Root-stock creeping above ground, chaffy.

- 1 D. TENUIFÒLIA. Fronds delicate, 6-10', tripinnate with few pinnæ, triangular-lanceolate; rachis narrowly winged; segments spatulate, toothed. China.
- 2 D. CANARIÉNSIS. Hare's foot. Fronds 3-parted, decompound, ultimate segments el liptical, decurrent, bearing 1 pyxis. 1-2f. Canaries.
- 3 D. DISSÉCTA, is very different, irregularly pinnatifid, or almost entire.

24. WOODWARDIA, Sm. Sori straight, linear-oblong, on transverse veinulets, parallel to the mid-vein, in 2 rows. Indusium from the same veinulet, opening inwardly.

\$ LORINSERIA. Fronds of 2 forms, net-veined throughout......No. 1
 \$ ANCHISTEA. Fronds all similar, netted only close to mid-vein......Nos. 2, 3

- 1 W. angustifèlia Sm. Fertile fronds pinnate, with distant linear pinnæ covered with the fruit beneath; sterile lance-oblong in outline, deeply pinnatifid; segm. oblong, 2-3f. Resembles Onoclea. Mass. (Dr. S. Bowles), and S.
- 2 W. Virgínica Sm. Fronds glabrous, lanceolate, pinnate; pinnæ remote, pinnatifid, lance-linear; segments oblong, obtuse, 2-3f. Swamps, E. and S.
- **3 W.** JAPÓNICA. Rachis chaffy; frond triangular, as broad as long; pinnæ lanceolate pinnatifid, with ovate segments. Bright green. 1-2f.

25. DOODIA ASPERA. Fronds rough, lanceolate, pinnate, 1f, in clumps, the caudex a few inches above ground. Pinnæ oblong-linear, contiguous, with spinescent teeth. Sori in 1 or 2 rows each side.—D. CAUDÀTA has linear-lanceolate, pinnatc fronds, with remote serrate segments, the terminal one elongated. Both from Australia.

26. BLECHNUM, L. Sori continuous on the cross veinulets, close to and parallel with the mid-vein. Indusia opening inward.

B. serrulàtum Mx. Fronds pinnate, lanceolate, erect; pinnæ sharply serrulate, those of the fertile fronds contracted. Florida.

27. ONYCHIUM LUCIDUM (or JAPÓNICUM). Delicately beautiful, from K. Ind., and of the easiest culture. Fronds 1-2f, alternately pinnate 3 or 4 times into innumerable linear-acute segments 2 or 3" long. Few of the segments fertile with an oblong bivalved sorus on the mid-vein half its length.

28. ASPLÈNIUM, L. SPLEENWORT. Sori linear or oblong, straight (curved in No. 9), separate, regularly arranged, oblique to the mid-vein, each arising with its indusium from the forward side of a lateral vein and opening forward. Veins forked or pinnate.

- * Fronds simple and entire, with regular linear fruit-dots......No. 1
- Fronds simply pinnate.—a Pinnæ roundish, nearly as broad as long....Nos. 2, 3
 —a Pinnæ long,—much longer than wide.....Nos. 4, 5
- * Fronds partly bipinnate, with few divisions. Ferns small, 2-8' high.....Nos. 6, 7
- * Fronds twice pinnate, with very many divisions. Large native Ferns....Nos. 8, 9
- * Fronds twice or thrice pinnate. Exotic Ferns cult. in conservatories... Nos. 10-12
- 1 A. NIDUS. *Bird's-Nest.* Fronds thick and rigid, polished green, tongue-shaped, obtuse, 2-4f, clustered in a circle, forming as it were a nest. Oahu, &c. A noble Fern.
- 2 A. FLABELLIFÒLIUM. Fronds very delicate, long and narrow (12-16'); rachis pro longed some 5' beyond the pn., and rooting at the end; pn. broad-cuneate, lobed and toothed, remote and alternate on the rachis. Australia. Suitable for baskets.
- 3 A. Trichómanes L. Dwarf S. Frond 3-6', lance-linear, in tufts; pn. roundish, small. subsessile, bearing several sori each; stipe and rachis polished-black. Rocks.
- **4 A. ebéneum** Wld. *Ebony S.* Fronds 8-14', erect, lance-linear; pn. lance-oblong, 1', some curved, serrate, auriculate on the upper side; stalk polished-brown. Dry.
- 5 A. angustifolium Mx. Fronds 2-24f, in tufts, the inner fertile; pn. lance-linear, alternate, short-stalked, 2-5', of a thin texture; stalks green. Woods, E. and S.
- 6 A. Ruta-murària L. Wall-rue. Very small and delicate, 2-3', 2-pinnate at base, pinnate above; pn. petiolulate, cuneate, erose-dentate, few, 3-4". Dry rocks.
- 7 A. montanum Willd. Glabrous, 2-pinnate; tufts 4-8'; pn. oblong-ovate, parted into a few (5 or 6) 2- or 3-toothed segm.; rachis green, winged. On cliffs, Penn., & S.
- 8 A. thelypteroides Mx. Silvery S. Fronds ample, ovate-acuminate, 14-3f; stipe pale; pinnæ lance-linear, pointed, distinct, subsessile; segments oblong, obtuse, serrate, sessile on the winged rachis, with 2 rows of linear distinct sori. Shady banks.
- **9 A. Filix-formina** Bernh. Lady Fern. Fronds ample, 1-2f, lance-oblong; pn. lanceolate-acuminate, rachis not winged; pnl. lance-linear, cut-pinnatifid; segments minute, sharply 2-toothed; sori oblong, curved, finally confluent. Moist woods.
- 10 A. GOVINGIÀNA. Slender and weak (in conservatories), 1f, lanceolate-acuminate ; pn. lanceolate, long-pointed, stalked ; rach. winged ; seg. acute, sharp-serrate; sori oblong.
- **11 A.** BELÁNGERI. Fronds lance-linear, $1-2f \times 2-3'$, pinnate with deeply pinnatifid pinnæ, segments linear, small, and very numerous, each with a sorus. From Java. Stipe stout, green The upper base (or axillary) segments are 2-parted.
- A. BULBÍFERUM. Frond lanceolate, bipinuate, 1-3f; pn. lanceolate from a broad base, deeply pinnatifid; seg. oblong, cut-lobed and toothed, bearing 1-6 bold sori,-1 to a lobe. Often produces young plants from bulblets on the upper surface. N. Hol.

29. CAMPTOSÒRUS, Link. WALKING FERN. Frond lanceolate, entire, or pinnatifid, with the apex prolonged and inclined to root. Veins more or less netted. Sori oblong, irregularly scattered, with the indusia lateral on the veinlets. (Antigramma, C-B.)

- 1 C. rhizophyllus Lk. Frond 6-12', subentire, at base stipitate, cordate, or truncate, or somewhat auriculate, the apex attenuated in a long thread-like acumination, arched, and rooting at the point. Rocky woods. Not common.
- 2 C. pinnatifidus (Nutt). Frond 4-8', abrupt at base, pinnatifid, with a long attenuated apex inclined to root; sori large, at length confluent. Pa. to Tenn. Rare.
- 3 C. ebenoides (R. R. Scott). Fronds 4-10' long, pinnate at base, pinnatifid above, tapering and rooting at apex; rachis black. Pa. to Ala. Rare.

30. SCOLOPÉNDRIUM, Smith. HART'S-TONGUE. Sori linear, transverse, scattered; indusium double (arising from 2 contiguous parallel veins), occupying both sides of the sorus, opening lengthwise along the middle.

S. officinàrum Willd. Frond simple, ligulate, acute, entire, cordate at base, 8-15'; stipe chaffy, 3-5'. Shady rocks, Chittenango, N. Y. (Sartwell).

31. WOÓDSIA, Brown. ROCK POLYPOD. Sori roundish, scattered; indusium fixed beneath the sorus, early opening above it, with a multifid or fringed margin, including the pedicellate spore-cases, like a calyx. Small, tufted ferns, with pinnated fronds.

§ Indusium closed over the sorus at first, toothed when open......No. 1 § Indusium concealed under the sorus, fringed with ciliæ......Nos. 2-4

- 1 W. obtùsa Torr. Fronds 6-12', lance-oblong, smoothish, almost tripinnate; pn. distant, sessile; segments pinnatifid, lobes rounded, toothed, each bearing a round fruit-dot, which dots at length almost meet. Rocks and cliffs. Vt. to Car., and W.
- 2 W. ilvénsis Br. Frond 4-7', lanceolate, *bipinnate*, the stipe, rachis, mid-veins and their bristly chaff rust-colored; pn. oblong-obtuse, sessile, with 13-17 obtuse, subentire segments. Dry or rocky woods, in tufts. Stipe as long as the frond.
- **3 W. glabélla** Br. Frond glabrous, lance-linear, 2-5', *pinnate*; pn. ovate, very obtuse, 2-4", 3-7-lobed, the upper only crenate. Cliffs, N. Y., Vt., and N. No chaff.
- 4 W. Oregàna Eaton. Frond glabrous, lance-elliptic, 2-8', *pinnate*; pn. pinnatifid, obtuse; segments ovate, obtuse, denticulate; indusia with very short ciliz. L. Sup.

32. CISTOPTERIS, Bernh. BLADDER FERN. Sori roundish. Indusium hood-shaped, vaulted, fixed by the broad base (or by the base and sides), soon opening toward the forward end of the frond and thrown off. —Delicate Ferns, 2–3-pinnate.

- 1 C. frágilis Bernh. Frond lance-oblong, 6-10′, on a slender stipe of the same length, with open divisions; pn. lance-ovate; segments pinnatifid below, only serrate above, oblong, with prominent veins and 4-10 sori. Shady rocks. Common.
- 2 C. bulbífera Bernh. Frond long-lanceolate, 12-18', the stipe shorter; pn. triangular-ovate, the lowest pair longest; segments oblong, obtuse, pinnatifid below, toothed above, 1 sorus to each lobe. Bears some bulblets. Shades.

33. ASPIDIUM, L. SHIELD FERN. Sori orbicular, scattered, terminal or lateral on the pinnate veins. Indusium orbicular, peltate or reniform with a deep sinus, covering the sorus, opening all around.

§ ASPIDIUM. Indusium round, entire, centrally peltate. Pinnæ mostly auricled on
the upper side at base.—x Fronds simply pinnateNos. 1–4
-x Fronds bipinnateNos. 5, 6
§ NEPHRODIUM. Indusium roundish, with a sinus on one side (subreniform) (a)
a Frond simply pinnate, with a few large pinnæ. CultivatedNo. 7
α Frond once-and-a-half pinnate.— γ Segments thin, quite entire
-y Segments thick, finely servate Nos. 12, 13
α Frond twice pinnate.—z Segments bluntly lobed, or crenate or entireNos. 14, 15
-z Segments sharply serrate, or lobed or toothed. Nos. 16, 17

- 1 A. acrostichoides Swtz. Frond narrow-lanceolate, 15–18'; stipe chaffy; pn falcate-lanceolate, ciliate-serrulate, 1–2', auriculate on the upper side at base, the np per covered with fruit, smaller than the sterile. Rocky shades. Common.
- β. incisum. Segments incised and sharp-toothed, most of them fertile. N. Y., &c.
 2 A. Lonchitis Sw. Frond linear-lanceolate, rigidly erect, 8-18'; pn. triangular ovate, auricled on the upper side at base, longest (1') in the middle, gradually lessened to apex and base, all densely fertile. Lake Superior, and N.
- **3** A. MUNITUM. A splendid Fern from California, growing in clumps, 3-5f, smooth rigid, evergreen, lance-linear; segm. oblong-falcate, spinulous-seriate; sori 2-rowed
- **A.** FALCÀTUM. Frond thick, rich green, lanceolate, pinnate, 2-3f high, with ample lance-acuminate pinuæ. A noble, hardy Fern from Japan.
- 5 A. Floridànum (Hook). Rigidly erect, lance-oblong, pinnate and barren below, bipinnate, fertile, and contracted above; lower pinnæ cut-pinnatifid; indusia large, round, peltate, as in No. 1. Ga., Fla., La. (A. Ludoviciàna C-B.)
- 6 A. aculcàtum Sw. β. Braunii. Fronds in tufts, dark green, 2-3f, pinnate, lanceolate, narrowed both ways; stipe short, shaggy with large scales; segm. ovate-falcate, auricled on the upper side, bristle-tipped. Mts., Vt. (Eaton), N. Y.
- 7 A. PODOPHYLLUM (or SIEBÓLDII). Fronds of two forms, thick, smooth, pinnate, with a few large oblong pinnæ, in the fertile contracted and covered with sori. China.
- 8 A Thelýpteris Sw. Lady Fern. Frond lance-ovate, 10-16'; pn. narrow, distant, deeply pinnatifid, the lowest pair as long as any; margins reflexed in fruit.
- 9 A. Novaboracénse Willd. New York Fern. Frond elliptic-lanceolate, 12-18';
 pn. narrow, gradually shortening from the middle both ways; segm. oblong, obtuse,
 flat; sori close to the margin, at length confluent. Moist woods: com. Delicate.
- 10 A. patens Sw. Frond soft and thin, downy with rusty hairs, lance., 12-18'; ph. linear-oblong, pinnatifid; segm. oblong, obtuse, entire; sori scattered. Dry, Fla.
- 11 A. MOLLE, from S. Afr. and S. Am., is divided just like A. patens, and equally hairy, but is larger, finer, with straw-colored stipes, and the sori in regular marginal rows.
- 12 A. cristàtum Sw. Frond narrowly lanceolate, some $2f \times 6'$; pn. deeply pinna tifid, triangular-oblong or -ovate, acute; segm. toothed, bearing a single row of large sori each side of the mid-vein. A beautiful dark-green Fern, common in woods.
- 13 A. Goldiànum Hook. Frond oval or ovate, about 15×10', stipe same length; pn. broad (1¹/₂-2'), deeply pinnatifid; segm. subfalcate, crenate. Woods, E. and W.
- 14 A. fragrans Sw. Fronds linear-langeolate, 6-12', tapering both ways, bipinnate; stipe short, chaffy; pn. ovate-oblong, 1-10''; segm. lin.-oblong, with a dozen roundish crenatures or lobes; sori confluent. Rocks, Northern Mich. and Wis.
- 15 A. marginàle Sw. Fern ovate to lance-ovate, thick, glabrous, 1-2f, bipinnate, stipe very chaffy at base; pn. lanceolate; segm. oblong-falcate, obtuse and entire at apex, the lower crenate-lobed; sori round, at or near the margin. Rocky woods.
- 16 A. Filix-mas. Fern lanceolate, 1-3f; stipe very chaffy; pn. triangular-lance.; segm. oblong, obtuse, serrate at apex; sori near the mid-vein. N. J. to Va.? N. W.
- 17 A. spinulòsum Willd. Stipe elongated, soon smooth, the chaff deciduous; fror.d 1-2f, ovate, acuminate, nearly or quite tripinnate; pinnæ lanceolate, acuminate, the lower longest; pnl. oblong, acutish, segm. mucronate-serrate. Woods and pastures β. dilatatum. Stipe permanently chaffy; frond triangular-ovate; pnl. obtuse y. Boottii. Stipe chaffy; frond oblong-lanceolate; pnl. rather acute.

ADDENDA.

Page 42. After V. (Vesicària) Shórtii, add,

2 V. Lescùrii Gray. Pubescent; stems many, ascending 6-10'; lvs. oblong, clasping, with a sagittate base; flowers yellow, in lengthening terminal meemes; silicle roundish, hispid, twice longer than its style; seeds 1-4 in each cell. Meadows Tenn. (Mr. Hamlin.)

Page 63. After S. (Stercùlia) platanifòlia, add,

2. MAHÉRNIA VERTICILLÀTA. A shrubby perennial from S. Africa, cultivated in conservatories. It has slender, vine-like branches, small pinnatifid leaves and stipules forming verticils. The flowers are small, yellow, bell-form, very sweet-scented, with 5 petals, stamens, and styles.

Page 68. After O. (Óxalis) versícolor, add,

7 O. CÉRNUA. Leaflets 3, obcordate; scapes bearing umbels of many large, yellow, drooping flowers; styles very short. S. Afr.

Page 69. After T. (Tropàcolum) perigrinum, add,

5 T. (CHYMOCÁRPUS) PENTEPHÝLLUS. Climbing high; lvs. digitate, of 5 small lfts.;
 fis. curious, green and red, the spur 1' long; sepals valvate; petals 2, small; carpels
 3 round berries. From Buenos Ayres.

Page 74. After A. (Acer) macrophyllum, add,

9 A. PLATANOÌDES. Norway Maple. Tree 40-50f; leaves bright green both sides, as broad as long, 5 lobed, lobes toothed and short-acuminate; corymbs nearly erect; fruit smooth, 2' long, wings very diverging.

Page 106. After G. (Geum) album, add,*b. luteum*, a variety with yellow flowers, rarely occurs in Pennsylvania.

Page 111. After C. (Cratègus) spatulàta, insert,

9a C. Pyracántha Pers. Shrub 10f, thorny; lvs. evergreen, lance-ovate or oblong, crenulate-serrate, smooth and shining. § Near Philadelphia, and southward.

Page 146. After D. (Diervílla) sessilifòlia, add,

4 **D.** JAPÓNICA, β. ROSEA. Wiegelia. Shrub from Japan, 4--6f, with straight branches; lvs. oblorg-ovate, acuminate, large; flowers funnelform, rose-colored, 1' broad, covering the plant in Spring; ovaries and pods linear. Common in cultivation.

Page 150. After Bouvardia, add,

11. GARDÈNIA FLÓRIDA. Cape Jessamine. From China. Much mitivated South. Shrubby evergreen, 2-4f. Lvs. elliptical, acute both ways, very smooth F.owers white, corolla 5-lobed or often many-lobed and double, salverform, 2' broad.

On page 175, after E. (Echinàcea) atrórubens, add,

E. Pórteri (Gray). Leaves lanceolate to lance-linear, remotely toothed, the highest entire; heads corymbed, 1' broad; scales about 9, lance-linear; rays 6-8, ovate-lanceolate, *yellow*; chaff spinescent. Stone Mountain, Ga. (Prof. Porter). Has the hably of Rudbeckia, but its chaff is plainly that of Echinacea.

ADDENDA.

On page 190, before Lappa, may be inserted,

99a CÁRDUUS NUTANS, L. Bristles of the pappus not plumous, nearly naked. Stem 2f, slender; lvs. narrow, sinuate-spinescent, decurrent, 2-3'. Acads few, large, nodding, purple. Ach. linear-oblong, rugulous, 2", crowned with a many-bristled deciduous pappus three-quarters of an inch long. Harrisburg, Pa. (Prof. Porter). § Eur.

Page 208. After P. (Prinos) lævigàtus, add,

Ba P. pubéscens Mx. Shrub 6—Sf. with smooth, virgate branches; lvs. large, cvate, acuminate, serrulate, soft pubescent beneath; clusters umbellate, axillary, shorter than the petioles; berries dark red, 2-3" in diameter. Alleghanies, Pa.

Page 281. Next before R. (Rumex) crispus, insert,

 R. patiéntia L. Patience Pock. Stem 3-5f, stout; leaves lance-oblong, 6'-2f; valves large (2-3"), broad-cornate, one of them bearing a small grain or all naked Grows at New Baltimore, N. Y. (Dr. Howe.) § Eur.

Page 388. Next before S. (Stipa) avenacea, insert,

1 S. Richardsònii Link. Culm 15-20', very erect and slender; lvs. shorter, finform; pan. loose, 3-4'; glumes near 2'', acutish; pales not bearded at the blunt base, the crooked awn about 6'' in length. Mt. Marcy, N. Y. (C. H. Peck.)

Page 394. After C. (Cenchrus) tribuloides, add,

2 C. echinàtus L. Differs from No. 1, in the globular, purplish, downy involucres, beset above with rough, stiff bristles, and cleft into 8-10 segments inclosing 3-5 flowers; grain brown. South.

Page 44. After C. (Cleòme) pungens, add,

2 C. integrifòlia (Nutt.) Smooth, glaucous, 1-2f; lvs. 3-foliate, lfts. lance-oblong, entire. mucronate; rac. dense; calyx 5-toothed; pet. rose-color, subsessile, 4"; stam. 6, equal; pod much longer than its stipe. Banks of the Mississippi R., N Illinois. (Mr. V. Friese.) and Westward.

Page 340. After T. (Trillium) cérnuum, add,

β. atrórubens. Petals brownish purple, ovate-lanceolate, acuminate. Hanover, Indiana. (Mr. A. H. Young.)

Page 291. After Phorodendron, insert,

2. ARCEUTHOBIUM, Bieb. Differs from Phorodéndron in having its anthers 1-celled, the 2 perianth 2-toothed, the herbage yellowish and leafless.

A. Oxycedri, β . abigenium (Wood). Found growing on the branches of small starved spruce-trees (Abies nigra), in a marsh in Sandlake, N. Y. (C. H. Peck). Stems 3-9", jointed, each joint terminating in a truncated sheath. Fls. terminal and opposite; berry some 3-angled. The variety α grows on Fines and Cedars in **Cal. and Oreg.!** and is much larger.

Page 133. Under Sesuvium, insert,

- B. pentándrum Ell. Lvs. spatulate-obovate; fis. sessile; stamens 5. ()? See coast, E. Hampton, L. I. (J. S. Merriam), Cape May (C. F. Parker), Cape Henloper Dr. Lidy), to Fla. Hitherto mistaken for S. Portulacastram.
- Page 164. After 45 A. (Aster) ericoides, insert,

 β . villosus (Mx.) Stem, branches, and often the leaves villous-hirsute.

Page 167. After 8 S. (Solidago) latifolia, *B. pubens*, insert,

B. ciliata (DC.) Upper racemes elongated and spreading. Dl. (Mr. Wolf.)

Page 168. After 30 S. (Solidago) Canadensis, insert,

B. scabra. Stem and leaves scabrous ; leaves narrow, rigid, subentire.

Page 173. After 6 S. (Silphium) scaberrimum, insert,

 β . séssile. Leaves nearly all sessile, lance-oblong to ovate. (S. Radula N.) III.

Page 180. After 5 B. (Bidens) connata, insert,

B. petiolata. Leaves more or less petiolate. (B. petiolata N.) Ill. (Mr. Wolf.) Page 283. After 10 P. (Polygonum) Careyi, insert,

rage 200. Alter 101. (1 orygonum) Careyi, insert,

JOa P. persicarioides K. Glabrous, 2-4f: stip. ciliate; lvs. lin.-lanceolate, sub sessile, spotted, not acrid; spikes linear, erect, pale-purple; sta. 6-8; styles 3-cleft; ach. 3-angled, shining. Low ground. Ill. (Mr. Wolf.) New to our flora.

Page 346. At bottom insert,

22a MYRSIPHÝLLUM ASPARAGOÌDES. A delicate vine, twining and climbing, from S. Africa. Cult. Branches very slender and smooth. Lvs. 1' or more, ovate, pointed, thin, and polished. Ped. in pairs, with an empty bract-like one. Fls. similer to those of Asparagus, 6-parted, white. Filaments flattened. Popularly called *Smilaz*.

Page 405. After E. (Elymus) Virginicus, β. arcuatus, add, y. villosus. Flowers villous-pubescent. (E. villosus Muhl.) Ill. (Mr. Wolf.)

ORDER LXXX. OLACACEÆ.

Trees or shrubs chiefly tropical, with alternate, ex-stipulate, petiolate, entire leaves, regular, hypogynous flowers, and drupe-like fruit; represented in our limits by the following genus only.

XIMENIA, Plum. Calyx small, 4-toothed. Petals 4, woolly within, barely united at the base. Stam. 8. Style 1, Ovary 4-celled, with several byules, but forming a 1-seeded drupe. $\notin \notin$ Thorny. Flowers axillary, single or in small corymbs.

X. Americana L. Leaves smooth, coriaceous, oval or oblong, obtuse; peduncles severalflowered, shorter than the leaves; petals oblanceolate, thick, spreading above, 4-5''long.—Fla. from Picolata (*Mr. Fry*) and S. Fls. yellow, fragrant. Drupe as large as a plum, yellow, well-flavored. Thorns $\frac{1}{2}$ an inch.

Page 76, under Celastreceae, insert,

3. PACHYSTIMA, Raf. Petals and stam. 4, inserted on the throat of the 4-lobed calyx. Style very short, expanded at base into the disk which covers the ovary and lines the calyx tube. Caps. oval, 2-celled, seeds 2-4, inclosed in a white dissected aril.—Low shrubs, with opposite, crowded, short-petioled, evergreen leaves, and minute axillary flowers.

P. myrsinites Raf. β Canbyi (Gray). Stems and branches creeping, ascending, bark Wackish; lvs. oblong and linear-oblong, obtuse, with a few minute teeth; caps. obtuse. – Mountain bogs, Wytheville, Va. (H. Shriver.) Stems 8–15'. Lvs. 6–9", margins revolute.

Fage 234, after R. (Ruellia) strepens L., insert,

B. micrantha (Eng. and Gr.). Flowers crowded in the axils, with corolla reduced to a slender tube with an obsolete lip-shaped border, or quite apetalous, fertilised in the bud.—In ponds, Mount Carmel, Ill. (Dr. Schneck.) Page 253, under Lithospermum, insert,

- 8 L. lutéscens Coleman. Minutely strigous; lvs. lanceolate, pointed, roughish above, about 5-veined; sepals subulate, shorter than the conspicuous yellow corolla.—Grand Rapids, Mich. (N. Coleman.) Allied to L. latifolium.
- 9 L. tuberosum Rugel. Hispid-bristly, erect, branching; lvs. obovate-oblong. dotted above with white glands, the upper lance-oblong; calyx lobes linear, as long as the yellowish corolla, twice as long as the polished nutlet.—Fla. to La. (*Dr. Joor.*) Page 256, under Hydrophyllaceae, insert,

8. NAMA, L. Calyx 5-parted. Cor. tubular-funnelform, 5-cleft, Stam. 5 equal, included, styles 2 distinct. Caps oblong. Seeds ∞ , pitted.— Hairy diffuse herbs. Lvs. alternate, entire. Fls. cyanic.

- N. Jamaicénsis L, Pubescent, prostrate, branched; stems angular; lvs. obovate, obtuse; fis. 1-3 in the axils; calyx lobes linear, as long (5") as the corolla; caps.
 2-, then 4-valved and the placentæ free.--Ditches, etc., Baton Rouge, La. (Dr. Joor.)
 Page 263, under Solanum, insert,
- 14 S. verbascifòlium L. Shrubby, hoary-tomentous; lvs. large, ovate-oblong, entire; cymes dense-flowered, on a long stout forking peduncle; flowers in bud obovoid, cor. lobes obtuse; anthers lin.-oblong; ovary woolly.—Picolzta, Fla. (Mr Fry) and southward.

Page 140, after 3 A. (Apium) nodifiorum, read,

3a A. angustifolium Wood. Weakly erect 8-20'; lvs. pinnate, elongated; lfts. toothed, cut, or pinnatifid, oblong in outline; ped. as long as the rays; invol. and involucels 5-7-bracted; fr. round-oval, ribs and vittæ obscured by the thick pericarp. -Wet places, Peoria, Ill., (Dr. Stewart) and W. Used as celery. (Sium, L. Berula, Kotch.)

Page 173, after Silphium, insert,

41a. ACANTHOSPÉRMUM, Schrank. Heads radiate, rays (small) \$\varphi\$ fertile, disk \$\varphi\$ sterile. Invol. herbaceous, inner scales closely investing the ray cypselæ. Recep. chaffy. Cyp. few, oblong, without pappus, each enclosed in the hardened prickly scale.—① Diffusely branching. Lvs opposite, toothed or incised. Fls. yellow.

A. xanthoides DC. Stems creeping, rooting at base; scabrous-pubescent; lvs. ovate or obovate, the lower petiolate; heads stalked; rays about 5; cyp. 5, spreading, 6" long, the sack muricate.—Atlanta, Ga. (T. B. Goulding.) § S. Am. Jl. Aug.

Page 237, after Vitex, may be inserted,

7. CLERODÉNDRUM, L. Corolla salverform, limb some unequal, 5-cleft. Drupe baccate, of 4 (or fewer) 1-celled, 1-seeded drupes.—Shrubs or trees. Lvs. simple, entire, opposite or ternate. Cymes axillary, or terminal, trichotomous.

C. Siphonánthus R. Br. Glabrous, virgate, erect 4--8f.; lvs. whorled in 3s and 4s, long-lanceolate, pointed at both ends; cymes once or twice trichotomous; cor. white, tube 4' long, limb 1' broad; stam. long-exserted.—Macon, Ga., naturalized in fields, waysides. (Dr. J. Mercer Green.)

Page 358, after 17 C. (Cyperus) divergens, read,

17a C. Wolffi Wood. Glabrous, slender, erect 2-3f.; lvs. at base, narrowly linear, 3f, of the invol. 2f; rays about 5, very unequal, each bearing a dense globular head; spikes many, 4-5-flowered, oblong, scales imbricated, obtuse, 9-11-veined; rackies broadly winged.—Anna, Ill. (J. Wolf.)

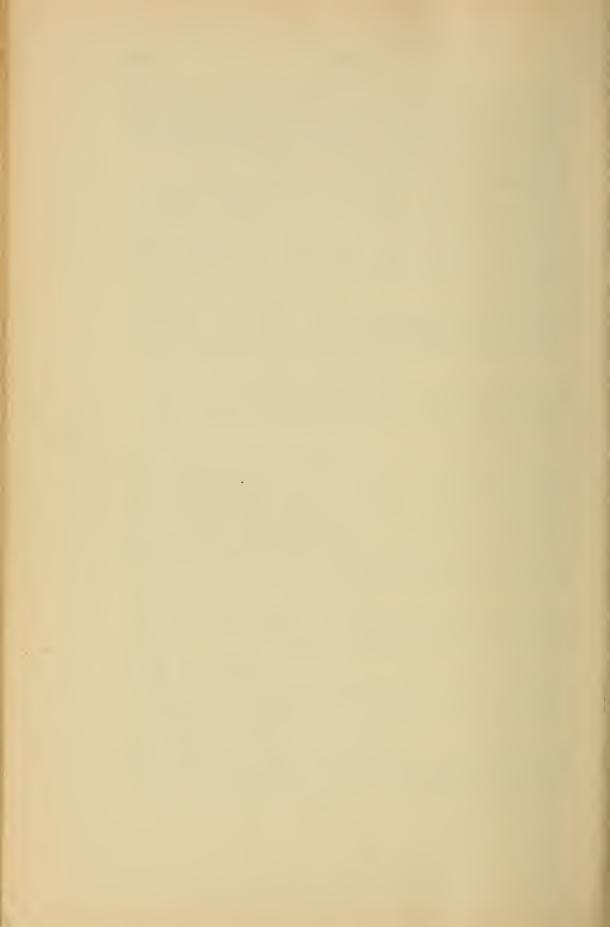

Page 30, after N. tuberosa, insert,

4 N. flava, Leitner. Yellow Water-Lily. Leaves ovate-orbicular, lobes acutely pointed; root-stocks erect; flowers yellow.—Figured in Audubon's "Birds of America," 1843. Otherwise unknown until re-discovered by *Mrs. Mary Treat*, May, 1877, in the St. Johns River, Fla. (See *Meehan's* Native Flowers and Ferns, Series 2, p. 121.)

Page 206, in place of genus 29, insert,

29. SHORTIA, T. & G. Calyx of 5 ovate, distinct, imbricated sepals. Corolla of 5 oblong-obovate, crenulate petals, united at base. Stamens 5, included, inserted on the base of the corolla and alternating with the petals; anthers innate, cordate. Style slender, persistent on the roundish, 3-celled, 3-valved capsule. Seeds numerous and small.—Plant glabrous, acaulescent, with the round-oval, crenate-dentate leaves on long petioles and shorter than the scapes. Each scape bears several small bracts above, and 1 white flower.

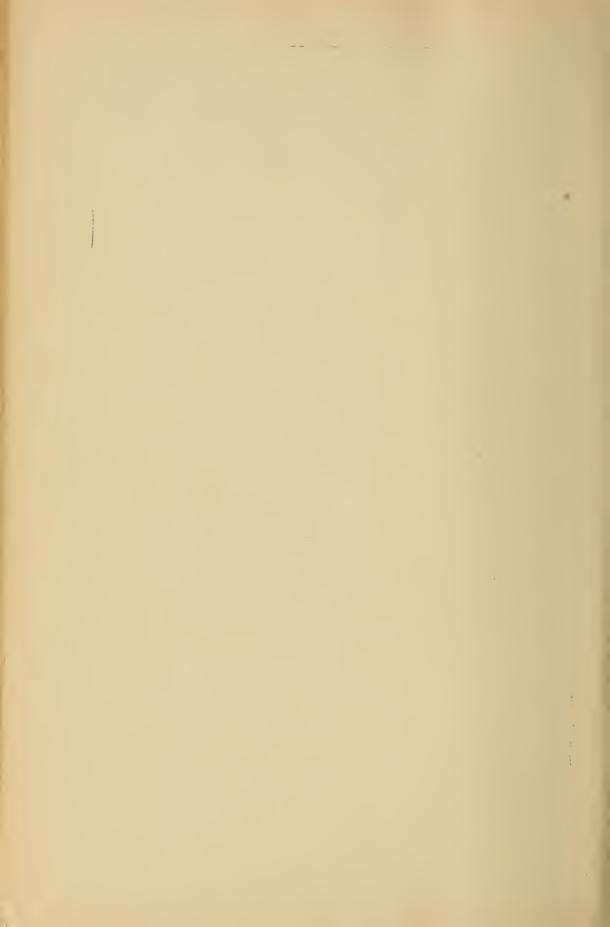

S. galacifolia T. & G.—High mountains of Carolina. *Michaux*, A.D. 1780. Re-discovered in 1878, by *Geo. M. Hyams*, in McDowell Co., N. Car. ! Scapes about 3' high. Flowers white, near 1' diam. Leaves 1-2' long, resembling those of a Pyrola more than Galax.
